I personally made the first estimates of the hazards from radioactive fallout from the nuclear reactors at Oak Ridge and Hanford, recommended precautions for their safe operation, and assisted in developing an organization to give this matter continued competent and responsible study. I consulted regarding the fallout dangers with those responsible for the postwar nuclear tests at Bikini. I have also discussed cases of radiation damage with radiologists and geneticists in both Japan and the United States.

POLITICAL PROBLEM

It will be widely agreed that two world issues are today of greater importance than any others. The most immediate is the avoidance of major war. More fundamental is the concentration of the efforts of civilization on the full personal development of all men and women. The United States will meet its great responsibilities of leadership to the extent that it helps the world achieve these two great goals.

A major source of our present confusion is the announced and demonstrated goal of Russian communism, namely, to bring the world under a kind of imperial domination that in the view of the great majority of men would make impossible for most men and women a satisfactory human development. As long as such is the Russian objective, the rest of the world has no alternative but to protect itself against falling under Russian domination. While such protection is a world problem, today's realities mean that without the effective cooperation of the United States the defense of the world's freedom for encouraging the full development of persons would be impossible. Thus it becomes a prime human responsibility of American citizens to maintain a defensive strength adequate to meet the aggressive power of the Russian empire.

In order that such defensive strength shall be maintained, effective atomic armament is essential. This follows from the fact that Russia's first objective is to bring and keep its immediate neighbors within its political orbit. In order to be effective in defense, the United States must therefore be prepared to fight at a long distance from home. But nuclear weapons are now the engineer's best answer to delivering heavy blows at a distance. If by any means, as through world political pressure, the United States could be induced to make her nuclear arms ineffective, there would remain nothing to prevent the massed armies, tanks, and planes of the Russian empire from taking over complete control of Europe, Asia, and nearer Africa. Reduction of American nuclear strength is thus to Russia of critical importance. By the same token, American nuclear weapons are the key to the strength of NATO, and in fact to the defense of the world.

As you are well aware, this critical importance of nuclear weapons is fully recognized in all military circles, including not only the United States and Russia but also such traditionally neutral areas as Switzerland and Scandinavia. The reason that nuclear weapons are more important to the United States than to Russia is because, as all the world knows, it is Russia, not the United States, that is a military threat to its neighbors. It is the United States, not Russia, that is concerned with protecting the interests of nations that are far from its borders.

It would thus be a tragedy for the world and a major hazard for America if our nation should reduce the effectiveness of its nuclear armament without firm assurance that Russia is not left in a position to exercise military dominance over its neighbors.

There are those, however, who believe that by arming our Nation with the most effective weapons we are exciting the world toward war. My own appraisal of history is the reverse. I believe lack of adequate preparedness for defense has proved itself an invitation to aggression, and that the reactions induced by aggression would be such as to make war inevitable even though the outcome would be disaster.

Thus my basic reason for advocating a continuation of tests of nuclear explosions is because I do not see how we can be confident that our weapons are adequate for defense unless tests continue to be made.

FALL-OUT HAZARDS

A consideration must be given, however, to the dangers that inhere in the tests themselves. As I stated in my testimony before your committee a year ago, these hazards are real, and must be carefully guarded against. Yet in my judgment the magnitude of the hazard has in certain quarters been grossly exaggerated. To my mind, the danger that would surely be done in case war should occur is so much greater, that to hesitate in making important tests because of the relaticely small damage they may do would be a tragic error of judgment.

This is not the place to present the technical arguments; but I note this contrast: On the one hand Professor Pauling and others have stated that each nuclear explosion introduces radioactive materials into the atmosphere that will shorten the lives of thousands of people through such effects as genetic mutations, leukemia, and bone cancer. On the other hand, as of this date, there is only one case (that of a Japanese fisherman) where good evidence exists that a person's life was shortened by fallout. Statistical evidence on populations living in areas where they are exposed to substantially greater differences in ionization than are induced by the usual radioactive fallout show no significant genetic or cancerous effects. Considering the evidence that I have seen, it is my own expectation that when really thorough tests shall have been made, it will be seen that the worldwide effects on people's health of nuclear tests continued at the level of the past few years are small as compared with many other hazards to which we are exposed.

To set the record straight, may I pause to note two points. The first is that the attention recently called to the hidden hazards of radiation has stimulated radiologists to improve greatly their techniques of use of X-rays and radium in diagnosis and therapy. These improvements have already resulted in a reduction in the exposure resulting from fallout. That is, the net result of our work with ionizing rays during recent years has been to reduce substantially rather than to increase our chance of being injured by such rays.

The second point is the very great debt we owe to these ionizing rays in terms of health and human life. Radiologists working independently in the United States and Germany have estimated "roughly but reliably" that the use of X-rays and radioactive materials in diagnosis and therapy has saved the lives of as many persons as have been killed in all the wars fought since 1895 when these agencies were discovered. While it has been salutary to have our attention called to the very real dangers in the peaceful as well as military uses of nuclear rays, we should remember that when properly used such rays are of great human value.

WEIGHING HAZARDS

On the one hand, we recognized the likelihood that some persons will be injured, perhaps even fatally, by the long-time effects of nuclear explosions. On the other hand, we see the chance that a slackening in our work on nuclear weapons may so weaken our defensive strength that the world may be baited into the fatal trap of a major war. In my own judgment, the possibility of drifting into war is by far the greater danger.

If this judgment is correct, we should continue to exert every effort to maintain our defenses. This means that we should continue the development of the nuclear weapons needed to insure the success of the aims of the free world in case war should be thrust upon us. In such work, however, continued care should be taken to avoid endangering people, whether citizens of our own or other nations.

Unfortunately, there exists today no responsible body that can say what experiments are in the interests or contrary to the interests of mankind. This is one of the more obvious duties that the United Nations should be authorized to perform. Until, however, it has a police force of adequate strength, putting such a judgment into effect is beyond the power of the United Nations. Until the United Nations develops such power, the responsibility for conducting nuclear experiments in the best interest of mankind must be accepted individually by every sovereign nation and carried through in accord with its own best judgment.

The policy that guides the United States Atomic Energy Commission is obviously to carry on the experiments that it finds necessary for both military and peaceful purposes, while keeping human risks to a minimum. The responsibility for the broader national and international implications of this work cannot, however, be avoided by the Congress. It is at this point where I should be glad for assurance that the Joint Congressional Committee on Atomic Energy is fully alert to the issues involved.

As a matter of military judgement, it would seem to me wise for emphasis now to be laid on the development of nuclear explosives of lower caliber. It seems evident that if war should come again it is the smaller nuclear bombs that will be most useful as tactical weapons. The relatively limited area of destruction by such weapons would raise far fewer political problems than the use of larger bombs. Superbombs, of over 1 megaton rating, will always be difficult to use in war without raising serious political issues.

We cannot afford to be caught unprepared with the most powerful weapons in case of a real power showdown. Yet, we may hope that only an occasional test of such huge weapons may be adequate for the very unlikely event that their use may be called for. It is thus in the area of superbombs that we may advantageously negotiate regarding reduction of bomb tests. For example, it would probably be within the bounds of prudence to state unilaterally that we will not be the first to use in war a bomb more powerful than a certain specified size. As you are aware, the fallout hazards are thousands of times less for the small caliber bombs, so that their tests are of relatively little international concern.

It is probably fortunate for the world's peace of mind that it is American citizens, rather than those of any other nation, who are exposed most strongly to the radioactive effects of the nuclear explosions that have so far been made. It is this fact also, however, that gives especial point to our taking every possible safety measure as we proceed with our own crucially important experiments.

DIRECTION OF PEACE

I am by no means hopeless with regard to avoiding another major war. For the immediate future I believe the likelihood that such a war would bring atomic weapons into use is recognized by all concerned. No nation would expect such a war to end without itself suffering more damage than its possible gains would be worth. Establishing an enduring peace thus would seem to require most careful and prudent negotiations during the next decade or two. By this time one may hope that the growing strength of new nations, the increasing need for economic and cultural cooperation and the rap-

id strengthening of other international ties will prevent the revival of a will to war.

As I see it, our best means of promoting such an atmosphere in which peace will develop and endure is for us to accept as our firm national policy what we have recognized for generations as "the American Dream," that is, that we shall make it possible for all of our citizens to grow to their fullest stature as men and women, and that we will cooperate with other nations in their efforts to do the same for their citizens. To this end, we would do well, I believe, to negotiate with Russia, intensively and with full determination, working preferably through the United Nations, regarding means of advancing cooperatively with the nations involved, the health, economic condition, and cultural status of men and women everywhere. As this becomes recognized as our consistent and sincere intention, we shall gain the support and confidence of the world. In such world confidence lies finally our only safety.

This, as I see it, is the direction in which we must move—but with every sense alert, lest eager on the way toward peace we fall into some trap that we must expect to find carefully laid for us.

Yours sincerely,

ARTHUR H. COMPTON.

Public Service

EXTENSION OF REMARKS

OF

HON. HOMER THORNBERRY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1958

Mr. THORNBERRY. Mr. Speaker, in the May 14, 1958, issue of the Austin American, Austin, Tex., there is a splendid editorial on the outstanding public service rendered by Texas citizens on the board for hospitals and special schools. Specific mention is made of the notable service rendered by Dr. Raleigh Ross, who is completing his service as chairman of the board, and also another outstanding Austin citizen, Judge W. W. Heath, former secretary of state who has just been chosen as chairman. The editorial is as follows:

PUBLIC SERVICE

The board for hospitals and special schools was created when it became clear that earlier administrative machinery was inadequate. In its earlier years, it was a favorite target of sniping from some quarters in the legislature. It had to get started on something of a trial and error basis; but the important thing is that it has moved into effective operation, in handling 1 of the 3 or 4 biggest programs of State operation.

The board through the years has gained the services of outstanding and unselfish Texas citizens. It has built up executive, administrative, and professional staffs of ability, and has broadened its scope of service to afflicted and handicapped persons. It has provided better treatment and care for the mental patients; has begun to meet much of the demands for care of tuberculars, and, within the few years of its existence, has finally made provision for care of the infirm aged without placing them in overcrowded mental hospitals. Its provision for treatment of the cerebral palsy victims has been outstanding.

Several Austin citizens have rendered notable service on the board for hospitals and special services, past and present. This is emphasized by the fact that Dr. Raleigh has completed a rather long service as chairman of the board, and continues as one of its members; and now another Austin citizen, former Secretary of State W. W. Heath, has been chosen as chairman.

The board is made up of distinguished Texas citizens, typified by Mrs. H. E. Butt, of Corpus Christi, member, and Howard Telepsen, Houston, the board's new vice chairman. And the board always has been fortunate in having outstanding members of the medical profession among its numbers.

This board has the unpaid services, and claims substantial amounts of the time of patriotic Texans in its vital service to State government. It serves the afflicted and the unfortunate, the people who need attention most; and in shaping policies and daily administration to care for these, it is serving the entire citizenship.

The Proudest Happy Birthday Greeting on Record: Hearty Shalom

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1958

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the CONGRESSIONAL RECORD an article appearing in the Jewish Daily News of April 25, 1958. The article is by the editor, Mr. Philip Slomovitz, a close friend of mine and a distinguished journalist and member of our Detroit Jewish community.

The article is entitled "The Proudest Happy Birthday Greeting on Record: Hearty Shalom." It sets forth the best wishes of all men of good will, Catholic, Protestant, Moslem, and Hindu, to Israel on the 10th anniversary of its independence:

THE PROUDEST HAPPY BIRTHDAY GREETING ON RECORD: HEARTY SHALOM

(By Philip Slomovitz)

One need not be a Jew to feel elated in this historic hour which marks the beginning of the second decade of Israel's existence. Catholics, and Protestants, and many realistically minded Moslems and Hindus, have expressed their respect for Israel and their sense of satisfaction over the triumph of fighters of liberty and for autonomy.

Israel's first 10 years were very difficult ones. An uphill trek marked the economic and social struggles involved in welcoming a million new settlers and fusing them into a single, Hebrew-speaking society. While the builders of Medinat Yisrael constantly marched forward, they nevertheless were compelled, as their ancestors were in the days of Ezra and Nehemiah, to manipulate the plow with one hand while holding on to weapons of defense in the other.

It was a struggle for life against great odds—and the battle goes on. The Israelis are, indeed, creating new industries. They are keeping their gates open for new settlers—every Jew who desires to join them has the opportunity of immediate acquirements of citizenship. They are creating universities and are opening new cultural and scientific vistas. They are building new roads and are opening new theaters. They are preparing for a very full life for themselves and their children.

Their most sacred hopes and aspirations are being fulfilled. Yet, their neighbors remain antagonistic. War threats continue to plague them. Their salutation is shalom—they virtually beg for peace—but their pleadings meet only with hatred.

It need not be so. Long ago, it could have been otherwise, all battles between the Semitic cousins could have been averted, for the simple reason that the masses among the Arab peoples are kept in ignorance, else they would have supported every peace move made by Israel. There are many Arab leaders who pray for the day of peace for their people and for Israel, but they fear the assassins' threats that emanate from the ranks of a handful among the ruling element who desire to dominate and to continue to rule in their medieval, tyrannical fashion.

Indeed, there is recurring evidence that many Arabs, like nearly all the Israelis, desire peace and would like to negotiate it through direct talks with Israel. Only a week ago, the JTA reported an Arab refugee leader's statement, at a press conference in Istanbul, of his readiness to meet with Israel's Prime Minister David Ben-Gurion to discuss a permanent solution of the refugee problem.

In his most informative book, The First 10 Years, Walter Eytan, director-general of the Israel Ministry for Foreign Affairs, offers many examples of Arab peace overtures to Israel. A typical example was his experience at the armistice conference in Rhodes. While Israelis then met in one room with the Egyptians, the latter at first addressed their remarks only to the mediator, Dr. Ralph Bunche, as if the Israelis never existed. But the atmosphere improved and the delegations soon argued directly. During the 6 weeks at Hotel des Roses, Eytan writes, "we became quite friendly with the Egyptians. Their earlier attitude may have been due to insecurity and shyness, or to instructions; I am certain it was not caused by any deep-seated hostility. We did not meet socially much, but when Abdul Moneim Mustafa, the chief political adviser on the Egyptian delegation, fell ill, we sat at his bedside and comforted him. * * *"

There was more socializing later on, and the Israelis thought, after the party arranged by Dr. Bunche, upon the signing of the armistice, that we had not only brought the fighting phase to a formal end, but had laid the foundations at least of normal relations between our two countries.

Yet, the very Abdul Moneim Mustafa whom the Israelis had comforted in Rhodes became Minister of Egypt at Berne and an assistant secretary-general of the Arab League. Early in 1957 he turned up in a new part, as a member of King Saud's entourage on the state visit to Washington.

How are we to account for it? Very simply: the lack of encouragement to Israel's peace efforts by the world's great powers, notably the men who have become so blinded to the actual Middle Eastern situation in our State Department Walter Eytan's story of the conciliation efforts at Lausanne proves it. The Arabs might have met face to face with the Israelis, had they been seriously urged to do so. But, by that time, unlike the actions of Dr. Bunche at Rhodes, the great powers already had begun to appease the oil interests, and there never was a direct meeting between Israel and the Arab states. But privately, representatives of every Arab state sought meetings with the Jewish representatives. Almost the only relief, we learn from Eytan, was afforded by the efforts of each Arab delegation to make secret contact with that of Israel. Each was determined to meet the Israelis, but only on condition that the others should not know about it.

That is how it has been going on ever since Israel was reestablished as a sovereign

state. King Abdullah was assassinated because he planned to make peace with Israel. Every Arab politician who dared to encourage peace with Israel merely risked his life. Every time the news leaked out that Arabs were negotiating peace talks, the reports were repudiated because the pacifists only risked their lives. It may well be that Naguib's elimination from power in Egypt was his conciliatory attitude toward Israel.

Illustratively, Israel's three major officers—President Itzhak Ben-Zvi, Prime Minister David Ben-Gurion, and Foreign Minister Golda Meir—emphasized their craving for peace, in their messages just released on Israel's 10th anniversary.

President Ben-Zvi prays to the Almighty "that real peace may reign in this country and in our relations with all peoples, near and far."

Premier Ben-Gurion says "we look to the future with confidence in the Rock of Israel, depending on our strength, and on the justice and purity of our cause, believing in the brotherhood of world Jewry, and hoping for the good will of all nations who seek peace and justice and freedom."

Mrs. Meir makes this emphatic assertion: "We fervently hope that in our second decade, our Arab neighbors will abandon their futile efforts at our destruction, and peace will come to our tormented region. But be that as it may, we shall persist in our work of reconstruction and development, in the rebuilding of our land and in the ingathering of our people."

That is how Israelis have been speaking throughout the 10 years of the state's existence. Unfortunately, the Arab not only shunned peace but even averted talking about it. The only word on their lips in relation to Israel has been "war," and their chieftains truly sought it. But they have never been able to prove that their people desired it. That is why they have failed and must continue to fail. Therein lies the solution for the rest of the world: in the best interests of the Arab peoples, they must demand direct negotiations between Israel and her neighbors for peace. Then we shall surely have peace.

In spite of the militant pressures from Arab quarters, there is good reason to believe that they could never have grown to their present grotesque proportions if it were not for the tacit encouragement the Arab militarists and feudalists were given by the Western powers. It is such encouragement that lends strength to Nasser, the defeated general who has become a triumphant statesman.

We are dealing with realities on Israel's 10th birthday, only to indicate that there is much hope for peace, that the current celebration is by no means clothed in fears stemming from threats from Israel's neighbors. Even if there should be a partial renewal of hostilities, it will not prove the emergence of serious dangers.

Israel is here to stay. The eternity of Israel has been determined long ago, and has been reaffirmed by the will to live of the people of Israel.

This is the dominant note in the Israel celebration. It is the heartening element in the life of the Jewish people.

Israel has reason to be proud, her people can hold their heads high. They are building and creating well. They are making friends. They have formed an indestructible partnership with the Jewish people. They have formed a warm friendship with great nations, notably the United States, France, and others.

All these developments have led to a glorious anniversary. Never before has the happy birthday greeting meant as much as it does now, in the joyous state in which we acclaim the growing child of 10 among the nations of the world whose creative spirit has elevated it to the status of more than a prodigy—rather to that of administrator of Altneuland (as Theodor Herzl termed it)—the oldest land clothed in the newest and youngest attire. A young and enthusiastic spirit rules an ancient nation. All who desire to see the survival of justice and peace on earth must wish it well.

A Message From the Mayor, Thomas J. O'Connor, Jr.

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. BOLAND. Mr. Speaker, the New York Sunday Times yesterday published a particularly outstanding supplement focusing attention on the Commonwealth of Massachusetts and appropriately entitled "Massachusetts Means Progress."

The entire supplement was devoted to the manpower, capital resources, governmental climate, and natural resources of our great Commonwealth. I want to compliment Commissioner John T. Burke, of the department of commerce, for the cooperative effort his department made in making this supplement possible, and for the beautiful display of colored pictures of some of the finest areas of Massachusetts.

Mr. Speaker, I would like to direct the attention of my colleagues in Congress, and readers of the CONGRESSIONAL RECORD, to the message of Mayor Thomas J. O'Connor, Jr., of my home city of Springfield, which appeared in the supplement. Under permission heretofore granted, I include Mayor O'Connor's message in the Appendix of the RECORD:

A MESSAGE FROM THE MAYOR, THOMAS J. O'CONNOR, JR.

Whether you're expanding, moving, or starting a brandnew enterprise—you can't beat Springfield.

Springfield is the focal point of a metropolitan area of half a million customers—the largest of a cluster of 3 cities—with 5 cities within a 20-mile radius.

Springfield is located on four railroad lines serving all points. Springfield is located on the Massachusetts Turnpike, with three access roads in the area. You can ship direct by truck via turnpike to Boston or west to Chicago. City hall is 12 miles from 2 major airports.

Springfield has unsurpassed industrial sites suited to every industrial need—and Springfield has a building, improvement, and expansion program that guarantees continued progress:

A 503-car parking facility in the heart of downtown.

An east-west expressway, connecting the Massachusetts Turnpike with Springfield's north-south expressway, providing rapid transit direct from all outlying areas to the heart of the city.

A multi-million-dollar urban renewal program—integrated with the expressway and off-street parking program—with promises of more to come.

A completely modern 110-acre industrial park, complete with railroad siding, parking, and easy access to the Massachusetts Turnpike.

Springfield's economic strength is based on business, insurance companies, and industry, and Springfield's industrial structure is thoroughly diversified—the best cushion against nationwide economic fluctuations—a structure that guarantees skilled personnel of every description, augmented annually by graduates from Springfield's specialized training schools.

Springfield is on the march. Businessmen and industrialists looking for the best location will find Springfield poised and ready for expansion as the metropolitan center of western Massachusetts.

The mayor's office and the entire city government are determined to help you in every way possible. Come in and see us. Come to Springfield and look around—talk it over.

And you'll agree with us, "You Can't Beat Springfield."

The Real Story of TVA—A True Partnership

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. EVINS. Mr. Speaker, in connection with the 25th anniversary of the TVA, under unanimous consent I insert the following article by the Honorable Barrett C. Shelton, entitled "The Real Story of TVA—A True Partnership," to be reproduced in the Appendix of the RECORD.

THE REAL STORY OF TVA—A TRUE PARTNERSHIP

(By Barrett C. Shelton)

In this, the 25th anniversary year of TVA, many could point to its spectacular achievements—its system of great dams and unified control of a river system, its towering steam plants, the development of the largest electric generating system in the world, its tremendous contributions of power to atomic development and the national defense. My story concerns itself with people—the people of the TVA region and what they have accomplished in a quarter century of working partnership with TVA.

Years ago, in 1943, my paper, the Decatur Daily, editorially summed it up this way: "We can write of great dams * * * of the building of homegrown industry, and of electricity coming at last to the farms of thousands of farm people in the valley. Yet the significant advance has been made in the thinking of a people. They are no longer afraid. They have caught the vision of their own powers."

The best place to start a story is at the beginning and at home. For years before TVA, the progressive citizens of Decatur had tried to improve conditions, to establish a sound economy for the city and for its surrounding trade territory. The assets, the resources for growth were here, but we couldn't take advantage of them. Our agriculture was based on one cash crop—cotton, which drained soil of fertility and opened it to erosion. Past our door flowed the Tennessee River, majestically broad but largely useless. Its power was untapped, its navigation chiefly a local affair of no significance, its waters often dangerous in flood. Industry came hard, and it came for the wrong reasons—subsidies and low wages. Then came the great depression. Cotton was down to 5 cents a pound. The railroad shop, our major industry, closed down, putting 2,000 men and women out of work. Another industry, brought to the city in earlier years with a considerable subsidy,

went bankrupt. Most of our banks were closed.

Then came TVA. In the beginning I was against it. Perhaps I feared the superstate which some people mostly outside the valley, had tried to call it. I knew I wanted no Government control over me or my people. Others felt the same way. Into this almost frankly hostile atmosphere walked David Lilienthal, one of the TVA directors, one midwinter afternoon. When we met in conference, our attitude was: "All right. You were not invited, but you're here. You are in command. Now what are you going to do?"

Lilienthal's answer took us by surprise: "I'm not going to do anything. You're going to do it."

TVA had no intention of taking command. It had no powers beyond those traditional functions exercised elsewhere by the Government through other agencies. It would, Lilienthal explained, provide the tools of opportunity—a navigation channel, protection from floods, low-cost power, better fertilizers, and farm test demonstrations to show how they could be used. "What you do with these tools is up to you," he said.

Dr. Harcourt Morgan, another director, brought us the same word. He talked of the relationship of people to the land, of the need for building the soil with phosphate, lime, and legumes, of the need for farm markets and processing plants, of making the most of our own natural resources rather than reaching out into other regions for industry.

Here was a new insight into our problems and how to solve them. We looked about us, and we started to chart new courses. We saw we needed agriculture with a stable, year-round income, and we induced the local ice company to install packing plant facilities to provide a market for livestock, a step toward more diversified agriculture. We scraped together the capital for a small milk plant, not hoping for a profit but simply to provide a pay check every 2 weeks for farm families in our section. The plant was a success almost from the start. It paid substantial dividends to its rather surprised stockholders.

As the dams went up, navigation became a reality. Taking advantage of it, Nebraska Consolidated Mills Co., established Alabama Flour Mills at Decatur. Besides bringing in midwest grain, the mills provided a market for local grain—$2 million worth in 1955. Grain barges now ply the length of the Tennessee, to mills and elevators at Guntersville, Ala., and Chattanooga and Knoxville, Tenn. Tennessee Valley Fertilizer Cooperative established a fertilizer mixing plant serving 10 counties. The possibility of selling seed commercially led to establishing a modern seed-cleaning plant. Other industry has found the city attractive, and today, instead of a single major industry, there is a diversity of plants producing many products. The city has doubled in population, from 12,000 to more than 24,000. It feels it is on a stable foundation, confident of its powers.

In all this development, the TVA has been a helpful adviser, never the dictator. It has provided technical services and facts about our resources, or about the requirements of industry, that we needed to know. "Here are the facts," has been its attitude, "and what you do with them is up to you."

That has been the story, all up and down the valley, in almost infinite variety. Far from taking the prerogatives of States, counties, cities, and citizens, the TVA has persistently urged them to take more and more responsibility to themselves. Its fertilizer and agricultural development activities has been channeled through the State extension services. TVA has operated in the confidence that once the facts and the tools were placed in the hands of the people, they would know what to do with them.

How well this yeast has permeated is perhaps epitomized by the comment of a mountain preacher who attended an agricultural extension meeting for farmers and ministers in a North Carolina county. "From now on," he said, "I'm going to preach less hellfire and brimstone, and more phosphate and limestone."

About 50 miles upstream from Decatur, another small Alabama city, Guntersville, faced what at first seemed to its citizens an insurmountable problem. It was a trading center for surrounding farmers. When TVA began the construction of Guntersville Dam, 10 miles downstream, the people of Guntersville learned that the rising reservoir waters wolud cover much of the farmland and on which their trade depended.

For many of the 3,000 people in the town, there seemed to be only one answer to this dreary prospect. Town officials, businessmen, bankers, and just ordinary citizens appealed to the TVA to buy the entire town, so they could take the cash and move.

Instead, TVA suggested the formation of a local planning commission to take a hard look at the problem and see what steps the town could take. TVA provided funds to the Alabama State Planning Commission to finance expert assistance to the local commission, and it cooperated by providing detailed maps and other data. The studies indicated that the town's income might be reduced as much as 30 percent. How could this be replaced? The answer was found in the new reservoir itself.

The commission set to work on a scheme to make the new reservoir an asset rather than a liability. It saw possibilities of industrial development and trade resulting from the new navigation channel, along with the opportunity of making the town a recreation center for a wide area. This called for detailed and careful planning in order to make the most of the waterfront. The town, after filling of the reservoir, would be on a peninsula, surrounded on three sides by water. A deep and navigable embayment on the east side of the town was set aside for commerce and industry; instead of purchasing and flooding low lying land on this side of the town, the TVA built a protective dike. West of the peninsula, a shallower embayment was planned for recreation.

When an oil company approached TVA for use of a small level area created by the dike at the north end of the town, jutting into the lake, for a bulk storage terminal, the decision was referred to the planning commission. The land, the commission decided, should be developed as a waterfront park, but it did not stop at this point. It worked with TVA and the oil company to find a suitable site on the industrial embayment for the terminal. Other similar decisions on detailed, practical matters were made.

The real test was yet to come, when Guntersville Dam was closed and the reservoir encircled the town. The doubts of all skeptics were soon resolved. In connection with the dedication of the dam, the town sponsored a program of motorboat races. It was hoped that several thousand people would be attracted to the event. More than 50,000 came. By 11 o'clock in the morning, all food and soft drinks were gone, highways were blocked with parked cars. None could miss the point of the demonstation. Guntersville's future as a recreation center was assured, and shortly its citizens were improving eating and housing facilities for guests and embarking on the sale of fishing tackle and boating gear.

Today Guntersville is a busy river port and recreation center. What seemed like impending ruin has been transformed into a prosperous present and a promising future. Huge three deck automobile barges regularly flood the town's docks with automobiles for distribution through the Southeast. An elevator receives Midwest grain. Far from withering away, the town has doubled in population.

The case of Guntersville was typical of the way TVA enlisted the talents, energies, and resources of State and local agencies and of citizens. Wherever communities were faced with readjustments because of the building of dams and reservoirs, TVA urged the responsibility on State and local planning commissions, using the money it would otherwise have had to spend doing the job itself. The TVA funds helped set up the agencies. In 1933 there were no State and only two city planning agencies in the Valley. Today there are six State planning bodies and 65 local agencies, all operating independently and supported by State and community funds.

The same with libraries. Instead of setting up its own libraries at construction camps, TVA contracted with existing city libraries to provide service which was also open to nearby communities. When the construction jobs closed down and TVA's support was withdrawn, the libraries remained, supported by State and local funds. Moreover, they provided the seeds for expansion. Figures from Tennessee tell the story. In 1942–43 the State provided no funds for regional library service; TVA funds amounted to $13,800 and local funds a little over $4,000. Ten years late TVA provided no funds, the State contributed $170,000, and local sources $125,000—a total of $295,000. Library service spread out to new territories.

Why this opportunity was seized is illustrated by the statement from one county facing the loss of library service when TVA support ceased: "We have 6,000 people—no telephones, no railroad, and no newspapers. The bookmobile and the grapevine are the only means of communication. Talk about country people not reading? In this county we read 4,000 books a month."

Take the forest resources. Forests and woodlands cover half the Valley land area. But in 1933 they were neglected, burned over, sometimes abandoned and eroded, seriously depleted. State forestry agencies were virtually inactive, no reforestation was going on, and protection against fire, except on Federal- or State-owned land, was practically nil. TVA moved in all these fronts. It began supplying seedlings for planting. It helped States and counties set up effective fire-prevention organization. It made periodic and systematic inventories of forest resources.

State and local agencies pitched in. More than nine-tenths of the forests now have fire protection. Nearly 300,000 acres have been reforested. Today TVA, which once was the only source of seedlings, produces less than half of those planted by landowners each year. State forestry agencies have grown and the scope of their activities has been enlarged. Where they expended only half a million dollars in forest work in 1939, the same 7 States invested nearly $15 million last year in promoting forest improvement.

This activity has paid off in better forest management and more forest income. New wood-using industries are appearing. Landowners are eager to plant trees, and local bankers and businessmen are eager to help them by buying and loaning mechanical tree-planting equipment.

Full use of the forest resource also depends on other developments. The location of a multi-million-dollar paper and pulp plant by Bowaters Southern Paper Co. illustrates how the various phases of integrated development mesh together to promote industry. When Bowaters became interested in a southern location in the 1940's, TVA statistics showed that the forests and woodlands could supply a large plant in addition to the

existing use. Pine plantations had reached the stage of thinning for pulpwood. Interest in forest management was gaining momentum. Electric power was available. Due to the multiple-purpose system of dams, a flood-free plant site could be found on the Hiwassee River arm of Chickamauga Reservoir, upstream from Chattanooga. Ample water was available for processing. The navigation channel offered opportunities for transportation of raw materials and finished products. In 1953, Bowaters had completed a $55 million plant which has since been expanded. It provides a market for wood over a $300-mile radius and, to round out the circle, this promotes more intense interest in forest development on the part of the valley people.

Local pluck and perseverance, plus the tools provided by integrated resource development, have paid off in the past few years for Calvert City, a town of some 300 population in west Kentucky. The town and its trading area fell into decline after World War I, when the market for dark tobacco, the only kind that would grow well on its lands, disappeared. In 20 years, the county lost 5,000 population.

The Draffen brothers, Luther and Art, operators of the general store, kept pushing for something to be done about it. Resources were there: The Tennessee and Ohio Rivers, the Cumberland, and only 70 miles away, the Mississippi formed a network of waterways for transportation and potential sources of power. Power was needed for industry to balance agriculture, but Calvert City couldn't even get electric lights until local citizens set up a generator in a flour mill. From the 1920's on, the Draffens and their fellow citizens sought, through Federal and State and private sources, for the kind of power they needed, and they plugged away at pointing out the advantages their area could offer industry. In the late 1940's, their dreams were realized. The Pennsylvania Salt Co. built a plant to be near the fluorspar deposits it had acquired in Kentucky and to take advantage of the power available from TVA. It was followed a few years later by the Air Reduction Co., and the National Carbon calcium carbide and acetylene plant. B. F. Goodrich Chemical Co. set up a plant to make basic vinyl chloride for its polyvinyl plastics from basic materials provided by the other plants.

Today Calvert City is struggling to keep abreast of the new industrial development, based on a chemical manufacturing complex it had sought so long, and it looks forward to a population of 10,000 by 1960.

So it goes, all up and down the valley region. Is it any wonder that we are sometimes astonished to learn, from outside critics, that we are obviously under the heel of an autocratic government agency, or at best, are the wards of a paternalistic socialism?

The real story of the past 25 years is a practical demonstration of the way the combined cooperative work of a forward-looking Federal agency, State and local agencies, educational institutions, and private citizens—farmers, labor, business and professional men—can make the most out of the basic resources of a region. No State, no city, no county, no private enterprise could have developed the Tennessee River in a unified way to capture all the multiple benefits it offered, from its sources in the mountains to its mouth. Only the Federal Government, through the TVA, could have done it. At the same time, our experience over this past quarter century has shown that huge planning and engineering tasks can be undertaken and carried out without a loss of democratic values or freedoms. Quite the contrary; the combined efforts of the Federal Government and the people have opened up new and wider opportunities, have given scope to individual talents, intelligence, and enterprise. The result has been a richer, more productive region, and a richer, more productive Nation.

An Appeal to the People of Italy

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I am inserting into the RECORD the text of an appeal to the people of Italy which I am making at this time on the eve of very important parliamentary elections to be held there on May 25. This statement is being circulated there in the press and through other mediums of information. It is as follows:

STATEMENT OF CONGRESSMAN VICTOR L. ANFUSO

On the eve of a very crucial election in Italy, I appeal once again to my forebears, and particularly to the youth of that country, to cast their lot on the side of freedom and independence by voting against the Communists and their fellow travelers.

I do so as one who was born in Italy, who is at all times interested in the welfare of its people, and who is anxious that it remain an independent and sovereign state with the freedom to determine its own destiny. I do so because I have very close relatives who still reside in Italy, and I am anxious that they and their children and all the people of Italy may continue to live in freedom and dignity instead of enslavement and degradation foisted upon them by an outside godless power.

Just a decade ago, in the parliamentary elections of 1948, I made a similar appeal to the people of Italy to repudiate communism. In fact, I urged thousands of others of my fellow countrymen to do the same by calling on their relatives and friends in Italy to support the parties which stand for democracy. The victory of the people at that time laid the basis for a strong alliance and a close friendship between Italy and the United States which resulted in the restoration of Italy as a formidable power in the West and a leader in the family of nations.

There were other achievements, too, which inured to the benefit of all Italians. The most striking of these is the fact that from the depths of depression and discouragement, which followed in the wake of World War II, Italy has accomplished an economic miracle which is practically unparalleled in modern times. With the aid of America, but primarily through the indefatigable energy, determination, and zeal of the Italian people, Italy has attained great economic progress coupled with political democracy. Economic growth and political freedom go hand in hand in Italy today.

A decade ago the sinister aims of international communism were not too well known. In their despair and disillusionment after the war, millions of Italians were misled to join the Communist Party as a protest against existing inequities and in search of a better life. By now, it is quite clear to many that this was a false and elusive hope. Years of experience with international communism has convinced thinking men and women in Italy and in other countries that the promises of communism are both worthless and dangerous, that freedom and liberty are the bases of a true democratic form of government, and that they are too great a prize to sacrifice for a regimented Communist way of life.

One need only recall the revolt of the Hungarian people in 1956, when their efforts to attain political freedom and independence were drenched in blood by Russian troops and tanks. The murder of hundreds of Hungarian freedom-fighters, men, women, and children, horrified the whole civilized world. Here was an instance where communism removed its mask and showed its true and ugly face for all the world to see.

The Yugoslavian situation is no better. On the one hand, a rigid Communist dictatorship has been set up in the country which has deprived the people of all freedom and has forced many to flee into neighboring countries. On the other hand, Yugoslavia is struggling to shake off the yoke of Moscow's domination and control.

It is no wonder that neutral nations are ever more alarmed over the Yugoslav situation than over the Hungarian situation in 1956. Prime Mnister Nehru of India put it very bluntly when he recently obeserved that the Communists in any country are not bound by the national interests of their country, but are guided by a totalitarian power emanating from Moscow. An example of this occurred in Italy in the about-face of the Italian Communist Party, which first supported Tito's Communist Party in Yugoslavia and then rejected it on orders from Moscow. Similar instances can be recited time and again when the Communist Party of Italy changed its course at Moscow's directions.

This interference on the part of Moscow should be compared with the attitude of the United States. In addition to extending the fullest possible measure of aid, the United States has never made any demands on Italy, other than that it remain a free and democratic country for the benefit of its people; it has promoted Italy's admission to the United Nations; it has always recognized Italy's right to voice its opinions as a free nation in a free society; and it has respected the wishes of the Italian people in every way.

I am particularly concerned over the fate and the future of the youth of Italy. I should not like to see them because the puppets of a totalitarian regime, going through the agonies of Communist brainwashing, facing enslavement and human degradation, becoming the prisoners of the Kremlin leaders who are not really interested in their welfare but are exploiting them for their own selfish purposes. The hope of Italy's youth—and of the youth of all nations—lies in a free society, where they will have opportunities to advance themselves, to attain a good education, to live in a better world. By following the leadership of power-hungry Communist despots, they will only rob themselves of all freedom and all opportunities for a better life.

Communism's lack of faith in a supreme being, its defiant challenge of the eternal power of God, and its disregard of the dignity of man, are among its greatest weaknesses which eventually must and will lead to its disintegration. It cannot forever go on to ignore basic precepts of God and man.

The time has come when the youth of Italy, together with the youth of other countries, must begin to build a better and a happier world. This is the challenge of the hour. In Italy, the youth now has a golden opportunity to help rout communism at the polls and thus safeguard the future of their country and their own survival as free men and women.

In my own country, the United States, I have urged my Government to call a conference in the near future of youth and youth leaders of all countries, including those of Communist countries, in order to

obtain their views and opinions on many pressing problems and to cooperate in preparing for a better and more peaceful tomorrow.

Perhaps my own case is the best example I can cite to the youth of Italy, in order to impress them the threat to the individual under communism. Had I in my youth migrated to Russia, I would today either be dead or in a slave labor camp because I could never accept the denial of free speech, freedom of worship, and all other freedoms to which we are entitled as human beings. Only in America would I find the opportunity to rise from a humble beginning to become a judge and now a Member of the United States Congress, the greatest deliberative body in the world.

During all these years I have never lost interest in Italy, the land of my birth, and in its people. In World War II, I served as an intelligence officer in Italy. Since the end of the war, I have followed with utmost interest all developments in my ancestral home, its economic growth, the political parties, etc. I have watched with the deepest of interest the change to a republic, the development of free institutions, and the participation of the Italian people in their Government, in elections, and in every phase of life as free citizens.

It is my considered judgment that a two-party system is more preferable. It was the two-party system which has advanced the United States to the position it occupies today in world affairs, while countries having a multiple-party system have been relegated to an inferior position. Too many parties in a country are apt to cause confusion in the minds of the people regarding major issues, they account for disunity, and for all practical purposes it does not provide the government with the required strength and authority which it must have in its dealings with other nations.

I should not like to see Italy reach such a position in world affairs. There must be no confusion in the minds of the Italian people regarding their present problems and their hopes for the future. They must and can solve their own affairs in the interests of Italy and the people of Italy, not in the interests of Moscow and its power-hungry leaders.

It is for this reason that I call on the citizens of Italy, and especially on its youth, to express their support for freedom and democracy by casting their ballot for the Christian Democratic Party. This party is the greatest single force against communism in Italy today. A substantial victory for the Christian Democratic Party will enable it to form the kind of a government which will have the interests of the Italian people at heart, will better guide the destiny of Italy in the years ahead, and will add strength to the free world for a better tomorrow.

Citizens of Italy, the survival of your people as a free nation is at stake. Will you rise to the challenge? True friends of Italy all over the world will await your reply on May 25.

Foreign Trade Policy

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. McINTIRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication addressed to all Members of the House of Representatives by Miles D. Kennedy, director of the national executive committee of the American Legion under date of May 16:

Referring to the proposed extension of the Trade Agreements Act, I enclose a copy of Resolution 41 adopted at the April 30–May 2, 1958 meeting of the national executive committee of the American Legion, our governing body between national conventions.

This resolution urges Congress to enact legislation and the Government to adopt a foreign trade policy that will prevent injury to and liquidation of industries essential to the defense and the economic welfare of our country.

We would appreciate it very much if this resolution could be given favorable consideration by you at the appropriate time.

The American Legion supports a truly reciprocal trade policy, one which will not do mischief to our economy and defense potential.

Barre Falls Dam Project Is Dedicated

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. BOLAND. Mr. Speaker, the first flood-control dam and reservoir to be completed by the Army Corps of Engineers since the disastrous 1955 floods in New England was dedicated Friday at Barre Falls, Mass. The Honorable Wilber M. Brucker, Secretary of the Army, was the principal speaker. I wholeheartedly agree with Secretary Brucker, who said in his speech that flood protection for the Connecticut River Valley must be prosecuted vigorously.

Under leave to extend my remarks, I would like to have printed in the RECORD news stories from the Springfield Daily News of Friday, May 16, and the Springfield Union on May 16, telling of the Barre Falls dam dedication, and including my statement on this event:

[From the Springfield Daily News]

BARRE FALLS DAM PROJECT IS DEDICATED—SECRETARY BRUCKER IS SPEAKER AT $2-MILLION RIVER CONTROL WORKS

BARRE, May 16.—Army Secretary Wilber M. Brucker said today that Federal flood-control work in New England must be prosecuted vigorously.

Brucker led a delegation of dignitaries attending today's dedication of the $2,030,000 Barre Falls Federal flood-control dam and reservoir. The Barre Falls complex is the first project finished under the Army Corps of Engineers New England flood-control program since the 1955 floods.

"In the light of the tremendous damages caused by the 1955 flood," Brucker said, "the Corps of Engineers is now engaged in another review of the flood-control needs in the New England area. We of the Army are convinced that flood protection for the Connecticut River Valley and other flood-producing basins must be prosecuted vigorously."

Brucker said flood-control problems in this area trace back to 1639, but it took the 1955 floods, claiming 90 lives and damage of half a million dollars, to revive interests in Connecticut Valley flood work.

He contrasted flood projects here with those in Russia, where 17 reservoirs on the Volga River already have been completed but done ruthlessly by excluding people by edict and without recompense from their homes in river flood plains.

Lt. Gov. Robert F. Murphy said the project adds so much to both the safety and scenery of this section of our Commonwealth.

He said all of about a dozen planned dam-reservoir projects are part of a needed and vital program designed to control floodwaters in the Connecticut River Basin and prevent any repetition of our flood horrors of 1955.

The Barre Falls dam rises 62 feet from the Ware River bed and stretches 885 feet. Three 48-foot high dikes, extending a total of 3,215 feet, straddle the river upstream from the dam. The dam controls a drainage area of 55 square miles, and the reservoir has a storage capacity of 7,900,000 gallons.

Thirty industrial plants, 300 homes, 62 business concerns, and 90 farms are within the project's shelter area. In the 1938 flood-damage in that area amounted to $4 million.

The dam is situated 32.7 miles upstream on the Ware River from its confluence with the Chicopee River at Palmer, and 49.8 miles above the junction of the Chicopee and Connecticut Rivers.

[From the Springfield Daily News]

BOLAND STRESSES SUCCESS OF FLOOD CONTROL PROJECTS—UNITED STATES REPRESENTATIVE PRAISES WORK IN NOTING DEDICATION CEREMONY FOR BARRE FALLS DAM

WASHINGTON, D. C., May 16.—Representative EDWARD P. BOLAND, Democrat of Springfield, noted the dedication of the Barre Falls flood control dam and reservoir today and pledged his continued efforts to "help guarantee our valley against disastrous flooding."

A member of the all-important congressional Appropriations Subcommittee for Public Works which was responsible in providing funds for flood control projects, including Barre Falls, Representative BOLAND expressed regret that he was unable to attend the ceremonies. His Committee on Public Works met in session today.

ANOTHER STEP

The Second Congressional District Representative issued the following statement:

"The dedication of the Barre Falls flood control dam and reservoir today marks another step forward for providing flood protection for people and property along the Chicopee, Ware, and Connecticut Rivers.

"The Barre Falls Dam is another link in the chain to provide adequate flood control in the Connecticut and Chicopee River Basin. The harnessing of water by means of dams and reservoirs is the most effective way of guarding against the ravishes of floods.

"I am happy to note that the comprehensive plan for flood control in the Connecticut River Basin is now moving ahead at a pace that assures the completion of the plan in the not too distant future.

"We have witnessed and are now witnessing the effectiveness of controlling floods. The extremely heavy snows of the past winter, melting into spring freshets, have dumped millions of gallons of water into the river basins."

LITTLE DAMAGE THIS YEAR

"All of the cities and towns in our valley have felt the damaging results of uncontrolled floods in the past. This year's thaw of the mountain and high land snows produced little damage to the localities. A great dam, floodwalls and dikes have paid off to stop the flooding of property and danger to lives.

"As a member of the Appropriations Subcommittee for Public Works, responsible for providing funds for flood control projects throughout the United States, I intend to continue to push for the completion of the plans for dams, reservoirs and dikes that will help to guarantee our valley against disastrous flooding."

[From the Springfield Union of May 17, 1958]

DEDICATE BARRE FALLS DAM AS FLOOD CONTROL PROJECT—ARMY SECRETARY WILBER BRUCKER HEADS NOTABLES AT CEREMONY PUTTING RESERVOIR IN SERVICE

BARRE, May 16.—Once the favorite picnic grounds of Barre folks, Barre Falls Dam was formally dedicated today by Secretary of the Army Wilber M. Brucker. The President's cabinet member said that the $2 million reservoir is the first step to helping people of the Ware and Connecticut Rivers valley to wipe out floods and disaster. The completed dam has been in operation since the first of the year.

FLOOD CONTROL PROGRAM

Barre Falls Reservoir is the initial unit in a comprehensive flood control program designed to control waters in danger periods in the entire Connecticut River watershed to prevent repetition of the floods of 1955, 1938 and 1936. The reservoir will provide protection to sections of the Ware and Chicopee River Basins within which are some 30 industrial plants employing about 5000 persons, 300 homes, 62 stores and commercial enterprises and 90 farms.

The dam and reservoir which will protect portions of the Ware and Chicopee River Basins, is the first such project to be completed by the United States Corps of Engineers as part of the reactivated New England flood control program. Construction of the project was supervised by the Springfield area officer of Army Engineers with Lane Construction Corp. of Connecticut as the contractor.

Greetings at the dedication ceremonies at 10 a. m. were extended by Lt. Gov. Robert F. Murphy of Massachusetts. Joining Secretary Brucker on the speaking program were Gen. Alden K. Sibley, Division of Engineers, United States Army, New England Corps of Engineers with offices in Boston; Maj. Gen. Sidney C. Wooten, commanding officer, Army Engineer Corps Reserve at Fort Devens and Lt. Gen. Blackshear M. Bryan, commanding officer, First United States Army, at Governor's Island, N. Y.

INDUSTRIAL PLANTS HIT

In the flood of 1936 there were damages estimated at $6.5 million on the Chicopee River and its tributaries below the present Barre Falls dam site. Losses to industrial plants and to individuals in the 1938 flood that preceded the hurricane was many more millions of dollars. It was pointed that flood damage was not too extensive in the Barre area in 1955, but that the disasters experienced in the Connecticut had their origin in tributary uncontrolled waters such as the Ware River.

The Barre Falls Reservoir will be operated along with five reservoirs constructed in the Connecticut River Basin by the Army engineers in the past 15 years and with flood protection works in Chicopee, Springfield, West Springfield, Hartford, and East Hartford, will help to prevent future great flood damages.

The Flood Control Acts of 1936 and 1938 authorized the construction of Barre Falls flood control project and in 1946 Congress appropriated $55,000 for the first planning of the reservoir. In 1956, $1,450,000 was appropriated for this project and work was started at once by the Army engineers. Ground breaking ceremonies were held on the site on June 15, 1956, with Maj. Gen. Charles B. Holle, Deputy Chief of the United States Army Engineers, principal speaker. Completion date was scheduled for December 13, 1957.

CONSERVATION POOL

In the event of flood the reservoir will hold back 8 billion gallons of water. In addition to serving as a flood control dam it can serve as a conservation pool, holding back water, and which could be diverted to the metropolitan district commission reservoir.

Serving as a gateway to the reservoir are two old mill wheels which were moved from the riverbed.

Rev. J. Marcus Murtough, pastor of St. Thomas-a-Becket Church of South Barre, asked invocation and the Rev. Edwin W. Alexander, pastor of Hast Congregational Church Ware, gave benediction. About 300 residents attended the dedication ceremonies. Among them were Ware and Connecticut River Basins town officials and the mayor of Chicopee, Walter J. Grocki.

John F. Shaw, vice president of the Chicopee Manufacturing Co., was chairman of the dedication committee and master of ceremonies. The Army band from Fort Devens furnished the music.

They Can't Run Your Farm From Washington

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1958

Mr. DORN of South Carolina. Mr. Speaker, Secretary Benson is resisting pressure to place price supports on livestock, made a great contribution to our farm economy and to the freedom of our farmers. Had Mr. Benson succumbed to this pressure, our livestock farmers would be in the same plight as the cotton, tobacco, wheat and corn farmers.

Years of Government regulations, price supports, redtape and regimentation has resulted in confusion and a substandard of living for many of our farmers. The time has come for a new farm program—one that will permit our farmers to use imagination, incentive, self-reliance, and the free enterprise concept.

The American farmer can compete in the markets of the world. He cannot compete in the world markets with regimentation, small acreage and the Federal Government breathing down his neck. The American farmer is, by nature, creative and ingenuous. Let us free him from his Government shackles and turn him loose.

Mr. Speaker, my good friend, Dr. Earl Butz, when he was Assistant Secretary of Agriculture, came down to the Union Station here in Washington and spoke to a breakfast meeting of South Carolina cattlemen. He made an eloquent speech and warned the cattlemen to fight against price supports and regimentation of the cattle industry. This was 4 years ago. Dr. Butz speech was timely and prophetic. Now, Mr. Speaker, Dr. Butz is again looking ahead. As Dean of Agriculture at Purdue University he has written an aricle for the Farm Journal which I commend to the Congress and to the country:

THEY CAN'T RUN YOUR FARM FROM WASHINGTON

(By Dr. Earl L. Butz)

I've been asked many times what impressed me the most when I served as Assistant Secretary of Agriculture in the Nation's Capital from August 1, 1954, to July 31, 1957.

My answer is that, after 3 years of observing hard, hand-to-hand political infighting, after exchanging ideas and matching wits with Congressmen in committee hearings, after fighting my way through a tangled thicket of farm laws and regulations, after wrestling with staggering farm surplus, after personally discovering how unbelievably intense political pressures can become, after all this—my answer is that I learned you can't run agriculture from Washington. Nobody can.

The plain truth is that for almost a quarter of a century, we have fashioned a fantastic maze of Federal farm programs. Now 25 years and more than $25 billion later, these Federal farm programs are in a capital mess.

The program is supposed to bolster farm income. But income has declined in all but 3 of the last 11 years.

The program is supposed to protect farm and small town life. But farm dwellers have become fewer almost constantly during the last 10 years, and small-business men are hard pushed.

The program is supposed to keep the farmer free. But more and more farmers are being told by the Government how much to plant, how much to harvest and how much to sell.

Much of farm management itself has moved from the individual farm to the banks of the Potomac.

The program is supposed to limit production. But it doesn't. Uneconomic support levels piled up huge surpluses.

It's clear that political attempts—from Washington—to legislate farm relief haven't solved the farm problem. The Federal Government has "thrown the book" at farmers—extending through several Congresses, 4 or 5 Presidents, half a dozen Secretaries of Agriculture, and with both political parties in charge,

Yet we're still searching for the answer to the farm problem.

Why haven't we succeeded? Government programs try to help farmers by maintaining farm prices at artificial levels, and by restraining production and marketing. But about all this has done is dislocate production. It hasn't restricted it. Production has merely been shifted from some crops to others—mainly to feed grains that compete with corn.

Look what allotments have done: They ration your right to produce. And your ration has been getting smaller and smaller. This raises the cost of producing each bushel, bale, or pound.

Nor has the harm stopped there. A cotton farmer with a 3-acre allotment, a tobacco farmer with his half-acre "ration" or a wheat farmer who's allowed to grow only 60 percent of what he used to—each needs something besides 90 percent of parity. He needs an opportunity to expand, to get bigger, to grow, to do what he wants to do. His Government now prevents him from producing enough to make a decent living.

A young man who wants to raise wheat, cotton, tobacco, rice, or peanuts can start farming only by buying a farm with an allotment; or by inheriting a quota from his father or father-in-law. For all practical purposes, he must get a permit from his government to go into farming.

The answer to the farm problem is not more complex and costly Federal programs, especially when they bring on more regulations and restrictions.

What's the alternative? Our American economic organization is based on freedom of choice. When we have relatively free prices, the dollar bill is the ration ticket. Each

individual is issued tickets roughly in proportion to his contribution to society.

There's a strong urge for each person to get as many of these dollar tickets as he can. But when the government rations the right to produce or the right to consume, it is using a new yardstick to distribute such rights.

Politics dictate that we move in the direction of equal shares for everyone. Under this system our individual incentive to produce and grow is stifled. We get acreage allotments, based not on how good a farmer we are, or how energetic or how low our costs. But rather on some historical standard that impedes desirable adjustments to changing know-how.

In a free economy, the price system does the rationing, even though sometimes harshly. If we throw it overboard, we have one thing left: Governmental supervision of production and distribution—with somebody in Washington deciding who produces and who gets what.

We need a vigorous farm program, but we need the kind that has less dictation from Washington.

We need the four freedoms we all know so well. But we also need a fifth freedom that men have fought and bled and died for: The freedom to go where you want to, to earn what you want to, to produce what you want to, to do what you want to.

This is a precious freedom—one that we often lose when we go after this illusory thing called security.

It's a freedom that we on the farm lose when we try to run agriculture from Washington.

Decent Southerners Denounce Anti-Semitism

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mr. FARBSTEIN. Mr. Speaker, in view of the widespread interest in developments in the South, I wish to call the attention of the Congress to a presentation of the facts about Jews and non-Jews in the South and the recent synagogue bombings. This material is gratifying in that it makes known how decent people throughout the South have denounced anti-Semitism.

This material has attracted wide attention, particularly in the South. It has been reprinted in such important southern daily newspapers as the Memphis (Tenn.) Commercial Appeal, the Tampa (Fla.) Daily Times, the Norfolk (Va.) Ledger-Dispatch and Star, and others. It has been quoted in the U. S. News & World Report and elsewhere. It is a syndicated column by Milton A. Friedman, Washington correspondent of the Jewish Telegraphic Agency, a news service that serves over 50 countries.

According to Mr. Friedman, the so-called Confederate Underground which dynamited synagogues in the South is repudiated by the many southerners who cherish the true Confederacy. According to the facts cited by Mr. Friedman, the Confederacy was actually less anti-Semitic than northern abolitionists. I wish to submit this report which describes popular southern indignation over the recent bombing incidents. Evidence of such indignation is encouraging to all those throughout the Nation, regardless of region, who cherish human rights and the American tradition.

CAPITAL SPOTLIGHT

(By Milton Friedman)

WASHINGTON, D. C.—Millions of southerners sentimentally linked with the Confederacy are fighting mad. They are angered by the use of the name "Confederate Underground" by hoodlums dynamiting synagogues.

Southerners with authentic attachment to the old South are indignant that the new self-styled Confederates are giving the Confederacy a bad name. By dynamiting respected Jewish religious institutions, including synagogues founded many years ago, the unknown terrorists have offended southern sensibilities. Many who revere what is to them the dignity and grandeur of the former Confederacy are outraged.

Such sentiments have been voiced in newspaper editorials throughout the South. They have been reflected in official Washington by southern Members of Congress. Most southerners oppose the integration of Negroes in public education. But they see the bombing of synagogues as uncouth and inexcusable. To them, such violent anti-Semitism is alien to the southern tradition.

Senators from States where synagogue bomb incidents occurred have taken a stand. They are Senators HOLLAND and SMATHERS of Florida, KEFAUVER and GORE of Tennessee, and SPARKMAN and HILL of Alabama. They urged FBI action, suggesting that the conspiracy crossed State lines. But the United States Attorney General ironically cited States' rights arguments, claiming the FBI could not legally intervene.

Senator HOLLAND was especially moved. He personally talked with J. Edgar Hoover, urging the F.B.I. to aid local police in apprehending the synagogue attackers. Generally, southern legislators dislike Federal intervention in local matters. But agitators simply went too far when they lit bomb fuses in Jacksonville, Nashville, Birmingham, and elsewhere.

Governors, mayors, and police chiefs throughout the South would like nothing better than to expose the so-called Confederate Underground.

Chapters of such groups as the United Daughters of the Confederacy have indicated considerable embarrassment.

Southerners have mustered history books to support a case that the Confederacy was freer of anti-Semitism than the abolitionist North. There is evidence. Horace Greeley's abolitionist New York Tribune read like the Der Sturmer of its day. Anti-Semitism among abolitionists was such that the northern Jewish leader, Simon Wolf, sought action against these (anti-Semitic) manifestations * * * radiating from the highest official circles.

A scholarly Jewish study of the Civil War concluded that the volume of abolitionist anti-Semitism exceeded southern bias, and its proponents were sometimes men of stellar prominence.

An anti-Semitic harangue delivered in the United States Senate in Civil War days was such that the Jewish community of Washington held a mass protest meeting. The speech was made by Senator Henry Wilson, of Massachusetts. Gen. U. S. Grant, northern commander, was ordered by President Abraham Lincoln to withdraw an anti-Semitic order issued to troops. The anti-Semitism of Yankee Gen. Benjamin Butler was notorious. Jews under his command were court-martialed in the manner of France's Dreyfus trial.

Like Americans of all faith, Jews were found on both sides in the Civil War. Loyal to their region, the Jews of the South served the Confederacy to the extent that a Jew was Secretary of State and later actually premier of the Confederacy. He was Judah P. Benjamin. He is praised in the memoirs of Mrs. Jefferson Davis, widow of the Confederate President.

Moses Cohen Mordecai, of Charleston, S. C., operated one of the most famous blockade runners. Dr. Daniel de Leon was surgeon general of the Confederate Army. Abraham Charles Myers was quartermaster general.

The Memphis Daily Appeal reported in 1861 that the Israelites of Memphis are behind none in showing their devotion to the South, both by liberal contributions and by taking up arms in her defense.

At the Battle of Seven Pines, a 19-year-old Jewish youth, Albert Moses of North Carolina, seized the Stars and Bars from a dying flagbearer and rallied his company. He died heroically.

Judge A. T. Watts of Dallas wrote of Max Frankenthal of the 16th Mississippi Infantry. He said that Frankenthal, "a little Jew, had the heart of a lion. For several hours he stood at the immediate point of contact, amid the most terrific hail of lead, and cooly and deliberately loaded and fired, without cringing. I observed his unflinching bravery and constancy." Frankenthal later became a leader of the United Confederate Veterans.

Maj. Adolph Proskauer of Alabama was wounded several times. The Confederate ranks included many Jews. From North Carolina came six Cohen brothers. From Georgia, Raphael Moses and his three sons. The five Moses brothers enlisted in Georgia. The three Levy brothers of Virginia served under Robert E. Lee.

The history-conscious South is not ready to permit hoodlums to attack the places of worship of a group that participated in the Confederacy. Nor will the South allow its dream of past glory to be shattered by individuals with a Nazi mentality who hide behind the name "Confederate."

Federal Educational Aid

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. PELLY. Mr. Speaker, as Members of Congress know, the orbiting of Sputnik I resulted in the administration submitting to Congress a 4-year plan for Federal educational aid in the form of grants to States for scholarships, fellowships, and assistance to expand and improve the study of science, mathematics, and foreign languages. It appears that legislation to carry out the President's recommendation implemented with a more extensive basis of scholarships including the humanities, as well as science, may soon be reported by the House Education Committee and come up for House consideration.

I wish to address myself to what appears to me to be weaknesses in scholarship legislation which would be administered by the Department of Health, Education, and Welfare. First, however, let me point up that the President proposed meeting the Soviet challenge and need for more highly trained scientists and engineers by other means as well.

His budget proposed $140 million for the National Science Foundation in 1959 of which $58 million, double the 1958 appropriation, was for research grants—most of which would be for projects carried on by university scientists and, as the President stated, would contribute importantly to the education of graduate students. The balance of $82 million, or 5 times the present amount, would go largely to expand high school and college science educational programs; also, to stimulate interest of able students in science careers, improving courses in mathematics and science and supplementing the training of teachers; also fellowship funds for highly qualified graduates and scientists for advance study.

Expenditures for basic research and research projects mostly by university scientists and educational aid to graduate students in addition are included in the budgets for the Atomic Energy Commission, the National Advisory Committee for Aeronautics, and the Department of Defense. All these call for increased amounts over the 1958 appropriation.

Now, Mr. Speaker, to return to a discussion of the President's so-called scholarship recommendations to authorize the Department of Health, Education, and Welfare to provide grants to stimulate State, local, and private action. Principally, this Executive request is embodied in H. R. 10278 and was for matching grants to strengthen State school systems for improvement in the teaching of science and mathematics. Title I of the bill is for testing, counseling, and guidance of elementary or secondary schools—grades 9, 10, 11, and 12 in public or other nonprofit scools under an approved State plan. In addition, $7,500,000 for fiscal year ending June 30, 1959; $15 million for the year ending June 30, 1960; $22,500,000 for the year ending June 30, 1961; and $30 million for the year ending June 30, 1962, are authorized for financial assistance to able students in need at institutions of higher education.

Title II of the bill authorizes grants up to $15 million to strengthen, on a matching basis, programs by expanding State agency supervision of elementary and secondary science and mathematics courses. Also, it authorizes $150 million in grants on a matching basis to assist local educational agencies to improve teaching standards and increase the number of, and raise the pay of, science teachers; also, to provide laboratory equipment.

Title III is for grants for implementing the teaching of modern foreign languages. A National Advisory Committee on Foreign Languages would be established.

And title IV covers expansion of graduate education by providing for grants to institutions of higher education to expand graduate education for students who have their bachelor's or master's degree and desire a doctor's degree.

As stated, Mr. Speaker, this is supposed to be a temporary program but I do not believe any of my colleagues will be so naive as to honestly think the legislation will not be renewed.

Also, it should be emphasized the President pointed out that in harmony with the tradition of keeping the Federal Government out of educational matters, which are a State responsibility, he proposed that his program should not be overemphasized so that later on local educational systems could carry on. However, I predict that once a scholarship bill with all its ramifications is enacted, the program will grow and no one in Congress today will live to see it terminated in favor of the States. This is nose-under-the-tent legislation even though its objective is meritorious.

However, Mr. Speaker, aside from any such speculation, I wish to address myself to the merits or demerits of the administration Federal scholarship aid proposal. Frankly, scholarships as such seem to me to be the least undesirable form of Federal school assistance, and I could support a scholarship program. But, Mr. Speaker, my studied and most considered judgment, and the advice of thoughtful educators, does not confirm the fact that the provisions of H. R. 10278 are the answer to our problem which is more a need of quality than quantity of scientists as far as competition with the Soviets is concerned.

I wish every Member could read the testimony sent to the Committee on Education and Labor. I refer to a carefully thought-out letter and statement from Dean Harold E. Wessman of the University of Washington engineering department in which this educator discussed the educational aid program. He pointed up in this letter that most of those connected with engineering education have serious doubts whether the administration's program would raise the quality of technology in this country. Dean Wessman, incidentally, is not only dean of the largest engineering college on the Pacific coast, but also is secretary of the Engineering College Administrative Council which represents the deans of 150 engineering schools of the country. So, he speaks with some background and authority and points up the fact that 78,000 high school seniors enrolled as freshman students in engineering in the colleges of America last September. He says there is no need to increase this number. Rather, the need is to increase greatly the number of senior engineering students who go on into graduate study for master's and doctor's degrees. It is at the highest educational level, he states, that help is needed.

The statement of Dean Wessman called for 2,000 scholarships for engineering alone with annual stipends of $4,000 of which $1,000 should go to the university to cover tuition and incidental costs, all of which would be at relatively modest annual cost.

Place yourself—

Dean Wessman's letter reads—

In the shoes of the bright young senior engineer. He may want to enroll in graduate study, but has an offer from industry of $6,000 a year. He learns that a graduate fellowship or a teaching assistantship will give him $1,800 a year, if he can get one. Is it any wonder he accepts the industry offer?

In 1957—

The letter continues—

Five thousand two hundred master's degrees were awarded in engineering fields. Six hundred doctor's degrees were awarded. The number of master's degrees should be doubled. The number of doctor's degrees should be quadrupled.

Thus, Mr. Speaker, it will be seen that if the real need is to raise the quality of engineering in our country, then emphasis in any scholarship legislation enacted by Congress should be toward aid to graduates of our colleges rather than on undergraduate scholarships. An incentive to induce more bright seniors to enroll in graduate study for the master's program will result in greater numbers continuing on for the doctor's degree. I think an important aspect of our scholarship program is that industry has need of engineers with only a bachelors' degree, whereas young physicists and chemists know they must go on into advanced graduate work to succeed, so engineering scholarships are especially needed. In other words, title IV of the bill would seem to me to cover the objective of meeting Soviet ballistic missile and satellite scientific competition. I feel the States themselves can and should carry the rest of the program, especially elementary and secondary school aid.

As a layman and one who is opposed to any program which could lead to Federal intervention and control of education, I repeat my general view that scholarships are the least objectionable of any form of Federal support, and that I am prepared to vote for legislation to fill our technological deficiencies of an emergency caliber. But, I reserve the right to vote against any measure which only qualifies because it is extensive and expensive. The views of Dean Harold E. Wessman which I have cited supporting graduate fellowships as against large-scale undergraduate aid seem to me to be sound and I hope any scholarship bill that is reported out of the Education and Labor Committee will be modified in line with this thinking. As I said earlier, quality of scientists and engineers should be our objective, and the issue is not simply how much we spend—but how we spend what we do spend if we do spend.

The Great Shepherd of the Sheep

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1958

Mr. HAYS of Arkansas. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following: Today in the city of Houston, Tex., a distinguished leader in the Southern Baptist Convention is delivering an address to the Pastor's Conference, an auxiliary of that great organization, which I believe would be of interest to the Members of the House. This ad-

dress is given by a former acting Chaplain of the House of Representatives, the Reverend James P. Wesberry, of Atlanta, Ga., pastor of the Morningside Baptist Church. Dr. Wesberry also has the distinction and the honor of being the president of the Georgia Baptist Convention. This sermon conveys the spirit of Christian compassion which characterizes this great and beloved minister.

The sermon follows:

THE GREAT SHEPHERD OF THE SHEEP—AN ADDRESS DELIVERED AT THE SOUTHERN BAPTIST PASTORS' CONFERENCE IN HOUSTON, TEX., ON MAY 19, 1958, BY JAMES P. WESTBERRY, PASTOR, MORNINGSIDE BAPTIST CHURCH, ATLANTA, GA.

In one of the most beautiful benedictions ever inspired by the Holy Spirit, Jesus is referred to as that great shepherd of the sheep. We find it at the close of the Epistle of the Hebrews: "Now the God of peace that brought again from the dead our Lord Jesus, that great shepherd of the sheep, through the blood of an everlasting covenant, make you perfect in every good work to do His will, working in you that which is well pleasing in His sight through Jesus Christ; to whom be glory forever and ever. Amen."

There is no more beautiful figure in the Bible to represent God's thought and feeling for us than the shepherd's tender care over his flock. Sheepherding in our country, where flocks often number into the multiplied thousands, and where the shepherd rides horseback, and where he drives rather than leads his sheep, does not give us as good an idea of the love and tenderness as was conveyed to those to whom Jesus said, "I am the good shepherd; the good shepherd layeth down his life for the sheep."

The glory of the shepherd's calling is rooted deep in the history of Israel. Looking back over the history of mankind we find that the shepherd held a highly significant place in the framework of society. Today, the place of the shepherd is of minor importance. The shepherd's task may seem humble but to the shepherds came determinative religious revelations, and some of them provided the noblest religious leadership the world has ever known.

To the true Israelite tradition, no higher calling than that of shepherd was recognized. Abraham and Isaac were shepherds, so were Jacob, Moses, and David. It is truly significant that when Moses, the great hero of Israel, left the courts of Egypt and adopted the life of a nomadic shepherd, there came to him the revelation that was to influence his people's development more perhaps than any other single event in history. It was the man who was faithfully discharging his duties as a shepherd in the loneliness and dangers of the wilderness who was chosen to be the leader and pastor of God's people in the emancipation from slavery and their establishment as an independent nation. The keeper of the sheep in those days was so prominent a character that he became a type of the highest servants of God. The priest was called a shepherd, and so, also, was a prophet, and later a king. At last men dared to apply the title to God. Kings and princes, priest and prophets, came to be regarded as under-shepherds on earth serving one shepherd over all in Heaven. No title more plainly revealed to them the character of their relation to God than that which spoke of Him as a shepherd of Israel. In their difficulties they cried out: "Give ear, oh Shepherd of Israel, Thou that leadeth Joseph like a flock." And, Israel was taught to sing: "The Lord is my Shepherd, I shall not want. He maketh me to lie down in green pastures; he leadeth me beside the still waters. He restoreth my soul: He leadeth me in the paths of righteousness for His name's sake. Yea, though I walk through the valley of the shadow of death, I will fear no evil; for Thou art with me; Thy rod and Thy staff they comfort me. Thou preparest a table before me in the presence of my enemies; Thou anointest my head with oil; my cup runneth over. Surely goodness and mercy shall follow me all the days of my life; and I will dwell in the house of the Lord forever." While there was a good shepherd in Heaven there was no good shepherd on earth. All the shepherds of Israel, one after another, proved disappointing. They failed to feed the flock. So, in turn prophets like Jeremiah, Ezekial, and Zachariah condemned them as hireling shepherds. "Woe unto the shepherds that destroy and scatter the flock of my pasture," saith the Lord. But the Hebrew heart did not despair. They dared to dream of an ideal shepherd who would surely come of whom the prophet wrote: "He shall lead His flock like a shepherd; He shall gather the lambs in his arms and carry them in His bosom and shall gently lead those that are with young".

And so when Jesus came, He was the Great Shepherd of the Sheep. The shepherd idea was often in our Lord's mind. No human calling seemed to Jesus so adequate to represent His own vocation within the divine purpose as that of the shepherd. No more elevated title is applied to Jesus anywhere in the New Testament than that which is the subject of this message, that Great Shepherd of the Sheep. His great heart was moved in spirt with compassion as He looked upon crowds of people in Galilee because, they fainted, and were scattered abroad, as sheep having no shepherd. To His eyes men were as sheep having no shepherd. They had gone astray like lost sheep. In the words of Isaiah, the 53d chapter: "All have gone astray, all have turned to their own way." And, in the first Peter, we read: "You were as sheep going astray; but are now returned under the shepherd and bishop of your souls." The sheep has not wittingly turned his back on the green pastures. Rather, he has kept his head down and followed his nose wherever it might lead him. He has taken no bearing; he has listened to no voice; he has simply been at the mercy of his appetites. So he finds himself lost, without direction and without hope. This describes the situation of multiplied millions of people today.

Christ told men repeately that He had been sent to the lost sheep of the House of Israel. As He thought of Himself in the world to come, seated upon the throne, with all of the nations assembled before Him, even then He is the Great Shepherd separating the sheep from the goats. "I am the Good Shepherd," He said. "The Good Shepherd layeth down his life for the sheep." When Peter, after the resurrection, received the final charge from the Great Shepherd of the Sheep, it was in these words: "Feed my lambs; tend my sheep." In other words, Jesus said to Peter: "Be a shepherd and do a shepherd's work."

The church loved the thought of the shepherd and dwelled upon it continually. One of the earliest Christian books of the second century, read in the churches, is entitled, "The Shepherd of Hermas." It was a shepherd whom early Christians loved to paint upon the walls of their churches or to chisel on the tombs of their dead. The shepherd idea appeals to all of us. Surely the most beloved of all the Psalms in all the world is the 23d Psalm. Multiplied millions of people have been moved and stirred by the pathos of the story of Jesus told of the 99 and the 1 lost sheep.

Never has there been a hymn written that touches the heartstrings as deeply as The Ninety and Nine:

"There were ninety and nine that safely lay
in the shelter of the fold,
But one was out on the hills away, far off
from the gates of gold—
Away on the mountains wild and bare, away
from the Tender Shepherd's care,
Away from the Tender Shepherd's care.

"But none of the ransomed ever knew how
deep were the waters crossed,
Nor how dark was the night that the Lord
passed through,
Ere He found His sheep that was lost—
Out in the desert He hears its cry, sick and
helpless and ready to die,
Sick and helpless and ready to die."

Almost every Sunday congregations sing The King of Love, My Shepherd Is, and Saviour, Like a Shepherd Lead Us. And, into our prayers as well as our hymns the shepherd idea has been woven. Many people find relief in the confession, "We have erred and strayed from Thy ways like lost sheep."

Nowhere do we find a more beautiful portrayal of the Great Shepherd of the Sheep than we do in the tenth chapter of John's Gospel. No words in any language can be compared in striking symbolism, in beautiful imagery and sublime simplicity to these spoken by Jesus as He describes Himself as the Good Shepherd. This is, indeed, one of the most beautiful chapters in the Bible. It is to the New Testament what the Twenty-third Psalm is to the Old Testament. No commentary or sermon could be more eloquent than this picture Jesus paints of Himself as the Great Shepherd of the Sheep. There is a unique relationship between the shepherd and his flock, a unique bond of tenderness, a very sacred and beautiful friendship.

Let us think of Jesus as the Great Shepherd of the Sheep and of ourselves as the sheep of His pasture. Let us say of Him, "The Lord is my Shepherd." Let us examine some of the qualities of the Great Shepherd of the Sheep. What kind of shepherd is He? And as we think of these qualities let us also bear in mind the relationship of ourselves, as pastors, to the sheep of our flocks. Every pastor will always want to be as much like the Great Shepherd as possible and will model his earthly ministry after His. Here are the secrets of a great pastor. Let us look at them and apply them to our own lives.

In the first place Jesus claims to be "the Good Shepherd", not "a Good Shepherd". There are many good shepherds, but Jesus says, "I am the Good Shepherd," as if to say, "I am the only Good Shepherd." He claims to a preeminent degree every quality that belongs to a shepherd's interest in his flock, watchfulness, tenderness, courage, love, so that he is the ideal, perfect shepherd. The word means more than good, in the sense of being morally excellent and inwardly fulfilling God's purpose that the sheep be shepherded. The expression "good" here means "fair", "lovely" and "beautiful". He stands before us infinitely lovely, perfectly fair, and draws the admiration of all who can appreciate beauty and admire that which is good.

Jesus appears in strong contrast to "False Shepherds" who "entereth" not by the door of the sheepfold, but climbeth up some other way, the same as a thief and a robber. "They are unworthy shepherds". The hireling is one of them. "He that is an hireling, and not a shepherd, whose own the sheep are not, seeth the wolf coming, and leaveth the sheep and fleeth: and the wolf catcheth them, and scattereth the sheep. The hireling fleeth because he is an hireling, and careth not for the sheep." The hireling has a careless and irresponsible attitude. He has not experienced the joy of ownership with a sense of treasuring that which belongs to him. He has been hired to lead the sheep to pasture, not to fight the wild beasts. He

has no warmth, no passion, no readiness to go beyond that which is written into the contract. He has no real sense of obligation. He cares not for the sheep. All he wants is money. He seeks his own safety and welfare, not the sheep's. He feeds himself rather than the flock.

He is indifferent to the weak, to the sickly, the cripple, and to the straying. He exploits them to the very limit. The hireling is symbolized by the Pharisee, who gained his position by evil methods; like thieves, by violence; like robbers by hypocrisy and greed. They were false shepherds. They said, "we see," but they were blind. They did not know the way into the fold. Like the Pharisees there are some shepherds today who are not worthy. They feed themselves and not their flocks. They perform their duties mechanically rather than compassionately. They act as hired men. There are some preachers, no doubt, who are wolves in sheep's clothing. But the real sheep will not follow them, for they know not the voice of strangers. The Bible condemns worthless shepherds. The Bible says, "Woe to the worthless shepherd that leaveth the flock." But in contrast to these unworthy shepherds, is Jesus, the Good Shepherd, the Perfect Shepherd, that Great Shepherd of the sheep. He is the Good Shepherd, and he is the type of shepherd that every pastor would like to be of his people.

The Good Shepherd knows His sheep. "He calleth his sheep by name." He says, "I am the Good Shepherd, and know my sheep, and am known of mine." He is with the sheep alone. He is their only companion. He knows them intimately. He has time to study them. He knows them from each other. He knows all about them. He knows each one of them. He knows each of their peculiar traits and characteristics. He knows each particular mark and spot on its fleece. He knows when such a one fell over a rock and broke its leg and he carried it home on his shoulder and nursed, bandaged, and brought it back to health. He knows when the wolves chased another and tore a gash on its flank. Thus alone, among desert hills, there comes to be deep, tender sympathy and understanding between the shepherd and his sheep. Between them is woven by night and by day, by summer suns and winter frosts, a living network of sympathy, and friendship. The shepherd comes to know the sheep and they know him. There is a mutual acquaintanceship, a mutual knowledge based on mutual recognition and love, "even as the Father knoweth me, and I know the Father." Such is the relationship which the pastor bears to his flock.

Each sheep has a name; some sheep have nicknames, as we do. We well know that people rather hear their own name than anything else in the world. They love to be called by their name, even by their first name. Some people are rather peculiar about their names, they do not want to be called by another name, and they do not like for their name to be mispronounced or misspelled. You and I may have difficulty in remembering names; but Jesus does not. He knows us before we know Him, He knows all about us, He says, "I know My sheep." If Jesus had not known His sheep, then how could He have missed one of them? How could He have missed one out of a hundred? The good shepherd counts and recounts his sheep. Thus it is that the good pastor usually knows his people; he knows them by name. And more than likely, he knows more people by name than any other person in his town or community.

The Great Shepherd of the sheep also cares for the sheep. This is one reason why He knows them so well, because He cares for them so greatly. The hireling cared not for the sheep. Jesus cares for them tenderly; He feels the burden of responsibility; He is deeply concerned, and is interested in the minutest detail of their lives. This is the purpose for which a shepherd exists, to care for his flock, to make up for their foolishness, by his knowledge, and for their weaknesses by his strength.

The Good Shepherd really cares for His sheep, that is the mark that distinguishes Him from all others who may in any way be related to the sheep. He takes a deep and intimate concern for them. One who cares for another takes the weight of the others' condition upon his own heart and bears it steadily and unflinchingly. One who cares has a deep regard which causes him to spend and be spent for another. To care is a costly thing. The Good Shepherd has a deeper interest in His sheep than a physician in his patient, than the teacher in his pupil, and even more so than a mother has in her child. From early morning until late at night the Tender Shepherd cares for His sheep and watches over them by day and night. He spends many sleepless nights; He carries them in His heart. From early morning until late at night He tends them; the lame, the diseased, the disabled, the aged, those that are with young, and the little lambs. When they come to the fold at night He refreshes them by rubbing oil on their heads, binds up their wounds, and sometimes He has to use a staff, or sling, or stone which is always good for the sheep. One of the great artists, Plockhurst, has painted a picture of the Good Shepherd bearing in His hands a little lamb, while the mother sheep, presses close against Him, looking up with anxious solicitude and love. This is a beautiful picture of how Christ cares for His sheep. He cares for them in all kinds of weather. He risks His own life to rescue them.

In a certain book a writer has a vivid sketch of some gypsies he met one stormy winter day, trudging along ankle deep in water, with hair plastered over their faces. One woman carried her baby on her back, wrapped in a shawl, while one man had a 3-year-old girl mounted on his shoulders. When asked if he had carried the girl all day nodded. "Are you not tired?", he was asked. The woman said, "He always carries her when the going gets rough." How true this is of the Good Shepherd. He always carries His sheep when the going gets rough. The Saviour bears with us, is patient, long suffering, and kind. He is a shepherd for love's sake and His love makes all burdens light.

A little lad was undergoing a surgical operation. It was impossible to give him chloroform due to his heart's weakness. His father asked him, "Do you think you can stand it my son?" The boy replied, "Yes, father, if you will hold my hand." There is no pain in suffering or sorrow which cannot be borne with strength and fortitude and peace, with the Good Shepherd to care for us. He bears the heavy load of our sins and of our sorrows because He cares for us. Where else in all the world do we find a more beautiful picture of the care which a pastor has for his people than we do here?

The Good Shepherd talks to His sheep, "The sheep hear His voice, for they know His voice—for they know not the voice of strangers." The sheep can distinguish between the voice of the Shepherd and strangers. His is a wonderful voice. He speaks in many ways to His sheep. Sometimes He speaks through the still small voice. He speaks through the Holy Bible, He speaks through nature, and He speaks through us.

He speaks through the great hymns, and in all of life's experiences, as His undershepherds, we voice His voice. We must listen for his voice, that we might speak to others.

"He speaks and the sound of His voice,
Is so sweet the birds hush their singing,
And the melody that He gave to me,
Within my heart, is ringing,
"And He walks with me, and He talks with me,
And He tells me I am His own;
And the joy we share, as we tarry there,
None other has ever known."

The Good Shepherd leads His sheep. He says ,"My sheep hear My voice, and I know them, and they follow Me." He goeth before them. The Shepherd is forever leading His sheep. The psalmist says, "He leadeth me beside the still waters," and "He leadeth me in the paths of righteousness for His name's sake." The Good Shepherd leads from the fold to luscious pasturelands, from green pastures beside the still waters, through valleys and shadows of death back into the fold at night. How does He lead them? He always leads them gently, tenderly, and lovingly. The Good Shepherd does not drive His sheep. He does not use a whip. He does not pull or tug them down with a rope or chain. He does not go behind to push them. But, ever before to lead them. A leader's place is in the front. The Good Shepherd is so attractive that His sheep follow Him. He has magnetic drawing power, and keeping close to Him, we can never lose our way. He is the guide who never falters, and He not only knows the way; but is the way.

A gentleman traveling in Syria stopped to watch three shepherds, who were at a well, watering their flocks. As the three flocks mingled together he could see no difference between them. He wondered how in the world the shepherds would ever get them properly separated. But, presently one of the shepherds stood forth and called out, "Men-ah," which in Arabic means, "Follow me," and 30 sheep immediately separated themselves from the mass of sheep and began following the shepherd down the hill. Then the second shepherd did likewise, and a second flock separated themselves and followed. While the third flock remained as unconcerned as if they had not spoken a word. The gentleman standing by was so astonished, that he stepped up to the third shepherd and said, "Would your sheep follow me if I called out?" The shepherd shook his head. "Give me your shepherd's cloak and crook, and let me try," the traveler said. And even though he put the turban around his head and stood forth and cried, "Men-ah!" "Men-ah!" not a single sheep stirred. They only blinked at him in the sunshine. "Do they follow anyone but you?" ask the traveler. "Only when the sheep is sick, then the silly creatures follow anyone," said the shepherd. What a true story this is. It is a sure indication that we are sick with the deadly disease of sin when we refuse to heed the voice of the great Good Shepherd, and go recklessly following strange voices in the dangerous ways of wickedness.

"He leadeth me! O blessed thought!
O words with heavenly comfort fraught!
What'er I do, where'er I be,
Still 'tis God's hand that leadeth me.
Sometimes 'mid scenes of darkest gloom,
Sometimes where Eden's bowers bloom,
By waters still, o'er troubled sea,
Still 'tis God's hand that leadeth me."

The good pastor leads his flock even as Jesus, that Great Shepherd of the Sheep, leads His sheep.

The good shepherd also feeds his sheep. "The Lord is my shepherd, I shall not want." He leads them into green pastures, and beside the still waters. He supplies their every need, they would starve to death without the shepherd. His wisdom and skill find for them the choicest pastures and the most re-

freshing streams. "Thou preparest a table before me." But God shall supply all of your needs according to His riches and glory through Christ Jesus, Our Lord. Yes, Jesus cares for His sheep and He wants them well fed. He said to Simon Peter, "Feed My sheep." He wants His sheep nourished. He desires that they be fed upon the truth. All of us who teach or preach have a part in feeding His sheep, and our humble prayer is that He may feed us that we may feed others the bread of life. Jesus says, "I am the Bread of Life, he that eateth this bread shall never hunger."

Then, too, the great shepherd of the sheep defends his sheep. "Neither shall any man pluck them out of My hand." He guards, defends, and protects them against all dangers. They are exposed to much hardship, many dangers, and to the extremes of heat and cold. They have to encounter the attacks of wild beasts—sometimes the very largest species—such as lions, wolves, panthers, and bears. You remember that David, as a shepherd, killed a bear and lion in the protection of his sheep. There are also many poisonous serpents and a shepherd has to keep a watchful eye on the paths. When the robbers and the thieves descend upon the flock the hireling flees, but the true shepherd remains and fights the enemy away. The shepherd is the protector of the flock. Thus we see that the great shepherd of the sheep gives protection and security to his sheep. He is the door. He says, "By Me, if any man enter in he shall be saved." He guards them carefully less any harm befall them. The wolves may howl, thieves may lay their strategems, lions may push and roar, and all of the evil forces of the universe may be hurled against the fold, but they are safe and secure from every harm and danger, and every foe. Tempests beat against the sheep in vain. Storms of adversity, and sorrow may rage, but "No man is able to pluck them out of the shepherd's hands."

The Great Shepherd of the sheep loves the sheep sacrificially; He lays down his life for them. He suffers, bleeds and dies, that they might have life. "I lay down my life for the sheep." "Greater love hath no man than this than that a man lay down his life for a friend." "I am come to seek and to save that which was lost." The Good Shepherd gives his life for the sheep. He loves his flock so devotedly, that he submits himself to every humiliation for their sakes. He makes of himself no reputation, takes upon himself the form of a servant and is found in the likeness of man. He humbles himself and becomes obedient unto the death—even to death on the cross. Yes, Christ died because he cared for the sheep. He cares for the sheep far far more than He cares for himself. His death was needful for the redemption of the world. The New Testament goes much further than the Old Testament. The psalmist never thought of the shepherd giving his life for the sheep. This is the Gospel of the Lord Jesus Christ.

He is the seeking Shepherd. He is not willing that any should perish. If one is lost or strayed away from the fold, He will go and seek that wandering sheep until it be found. The great artist, Sourd, has painted a picture entitled "The Lost Sheep." A friend of mine reproduced it and gave it to me. It hung in my home for many years. It is a picture of the night; the canyon depths are still sleeping in the darkness, and dawn is barely tipping over the mountain rim. All night long the Shepherd has been in search of the lost sheep; its piteous cries at last are heard as they echo through the caverns. Vultures are seeking for their prey. The poor sheep is caught in the brambles upon the ledge of a rock. It is impossible for the sheep to escape without help. The Good Shepherd has come and he leans far out over the precipice to rescue the lost sheep. His face is unseen in the painting, but His character and love is revealed in his posture. He leans far over to risk His own life to rescue the lost sheep. No dangers are too great for Him to run. He says, "What man of you having a hundred sheep, if he lose one of them, doth not leave the ninety and nine in the wilderness, and go after that which is lost till he finds it?" And, calls his neighbors and friends saying, "Rejoice with me; for I have found my sheep which was lost."

One sheep is not many, but it is one. With 99 safe in the fold, why should the shepherd care about 1? But to him one is of infinite value. It makes no difference if there are a thousand or 10,000 in the fold, as long as 1 is lost, he must go in search of it, until it is found. No man can say, "God does not love me" but rather he must say, "He loved me and gave Himself for me." It matters not how the sheep was lost, whether he intended to be lost or not, whether he went on nibbling away taking the wrong path, or wandered carelessly away. When the alarm is sounded, the Great Shepherd goes in search of it until it be found. "He giveth His life for the sheep." No matter where people are lost amid the mountains of sins, or what deadly wolf or lust or passion is pursuing them to destruction, the Good Shepherd is ever seeking them. If they will, they may be saved. He says, "I am the Good Shepherd, I lay down My life for the sheep." No risk is too great and no peril will ever keep Him from seeking the sinner. Scarred and bleeding from the cross where He suffered for us, He comes to lift all lost sinners on His shoulders to bear them home to God with the joyful cry, "Rejoice with Me, for I have found My sheep that was lost."

St. Francis saw a mountaineer in the Alps risk his life to save a poor lost sheep. He said, "O God, if such was the earnestness of this shepherd in seeking for a mean animal, which had probably been frozen on the glacier, how is it that I am so indifferent in seeking my sheep?"

Let us, like that Great Shepherd of the sheep and the good pastors which we want to be, go in search of the lost until they are found. And, in so doing may we receive this beautiful benediction from Jesus. "Now the God of Peace that brought again from the dead our Lord Jesus that Great Shepherd of the sheep, through the blood of an everlasting covenant, make you perfect in every good work to do His will, working in you that which is well-pleasing in His sight, through Jesus Christ; to whom be glory for ever and ever. Amen.

The Achievements of TVA

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. EVINS. Mr. Speaker, in connection with the 25th anniversary of the TVA, I ask unanimous consent that the following article by Mr. Miles McMillin, entitled "The Achievements of TVA," be reproduced in the Appendix of the RECORD.

The article follows:

THE ACHIEVEMENTS OF TVA
(By Miles McMillin)

John Gunther once said: "Quite possibly the TVA is the greatest single American invention of the century, the biggest contribution the United States has yet made to society in the modern world."

If TVA were just an idea—and not the reality it is—Gunther might find his evaluation accepted these days even at the White House. The Eisenhower administration has shown that it is sufficiently impressed with TVA to export the idea to foreign lands. But to President Eisenhower TVA in actual operation at home is a disease called creeping socialism which should be treated with applications of old-fashioned power trust snake oil bearing the Dixon-Yates label.

The paradox of TVA is that, while we proudly export its principles, it is the one New Deal achievement which has to continue to fight at home the hammer blows of those who have long since accepted, in varying degrees, the other accomplishments of perhaps the most socially creative era in our history. Hardly a session of Congress goes by that the friends of TVA do not have to ward off another attack. And the propaganda campaign, organized and financed by the power trust to persuade the American people that what has made the Tennessee Valley livable is communism or worse, continues unabated, day after day, year after year.

The reason is simply that TVA produces and sells electric power at prices people can afford to pay.

The other functions of TVA—flood control, navigation, fertilizer development, recreation, soil erosion control—have come to be accepted. But the power program is still treated as if it were proscribed by the Ten Commandments.

When Louis V. Sutton, chairman of the board of the Carolina Power & Light Co. submitted a statement for the United States Chamber of Commerce last year to the Senate Subcommittee on Rivers and Harbors opposing legislation to give TVA authority to issue its own revenue bonds, he was careful to distinguish between TVA's power and nonpower functions:

"TVA," he said, "should conduct only its authorized nonpower functions. The TVA power facilities should be transferred to local ownership and operation. This transfer should include transmission lines, steam plants, and hydroelectric plants at TVA dams, but not the dams or other related river control facilities."

What Sutton almost said right out loud was that TVA is a great idea if the utilities can have the power produced by the dams. The more closely the anti-TVA propaganda is examined, the more clear it becomes that the utilities have only one aim in their attacks: to get their hands on the power-producing facilities of this great public asset.

The enemies of TVA have not always been willing to grant the wisdom and legitimacy of its nonpower functions. In the earlier stages of the fight against TVA, the utilities were willing to finance any argument that would discredit TVA—almost to the point of defending the anopheles mosquito whose life has been made more difficult by TVA's malaria control program.

One of the earliest campaigns against TVA—then under the chairmanship of Arthur E. Morgan—was an attempt to persuade the public that the multiple-purpose dams could not do all the things they were constructed to do. Numerous authorities were cited in an effort to prove that flood control and navigation were not compatible with power production, but enthusiasm for this argument waned under the weight of contrary evidence.

As late as February 1948, TVA's detractors were praying for a great flood in the valley—the kind that in pre-TVA days regularly ravaged the countryside. On February 15 of that year the Associated Press carried a story out of its Atlanta bureau saying: "On the Tennessee River the floodwaters were too much for the great dams set up by the TVA.

The huge reservoirs filled and the water was released to rush over the low country."

Anti-TVA papers whooped up the story, bellowed for photographs—and then settled back into a deep funk when the AP's Atlanta bureau contritely explained it had not bothered to check rumors concerning the flood-breeding rains in the valley. Actually, as the New York Times reported, the "great reservoirs of Norris, Cherokee, Douglas, Fontana, and Hiwassee on the tributary streams, took all the water that was poured into them and had plenty of room left. By this means the flood crest at Chattanooga was cut 10 feet with an estimated saving of $6 million."

TVA's flood control program has succeeded because it has adhered faithfully to the mandate of Congress to regulate the streamflow primarily for the purpose of promoting navigation and controlling floods. While private power companies must necessarily give primary empasis to power production, power production by TVA must be consistent with the operation of its dams for flood control and navigation.

As the flood season (late December to early April) approaches in the Tennessee Valley, the TVA dams are controlled to reserve 12 million acre-feet for water storage. Near the end of the flood season the reservoirs are allowed to fill and are fed out during the dry season for power production and stabilization of navigation. The average annual benefit from flood reduction is estimated at more than $11 million. In February of 1957 the valley had its second largest flood of record. TVA's control of the water prevented damage of an estimated $66 million. TVA has helped also to control floods along the Ohio and Mississippi Rivers, into which the Tennessee's waters flow.

The 630-mile navigation channel is a national investment, making the Tennessee part of a 19-State 9,000-mile inland waterway. Sixty-eight percent of the shipping is either from outside or destined for outside the TVA region. In 1933 traffic on the Tennessee was 33 million ton-miles. In 1956 it was about 2 billion ton-miles. Transportation savings, now $20 million a year, return over 10 percent on net navigation investment when measured against the cost of maintaining and operating the waterway.

This is a success story that the foes of TVA cannot ignore. If the late George Norris and the others who dreamed the TVA dream had not tacked on the authority to produce power, TVA would be as acceptable today as Federal bank deposit insurance. But they had the practical idea that as long as dams had to be built, the power potential should be used for the benefit of the people who were paying for the dams.

The nonpower functions have changed the history of the valley. But it is the power program which is primarily responsible for raising the productive level of the region. And it is the power program that has made TVA the target of one of the most relentless propaganda campaigns in the history of the Nation.

TVA power has not only changed the way of life for millions within the seven-State region it serves; its price yardstick has jutted out of the valley to drive down the rates for other millions of consumers served by the private power companies.

TVA power is distributed by 151 distributing systems, 149 of which are publicly or cooperatively owned. In fiscal 1957 they sold 15½ billion kilowatt-hours and earned revenues of $163 million, of which $25½ million was net profit.

There are 1,460,000 customers buying TVA power for the use of 4 to 6 million consumers. In the pre-TVA era, the private power companies served 275,000 in the same area. The average annual consumption of electric power in valley homes has jumped from 600 kilowatt hours to 6,000—twice the national average. The price has dropped from an average 5.7 cents per kilowatt-hour to 1.2 cents, less than half the national average of 2.6 cents.

Less than four percent of the valley farms were electrified when TVA's turbines started rolling and its first highlines leaped the mountains. Today 95 percent have electricity. The customers of these rural co-ops are buying power at less than 5 mills per kilowatt-hour. Except for the Pacific Northwest, where Bonneville, and Grand Coulee are transforming the energy of the mighty Columbia, this is the lowest rural electric rate in the Nation.

TVA power has made the valley a strategic defense area for the Nation, accounting in large measure for the rapid expansion in steam-produced power. More than half (57 percent) of TVA's power goes to the atomic energy projects at Oak Ridge and Paducah. It is estimated that this power at private utility rates would cost the Atomic Energy Commission from $50 to $60 million more each year than it pays to TVA. The Air Force wind tunnel plant at Tullahoma is supplied by TVA, as is the Redstone missile program. Huge amounts of aluminum and chemicals vital to the defense program are produced by private industry using TVA power.

It is worth speculating, considering the power shortage of World War II, whether the United States would have taken the lead in the development of atomic energy had not the power facilities of TVA and the Columbia River program been available to pour out the staggering amounts of electricity needed for the Oak Ridge and Hanford projects.

The utility propaganda which seeks to inspire sectional jealousy against TVA is always careful to hide from the American people this monumental record of service to the defense program of the whole Nation. Also ignored in these sectional appeals are the expenditures made by TVA with industry located outside the valley. In the years 1934–56 TVA made purchases of $1,024 million from businesses located outside of the 7 States in the TVA area. Almost a billion has gone for manufactured articles. Here is where some of the money went: Pennsylvania, $311 million; New York, $156 million; Ohio, $127 million; Illinois, $112 million; Wisconsin, $60 million.

Add to that the $1,750 million the users of TVA power have spent on appliances—most of them manufactured in other States—and you get a fair notion of how TVA is helping business in the rest of the country. Workers in Milwaukee and Schenectady are living better because farmers in the Tennessee Valley are living better.

No assessment of what TVA has done for the country as a whole would be complete without mentioning what has happened to the valley's tax contribution to the Federal Government since TVA lifted it to a level more comparable with the rest of the Nation. In 1933, 3.4 percent of total Federal individual income-tax collections came from the 7 States which embrace the TVA region. Recent studies show the proportion of tax contribution has almost doubled. During the 1933–56 period $21,900 million was collected. At the 1933 rate only $12,200 million would have been collected. That $10 billion difference is almost 5 times the amount the Government has invested in all of TVA's functions.

If TVA is doing these things for the Valley and for the rest of the Nation, then why the incessant campaign to wreck it? Has TVA done so much damage to the private utilities that they should continue to spend millions of their customers' dollars in a campaign to destroy it?

TVA has forced the utilities to sell power more cheaply, it is true. In 1932 some of the highest electric rates in the Nation were paid in the TVA area cities, according to studies made of cities of 50,000 population and over. By 1956 the situation was reversed. In cities of 50,000 and over, the lowest rates are now in the TVA area and the area serviced by the Bonneville program. The influence of these two great public power projects is shown by the fact that rates get progressively higher as the distance from TVA or Bonneville increases.

Significantly, the private utilities in the areas bordering TVA have not been hurt. They have found that the TVA theory of power distribution works profitably for them. As they reduced rates under the impact of the TVA "yardstick," they reaped the financial benefits of the resulting increase in demand. Studies of the period 1937–1955 show that earnings available to common stockholders of the big profit utilities across the country multiplied by less than three times—yet companies bordering TVA multiplied similar earnings 6½ times.

The utilities claim that TVA is unfair because it is subsidized. If the utilities themselves weren't subsidized by the Federal Government on a scale more staggering than TVA, this argument might have some appeal to fair-minded citizens. The truth is that under the fast tax writeoff policy the utilities have been handed subsidies over a 2-year period that exceed the total investment in TVA in more than a quarter of a century.

The Senate Antitrust and Monopoly Subcommittee recently issued a report quoting R. C. Rainwater, chief accountant of the Federal Power Commission, as saying that the tax writeoff policy has benefited utilities in the 1955–57 period by $2,621,318,000. The report made it clear that consumers receive no benefits from these subsidies, because of Government rulings that they need not be passed on in decreased rates.

Are these tax write-offs subsidies? Let Walter H. Sammis, president of the Ohio Edison Co., a large utility with offices in Akron, Ohio, testify. Sammis appeared before a Senate subcommittee in opposition to the bill to allow TVA to issue bonds to help finance its operations. Senator ROBERT KERR, Oklahoma Democrat, was presiding. The following exchange took place:

"Mr. SAMMIS. It should be the policy of the Federal Government to cooperate with taxpaying businesses and to encourage their participation to the fullest extent in the power features of water resources instead of engaging in unfair competition through the advantages of Government subsidies.

"Senator KERR. Let's talk about Government subsidies. Has your company received any certificates of accelerated depreciation [tax write-offs]?

"Mr. SAMMIS. Yes, sir.

"Senator KERR. How much?

"Mr. SAMMIS. $46 million as of February 28, 1957."

There followed several minutes of argument about depreciation formulae and other matters and Senator KERR returned to the tax write-offs.

"Senator KERR. I asked you if that was in the form of Government subsidy?

"Mr. SAMMIS. Oh, surely.

"Senator KERR. That is all I asked you.

"Mr. SAMMIS. That is right. Surely. I am sorry. I didn't get your point earlier."

Senator KERR commented that the utilities really have no objection to subsidies as such. Their complaint seems to be that others get bigger subsidies. The testimony of the Federal Power Commission's chief accountant would seem to indicate that if anyone has cause to claim discrimination in the matter of subsidies, it is TVA.

TVA's power operations are often criticized by the power trust as unsound and unbusinesslike. But when the critics are examined on this point they are usually found retreating to another point which permits them to make vague charges about

socialism or to cry out that TVA pays no taxes or interest.

By law, TVA's power operations have to be self-supporting and self-liquidating. The record shows that the law has been obeyed. Gross power revenues from 1933 through fiscal 1957 amounted to $1,474,000,000, of which net revenues amounted to $424 million.

Here is a summary of TVA's power operation through fiscal 1957:

	Millions of dollars 1933 through 1957
Revenue	$1,474
Expense:	
Operation and maintenance	736
Taxes	46
Depreciation	268
Total expense	1,050
Net income before interest	[1] $424
Investment assignable to power (24-year average)	$442
Annual return on investment (24-year average) (percent)	4

[1] Of the $424 million net income before interest shown above, $10 million has been used to pay interest on bonds, $65 million has been used to retire bonds, and $175 million has been paid into the Federal Treasury as an offset to appropriations previously made. The remainder, $174 million, has been reinvested in power facilities.

From a cold business viewpoint, Uncle Sam's stockholders would have a difficult time finding a better investment.

The law imposes on TVA another obligation—one that distinguishes its power operations from the exclusive profit motive of the private utilities. TVA's objective is the widest use of electricity at the lowest possible price to consumers. This aim is achieved by utilizing more economical sources of power and by keeping operation and maintenance costs below the national average of the industry. The distributors of TVA's power also operate at costs far below those of other utilities. As the use of electricity by consumers goes up, the cost per kilowatt-hour of delivering it goes down. Many of the distributors have been able over the years to reduce rates.

The utility industry insists that these low rates are made possible because of TVA's tax exempt status. This is the argument most frequently made in the propaganda of the utilities. Of course, TVA pays no income taxes to the Government. Income taxes are based on profit and all of TVA's profits belong to the Government—not just the part paid in taxes by the private companies. TVA's net income in fiscal 1957, after allowance for the cost of money to the Government at 2½ percent, was approximately $21 million. Uncle Sam claims all of it. If it were the income of a private utility, the Government could claim only half of it, in the form of income taxes.

If TVA had been privately owned over the last 24 years, it would have paid Federal income taxes of about $170 million. TVA earned $424 million—a 4-percent return on the investment. The average cost of money to the Government over this period was 2 percent. Had that rate of interest been charged against the power investment, it would have amounted to half the 4-percent return, or $212 million, leaving a margin of $212 million for the Government. This is $45 million more than the $170 million that would have been paid in taxes under private operation.

Despite the sweeping claims that TVA pays no taxes, it does pay local and State taxes or tax equivalents. They amounted to $4,744,000 in fiscal 1957. Its distributors paid $7,646,000 in taxes or equivalents in 1957. In 1937, when power in the TVA area was distributed by private companies, taxes paid to local and State governments by the utilities amounted to $3,350,000. The total under public ownership in 1957 was $12,390,000. In the intervening 19½ years the increase in State and local taxes was 270 percent. In roughly the same period the State and local taxes paid by private utilities across the Nation increased by 232 percent—a difference of 38 percent in TVA's favor.

Furthermore, the utilities' argument that the difference in tax payments accounts for the difference in rates doesn't stand up in the light of practical experience. Two of TVA's distributors are private utilities, selling power at the same low rates as TVA's publicly owned distributors. Yet they are able to make a profit just as if they bought power from private sources for resale at presumably higher rates.

If a lot of water has been spilled over TVA's dams in the last quarter of a century, it is perhaps exceeded in quantity only by the volume of words that have been spilled attacking and defending TVA. TVA has endured, not because the words of the defenders have been wiser or more forceful. Its own record of achievement for the people of the valley and the people of the Nation is its stoutest shield. The avalanche of utility propaganda has not been able to dent that record. It has stood up through 5 years of an administration which has been steadily probing for weaknesses—indeed, has tried to create some.

This record was made possible because TVA produced power at prices people can afford to pay. If its power program is allowed to be pillaged and turned over to the profit utilities, TVA's service to the people of the valley and of the Nation will be ended. But, more than that, its service to democracy would be destroyed. For TVA has come to mean something to the rest of the world. It was best expressed by the people of the valley who belong to the Tennessee Valley Public Power Association in a letter to President Eisenhower in April of 1957:

"TVA is more than a regional agency—more than just a Federal power system. It is an international symbol to people of free nations all over the globe—a symbol of democratic methods and democratic ingenuity and enterprise applied to one of mankind's most challenging problems—how to develop natural resources for the benefit of the most people. TVA carries a vital international message—a message that people from all over the world can see and study and carry home to their own lands."

Our Salute to Israel: May She Grow From Strength to Strength

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1958

Mr. DINGELL. Mr. Speaker, I proudly insert into the CONGRESSIONAL RECORD an article entitled "Our Salute to Israel" appearing in the Detroit (Mich.) Jewish News of April 25, 1958, whose editor and publisher is Mr. Philip Slomovitz, my good friend and a distinguished author and newspaperman:

OUR SALUTE TO ISRAEL: MAY SHE GROW FROM STRENGTH TO STRENGTH

Humbly, with a sense of pride in the Jewish State's achievements, conscious of the great humanitarian objective inherent in Israel's rebirth, we salute the Israelis. May they acquire peace speedily, may their economy grow, and may their people hold fast to that courage and dignity which has elevated their autonomous State to a position of international significance.

Israel's accomplishments are manifold. Out of an inexperienced people has developed an able and effective diplomatic force that plays its role well on the international scene, within the framework of the United Nations.

Its population has grown from 650,000 in 1948 to nearly 2 million today—its immigrants having come from East Europe, from Moslem countries, from lands of oppression. The new settlers now possess the freedom of citizenship in a land they can call their own. The homelessness of hundreds of thousands has ended, no longer are they persecuted, now they can strive for peace and for the dignity of man on a par with free men everywhere.

Israel has established a vast network of industries. She has expanded her educational system and she is proudly developing higher schools of learning and scientific research projects.

American Jewry has good cause to be especially proud of the share it is playing in Israel's upbuilding and development. We have contributed, through the United Jewish Appeal, for the settlement and integration of immigrants into Israel's economy. We have assisted in establishing new industries, through the purchase of Israel Bonds and by means of private investments. We have redeemed the land through the Jewish National Fund and have made Israel a healthy area through Hadassah media.

This work goes on. We dare not stop in the middle—for, Israel is in the midst of completing her task of acquiring self-sustainment. Our greetings, our expressions of pride, must, therefore continue to be expressed in the form of continued devotion to the Allied Jewish Campaign—the major fund-raiser for Israel; to the Israel Bonds and other efforts in support of Israel.

We greet Israel with confidence that American Jewry will honor the obligations we have accepted as the partner in Israel's upbuilding. May Israel's growing stature soon be silhouetted in a peacefully brightened world.

JEWISH PUBLICATION SOCIETY'S 70TH ANNIVERSARY

This Sunday, the Jewish Publication Society of America will mark its 70th birthday, at the annual meeting to be held in Philadelphia.

It is an event to be marked on the calendar of activities of every Jewish community in America and by English-speaking communities elsewhere.

This is the major nonprofit Jewish publishing movement in the land. While there are a number of private Jewish publishing ventures, and several of the theological seminaries also sponsor the publishing of books of Jewish value, the Jewish Publication Society of America specifically functions for the purpose of making available to English-reading Jews the outstanding Jewish classics, the Bible in improved and accepted translations, works dealing with Jewish history, the best in fiction, poetry, sociology, and philosophy.

Because it is nonprofit-making and was organized specifically for the purpose of providing the best works in Jewish literature, the members of the society benefit from the venture and secure the membership books at low costs.

The importance of the society lies in its pioneering efforts. It sponsored the first traditional translation of the Bible 30 years ago and is now in the process of producing a revised translation of the Bible in English.

It introduced Israel Zangwill to the Jewish reading public and it made available the English translation of the Heinrich Graetz's "History of the Jews." It published Prof. Louis Ginzberg's "Legends of the Jews," and the histories and essays of Simeon Dubnow. It made available scores of other outstanding Jewish classics.

These efforts have placed the Jewish Publication Society in the position of being one of the major important culture-sponsoring movements in America. They have earned for the society the support of every American Jew.

Under the leadership of the Society's president, Edwin Wolf II, many important new projects have been undertaken.

Together with Farrar, Straus, & Cudahy, the society is publishing a number of children's publications, in the series that is being popularized as Covenant Books.

Another very commendable undertaking is the new series of paperbooks, published cooperatively with Meridian Books. Already, the Jewish Publication Society, together with Meridian, have reprinted three outstanding Jewish Publication Society classics—"A History of Mediaeval Jewish Philosophy" by Prof. Isaac Husik, Students, Scholars, and Saints by Prof. Louis Ginsberg and For the Sake of Heaven by Dr. Martin Buber.

These efforts show initiative and an understanding of the needs of American Jewry, and the Jewish Publication Society continues through these means to endear itself to English-reading Jewries everywhere.

On the occasion of the Society's 70th anniversary, we renew again the appeal we have made previously for at least 100,000 members in this movement. The present membership of 10,000 represents a strong element of support for the Society, but it would be to the greater glory of American Jewry if the response to the Society's needs would be at least tenfold.

We congratulate the Jewish Publication Society on its anniversary and wish it increasing strength in the months and years to come. And we wish for American Jewry that it, too, should share in such growing cultural status by a mounting interest in the society's worth and values.

Nuclear-Powered Navy

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. HILLINGS. Mr. Speaker, an outstanding Member of this body, our colleague from California, the Honorable CRAIG HOSMER, has written a revealing article entitled "Nuclear Power for the Navy" for the United States Naval Institute proceedings.

Mr. HOSMER is a commander in the United States Naval Reserve and is an articulate authority on nuclear energy as a member of the Joint Congressional Committee on Atomic Energy.

I commend this article to your attention. The article follows:

NUCLEAR POWER FOR THE NAVY
(By Comdr. CRAIG HOSMER, United States Naval Reserve)

Fast becoming a reality is a powerful new nuclear-powered United States Navy—a Navy backboned by atomic-bomb-carrying 85,000 ton super-carriers, fast striking guided-missile cruisers and destroyers, and specially designed submarines for high-speed attack, hunter-killer, radar-picket, guided-missile and other new missions.

Already more than $2 billion have been spent or programed for research, development, and construction of such a Navy. The table on page A4599 sets out what is on hand and what is on order. Another $500 million a year for at least 8 years ahead will be needed to bring it into full being.

It began in 1948 with a small but ambitious joint Navy-Atomic Energy Commission program aimed at submarine nuclear propulsion and later expanded to include design and development of a full spectrum of naval nuclear propulsion plants for new naval construction from small submarines to the largest aircraft carriers.

By early 1954 the basic question of feasibility of naval nuclear propulsion was affirmatively answered by successful completion of all critical tests of the *Nautilus* land-based prototype plant. That answer made possible continuous cruising at top speeds, unlimited cruising radii, and practically absolute freedom from fuel logistics. It has revitalized the role of seapower in geopolitics.

At the beginning of naval reactor development 10 years ago, even the most imaginative nuclear propulsion enthusiasts hardly foresaw such a future. Nor did even the most practical amongst them envisage the full scope of difficulties ahead. Neither the technical problems nor their solutions were well understood. In fact, many of the problems were not even known.

The task was to devise a safe, reliable plant within naval space and weight limitations. It began with an examination of various possible reactor cycles. Gas-cooled reactors were discarded as involving too much space and too many technical problems. Other types were in turn rejected for various reasons. Finally left as promising to meet naval requirements were but two: a reactor utilizing liquid sodium as its coolant, or one utilizing pressurized water.

Liquid sodium seemed to offer the best approach because it permitted high steam temperatures and pressures, with consequent greater efficiency. But the physics and chemistry of liquid sodium were little known and insurmountable development problems might be encountered. Although pressurized water involved lowering steam temperatures and pressures, more was known of the characteristics of water. That could mean fewer problems of basic research and faster development of the plant.

Decision was made to pursue both approaches and preliminary design began. So dissimilar are the physics and chemistry of water and sodium that in effect two simultaneous but essentially independent projects were involved. Both were carried successfully through land prototype and shipboard installation stages.

Liquid sodium leakage problems appeared in the *Seawolf's* land prototype plant which were not in themselves insurmountable. However, they were considered in combination with other factors in an eventual decision favoring the *Nautilus'* pressurized water type reactor system as the accepted approach to practical naval nuclear propulsion.

The men who carried on the work had no experience or rules of thumb to guide them. No power reactor had ever been designed before. They had no science of reactor technology to apply to the job. They created it as they went along.

From the beginning they applied a "can of worms" description to their work, for each component and function of a nuclear power plant, from the reactor vessel through the turbine and all auxiliaries, are wholly interrelated and interdependent.

For example, raising turbine exhaust temperature or back pressure in a conventional plant is felt primarily in fuel economy. Such a reduction in thermal efficiency in a nuclear plant affects each of its complex components. The necessary increase in heat output requires size, capacity, and weight increases in the condensate, feedwater, and heat-generating systems, and equipment. Size of the reactor, steam generator, coolant system and auxiliaries is increased. Proportionate increases in radiation shielding must follow. These in turn affect the size, design, and characteristics of the hull into which the plant is to be placed, or, as a practical matter, thrust back upon the plant designer the necessity of selecting every characteristic of design in relation, not only to each function and component of his plant, but in relation to hull space and weight limitations as well.

Development of the two original naval, nuclear reactor plants, and to only a slightly lesser extent today's plants, involves creation not only of the total concept, but individually of each of its components. It demands tremendous and concurrent basic research into unexplored fields of the new science. Maximum assurance that all parts individually will work and that they will work as a unit when coupled together, and function with a high degree of safety, dictates what might otherwise be wasteful overdesign and overtesting.

Few, if any, off-the-shelf items exist which can be incorporated in nuclear plants. Canned pumps are but one entirely new concept brought into being to make nuclear power possible. Prolonged successful effort to develop as complex a component as this often has to be discarded when efforts fail to develop another which is interdependent. Fresh starts must be made on the problems of both.

Reactor design develops the need to know undiscovered properties of common substances under conditions of reactor chemistry and irradiation. Requirements are generated for rare metals and alloys concerning which the full spectrum of chemistry, physics, and metallurgy need be researched and industries found or formed to produce them in quantities required. For example, such diverse enterprises a the Carborundum Co., National Distillers Corp., Wah Chang Corp., and National Research Corp. had to be persuaded to engage in large-scale zirconium production.

Not only has the naval nuclear reactors program faced mountainous technical problems, but it has been burdened from the beginning with a continuing necessity to seek answers to a variety of nontechnical questions affecting its ultimate success.

Wholly new and workable administrative and funding relationships, to be discussed later in detail, had to be evolved and must be continuously perfected between the Navy and the AEC, amongst naval personnel in and outside the reactors program, and between the Government reactors group and industry.

As operations expand, new personnel must be broght in; techniques must be developed for their rapid specialized training; and new facilities established for the basic research, design, and engineering functions involved in the work. Progress from design to construction of plants involves large-scale training of industry personnel. The design and construction of new ships for the new plants brings in a whole new group for specialized instruction; manning those ships brings in another.

During the process a basic philosophy on security of information had to be evolved, continuously adapted to an ever-increasing body of knowledge, and the mechanics of implementing it amongst public and private groups engaged in the program kept efficiently in motion. The approach has been to distinguish between specific design and dimensional characteristics which are classified, and technology as such which is unclassified. Communicating the latter has

involved the writing of up-to-the-minute technical handbooks by scientific personnel engaged in the work concurrently as they do it. Six such handbooks have been published and another eight are currently in preparation.

Another essential task of those engaged in the program has been to translate difficult scientific concepts into information meaningful to the layman. It is fundamental to obtaining policy decisions from legislative and executive leaders of Government underlying financial support of the naval nuclear program. It is also vital to the public, which in a democracy ratifies those decisions at the polls.

The foregoing enumerations barely hint at the multiple technical and nontechnical problems involved in the naval nuclear reactors program from the beginning and which will continue to plague it for years ahead. Yet they are ample testimony to the outstanding devotion and qualities of the officers and civilians who carry it forward. Within 6 years from the start they produced the basic pressurized water nuclear propulsion plant illustrated on the following page which is now standard for all new nuclear naval vessels.

The plant arrangement shown approximates that developed for submarine propulsion, and it will vary only in details for the supercarrier with four dual reactor powerplants, and the cruiser *Long Beach* and submarine *Triton*, each with dual reactors.

The naval nuclear propulsion plant consists of a nuclear reactor core contained in a pressure vessel; a primary coolant system utilizing fast-flowing pressurized water to remove the heat generated by nuclear fission in the core and transfer it via a steam generator to the secondary, or steam system; a steam machinery plant for propulsion and auxiliary electric power generation; and radiation shielding.

The reactor consists of a pressure vessel housing a core of enriched uranium fuel encased in a protective metal, such as zirconium, which passes heat to the coolant; a moderator, in this case the coolant itself, to slow down neutron emissions to efficient fission speeds; and rods of a neutron absorbing metal such as hafnium, together with machinery to insert and withdraw them from the core, to control rate of fission and thus amount of heat produced.

The primary coolant system consists of one or more loops, each having one or more coolant pumps; a steam generator (boiler); a pressurizing vessel; and connecting piping with appropriate valves.

Since the coolant water becomes radioactive in passing through the reactor core, shielding is required around the portion of the plant containing the coolant in order to protect personnel from radiation. A separate reactor shield surrounds the pressure vessel. It affords sufficient protection against radiation from the reactor core to allow access to the reactor compartment when the reactor is shut down. All shielding designs incorporate enough protection to meet civilian radiation exposure tolerances established by the AEC.

The steam produced in the separate secondary circuit by the steam generator is nonradioactive, and the steam propulsion machinery need not be shielded. This machinery and the necessary auxiliaries for electric power are arranged in a conventional way in the engine room. However, arrangements within the reactor compartment must of necessity be strongly influenced by considerations of accessibility in relation to radiation and the continuous necessity of removing heat even after the reactor has been shut down. The latter phenomenon, known as radioactive decay heat, results from the constant breakdown of radioactive materials even under normal conditions.

Penetrating to all parts of naval nuclear powerplant design are intensified requirements for ruggedness, reliability, and easy maintainability dictated by safety, the extreme endurance of nuclear plants, and higher average sustained ship speeds.

These various special nuclear plant considerations also complicate the work of designers of hulls into which they will fit. Gone are the days when minor weight allocation errors can be overcome by pumping fuel between tanks. Crew living and working spaces must be allocated with radiation hazard in mind. Stacks are eliminated, but vertical free spaces must be arranged for removal and renewal of reactor cores. Stowage space for consumable supplies and ammunition must be enlarged to take full advantage of the ship's longer range cruising capabilities. Many other specialized considerations are involved. A byproduct of tackling them has been experimentation with novel hull configurations that may substantially increase speed-power ratios of future ships.

Another byproduct of naval nuclear propulsion has been the evolution of a unique, hybrid military-civilian research and development organization that may well set administrative patterns for successful missile research and development and any similar future large-scale Government projects. Without it, there would probably be no nuclear powered naval ships in existence today.

Its antecedents are in the Atomic Energy Act of 1946 assigning responsibility for research and development in the theory and production of atomic energy, including processes, materials and devices related to such production, to the newly created Atomic Energy Commission.

Soon after passage of the act, Navy communications to AEC began setting out potential nuclear propulsion requirements in connection with the submarine program as defined by a small, cross-sectional group within the Bureau of Ships. AEC's response, in part, was to turn back to the very Bureau of Ships' group that generated the requirements for manpower assistance in meeting them.

By 1949 the Commission's activities in this field were sufficient to justify inclusion of a Naval Reactors Branch in its Division of Reactor Developments established that year. Also by that year it had become apparent in the Bureau of Ships that the activities of the cross-sectional group were sufficiently unique and unconventional to warrant special treatment. A period of organizational experimentation began, culminating in formal establishment in 1955 of Bureau of Ships Code 1500, designated as the Nuclear Propulsion Division and headed by a new assistant to the Chief of the Bureau for Nuclear Propulsion.

Code 1500, however, did not mean a separate Navy reactors program paralleling the AEC's program, because Code 1500 had by this time also developed into the Commission's Naval Reactors Branch, unofficially referred to as the "headquarters organization" by both Navy and AEC. Naval officers ordered to the program report to both AEC and BuShips. Navy and AEC civilian employees are utilized interchangeably. Rear Adm. H. G. Rickover, United States Navy, is both Assistant Chief of the Bureau of Ships for Nuclear Propulsion and Chief of the Naval Reactors Branch, Division of Reactor Development, United States Atomic Energy Commission. So complete is the Navy-AEC integration in this "two-hat" organization that neither AEC nor naval personnel need switch headgear during the course of their work.

Possibly the only persons who can distinguish the military from the civilian characteristics of headquarters organization are the Government accountants who must assess its cost of operations between the AEC and the Navy. Even here the line of demarcation is often blurred; but, in general, nuclear research and development costs, including construction of land prototype powerplants, are paid for by AEC, while the Navy pays for research and development on steam parts of the plants and construction of nuclear ships. During the current fiscal year (1958) research and development money amounts to around $86 million from the Commission and around $11 million from the Navy. The prototype aircraft carrier propulsion plant has consumed the lion's share of these current funds.

Inherent in the headquarters organization setup is a flexibility and freedom in both administrative and funding action essential to rapid progress in complex scientific operations. This has speeded civilian as well as naval reactor development. No new group had to be organized from scratch to develop the $110 million civilian pressurized water reactor at Shippingport, Pa. Naval Reactors Branch, long experienced in that type of reactor, was assigned the job and went to work without delay. Additionally, the organization's dual nature avoids duplication of effort and facilities, such as purchasing offices, inspection groups, and so on. For example, purchase of nuclear cores on competitive bidding for which the Navy pays is done through AEC purchasing offices.

The organization is unique in a number of other respects and bears substantially the image demanded by its strong-minded chief, and founder, Admiral Rickover.

In discussing the qualifications of some 90 officers and civilians assigned to Headquarters, Rickover told the Joint Atomic Energy Committee:

"By qualification I do not mean, necessarily, their technical ability, but their desire to work long hours and to be dedicated to the job as well. We adopted the procedure of getting only young people. If we get in people with more experience, it takes too long to have them unlearn the bad things they know. We haven't got time for that. We don't try to get top-flight scientists. A lot are top-flight scientists by reputation only. We can't afford to have people around who have reputations who don't work hard. We would rather have people who work hard and don't have reputations."

New recruits for Headquarters Organization come from a number of engineering and scientific schools which recommend their best graduates. After a series of 5 interviews, about 1 in 4 is accepted. A similar procedure applies to naval officers. Some 40 engineering duty officer applicants are screened annually and 4 or 5 finally accepted. Several naval reservists selected have stayed on in Headquarters as civilian employees on completion of their duty tours.

Once selected for Headquarters duty, officers as well as civilians are given at least six months' special training at schools and on projects, followed by assignments on the basis of ability, not rank, and irrespective of military or civilian status. "The best qualified man gets the job," Rickover states, "and in my opinion it is the only way you can run any kind of technical organization."

The Organization also operates on a principle of retaining major control rather than assigning substantial areas of responsibility to contractors. This in effect draws contractors into an integration with Headquarters which expands the naval nuclear propulsion program from the "two hat" Navy-AEC concept to a "three hat" Navy-AEC-contractor concept. Headquarters control extends even as far as employment decisions on contractor personnel. "Anyone responsible for a reactor program," Rickover explains, "must take on the problem of see-

ing that his contractors hire the right sort of people and train them. Unless he does, he is in for trouble."

The centralized method of headquarters operation eliminates considerable redtape and memorandum writing. It permits quick decisions. But it violates generally accepted sound management criteria by overburdening key personnel with a large volume of both technical and nontechnical minor decisions. Justification for it is claimed not only from the inherently complex design interrelations within the powerplant itself, but in another circumstance explained to the Joint Atomic Energy Committee by Comdr. R. V. Laney, United States Navy:

"Each naval reactor project has a specific end in view. It is intended to be installed in a definite ship at some definite time. Because the building time for a ship and that for a reactor and the reactor plant components are different, the ship is partly built when the reactor and reactor equipment are still being designed. Its characteristics, its length, beam, its speed—all are determined, frozen. The task is very sharply defined, and there is a very high premium on success. The reactor designer must conceive, develop, design, and produce a reactor, which, when delivered to the ship, will fit into the reactor vessel which it has never seen before. That reactor vessel is resting in a ship which is a stranger, and the reactor, the vessel, the pumps, the heat exchangers, and the intricate control equipment must, the first time they operate in unison, operate correctly, so the ship will have the necessary amount of power to produce the speed for which she was designed."

Projects such as Laney describes, together with necessary basic research, are presently carried on under close headquarters organization control at 3 development centers, 2 (Bettis Plant and Knolls Laboratory) operated for AEC by contractors, and 1 privately managed.

The Commission maintains Bettis Plant at Pittsburgh, operated by Westinghouse Electric, employing some 1,300 scientists and engineers, and Knolls Atomic Power Laboratory at Schenectady, operated by General Electric and employing another 500. Combustion Engineering, Inc., operates its own center near Windsor, Conn., employing approximately 200.

The centers, together with headquarters personnel, and close to 1,000 scientists and engineers on contractor payrolls, total nearly 3,000 highly skilled technicians at work on naval nuclear propulsion. Another 250 to 300 BuShips personnel engage in closely interrelated work.

Today bringing a new reactor concept into being takes about half the 6 years needed to produce the original *Nautilus* and *Seawolf* plants. A year is consumed by preliminary analysis and design studies to fix the essential nature of the project; another year is needed for detailed design and analysis, including mock-up critical experiment in the physics, chemistry, and metallurgy of the reactor. During the third year engineering, construction, and installation of the core, components, and machinery completes the work.

Throughout such a project weekly lists of critical items delayed, in trouble, or needing help is submitted by the development center to headquarters for priority attention. Detailed monthly reports on each phase of the project assist overall coordination. All major design and technical decisions in a program are made by agreement among the principals, that is, AEC, the Navy, and the development center. If there is strong dissent from any party, it is talked through until essential agreement is reached. Lesser technical decisions which derive from major ones, extending even to the contractor level, are made in somewhat the same way by being referred back to headquarters, the principal technical source of direction.

This pattern of vertical relationships between the development centers, contractors, and headquarters in its capacity as the AEC's Naval Nuclear Reactors Branch, does not, however, pertain to its intra-Navy relationships as Code 1500. These are substantially horizontal, particularly with the Preliminary Design Branch and with the Hull and Machinery Design Branches of the Bureau of Ships, where discussions are informal and close.

In general, code 1500 is responsible for research, development, engineering, and installation of an entire nuclear plant of a new type. Reactors for subsequent plants remain a code 1500 responsibility, but repeat machinery now comes under cognizance of BuShips Machinery Branch, the same as machinery for conventional ships. This shift back to conventional from task group administrative procedures as the program progresses from its research and development to production is a wise one.

Just as the development of naval nuclear propulsion created demand for special ships to utilize it, so has it created demand for specially selected and trained men to man them. The intricacies involved inevitably drew the Bureau of Ships into this field as a technical adviser to the Bureau of Naval Personnel. Large numbers of submariners have received the training and already some 200 men and 12 officers are being trained in anticipation of commissioning nuclear-powered surface ships.

Nuclear ship enlisted personnel are selected by forces afloat, but in accordance with strict standards of intelligence, ability, and conduct. So outstanding is this group that about 6 percent are further selected each year as officer candidates—20 times the overall Navy rate. Officers submit to a series of comprehensive interviews by Admiral Rickover and others before final acceptance for training.

Following selection both officers and men undergo 6 months' intensive schooling in physics, mathematics, and various nuclear subjects, followed by another 6 months' further study and practical operation of prototype plants at the National Nuclear Reactor Test Station, Arco, Idaho.

Officers are more intensely trained than enlisted men. All officers must, and a number of enlisted ratings do, qualify as nuclear plant chief operators before completing the course. Qualification establishes proficiency in all phases of reactor operation, particularly in everything pertaining to safety. It requires at least 1,000 hours practical work on a prototype plant and is said to be several times as difficult as qualifying for submarine command.

In addition to regular training, prospective commanding officers are assigned several months' duty at Headquarters Organization and in the development centers. Each is placed in contact with the designers and developers of the powerplant destined for his command and acquires the same intimate knowledge of its capabilities as the men who created it.

The policy of building a land prototype of each naval nuclear plant type pays dividends, not only during development, but during the careful and meticulous training program as well. Crews go aboard ship fully experienced in operating a plant identical to the one which they must safely control to protect the lives of themselves and their shipmates. These factors, as well as care in design, are responsible for the excellent safety records of presently operating nuclear submarines.

The advent of naval nuclear propulsion has, indeed, brought about as major a change in naval men, material, and methods as it has in concepts of naval tactics. It has placed on naval policy planners the difficult burden of allocating available naval funds to costly commitments for seapower in being to meet the crises of today and at the same time carrying forward the bold nuclear research, construction, and training programs needed to meet the crises of tomorrow.

But if Congress appropriates hoped-for funds, by 1966 the Nation will have in being 5 or 6 superflattops, half a dozen guided missile cruisers, the beginnings of a destroyer fleet, and some 45 submarines, all nuclear powered.

The substantial shift over from steam to naval nuclear power will have been made during a brief 18 years, compared to more than 50 years needed for the shift from sail to steam.

Naval nuclear ships and reactors

Ship	Purpose	Builder	Completion	Reactor [1]	Remarks
SSN571 *Nautilus*	Attack	Electric Boat	Sept. 30, 1954	S1W	Land prototype, Arco, Idaho.
				S2W	First nuclear-powered ship.

The Critical Shortage of Culture in Russia

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. FEIGHAN. Mr. Speaker, under leave granted, I insert in the RECORD my remarks delivered in Cleveland on May 10 to the Rumanian-American organizations on the occasion of Rumanian Independence Day, on the Critical Shortage of Culture in Russia:

It is a great privilege for me to be able to join with you in commemorating Rumanian Independence Day. May 10 of each year has long held special significance for me because May 10 is Rumanian Independence Day. In my youth I was inspired by Father Trutza, who was so worthy and representative of the true Rumanian cause. Father Trutza was a friend of my late father, and between them there existed a warm and hearty friendship. In the years that have passed, in my duties as a Member of Congress, I have fought to bring justice to the cause of the Rumanian nation. Father Hategan, together with George Dobrea, your national president, have fought to carry on the inspiring work of Father Trutza as advocates of the cause for Rumanian national independence. This is the cause in which all America joins, because we Americans take pride in the fact that the spirit of national independence was born here in the United States and the roots of democratic representative government were given life and meaning by our Founding Fathers.

All of us are saddened by the unhappy subjugation of the Rumanian nation by the Russian imperialists. The once free and independent Rumanian nation has no official voice in the affairs of the nations of the world. This right has been denied the Rumanian people by the greatest curse which has ever beset humanity—the plague of Russian communism.

Freemen the world over are heartened in the knowledge that the Rumanian people, despite alien occupation, in the face of the worst tryrannies and inhumanities which have ever been visited upon them, remain true and loyal to the cause of human freedom. No one better knows this to be a fact than the Russian occupiers of Rumania. They have applied all their evil devices in an effort to break the spirit and the aspirations of the Rumanian people. This effort began when Vishinsky handed his Kremlin ultimatum to the legal ruler of Rumania, King Michael, on May 6, 1945, and arrogantly said: "In this case I am Yalta and I tell you what to do." In the years that have passed the Russians and their proconsuls have attempted to make Russians out of the Rumanian people. In this ignoble task they have failed miserably. Today the Rumanian people are more determined and more dedicated to being Rumanians and winning national independence for their country than ever before in their history. This is the answer the Rumanian people have given to the Kremlin objective of world conquest. In this task Rumanians in all walks of life will continue to remain dedicated to the preservation of their rich culture, their glorious traditions, and their attachment to civilized mankind.

All Rumanians, like the other non-Russian people of the present-day Russian empire, are keenly aware that among many other deficiencies, the Russians have never possessed a distinctive culture or folklore of their own. Today when the Kremlin is attempting to put their best foot forward in an effort to propagandize the western world, all thinking Americans are amused by the recent exhibition in New York City of the Moiseyev ballet. The typical Russian ballet would lack entertainment that would suit the tastes of the American people, therefore it adopted Rumanian, Polish, Ukrainian, Byelorussian, and other non-Russian dances and music as the basic part of their repertoire. The most characteristic old Rumanian popular dances and tunes, the hora and joc, and the ciocarlia, are being danced and sung by Kremlin puppets in an effort to create the impression that the Russians are a cultured and musical people. Only a few years ago the Russians attempted this same propaganda maneuver in Paris, and the Paris press promptly exposed the exhibition as a fraud. Today the American people are enjoying the same entertainment, as the Russians feverishly attempt to claim as their own the rich culture, songs, and dances of the Rumanian people. It has long been a popular joke among Rumanians and other non-Russians to refer to the grandiose, but futile efforts of the Russians to demonstrate that they are cultured people. This is a new sport and source of amusement on the American scene, but which will surely grow more popular as the Russians attempt to disguise themselves as a cultured and happy people. The American people have long been acquainted with the amusement provided by marionettes. They now see the Moiseyev ballet as a Russian extravaganza of a marionettte show with all the strings being held by the leaders in the Kremlin.

I have singled out this particular effort of the Russians to propagandize the western world because I feel it well expresses the most desperate needs of the leaders in the Kremlin. Their uncertain and precarious position within their empire, together with their concern for the political awakening to the realities of life which is taking place in the free world, has caused them to go to ridiculous extremes. We can be confident that the more ridiculous the Russians become in these efforts, the more certain it is that their present-day empire is reaching a state of disintegration.

The Russian czar Khrushchev has been very vigorous in the past year in pressing the western powers to recognize a status quo. With the usual heavy hand of Russian approach, he has attempted by rattling the atomic bomb, to intimidate some of the western leaders into accepting his proposal. Only a few days ago at the foreign ministers conference of the NATO powers, decisive action was taken, by unanimous agreement, that Khrushchev's proposal for recognition of a status quo must be rejected. Once again the Russian spirit of desperation caused their leaders to overplay their hand and thus alert the leaders of the western world to the realities which lie behind the latest Russian proposal. Khrushchev has stated that there can be no summit conference unless the western powers first agree to recognition of a status quo. The western powers have now made it clear that they will not assist the Russians in their ignoble task of tightening the noose of slavery around the necks of the many non-Russian nations now held against their will within the Russian empire. This action coincides with the valiant efforts of the non-Russian people behind the Iron Curtain. The struggle of the non-Russian people is to throw off completely the Russian imposed noose and regain their national independence. In this inspiring and noble cause all men of good will must join.

I have often felt that one of the greatest obstacles to Russian occupation of Rumania is the rich and ages-long culture of the Rumanian people. As I examine the present-day Russian empire, which now flies the banner of Communist ideology, I see this to be an insurmountable problem for the Russians from the Baltic Sea to the Pacific Ocean. No method of despotism and no tactic of propaganda can overcome this obstacle. This is the basic problem which confronts the Russian imperialists. This also is the greatest asset possessed by the cause of free men. The people of Rumania and the other subjugated nations behind the Russian imposed Iron Curtain surely no less than the awakened peoples of Asia and Africa, are on the march for the inevitable goal of national independence and self-government. This is a political movement which is beyond the capability of the Russians to control and one which the United States, by its historic traditions, must support with a firm faith and certainty of victory in the future.

All of us can take encouragement from the political trends which are now taking place throughout the world. With certainty this vast movement of human aspirations will sweep all mankind forward toward the goal of peace, justice, and freedom for all nations for all time.

Fantastic Foreign Aid

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. GWINN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I wish to draw the attention of the Members of the House to a thought-provoking pamphlet entitled "Fantastic Foreign Aid." It was prepared by Kent

Courtney, publisher of the Independent American, a national newspaper of conservative political viewpoint.

The pamphlet points out that our people are taxed to fight communism but at the same time, various agencies of our Government are actually giving economic aid to our enemies, the countries whose leaders have openly declared that they intend to crush us.

The article follows:

FANTASTIC FOREIGN AID

FOREIGN AID DOLLARS HELP OUR ENEMIES

The advocates of foreign aid state that its prime purpose is to defend the free world against communism by sending economic and military aid to our friends overseas.

If this is true, then why are we sending foreign aid to our mortal enemies—Communist nations?

Below is a list of Communist countries who have received foreign aid from the United States. These billions of dollars of foreign aid to Communist nations were paid for by your income-tax dollars.

Here is where some of your tax dollars went:

Foreign aid to Communist countries, July 1, 1946–June 30, 1957 [1]

Country:	Total
Albania	$20,444,000
Czechoslovakia	215,410,000
East Germany	17,339,000
Hungary	31,938,000
Poland	442,698,000
Soviet Union	687,929,000
Yugoslavia	836,354,000
Total aid to Communist nations	2,252,112,000

[1] Source: Legislative reference service of the Library of Congress.

Recent figures on foreign aid to Reds [1]*—Aid during fiscal year July 1, 1956–June 30, 1957*

East Germany	$21,000
Hungary	10,166,000
Yugoslavia	45,241,000

Not only has the United States sent more than $2¼ billion to aid Communist countries since 1945, but, in addition, Communist Poland has recently received $193 millions in gifts from the United States—$95 millions in 1957 and $98 millions in February 1958. The transfer of these United States dollars to Red Poland was handled in a special transaction.

Your tax dollars strengthen grip of Communist dictators

Poland, East Germany, Hungary, and Yugoslavia are each controlled by loyal-to-Moscow dedicated Communists. Foreign aid to such countries merely strengthens their control of the slave-citizens of these countries.

Mark well that the United States gave over $10 million in foreign aid to Communist Hungary, where the Red army crushed the valiant freedom fighters.

FANTASTIC WASTE OF FOREIGN AID FUNDS

Not only have your income tax dollars aided Communist nations abroad, but millions of foreign aid dollars have been scandalously wasted on fantastic projects.

A few examples of the wanton waste in foreign aid

Your tax dollars were spent to pay for:

1. Sending high-priced "rock and roll" jazz bands to South America and the Far East, weight lifters to the Near East, and opera singers to Western Europe.

2. Five expensive airfields in Afghanistan, where most inhabitants can only afford to travel on the backs of camels.

3. Grass seed to Great Britain.

4. Direct support of Communist-sympathizer Nehru's second 5-year plan for India.

5. An $18 million highway for the 9,000 automobiles of Siam.

6. Electronic microscopes to the Philippines where there was no power to operate them.

7. Paving highways in Saudi Arabia so that billionaire King Saud can drive his 100 gold-plated Cadillacs to and from his winter and summer palaces.

AMERICA'S ECONOMIC STRUCTURE BEING WEAKENED

No nation can continue to squander its money abroad—giving aid to its enemies and its fair-weather friends—and still remain financially strong and able to defend itself in time of war.

Eugene Castle, author of the Great Giveaway, stated in a recent speech that we have given away approximately $70 billion dollars in foreign aid in the last 13 years.

Seventy billion dollars is equal to:

(a) Seven times the money we have spent on all atomic energy projects.

(b) It is equal to the total assessed value of our 26 largest cities.

(c) It is equal to the increase in our national debt in the last 13 years.

So, not only are American taxpayers now saddled with supporting the world via foreign aid programs at the rate of about $4 billions per year, but also we taxpayers must continue to pay interest on the national debt for these $70 billion squandered abroad. This interest is now costing us about $2 billion each year.

Foreign aid must be stopped if America is to survive as a nation.

YOUR INCOME TAX DOLLARS FINANCE TAX CUTS ABROAD

Socialist Great Britain and former enemy Japan have both recently reduced the personal income taxes of their citizens. You, Mr. and Mrs. American Taxpayer, made this possible because millions of your hard-earned tax dollars have been used to bolster the financial structure of Great Britain and Japan.

Congressman NOAH MASON of Illinois puts it this way: "American foreign aid has helped European nations reduce their own national debts, balance their annual budgets, and reduce taxes for their citizens."

CUT FEDERAL SPENDING SO OUR TAXES CAN BE CUT

Continuation of the present policies to tax and spend and waste, will result in a ruinous inflation for this country, and a devastating depression.

You can help to stop this fantastic waste of your hard-earned tax dollars.

Congressmen and Senators will vote against foreign aid provided the folks back home deluge Congress with letters and telegrams demanding an end to foreign aid to Communist and Socialist countries abroad.

The billions of dollars that would be saved would give a tax cut to every citizen in the United States.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Death of Charlie Peace, Greenville, S. C., Newspaperman

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, May 19, 1958

Mr. THURMOND. Mr. President, the death of Mr. Charlie Peace last Thursday brought an untimely end to the career of one of South Carolina's finest citizens and ablest newspapermen. He was a man of rare vision and foresight who contributed a great deal to his community and region. He was an extremely friendly man and he had a great number of devoted friends who mourn his death.

I ask unanimous consent that there be printed in the Appendix of the RECORD three editorials which express the sadness felt over his passing throughout South Carolina. The editorials are: Newspapers Are People—Charlie Peace, from the Greenville News of May 6; Charlie Peace, from the Columbia State of May 17; and Charlie Peace, from the Charleston News and Courier of May 17.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Greenville (S. C.) News of May 16, 1958]

NEWSPAPERS ARE PEOPLE—CHARLIE PEACE

(By Wayne W. Freeman)

Throughout most of his career as a newspaper executive, Charlie Peace was concerned primarily with the business and mechanical side of the complex publishing operation. Since his days as a youth in his late father's commercial printing plant, machinery had fascinated him.

As vice president and general manager of the News-Piedmont Co., he had personally shopped for most of the multitude of machines required to produce the two newspapers, and he probably knew more about them than anyone other than the men who operate and maintain them.

But as valuable as was this contribution to the common task and as much as it was appreciated, it is the memory of another side of his character that his associates will cherish as long as they themselves live: Charlie Peace, the generous, hearty, fun-loving, understanding, and compassionate human being.

In discussing newspapers and what makes them, Mr. Peace almost invariably would observe, "newspapers are people."

For all of his preoccupation with other matters, he never forgot nor let anyone else forget that the men and women who write and edit the copy, run the machines, and produce and deliver the final product were the most important element in the success of the paper as a community institution.

Thus it is that in the death of Charlie Peace the officers, executives, and employees of our publishing company have lost more than a business and professional associate. The greater loss is that of a close and beloved friend.

Part of this characteristic, too, was his boundless love for children and, invariably, children who came within range of his radiant affection for childhood returned his love.

His friends of all ages were literally legion, not only in this community and State but throughout the United States and even in Canada, where he had many dealings with manufacturers of newsprint. Wherever newspapermen gathered in their professional conferences, Charlie Peace was known. Usually he was there and, when he wasn't, members of the News-Piedmont staff were greeted on all sides with, "How's Charlie?"

Mr. Peace was a newspaperman from his boyhood. As a youth, he and his brothers were instrumental in their father's acquiring The Greenville News to make it a forceful influence in the Piedmont Carolinas. From the old Peace Printing Co., he went to the News as a proofreader and set out to learn all phases of the operation.

It was natural that he should move gradually into the business and production side exclusively. He played a big part in the steady growth in the circulation of the News and in the renovation and expansion of the Piedmont after the company acquired it in 1927.

Production, however, was his first love, and as the years passed he devoted more and more of his time to the expansion and improvement of the mechanical plant. He literally roamed the country in search of new ideas, better techniques and better machines for doing the job.

And wherever he went, on a business trip or to the beach home he loved, each edition of the papers was sent to him and he read them meticulously.

As far as we know, Mr. Charlie never wrote an editorial or a news story, but he knew when they were done right and he was quick to spot a mistake. Reporters and editors alike found him a kindly critic and a strong backer when controversy arose or the going otherwise got a little rough.

After the News-Piedmont Co. acquired the Asheville Citizen-Times Publishing Co., he became its president and gave to that responsibility the same sort of devotion he had given to the Greenville operation. His basic tenet there, as here, was that the newspapers belonged to the community and that the publishers should give the community the kind of newspapers it wanted and needed.

Although the press was his great love, Mr. Peace gave much of himself and his substance to the community and region in other ways. Many were his acts of charity and philanthropy, and as often as not those who benefited never knew the identity of their benefactor.

Many years ago he saw the importance of aviation to Greenville's future. He accepted appointment to the Greenville Airport Commission. He participated in the vision of a modern airport which became a reality with the cooperation of other officials and the public. And with his colleagues he was looking to the age of the jet transport.

Such at a glance was the 54-year lifespan of a man who loved life more and lived it more fully than most who are spared long beyond the allotted three score and ten.

Those of us who lived with him, worked with him and played with him are conscious of a great loss. We are comforted by the knowledge that the loss is shared by the community and that he might say, in the words of George Crabbe in The Village:

"Life is not measured by the time we live."

[From the Columbia (S. C.) State of May 17, 1958]

CHARLIE PEACE

Charlie Peace was a newspaperman by inheritance and by love. He came from a newspaper family; he would have been unhappy in any other work.

Jovial—given to being in a happy mood—he was nonetheless serious when the occasion demanded it. His fellow journalists recognized his leadership by making him president of the South Carolina Press Association; he held important committee appointments from the Southern Newspaper Publishers Association, and his own family called upon him to assume responsible executive duties as vice president and manager of the Greenville News-Piedmont, and president of the Asheville Citizen-Times.

In the last year or so, ill health had curbed Mr. Peace's activities, but this did not lessen his keen interest in successful operation of the newspapers, and other properties with which he was identified, nor did it cause him to lose his enthusiasm for Greenville and for South Carolina, in which he had so much faith, and in whose upbuilding he had done his share.

There are many to mourn the loss of Charlie Peace. He was a friend, indeed; a man with a big heart whose fine qualities were appreciated by those of us who had the privilege of knowing him and evaluating his real worth.

May God rest his kindly soul.

[From the Charleston (S. C.) News and Courier of May 17, 1958]

CHARLIE PEACE

Three sons of the late B. H. Peace have carried on the newspaper business he bought in Greenville and expanded it through the years. The death of Charlie Peace at the age of 54 has removed one of the brothers from a successful family enterprise.

Jovial of manner and friendly in approach, Charlie Peace was well known among newspaper people not only in South Carolina but elsewhere in the profession. He had been assigned to all departments of the Greenville News and Piedmont, and was general manager of the two papers since 1939. When the Asheville Citizen and Times were bought in 1953, he became president of the enterprise. Mr. Peace also was a director of the company operating the Peace radio and television stations.

Fond of jokes and a good time, Charlie Peace was good company when newspapermen got together. We shall miss him.

Tax Legislation To Benefit the Small-Business Man

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. CUNNINGHAM of Nebraska. Mr. Speaker, the small-business man is facing a serious threat through excessive taxation which stifles growth. This is a

situation which concerns all of us here in Congress, for it is often said, and rightfully so, that the small-business man is the backbone of our economy.

There is much talk of tax reduction in the air, but the future of legislation in this field is at best uncertain. Meantime, small business finds it increasingly difficult to experience growth due to high taxes on success. Furthermore, every small business faces the problem—often insurmountable—of estate taxes due upon the death of a principal in such business.

I believe we in Congress should not wait for or count on tax reduction to relieve the plight that many of our small businesses are in. I am introducing a bill today to give needed relief to business in two important fields—expansion and estate tax.

Section one of my bill is designed to reward success and growth of a small business. It allows a person in business to deduct a portion of the additional investment in his business during a taxable year. Under section 1, a business which shows a $10,000 increase during a taxable year in the value of its property, equipment, stock, and so forth, will not be forced to pay tax on the entire gain. Section 1 allows a deduction before taxes of 20 percent of this gain (or $30,000, whichever is smaller). This would result in a $2,000 deduction for a company showing a $10,000 increase in the value of its assets during a year. The balance of the increase would be subject to normal taxes.

Sections 2 and 3 face the problem of high estate taxes and the effect on a small business of the death of a partner or sole owner. Section 2 establishes noninterest-bearing estate-tax certificates for small businesses. By using such certificates, a businessman, in effect, may prepay his estate taxes, thus lessening the effect of his death upon a business in which he has a large financial stake.

Section 3 provides for installment payments of estate taxes over a 10-year period. This avoids the serious and sometimes catastrophic financial effect on a business when estate taxes must be paid following the death of an owner or partner.

These steps form only the most basic plan for relief of small business. Some action must be taken which will benefit the thousands of small-business men who are literally on the brink of disaster. Talk of tax cuts does not keep the wolf from the door, and I urge my colleagues on the Ways and Means Committee to use these recommendations as a basis for legislation of real benefit to the small-business man.

The President Scores

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. MOORE. Mr. Speaker, as a firm believer in the plans submitted by the President for reorganizing the Defense Department, I have been heartened by the favorable action taken by the House Armed Services Committee in reporting a bill which fulfills a major portion of the recommendations made by the administration.

I believe the following editorial of May 19, 1958, from the Wheeling Intelligencer, a leading newspaper in the First Congressionad District of West Virginia, indicates that the sentiment of the people back home is definitely in favor of Congress approving the Defense reorganization plan in substantially the form recommended by the President. Consequently, I am hopeful that Congress will have an opportunity at an early date to work its will in regard to this important legislation.

The editorial follows:

THE PRESIDENT SCORES

The fact that the House Armed Services Committee has devised a defense reorganization bill which Mr. Eisenhower likes so well that he has sent congratulations to Chairman VINSON and his associates is ample proof that the President and his critics are not so far apart as at first indicated.

While making certain reservations, the President agrees that the committee's version of the reorganization plan submitted by administration represents "constructive efforts to correct the main difficulties which have troubled our Defense Establishment in recent years." This approximate meeting of minds encourages the hope that a workable plan of reorganization which will go a long way toward achieving that unity of effort so essential to a capable defense posture will emerge from this session of Congress.

That the committee bill still leaves something to be desired, however, is indicated by the suggestion of the President that two quite important changes be made. For the purpose of allaying the fears of those who foresee the day when the several arms may be abolished as separate entities, the committee inserted a stipulation that the Army, Navy, and Air Force shall be separately organized under civilian secretaries. It further provided that these services function under the direction, authority, and control of the Defense Secretary, exercised through the respective secretaries of such departments. The President would like to have this last stipulation removed. He also objects to a provision which would give Congress the power to veto, by a simple resolution, any plan of the Defense Secretary to transfer, reassign, abolish, or merge combat functions of the services.

This latter provision would seem particularly objectionable. It would substitute the judgment of Congress for that of the Secretary of Defense in matters of pure military strategy. The mischievous possibilities of such interference would appear to be unlimited. As for the President's other objection, while less serious, it does go to the heart of the whole theory of reorganization, which is to centralize the authority and coordinate the defense effort. In the natural course of administration the authority of the Secretary of Defense is exerted through the respective secretaries. To stipulate this procedure by law, however, suggests an advisory relationship of the Defense Secretary to the several department secretaries which is not or should not be the intent of the law and which, in operation, might tend to defeat in large measures the purpose of reorganization.

There can be little doubt that the overwhelming public support which has lined up back of the President on this issue is responsible for the change of heart in the House Armed Services Committee which moved it—to go as far along with the administration as it has gone. This same factor, it seems reasonable to believe, will exert a powerful influence in having the language of the committee bill suitably adjusted on the floor of Congress, as the President has requested.

Speech by Dr. Frank Stanton at the Missouri School of Journalism

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. MOULDER. Mr. Speaker, at the 50th anniversary of the University of Missouri School of Journalism on May 2, Dr. Frank Stanton, president of the Columbia Broadcasting System, delivered a challenging speech on the tremendously heavy responsibility of all mediums in these critical times to inform our people of what is going on in the world. Our people, he points out, are faced with making vital decisions quickly—decisions which "must be based on increasingly wide foundations of accurate, understandable information at the very time when the issues are far more complex and difficult to make both accurate and understandable."

Without attempting to minimize the importance of editorialization, Dr. Stanton maintains that "editorialization without the context of objective, factual reporting, is personal opinionating in a vacuum." American journalism, he believes, faces a great and urgent responsibility in providing this factual, background information.

Mr. Speaker, I ask unanimous consent to insert at this point in the RECORD, the text of Dr. Stanton's speech of May 2, when he received the Missouri School of Journalism Honor Award for Distinguished Service in Journalism.

The address follows:

THE CHANGING ROLE OF JOURNALISM

(By Frank Stanton, president, Columbia Broadcasting System, Inc.)

I am happy to be here tonight, and very proud of the honor you do me.

No one can come to Missouri and to this university without being reminded of the great contributions made here both to journalism and to American letters. The roots of a wholly American literature are here. Missouri has bred a vigorous and venturesome press. And it has sent our journalists who have made their constructive influence felt all over the world.

The company whom you have honored in this way over the years includes some very great figures. I cannot escape the fear that you have made a mistake in adding my name to that group. At any rate, perhaps the most appropriate response is that we in this relatively new and still not wholly matured field of electronic journalism share with all journalists a deep concern that we do not miss our common opportunity in an age of crisis.

I have listened with great interest to Eugene Pulliam's stimulating comments on freedom of the press. This is not a subject we can ever afford to take for granted. Indeed, for electronic journalism, the task is not so much to hold to the freedoms we

have, but to fight to expand them so that we can share with journalists from the printed mediums at least some of their liberties. Essentially, the constitutional recognition of the fundamental role of journalism in a democracy is merely the formal expression of the attitude of the people. That attitude ought to be revitalized, from time to time, in terms of current needs. Otherwise, its formal expression is in danger of becoming merely a slogan.

It is also a good thing for us to take a look, from time to time, at journalism's attitude towards the people. Actually, the Constitution could confer upon journalism only its freedom. It provides neither a positive objective for journalism nor a roadmap for getting there. It confers the right to talk, it imposes a moral, though not legal, duty to be responsible; it obliges no one to listen. It provides for the one sweeping condition under which journalism can reach its highest usefulness; all the rest it leaves to journalism itself, and to the people.

Like other institutions in our democracy, journalism has from the very beginning been subject to a long, bumpy process of trial and error. It has had periods of great usefulness when it has made the critical difference, I think, between our advancing toward the realization of popular aspirations and slipping back into an easy rut. But it has also had some pretty thin times when many people cared little about what journalism was up to.

By trial and error the press has found that it has had to respond—sometimes very slowly—to the needs of the people. As popular needs changed from one generation to another, the press also had to change. If it failed to do so, there would be no one listening. And when that happened, any right to freedom conferred by the Constitution amounts to little more than the right to be ignored.

The concept of the press as propaganda—epitomized by the party press of the early days of the Republic—proved to be suitably short-lived in America. Journalism moved on into the great days of the 19th century. The rise of the penny press—which reacted to the party press by containing no political opinion at all—was a peculiarly American institution. It reflected the insatiable thirst of a youthful Nation for news about its own mores and social behavior at a time when there were few pressing problems of a threatening nature.

The penny press was, in its time, an economic as well as a journalistic phenomenon. But when its publishers and editors failed to recognize the disturbing issues growing out of our territorial expansion and the slavery conflict—when the needs of the people changed—it lost its place to a whole new crop of journalists: Greeley and the Tribune, Bryant and the Post, Bowles and the Springfield Republican, Carl Schurz and the St. Louis Westliche Post, among them. These were the years in which journalism first became a determining force in American life. They carried out with real vitality the role that the Constitution makers must certainly have had in mind when they envisioned a free journalism as a necessary ingredient of the democratic process.

Yet the giants of personal journalism came to see a decline in their influence and effectiveness—not because they had changed, but because the society they served had changed. The new needs were met by a new journalism that flowered in such great papers as the St. Louis Post-Dispatch and the New York Times, a journalism that did not depend solely upon the driving force of a single mind and personality. And under this stimulus, the horizons of the average American became broader as the march of events became more rapid and complex, for the climate of life had become less hospitable to the moral force of the reflective article and more conditioned by what was happening in many places at the some time.

The War Between the States also taught some lessons—among them the primary role of the newspaper as a reporter. It focused attention on the concept that the real strength of a newspaper lies in its reporting staff.

All this is familiar to you. I remind you of it now only because we are, I think, again at one of those pivotal points in American journalism where its basic role is undergoing a tremendous change: a change in opportunity, a change in responsibility, a change being visited upon us whether we like it or not.

Moreover, I am convinced that never before has the roles of journalism in America assumed proportions of such staggering dimensions and urgency as the events of the last decade—indeed, the last few months—have given it.

If we are to cope successfully with this change, all of us need to go back to the root of the problem as Jefferson saw it: that you cannot have a government by the people unless the people are informed. This dictum, which has never been disputed in our history—even in time of war—has always imposed on journalism a challenging and never-ending responsibility.

Even in slower-moving times, in the midst of far less pressing events, this responsibility has not always been easy to carry out. But in the past we have always had time on our side, and sooner or later in periods of great change, the evolving role of journalism has been spelled out by the people themselves in the slow certainty of the gradual change that is characteristic of the democratic process.

Today, time has become a luxury we can no longer afford. The people of this country are called upon to make decisions—and to make their decisions known and felt—fast and unmistakably. Moreover, each decision must be based on increasingly wide foundations of accurate, understandable information at the very time when the issues are far more complex and difficult to make both accurate and understandable.

Now I cannot see how journalism can have the ghost of a chance of contributing what is absolutely essential to this fundamental process, under fearfully accelerated conditions, unless it begins with a clear sense of its own destiny. Governments in democracies move in tandem with public opinion. Our constant goal must be to come to a better understanding of the relationship between journalism and public opinion—what the essential role of journalism is in the molding and ultimately the expression of public opinion.

This is a much larger order than it seems at first glance. Philosophers and political scientists for centuries have been trying to discover what molds public opinion, what influences it, what changes it Although the poll-takers have sought to dispel some of the mystery surrounding the subject they have thus far been able only to nibble at the fringes of the mystery. The physiology of public opinion remains still largely unknown, still an enigma.

Yet we do know certain things about it One of the most important findings of the pollsters over the last 20 years is that public attitudes are rarely changed by mere exhortation without all the facts, on all sides, to provide the context and to assure the reader or listener that he agrees, rather than that he is being pushed. The concept of mobilising opinion by a campaign of hortatory solgans is fallacious. For all of us in the profession of journalism that point has vital significance, no matter what media we serve. It suggests that public opinion is crystallized or changed by the force of persuasion and argument only if, as a condition precedent, entirely different forces have first been at work. People generally resist being told what to do or think. They want to know all the facts and then make up their own minds about the merit of the opinions of others and of suggested courses of action.

This may well be the lesson we can draw from the Cincinnati experiment, conducted by the American Association for the United Nations and the United Nations Association of Cincinnati, aided by the Stephen H. Wilder Foundation. Their objective certainly represented an essential goal of a democratic people in a shrinking world: "To demonstrate how a community may become so intelligently informed on world affairs as to be a dynamic force in the creation of an ordered, eventually a peaceful world."

The campaign started in September 1947—a period of relative serenity, with the United Nations heavily involved in procedural debates. Literature on the United Nations was given to every public school child and every teacher. Church and PTA meetings were devoted to the subject. At more than 225 meetings special speakers appeared, documentary films were shown, and thousands of pamphlets were distributed. Newspapers and radio gave special emphasis every day to information about the United Nations. Everywhere in the city slogans urging support for the United Nations were exhibited in enormous numbers: on blotters, matchbooks, streetcar cards, and billboards.

Yet this mammoth campaign descended upon the people of Cincinnati with all the impact of a whisper in a boiler factory. On two central aspects of the United Nations—its main purpose and the existence of the veto power—almost exactly the same percentage of the population had knowledge after the 6-month campaign as before it. The same percentage of people who praised the United Nations before the campaign praised it afterward—and for the same things; so did an unchanged percentage blame it—and for the same things. The citizens of Cincinnati were just not susceptible of mobilization by exhortation alone, even of the most concentrated, disinterested and saturating kind.

I suspect that these results are not wholly surprising to you who are students of the history of American journalism, for you are aware of the immense gaps between the vigorous editorial support of some presidential candidates in our history and the popular vote at elections.

I cannot agree that this has anything to do with a so-called decline in the power of the press. The press in this country was at its weakest by far when the mainspring of its existence was held to be a persuasive power over the people. Such a power seems to me to hold no promise for the effective workings of self-government, because it does not imply an informed people at all. It implies a suggestible one, very apt to turn to the next most artful persuader that comes along. The opinions of a people easily persuaded rest on very weak foundations indeed.

Opinion can never be mobilized in this country, unless there is first—and unless there continues to be—prompt, clear, and arresting news of events. We can sense this all through our history: in the response to the British march on Concord, in the siege of Fort Sumter, in the attack on Pearl Harbor. The danger today is that, in the traditional working of democracy, we live at the mercy of a population capable of mobilization only after the impact of a disaster. Today, such a disaster may be so great and so swift that mobilization after the fact will be little more than the desperate wanderings of a few survivors among the wreckage.

I think, however, that we have hopeful and strong evidences that this will happen only if there is inadequacy in the constant flow of information to the people. Manmade disasters do not burst out of a vacuum. Lex-

ington, Sumter, Pearl Harbor—all were culminations, not beginnings. The great event which marks the end of a chain reaction is explosive only because the lesser events leading up to it were inadequately known and hence imperfectly understood.

Even if the reporting of these lesser events cannot be counted a wholly new role for modern journalism, it must certainly be counted as a role wholly new in urgency and emphasis in this ICBM age.

That is the major job that faces journalism in America today. And we are not talking about our survival as a profession now. We are talking about any survival at all.

We can be comforted by evidence that prompt, thorough and good reporting does work. In the fall of 1956, every form of journalism in the United States—press, radio, and television—reported fully and arrestingly on the Hungarian revolt. Before this a Roper survey of a cross-section of American adults found that 72 percent of them opposed any immigration allowance beyond the fixed quota. After the revolt, but when the immediate emotional reaction was over, 72 percent were in favor of lifting the immigrant restriction.

Also in the fall of 1956, despite the preoccupations of a presidential election, journalism in America in all media did a job of incisive effectiveness in reporting the Suez crisis. In a survey before Suez, less than a third of the people were unqualifiedly in support of a United Nations police force in troubled areas. After the Suez crisis, 57 percent of the American people, in a similar survey, were unqualifiedly in support of a United Nations police force—including its use of American soldiers.

In March 1957, when the $72 billion budget for 1958 was submitted to Congress, a survey showed 60 percent of the American people in favor of cutting it. After the dramatic job of reporting the flight of the sputniks, another survey showed 65 percent of the American people in favor of increasing the budget.

Now all these issues were the subject of arguments, orations, and repeated exhortations for years. But information brought quickly, fully, and well on events relating to the issues accomplished the mobilization of opinion that years of persuasion and argument failed even to start. I find this very heartening. To me it means that exhortation does not move without the facts.

This has an obvious bearing on the role of journalism in our time. It emphasizes the importance of better, faster information to the people. The speed, clarity, accuracy, and thoroughness with which we report events that inevitably shape public opinion constitute the very essence of our responsibility as journalists.

I do not mean to minimize the role of editorialization. It is of vital importance But editorialization without the context of objective, factual reporting, is personal opinionating in a vacuum. Unless the people have confidence that they have all the facts without bias, they will tend to dismiss the editorialization. But if they are persuaded that the opinion is based on all the facts—facts which the journalist has first given to the people—then the editorial will be accepted as thoughtful and helpful guidance.

Newspapermen have many of the same problems we do in the younger, newer branch of the press—electronic journalism. We both recognize a special responsibility to the public interest that world events have imposed upon us. We in broadcasting have additional unique problems of our own that relate to the very newness of our kind of journalism: radio reporting as we know it today is scarcely 20 years old, and television reporting is barely beyond its tenth year.

Each medium—the newspapers, radio, television—has its own individual capabilities.

Newspapers can present news in a great wealth of detail. The reader can peruse at length those things in which he is most interested, and ignore, or treat lightly with, the remainder. But in broadcasting the listener—or viewer—lacks this option of selectivity. In the electronic medium where time is the only dimension, the news must be presented sequentially. A further element is the inelastic nature of the dimension we call time. There are 60 minutes to the hour, 24 hours to the day. No matter how compelling the news may be, there simply is not enough time in a broadcast day to treat in detail the full panorama of news; not if we are to do the other jobs which we must do in order to make possible the fulfillment of our news functions. Completeness in the sense of detailed coverage, therefore, is one of the major advantages of the daily press and one of the technical limitations of broadcasting as a news medium.

On the other hand, radio and television brought an exciting new dimension to journalism. Ours is the strength of immediacy in reporting, often in transmitting the very event as it is happening. Combining sight, sound, and action, television has brought the world into almost every American home, giving remote places reality and revealing the important figures of the world as both more and less than legendary names. Moreover, by their very natures, radio and television are the mediums that often first trigger the interest of people in new events, new personalities, new problems—sending them to the printed mediums for further and continual information.

In the decade or so that we have had television as a great new presence in journalism, we have organized ourselves to meet our job as reporters. This is not to say that we have arrived at any plateau of effectiveness or thoroughness that calls for no more effort or ingenuity. But we have joined the older mediums in fulfilling the reporting function so that a certain level of performance is expected of us. We are getting the major stories, and we are getting them to the people.

But we cannot be content to rest on our oars for we are still far from getting to where we ought to be. We must constantly remind ourselves, I think, that the role thrust upon journalism today requires a far graver view of our total responsibilities than that which any of our predecessors had to take. Democracy rests on public opinion, and democracy succeeds only to the extent that public opinion is intelligent, well informed, responsive. The facts of life in the world today make this need for an informed public far more urgent than ever before.

There is mounting evidence that public opinion is shaped more clearly and more swiftly by the impact of events than by the power of propaganda. Propaganda in mid-twentieth century is self-limiting. On the other hand, people adequately informed can act and act fast to make their wishes known, and compel leadership to action. Upon the basis of full information which they can trust, people can make up their own minds about the conclusions of others, and if those conclusions—whether programs of Government leaders or editorials of journalists—are well founded on known and understood facts, people will be stimulated and influenced by them. Only, however, because they understand, and hence respect sensible opinion.

These circumstances put journalism on the threshold of the toughest job it ever faced, with the most serious issues hanging on its success or failure.

For our ability to report swiftly and thoroughly the events of our time in a way to compel the attention, interest and understanding of tens of millions of people is essential to the very survival of democracy itself.

A Tribute to Lloyd W. King

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. BOLLING. Mr. Speaker, at the 1958 annual meeting of the American Textbook Publishers Institute held earlier this month, announcement was made of the retirement of Lloyd W. King, for 16 years the executive secretary of the institute. Mr. King is to be succeeded by Dr. Austin J. McCaffrey, former State commissioner of education in New Hampshire.

Lloyd King became the first executive secretary of the institute in 1942, after serving for 8 years as State superintendent of schools in Missouri. He has made an outstanding contribution to education in this country in both positions.

Under leave to extend my remarks, I include the following tribute to Mr. King by the editors of the well-known educational journal, Scholastic Teacher in the May 16 issue of that publication:

"A crazy idea that'll never work," was the verdict in some circles 16 years ago when a group of 12 publishing companies proposed formation of a textbook publishers' association. The small, individualistic, highly competitive industry stood only to suffer, critics argued, under the restraints of cooperative effort.

Supporters, however, saw real benefits to education in the idea. They sought higher editorial and manufacturing standards throughout the industry; broader cooperation with professional educators and lay groups; better understanding among school people, publishers, and the public alike, as to the purposes and best uses of textbooks and other materials of instruction. In a real sense pioneers (although today they would likely smile at the word), the founding group went ahead. June 1942 marked the official beginning of the ATPI.

Chosen as its first executive secretary, and charged with transforming its ideals into reality, Lloyd W. King came to the institute from Missouri, where he had previously served for 8 years as State superintendent of schools. He brought to the fledgling organization a wealth of experience in both practical and theoretical education, together with rare skills in administration and human relations. On his shoulders has rested ever since, to a very large degree, the success of the ATPI.

As the reader is by now aware—and to borrow from an earlier man from Missouri—forecasts of a quick demise for the institute were greatly exaggerated; yet those early prophets of doom can be excused by pointing out that they did not know Lloyd King. With resolution, vast energy, and tact—supported always with the underlying conviction that the institute would endure only as long as it served both education and educational publishing—Lloyd King went to work.

That he succeeded in this ambitious undertaking, beyond even the fondest hopes of its proposers, is seen in a record of Institute accomplishment over the years, which record would far exceed the space available here. Membership has grown to a present total of 75 educational publishers supplying more than 95 percent of the Nation's teaching materials. (Scholastic has belonged to

the Institute since 1948.) Of even greater significance is the vast superiority of today's textbooks and other instructional materials over those of 16 years ago; in better printing and binding; wider, more imaginative uses of color and illustration; improved editorial techniques; better methods of selection and distribution.

Finally, the ATPI has achieved notable success in interpreting and explaining the industry's objectives. It is safe to say that the role of textbooks and periodicals—second only to the teacher as the most important influence in the classroom—is better understood than ever before by teachers, principals, administrators, and lay people.

These and countless other achievements—together with the universal respect, gratitude, and affection he has earned among publishers, legislators, school people, and Institute colleagues—offer profound testimony to Lloyd King's contribution over the years to education and educational publishing.

We salute him.

Now That Mr. Nixon's Home He Can Educate His Chief

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. LOSER. Mr. Speaker, a rather enlightening editorial appeared in the Nashville Tennessean the other day anent Vice President NIXON'S visit to Latin America. Under the unanimous consent rule I insert in the CONGRESSIONAL RECORD as follows:

NOW THAT MR. NIXON'S HOME, HE CAN EDUCATE HIS CHIEF

There are two important phases to the story of Vice President NIXON'S return from his tour of Latin America yesterday.

One deals with the extraordinary reception that awaited him and his brave wife at the Washington Airport. Just how much good will he had built on the trip which ended disastrously in Venezuela was beside the point. He had done his best to carry out a difficult assignment which confronted him with danger on more than one occasion, and he met every test with the kind of courage that appeals to all Americans.

The welcoming turnout was exceptional, and it marked an occasion when partisanship was put behind. Making a special concession, President Eisenhower was on hand, and so was everybody else. There was no bitterness in Mr. NIXON'S impromptu remarks, and the motor ride to the White House was an event of high importance.

In an expansive mood, Mr. Eisenhower chose this occasion to say that the riots against the Vice President would simply strengthen inter-American friendship.

And that brings us to the second part of the story, as yet untold, which deals with what Mr. NIXON may have told his chief after he had arrived in triumph at the White House.

We can believe that many Latin Americans bear Mr. NIXON nothing but good will and are ready to praise his admirable conduct under fire. To that extent relations may have been improved.

But if Mr. NIXON is as smart as we believe him to be, and if he was frank with the President, he did not overlook the underlying causes of the animosity he encountered.

Here was his opportunity to inform Mr. Eisenhower that a colossal mistake was made by ditching the Roosevelt-Hull Good Neighbor policy and trying to substitute something called the good partners, expounded by Dr. Milton Eisenhower and then filed away to gather dust.

And here was his chance to cite the criticism of our best Latin American friends who do not hesitate to point out flaws in Eisenhower administration policies in dealing with nations to the South.

Restrictive trade policies have had their inevitable effect on Latin American reaction to the United States, and this applies as much to free enterprise countries as others.

But there is even greater resentment over Washington's readiness to give sanctuary to the deposed dictator, Gen. Marcus Perez Jiminez, and his hated secret police chief Estrada. For freedom-loving Venezuelans who risked their lives to remove these menaces, such solicitude cannot be understood.

Furthermore, Latin Americans resent the United States active support of the Trujillo regime in the Dominican Republic and that of Batista in Cuba. As Governor Muñoz of Puerto Rico recently told the United States Senate Foreign Relations Committee, "When you give equal consideration to dictators and tyrants as to proven democrats you cannot help but discourage democracy."

One can but hope that Mr. NIXON briefed the President well and that the facts will trickle through to the State Department while yet there is time.

Of course, there is no call for reprisals against Latin American countries, most of which are well disposed toward us; and there is also no need of keeping shock troops in an area where the possible need for them has disappeared.

Good neighborliness in the best sense of the term is the all-important requirement, after more than 5 years of neglect. And if Mr. NIXON can contribute to that end, he again will have acquitted himself well.

A Letter From Two Youthful Constituents

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. BYRNE of Illinois. Mr. Speaker, I would like consent to extend my remarks in the RECORD in commendation of two of my young constituents who have written me requesting a job to help protect our country. Joe Lind, of 1664 West 106th Street, Chicago, and Bob Norman, of 1616 West 104th Place, Chicago. Joe and Bob attend Barnard School which is located at 10345 South Charles Street. These young gentlemen are 9 and 10 years of age.

As I read their joint letter, I could not help but be touched by their desire to protect their country without any request for pay. As adults, we are quite occupied with how much and what we are going to get out of things. In Bob and Joe, we find a willingness to serve without pay, a spirit much more prevalent in the days past than now. Few of us enter into something unless we have almost a guaranty that we are going to get a reward. Today there is a great need for selflessness in the world.

I believe the families of these two boys should be praised since it is quite obvious that the parents have instilled a willingness to give instead of take. The teachers at Barnard should be commended likewise since I am certain that the teachers in our Chicago schools are stressing the importance of students learning about their Congress which is dedicated to serving the well-being of the citizens of the United States.

Answering the letter from Joe and Bob is going to be a pleasure and I predict a bright and successful future for them if they keep the ideals expressed in their letter to me. The letter reads:

CHICAGO, ILL., *May 6, 1958.*

DEAR SIR: Joe Lind and I, Bob Norman, request a job with the Government. We are only 9 and 10. We hope we will be eligible for a job protecting our country. You may think we are too young. We would like to have identification papers if we can have your approval on the papers. Here are some things about Joe Lind. Joe goes to Barnard School. He lives at 1664 West 106th Street, his phone number is Pr 9–4760, his age 9, he speaks a little Espanol.

Bob Norman, I go to Barnard School. I live at 1616 West 104th Place. My phone number is CE 3–3555, my age is 10. If there is anything else you want to know, tell us in your answer. We both collect stamps so you see we know different countries.

Bob Norman, I know Espanol, a little Swedish, a little German, a few words in French. If we get the job we will start June 28, 1958.

We don't want a salary. Bob Norman, I will be down in Washington, D. C., in the early part of July. You see my aunt is taking me to Washington, D. C., for a tour. That's all for now.

ROBERT WALTER NORMAN.
JOE LIND.

Views of Marriner & Co., Inc., Lawrence, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter from Mr. Kenneth W. Marriner, of the Marriner & Co., Inc., Lawrence, Mass., which will interest the readers of the CONGRESSIONAL RECORD.

The letter follows:

MARRINER & CO., INC.,
Lawrence, Mass., May 15, 1958.

The Honorable THOMAS J. LANE,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR MR. LANE: I thought you would be interested in knowing that our Government, through ICA has granted Pakistan $2,200,000 for the purchase of wool tops, which business our industry badly needs at this time, but we cannot get due to the funds being available for worldwide purchase, meaning foreign competition will get the business.

This is the sort of things that makes us business men mad when we see our Government giving away billions of dollars of taxpayers' money to foreign countries while our

own industries are running on short time. It would seem to me that the least our present administration could do would be to specify that the money for foreign aid must be spent on merchandise purchased in the United States.

This, incidentally, would be another way of helping the present recession.

Kindest regards.

Yours sincerely,

KENNETH W. MARRINER.

American Prisoners in Russian Slave Labor Camps

EXTENSION OF REMARKS

OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1958

Mr. SHEEHAN. Mr. Speaker, the radio broadcast of Friday, May 9, over radio station WLS, Chicago, by Mr. Bob Siegrist, contained an interview with Mr. John Noble, who has returned to this country after being held in a Russian slave-labor camp for 9½ years.

Mr. Noble, in his radio interview with Mr. Siegrist, has brought out the fact that he believes there are many thousands of American citizens who are still alive and still held by the Russians in slave-labor camps.

Mr. Noble's information, as detailed in Mr. Siegrist's interview, is as follows:

As we promised last night, our guest tonight is John Noble, the American citizen who was seized by the Soviet gangster regime and held in slave labor for 9½ years before finally being released in 1955.

As we mentioned last night, John Noble has now condensed the highlights of his fantastically horrible experiences into a gripping 180-page book aptly titled "I Was a Slave in Russia."

It's good to have you alive and with us tonight, John Noble.

Mr. NOBLE. Well, it certainly is a pleasure and a privilege to be here with you, having heard your broadcasts so often, and admiring the fact that you are certainly handing down to the American people in a way which they should understand, the dangers of communism. It is only too bad that some of these that listen to you do not yet realize the complete and satanic natures that confront our Nation.

Mr. SIEGRIST. Well, John, you know how completely barbaric and satanic communism can really be, since you certainly suffered terribly that barbarity, under the hands of the Communists.

Mr. NOBLE. To me, Bob, even worse is the fact that still today under Communist slave-labor conditions, there are many Americans who still suffer as I suffered.

Mr. SIEGRIST. You mean, that there are many Americans actually in Communist imprisonment, today, John?

Mr. NOBLE. Yes; there are many Americans that have been declared dead, many of them from World War II.

Mr. SIEGRIST. You mean, some American soldiers officially declared dead by the American Government are actually in slave labor in Soviet Russia today, John?

Mr. NOBLE. Exactly. But, you, as well as the American people, know that very little is being done by the American Government to force the Kremlin gangsters to release them.

Mr. SIEGRIST. Now, what would you, from your experience, John, like to see our Government do to gain the release of these Americans?

Mr. NOBLE. I would like to see the American people so properly aroused by this knowledge that they would bring every conceivable legitimate pressure upon our Government to, in turn, bring every conceivable pressure upon these same Kremlin gangsters with whom our leaders insist upon dealing in so-called diplomacy and so-called cultural exchanges.

Keep in mind, Bob, that all information about all American citizens missing behind the Iron Curtain is channeled to one office of the Russian desk of the State Department which, in turn, does little more than merely place that vital information about American lives in a file.

Mr. SIEGRIST. And, needless to say, you want to see that information pulled out of that State Department file, where it does no good, and activated, to facilitate the release of these unrightfully imprisoned American citizens.

Mr. NOBLE. Of course. These are American citizens. To the Kremlin gangsters, their only crime is that they are American citizens. And the Government of the United States has the grave responsibility to gain their freedom.

Mr. SIEGRIST. You feel it's time the Government of the United States did so in a vigorous manner, John; is that right?

Mr. NOBLE. That's right.

Mr. SIEGRIST. How did you gain your release, John, if it's so difficult? How did you gain your release?

Mr. NOBLE. Despite constant pleas on behalf of my mother to the State Department, as well as the pleas contributed by my father after his release in 1952, the Soviet Government denied holding me. It was only after I was able to submit evidence through a post card that I was still alive that my case was brought to the attention of the White House which, in turn, forced the Communists to release me.

Mr. SIEGRIST. You and your father were seized and imprisoned by the Communists at the same time?

Mr. NOBLE. Yes, we were arrested together in Dresden, Germany, where the Germans had held us in local internment throughout the entire war and we were then separated at Buchenwald, the infamous Hitler concentration camp which the Russians took over for their use. My father was imprisoned in Germany for 7 years, but I was moved into Russia, where I served the last 4½ years of my imprisonment at the infamous Vorkuta slave-labor camp 50 miles north of the Arctic Circle.

Mr. SIEGRIST. How did your father gain his release, John?

Mr. NOBLE. The prisoners held by the Russians in Eastern Germany were turned over to the East German Communist regime in 1952. They, in turn, had no jurisdiction over foreign nationals, and gradually released them. My father was one of them.

Mr. SIEGRIST. Well, now, John, the Russians have no jurisdiction over foreign nationals either—but they act as if they did. What's the story there?

Mr. NOBLE. The Kremlin gang is not only disregarding international law, but disregarding all standards of morality and decency.

Mr. SIEGRIST. Are you suggesting that the Communists in Eastern Germany are more moral and more decent their their Communist bosses in Moscow?

Mr. NOBLE. Certainly not. To release men held in Eastern Germany like my father was to the political advahtage of Moscow and its East German stooges.

Mr. SIEGAIST. You mean it was to their political advantage at the time of the release in 1952 as you saw it.

Mr. NOBLE. That's true, the East German Government wanted to show the world that they had some independence.

Mr. SIEGRIST. Which, of course, they did not and they do not have now.

Mr. NOBLE. That's right.

Mr. SIEGRIST. But, this again was a propaganda maneuver on the part of the Communists in Moscow through the Communists in Eastern Germany to release prisoners and to put up a bit of a show. Is that the idea, John?

Mr. NOBLE. That's right.

Mr. SIEGRIST. Well, now, you say that your release was actually triggered by a post card which you sent out from Vorkuta Slave Labor Camp. Is that to suggest then that you were permitted mailing privileges?

Mr. NOBLE. No; of course not. Any connection with the outside world was strictly prohibited, except for a few people which had mailing privileges in our camp. There were only about 35 prisoners out of the 4,000 in our section, which again was only a small section of the massive Soviet slave labor system.

Mr. SIEGRIST. There at Vorkuta. Now you say there were 4,000 prisoners. There were more actually in other camps within Vorkuta. Vorkuta has many camps is that right?

Mr. NOBLE. Vorkuta has approximately 200 to 250 camps holding approximately a half a million prisoners.

Mr. SIEGRIST. How were you able to send out that card?

Mr. NOBLE. A prisoner with mailing privileges into Germany permitted me—at the risk of his life—to use his privilege on this one occasion. I sent the card to distant relatives in Western Germany. It bore a single clue to my imprisonment—with the line—"your noble nephew"——

Mr. SIEGRIST. And your relatives in Western Germany recognized that; is that correct?

Mr. NOBLE. Yes; they forwarded it to Detroit, believing that the card was from me. My parents in turn forwarded it to the State Department as concrete evidence that I was still alive and imprisoned in Vorkuta.

Mr. SIEGRIST. In other words the Russian maneuver, in this case, which was a propaganda maneuver, this idea of being able to say they gave, a very cynical thing, they gave mailing privileges to their prisoners. That one propaganda maneuver, you were able to just almost by good fortune take advantage of it and gain your release really in that way; is that right, John?

Mr. NOBLE. Yes.

Mr. SIEGRIST. Well, now, John, what was it like being a slave laborer?

Mr. NOBLE. First of all, you are deprived, completely deprived of all freedom. It meant constant starvation diets which reduced by weight from 155 pounds to a mere 95 pounds. It meant brutality, constant fear and intimidation—long hours of extreme physical hard work in a primitive coal mine above the Arctic Circle under constant armed guard, with almost no hope of ever coming out alive. In short, it meant being reduced from a human being to the status of a beast of burden.

Mr. SIEGRIST. Well, and of course, these were very inhuman people treating you as if you were inhuman. Isn't that right, John?

Mr. NOBLE. That's right.

Mr. SIEGRIST. John, tell me this, you and your father were in business in Eastern Germany before the war and as I recall, when the war came, you were interned there by the Nazi regime. Is that right—that's how you happend to be there?

Mr. NOBLE. That's correct.

Mr. SIEGRIST. And, John, did you have any idea that the Communists would do what they did or were you told by American officials that you could stay in Eastern Ger-

many because everything would be all right? The Communists were our allies.

Mr. NOBLE. The American officials told us that we would not be able to return to the United States before early 1946 due to a lack of shipping space. On the other side, they told us that the Russians were our allies and that the Russians couldn't harm us. They told us, furthermore, that Dresden in Eastern Germany would eventually become British territory so there was no need to have any fear.

Mr. SIEGRIST. So the advice of the officials of our American State Department proved not very good because quickly thereafter you were seized by the Russians and that began your nightmarish existence as a slave laborer for 9½ years.

Mr. NOBLE. That's right, Bob.

Mr. SIEGRIST. Well, John, if you had a message to put across in the remaining moment or so, here, to the people listening as to what communism really means as a man who has suffered it in the most barbaric manner and if you had a warning to give the American people, how would you put it, John Noble?

Mr. NOBLE. First of all, I would like to say that I've experienced on my own body as well as all of the things that I saw over there that you cannot trust the Russians. No agreement which is made with the Russians has any value at all. The present situation in Russia is in my eyes, and the opinion also of those millions of people behind the Iron Curtain a lot worse than at the time of Stalin. Mainly, because of the smile—it's a false smile—it's intriguing.

Mr. SIEGRIST. How did it feel when the news filtered down to you people enslaved there at Vorkuta to know that President Eisenhower was meeting with Khrushchev and company at the summit conference in Geneva?

Mr. NOBLE. For us prisoners as well as for the free people in Russia, every firm stand on behalf of the Western nations was tremendously encouraging. On the other side—when they began their meetings—the Yalta meetings and so on—it certainly took every bit of hope out of the Russian people ever to get rid of their system.

Mr. SIEGRIST. Well, now, when you said free people of Russia, you meant the people who were not enslaved and were working for the Russian regime.

Mr. NOBLE. That's true.

Mr. SIEGRIST. Did you find hostility to the Communist regime among the so-called free people, among the Red Army and so forth?

Mr. NOBLE. Yes; there was some, very little though.

Mr. SIEGRIST. Very little. At least as far as you could see it on the surface.

Mr. NOBLE. Yes.

Mr. SIEGRIST. John Noble, thank you very much, and, of course, as we promise, we are certainly going to make your great book—it is a great book—I Was a Slave in Russia, available to our listeners at $3.75. All they have to do is write in care of the station. Thank you, John Noble. Bob Siegrist, good night.

American Legion Warns of Communist Threat

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. DEROUNIAN. Mr. Speaker, veterans who fought to protect the United States in war are, in peacetime, carrying on their vigilance through the American Legion.

American Legion, New Hyde Park Post, 1089, which I am proud to say is within my congressional district, has passed a resolution urging the Federal Government to strengthen its forces, which protect this Nation against communism, a resolution I am pleased to be able to place in the CONGRESSIONAL RECORD:

Whereas an intensive campaign of political subversion, directed by a nationwide apparatus of Communist agents, menaces the entire security system of the United States of America; and

Whereas the objectives of this campaign is to destroy the McCarran-Walter Immigration Act; the Internal Security Act; the Smith Act, and all other legislative and executive action aimed against communism in this country; and

Whereas these forces would weaken or destroy the Federal Bureal of Investigation and its Director, J. Edgar Hoover; and seek to abolish the House and Senate committees who are investigating Communist subversion and espionage: Be it therefore

Resolved, That the American Legion, New Hyde Park Post, 1089, of New Hyde Park, N. Y., respectfully urges the Attorney General of the United States, and other duly elected representatives, to exert all efforts to prevent this deliberate weakening of our national security agencies; and urge the enactment of all necessary legislation which will strengthen these agencies in order to be able to meet the Communist threat facing our Nation today.

Adopted May 15, 1958.

HAROLD A. SANDFORD,
Adjutant.

The Employment Picture in the Los Angeles Area

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the most recent report, dated May 14, on employment in the Los Angeles area published by the State of California Department of Industrial Relations. While similar statistics are available from a myriad of sources, I believe that these, being compiled by a governmental agency are most realistic. The impact of the recession on the durable goods industries is illustratedd as continuing in an alarming downward trend, and points up the need for firm, speedy antirecession measures:

LOS ANGELES-LONG BEACH METROPOLITAN AREA—MANUFACTURING EMPLOYMENT

Factory employment continued to decline between March and April in the Los Angeles-Long Beach metropolitan area, Edward P. Park, California Director of Industrial Relations, announced today.

The number of wage and salary workers in area factories totaled 692,000, off 9,200 from March and at the lowest level since mid-1955.

The March–April loss was concentrated in durable goods manufacturing. The largest cutback in April was in the automobile industry, where employment was down by 4,400. Cuts of nearly 1,000 each occurred in aircraft and in machinery manufacturing.

Within nondurable goods groups, there was a post-Easter reduction in apparel plants of about 2,000 workers and a loss of 1,200 in the rubber industry.

Employment in electrical equipment manufacturing rose by 500 in April, reversing a 7-month downtrend. The work force in food processing increased seasonally and small additions were recorded in ordnance and instruments manufacturing.

Measured from April a year ago, factory employment was down 75,400, or 10 percent. Of every 10 manufacturing workers released since April 1957, 5 came from aircraft and 4 from other durable goods industries. Only 1 in 10 came from nondurable goods plans.

Federal Versus State Rights

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting editorial which appeared in the Evening Tribune, Lawrence, Mass., on May 17, 1958:

FEDERAL VERSUS STATE RIGHTS

A public hearing is scheduled at State house early next week on Governor Furcolo's recent request to have the Massachusetts Legislature extend the duration of unemployment compensation benefits 13 weeks beyond the present 26-week maximum.

A number of other States are tackling recession problems in the same manner because it is quite certain that whatever action the Federal Government takes along this line will be through the medium of a loan rather than a grant.

Federal extension of State unemployment benefits could usurp the rights of States by permitting the arm of federalization to reach out and seriously affect State employment security systems.

In addition, State administrators and legislatures are close to current economic conditions and are aware of local problems.

The Massachusetts employment security law was enacted in 1935, and through periods of high and low unemployment it has provided benefits to the unemployed at a total cost to Bay State employers in excess of a billion dollars.

Any Federal law which would impose an added burden upon the Massachusetts system could result in Massachusetts employers paying a contribution rate beyond any reasonable expectation. Thus, any such change in the system in this State should come about only through the due process of a change in the State statute.

A 13-week extension of such benefits in Massachusetts will put a dent in the fund but it will not wreck it. At last reports it had a reserve balance of well over $200 million. In the 1948–49 recession, before recovery came, the balance had dropped to $79 million.

There are 200,000 persons out of work in Massachusetts and many of them need something to bolster their economy because they have exhausted these benefits. As far as industry's thoughts on the subject are concerned, one of its top spokesmen admits there seems to be sufficient money in the unemployment fund at present to finance a reasonable extension.

It is one thing for some Massachusetts legislators to await the course the Federal Gov-

ernment will take. The truth of the matter is that Federal action on the jobless aid issue has been so slow that some States already have grabbed the ball and have done something about the unemployment benefit situation.

It could become a question of Federal versus State rights in the administration of the program. The Federal administration's plan would just about force States to borrow from the Federal Government to prolong unemployment benefits. This would amount to Federal encroachment on State responsibilities.

The system, generally, has gone through previous recessions without difficulty largely because its founders cautiously provided for an accumulation of reserves. Fortunately, Massachusetts has a healthy reserve.

Fortieth Anniversary of Independence of Lithuania, Latvia, and Estonia

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. BYRNE of Illinois. Mr. Speaker, it is a pleasure for me to ask permission to insert in the Appendix of the RECORD a letter addressed to the Honorable John Foster Dulles, our Secretary of State, from the executive board of the Lithuanian American Council.

The president of the council is Leonard Simutis, who is also publisher of the Draugas, a Lithuanian daily newspaper located in my district at 4545 West 63d Street.

I have previously indicated my genuine concern and interest in the plight of Lithuania and the sister nations of Latvia and Estonia. These valiant countries were among the first victims of the Communists. They are still under the complete domination of Russia. Recently Lithuanians here and in other parts of the free world observed the 40th anniversary.

Our country believes Lithuania and the peoples of Latvia and Estonia should have the right to choose their own economic, cultural, and political way of life. The letter follows:

MAY 19, 1958.

The Honorable JOHN FOSTER DULLES,
Secretary of State,
Department of State,
Washington, D. C.

DEAR MR. SECRETARY: The Lithuanian American Council in presenting its observations on some recent events, wishes, first of all, to convey to you the congratulations of the council on the successful NATO meeting at Copenhagen which was achieved mostly by your courageous stand, exceptional ability and extreme patience. The unanimous support of your position by the Foreign Ministers of the NATO Council was most gratifying.

Permit us to recall to you the telegram which the executive board of the Lithuanian American Council sent you February 8, expressing its gratitude and support for your consistently maintained position on problems of conflict between the western democracies and the Soviet Union.

Much has been said and written about the Soviet Russian summit conference proposal. It has aroused apprehension among Americans, particularly those of central eastern European descent. We, therefore, feel it our duty to approach you on this subject.

THE ALLEGED PEACEFUL INTENTIONS OF THE SOVIETS

The Soviet Russian dictators have been insisting for a long time that the heads of state should meet to lessen international tension and prepare the ground to stop the armament race, to establish cultural cooperation and widen trade relations between the East and the West. This agitation found a favorable response in wide circles of many countries, because of the fear in people everywhere, believing themselves living under the constant threat of an atomic war which could become a terrible reality if production and improvement of nuclear weapons continue.

We agree with you, Mr. Secretary, that those who know Russian communism not only from the declarations of their spokesmen but also from Soviet deeds, doubt the sincerity of the dictatorship. A recent, typical example reaffirmed this skepticism when Moscow suddenly charged the United States with endangering international peace by the flights of American bombers carrying nuclear warheads in the Arctic region. This malicious charge without foundation was subsequently withdrawn by the Soviet delegate himself in the United Nations Security Council, but not until its aggressive propaganda had made its point.

We applaud the able manner in which you exposed the insincerity of the peaceful intentions of the Soviets which forced their own delegate to veto the honestly peaceful proposal of the United States to establish a system of supervision and inspection to prevent sudden nuclear attack in the Arctic area from any quarter. If the Kremlin masters do not want such security then who will believe that they really want to preserve peace?

THE POLICY OF THE BIG LIE AND DECEPTION

We agree with your able analysis of Soviet intentions and methods. Why did the Soviet rulers so loudly and consistently agitate for a summit conference? Mainly for two reasons.

First, they knew that the Government of the United States saw no reason to hold a summit conference with Stalin's successors as long as they did not show the slightest inclination to stay their aggressive designs against the free world or to rectify the injustices committed by the late dictator against their U. S. S. R. neighbors. And we believe, Mr. Secretary, that you foresaw quite accurately that the Kremlin rulers were proposing a summit conference solely for the purpose of propaganda—not peace—with the intention of discrediting the United States, of trying to place it in a position of appearing to be an enemy of peace and a warmonger, while at the same time attempting to create the impression in the mind of the world that they themselves were champions of international peace.

But since the intentions of the Kremlin were unmasked the summit conference has lost value as means for their propaganda.

If Nikita Khrushchev does not entirely reject it, it is because of the internal situation in the Soviet Union. The summit conference—a meeting with President Eisenhower and other heads of state—would enhance Khrushchev's prestige, and strengthen his position in the Kremlin.

A DICTATOR'S PRESTIGE

Not long ago, Khrushchev climbed to the top of the Soviet Communist Party and the Soviet Government over the heads and bodies of his rivals (Beria, Dekanozov, etc.). But the struggle for power goes on, as the opponents he defeated still have many followers who continue their efforts to unseat him. To strengthen his dictatorial position he must acquire an international authority similar to that enjoyed by Stalin. He does not yet have that authority. At the summit conference in Geneva in 1955, Khrushchev was demonstrating his power by rudely pushing around Premier Bulganin; but Bulganin, and not the First Secretary of the Communist Party was then acting officially as the representative of the U. S. S. R. Government and signing documents. Therefore, Khrushchev, desiging to meet the President of the United States as his equal, removed Bulganin and took over his duties.

Why should the United States support the ambitions of this despot who murdered thousands of Hungarians fighting for freedom? And a despot who does not conceal his utter contempt for international agreements?

Last month, Anastas Mikoyan, First Deputy of Prime Minister Khrushchev, quite frankly admitted to the representatives of the press in Bonn that Soviet Russia had agreed at the conference in Geneva, in 1955, to the western proposal to unite Germany by free elections of the German people; but now times changed declared Mikoyan, and the plan of uniting Germany by general election is unacceptable and cannot be applied any longer.

So the Soviet Government arbitrarily rejects the agreement, and the Western Powers must abide by its decision. Just as simple as that.

THE NATURE OF TOTALITARIAN DESPOTISM

An idea is being spread among the people of the democratic West and in the neutral countries of Asia, that the Communist regime of Russia will gradually become softer and will develop in the direction of liberalism. This idea finds wide acceptance each time the Kremlin rulers begin to talk about peaceful coexistence. Some people even believe that Stalin himself might change and abandon his hostile attitude toward the democracies, but now everyone knows it was a vain hope.

This illusion was revived again when Nikita Khrushchev strongly denounced Stalin's crimes and grudgingly conceded some rights to the Communist parties in the satellite countries. In line with the new-found liberalism of the Kremlin, Mao Tse-tung of Peiping proclaimed freedom for contending different schools of thought in China.

Those who believed this profession of liberalism by Communist leaders now feel bitterly disappointed, as Khrushchev and Mao are turning back to Stalinism.

This development should not surprise anyone who understands the nature of Russian communism. A despotic regime, and especially one of the totalitarian type of the Kremlin, is unable to evolve in the direction of freedom, because it is based on the denial of freedom and self-determination to people in every sector of life; consequently any sign of independence or opposition anywhere endangers its existence. The totalitarian dictatorship cannot make peace with its subjects, or seek an honest reconciliation with the free nations because a lasting international peace as a result of such reconciliation would deprive the Soviet Government of any justification for its policy of suppression of the people at home.

As long as the totalitarian regime is in power in Russia, there will be a cold war, and a constant danger of a general war. The Western democratic nations have no choice but to arm in order to be prepared to repulse aggression.

NEW WARNING TO THE FREE WORLD

We agree with you, Mr. Secretary, that the aim of the Communist dictatorship to destroy freedom in the world did not change with Stalin's death. And Nikita Khrushchev, just as his former chief, considers the United States of America the principal obstacle of world communism, and all his efforts are di-

rected toward destroying the power, harming interests and defaming the reputation of this great Democracy and he is using the most despicable means at his command.

A striking example of this was seen recently in South America on the occasion of the good-will visit of RICHARD M. NIXON, the Vice President of the United States. The outrageous acts of violence and insults by hate-filled mobs in Lima and Caracas against this representative of the Government of the United States were Communist inspired, organized and directed.

Clearly established facts and documentary evidence prove that the leaders of those mobs were carrying out direct instructions of the Communist Center in Moscow. This center is under the personal control of Nikita Khrushchev, the man who unceasingly talks about peaceful coexistence and bombards Washington with his appeals for mutual understanding and cooperations.

The masters of Soviet Russia long ago assured the United States that the Comintern, the international Communist organization, has been dissolved. But it is evident now, that this instrument of world Communist conspiracy still exists.

This new evidence of the Kremlin's treachery should be a warning to all those who long for rapprochement and friendly relations with the rulers of the Soviet empire.

NEGOTIATIONS WITH THE SOVIETS

We further agree with you, Mr. Secretary, that from the above it does not follow that all negotiations with the Soviet Union must be rejected. A complete refusal to negotiate would leave no alternative but war.

Democracies abhor war. They want peace, a just and durable peace, based upon the principles of law and morality.

By firm adherence to these principles the representatives of the democracies can turn negotiations with Moscow into an effective weapon for the cause of freedom. They can use the negotiations to expose Moscow's lies and deceptions, to reveal the truth about Communist rule in Russia and the satellite countries, and to inform millions of people behind the Iron Curtain about the free world.

OUR POTENTIAL ALLIES

Soviet Russia enslaved 90 million people in eastern and central Europe who, until 1939, lived under their own national governments. These millions are natural allies of the West, and they will ardently support the cause of freedom if the western democracies will not abandon their cause.

The yearning for freedom of the enslaved people and their opposition, even their passive opposition, to the oppressors, is of inestimable value to the democracies. The Kremlin knows that they constitute a constant threat to its rule and is forced to maintain in those countries many divisions of the Red army.

The notion of the apologists of Soviet despotism that the fate of the enslaved peoples would be ignored in order to win the consent of Soviet Russia for a peaceful settlement of world problems must be rejected emphatically. These proposals of the advocates of the status quo not only violate the principles of law and morality, not only would they undermine the foundations of modern civilization, but would also dangerously weaken the security of this country by alienating countless friends and potential allies of the United States among the people subjugated by the Kremlin.

It is not by moral capitulation that this country will assert its leadership in the struggle against Communist tyranny, but by courage and firmness.

THE FATE OF THE BALTIC STATES

The Lithuanian American Council, an organization of Americans of Lithuanian descent, does not need to remind this Government of the fact that Lithuania, as well as the other two Baltic States—Latvia and Estonia—were among the very first victims of Soviet aggression executed in conspiracy with Hitler. The Soviets, against the will of the overwhelming majority of the people of the Baltic States, illegally and forcibly incorporated them into the Soviet State. These three Baltic Republics are still held under the cruel yoke of Communist Russia.

The Council is deeply grateful to you, Mr. Secretary, for your message to the Lithuanians, Latvians, and Estonians on their 40th anniversary of the restoration of independence wherein you stated, "The United States Government believes that the peoples of Lithuania, Latvia, and Estonia have a firm right to choose their own political, economic, cultural systems."

We are grateful to the Government of the United States for its sympathetic attitude maintained through all these years regarding the aspirations of the Baltic peoples.

We conclude by asking you, Mr. Secretary, to use every opportunity to bring the facts of their enslavement to the attention of the world and to insist that their right to freedom and national independence should be restored to them.

EXECUTIVE BOARD OF THE LITHUANIAN AMERICAN COUNCIL,
LEONARD SIMUTIS, *President.*
Dr. PIUS GRIGAITIS, *Executive Secretary.*

Hon. F. Edward Hébert, of Louisiana

EXTENSION OF REMARKS
OF
HON. CARL VINSON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1958

Mr. VINSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include three citations received by our distinguished colleague, Mr. HÉBERT, from the State of Louisiana, city of New Orleans, and the Association of the United States Army.

On Sunday, May 18, our distinguished colleague and long-time member of the Naval Affairs Committee and of the Armed Services Committee, the Honorable F. EDWARD HÉBERT, of New Orleans, representing the First Congressional District of Louisiana, was signally honored by his State, by his city, and by the Association of the Army.

On that day, he received the Distinguished Service Medal of the State of Louisiana from Maj. Gen. Raymond F. Hufft, The Adjutant General of the State of Louisiana. This is the first time that a civilian has received this medal in the long years of its existence; and the first time it has been awarded to a Member of Congress.

The citation accompanying the award is this:

STATE OF LOUISIANA,
MILITARY DEPARTMENT,
JACKSON BARRACKS,
New Orleans, La.

CITATION: LOUISIANA DISTINGUISHED SERVICE MEDAL

The Honorable F. EDWARD HÉBERT, Member of Congress, is presented the Louisiana Distinguished Service Medal, awarded per General Orders No. 29, Military Department, State of Louisiana, in recognition of his significant unselfish, and untiring interest in the Louisiana National Guard and in furthering the security and welfare of the State of Louisiana and the United States of America.

Congressman HÉBERT's long and distinguished service to the State of Louisiana and the United States of America, both in peace and war, stands as a symbol of integrity, faithful service, and devotion to duty and country, and, for his untiring efforts in behalf of the State of Louisiana in securing title to Jackson Barracks, the Louisiana National Guard and the people of Louisiana are grateful.

For his unstinting devotion to the National Guard of the United States and his profound wisdom in securing the activation and construction of Alvin Callender Field as the first joint-usage Reserve Air Force the National Guard is deeply indebted.

His diligent and devoted service to the State of Louisiana, his wise counsel and steadying influence, and his intelligent and practical approach to military problems have fostered a genuinely harmonious relationship between the military elements located in the New Orleans area and the people of Louisiana, and all members of the Louisiana National Guard are deeply grateful and appreciative of his efforts in their behalf.

RAYMOND F. HUFFT,
Major General,
The Adjutant General.

Mr. Speaker, at the same time, the mayor of New Orleans, the Honorable deLesseps Morrison, awarded our colleague that city's International Order of Merit for his outstanding services in promoting international cooperation and fostering good will among South American and other countries.

That citation reads:

Greetings: Be it hereby known to all that the Honorable F. EDWARD HÉBERT has on this 11th day of May 1958 been awarded the International Order of Merit and made an honorary citizen of New Orleans, the international city, air and sea gateway between the Mississippi Valley and the world, second port of the Nation, home of the Mardi Gras, Sugar Bowl, and spring fiesta, and city with a colorful past, a progressive present, and a promising future.

DeLesseps S. Morrison, Mayor, City of New Orleans; Glenn P. Classen, Councilman at Large; Victor H. Schiro, Councilman at Large; Henry Curtis, Councilman, District A; Paul V. Burke, Councilman, District B; James E. Fitzmorris, Jr., Councilman, District C; Fred J. Cassibry, Councilman, District D; Theo Hickey, Councilman, District E.

Mr. Speaker, then followed an award from the Association of the United States Army presented by Wallace M. Davis, its president, for our colleague's outstanding leadership on the House Armed Services Committee.

That citation reads:

In grateful recognition—the Honorable F. Edward HÉBERT, Member of Congress, First Congressional District, Louisiana, a distinguished and illustrious Member of the Congress of the United States—for faithful service to his country and his community; with the respect of his colleagues and his fellow citizens; outstanding for his leadership on the House Armed Services Committee and deserving of our highest commendations.

NEW ORLEANS CHAPTER,
ASSOCIATION OF THE UNITED STATES ARMY.
MAY 11, 1958.

Mr. Speaker, we are proud of the accolade received by our colleague on the Armed Services Committee of the

House. He has long and consistently distinguished himself. We join in the tribute which he has so rightfully received and justly earned.

The Advantages of the Free Enterprise System

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. THOMPSON of Texas. Mr. Speaker, a high-school student in Angleton, Tex., D. Herschel Mills, 17-year-old son of the Reverend and Mrs. John W. Mills, has just won the $1,000 first-place award in an annual essay contest sponsored by the Association of American Physicians and Surgeons.

His essay was written on the theme of The Advantages of the Free Enterprise System. The essay reflects the characteristics for which we strive in our American way of life, particularly in free education.

Herschel is a product of the Angleton public-school system.

It is with a great deal of pride that I invite the attention of the House of Representatives to the fact that young Mills expects to use the money which he has won in this grand prize and various other lesser prizes, a total of $1,205, to further his education as a minister.

It is with great pleasure that I place the essay in the CONGRESSIONAL RECORD for all to read and to study in years to come:

THE ADVANTAGES OF THE FREE ENTERPRISE SYSTEM

The greatest monument I have ever seen to free enterprise is the modern American supermarket. On a single shelf may be found 1 product under 15 different labels, every one on those labels proclaiming its product to be the best made. Fifteen manufacturers, each trying to convince the public that only he can produce green peas capable of satisfying hunger. This is free enterprise.

Many denounce this system by which man earns according to his desires and capabilities, but they would destroy man's ambition, making him a robot with no incentive for advancement. What a flimsy, weak-willed creature man would be.

The main advantage of socialism, according to its staunchest advocates, is the security it provides. Under socialism, they say, poverty could be destroyed and man could live in peace, assured that no twist of fate could force him down into the gutters of life and prevent his rise. All would be equal, the socialists claim, despite their intelligence, ambition, and initiative. The drunken bum could be placed on the same level with the most distinguished statesman. This, they say, is security.

This may really be security, but while security may be one of the most universally pursued goals, it is also one of the most universally deceptive goals. Few would actually want security if they got it. There is something about sweat and toil and tears that appeals to a man's soul. To be deprived of the right to advance would tear man away from himself.

Man is a competitive being. All progress, whether intentional or not, has been derived from this competition. When man betters himself, he often betters humanity. Competition also provides better qualities. The man who must produce a better product than his neighbor will naturally produce a better product than someone who is not subjected to these pressures. The truth of this statement can be proved by comparing an American car and a Russian car. The American car is ahead by at least 10 years in all respects. Nowhere, except in a free-enterprise system, can man progress so far in so short a time as he has progressed in 20th century America.

This brings us to another important point: Democracy. To bring us democracy, to bring us freedom, our ancestors lived and worked and fought. The blood of America's sons was shed on Bunker Hill, at Gettysburg, at the Marne River, Iwo Jima, Normandy, and Porkchop Ridge; shed so that the light of democracy might shine on our land forever. Our common heritage of democracy makes us all zealous in protecting that democracy.

And what could be more democratic than free enterprise? What could be freer than for a man to earn his bread by the sweat of his brow? Abraham Lincoln referred to this Nation as a Nation "of the people, by the people, and for the people". But how can a Nation be of the people and deny the right of private ownership of property? How can a nation be by the people if it thwarts individual initiative? And how can a nation be for the people if it restricts individual opportunity for advancement? Freedom is impossible without a system of free enterprise.

One of the biggest advantages of the free enterprise system is that it permits private ownership of property and business. We all know that a man will take more pride in something he owns than he will in something owned by somebody else. The destruction of an individual's right to own property also destroys his ability to achieve, curbs his initiative, and decreases his productivity and usefulness. Free enterprise is necessary for man to perform to the best of his capabilities.

To see it in its proper perspective the difference between a country that has a system of free enterprise and one that does not, we must compare the United States with the Soviet Union. The United States has been one of the most prosperous nations in the world. The Soviet Union has been referred to as the "world's biggest poorhouse." The American free enterprise system has produced better than an average of seven times as much coal per worker as the Soviet Union. Opponents of free enterprise say that socialism, communism, and all the isms created to destroy mankind would eliminate poverty and tend to build up the standard of living among the masses. Yet the average Russian worker must labor 5½ times as long as the average American worker to earn his daily bread. Without free enterprise, not poverty, but prosperity, is eliminated.

Technical ability under any other system besides free enterprise would be practically nonexistent. What would be the use of gaining technical skills? The unskilled, the uneducated, would all earn as much as the most highly trained and highly educated men a nation could produce. The genius could accomplish no more than an idiot. The college professor would be more than an illiterate bum. Invention would reach a standstill. Scientific advancement would be thwarted. Production would be slowed to a snail's pace. There would be no dreams, only drudgery. How could man progress in such a stagnant atmosphere?

Free enterprise is the world's backbone. Ludwig Erhard, West German Minister of Economics, credited with the success of the German economy, has said, "Where there is a free market, there are sound currencies." The most industrious man is the man with the highest goal in sight, a goal that will lead him higher and make him better. The most perfect position for the head is tilted upward looking at the sky, and all those who have advanced the human race, regardless of the political system under which they labored, were laboring under an economic system of free enterprise which encouraged individual initiative.

What is free enterprise? It is a steel mill in Pittsburgh, an oil well in Texas, an orange grove in Florida. It is a man wiping the sweat from his brow in the cornfields of Iowa, a doctor preparing for surgery. It is a one-room schoolhouse in the mountains of Kentucky. It is a wadded section of the stock market reports from a morning newspaper, and yes, it is the grin on a little boy's face as he tries to sell lemonade, "Only a nickel, mister." That's free enterprise. That's why our forefathers died, and it's what we must live for.

Congressman McCormack on Taxes

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include an editorial on the Honorable JOHN W. MCCORMACK, concerning his views on the need for a tax cut, which appeared in the Telegram-News, Lynn, Mass., on May 15, 1958:

CONGRESSMAN MCCORMACK ON TAXES

No matter how vital or complex the issue, Boston's renowned gift to Congress, Majority Leader JOHN W. MCCORMACK, can never be accused of not making his views or feelings known.

This week, Congressman MCCORMACK called for a cut in personal income taxes as an antirecession measure. While the Congressman made it plain that he was speaking for himself and not for the Democratic majority of the House, his views unquestionably carry great weight.

"The economic situation is such that a tax reduction should be put through at once," the veteran Democrat stated.

Congressman MCCORMACK envisages a tax reduction as something giving a badly needed shot in the arm to industry. Aside from the extra income it would afford middle-class families, the Congressman believes it would spur a new business cycle by inducing a wave of buying.

As the eyes of the United States look upon Washington this week, it is heartening to see Boston's great leader once more placing himself definitely on the record in such a controversial issue.

It would take volumes to list the good accomplished by Congressman MCCORMACK in his public career. He is one of the great statesmen of the day, a man who not only knows what is going on all over the world but is equally conversant with the problems affecting the working man and woman.

During his long and notable career, Congressman MCCORMACK has had the sympathetic understanding and cooperation of a wonderful wife, Mrs. Harriett McCormack. Mrs. McCormack has emerged over the years as one of her husband's most trusted and capable advisers. She is a brilliant, intellectual woman with a complete grasp of goings on at home and abroad.

Edward McCormack, nephew of the Congressman, an able and brilliant lawyer, who is slated to be the next attorney general of the Commonwealth, is an ardent advocate of a reduction in personal income taxes.

Address by Alexander Campbell at the Thomas Riley Marshall Democratic Dinner, Wabash, Ind., April 29, 1958

EXTENSION OF REMARKS
OF
HON. WINFIELD K. DENTON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. DENTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by Alexander Campbell at the Thomas Riley Marshall Democratic dinner in Wabash, Ind., the evening of April 29, 1958:

EXCERPTS FROM ADDRESS OF ALEXANDER CAMPBELL AT THE THOMAS RILEY MARSHALL DEMOCRATIC DINNER, WABASH, IND., APRIL 29, 1958

Thomas Riley Marshall, Hoosier Vice President, philosopher, and governor, though a man small in physical stature, was a man of powerful intellect, sparkling wit, and Christian integrity. His grandfather was one of the pioneers and pathfinders who came to Indiana when it was a primeval forest. His grandfather had youth, a stout heart, a sharp ax, a young wife, and courage. It took him 6 weeks to get from Virginia to Indiana. Tom Marshall inherited a stout heart, great courage, and it is conceivable that from the sharp ax of his grandfather came the sharpest wit to ever grace the public life of Indiana.

In his own book entitled "A Hoosier Salad," Tom Marshall tells about his grandfather being the first clerk of Grant County, Ind., where the courts were held in his house for several years.

In this book he says, and I quote: "I have met nearly all the men and women in America who have been prominent in the last 40 years; I have seen and conversed with a great many of the illustrious ones from across the sea, and I do not hesitate to place the wreath upon the tomb where rests the ashes of my father and my mother. Among all the sons and daughters of men that I have known there may have been many of larger vision; many of finer education; many of more potent influence in the affairs of men, but there have been none with finer spirits, greater consecration to duty, love of humanity and veneration to God, the match of the perfect man and the perfect woman."

These sincere words from the pen of a great trial lawyer, sparkling speaker, and dynamic personality attest to a philosophy of greatness. Any man who will thus testify as to his mother and father has the quality of true Christian integrity.

Dr. Daniel Marshall, father of our Democratic patriarch was a practicing physician in North Manchester, Wabash County, in the 1850's and I am honored to be invited to the county of his birth to review with you, to point with pride the great record of a distinguished son of Indiana, the Hoosier Vice President, philosopher and Governor.

It is interesting to note the strong belief which the pioneer Marshall family had in the Democratic Party. In a chapter in his own book entitled "Hell or the Republican Party", Marshall says that "my grandfather and my father were notified by the Methodist preacher whose church they attended that they would have to strike their names off the roll if they continued to vote the Democratic ticket. My grandfather as a former Virginian announced that he was willing to take his chance on Hell but never on the Republican party. My father compromised by joining my mother's church. Many of the people of the South suffered deep privation and agony untold during that long period but the thousands of Democrats who went into the Union Army from Indiana and Illinois left at home families that suffered far more. Perhaps, he said, it was the experience of these youthful days that has led me to be rather charitable in my judgment of the political opinions of other men. I have always been a staunch adherent of the Democratic faith and a devoted follower of the Democratic party, but I have never been able to as yet, make myself a politician, because a politician, I have discovered, must not only be convinced that he is right, that his cause must prevail if the republic is to survive, but that the man on the other rank is not only a bad American but that if his cause prevails the fabric of democracy is likely to be torn in twain. I never have had a doubt as to my being right, but I have never been so sure that I desired unqualifiedly to condemn anyone who happened to think otherwise.

Tom Marshall had great faith in the Constitution of the United States, in order through law, and in the American people. He once said, "Don't worry about the overthrow of the vital principle upon which the American Government rests. So long as 10 million Fords are driven by 10 million Americans, God is in his heaven and the Government in Washington will continue to live."

In the campaign of 1872 Tom Marshall organized the Democratic Club of Wabash College where he was a student. At this time he was able to gather together about eight members of his club, although he himself was not a legal voter. This club was honored with leading the procession when Hendricks, a candidate for governor, came to Crawfordsville and Tom Marshall astride an enormous horse acted as escort for the man who was to become the next governor of the Hoosier State.

The Vice President was a true Democrat in his philosophy that government is designed to serve the people and the masses and not to rule over them. He was very much concerned with the fact that in 1913 every income in the German Empire was paying a 10-percent tax to the Government, that socialism was growing by leaps and bounds in the empire and that one of the principles of socialism was its abhorrence of and opposition to war. There was great agitation in Germany also for universal manhood suffrage. In those days Tom Marshall liked dictatorship no better than we like dictatorship today and it was Tom Marshall who predicted in December 1913 that there would be war in Europe within 5 years and that we might be drawn into it. He was laughed at by the Senators who were present in the Senate cloakroom at the time and some of them even ventured to inquire what sort of liquor he had been drinking—these Senators assured the Vice President that the peace of Europe was permanent.

It was not 5 years, it was only 9 months until the awful cataclysm came and World War I became a reality. World War I became a reality because the American people and the free people of the world could no longer stand by and watch the heel of the Kaiser being pressed down upon the backs of the great people of Germany in a similar manner as did the heel of the Nazi Adolf Hitler repeat the catastrophe—a catastrophe which brought to the defense of men and women in virtual servitude, the freemen from around the world who challenged the Axis triumvirate of Nazi Germany and imperialistic Japan and Fascist Italy.

Is history to repeat itself again? What is going to happen to the enslaved peoples behind the Iron Curtain in this world of 1958 in which the world is half free and half slave. I say to you tonight that the world cannot endure half free and half slave in the space age in which we now live anymore than a nation could endure half free and half slave in which the world is half free and half slave? These great, abiding and undergirding principles which well up in the minds and hearts and souls of free men everywhere will keep alive forever the breath of freedom in the world and in the universe.

And speaking of the universe, this Nation faces its greatest test in the days that lie ahead. The Democratic Party faces its greatest test in these immediate years because we are witnessing the spectacle of the totalitarian government of Communist Russia gobbling up piecemeal defenseless nations and placing them behind the Iron Curtain, sending sputniks into outer space, and refusing to negotiate with this Government or any free government in the world on the control of outer space.

In our democratic processes, our Anglo-Saxon civilization had developed living by the rule of law and not the rule of men. We have had the development of the law of the sea, the law of the air, and now there must be implemented in the framework of nations, the law of outer space. Communist Russia refuses to discuss the law and the rule of outer space by law because Communist Russia seeks in its international program of aggression and infiltration to dominate not only the free and the enslaved world but outer space as well.

It is the Democratic Party that has fought communism to a standstill in its tracks not the Republican Party. It was a great Democratic Attorney General who laid out the blueprint for the prosecution in the Federal Courts of the land, with all of the constitutional guaranties afforded them, the 12 top Communists Board of Directors, United States of America. Alger Hiss, Judy Coplan, Harry Bridges, and 50 others who were indicted, prosecuted, and convicted between 1948 and 1950. These Communist prosecutions were the first of their kind in the history of the United States since the time of George Washington and they were carried on successfully by a Democratic Attorney General under a Democratic President. I know—because I was there.

President Harry Truman stopped Communist aggression in its tracks in Korea and saved Europe from communism during his administration. Who has been soft on communism? My friends, we are losing the cold war. As Communist aggression continues around the world, as the Communist international program for domination of the earth and space engulfs nation after nation and the influences of the godless totalitarian form of government reaches out to subjugate the peoples of the world, let me point out tonight that there has been no move to stop them. In the hope of peace at any price, this administration cringes beneath the lash of Communist Russia; in Egypt, in Indochina and Syria, in the Satellite countries, and Africa is next. You say it cannot happen here, it is happening here in this little world on which we live. The rape of Hungary accounted for the starvation of millions of people behind the Iron Curtain, the subjection of free people to a police state—and there is no cry from Washington to encourage the enslaved people behind the Iron Curtain who look and listen and linger for a ray of hope from their free brothers around the world.

Why does our State Department not call upon Communist Russia to liberate the enslaved peoples in the satellite countries, to grant free elections to people everywhere within their domination, the answer is be-

cause the administration is afraid. The administration is afraid of losing votes and as a result we are losing the fight for freedom around the world.

Here me tonight—arise democracy—carry on the torch of freedom held so high by Woodrow Wilson, Thomas Riley Marshall, Franklin Delano Roosevelt, and Harry Truman.

Vice President Marshall served in high public office under one of the greatest men in the history of the world—Woodrow Wilson. The administration of Wilson and Marshall was a very progressive one which saw the enactment of long needed reform and all during the 2 terms as Vice President, when Marshall differed with the President, which he occasionally did, he gave his loyal support to his Chief in the White House.

The story is told about the days when President Wilson lay stricken in the White House—and selfish men urged Marshall to sieze the reins of government for himself—and how the Vice President steadfastly refused. He took the position, as a great lawyer, that such an act would be unconstitutional. There was no legal provision for such an act, and history has shown that he was right.

Even now, in 1958, Congress is fighting, but doing nothing with the problem, while NIXON waits on the 19th hole.

Our illustrious Hoosier was an active Democrat all of his life and I am pleased to say that he was an organization Democrat. After organizing the first Democratic club at Wabash College, he returned to Columbia City to become a leader in the community, a great trial lawyer and a faithful and prominent member of his lodge. He served as 12th district chairman and a member of the Democratic State Central Committee in 1896.

Governor Marshall, like Governor Schricker brought to Indiana a refreshing administration of rugged honesty, fairness and economy. There were no tumultuous highway scandals to blacken the pages of the Democratic administrations in our great Hoosier State under either Marshall, Ralston, McNutt, Townsend or Schricker.

Do you realize that tonight in Indiana there stands more public men under grand jury indictment and prosecution than any time in the history of the State of all of the State administrations put together from the time we transcended from Indian territory to statehood—to this present hour.

The Democratic Party in Indiana is on the march—the people are eager to vote for a new profile in the Hoosier State. Let us tonight resolve to lift high the torch of democracy which thus far has given us 73 out of Indiana's 106 mayors—the highest percentage in the history of the State and I am proud to acknowledge that your great Democratic mayor of Wabash is one of them. Let us join hands with one resolution, that we may go forward together and elect a Democratic United States Senator, full congressional delegation from Hoosierland and then continue through the mayors elections of 1959, on to the State House in 1960 with a Democratic governor who will rid the State of its bad name tarnished by the greed and plunder of the Craig administration. That will give to the people of Indiana the kind of efficient, sincere and honest government that the Democratic Party has always given to the great Hoosier people under such administrations as Marshall, Ralston, McNutt, Townsend and Schricker.

Isn't it great to be a Hoosier?—Isn't it inspiring to be a Democrat and to point with pride to the wonderful record of public service of such stalwart sons of democracy?

"PRIDE IN THE DEMOCRATIC PARTY

From the Fort Wayne Journal-Gazette editorial page of April 29, 1958:

"One short week from today the primary election will be held in this community.

"We urge all Democrats to go to the polls on that day—next Tuesday—and vote for the candidates of their choice.

"It is their privilege to help select the candidates who will be on the Democratic ballot in the general election on November 4.

"They should take advantage of this privilege.

"They are proud that it has given the Nation in recent times such Presidents as Woodrow Wilson, Franklin D. Roosevelt and Harry S. Truman. These men faced tremendous problems and met them with courage and devotion to the cause of the people.

"The Democrats of Indiana are proud of such Governors as Thomas R. Marshall, Samuel M. Ralston, Paul V. McNutt, Cliff Townsend, and Henry F. Schricker. Their names will live through the years to come as leaders who added luster to the fame of our great State."

When You Are Sick and 65

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mrs. SULLIVAN. Mr. Speaker, two developments of widespread interest to those concerned over the health needs of our elderly recently occurred and were the subject of an editorial in the St. Louis Globe-Democrat.

In one development, the American Medical Association, the American Hospital Association, the American Nursing Home Association, and the American Dental Association set up a new national agency, the Joint Council To Improve the Health Care of the Aged.

In Missouri, a great step forward was taken in the area of health care for the aged when the Missouri Medical Service, which sponsors the Blue Shield insurance plan, and the Group Hospital Service, which sponsors Blue Cross, removed age ceilings on nongroup applications.

The Globe-Democrat editorial commenting on these developments follows:

WHEN YOU ARE SICK AND 65

How can 15 million Americans who are 65 and over take care of their doctor and hospital bills? They are at an age when their earning power has probably hit bottom, while their health expenses may be at a peak.

Last month, four national medical and health associations set up a new agency to tackle this problem. It is called the Joint Council To Improve the Health Care of the Aged. The four associations in it are the American Medical Association, the American Hospital Association, the American Nursing Home Association and the American Dental Association.

"The new joint council will work to bring into being more medical facilities with costs tailored to the limited means of the aged," Dr. Robert Peden of St. Louis told members of the St. Louis Academy of General Practice over the weekend.

"In that connection," he said, "I am happy to say that Missouri Medical Service—the Blue Shield medical-surgical plan sponsored by the Missouri State Medical Association—recently announced a new development of great importance and benefit to the health care protection of our senior citizens.

"This new development was to make nongroup membership in this Blue Shield plan available to everyone, regardless of age. Group Hospital Service—the Blue Cross hospitalization plan—has also removed its age ceiling on nongroup applications."

Giving men and women over 65 the opportunity to have the insurance protection of Blue Cross and Blue Shield is a development of great importance and benefit. Although it does not and cannot solve the problem of paying for long, expensive illnesses, it still goes a long way toward providing for many illnesses.

The medical and health association should be applauded for taking the lead in tackling this problem for it is not a problem that can be ignored.

By 1975, nearly 1 out of every 10 Americans will be 65 or over. If there is no other way for these 22,500,000 men and women to meet their health needs, the demand for Washington to do something will be irresistible.

And 2,500,000 Americans may be wrong, but they won't be ignored by men who have to run for office.

McGregor Will Hold Conferences in District

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. McGREGOR. Mr. Speaker, since I have been in Congress I have always attempted to keep in close contact with the people of the 17th Ohio District, whom I represent.

While a Congressman is expected to have a broad grasp of national and international matters, and to give information on many troublesome subjects, I deem it most advisable to keep in touch with the people of our district so that I might have their views and endeavor to be of service to them in their personal problems.

Having been assured by the leadership that the Congress will not be in session, I will again, this year, follow the procedure of holding meetings in the courthouses of the seven counties in my district.

I have established the following schedule:

Tuesday and Wedneday, September 2 and 3, Ashland, Ashland County.

Thursday and Friday, September 4 and 5, Mansfield, Richland County.

Monday and Tuesday, September 8 and 9, Delaware, Delaware County.

Wednesday and Thursday, September 10 and 11, Newark, Licking County.

Friday and Saturday, September 12 and 13, Millersburg, Holmes County.

Monday and Tuesday, September 15 and 16, Mt. Vernon, Knox County.

Wednesday and Thursday, September 17 and 18, Coshocton, Coshocton County.

Weekdays 9 a. m. to 5 p. m. Saturday conferences will last only until noon, when the courthouse closes.

It is surprising how much can be accomplished when a citizen and his Congressman can sit down and talk over national and personal problems.

No appointments are necessary for these conferences and I urge any or all of my constituents to meet with me on the date most convenient to them.

With the knowledge thus obtained, I know I will be better able to truly represent them in the Congress of the United States.

Hon. Arthur Sherwood Flemming

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. WHARTON. Mr. Speaker, under leave to extend my remarks I am very pleased to include a recent editorial of the Kingston Daily Freeman bearing on the recent Cabinet appointment of a native son of my district, the Honorable Arthur Sherwood Flemming:

IN NEW CABINET POST

Kingston's illustrious native son, Arthur Sherwood Flemming, son of Judge and Mrs. Harry H. Flemming, of this city, has been called again to Washington as a member of President Eisenhower's Cabinet as Secretary of Health, Education, and Welfare. Mr. Flemming previously served in the Cabinet as Director of Defense Mobilization.

Mr. Flemming's long experience in Government service, his administrative ability and his dedication to office make him an excellent choice to direct this important governmental function. It is unusual for one individual to serve in two different Cabinet positions under one Presidency.

This new Cabinet post now places Mr. Flemming in a position of foremost responsibility in the administration. The department is one of the large governmental services, having some 20,000 employees. A man of unusual ability and energy and an experienced Government administrator, with a practical working knowledge of the job, Mr. Flemming's appointment is an excellent one.

Prior to his selection in the first Cabinet post as Director of Defense Mobilization, Mr. Flemming gained nationwide distinction as a member of top-level Government commissions under three Presidents—Roosevelt, Truman, and Eisenhower.

When Mr. Flemming resigned his Cabinet post as defense director to resume the presidency of Ohio Wesleyan University and become a private citizen, President Eisenhower expressed his regrets in one of his most complimentary letters, which, in part, read as follows:

"I have drawn constant reassurance from the fact that your many abilities were devoted to the vital task of preparing our Nation against any eventuality. In this complex and exacting work, your vision and sound judgment have been of the highest value. The Nation has indeed profited by your dedication to this service over the past 4 years.

"Along with my appreciation of your services as Director, Office of Defense Mobilization, you have my thanks for your great contribution to the work of my Advisory Committee on Government Organization. I am glad you can continue as a member of the committee and will be available for further consultations from time to time."

Before accepting the presidency of Ohio Wesleyan University, Mr. Flemming served for 9 years as a member of the United States Civil Service Commission and later as chief of labor supply, OPM and the Manpower Survey Board, Department of the Navy. He also served on the Commission on Organization of Executive Branch of Government, and Chairman, Advisory Committee on Personnel Management, Atomic Energy Commission.

Mr. Flemming's contribution to the general welfare of the country has not been limited to Government service. Besides his presidency of Ohio Wesleyan, he is a trustee of the Theodore Roosevelt Memorial Association and a member of the Hoover Commission. He served as president of the Washington Federation of Churches and was awarded the Traveling Fellowship, Washington branch, of the English Speaking Union in 1928. He has been prominent in Methodist Episcopal Church movements and he is a member of that church.

Mr. Flemming's qualities and his knowledge of Federal Government administration have been recognized by three presidents. Eminently qualified for even greater responsibility, he may be called upon for higher office and Kingston one day may be the birthplace of the President of the United States.

Welcome to Port

EXTENSION OF REMARKS
OF
HON. WILLIAM E. McVEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. McVEY. Mr. Speaker, the Congress has heard much in recent years, relative to the Calumet-Sag Channel, which is located in the district it has been my honor to represent. It will be welcome news to all to learn that the harbor has been opened to seagoing commerce. The Calumet Channel is the connecting link between the St. Lawrence seaway and the midcontinent of America. There is much progress yet to be made. However, the fruits of our labors are beginning to appear. There follows an editorial from the Chicago Daily Calumet carrying the glad tidings that the first foreign vessel has sailed into the harbor at Lake Calumet.

The editorial follows:

WELCOME TO PORT

Today is a special day for Calumet Harborland.

Today the newest world port—the harbor at Lake Calumet, is expected to greet its first foreign sailing vessel of the season which will be steaming in to take honors in the traditional race that starts at Montreal.

This is the second full season of activity for the port at Lake Calumet and 1958 bids to be the biggest and best yet.

After the hubbub of feting the victorious captain and his crew of the winning ship things will get back to normal and then we will begin seeing ships from all parts of the world steaming into the port.

We already are used to seeing ships whose home ports are in Sweden, Canada, Norway, the British Isles, France, Germany, the Netherlands, Italy and several other countries.

The port at Lake Calumet is now a true world port.

But we must not forget that just because we are a port of major prominence that our American shippers should not be slighted or forgotten.

Our great ore and grain boats have plied the lakes between South Chicago and other major harbors for years. Every day, from now on, we'll have the opportunity of seeing these sturdy "bread and butter" ships plying the Calumet River.

We also must realize the major importance of barge traffic on the expanding Calumet-Sag channel. This type of traffic comes to us all the way from the gulf and on the vital Illinois Waterway.

Business in this great and vital area of the Midwest is bound to get better from now on—thanks to the waterway traffic and its attendant business.

Italy: The True Republic With American Dreams Realized

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. LIBONATI. Mr. Speaker, it was only a mere decade ago that Italy, the gateway to Central Europe, and the strategic control of the Near East, Africa, and the Mediterranean by air and sea power, faced the political crisis of its existence as a free nation.

Not only was unemployment a critical problem but a spiritual revolt against the Catholic Church was spurred by Communist conspiracy progagandists throughout all of Italy and especially among the tradesmen of the northern provinces where unemployment took its greatest toll.

It was immediately before the eve of election that the Italo-Americans and their many American friends here began the letter writing called the Postal Cavalcade for Freedom that turned the tide. Thousands upon thousands of appeals were written to friends and relatives in Italy.

It could be honestly said that nearly every American who served in Italy as well as all the service organizations including the American Legion, Veterans of Foreign Wars, and Amvets, together with the Military Order, 40 & 8, 8 & 40, Congressional Medal of Honor, the Order of the Purple Heart, Knights of Columbus, YMCA, Red Cross, and all their women auxiliaries deluged Italy with prayers and supplications to reverse this dangerous trend to undermine and sacrifice and destroy the Italian Republic—free elections were on trial. The result of this concerted program wrote the future history of a freedom-loving people—the followers of freedom won the day.

I can remember the joy this victory brought to my brother Ellidore (deceased), who worked untiringly for this result, serving then as chairman on the Department of Illinois American Legion Americanism Commission, which post he had held for 15 years until his death, June 1954.

So today we see the great progress made by Italy in the past 10 years since that memorial election day when freedom was sustained.

And so we congratulate Italy on the 10th anniversary of her free elections. For on the 25th of May 32,506,339 citizens of whom 16, 931, 263 females and 15,575,076 males will cast their votes for their favorite candidates. Of this num-

ber of voters only 29,225,687 can vote for the Camera—House—deputy candidates. A lesser number are qualified to vote for the senatorial candidates—the voters over 25 years of age are so qualified. There are 3,500,000 who are eligible to vote for the first time in this election of which only 500,000 are eligible to vote for the senatorial candidates.

We are happy to salute Italy, the strongest of the free Republics, next to West Germany, on her accomplishment to effect a free suffrage. The following list shows the true spirit of the Italian electorate from L'Italia, a Chicago Publication, by J. La Franco, editor and publisher.

There are, exclusive of Valle d'Aosta, 324 political divisions with 5,977 candidates—certainly an American forum.

Valle d'Aosta, 67,803; Lombardia, 4,789,698; Liguria, 1,230,700; Trentino e Alto Adige, 490,219; Friuli e Venegia Giulia, 864,014; Veneto, 2,513,096; Emilia e Romagna, 2,566,000; Toscana, 2,318,-241; Marche, 925,789; Umbria, 557,184; Abruzzi e Molise, 1,082,820; Lazio, 2,360,-449; Campania, 2,733,765; Basilicata, 386,170; Calabria, 1,207,519; Puglie, 1,967,248; Sicilia, 2,879,371; Sardegna, 800,012.

We need not emphasize the importance of Italy in the American plan of defense for freedom. The great American Army base at Leghorn—largest in the world—can supply all of Western Europe. The bases at Verona—combat—and Foggia—atomic—our NATO base at Naples, 6th Fleet operations center.

So that it can be readily said that whatever way the elections go, the American-defense program in Italy is thereby affected.

The help we gave to Italy surely has brought us a friend we can depend upon. Italy is our true friend in all of Europe. Even the Fascists, monarchists,. and left-wing Socialists cannot change it. The Democratic Christians Party support the ideas of American influence in Italian politics. Giuseppe Saragat, leader of the Social Democratic Party and friend of the United States, who has supported the Christian Democrats at times keeping the Government in pro-American control, is a leveler for American control and watches closely public sentiment to warn the United States of its fallacious attitudes on foreign policies.

We hope that this young Republic, Italy, will continue in this, its 10th election, to elect candidates to sustain us in this global cold war and, with us, maintain the freedoms of all peoples against the oppressive aggression of atheistic governments.

The progress of Italy can be best determined by the Drew Pearson report on his present coverage of the Italian elections in Rome:

GREAT PROGRESS IS MADE BY ITALY

(By Drew Pearson)

ROME.—Two big things impress you about Italy today. They are:

1. The forthcoming election will be completely free, with every shade and segment of political opinion not only able but required to vote. It will be a purer demonstration of democracy than in United States presidential elections because only 60 percent of Americans vote. When you contrast this with complete suppression of democracy under Mussolini you get some idea of Italy's tremendous political progress since the days when partisan bands began knifing Mussolini after Salerno.

2. Italy has made more economic progress than any other European nation except West Germany. Her gold deposits in New York of $1.4 billion are now behind only England's and Germany's.

ECONOMIC MIRACLE

From the depths of depression and discouragement as I saw it after the war, Italy has accomplished a modern economic miracle. The American people can take a little credit for an assist in this recovery. But basically it goes to the indefatigable energy and determination of the Italian people.

Today Italy receives no foreign aid from the United States except for a barter deal by which Secretary of Agriculture Benson gets rid of some of his surplus tobacco and cotton in exchange for local lira, some of which are used for the expense of the American Embassy in Rome.

DIFFICULT REFORMS

It has actually been Italian land reform, tax reforms, oil development, and highway improvement that have revamped the nation's economic structure. The Christian Democrats who have governed Italy since the war deserve credit for these difficult and sometimes unpopular reforms.

It was ex-Premier Antonio Segni, himself one of the biggest landowners in Italy, who largely wrote the land reform bill and wrote it in such a way that his own land would suffer severely. Many of the big estates in Italy are owned by Christian Democrats or the Catholic Church. However, the law was passed and is being carried out.

Last week, driving through southern Italy, I visited some of the new developments made possible by irrigation, reclamation, and by a series of loans from the World Bank. Along the Mediterranean where the Tifata Mountains drop abruptly to the sea, the erosion of the centuries has piled up silt along the river beds, while the pounding of the Mediterranean has washed sand and silt against the shore.

This created a mosquito-breeding morass somewhat like our New Jersey swamps which for years was wasted.

It remained for the Christian Democrats, with help from the World Bank, to accomplish the overall job of draining these swamps, damming the rivers, irrigating the land, and putting people back on the land.

A total of $340 million has been advanced by the World Bank, the latest loan of $75 million being subscribed by 7 West German banks and 14 banks in New York, Chicago, Toronto, Philadelphia, and Boston. The loan will go toward reclaiming 96,000 acres along the Volturno River, another 158,000 acres near the Adriatic, building 2 power plants, mineral development in Sicily, a clothing factory in Salerno, and 2 tin-plate and electric refrigerator factories in Naples.

A new throughway, the Highway of the Sunshine, is being built from Milan to Naples.

Michael J. Boyle

EXTENSION OF REMARKS

OF

HON. ROLAND V. LIBONATI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1958

Mr. LIBONATI. Mr. Speaker, Mike Boyle is dead. He was a pioneer in the early labor wars for recognition. He was known as "Umbrella Mike"—always carried the sun and rain protection with him. He died while in Florida last Saturday, May 17. He had a turbulent career in the labor movement—when it was really tough to keep the flock together. Through his indomitable will and courage he built the Chicago Electrical Workers Union into a formidable organization and was its leader for 50 years. Everyone knew that Mike Boyle's word was good. He was loved by his men and was one of the most powerful leaders in the union circles both nationally and locally. The electricians lost a faithful father and labor lost a powerful son.

We from the congressional districts identified with labor problems feel this terriffic loss to the men of the laboring classes and send our heartfelt condolences to his widow, Helen, and two daughters, Mrs. Frederick P. Geyser and Mrs. John Sheridan.

Fourth Annual Model Congress of Genesee County

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1958

Mr. OSTERTAG. Mr. Speaker, the schools of Genesee County in western New York hold a model congress each year for the purpose of providing high-school students with a better knowledge of the procedures and activities of the Congress and of our system of representative democracy. I consider this to be a very excellent and worthwhile program which might be carried out with profit in any school system.

The fourth annual model congress was sponsored this year by the Robert Morris Council for Social Studies and was held in the Oakfield-Alabama Central School, Oakfield, N. Y. A number of bills were submitted by the student delegates and referred to proper committees. Six were acted upon by the congress.

Two bills were passed. They were:

Bill No. 5, submitted by Loretta LaRussa, of Notre Dame High School, Batavia; a bill to improve the social status of migrant workers by requiring the Federal Government to license and regulate agencies engaged in the contract of migrant workers; to regulate the method of interstate transportation of migrant workers; and to extend the benefit of social security and the protection of the Labor Management Relations Act to the migrant workers if they are citizens of the United States.

Bill No. 6, submitted by Douglas Fiero of LeRoy High School, LeRoy; a bill to amend the Taft-Hartley Act of 1947 to include the following statement: It shall henceforth be unlawful for any labor union, or other organization of workers to force workers either by threat of violence or strike or agreement with the employer to join or pay dues to that

union. Be it also recognized that a worker who does not join a union is in no way deprived of rights of equality of opportunity by his action.

This amendment shall be carried out and enforced by the National Labor Relations Board.

Three bills were defeated: They were:

Bill No. 1, introduced by Ted Schultz of Oakfield-Alabama Central School; a bill to abolish the personal income taxes by imposing a national sales tax of 10 cents on a dollar on all products bought by people in the United States, with the exception of domestic foods, medicines, home fuel, necessary clothing, automobiles used for work, and home lights for reading and homework; a motion was made to accept this as an amendment to the Constitution instead of a bill.

Bill No. 2, introduced by Chester Gabriel of Elba Central School, Elba; a resolution declaring that it is the sense of the Model Congress that the Government of the United States officially recnogize the Government of the Peoples' Republic of China, and furthermore look with favor upon the admission of the Peoples' Republic of China into the United Nations but not as a permanent member of the Security Council.

Bill No. 4, submitted by Douglas David and Clarke Aspinall of Pavilion Central School, Pavilion; a bill to repeal the National Fire Arms Act.

One bill was tabled:

Bill No. 3, submitted by Paul Dickinson of Batavia High School, Batavia; a bill to discontinue the operation of the Post Office Department by the Federal Government, but instead to permit private businessmen to operate the Post Office under the supervision of the Federal Government.

An Increase in Income Tax Exemption for Persons Over 65

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. CUNNINGHAM of Nebraska. Mr. Speaker, the problems of our older people today are well known. In many cases they live on fixed incomes, such as pensions or annuities, and the cost of living increase in the past two decades has caused great harm to these plans.

The income or retirement plan which was set up 20 years ago provided an adequate income for 1940 prices, but it often is tragically short of covering more than the most basic needs in 1958 prices.

I am introducing a bill today to increase the additional $600 exemption allowed persons 65 and older. It is next to impossible for most persons 65 or older to find jobs to supplement their retirement income, and they should be allowed to retain enough of this limited income to take care of their basic needs.

My bill would allow an additional $900 exemption to persons 65 or older, allowing a single person over 65 a $1,500 income or a married couple, both over 65, a $3,000 income before income taxes are levied. This is not a large income, but many older persons are living on just this or less. It is not fair to them to tax any portion of their income below these levels. Our country is not so badly in need of revenue that we must take money from older persons who have only these small amounts to live on.

Virginia Will Continue Massive Resistance to Racial Integration in the Public Schools

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. TUCK. Mr. Speaker, in the Richmond News Leader of Friday, May 16, 1958, there appeared two editorials on the subject of public education in Virginia. The editor states his unyielding position to the unwarranted decision of the Supreme Court in the school case, and I am in wholehearted agreement with him in his determination to continue massive resistance to the persistent effort to force integration upon us. I hope the editorials will be widely read, and under leave to extend my remarks in the RECORD I include the following text thereof:

YIELD, NOW?

The week that brings the fourth anniversary of the Supreme Court's segregation decision brings Virginia significantly closer to the showdown that has been inevitable all along. On Monday, Federal Judge Paul directed Charlottesville, in effect to begin integration in September. Federal Judge Hoffman is expected to impose the same mandate upon Norfolk and Newport News. Prince Edward and Arlington Counties are not far behind.

It is possible, of course, that new avenues of litigation may yet be found, by which these orders could be further delayed. In the interests of domestic tranquility, Governor Almond and Attorney General Harrison will want to explore these fully.

If no such recourse can be found, the question before Virigina will be:

Do we yield? Now, do we yield?

Every Virginian has a right and a duty to answer that question for himself. We have had a long time to think about it—4 years to reflect upon some towering problems of law, and education, and the preservation of a whole way of life.

Many a Southerner, long conditioned to respect the judicial process, was at first reconciled to accept the Supreme Court's decision with little protest. It took time to understand that the Court had not acted judicially, but rather legislatively. It took months to comprehend that the Court, in interpreting the Constitution, had done an unconstitutional thing: It has usurped the power reserved to the States themselves to amend the Constitution. Many persons have yet to grasp the plain truth that what is loosely called "the law of the land," in speaking of school decisions, is not a statute law at all.

Many of us have thought, too, of education. Four years ago, it seemed unthinkable that public education, meaning tax-supported education, might ever be abandoned anywhere. So great a catastrophe, we declared, would have to be forestalled at any cost. Now we have come to believe that the important end is education itself, and that it is of no consequence whether the end is achieved by public institutions, financed from taxation, or by private schools.

Most of all, many a Southerner has thought hard about the future of the South, and tried earnestly to weigh the alternatives before us now. One alternative, surely, is to surrender. The other is to maintain a massive resistance.

Considering the first of these alternatives, we have sought to appraise some of the affirmative arguments. One of these is that "the Negroes don't really want integration; they only want an end to legal segregation, and if schools were desegregated, they would stick to their own schools." A second argument is that school segregation should be abandoned because school segregation is immoral and un-Christian. A third is that the Supreme Court must be respected. A fourth line of argument goes to the unworkability of a private school system. There are other arguments also, among them the curious contention that integration in the south would please the Venezuelans and gratify Mr. Nehru.

Most of these arguments (and indeed, the same thing is true of arguments on either side) are based on conjecture, or upon opinion. They are not susceptible to direct rebuttal. We do know that in Baltimore and Louisville, where desegregation has been instituted on a voluntary basis, Negroes have flocked to white schools; there has not been the slightest evidence to support the theory that no more is desired by the Negro than an end to some legal barrier. Questions of morality or Christianity cannot be responded to in nonsectarian, political debate; on this point, surely, each man is entitled to his own opinion here on earth. Neither is there satisfaction to be found in arguing whether a contemptible decision merits respect; who is to say that when judges act lawlessly, law-abiding men are bound to abandon lawful alternatives to object compliance? As for international relations, a short answer is that we would all be better off if Mr. Nehru would tend to his knitting and let us tend to ours.

The consequences of surrender, in our view, far override the uncertain and arguable gains that are urged by integrationist spokesmen. To surrender would mean to accept the disruption of schools over much of the South, where white citizens, who provide the overwhelming bulk of tax support, would refuse to contribute longer toward school maintenance. Where public education were continued, integrated schools would be conducted in an atmosphere of tension, hostility, and bitterness. Has nothing been learned from Little Rock's Central High School this year? To surrender would be to invite the very conditions of interracial violence that have appalled the people of New York, Philadelphia and Chicago. To surrender would be to risk, a generation hence, a black-and-tan society—a society in which a Gresham's law of genetics, acting inexorably, as bad money drives out good, had expelled white culture and white characteristics in favor of the African. And at ever step along the way, we could anticipate social, familial and political conflicts that would rip the fabric of our whole lives, and react disastrously upon our economy.

What are the consequences of continued resistance?

They are not happy either. In localities where suits are filed by Negro plaintiffs, and litigated, and finally lost by the defense, some public schools—perhaps all public schools—will be closed. Some children, perhaps all children in these localities, will have their

education disrupted for a time. There will be great bitterness under this alternative, too, and there may be violence. For parents in some localities, resistance will mean financial sacrifice. Unless private schools can be made genuinely workable, the economy in these areas will suffer also. The physical act of closing a school will unleash a fresh torrent of abuse upon the South. We may anticipate, where schools are closed, an effort to maintain Federal schools with Federal taxes, or to compel the acceptance by private schools of students of all races. Endless litigation may be expected.

In choosing between these broad alternatives, Virginians cannot, or should not, confine themselvs to their personal situations here and now. If the dyke is breached anywhere in Virginia, then ultimately all Virginia must topple, for no State policy will remain. And if a small degree of integration may seem tolerable in 1958, we have some obligation to think of Virginia 20, 30, or 50 years hence.

Every Virginian, we have said, has a right and a duty to form his own opinions, conjectures and predictions, and to reach his own decision on the general alternatives now before us. These alternatives, again, are to accept race-mixing in the public schools of Virginia, or to resist race-mixing even if it means the closing of some public schools. In brief, the alternatives are to yield, or not to yield, to the judicial and political forces demanding integration.

Let there be no slightest doubt of this newspaper's choice.

Speaking for those of like mind, let us say this: We do not yield. We do not expect to yield ever.

PLAN PRIVATE SCHOOLS NOW

This newspaper believes, on the basis of all the evidence at hand, that a policy of continued resistance to racial integration has the overwhelming support of the voters and taxpayers of Virginia. Public opinion polls have shown this to be true; the people repeatedly have sent representatives to the General Assembly whose policies of resistance were well known; J. Lindsay Almond, Jr., was elected Governor last fall on this single issue. On this record, it is clear that the vast majority of the people of Virginia stand opposed to race mixing in the schools.

In less than 4 months, the strength of that conviction may be severely tested. In the absence of new legal delays, some public schools, and perhaps all public schools, may be closed in 3 cities and 2 counties. The question will be: What do we do in September?

A better question would be, What do we do now, in May? Now is the time for planning. Now is the time to draft local ordinances, organize private schools, line up teachers, and prepare for the siege. Governor Almond can help by undertaking a survey of possible tuition grant requirements, so that aid can be made promptly available to white and negro students alike. The attorney general's office can help by advising with localities on problems of local taxation and disposal of surplus property. The department of education can make available to both white and negro groups some useful advice on school operations.

But the thing that must be most clearly recognized is this: Private schools must be the responsibility of private citizens. On the precedent of Federal tuition grants under the GI Bill of Rights, we believe a good case can be made for the validity of State tuition grants, provided the State's action is limited to the disbursement of funds on a wholly nondiscriminatory basis. We believe also that a good case can be made for the leasing of unused public school buildings to private educational corporations. But the actual organization, administration, and day-by-day management of private schools must be undertaken by private groups, acting privately and without State supervision.

This is not an impossible task. At first glance, the total number of pupils to be educated privately may seem appallingly large. Broken down in terms of individual schools, and further reduced in terms of individual grades or classes, it is not appalling at all. It is one thing to think of private schools for 3,000; it is not so great a problem to establish private schools for 300. But the initiative must be taken now. Next September will be too late.

We approach the most critical point in the whole struggle. If parents in affected communities can meet the crisis calmly, accept the temporary disruption of their children's education, and switch over to private school operation without great confusion, a great advantage will be gained. That advantage should not be lost in the fall for want of prudent groundwork in the spring.

Indiana Newspaper Supports World War I Veterans' Pensions

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1958

Mr. BRAY. Mr. Speaker, under leave to extend my remarks, I want to present an editorial from the Plainfield Messenger, a newspaper in Plainfield, Ind., on the subject of pensions for veterans of World War I.

The editorial follows:

HAVE YOU CONSIDERED?

There is a movement on foot by veterans of World War I to ask Congress to grant them pensions after they reach the age of 60, which is meeting some opposition.

The movement is nationwide and already over 1,250 barracks have been established throughout the 48 States and Territories. This organization is known nationally as Veterans of World War I—U. S. A., Inc. It is intended that this organization will add strength to the cause of all veterans, but is specially constituted to press for immediate attention of the men and women who served in the Armed Forces in 1917–18.

Those who are opposed to this movement perhaps have not considered all the facts. We have seen our men and women leave for war on three occasions during our lifetime; and it was no different in 1917, when they marched off to serve their country, than it was in later years—insofar as offering their lives was concerned. The care of these veterans who became wounded or sick did not compare in the slightest degree with that provided for subsequent wars; the pay was much less; the facilities were meager; training was inadequate, and clothing and supplies were barely sufficient to keep them from suffering—their parents suffered the same losses as parents of the two latter conflicts. They were denied college educations since they were fighting during this period in their lives. They left jobs with no assurance that they would be reinstated upon their return. They were, in addition to being soldiers, flu victims of the 1918 epidemic. They were the victims of the 1929–38 depression. They were the fathers and mothers of World War II and Korean veterans. They have been the heaviest taxpayers in these years of such fabulous spending. They have helped pay the bill and have neither sought nor received anything for their service to their country.

Their ages now range from 60 to past 70 and their days are numbered. Many of them are forced into retirement and living on small fixed incomes, if any, which are far from sufficient to meet their daily needs.

The cost for the better care and attention given to the veterans of the later conflicts have been paid by the taxpayers, including World War I veterans. They have not complained. They have wanted their sons and the sons of their buddies to have every consideration.

Now, doesn't it seem just a little selfish to begrudge pensions to those remaining veterans of World War I, all of whom are on the shady side of life? At most, the program would not last many years. Thousands have already died, 1 now is dying every 5 minutes. With the number involved and their present age, the cost of pensions for them would not be a drop in the bucket compared to that spent and being spent on the others.

Why not withhold some of the foreign aid and give these older veterans a pension of $100 per month—no strings attached—for their declining years? If you will give the matter an honest appraisal we believe you'll agree that veterans of World War I have had pretty shabby treatment in comparison to those of other wars and to that given our foreign neighbors.

A Forward Look at TVA's Program

EXTENSION OF REMARKS
OF
HON. HOWARD H. BAKER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1958

Mr. BAKER. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an editorial from the Knoxville News-Sentinel, Knoxville, Tenn., Sunday, May 18, 1958, entitled "A Forward Look at TVA's Program."

The editorial follows:

A FORWARD LOOK AT TVA'S PROGRAM

On this 25th anniversary of the Tennessee Valley Authority much is being said and written about that agency's past record.

But here, we want to take a forward look at TVA. And what we have to say is directed to Congress.

There are two things that need to be done by Congress to give TVA the assurance and self-confidence which its overall past record has earned.

First, the Senate should delay no longer the confirmation of E. R. Jones and Frank J. Welch as members of the Board of Directors.

President Eisenhower made interim appointments of both these men last fall; Congress has been in session now 4½ months without doing anything about their confirmation. In the interest of stabilizing morale, the two appointees should be approved quickly.

Second, Congress should give TVA the right to sell its own self-liquidating bonds on the open market for financing necessary electric power additions to the system. This would put TVA on a better business basis, and in addition would silence the critics—at least it should silence them—who say that TVA is subsidized.

Considerably more than half of TVA's electric power output goes into national defense operations—and at a big saving to United States taxpayers. This fact alone justifies a self-financing authority, and Congress should give the matter top priority on its current calendar.

Report of Special Committee of New York Savings Bank Association on Dual Banking System

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. MULTER. Mr. Speaker, on March 13, 1958, I introduced a bill to provide for the establishment of national mutual savings banks, H. R. 11412. Although we have a dual system of commercial banks and of savings and loan associations, there is no dual system of mutual savings banks.

In this connection, I commend to the attention of our colleagues a report issued by the special committee on the dual-banking system of the New York Savings Bank Association. The report was made to the Savings Banks Association of the State of New York, and published in that association's 65th annual report on April 22, 1958.

The report follows:

REPORT OF SPECIAL COMMITTEE ON THE DUAL BANKING SYSTEM

(By Earl Harkness, chairman)

The Special Committee on the Dual Banking System was appointed by the association at the request of the National Association of Mutual Savings Banks. Each State association was asked to establish such a committee to study and determine (1) whether a dual savings-bank system was desirable, and (2) if so, what form a Federal charter should take. The committees were to report to the national association and be available for consultation, advice, and suggestion.

The committee proceeded at once to carry out its assignment and found that the question of whether there should be a Federal charter for savings banks was a matter which has confronted the industry for 25 years without any positive action having been taken. As a result, savings banks are the only financial institutions which do not enjoy the benefits of the dual banking system. Savings and loan associations, operating under dual chartering, have experienced such expansion that they have grown to the point where they are one-third again as large as savings banks.

The committee thereupon adopted a resolution that geographical extension of mutual savings banking was in the public interest and that the dual savings bank system was a desirable and necessary step—a principle overwhelmingly ratified by the savings banks of this State acting through their respective groups. The specific recommendations of the committee on the framework of Federal supervision and control and on the powers and privileges which a national savings bank should have were thereafter contained in a formal report which was filed with the national association. The committee further authorized distribution of this report to the members of the Savings Banks Association of the State of New York immediately prior to their annual convention in Miami in November 1957 so that they could be apprised of their committee's implementation of the principles already adopted.

The report is unique in that it represents the only completely blueprinted statement of position on the subject ever advanced by any segment of the savings-bank industry. It has been the subject of considerable discussion in newspapers, among savings bankers, savings and loan associations, housing experts, and in Washington.

Events since the filing of the report confirm the conclusion of the committee that if there is to be a geographical extension of mutual savings banking it must be through the medium of a Federal charter, that delay can be destructive, that any initiative which may now be ours can soon be lost, and that if we are to be successful we must have the cooperation of the savings and loan industry. There is so much more similarity than difference between our two types of institutions that it should not prove too difficult to find a community of interest possible of translation into legislation which would receive favorable consideration by Congress. It is the belief of the committee that its recommendations should aid immeasurably in providing the basis for discussion to that end.

Perrin L. Babcock, Robert M. Catharine, James R. Davie, Gerald R. Dorman, Bryant Glenny, Walter J. Hess, George C. Johnson, Joseph A. Kaiser, Earl B. Schwulst, Gabriel Wendel, Earl Harkness, Chairman.

Loans—Not Grants

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. LOSER. Mr. Speaker, under leave to extend my remarks, I call to the attention of the House an editorial appearing in the Nashville (Tenn.) Banner, which points up the need of a review of our foreign policy in South America.

The editorial follows:

LOANS—NOT GRANTS

In terms of lasting good will, and sound policy procedure in our hemispheric relations, the 80 minutes Vice President NIXON spent in conference with Dr. Galo Plaza Lasso at Quito might prove to be the most profitable interview of his whole Latin American tour.

Dr. Galo Plaza's suggestion was that the United States (1) review its policies, (2) forgo a new aid grant, and (3) render assistance to these neighbors by loans—not gifts.

That is not, note it, an isolationist talking. It is not an amateur in diplomacy and statecraft, or a skeptic needling Uncle Sam; or a hostile critic bent on dissension. It is a friend of the United States, profoundly concerned for peace and progress by a program of mutual responsibility. He is a Latin American statesman, who knows both the economic and the political facts of life; and who views this operation from the standpoint of the hemisphere's long-range interest.

Competent voices have pointed out the desirability—yea, the necessity—of cultivating pan-American solidarity. They have emphasized the equal necessity of building that on the basis of self-help, an encouraged initiative, not charity. The former builds; the latter undermines. That is the Galo Plaza view.

When he advises the Vice President that a new grant or handout would be a mistake, he unquestionably means that it would be a mistake for donor and recipient alike; that is, it would fail of its purpose. And to avoid that, he suggests a better way.

Who better to evaluate the merits of a plan than a leader of this stature—who speaks as a Latin, and at the same time as a leading figure in promotion of stronger hemispheric ties?

Dr. Galo Plaza has been prominent for years in the Organization of American States, and its forerunner, the Pan American Union.

He is a former President of Ecuador, and prior to that its Ambassador to the United States.

In 1955, he won the American Award of the American Foundation for notable service in behalf of peace and progress on the hemisphere.

No one knows better the potentialities of these Latin lands—their capacity for self-help, their spirit and national pride best served by loans where and when needed . . . not gratuities.

He speaks with prestige on a subject concerning these lands, and what he says will bear weight with them. It will bear weight, assuredly with the United States, which has faced the necessity of reappraising policy in this particular throughout the foreign-aid picture.

None has spoken more forthrightly on the subject, or with a more enlightened view.

Dr. Galo Plaza is not an opportunist, grinding an ax of enmity. He is one of this Nation's stanchest friends—seeking to develop a course of constructive international enterprise, mutually and permanently beneficial.

He wants solid ties, evoking responsibility on the part of all concerned. That makes sense. It is in accord with the highest concept of good-neighbor relations. He has earned the gratitude of America by saying something that needed to be said.

We Need Reforms, Not Frauds

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. JONES of Missouri. Mr. Speaker, as we consider many of the suggested devices for meeting emergencies brought on by the current recession, I feel that we are fortunate in having men in positions of leadership who are capable of facing the issues squarely and sensibly; who maintain sanity when others about them are given to panic. I am proud that the leadership of such a great and influential organization as the American Bankers Association is being led by a fellow townsman of mine, J. C. Welman, president of the Bank of Kennett, who is also president of the American Bankers Association. In this capacity he has been going about the country, appearing before State bank groups in many of the States of this Nation. His philosophy is reflected in the following editorial, written by another good friend of mine, Jack Stapleton, Jr., publisher of the Daily Dunklin Democrat, Kennett, Mo., and which appeared in its issue of May 14, 1958:

WE NEED REFORMS, NOT FRAUDS

Earlier this week Joe C. Welman, of Kennett, president of the American Bankers Association, spoke out against indiscriminate tax cuts in an attempt to end the current business recession. Welman, in an address before the Texas Bankers Association, said a tax cut will do little in relieving the present

situation, but will add billions to the Federal deficit.

All this talk of a tax cut, it seems to us, is bound to put thinking persons in a kind of dilemma. We doubt if it can be disputed that the present tax load is too heavy on the American taxpayer. Fully one-third of the whole economic effort of the people is consumed by the Federal, State, and local Governments. A vast proportion of this is plainly sheer waste; that is, it goes to support governmental activities which have nothing to do with national defense or with the real welfare of the people.

This newspaper yesterday published the fact that all earnings up through yesterday went to Uncle Sam in the form of taxes. The rest of the year we work for ourselves, but from January 1 through yesterday we were working to pay our taxes.

As welcome as a tax cut might seem, we hope Congress will not rush into a recession-period panic with indiscriminate cuts just to gain a few votes next November. There is so much talk of a recession, and one need only reflect on what the people could buy and enjoy for themselves if they had even a small part of these taxes to put to their own use. Beyond this immediate effect, although perhaps not so obvious to everyone, the weight of this tax load is a drag upon the future. Every dollar Government takes now for nonproductive purposes is a dollar subtracted from the future economic strength of this country.

The present tax structure is a jerry-built mishmash that distributes the burden inequitably and unwisely. The excise taxes are a crazy quilt; the design is not only senseless but is an actual penalty on many lines of business and many consumers.

The present method of levying direct taxes upon individuals is, if anything, worse. The steeply graduated income tax is fundamentally unjust because the more the taxpayer works and earns, the more he pays. It is economically unsound simply because it takes a bite out of the future—the savings which must provide the capital tomorrow for a growing Nation.

So plainly tax reform which would both reduce and redesign the tax structure is more than overdue. The words of "tax cut" which they're hollering through the corridors of the Capitol in Washington are bound to appeal to everyone.

But few of the politicians who are saying "cut taxes" are actually talking about reforms. They're talking about gimmicks. Some excise taxes, so we are told, must be cut on certain products just to help boost sales on these particular products. This is not reform. The plan is not to revamp plant amortization rates to make economic sense for all, but rather to give temporary fast writeoffs in certain areas somebody thinks need a little stimulation.

There are other gimmicks—"forgive" a month's taxes, or have a 1 year's increase in the tax exemption, or otherwise just juggle the books to put a few more dollars in people's pockets in the hope they will spend them fast.

As far as we're concerned, it would make just as much sense for Congress to hand out $40 to everybody in the country from the Treasury. The guy who signed the check would undoubtedly be elected President.

But the simple fact is that the Government is now running a deficit of more than $3 billion. There is no plan underway to reduce Government spending. We even hear talk of increasing this spending.

If this is what is meant by a "tax cut" then let's not kid ourselves—it simply means the political effect of 40 pieces of silver for which we will pay many times over in future taxes and in the theft of all values by way of inflation.

Before we can be realistic and cut taxes, we must cut Government spending. Otherwise we'll just be kidding ourselves.

We can't have our cake and eat it too. We should welcome tax reforms and tax reductions. But we should not permit Congress to vote tax frauds.

The Water Pollution Control Program

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. EDMONDSON. Mr. Speaker, it is disappointing but not surprising that the Eisenhower administration is now proposing that the water pollution control program, which was one of the great achievements of this Congress in 1956, should now be terminated.

The President's recommendation on this point, sent to the Congress on May 13, states that this program must be eliminated to end the dangers of overcentralizing power and authority in the National Government.

It is very difficult to find, in the water pollution control program any dangers that are equal to the very grave menace that is posed to our Nation and the national health by the ever-increasing problem of pollution of national water supplies.

The estimate has been made by reliable authorities that pollution today is costing our Nation more than $1 billion in valuable water supply, each and every year. The program now underway, in which the Government is authorized to invest up to $50 million a year, falls far short of meeting our national needs in this field.

When we consider the fact that municipalities have been matching Federal funds under this program at a rate of approximately $5 for every Federal dollar, we get some idea of the scope of the program and of the undeniable fact that major responsibility in this field is still being carried by local government.

In the State of Oklahoma, as of March 31, 1958, there were 24 projects under the Water Pollution Control Act, with a total estimated cost of $7,717,289.

The Federal grant offers for these projects totaled $1,703,785, leaving a total in local funds to be spend on this worthwhile purpose of $6,013,504.

As of March 31, 21 Oklahoma communities were vitally interested in this program, including the cities of Ardmore, Cache, Carnegie, Chickasha, Chouteau, Cushing, Dell City, Drumright, Grove, Harrah, Kingston, Lindsay, Locust Grove, Luther, Mangum, Marietta, Muskogee, Norman, Oklahoma City, Pawnee, and Tulsa. All of these communities had approved projects as of that date.

Four of these projects, at Cache, Carnegie, Drumright, and Marietta have already been completed, with very real benefit to the people of these communities.

In the Second Congressional District, projects at Chouteau, Grove, Locust Grove, and Muskogee are going forward under this worthwhile program.

I earnestly hope that this Congress will reject the Presidential recommendation, which fails completeley to make any case for danger—and which asks us to turn our backs upon the very real and provable danger to the most precious commodity which we own—our water supply.

I hope the Congress will consider approval of H. R. 11714, the bill sponsored by our colleague from Minnesota, the Honorable JOHN BLATNIK, which would enlarge and improve this program and meet fully our national responsibility in this critical field.

I have today introduced an identical bill to H. R. 11714, and was pleased to testify today in support of the Blatnik measure, and to place before the committee the recommendation of President B. E. Townsend, of the Oklahoma Outdoor Council, Inc., in support of H. R. 11714.

A Resolution Relating to the 45th Infantry Division

EXTENSION OF REMARKS
OF
HON. JOHN JARMAN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks, I should like to include in the Appendix of the RECORD Resolution No. 4 of the Oklahoma State Legislative Council setting out the council's unanimous opposition to the elimination and abolishment of the 45th Division of the Oklahoma National Guard.

The resolution follows:

LEGISLATIVE COUNCIL RESOLUTION 4

Whereas during the past few weeks various United States Army officials have indicated by press releases that the strength of the National Guard in the United States should be reduced by eliminating six divisions therefrom; and

Whereas these same officials have strongly implied that Oklahoma's famed fighting 45th Division would be deactivated and abolished; and

Whereas Gov. Raymond Gary and other State-elected officials have filed letters and telegrams with the Secretary of the Army bitterly protesting this contemplated abolishment of the 45th Division; and

Whereas since the activation of the 45th Division in Oklahoma the legislatures of this State have consistently supported the guard program by passing numerous appropriation bills to match Federal funds to build armories and meet other monetary needs of said program; and

Whereas the function of the Oklahoma Guard in peacetime provides splendid training for the youth of this State as well as a highly trained organization available to our State in times of flood, disasters and other State emergencies; and

Whereas in wartime the fighting 45th has proved by its excellent and valiant battle record on the beaches of North Africa, Anzio, and Korea that this famed division has no

equal and, thereby, deserves and warrants the united support of all the citizens of this great State; and

Whereas the executive committee of the legislative council is aware and cognizant of the fact that an all-out and united effort should be made by the members of the council, as well as every citizen of Oklahoma, to protest the abolishment of the 45th Division, and at the same time an all-out effort be made to urge our elected Congressmen and Senators in Washington to urgently request the proper Army authorities to retain the famed fighting 45th as a part of the National Guard Reserve components; and

Whereas it is the unanimous feeling and the consensus of this committee that the chairman of this council advise the proper authorities that the Oklahoma Legislative Council, for reasons above stated, is vehemently opposed to the abolishment and deactivation of the 45th Division: Now, therefore, be it

Resolved by the Executive Committee of the Legislative Council of Oklahoma, That it is unanimously opposed to the elimination and abolishment of the 45th Division of the Oklahoma National Guard, and that the chairman of the council be directed to register this protest with the proper United States Army officials in Washington, D. C., and urgently request the Oklahoma Congressmen and the United States Senators from the State to exert all their influence to insure the retention of the fighting 45th in the great State of Oklahoma; be it further

Resolved, That copies of this resolution be sent to the Honorable Raymond Gary, Governor of Oklahoma; all Members of Congress from Oklahoma; Maj. Gen. Roy W. Kenny; Maj. Gen. Hal L. Muldrow; all commanding officers of guard units in the State; and to the appropriate Army officials in Washington, D. C.

Report of New York County Lawyers' Association on S. 3423

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. MULTER. Mr. Speaker, the committee on the Federal courts of the New York County Lawyers' Association adopted, on April 29, 1958, a report recommending enactment of S. 3423 which would grant the consent of Congress to an interpleader compact between or among any two or more of the States, Territories, and possessions of the United States and the District of Columbia.

The report of the committee is as follows:

NEW YORK COUNTY
LAWYERS' ASSOCIATION,
COMMITTEE ON FEDERAL LEGISLATION,
New York.

Report of committee on the Federal courts on S. 3423, which seeks to grant congressional consent to an interpleader compact.

RECOMMENDATION: APPROVAL

The congressional consent to an interpleader compact is approved because:

1. It relieves from uncertainty a person who may be subject to multiple liability because of adverse claimants;

2. It assists in overcoming present restrictions of interpleader practice, i. e. Federal diversity jurisdiction requirements and State territorial limitations; and

3. It is supported by many nonpartisan committees and writers.

Respectfully submitted,
COMMITTEE ON THE FEDERAL COURTS.

Eugene F. McDonald

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. LIBONATI. Mr. Speaker, it is seldom in the growth of a city that you find one man like Comdr. Eugene F. McDonald, whose versatile activity touched upon all phases of business life. He was the personification of a great executive, a financial genius, military expert in intelligence service, explorer, and radio pioneer. Chicago and the Nation has lost a great man. He was fearless in any enterprise and positive in his business acumen. His popularity was treemndous. He contributed so much to the commercial and financial importance of Chicago and its business success within certain fields affecting radio manufacturing and promotion. He was a true sport in the fine sense of the word. And as a man enjoyed the sterling friendships and confidences of important men. He did big things for the city that he loved.

The Members of Congress from the State of Illinois send this message to his family: His daughter, Mrs. Marianne Weisenberg; his son, Eugene F. McDonald III; and his sister, Mrs. Wilson Towns, and we are also proud of his admirable accomplishments and hope in some way to allay their great sorrow in his loss—and further spread this eulogy on the RECORD to commemorate his sacred memory with our prayers.

The Chicago Daily Tribune article does great justice to this distinguished Chicagoan, as follows:

MCDONALD, RADIO PIONEER, ZENITH CHAIRMAN, WON FAME AS EXPLORER

Mass for Comdr. Eugene F. McDonald, 72, board chairman of the Zenith Radio Corp. and a pioneer in the radio field, will be said at 10 a. m. Monday in Assumption Church, 313 West Illinois Street. He died Thursday night in Billings Hospital, where he had been a patient since December 26.

A fabulous executive, Commander McDonald welded together an executive team at Zenith so able that he could spend much time exploring and adventuring. He often directed Zenith's policies by radio from far places.

AUTO FINANCE PIONEER

Born March 11, 1886, in Syracuse, N. Y., he read electric meters to earn his first money, and while in high school operated with a friend a successful business installing and repairing electric bells in homes.

Commander McDonald spent his early years in various phases of the auto business, making a fortune in financing time payments for cars, a business he started in 1912. He sold the business in 1917 to enlist in the Navy Intelligence Service, and eventually became a lieutenant commander, the basis of the title he kept the rest of his life.

In 1920 he went to a small radio shop on Ravenswood Avenue to buy a radio set and wound up by joining the company owned by two young men, Karl Hassel and R. H. G. Mathews. In 1923 the partnership was incorporated as the Zenith Radio Corp.

HEADED BROADCASTERS

Commander McDonald catapulted Zenith into a top position among radio manufacturers and at the same time launched his career as an explorer and adventurer that greatly publicized the company's products and sent sales soaring.

In 1923 he organized the National Broadcasting Association of Broadcasters, became its first president, and conducted the first successful radio advertising campaign. In 1943 he developed a hearing aid, and had been a pioneer in phonevision, a form of pay-as-you-see television.

When Comdr. Donald McMillan, the Arctic explorer, planned his 1923 expedition, McDonald went along to handle radio communications.

OWNED 185-FOOT YACHT

McDonald bought the yacht *Peary* and was its skipper and second in command when it took McMillan to the Arctic in 1925. He also made other expeditions to other parts of the world on his 185-foot yacht, the *Mizpah*.

In 1931 he married Elba Inez Riddle, a descendant of President Zachary Taylor. The marriage ended in divorce in 1947.

Norway's Constitution Day

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mrs. KNUTSON. Mr. Speaker, it is with a feeling of fellowship that I share with the citizens of Norway their national day—Nowegian Constitution Day. To Norwegian nationals, this day honors the living constitution which has endured from May 17, 1814—for almost a century and a half—down to the present. It is my prayer that Norway, under its forward-looking constitution, shall continue to lead the way in fair relationships between the people and the Government, to stand as a sturdy ally to the United States, for untold centuries to come.

The recent visit of Princess Astrid and Prime Minister Gerharden to the Minnesota centennial observances strikingly emphasizes the close friendship, the esteem, the regard, in which our two countries hold each other.

Sixty years ago this summer—in Douglas County, Minn.—the so-called Kensington Stone was found. This stone held inscriptions which, when translated, indicated that it was the record of a Viking expedition, composed largely of Norwegians. For six decades controversial claims have been advanced about this otherwise unheralded tour of discovery. Whether or not men of Norwegian ancestry stood on Minnesota soil six centuries ago is of small significance. What does matter is that men and women of Norwegian ancestry have contributed far beyond the strength of their numbers to the spiritual and material progress of the State of Minnesota and to these United States.

Men and women of Norwegian origin could point to their compatriots who have won distinction in art, in music, in science, in education, in medicine, in law, in theology. They could point with pride to blood-relatives whose names are forever blazoned in the roster of this Nation's wars. No phase of American progress in culture, business, or the humanities but has its honored roll of giants of achievement with a common Norwegian heritage.

Yes; it is true. Americans of Norwegian ancestry have attained to leadership in all fields.

Yet, it is equally true that others of the same noble breed have served their adopted country just as well as the leaders. It has been their destiny to live their lives unnamed, unhonored, and unsung.

What was the impact of these, the great unknowns?

They thrust into the wilderness. They built their cabins and sod houses. They faced the dangers of the frontiers, the blizzards, the forest fires. They started the schools. They built churches before they had hearths of their own. They borrowed from the Norwegian Constitution to help make the laws of the States. They gave their ideas, rich in human warmth, to American social progress, to American governmental growth. They sang as they worked and the songs of Norway became the songs of the United States. Such was the completeness of their giving in their new land that the relationship between Norway and the United States—instead of hands across the sea—became hearts across the sea.

This is what Norwegian Constitution Day, May 17, means to me.

This is why I raise my voice to cry, "Skoal" to all Norwegians, on this day they honor, whether theirs are only ancestral ties or whether they are numbered among the three and a half million citizens of Norway itself.

Hail to our friend and ally.

Hail to the people who have made Norway's name honored throughout the world.

Hail to our mutual fellowship throughout the years to come.

Danny Dever Died

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. LIBONATI. Mr. Speaker, the Members of the Congress of Illinois learned that a fine citizen and patriot died the other day and those who knew this friendly man have good reason to mourn his passing. He was the quiet and forgiving kind. He liked poor people and secretly helped them—no fanfare—just did it because he knew that in charity one serves God best. His father was a great man—perhaps the shadow of the father cast an obscure shadow over his son, Danny. Sometimes that happens. Yet we can say that the son was something in his own right. Good people liked him both as lawyer and friend. He served his Nation in World War I—Army—and was active in veterans work. Mayor William E. Dever, 1923–27, of Chicago, judge and alderman, now deceased, had a good son in Danny. He was his pal. It is with heavy heart that we send condolences to his family, brother George, sisters Miss Margaret McCafferty, Mrs. Jane Gahagan, Mrs. A. S. Newman, and Mrs. Herbert Phillips. We can truly say that the poor people of Chicago lost a real champion when Danny Dever died.

A Five-Point Plan To Curb the Recession and Bring About a Wholesome, Sound, Prosperous, and Stable Economy

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. SCUDDER. Mr. Speaker, a lot has been said and much study is being applied to the quick stimulation of the economy of the country.

I feel that private enterprise is much better able to cope with this situation than is Government. However, I believe that inducements should be given to private enterprise and to every citizen of our country to start them thinking and acting in a way that will develop a better economy.

On May 1, I introduced H. R. 12316, which is a companion bill to one introduced by Senator CAPEHART, of Indiana, which would have the effect of stimulating construction by providing for a shorter writeoff period of invested capital.

I am in receipt of a plan which could complement my proposal, and I desire to insert it at this point in the RECORD:

A FIVE-POINT PLAN TO CURB THE RECESSION AND BRING ABOUT A WHOLESOME, SOUND, PROSPEROUS, AND STABLE ECONOMY

1. Home owners repair program: Permit home owners to deduct from taxable income the cost of repairing homes (for example, up to $500 or 5 percent of the original cost of the house whichever is greater), said repairs to include exterior and interior painting, plumbing, heating, air conditioning, roofing, storm windows, and other physical improvements and additions.

Beneficial results: This would encourage a Nation-wide home-improvement program by creating an attractive incentive to home owners, most of whom are still gainfully employed or in business. It would not require any change in our present banking system, while providing business for the metals, hardware, paint, lumber and kindred industries and supplementary services. It would provide employment for skilled and unskilled workers. It would create a movement of goods benefiting transportation firms and manufacturers of transportation equipment.

Cost to the Government in lost taxes would be offset to a major extent by additional taxes derived from individuals and companies benefiting from this program.

2. Personal automotive repair program: Permit owners to repair their personal cars and to deduct this cost from taxable income, to the extent of a small percentage of the original cost of the car. Repairs to include painting, replacement of tires, overhauls, seatcovers, etc.

Beneficial results: This would provide immediate increased business for the smaller gasoline station, automobile repair shop, the producers of tools and repair parts, skilled and unskilled labor, transportation, and so forth. Here again the amount of tax loss involved would be offset to a major extent by the benefits that the Government would obtain from increased taxes generated by new business.

3. Capital goods incentive program: Permit users of machinery of all kinds, to apply accelerated depreciation to all new machinery bought, received and installed within 12 months beginning April 1, 1958. This depreciation rate could be on either of two plans: (a) 4 percent a month for 12 months and 2 percent a month for 24 months or (b) 3 percent a month for 24 months and 2 percent a month for 12 months. It will be noted that this would provide 96 percent depreciation in three years. The Internal Revenue Code or Regulations should be amended to provide that if any equipment subjected to this rapid writeoff should be sold, the profits, if any, resulting from such sales would become ordinary income and not capital gain.

Beneficial results: This would provide an incentive for all users of machinery—whether in mines, railroads, bakeries, chemicals, metal products, or any other type of operation—to place orders immediately for modern equipment. Such orders would provide immediate employment in foundries, in pattern shops, in iron and steel mills, in transportation, for both skilled and unskilled labor. Again the loss of tax income would be spread over a time and would be offset in major part (if not entirely) by added income to the Government from reemployed workers and profitably operating companies.

4. Commercial and apartment building repair program: Permit operators of commercial and apartment buildings to make physical repairs and improvements, and to charge such costs to taxable income instead of capitalizing the expenditures. The expenditures could be limited to a percentage of the net depreciated cost of the building, say 5 percent or 7½ percent. Thus, on a million dollar building the owner could spend $75,000, whether it be for air conditioning, elevators, new windows, sandblasting, painting, or other improvements.

Beneficial results: Here again a wide area of skilled and unskilled labor would receive employment, and would boost transportation, producers of machinery, paints and chemicals, and so forth, quickly, and with a minimum, if any, tax revenue loss.

5. Excise tax reduction program: Inaugurate a program of reduced excise taxes on automobiles, automobile accessories, appliances, and other consumer durable goods. This would include such items as television and radio sets, pleasure boats, typewriters, and so forth.

Beneficial results: This point is a longer range one and will produce results at a slower rate than points 1 through 4, but will definitely provide a stimulus to the sale of new cars and appliances—and again, provide greater opportunities for employment of skilled and unskilled labor, for the production of components, for their transportation, for the employment of sales and other service people.

It should be noted that none of the above will require financial aid from the Govern-

ment, easing of bank credits, or relaxing of inflationary controls.

HERBERT I. SEGAL,
President, Van Norman Industries, Inc.

Mr. Speaker, I believe that points 1, 2, 3, and 4 could be applied to the great advantage of our economy and should stimulate untold millions of dollars of improvements throughout every nook and corner of our country. I think such a plan as this is far better than delving into tax reductions and other methods of trying to bolster the economy.

I trust the Ways and Means Committee will take recognition of these proposals and the Congress may have an opportunity to pass on them in the near future.

Voting Restrictions: A Report From the South

EXTENSION OF REMARKS
OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1958

Mr. ROOSEVELT. Mr. Speaker, late last month, on April 27, a group of men and women who were deeply concerned about the legal rights of the individual in the South gathered under the auspices of the southern conference educational fund to hear reports on voting restrictions in 8 Southern States. These reports were subsequently submitted to the Civil Rights Commission.

Seldom have I had an opportunity to see such a complete picture of the actual abridgment of rights—largely, I believe, because the substance of the reports which were presented are made up of actions against individuals which are seldom given publicity. In many cases, denial of the right to vote is more in the nature of a sin of ommission than an overt act and is therefore less likely to be publicized.

The truth about restrictions on voting might not make headlines, but it represents the bedrock of our constitutional guaranties. If the American people are not completely aware of the real situation, and I believe that many of us are not, they should be informed. The southern conference has performed a needed and courageous job in getting these factual reports to the public.

More recently, in delivering the keynote address to a group of Negro leaders here in Washington, William O. Walker, president of the National Newspaper Publishers Association said:

The Negro is no taller than he can reach in Mississippi. Our freedom must not be measured in Ohio, but in South Carolina.

Our aim must be that the stature of every citizen be the same before the law. Unless we know how far we have to go, this goal will be too long in being realized.

I, therefore, include in the CONGRESSIONAL RECORD the introductory address of Mr. Aubrey Williams, president of the southern conference educational fund which follows immediately. I shall in the future include reports from Alabama, Florida, Georgia, Louisiana, Mississippi, North Carolina, and South Carolina, as well as a special report on a recent registration drive in Baltimore, Md.:

REPORT FROM THE SOUTH

(Address by Aubrey Williams, of Montgomery Ala., at the southern conference educational fund's conference on voting restrictions in Southern States, Washington, D. C., April 27, 1958)

We are here to discuss one of the basic rights of American citizens—the right to vote. In many respects it may be said that the right to vote is the most fundamental right in a society in which the government rests upon the consent of the governed, for upon it rests what we may term sovereignty. It is the keystone of freedom. By its exercise the positive functions of citizenship are performed. Men decide the kind of government they want. They set up mandates for those elected to power. By the same token the vote is the soverign remedy of free men against all of their civic grievances.

We are here to make a report on a region of our Nation where trouble exists for many citizens in obtaining the right to vote. These citizens want to fulfill their obligations as well as enjoy their rights as citizens. They are having great difficulty in doing either. I speak of some 6 or 7 States of the Deep South. We are not here to condemn, in a blanket fashion, this region or to indulge in odious comparisons. Sad to relate, no section of our blessed Nation is perfect and possessed of all the virtues. Each has its shortcomings and could stand some additional equality, justice, and fair dealing.

We are here to report what the facts are in respect to the Negro and his efforts to exercise his right to vote. We feel Congress can profit by a greater knowledge of what is going on in these States. We feel that no individual or group is wise enough to know all the answers to these problems. On the other hand, we certainly do not come here with the feeling that we have all the answers. We wish only to give the facts and to help in any way we can to work out the right answers.

It is stating the obvious to say that relations between the races in the South have changed for the worse since May 1954, when the Supreme Court declared segregated public schools unconstitutional. This worsening has reached the stage now where there are few channels of communication open between the white- and the dark-skinned people in the six or so Deep Southern States.

There are those who find in this condition a reason for complete despair. I am not among these. I agree that it would be far more desirable to have an atmosphere devoid of antagonisms, where persons in conflict talked to each other and fought out their differences in a relaxed climate. But realism should force one to recognize that to ask such is to disclose a sad ignorance of human nature. I must confess I find something healthy about the present condition in the South. Not, I want to say, about the white man's side of it or the way he is acting, but about the Negroes' conduct during this period; yes.

I get a great deal of hope from what Negroes have done and how they have conducted themselves during the months and years since the 1954 ruling. What we have seen in the South is a generation of people who have come of age with a heritage of keeping the peace with the white man at any price. There was a harmonious relation between the races in the South—of a sort. There was a surface peace. There was the appearance, but not the reality. When white men said, "We get along with our Negroes," what they meant was, Negroes know their place and stay in it. This was a degrading peace. White people knew what they were really saying, and Negro people knew what the white man meant. The Negro purchased peace at the price of his self-respect. The white man purchased a working relationship with the Negro community by indulging in a refusal to face the consequences of his democratic professions. It was a debauching and degrading condition for all concerned. The present condition of tensions is at least honest. The Negro has said he will no longer settle for a peace which costs him the first prerequisite of a free man—his self-respect. He now stands openly and honestly for his rights. The Negro leadership has forced the struggle out into the open.

There had been a leavening working, of course before then. There were leaders like Dr. Mordecai Johnson, Walter White, Mrs. Mary McLeod Bethune, A. Philip Randolph, John Wesley Dobbs, E. D. Nixon, Charles G. Gomillion, Mrs. Modjeska Simkins, Paul Robeson, Roscoe Dunjee, Lula White, Thurgood Marshall, Dr. T. R. M. Howard, and many others. These people were stoking the fires of manhood and womanhood among the disfranchised, denied, insulted, segregated Negroes of the country. The first fruits were the Sweatts, the Hendersons, and others like them, who came forward as expendables to make legal challenges of the bonds that bound them. Then came the new crop of younger fighters, Dr. Martin Luther King, Jr., Mrs. Rosa Parks, Miss Autherine Lucy, the Reverend C. K. Steele, Mrs. Daisy Bates, the Reverend Fred Shuttlesworth—and then the "tender warriors," the children of Clinton, Tenn., of Clay and Sturgis, Ky., of Little Rock, Ark., and elsewhere. All of which adds up to the fact that the Negro has finally made up his mind that he is freed and that he intends to possess that freedom.

That he will have to do most of the fighting is not unusual or saddening. It is probably one of history's most consistent axioms that those who would be free must fight for their own freedom.

What is sad and altogether disillusioning to me as a citizen of this country, predicated as it is on the principles of democracy and Christianity, is the Negroes' naked aloneness as they engage the enemy. For they must take on not only the race haters of the South and the institutions of the South, its white educational institutions, a considerable portion of its churches, its elected governments, its law-enforcement agencies, but they must often find the Federal Government in league with the local and State governments in keeping them from the enjoyment of the rights vouchsafed under this selfsame Federal Government. One of the discouraging incidents of the past year has been the result of the one fulfillment of the Federal Government's obvious responsibility for enforcing its decrees. The one simple manifest demonstration that the ruling of the Supreme Court was more than pious words has resulted in a Federal apologia. I refer to Little Rock. The apparent result of this one acceptance of its responsibility is that the Attorney General has now decided that there will be no more Little Rocks. The field has been abandoned to the racists. The children at Little Rock are left to the mercies of the local institutions. Everyone seems more concerned that there be no more Little Rocks than that justice be done. The net result is to make the work of the deprived even more difficult.

It is important in this regard to call attention to the fact that what may appear as just a fight for the right of Negroes to a desegregated existence is much more than that. Our laws and constitutional safeguards are not selective. They must protect everybody or they will soon protect nobody. Once we let down the barriers to get at people we don't like or to get at ideas we don't like, the rights of all are endangered. Mr. Justice Frankfurter, in a dissenting opinion in a case

involving the due process rights of a rather disreputable character made the following pertinent observation:

"It is a fair summary of history to say that most of the safeguards of our liberties were forged in controversies involving 'not so nice people.'"

The traditional technique of those who would limit or even destroy individual liberties is to involve fear of, or hostility against, "not so nice people." Nor do the "not so nice people" conveniently remain the same people. In one period they have been the Protestant followers of Roger Williams; in another period they have been the adherents of the Catholic Church; in 1932 they were the bankers of America.

It would have been possible during a certain period around 1932 to have gotten almost any sort of punitive law enacted against corporation heads or bankers. It is not at all difficult to transform nice people into not so nice people. A pattern gets established and times change. For example, the pattern that is now fast being returned to usage in the South, of wholesale challenging of Negro voters—such a pattern gets established, then a new group comes under public disfavor and you have a new set of victims. We have seen the Federal Government allowing its stable of informers to be used by Senators in the United States Senate to destroy white persons in the South who stand up for the rights of individuals regardless of color or nationality. This is not only a shameless thing, but it is a dangerous thing. Unless we Americans turn our faces against liars and informers, no man's character or livelihood will be safe.

There are disturbing parallels between conditions in the South in the year of 1958 and in the year 1858. I sincerely believe that the devastation and the horrors of the Civil War could have been avoided and we could have moved from slavery into a sounder economic order if we had been willing to deal openly with slavery and people had been allowed to express themselves and to discuss the problems of slavery openly. But we were not. There was almost a complete black-out of discussion by legislatures as well as by social and economic pressures put upon people. School teachers were silenced or sent back to New England, where came from. Preachers were faced with the choice between Christian principles and the demands of their major contributors that they remember their obligations to the church which gave them bread and board. Books were censored and literature suggesting that things as they were were not necessarily as they should be was barred from the mails. The advocacy of abolition was made a felony in some States; punishable by death in others. Having put an end to thinking, talking, reading, and writing, there was no way left open but the way of violence.

"Freedom to speak and write about matters of public interest is to our form of government as the heart is to the human body," wrote Justice Hugo Black. "If the heart be weakened, the whole body is debilitated; if it be stilled, the result is death."

Things in 1958 have not yet reached the state of repression that existed in 1858. There are, however, signs that such a state of affairs is what the more extreme element in the South today desires and is working to bring about. Given a few more years of accomplishments similar to those of the past 4, and it is no exaggeration to hold that the South will be in much the same condition as it was 3 years before the explosion of the Civil War.

It would be well for those Members of Congress who aid and abet those un-American attacks to ask themselves, "What are the possibilities of such a course of conduct?" They should ask themselves, "What are the consequences to white citizens?" "Is it possible to maintain the safety and well-being and peace of the Nation?" Nothing is more dangerously explosive than pent-up pressures for change. So long as people can exchange ideas, express ideas, discuss their feelings about desired changes, there is little danger of explosions. It is when people are stopped from speaking their thoughts, when they are even warned not to have such thoughts, that danger mounts. Today a blanket of silence lies over the whole South. Men no longer discuss the race question in the white community except to view with alarm and deplore; they fear even to talk about a different point of view. And most newspapers are unhappily caught in the prevailing community hysteria and reflect the one-track line of southern thinking. The national radio and TV programs are the only media that sometimes differ from the dominant opinion. There is one political party, with one issue, in Alabama in the present governor's race. Each candidate is trying to outdo the other 13 in the vehemence of his opposition to integration. It is political suicide to be even mildly for segregation.

However, with our preoccupation with the treatment of the Negro close at home and its effect upon the white South, we may tend to overlook the greater significance of the struggle. The Negro's fight for political emancipation and racial democracy may very well have a far greater significance than just the securing of the right to register and vote, for behind the race crisis stands the specter of an inclusive political struggle involving the political party organization of both the South and the North. This is not just a matter of a major minority group trying to gain admittance into the political house of their fellows. What you have here may be the coming to a head of the long-delayed political realinement of the two political parties on all the great issues of the day. The issue of the political emancipation of the Negro could be the activating agent that threatens to explode the present ill-mated political setup. What we have here is a Government consisting of two political parties; the Republican is made up in part of what are termed "moderates" and another part of "conservatives"; the Democratic Party is little different. They have what is known as the "liberal" wing and what few call by its rightful name but which in fact is the southern oligarchy. The right wing of the Republican Party and the southern oligarchy have everything in common except the names by which they are called. Both are concerned primarily with maintenance of the present power structure in control in our country. The results for the American people from this situation are that the reactionaries in the two parties always effectively get together on anything really important to their interest and the liberals in both parties either split over political lines or are unable to put together a sufficiently large number of votes to pass legislation in line with their respective professions and promises.

It is this always inconclusive situation that the race crisis threatens, for the interests of the Negro are looming larger and larger in congressional districts in the North and West and in a considerable number of States. Members of Congress feel with greater urgency than ever before that their own personal interest is bound up with the fight of this particular minority group. Once enough Congressmen see how great is their personal interest in this issue and take the only course open to them, which is simply full-fledged support of the Supreme Court's position, they will seal the doom of the southern oligarchy or drive them into the Republican party where they really belong. By the same token, the liberals in the Republican party will be forced in the interest of self-preservation to support the Court and will face the necessity of finding working relationships with the liberals in the Democratic party.

It is possible, therefore, that the political emancipation of the Negro may have gotten underway a political realinement of major magnitude. Much will depend on how deep is the determination of the Negro. There is considerable evidence that this determination runs very deep in a considerable part of the Negro community, but how widespread it is is something that time alone can tell. The Montgomery bus protest had all the elements of a people who would not be denied their elemental rights. The Tuskegee resistance to having their votes taken away from them again has all the strength that characterized the ancient Anglo-Saxons as they fought similar battles for their elemental rights. However, there is disquieting evidence that Negroes do not always take advantage of the opportunities which are offered them. But the overwhelming weight of evidence is that the Negro has at last made up his mind to secure his rights as a citizen. If this is true, then we may well have the stuff out of which can come a true and sincere realinement of political parties in the country.

There stands to hand, then, for all Americans, with the exception of those whose privileged positions would be undermined, the opportunity to do all within their power to see that this comes about, to lend every possible support to the Negro community in their efforts to secure the vote. We must do all within our power to see to it that the Federal Government gives unequivocal support to the mandates of the Federal courts and unceasingly pressure the Federal law-enforcement departments to do their duty. We must work to secure southern white support and assistance. We must aim at political reform in the South and force the liberal southerners in the Senate and the House to cease their playing footsie with the Byrds and the Talmadges and the Eastlands. We must recognize the Negro's struggle for what it is—the spearhead which is challenging the hyprocisy of American political party alinement and which, if it succeeds, can clear the ground of the creeping fascism and totalitarianism which is inherent in the thinking of the power elite and their supporters, the conservatives and reactionaries of both parties.

College President Discusses the Lift That Modern Education Needs in Our Country

---

EXTENSION OF REMARKS

OF

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1958

Mr. COLLIER. Mr. Speaker, I was deeply impressed with the thoughts expressed in a little booklet entitled "Antioch Notes," which recently came to my desk. In considering the problems of education, I believe there is a great deal in the statements of the author, Samuel B. Gould, president of Antioch College, of Yellow Springs, Ohio.

I should like to quote the entire booklet for the benefit of my colleagues, but confine the quotation to the final paragraph which is certainly food for thought as we appraise the shortcomings of the system of education in America:

The goal that we have set for ourselves in education will not be reached without sacrifice by the American people, the kind of

sacrifice that impels them to put educational necessity for their children before personal luxury. That the President's program is a relatively short-term one, that it emphasizes the sciences and mathematics so heavily, and that it offers scholarships to qualified students with no mention of the students' own investment in their future—these facts are disappointing to some of us but not too disturbing. For the real lift that education needs must come out of the minds and hearts and pocketbooks of the American people themselves. A realization on their part that education is the key to America's future and an inclination to make sacrifices to support that realization are the truly essential factors that can give us hope. The Federal and State Governments can and do provide assistance of many kinds, and should continue to provide it increasingly. But it is not the American way to turn the responsibility completely over to Government. It is not only desirable to maintain the present diversity in education, it is also feasible, if our people have the will to make it so.

Cases of Speiser and Harris

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. HÉBERT. Mr. Speaker, Cro Duplantier, executive sports editor of the New Orleans States, pounds a typewriter with a steady and a firm hand. What comes out is a reflection of the strong and logical processes of his brain.

Just to keep the fires burning and the record straight, Cro Duplantier recently turned out another piece in the saga of the International Boxing Club and its weird and strange ways—if you are so naive—of doing things in the professional boxing business where it controls both the muscle and the fat—the muscle of the competitors and the fat of their purses.

This story is no The Tale of Two Cities but vividly and graphically the tale of two fighters.

It is revealing but certainly not surprising in view of the other exposés which have been made and still we Members of Congress do nothing about it. We investigate this and we investigate that but the smelly circumstances surrounding professional boxing—investigate? Never.

Here is Cro Duplantier's column from the pages of the New Orleans States:

CASES OF SPEISER AND HARRIS

(By Cro Duplantier)

One thing Truman Gibson, new president of the International Boxing Club, has never been accused of doing is meeting a question head on.

In a manner common to a certain group in the legal profession which expects yes or no answers to its questions, but believes it can never give a direct answer to one, Gibson recently explained away the inability of light heavyweight contender Chuck Speiser to get a fight.

Speiser terminated his managerial contract with Hec Knowles, an IBC favorite, a year ago. Since then, with his brother as manager, he has gotten but one fight.

So Murray Olderman, NEA correspondent, asked Gibson:

"Why can't a ranked fighter like Chuck Speiser get a fight?"

You couldn't ask for anything more direct. But here's how Gibson handled that one:

"We thought that Hec Knowles, when he had his contract, did a great job with Speiser. We prefer to deal with managers instead of fighters because they have more stability. I could show you a couple of checks that bounced."

This is an answer that is no answer at all. Though we're sure that Gibson did not mean it this way, the only interpretation we can get from the statement is that if Speiser wants to be a good boy and go back to the fold of the suave Mr. Knowles, he may suddenly find his prospects brightening.

This is a heckuva way to run a business, shelving a good piece of property like Speiser, a college man who is fifth ranked in his division, can box, can hit, and doesn't run from trouble.

But that's the way it is and Joe Speiser, acting for his brother, says he has been totally unable to get any fighter of any consequence to agree to a date with Chuck.

He went on to explain that he had arranged a date with Yvon Durelle, but that Durelle later backed out.

"He's got to live with the IBC," says Joe.

Joe Speiser says that the power of the IBC was further demonstrated by the fact that he had arranged for a title fight with Archie Moore, with only a sponsor for the TV part of the show needed to clinch the agreement.

He said that Gov. G. Mennen Williams of Michigan, the home State of the Speisers, had written a letter to the firm which frequently sponsors TV fights, a firm owned by the Governor's family, but had not been able to coax the company to brave the possible wrath of the IBC.

So Chuck stays idle, while the bank account drops.

But on the other side of the street is Roy Harris, the Cut and Shoot, Tex., heavyweight who surprised everyone with a win over agile Willie Pastrano of New Orleans.

Roy ain't got any more education than Speiser, who also holds a college degree, but apparently has more horse sense. He knows if he wants more than hay he's got to be in the right barn.

Roy, you may know is now under the managerial reins of Lou Viscusi, who also holds the contract on lightweight champion Joe Brown and who also was the promoter for the recent Brown-Ralph Dupas catastrophe in Houston.

But this is a recent development.

Harris, up until the time he decisioned Pastrano, was managed by Benny King, a Houston fight tutor who has a stable of boys he helps develop.

King told us on our visit to Houston that he saw the handwriting on the wall about a year before the blow fell. Harris was starting to make a splash in the second year of their 3-year contract as he continued to win them all.

"About a year before the contract was to expire," King said, "the IBC boys started to work on him and his father trying to get over the message that though I had helped develop Roy he needed someone bigger to get him the big money shots."

When Roy decisioned, in order, Charlie Norkus, Joey Rowan, and Bob Baker, King's days were numbered. Suddenly Harris got the biggest bout of his career—the shot at Willie Pastrano—and, when that was over, King was out.

Now Harris, with only these four wins to serve as any real recommendation, is being boomed as the logical contender for the heavyweight crown.

And if the IBC can ever manage a truce with Cu. D'Amato, manager of heavyweight champion Floyd Patterson, Harris is the guy who will probably get the title shot.

And Benny King, who developed him? He's busy trying to find a new meal ticket from among his other proteges.

The Errors of our Latin American Policy

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. UDALL. Mr. Speaker, in attempting to evaluate the violent incidents in South America last week some administration officials, including the President himself, have attempted to put all the blame on the Communist element in these countries. However, more detached observers indicate this explanation is over-simplified.

I suggest, at this time, we would best serve our cause by candor. We should for example, admit that our relations with Latin American countries have deteriorated; and concede that our blunders have been a prime factor.

Mr. Speaker, as sobering evidence of the deeper causes of the anti-American ground-swell, I present two articles. The first is an interview with Dr. Russell C. Ewing, head of the University of Arizona department of historic and political science which appeared in the Tucson Daily Citizen last week. A specialist on South America, Dr. Ewing was a visiting teacher at the University of the Andes in Bogota, Columbia, from August 1956 until last July. The second is an article written for INS by Miguel Angel Capriles, the publisher of Venezuela's most influential group of newspapers. Senor Capriles was jailed by Dictator Jimenez last January for refusing to publish a government editorial. These articles follow:

[From The Tucson Daily Citizen]

NIXON INCIDENTS BLAMED ON DETERIORATING RELATIONS

(By John Riddick)

To blame the Nixon incidents this past week in Peru and other countries entirely on Communists would be a mistake, a University of Arizona expert on South America said today.

The incidents reflect the fact that relations between the United States and its neighbors to the south have deteriorated badly since World War II, said Dr. Russell C. Ewing, University of Arizona history and political science department head.

No doubt there were Communists involved in the riots, but it would be too simple an answer to give them the credit. The roots of antagonism towards this country run much deeper. We are felt to be hypocrites and a friend to dictators, Ewing said.

A specialist on South America, Ewing was a visiting teacher at the University of the Andes in Bogota, Colombia, from August of 1956 until last July.

The report this week of the lavish spending of Dominican Republic dictator Trujillo's son in this country is a key to some of the unfriendliness.

"They can't understand how we can be so friendly to dictators in South America and so unfriendly to Russia," Ewing said. "The South Americans think of us as being a bit hypocritical."

It mystified South Americans that President Eisenhower appeared to be so concerned about the dictator of Nicaragua when he was shot by an assassin several years ago that the President sent a physician.

While Ewing was in Colombia, the dictator of that country—Rojas Penilla—was overthrown.

Ewing said the Colombians were angered that the United States sold arms to Rojas who, in turn, used them against the people. "How would you feel?" he added.

The United States has appeared to the South American countries to give aid and comfort to such dictators as Batista in Cuba and the late reigns of Jimenez in Venezuela and Odria in Peru.

There was great disappointment in South America about the United States after World War II, Ewing said.

"We immediately began canceling contracts at the end of the war and they couldn't understand the suddenness," he said. "They felt they were let down too soon. They thought they had been used during the war and then dropped."

Later when the Marshall plan began in Europe, the South Americans were disappointed that they got little benefit of such aid.

The Nixon incidents have occurred mainly around universities, and Ewing stressed that the schools have a strong political importance in South America.

"Almost everywhere, the faculty seldom holds a position if it does not have the approval of the reigning power," Ewing said. "The faculty quite often goes down with a regime. The students react against this."

South American students tend to be much more politically conscious than students in this country, Ewing said.

"If you count heads, a majority of South American people are somewhat sympathetic to the United States," he added. "But a good share of the intellectual leadership is unfriendly."

At the same time, many of these people are violently anti-Communist and it will create a great deal of antagonism to accuse them of being Communists.

After a 300-year history of colonialism, South America began a difficult climb toward self-government in the early 1800's. The area is now gradually moving toward more stability.

"We have neglected South America," Ewing said. "Things can be straightened out with attention. But we should have a new look at our policies. We should make it clear to the world we don't support dictators anywhere."

VENEZUELAN PUBLISHER GIVES BACKGROUND OF RIOT—UNITED STATES POLICY NEEDS TO BE REVAMPED

(By Miguel Angel Capriles)

CARACAS.—The group of newspapers published by me was the leader in a campaign, in the days preceding the arrival of the Vice President, for a frank discussion of the problems facing the United States and Venezuela.

The main problem was that of the presence in the United States of (former Security Chief) Pedro Estrada and (exiled dictator) Marcos Perez Jimenez.

We called for the open discussion of these problems in a civil and orderly form, without resort to violence of any kind.

Unfortunately, as NIXON himself told us yesterday at the embassy, young people are impulsive and quick tempered and do not always follow the advice of their more mature elders.

However, and I told this to NIXON at the meeting, I have just conferred with the leaders of the three main Venezuelan political parties—Accion Democratica, Democratic Republican Union, and Christian Socialists—and the great majority of the Venezuelan public opinion emphatically condemns yesterday's violence as undemocratic.

I am sure the Venezuelan Government Junta has expressed these same sentiments to NIXON.

We cannot, however, blame all that has happened solely on communism even though it is true that some of the demonstrators were members of Communist youth groups.

As I have said in my newspapers, many things led to yesterday's violence. These things might be grouped under the general term of errors in United States policy toward Latin America.

Just one calculated step taken by the United States a week ago might have turned NIXON's reception in Caracas into a cheering ovation. This step was to have expelled our hated security chief, Pedro Estrada, from the United States.

People were incensed at the ease with which a permanent resident's visa was granted to Estrada. Other applicants go through a trying and lengthy process to get one. But Estrada got his in a hurry.

Another easy step for the United States to have taken, would have been to have NIXON omit his visit to Paraguay. This would have shown Latin Americans that North American leaders do not visit dictators.

Unfortunately, however, NIXON not only went to Paraguay but, I understand, he praised Dictator Alfredo Stroessner as an anti-Communist fighter.

The Venezuelan youths who yesterday demonstrated against NIXON still have fresh in their memories a decoration of the order of merit conferred on Perez Jimenez by the United States while hundreds of them were confined in the dictator's political jails.

And they still remember Secretary of State John Foster Dulles' praise of Venezuela's sane economic policies, under Perez Jimenez, whose plunder of the Venezuelan treasury and public mismanagement was the worst in Venezuela's history.

Lynwood High School, Lynwood, Los Angeles County, Calif., 23d Congressional District, Again Achieves National Recognition in Winning Sixth Consecutive Principal Freedoms Foundation Award

---

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1958

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I proudly present for the information and inspiration of all who read it, the text of newspaper comments announcing that Lynwood High School, in the great 23d District, Los Angeles County, Calif., has for its sixth consecutive year, and being the only school in the Nation to be consistently recognized by the Freedoms Foundation, received an award for an outstanding citizenship training program.

The Lynwood Press of Thursday, February 27, 1958, said:

LYNWOODD IN TOP AWARDS OF FREEDOM'S FOUNDATION ANNOUNCED AT VALLEY FORGE

Lynwood was again in the foreground as an outstanding community in the Nation with announcement from Valley Forge that four major awards were presented within this city from the Freedom's Foundation.

Award winners were Lynwood High School to receive a principal school award, George Washington Elementary School to receive a library award, Lynwood Coordinating Council to receive a George Washington Honor Medal and Joe McMillan as editor of the award winning Robertshaw Fulton house publication Relief Valve to wind a distinguished service award.

Lynwood High School maintained it's Nation leading position this year despite handicap of day sessions and for the sixth consecutive year and coveted principal school award. It is actually the seventh win for the school since while still a junior high school under W. W. Jones as principal won the first principal award. Since then the performances have been repeated with Don Reber and later Ralph Cosman as principal.

The high school entry was based on the citizenship program and training for leadership. Lynwood high has won the principal award more than any other high school in the country. It also holds two distinguished service scrolls.

Lynwood Coordinating Council entry was based on the part it plays in the community and the community sponsorship of the United Charities, case conference, senior citizens, youth coordinating council and junior coordinating council. Ruth Carver is president of the coordinating council.

George Washington School, appropriately on Washington's birthday, received the library award, the highest honor that can go to an elementary school. This makes the second consecutive year winning this award by Harold Peterson's school.

Joe McMillan, editor of the Robertshaw Fulton Controls Co. house publication received a distinguished service award for his part in producing an award winning bulletin.

Lynwood groups have consistently been at the top in receiving recognition from Freedom's Foundation and it is noted that each year there are different judges.

The Lynwood Press also said:

DELEGATES TO LEAVE FOR VALLEY FORGE

Receiving Lynwood High School's sixth consecutive Principal Freedom's Foundation Award next week at Valley Forge, Pa., will be Mickey Bach, an 11th grade student, and Edwin Clark, United States history teacher.

They will be representing the only high school in the Nation to be so consistently recognized by Freedom's Foundation for an outstanding citizenship training program.

The two high school representatives will fly to Valley Forge next Wednesday, at the expense of the Foundation, to participate in the annual Freedom's Foundation ceremonies and to begin a tour of other historical shrines in the East. Their itinerary includes a visit to Washington, D. C., where they have been invited to breakfast at the Capitol with Congressman CLYDE DOYLE.

In a letter to Lynwood High Principal Ralph Cosman, Congressman DOYLE has said that such a high accomplishment (Lynwood High's Freedom's Foundation record) its worthy of special mention in the CONGRESSIONAL RECORD. The 23d Congressional District Representative also said that his personal car would be available to Mr. Clark and Mickey Bach while they are in Washington.

Mickey Bach is president of the junior class and secretary of the Key Club at Lynwood High. He is a varsity football player and an honor student in the college preparatory program. He is planning a career in

law. Mickey is the son of Mr. and Mrs. N. Bach, 3554 Carlin Avenue, Lynwood.

As chairman of the social studies department at Lynwood High, Edwin Clark directed the preparation of this year's Freedom's Foundation entry. He has taught at the high school 7 years and is currently an adviser to the student council. Clark is a UCLA graduate with a bachelor's degree in political science.

He is the father of one daughter who was born last month.

In the ninth annual honors at Valley Forge next week, Lynwood will be 1 of only 2 high schools in the southern California area to receive a principal award for its contribution to a better understanding of America. The Freedom's Foundation record of the entire Lynwood Unified School District is unequaled by any school district of comparable size in the Nation.

The Lynwood Herald-American said:

FREEDOM AWARD TREK: LYNWOOD HIGH YOUTH, TEACHER TO GO EAST

Receiving Lynwood High School's sixth consecutive Principal Freedoms Foundation award next week at Valley Forge, Pa., will be Mickey Bach, an 11th grade student, and Edwin Clark, United States history teacher. They will be representing the only school in the Nation to be so consistently recognized by Freedoms Foundation for an outstanding citizenship training program.

The two high school representatives will fly to Valley Forge next Wednesday, at the expense of the foundation, to participate in the annual Freedoms Foundation ceremonies and to begin a tour of other historical shrines in the East. Their itinerary includes a visit to Washington, D. C., where they have been invited to breakfast at the Capitol with Congressman CLYDE DOYLE.

Mr. Speaker, having already represented the Lynwood community adulthood and school youth as well for 12 years now in this great legislative body, I know you and all my distinguished colleagues will share with me the pride Mrs. Doyle and I had when we had the privilege and honor of having instructors Edwin Clark and Mickey Bach, of Lynwood High School, who traveled to Valley Forge for Lynwood High, at breakfast here at our Nation's Capitol. With them at the same happy breakfast occasion we had the pleasure and honor of having with us Miss Charlotte Becker and Jim Heinrich, representing Franklin D. Roosevelt Junior High School, in the important city of Compton, Calif., also in the great 23d district. Said Franklin D. Roosevelt Junior High was also awarded a highly coveted principal award of the Freedoms Foundation as 1 of the top 50 nominations in the nationwide contest in the junior high school division.

Also at the breakfast table we had the privilege of having instructor Leicester B. Yates and Walter Stewart, 664 East 120th Street, Los Angeles, Calif., a student of the John C. Fremont Adult School; said school also being a winner, being named the principal winner by Freedoms Foundation in the adult school class. Said adult school is located in the congressional district represented by the Honorable JAMES ROOSEVELT.

I know you and all my other distinguished colleagues will share with me the pleasure and pride I have these successive years on account of these young people repeatedly achieving nationwide recognition for their scholarly competitive attainments. I am sure you also share with me complimentary and congratulatory best wishes to the faculty of these fine educational establishments, as well as to all the students thereof.

An Example of Controls Over Corn

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 19, 1958

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I should like to include a letter written by Mr. Rex R. Keck, of Lake View, Iowa, which appeared in the May 1, 1958, issue of the Des Moines Register.

Mr. Keck has pointed out the significan fact that the reason farmers are not entering the farm program is because they have had their support price taken from them in a manner quite contrary to the purpose of the program itself. Mr. Keck's letter is interesting and gives a graphic picture of what happens under the present program as administered:

AN EXAMPLE OF CONTROLS OVER CORN

To the EDITOR:

During some 20 years of Government-controlled price supports we have built up a surplus of corn. During those years the average 160-acre farm had a corn base of about 50 acres.

Recently it became apparent something had to be done to reduce this accumulating surplus. The following figures taken from the 1957 records of a 160-acre Sac County farm clearly illustrate Secretary Benson's idea of how this should be done. This farm is rented on a 50–50 crop share basis and the 1958 figures are the same except a $5 per acre increase in the Soil Bank payment.

CORN BASE DOWN TO 34 ACRES

Benson's first move was to cut back the corn base to 34 acres, a reduction of approximately 30 percent in production. If we did this we could seal our corn. If we would cut this 34 acres another 15 percent or 5 acres we would get a soil-bank payment of $245. Now we are down to 29 acres.

Then he advised that as we were only farmers we should not expect to get full price for our products so he set the sealing price at 70 percent of parity; another 30 percent deduction. This 29 acres of corn was to be divided 50–50 between landlord and renter.

You cannot raise enough corn on 14½ acres to keep a 160-acre farm at the proper degree of fertility. The renter would have to buy corn from his neighbors to feed, even though he fed only the stock he raised on the farm. Imagine a successful auto company advising its employees they would have to buy their new cars of its competitors as they had failed to make enough for their own requirements during the year.

SUGGESTS APPLICATION TO SALARIES

In other words, Benson cut off 30 percent of the farmer's hog at each end and left him about 40 percent in the middle and we all know what that adds up to. May I suggest that you people working on salaries apply the Eisenhower-Benson program to yourselves.

For instance—if you are a teacher, cut your working time one-third and your monthly salary for the reduced time 50 percent. Then you might add about 5 percent of your original salary to the result to offset the soil-bank payment. We can guarantee this system will reduce your income taxes. It did ours.

If in 1957 and 1958 we had been offered a program reducing acreage 30 percent and a sealing price at or near parity practically every farmer would have signed up and our surplus would have disappeared.

REX R. KECK.

The Communist Attack on Judaism

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following excerpt from Masters of Deceit, written by J. Edgar Hoover, Director of the Federal Bureau of Investigation. Masters of Deceit is a firsthand account of American communism, from its beginnings to the present. Mr. Hoover gives particular attention to Communist attempts to influence minority groups and exposes the lies behind the Communists' efforts to infiltrate the Jewish community.

The excerpt follows:

THE COMMUNIST ATTACK ON JUDAISM

(By J. Edgar Hoover)

The Communist propaganda machine with its tactics of infiltration and division has long fostered the false claim of widespread influence in the Jewish communities of America. One of the most malicious myths that has developed in the United States is that persons of the Jewish faith and Communists have something in common. The people who gave the world the concept of our monotheistic God and the Ten Commandments cannot remain Jews and follow the atheism of Karl Marx and the deceit of the Communist movement.

It is a matter of record that numerous Communist Party leaders call themselves Jews and claim a Jewish origin. This does not, however, make them Jews, any more than William Z. Foster's Catholic background and Earl Browder's Protestant background give them any standing in present-day Catholic and Protestant communities in the United States.

The reasons for the extensive activities of the Communist Party in seeking to infiltrate and make extravagant claims for its work in some Jewish organizations and those of other minority groups are readily apparent. In the Soviet Union, the proving ground for Marxism-Leninism, Communists are confronted with a minority problem of staggering proportions. Only 58 percent of the population in the Soviet Union is Russian whereas 42 percent is non-Russian and consists of 168 national minorities.

A more important reason for Communist interest in minorities in the United States is, of course, the opportunities they provide for exploitation and propaganda. The large number of Communist fronts using the word "Jewish," as well as publications that the Communists dominate, is for the obvious purpose of conveying a false impression of strength among those who embrace the Jewish faith. This also accounts in part for the literary interest Communists devote to the problems of Jews. Prior to issuing the Communist manifesto, Karl Marx, the atheist, wrote a treatise called, On the Jew-

ish Question, which sets forth his views regarding Judaism and Jewish culture.

From that time to this in dealing with those of the Jewish faith, the Communists invariably do so in terms of discussing the Jewish question. In fact, by this propaganda technique the Communists deliberately try to make the Jews a problem, which is denied by the record of good citizenship and civic responsibility of adherents of Judaism in the United States.

A true follower of the Jewish faith, like those of other religions, cannot embrace communism. Marxism-Leninism is irrevocably opposed to all religious beliefs and all forms of worship, whether they be Catholic, Protestant, Jewish, or Moslem. One of Lenin's basic teachings is, "We must combat religion—this is the A. B. C. of all materialism and consequently of Marxism. The Marxist must be a materialist, i. e., an enemy of religion." In theory and practice the Communists make no distinction among any of the world's greater religions.

The Communist propaganda line directed to Jewish people follows three general themes:

1. The Soviet Union offers the Jewish people complete freedom. As one apologist put it: "There is one spot on the earth where the Jewish people are not under increasing pressure, one spot where the Jews have full equality * * * That is the Socialist Soviet Union."

2. The Soviets have created a national homeland for Russian Jews in the Jewish autonomous region of Birobidzhan (or Birobidjan), where they claim Jewish culture is flourishing.

3. In World War II the U. S. S. R. saved thousands of Jews from certain death from the Nazis.

Standing by themselves, these claims admittedly make an impressive appeal. The record, however, demolishes this propaganda line as a collection of half-truths, exaggerations, and outright deceptions.

At best, Soviet tolerance toward Jewish culture was never anything more than a temporary political tactic. And even then the Soviet claims were contemporaneous with the 1917 revolution, when the Communists were seeking support from all quarters. Stalin's Marxism and the National Question, the acknowledged Communist classic on the subject, though consisting of 222 pages, contains only 20 pages written after 1927, with the most important single part having been written in 1913. By the late 1930's alleged concessions to the cultures of the various minority groups gave way to a policy of forcible denationalization rivaling the brutal russification tactics of the Czars.

To illustrate: In 1917 there were a total of 49 Yiddish or Hebrew newspapers in the Soviet Union. By 1921 these had increased to 62; but no less than 50 were Communist-controlled, while the 49 not under Communist control in 1917 had dwindled to 12 in 1921.

Jewish literature suffered a similar fate. From 1928 to 1933 books published in Yiddish rose from 238 to 668, but there was a marked decline in books dealing with Jewish history and tradition. In 1932 there were 36 books in Yiddish classified as history—of these, 16 were memoirs chiefly of old Bolsheviks; 6 were studies on the Communist International; 6 dealt with the revolution and history of the Communist Party; 5 consisted of speeches of Stalin and other Communist leaders; and only 3 actually dealt with matters pertaining to Jewish culture. These related to the labor movement and were an attempt to rewrite history to conform with Marxist-Leninist doctrine.

One of the most crippling Communist attacks on Jewish culture has been prohibition of the use of Hebrew, the traditional language of Judaism. As a tactic the Soviets launched a program of compulsory Yiddishizing to destroy the influence of Hebrew among Russian Jews. A similar program of suppression of Jewish institutions shifted to the satellites after World War II, where Jewish schools were abolished, Jewish organizations banned, and even athletic clubs bearing Jewish names were forced to change their names on 24-hour notice.

The second propaganda claim of the Soviets in establishing the Jewish homeland of Birobidzhan should be closely analyzed. The so-called Jewish homeland was set up at a time when the threat of Japanese and Chinese invasion of the U. S. S. R.'s far eastern frontier was not idle. Thus, the Jewish homeland was conceived as a means of populating the vast spaces in the Far East of Russia, and also provided a convenient place to settle Jews not wanted in other parts of Russia.

By 1933 the Soviets envisioned a population of 60,000 Jews in Birobidzhan. During its first 6 years 19,635 Jews arrived, while 11,450 left, leaving a net gain of only 8,185. By 1939, after 11 years, the Soviet Jewish homeland could claim no more than 30,000 Jews, and by 1951 around 40,000 which was a small community surrounded by Asiatic peoples completely separated from the mainstream of Jewish life. Furthermore, it is in the maritime provinces of Siberia, where the climate is unsuitable for those accustomed to European life.

The third Communist propaganda claim, that of rescuing Jews from Nazi extinction, is also a deception. In the first place, for 2 years prior to the Nazi invasion of Russia, when Moscow was allied with Berlin, there is no record of any Soviet protest against the Nazi slaughter of Jews, so far as is known. The good-neighbor policy between the Communists and the Nazis, initiated by the Stalin-Hitler pact, is clearly established by the following report sent by the German Ambassador to Moscow to the German Foreign Office, where it came to light after the war: "The Soviet Government is doing everything to change the attitude of the population here toward Germany. The press is as though it had been transformed."

Then, too, the silence of the Soviet leaders on the outbreaks of Nazi anti-Semitism completely misled Eastern European Jews as to the real character of the Nazi threat and hence, some 2 million Russian and Eastern European Jews made no attempt to escape the Nazis during the early months of the German invasion of Russia. And even after the Nazi onslaught, there was a shocking failure on the part of the Soviets to reveal Nazi atrocities against the Jews.

For example, the Soviet government in 1942 condemned the bloodthirsty, criminal plans of the fascists aimed at exterminating Russians, Ukrainians, Byelorussians, and other peoples of the Soviet Union, with no direct reference to the Jews. As late as 1945 the Soviets, in a report on the German concentration camp at Auschwitz (Oswiecim), where more than 4,000,000 persons were exterminated, did not even use the word "Jew," although they constituted the majority of those whose lives were so brutally taken.

Not only did the Communists in the Soviet Union fail to make any special effort to save Jewish people during the war, they showed no concern over their fate.

When Khrushchev denounced Stalin at the 20th Congress of the Communist Party of the Soviet Union in Moscow in February 1956, news of the long pent-up acts of oppression against Jews in the Soviet Union began to leak out. It is, of course, significant that Khrushchev made no mention of the mistreatment of the Jews in his exposure of Stalin, whom he had so loyally served over the years.

Within a few weeks, the disclosures of anti-Semitism came in the Warsaw Yiddish-language Communist Folks-Shtimme on April 4, 1956, regarding the Soviet purges of Jewish leaders and culture under Stalin. Later, on April 13, 1956, the Daily Worker expressed regrets and then admitted "* * * we were too prone to accept the explanation of why Jewish culture had disappeared in the Soviet Union in the late 1940's." With the agility of whirling dervishes the Communists then sought to develop a justification for the Soviet Communist leaders' action.

World public opinion over the Soviet Communist leaders' injustices mounted and as Khrushchev turned on the "smiles" and started visiting other countries, he was confronted with the accusation of anti-Semitism in Russia.

In England, Khrushchev characterized "anti-Semitism" as "nonsense" to which he would not listen. To a French delegation he protested that he was not anti-Semitic but that the Yiddish language is fading away in Russia as the Jews in the Soviet Union are learning to speak Russian. A new low in deception was reached when Khrushchev claimed that, in the early years of the revolution, "Jews occupied a disproportionately large number of high Soviet positions because the country had few trained people." He then asserted that the Kremlin had received protests from "the various Soviet Republics that too many Jews held desirable positions." The New York Times story on June 10, 1956, then reported that Khrushchev "* * * reportedly pressed Lazar M. Kaganovich, only high-ranking Soviet leader of Jewish origin, to confirm his statements, which Mr. Kaganovich finally did, saying one word, 'correct' * * *." And now there are no top Communist leaders in the Kremlin of Jewish origin since Khrushchev ousted and denounced Kaganovich last summer.

The President of B'nai B'rith, Philip M. Klutznick, answered the Communist propaganda claims when he made the factual observation that only in Soviet Russia and its satellites is "Jewish life languishing and approaching extinction."

The Communist Party of the United States at its February 1957 convention sought to hoodwink the American public by a series of statements to the press of how it had declared its independence from Moscow. This deceit was established in no unmistakable terms by the handling of a resolution dealing with anti-Semitism in Russia. The resolution stated: "This matter concerns us as Communists in a country which includes 5 million Jews." It then points out:

"Since the Jewish question is international in scope, we Communists must be alert to the problem and its worldwide aspects. The Jewish question is a specific question that requires specific attention. * * * The liquidation of the outstanding Yiddish writers and Jewish communal and political leaders, and the snuffing out of organized Jewish cultural life have been known for some time."

The resolution called for the creation of a Jewish commission, a return to Leninist policy, and a request to make this subject one for fraternal discussion with the Communist Party in the Soviet Union, which, of course, negates the view of independence of the Communists in the United States.

The resolution was soft-pedaled and disposed of, as was a similar resolution dealing with Soviet terrorism in Hungary, by being referred to the national committee of the party. Pravda, on February 16, 1957, had this to say: "The 16th Convention of the Communist Party, United States of America, confirmed the loyalty of the American Communists to the principles of Marxism Leninism."

Party leaders, however, in the face of the overwhelming evidence of Communist hate for the followers of Moses, still are attempting to deceive unsuspecting persons of Jewish origin and, as this is being written, Communist tacticians are at work on a program of

infiltrating Jewish groups by seeking the answers to such questions as:

How to avoid the extremes of negating Israel and of accepting its actions uncritically.

How to work in religious groups while keeping ourselves and our children free of the religious doctrine of these groups.

How to avoid the extremes of taking on all issues and avoiding all issues.

How to balance Jewish work with our interests as Marxists in general trade union, minorities and people's movements.

The vigilant and patriotic members of Jewish organizations have demonstrated their alertness to counteract such infiltration tactics.

Mineral Resources Security Act of 1958

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an analysis of the Mineral Resources Security Act of 1958. The time has come when a healthy balance must be reached between oil importation and domestic oil production, if the United States is to preserve a healthy oil industry in peace or in times of national emergency. Our defense posture is dependent to no small degree to our ability to provide the necessary sinews of war. Oil is most important, and this means the preservation of oil production. Excessive oil imports have threatened the very economic life of many of our small producers, none of whom are successful small-business men are expendable, if their demise is being accomplished by the unbalance of imports. Poor or unsuccessful business operation is one thing, but being throttled by excessive importation is another. I recognize the danger to the oil industry from Government regulation, and of the failure to control voluntarily the oil imports on the other. While I am not an authority, but a student of this problem, I would like to recommend an analysis of the bill currently pending that is intended to correct the present unhappy situation as outlined by the gentleman from Texas [Mr. IKARD]. It is my hope that my colleagues will give this matter their attention so that we can find the right solution, to both permit importation and yet just as fairly permit the oil producer to operate his well or wells instead of shutting them down most of the time. The latter course, will lead to danger to this Nation. From the combined effort of the Members I feel confident that a right solution can be found. It is my hope that these few remarks may shed some light on this troubling problem. The Mineral Resources Security Act of 1958 is presently pending before the Rules Committee as an amendment to the Trade Agreements Act. I urge my colleagues to lend their support to this amendment, which seems fair and equitable, or if any not deem it so, that such an equitable solution be found without delay.

The analysis follows:

ANALYSIS OF THE MINERAL RESOURCES SECURITY ACT OF 1958

(By Congressman FRANK IKARD)

BASIC PURPOSE

The basic purpose of this bill is to provide for the national security insofar as mineral resources are concerned. The bill is, therefore, entitled "Mineral Resources Security Act of 1958." The bill would serve the national security by the Congress taking action with respect to individual defense minerals as will assure the availability of such essential materials in time of need.

The bill would amend the existing defense amendment (19 U. S. C., sec. 1352a). The defense amendment was first enacted in 1954 and further amended in 1955. Its sole purpose is to make sure that excessive imports will not impair or threaten the national security. The present law delegates to the President broad authority to take whatever action he deems necessary whenever he finds that the national security is endangered.

The bill would implement the present law by establishing legislative findings as to the level of imports that constitutes a threat to the national security in regard to two commodities, namely: (1) fluorspar; and (2) petroleum.

It is anticipated that as Congress determines the essentiality of other mineral resources and the level at which imports must be held in order to protect the national security, such resources would be included in this provision of the law.

TREATMENT OF PETROLEUM

With respect to petroleum, the bill would provide that imports for consumption of both crude oil and all petroleum products, in excess of the ratio in 1954 between such imports and domestic production, are determined by Congress to endanger the national security. The President is directed to limit such imports to or below such ratios.

LEGISLATIVE GUIDELINES FOR ADMINISTRATION OF PETROLEUM LIMITATION

The bill would establish specific and definite guidelines to be followed in the administration of the quota limitation on petroleum imports.

First, it would provide that the President may, if he deemed it advisable or necessary in the interest of national security, allocate the quota among the countries or areas which are the source of imports.

Second, it would provide that the quota be put up for bid. Each person desiring to import would bid for a license to import. These licenses would be awarded, subject to approval by the President, on the basis of the highest bids. Licenses could be awarded annually, semiannually, or more often, at the determination and discretion of the President.

The licensing procedure would function as follows:

Prior to the beginning of each calendar year, the President would request the Bureau of Mines to forecast the daily average domestic petroleum production during the next calendar year. This would have to be done sufficiently early to permit bids to be awarded and to provide licensees with sufficient time in which to make arrangements for importing petroleum during the next calendar year. By applying the 1954 ratio between imports and domestic production to the forecasted production for the ensuing calendar year, an initial quota for the year is determined. This quota may be adjusted for each quarter of the year so as to take into account seasonal variations in domestic consumption. This is necessary to recognize the rather wide seasonal variations in imports of products such as residual fuel oil. To avoid disruption of normal industry practices geared to this seasonal fluctuation, it is necessary to consider these seasonal factors.

Upon determination of the quota as outlined above for the ensuing calendar year, the President would be required to give public notice of the quota so established and to request bids for licenses to import during the calendar year. Licenses to import would be awarded on the basis of the highest bid, subject to the approval of the President. The highest bid is to have priority unless for some overriding reason the President finds that a license should not be awarded to the highest bidder.

If during any calendar quarter domestic production is above or below the forecasted production, imports for the following quarter shall be adjusted commensurately. In other words, if actual production during a quarter is 10 percent above or below forecasted production, the quota for the next quarter would be increased or decreased by 10 percent provided that in no event could imports exceed the 1954 ratio.

Such quarterly adjustments are necessary in order to minimize the adverse effects of imports upon the conservation programs of the oil producing States. Whenever the conservation programs require cutbacks in domestic production, similar cutbacks should be made, as soon as possible, in imports of foreign oil. Equity requires that such periodic adjustments be made. In addition, the administrative problems faced by the State conservation agencies will be aided under such a program. The necessity for such periodic adjustments is emphatically demonstrated by the fact that in the State of Texas the allowable producing days has been continuously cut back to a current low of 8 days per month. Under any program to limit imports, similar cutbacks in imports should be made periodically whenever domestic production is reduced.

The bill also provides that the President may, if he deems it advisable, allocate the quota determined for each calendar year among the countries or areas which are the source of imports. This discretionary authority is given the President in the interest of national security. If the President determines that allocation of the quota on a country or area basis is necessary in the interest of national security, this provision of the bill delegates to him unrestricted authority to do so.

This licensing procedure provides a method of administration which eliminates the danger of Federal governmental control of domestic industry activities. This licensing system would automatically allocate the quota to individual companies according to their bids which in turn would be based upon the economics involved. This automatic method of administration is far superior to any method of administration which involves undefined administrative discretion to allocate the quota to individual companies based upon a myriad of unnamed and unknown considerations which may be changed from time to time and may not be known in advance by all parties concerned.

The awarding of the licenses on a bid basis would tend to eliminate the economic advantage enjoyed by foreign oil. It should function in the direction of placing each barrel of imported oil on a competitive equality with domestic produced oil.

The awarding of the quota on a bid basis would also provide a substantial source of revenue to the Federal Government.

EFFECT OF THE BILL ON PETROLEUM IMPORTS

If this bill had been in effect during 1957, the effect on petroleum imports, both crude oil and products, would have been as follows:

	Barrels daily
(a) Domestic crude-oil production in 1957	7,175,000
(b) Total imports permitted under 1954 ratio (16.6 percent)	1,191,000
(c) Actual total imports during 1957	1,545,000
(d) Reduction that would have been brought about under this bill	354,000

The effect of the bill upon imports of crude oil alone would have been as follows:

	Barrels daily
(a) Domestic crude-oil production in 1957	7,175,000
(b) Total imports of crude oil permitted under 1954 ratio (10.3 percent)	739,000
(c) Actual crude-oil imports in 1957	997,000
(d) Reduction that would have been brought about under this bill	258,000

The effect of the bill upon imports of petroleum products, including residual-fuel oil and all other products, would have been as follows:

	Barrels daily
(a) Domestic crude-oil production in 1957	7,175,000
(b) Total imports of products permitted under the 1954 ratio (6.3 percent)	452,000
(c) Actual imports of all petroleum products in 1957	537,000
(d) Reduction of imports of all petroleum products	96,000

ESCAPE CLAUSE

The bill contains an escape clause which authorizes the President, during any period in which he finds that supplies of petroleum, or directly competitive articles, are inadequate to meet current domestic demand to suspend the quota limitations provided by the bill.

The bill, therefore, contains a flexibility that assures the consumers of the United States that they will not be faced with a domestic shortage and at the same time a limitation upon imports into the United States.

Huntington Park, Calif., Daily Newspaper Says: "Nixon's Woes Are America's"

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I present herewith the text of an editorial on Tuesday, May 13, 1958, in the Huntington Park Daily Signal "serving the greater southeast community" published in the great 23d District which I represent in this my 12th year in this great legislative body:

NIXON'S WOES ARE AMERICA'S

The troubles of Vice President RICHARD M. NIXON in South America undoubtedly are, as reported, Communist inspired and Communist perpetrated.

But the basic cause, we believe, goes far beyond that. It stems from a general loss of respect the United States has suffered, not only in Latin America, but throughout the world.

Today's news report is a perfect reflection of the point we make. Not only is the life of the Vice President of the United States endangered in the "friendly" country of Venezuela but half way across the world mobs have sacked a United States cultural center in Algiers. Another mob, equally bent on destruction, had to be turned away by force from the American Embassy in Beirut, Lebanon.

Part of this feeling of resentment, to be sure, is the price we pay for being a wealthy and powerful nation. This has been the case throughout history and against all nations which have risen to similar positions of world power.

It is an integral part of human nature to resent those who have more—not only in the case of nations but of individuals as well. The rich man always has been a target of one form or another.

LACK OF FIRMNESS

But even more important than this natural resentment, we believe, has been our failure, particularly in recent years, to assume the world leadership our position entails.

We have had no firmness in dealing with other nations. Our foreign policy has been one of vacillation, bluster and bluff. One by one we have seen friendly nations picked off and placed under the Communist sphere of influence while we have threatened, cajoled and finally wrung our hands.

As a parent who fails to exercise firmness in leading his family soon loses its respect so we as a nation have lost the respect of the world.

And while it is easy to blame the Government for the faults we see, the American Government, more than any other, is a reflection of the American people. To a great extent, we believe, it is the unwillingness of the American people to stand up and be counted, to "go for broke" as it were, that has led us to our present plight.

Top Award in Reporting to Mollenhoff

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. COAD. Mr. Speaker, Iowa is justly proud of news correspondent Clark R. Mollenhoff, who recently was awarded a Pulitzer prize in journalism for excellence in national reporting. The following account of Mr. Mollenhoff's work in exposing evidence of racketeering appeared in the Tuesday, May 6, issue of the Des Moines Register, Des Moines, Iowa:

TOP AWARD IN REPORTING TO MOLLENHOFF—PULITZER PRIZE FOR RACKETS STORIES

NEW YORK, N. Y.—Clark R. Mollenhoff, of the Washington bureau of the Des Moines Register, was recently awarded a Pulitzer prize in journalism for excellence in national reporting.

Mollenhoff won the $1,000 award for his 5-year reporting job in digging out and exposing evidence of racketeering in labor unions. His disclosures led to the McClellan committee's hearings in the Senate as well as to other remedial actions.

A similar award for distinguished reporting of national affairs went to Relman Morin of the Associated Press. He was cited for coverage of the Little Rock, Ark., Central High School mob violence of last September 23.

EARLIER HONORS

Mollenhoff, 37, has been a member of the Register's Washington Bureau since 1950. Before that he had been a reporter for the Register in Des Moines since 1941.

The Pulitzer award, announced here by the trustees of Columbia University, was the second award based on Mollenhoff's news coverage of labor racketeering.

Last month the Register was awarded the 1957 public-service prize of Sigma Delta Chi, professional journalism fraternity, for his work in the same field.

Mollenhoff previously won two other Sigma Delta Chi prizes, the Raymond Clapper memorial award for distinguished Washington reporting and the Heywood Broun memorial award of the American Newspaper Guild.

FIVE-YEAR ACTIVITY

The work which won for Mollenhoff the Pulitzer prize, most coveted award in American journalism, began 5 years ago.

The series of investigations which he undertook in many States and the stories he wrote from then through 1957 resulted in a series of congressional investigations of racketeering, misuse of funds, and mishandling of welfare and pension funds in labor unions.

Chairman JOHN L. MCCLELLAN, Democrat, of Arkansas, of the Senate Select Committee on Improper Activities in Labor and Management—a group which has conducted explosive hearings since its establishment a little over a year ago—has credited Mollenhoff with providing the impetus for the broad probe.

MCCLELLAN, in a letter to Mollenhoff, once said: "Your ideas, advice, and guidance have been invaluable."

BECK AND HOFFA

Mollenhoff's extensive and exclusive reporting on the activities of former Teamster President Dave Beck and current Teamster President James Hoffa formed the starting point for the McClellan committee's work.

Beck's retirement as teamster president and a tangle of legal problems in which Hoffa is now enmeshed were results of the McClellan hearings.

The Senate recently passed a bill to reform the handling of union pension and health and welfare funds. Mollenhoff's detailed stories on abuses in various unions had focused attention on this area.

Mollenhoff, a native of Fort Dodge, Iowa, was graduated from Drake University law school in Des Moines in 1944. He served 2 years as a naval officer in World War II. In 1949 he won a Niemann fellowship and spent a year studying at Harvard University.

IN IOWA FOR WEBSTER CITY TALKS

Mollenhoff heard the news of his Pulitzer award while in Des Moines Monday en route to Webster City, his former home town.

Mollenhoff will speak tonight to the Webster City High School Quill and Scroll Journalism Society at Elm Park School, and Wednesday night to the Webster City Teachers Association at Washington Central School Gymnasium.

Mollenhoff plans to visit Drake University, his alma mater, Thursday.

His wife, Georgia, formerly of Webster City, heard the award news at their home in Washington, D. C. The Mollenhoffs have 3 children, Gjori, 17, Sue, 14, and Raymond, 8.

Mollenhoff's mother, Mrs. R. E. Mollenhoff, lives at Waverly, Iowa.

UNDERWORLD TIES

Mollenhoff predicted here Monday night that labor news involving the underworld and the hold it has on the Teamsters union and some others will be of great national interest this summer.

"This underworld picture will be further dramatized in the summer months to give

impetus to labor legislation in the United States Senate," Mollenhoff said.

"The Senate will try to enact legislation on the labor front, and may even jar the House into action."

Mollenhoff said responsible labor leaders such as George Meaney, president of the AFL-CIO, have tried to clean up unhealthy situations.

"Meany and others like him are faced with the problem of practical politics within their operation, and would be powerless to act if the Senate Labor Rackets Committee were not continually putting fire on the subject," Mollenhoff said.

Summer Folklore Institute at Indiana University

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. BRAY. Mr. Speaker, I wish to call attention to an article in the March 1958 issue of Indiana History Bulletin, with reference to a folklore institute which will be held at Indiana University this June:

The fifth folklore institute of Indiana University will be held on the Bloomington campus during the regular summer session from June 11 to August 8, 1958. These institutes were established by Stith Thompson in 1942 and have been held every fourth summer since. Their chief purpose is to bring together folklore specialists from all over the United States, and where possible from other countries, who lecture in a variety of courses on folklore, in conjunction with the resident folklore faculty of Indiana University. Besides the formal lecturing in the classroom, the institute makes possible free exchange of ideas and shoptalk in between times, and gives students an opportunity to meet a number of active and eminent folklorists.

For the 1958 institute two distinguished visiting scholars will teach for the full duration of the institute. Prof. Archer Taylor of the University of California, past president of the Modern Language Association of America, and author of The Proverb and English Riddles in Oral Tradition, will offer courses on The Proverb and the Riddle, and Research Problems in Folklore. Prof. Katharine Luomala, chairman of the department of anthropology at the University of Hawaii, a past editor of the Journal of American Folklore, and author of Maui of a Thousand Tricks and Voices on the Wind, will lecture on Folklore of the Pacific and Introduction to Folklore.

Three other courses will be given by Indiana University faculty. W. Edson Richmond will teach English and Scottish Popular Ballad, Warren E. Roberts will give The Folklore and Allied Forms, and Richard N. Dorson will serve as chairman of a course entitled "International Relations in Folklore." The purpose of this course will be to inform students of comparative folklore of current activities in folklore in various countries of the world. A panel of outstanding specialists will lecture in the course on the particular countries they have visited:

Africa: Melville J. Herskovits, Northwestern University.

China: R. D. Jameson, New Mexico Highlands University.

Finland: Aili Kolehmainen Johnson, Piedmont, Calif.

French Canada and France: Luc Lecourciere, Laval University, Quebec.

Great Britain: Richard N. Dorson, Indiana University.

India: Edwin C. Kirkland, University of Florida.

Italy: William E. Simeone, Southern Illinois University.

Japan: Richard N. Dorson, Indiana University.

Russia: Felix J. Oinas, Indiana University.

Scandinavia: Stith Thompson, Indiana University.

South America: Stith Thompson, Indiana Universtiy.

Turkey: William H. Jansen, University of Kentucky.

Other prominent folklorists will give special lectures in the Institute in the American folktale, folk museums and folk art, problems of archiving, the relations of folklore to literature, collecting in the Ozarks, style in folklore, and Anglo-American ballad scholarship. These lectures will be offered by John Ball, Miami University; Ernest W. Baughman, University of New Mexico; Daniel G. Hoffman, Swarthmore College; Thelma James, Wayne University; Louis C. Jones, director, New York State Historical Association, Cooperstown, N. Y.; Vance Randolph, Eureka Springs, Ark.; D. K. Wilgus, Western Kentucky State College.

It is hoped that State folklore societies will send delegates to the Institute. Courses may be taken for regular academic credit, or audited without credit. For further informatoin address Richard N. Dorson, chairman, folklore program, Indiana University.

Exclusive Private Schools and Class Systems Swell British Emigration

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. THOMPSON of New Jersey. Mr. Speaker, the period since the end of World War II is having a swelling impact on the British educational and class system. One result is a record British emigration. According to competent observers, this is the kind of comment one hears in England from families about to emigrate:

"We must not confine our children to the limited opportunities we've had. In this country there's not only a lack of incentive and discouragement of initiative but, unless you've been to the right school, you can get only to a certain point—accent too often counts more than ability. There's too much class distinction."

The current wave of emigration is the result of deep-seated social and economic troubles, and is indicative of a growing conviction that only by starting life anew in a country with an expanding economy can one achieve a rapid improvement in one's economic condition and have a higher standard of living such as we achieved in America.

This situation is discussed by George W. Oakes, well-known journalist, in the magazine Freedom and Union, May issue. Mr. Oakes has been visiting Britain for more than 30 years, and with his brother, John B. Oakes, of the New York Times, established the first graduate scholarship in American history at Oxford.

I include here the article from Freedom and Union:

EDUCATION AND CLASS SYSTEMS SWELL BRITISH EMIGRATION

(By George W. Oakes)

The impact of the postwar era on the British educational and class systems—which are closely interrelated—is having some far-reaching results. These range from contributing substantially to a record British emigration to causing the London County Council to reorganize its high schools along American lines. This is the sort of comment one hears in London from families about to emigrate:

"We must not confine our children to the limited opportunities we've had. In this country there's not only a lack of incentive and discouragement of initiative but, unless you've been to the right school, you can get only to a certain point. Not many without a public-school[1] education become senior executives or company directors. Accent too often counts more than ability. There's too much class distinction."

The urge to move to a land with greater scope has been mounting to such an extent that 220,000 Britons emigrated in 1957, mostly to the Commonwealth and to the United States—the largest emigration by far since the war. Canada alone took 110,000 from the United Kingdom, more than twice as many as during 1956.

The current exodus is the result of deep-seated social as well as economic troubles. Primarily it expresses a strong conviction that only by starting life anew in a growing country can one achieve a rapid improvement in one's economic condition and approach more quickly a higher standard of living, such as Americans enjoy. Frequent remarks about the classless society out there—in Canada, Australia, New Zealand, and the United States of America—also reflect an underlying resentment by at least a substantial minority in Britain against the confining restrictions of a social system that is changing in many ways but is still firmly based on class distinction.

In assessing the motives behind the emigration wave, both economic and social factors impel an average white-collar family in the London suburban area to leave. Ontario, where most Britons settle in Canada, finds that office and commercial workers form as high a proportion of applicants as any other group.

Why shouldn't a company secretary, for example, who has been with the same firm for 20 years be dissatisfied with $3,300 a year? In the 20 years his cost of living has risen about 3 times, yet his buying power is less than three-fourths of what it was in 1938. During this period a process of economic levelling has taken place between the white-collar man and the skilled industrial worker who now has about 40 percent more purchasing power than he had 20 years ago.

In recent years the economic foundations of British life have been profoundly altered by mass industrialization accompained by heavy taxation and the development of the welfare state. For the first time the disparity in living conditions between the classes no longer exists.

As this economic merging of previously sharply separated income groups occurred during the postwar years, many who felt denied greater scope and opportunity because of the class structure expected rapid social consequences. They had thought that such a drawing together in the way of living among those of differing financial strata would have produced corresponding shifts in

[1] The term "public school" in Britain refers to what Americans would call exclusive private schools.

the class system. Yet many observers believe that few basic changes have taken place thus far in the traditional class organization of British society.

How does the durability of the class relationship affect the white-collar worker's life? First of all, by making it harder for him to make ends meet. He no longer has the obvious advantages in his standard of living over the manual worker that he enjoyed before the war. Then he had a house maid. He went to a better seaside resort for his holidays than those socially down the line. His wife could afford finer clothing. He even ate better food than the skilled industrial worker. Today their incomes and ways of living are not too dissimilar. Aside from the fact that the white-collar worker is more likely to own his own home while the factory worker lives in state subsidized housing, the chief way, perhaps, in which the former still asserts his social superiority is through his children's education.

ACCENT IMPORTANT SOCIALLY

Certainly, he clings more tenaciously now to such things as education and accent which still set him apart from the lower social group. At great financial sacrifice the office worker sends his children to a private school both a get a better education and to prevent them from developing the cockney accent so typical of the working class. It is not unusual for his wife to take a part-time job so that their children can thus maintain their rung on the social ladder.

This search for wider economic and social opportunity is for the benefit of the children even more than the adults. Today's emigrants aren't unemployed or looking for work. Ninety-five percent are giving up jobs and often selling homes as well as businesses. Their decision to leave isn't due to temporary hardship. It is based on broader and longer range reasons, especially consideration for the future welfare of their children.

Many who are frustrated by their personal financial troubles and skeptical over the country's economic prospects—and hence turn to emigration—say that though minor improvements may be occurring in the class relationship, these changes are too slow to assure their children as broad an opportunity as they could have overseas.

In contemporary Britain, it is now the "done" thing to discuss class. Just as in Victorian days one didn't talk about sex, so until recently one didn't discuss class. Ever since the feudal period the class stratification of society has been accepted as the normal pattern. Unlike America, social position depends on it in Britain. A few unusually successful men, of course, occasionally have broken through the rigid system and been accepted socially even despite this working-class background.

LABOR URGES CLASSLESS SOCIETY

The apparent failure of the economic leveling process to break down the class system is seriously disturbing many Labor Party intellectuals and political leaders. The doctrine of equality and the classless society has been proclaimed, as the party seeks a new creed. Labor politicians have proposed a more equalitarian society as one of the party's major objectives. Admitting that ours is a a class society, a Labor Party pamphlet on equality adds that our society will be happier and healthier without social classes.

The first target is the public school, which is the reverse of public in the American sense. Attendance at a public school is the Plimsoll line of class. Even Hugh Gaitskell and other Labor leaders who came from the public schools, recognize that these schools form the root of the problem. Labor proposes to achieve its egalitarian ends by trying to make Eton, Winchester, and the other public schools the training ground for the best talent from all social groups. For this to occur, there will be a battle worth watching.

Undoubtedly this political attack on the class system appeals to some voters. Yet it is a measure of British adherence to the social order that labor's call for equality seems at present to be attracting little interest even among the workers.

Educators in the state schools—which Americans would call public schools—find both the white-collar and working-class groups indifferent to the increasing opportunities which are offered their children to attend private schools. For example, in one of London's most populous suburban counties, the education officer for the past 10 years has been offering six free places a year in them—two each at Eton, Winchester, and Rugby. Out of a thousand eligible boys, only 20 on the average apply each year, and of these about half come from working-class families.

Labor politicians in explaining this situation point out that the workingman dislikes the snobbery of the public school and doesn't want his boy to be uncomfortable in a different social atmosphere. What he does want is that his boy should receive as good an education through the state system as in a private school and have an equal opportunity of being admitted to a university.

Why is it that most British whitecollar or industrial workers seem satisfied with the class system and that only a minority want to break away from it by emigration? Why don't they have the same social ambition that their opposite numbers have in the United States, or even in mainly British countries such as Canada and Australia?

In Britain, first of all, the average man for generations has accepted the traditional organization of society and his place in it—from royalty and the hereditary aristocracy down through all the gradations of professional and business classes to the white-collar and manual workers. On the whole he is satisfied with the social system—and with his club—the city or country pub. (Most British pubs provide a public bar for the working class, a saloon bar for the white-collar class, sometimes even a private bar for the upper class.)

He and his leaders accept and endorse the values that the upper classes have established—the class system as defined by birth, education, accent, and a man's position in the world. He isn't jealous of those higher in the social scale. What he demands is that this standard of living should show a constant improvement—that he should continue to enjoy the benefits of modern industrialization, especially in his home. Since the war, the proportion of income spent on food and rent is about the same as in prewar days, but that spent on the embellishment of the home has doubled. Recent studies of life in the new communities of suburban London show that, in contrast to the thirties when the industrial worker couldn't and didn't spend money on his home, his ambition now is to give it the same comfortable atmosphere that formerly only the white-collar class and above could afford.

Another important factor in Britain which tends to solidify the traditional social system is the small proportion of the young, compared to America, who go to a university. Higher education is for the few, not the many. Only about 82,000 attend British universities in a population of 50 million, compared to 3 million American college students in 170 million—approximately 12 times more in the United States. A mere 6 percent of boys leaving British state schools go on to institutions of higher education. This fact is frequently brought out by those planning to emigrate: "Out there, our children will have a better chance for a university education—here you have to have scholarship standing to get in."

In the United States, because of the large numbers who go to college, the ordinary citizen is likely to have been affected by the social as well as academic influences of university life. In the hundreds of American private and State universities, as well as technical and junior colleges, students from very different family backgrounds learn to mix and live together. This creates a social mobility and intermarriage on a scale unknown in Britain.

LITTLE INTERMARRIAGE BETWEEN CLASSES

Prominent sociologists say that thus far there has been little indication of intermarriage developing in Britain between different classes of society. British students in America are amazed when they find a graduate of a college for women marrying a carpenter or other manual worker.

The strength of the British class system is further illustrated by the fact that it is accepted enthusiastically by those workingmen's sons who do get into a university and thus raise their social status. They thus help perpetuate it.

Even trade union leaders, after taking a university degree, hardly ever return to work in the union headquarters; they prefer jobs with a higher social status. United States unions can recruit trained economists as staff members; in Britain very few unions, except the small Trade Union Council, employ university graduates.

There are other educational counter forces at work slowing down the process of social assimilation. For example, under the Education Act of 1944 11-year-olds take competitive examinations for admission to State grammar schools. Those who fail attend secondary modern schools where stress is laid on a practical rather than academic education. Many families, unwilling to deny their children the best possible education because they cannot meet the competition for entrance to the grammar schools, undergo great financial strain to send them to private schools. Thus they help perpetuate that important mark of class—private school attendance.

This division of children at the age of 11 into three distinct types of schools, even though done on the basis of ability, also has the effect of separating the children socially. One reason the London County Council has adopted a policy of "comprehensive" (American-type high schools) is to counteract this tendency. In fact, the argument raging over whether comprehensive schools should be adopted generally is in some degree over the issue of reducing social differences between children in State schools.

LONDON COPIES UNITED STATES HIGH SCHOOLS

By comprehensive school is meant one that includes pupils of all abilities in a school that offers both general academic and commercial-technical courses—much as a United States high school does. Labor Party control of the London County Council led to its adopting this policy instead of continuing to separate the children in three types of schools—grammar, secondary modern and technical. The first comprehensive school—Kidbrooke—was opened in September 1954 in Blackheath with 1,770 students and 90 teachers, and a 5-year course.

The comprehensive school has caused a lively controversy. Its opponents argue that in such a huge school, the identity of the individual child is lost and the headmaster—who has wide discretionary power over the curriculum under the British system—cannot exercise proper supervision and loses the personal touch. Its advocates point out that it offers the most modern facilities—even a model apartment where girls can learn housekeeping—and that classes at Kidbrooke average only 30, thus permitting individual attention.

In these and other ways the educational system is probably the chief reason for the

continuing strength of class society in Britain. Therefore it is the target of those campaigning to reduce social distinctions. But they must contend with the fact that the British, a historically minded people, do not alter their social pattern rapidly. Change there is evolutionary, not revolutionary.

Quite possibly the social discontent with class distinctions—currently evident among the thousands of emigrants—may give impetus to reform. If so, the public school will be the first bastion to be leveled in the educational system. This crusade will not come until Labor returns to power—which may occur before long. Because of the time required for such a basic change, many thousands of emigrants will have left for a new life before British class distinctions becomes as reduced as economic ones.

Resolution Favoring Excise Tax Reduction

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. COAD. Mr. Speaker, of all the tax-reduction proposals to stimulate our sagging economy which have been offered and discussed in the past weeks, the proposal to make cuts in some excise-tax levies has been steadily gaining favor in Congress. There is little question that this growing solidarity in Congress for excise-tax reduction is but a reflection of the sentiment of those who must pay these old wartime taxes. The following resolution of the Central Western Shippers advisory board represents the views of the members of this organization in seven States, including Iowa. Excise tax cuts would be a lasting contribution toward the economic recovery of segments of industry which are hardest hit by the downtrend in business:

CENTRAL WESTERN
SHIPPERS ADVISORY BOARD,
Denver, Colo., May 12, 1958.

Hon. MERWIN COAD,
House of Representatives,
Washington, D. C.

At its 77th regular and 36th annual meeting held at Denver, Colo., on May 6, 1958, the Central Western Shippers advisory board gave serious consideration to matters affecting railroad transportation. The views of the membership with regard to pending or proposed legislation and regulations dealing with transportation were embodied in resolution form and set forth as follows:

"RESOLUTION 1

"Whereas the Federal transportation tax was instigated as a means of discouraging unnecessary traveling and shipping; and

"Whereas the state of emergency for which this tax was created no longer exists; and

"Whereas it places an undue burden on shippers as well as carriers; and

"Whereas it places an undue burden on shippers as well as carriers; and

"Whereas the long haul and the LCL shippers pay the greater portion of this tax: Therefore, be it,

"*Resolved*, That the Central Western Shippers advisory board continue to support legislation against this unjust and burdensome tax; and further,

"*Resolved*, That the general secretary make our position known to the proper congressional delegation in this territory."

Your favorable consideration and active support of these views, representing the considered opinion of the 3,640 members of this board in the States of Iowa, Nebraska, Wyoming, Colorado, Utah, Idaho, and Oregon, is respectfully urged and will be sincerely appreciated.

Respectfully submitted,

HOWARD HOSEK,
General Secretary-Elect.

Franklin D. Roosevelt Junior High School, Compton, Calif., 23d Congressional District, Again Achieves Winning Freedoms Foundation Award, Valley Forge, Pa.

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the text of appropriate comments in Lionews, publication of the students and faculty of the Franklin D. Roosevelt Junior High School, Compton, Calif.; said school being in the great 23d District, which I represent this my 12th year in this great legislative body. I know you and all my other distinguished colleagues will share with me the pleasure and pride I have these successive years on account of these young people repeatedly achieving nationwide recognition for their scholarly competitive attainments. I am sure also you share with me complimentary and congratulatory best wishes to the faculty of this fine educational establishment, as well as to all the students thereof:

ROOSEVELT ENTERS FREEDOMS FOUNDATION COMPETITION

Roosevelt is again entering the Freedoms Foundation competition which closes October 15. The Lions are set to repeat their previous victory of the principal award in 1953. Last year Roosevelt won the Valley Force Library award.

As you may or may not know, the Freedoms Foundation is a group which conducts contests among schools, groups, and individuals. The object of these contests is to help educate us, through competition, in the basic principles of our liberty and also to preserve our heritage for future generation.

Schools entering the contest tell of what they have done in the past year to educate the citizenry and their students of our heritage, also what they are doing to preserve it. For example, Roosevelt's mock election, the distribution of Bill of Rights circulars, back to school night, the nominations assemblies, Bill of Rights essays, the dances, and our school's athletic program are some of the things we did last year to educate people in our heritage and to preserve it.

The best 50 schools are awarded the principal award. This includes an interesting trip for one pupil and one teacher to Valley Forge, Pa., to visit the shrines of our national heritage. Other lesser awards are given various other schools for their strivings in the field.

Roosevelt owes its most sincere gratitude to Mr. Moore, Miss Becker, Mrs. Ensign, Mrs. Anderson, Mr. Wolfe, and all the students and teachers who aided the above mentioned in their hard work in preparing our entry.

P. O.

ROOSEVELT WINS TOP AWARD IN FREEDOMS FOUNDATION CONTEST—MISS BECKER, JIM HENRICH FLY TO VALLEY FORGE TO ACCEPT PRINCIPAL AWARD

Roosevelt has been awarded the highly coveted principal award of the Freedoms Foundation. The announcement came in a special coast-to-coast television program on Washington's birthday, February 22. Only the top 50 nominations in the nationwide contest win the principal award.

The award consists of an all-expense paid trip to Valley Forge, Pa., where 1 teacher and 1 pupil from each of the principal award winning schools will visit the shrines of our American heritage. Miss Becker, who prepared our entry, and a student, Jim Henrich, will make the trip for Roosevelt.

Mr. Moore stated, "Our faculty and students can be justly proud of receiving top honors in the Freedoms Foundation's 1957 nominations. This is truly an achievement which is representative of the way we at Roosevelt live and believe. Congratulations to all of you for contributing your share of the nomination."

As you may or may not know, the Freedoms Foundation is an organization which recognizes contributions to the American way of life by schools, groups, and individuals. The object of this recognition is to help educate us, through awards, in the basic principles of our liberty and also to preserve our heritage for future generations.

Schools entering their nominations for awards tell what they have done to educate the citizenry and their students of our heritage, and what they are doing to preserve it. For example, our winning award told of our mock elections, the distribution of Bill of Rights pamphlets, back-to-school night, the nomination assemblies, Bill of Rights essays, the dances, and our school's athletic program.

Roosevelt is not a newcomer to these awards as we won the principal award in 1953 and the Valley Forge Library award, a lesser conferment, last year.

Roosevelt owes its gratitude to Miss Becker, Mr. Moore, Mrs. Ensign, Mrs. Anderson, Mr. Wolfe, and all the students and teachers who aided the above mentioned in making this victory possible.

HENRICH, BECKER FLY EAST TO ACCEPT PRINCIPAL AWARD

Jim Henrich, student body president, and Miss Becker, of the faculty, toured some of the historical shrines of our American heritage on the east coast from April 30 to May 3. The trip east was part of our school's prize for winning the principal award in Freedom's Foundation competition.

On the trip they visited New York City where they saw the Statue of Liberty and other points of historical significance. They joined with representatives of 30 other top awarded schools from 17 States for a 3-day, all-expense tour of the historic shrines in the Valley Forge-Philadelphia-Washington, D. C., area.

In Washington, D. C., they were shown around by Congressman CLYDE DOYLE of our own 23d Congressional District.

In addition to the pilgrimage trip, each principal awarded school received a George Washington Honor Medal and a "Freedom Library" of books, films, and other teaching materials. Teachers officially attending the pilgrimage received the Valley Forge Pilgrimage Recognition Medal. Highlight of the pilgrimage was the presentation of the George Washington Honor Medal to school

representatives by Foundation president, Dr. Kenneth D. Wells, in special ceremonies at Valley Forge on May 3.

They arrived back in Los Angeles on Wednesday, May 3, and thus concluded what both termed as a very enjoyable and educational trip.

P. O.

And, Mr. Speaker, in that same school magazine, in which the above articles are written by the students themselves, is an editorial which is clearly so pertinent and so very close to one of the subjects which we as American Congressmen are at all times aware of, and which we are in duty bound to guard: to wit, freedom, I take the liberty of also including it in this extension:

AMERICAN WAY OF LIFE: PRESERVE IT AND PASS IT ON TO FUTURE GENERATIONS

Do you know how much your freedom as an American means? Are you doing your best to preserve it?

The privilege to say what you feel, print the truth, and being able to learn about anything man has ever known are freedoms you probably take for granted. If we continue to take these for granted we will soon lose our freedom. Try to imagine for a while what the United States would be like without freedom.

FREEDOMS FOUNDATION ON THE JOB

The Freedom's Foundation is doing something to preserve freedom and the American way of life for coming generations. They support contests which you may enter only by doing something that promotes for yourself and others a better understanding and appreciation of liberty.

GET IN THE ACT

An an individual you should support this foundation by taking an active part in school and community projects.

School is very important in preserving freedom. In school we learn more about the history of our country and of the Government. We also learn about voting through student body elections and mock elections such as we had last year. In student council we learn of the right to voice our own opinions and the way to run the school democratically. All these help to prepare us for our later lives as good citizens.

To have a strong government we need knowledge. Our leaders, to be good, must be intelligent.

Tomorrow, let's all start working with the Freedom's Foundation to keep our liberty and our way of life.

P. B.

Mr. Speaker, having already represented the Compton community adulthood and school youth as well for 12 years now in this great legislative body, I know you and all my distinguished colleagues will share with me the pride Mrs. Doyle and I had when we had the privilege and honor of having instructor Miss Charlotte Becker and Jim Heinrich, of Franklin D. Roosevelt Junior High, who traveled to Valley Forge for this outstanding junior high school, at breakfast here at our Nation's Capitol. With them at the same happy breakfast occasion we had the pleasure and honor of having with us Edwin Clark and Mickey Bach, representing the Lynwood High School—also in the great 23d District—and Leicester B. Yates and Walter Stewart, representing the John C. Fremont Adult School, of Los Angeles.

Businessmen in Government

EXTENSION OF REMARKS
OF
HON. FRANK M. COFFIN
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. COFFIN. Mr. Speaker, most of us, I am sure, have firm and fixed ideas about the businssman in Government. These preconceptions range from the one extreme that he is a villain to the other extreme that he is a saviour.

The facts about the businessman in the Federal Government—why he served, how long, his satisfaction with this experience, how he was regarded by others, and so forth—have been gathered, organized, and set forth by the Harvard Business School Club of Washington, D. C.

As a former student and graduate of that institution I have had the privilege of distributing to my colleagues an attractive 44-page pamphlet, the product of 4 years of hard work by this group—an extended busman's holiday.

Their findings reflect a competent, careful effort to substitute facts for preconceptions and bring about a better mutual understanding between the businessman and the Federal Government. For these reasons I am inserting an abridged version of this pamphlet in the CONGRESSIONAL RECORD.

Mr. Speaker, I wish to commend this group of citizens for a most significant public service. They recognized the need for information. They did not seek an appropriation. They simply dug in and did the job.

The abridged version of the pamphlet follows:

BUSINESSMEN IN GOVERNMENT—A REPORT BY THE HARVARD BUSINESS SCHOOL CLUB OF WASHINGTON, D. C.

FOREWORD

The size and complexity of modern government suggests the need for a considerable number of well-qualified executives. This executive talent, whether it be represented by businessmen, lawyers, educators, or career civil servants, is needed to manage the affairs of government in a competent, efficient manner. The number of positions these executives fill has been estimated at 5,000.

Many businessmen fill these positions. Many more have turned down the opportunity. Very few have stayed more than a year or two. Why? Is there a difference between business and government know-how? What attracts businessmen? What keeps them away? Do they do a good job?

Alumni of the Harvard Business School in the Washington, D. C., area decided to find out.

For the purpose of this study, a businessman was defined as a business executive whose primary duties were those of administration—planning, organizing, directing, and controlling. Government positions calling for these talents start at the top with heads of agencies, their deputies and aides, and go down to Grade GS–15. While these jobs might be filled ably by lawyers, educators, and others, this study concerns businessmen.

Written questionnaires were sent to 8,500 business executives and top career civil servants throughout the country and personal depth interviews were held with both groups.

For over 3 years, more than 100 alumni and others worked devotedly on a voluntary basis to plan and carry out a comprehensive analysis of the problem under the general direction of Dr. Wilford L. White, chairman of the steering committee, and the immediate supervision of Louis Alexander Trazel, executive director.

Financial contribution came from the Committee for Economic Development, and the Fund for Adult Education.

JAMES A. BARKER,
President, Harvard Business School Club of Washington, D. C.

RECOMMENDATIONS

The business administrator

1. Should recognize and welcome the opportunity of Government service and its personal benefits while he is climbing the ladder of corporate or professional responsibility, while he is on top of the ladder, and as he is preparing for retirement.

2. Should take an active part in national politics and acquaint himself thoroughly with the national and international issues of the day.

The business community

1. Should recognize and assume responsibility for supplying qualified administrators for varying levels of Federal Government service for a minimum term of 2 years.

2. Should carefully formulate and communicate corporation policy relating to Government service so that administrative employees will know how it applies to them when they take a Federal position, how it will protect their corporate advancement while they are on leave, and what will happen to them when they return.

The business association and press

1. Should, with other groups, keep the business community informed of the specific need for qualified administrators in the Federal Government and develop a climate conducive to easier transitions to public service.

2. Should point up this need and indicate and illustrate advantages and disadvantages of real life circumstances surrounding such service.

The business educator

1. Should develop more practical courses on public administration in schools of business administration.

2. Should allocate more funds and facilities for research into practical public administrative problems.

Members of Congress

1. Should recognize the human dignity and professional attainments of men who occupy top Government positions and spare them needless harassment while still exercising their right of legislative inquiry.

Political parties

1. Should assume the responsibility of supplying the Federal Government with qualified administrators by formal and continuous recruitment.

Executive department of the Federal Government

1. Should indicate to the party in power the types of individuals needed to fill specific administrative positions and help party officials match position requirements with abilities of candidates, thus actively accepting the fact that it is the intent and practice of the party in power to fill exempted administrative posts.

2. Should maintain a central recruiting office in the White House which would catalog top executive requirements of all Fed-

eral agencies and at the same time act as a clearing house for businessmen and others offering to serve. This office would recruit actively when no qualified candidates are available.

3. Should place candidates primarily because of ability and suitability and not only because of political or personal recommendation.

4. Should accept in practice as well as in principle the fact that agency heads will not knowingly hire a business executive or other person from outside Government for less than a 2-year period except in emergency.

5. Should engage for shorter periods, as consultants, rather than as regular employees, businessmen and others needed to bring in a fresh point of view or some special knowledge or skill.

6. Should establish short, off-the-job training programs for new administrative executives to point out, among other things, the main operational differences between Government and business. This program could be carried out by a professional institution and supported by foundation money.

7. Should encourage top administrators to seek advice and counsel of experienced members of their staffs before making policy decisions.

Career civil servants

1. Should utilize all of their administrative skills to achieve promptly policy changes and personnel procurement requested by new administrators.

All interested groups

1. Should formulate rules of reason in their interpretation and application of conflict of interest laws and regulations in order to utilize the services of exceedingly competent administrators from outside the Government and still safeguard the public trust.

INTRODUCTION

"Business executives in government."

These highly charged words set a lot of images going in the average American reader's mind, many of them unfavorable. Cartoons of corpulent, self-important men entering government buildings with loot bags in their hands flash through the mind's eye. You see a fellow already rich as Midas taking a top Federal job to further his own and his company's financial interest.

On the other hand, there came along a play not so long ago called The Solid Gold Cadillac which seemed designed to reverse this popular image. For here was a business executive in government so dedicated to giving the taxpayer his dollar's worth that the officers of his own company were scandalized by his indifference to self-interest.

Why the service of the businessman in government should be questioned is difficult to understand. Surely, the successful business executive of the kind sought for Federal service owes much to our political system. What, it must surely be asked, should he give in return? Many will say that he owes something more than merely paying taxes and obeying the laws.

One cannot contemplate this subject, however, particularly in an age of crucial international contest between two rival political systems, without considering the basis upon which our kind of democratic government fundamentally rests. It is not debatable that such government must have both an enlightened citizenry and a capable public service. It is with the latter requirement that we are concerned here.

The shocking fact is that though the Eisenhower administration has been called a businessman's government, it has had an exceedingly difficult time getting the kind of businessmen it wants.

The popular notion of the businessman who has served or is serving in Government (BMG) as a questionable character no doubt originated in the traditional suspicion of so-called special interest groups. Whatever its origin, the impression has been tremendously fortified by innumerable congressional committee hearings over the qualifications of this or that industrialist for a top Government position. Although the outcome of these performances has usually been favorable to the businessman concerned, they gave the appearance of proceeding on the un-American assumption that the businessmen were guilty until they proved themselves innocent. The public consequently became more suspicious than ever of the BMG, and businessmen became all the more reluctant to accept positions which would expose them to this kind of treatment.

From where we sat

Watching these things from close quarters over the years, we members of the Harvard Business School Club of Washington, D. C., decided a little more than 3 years ago that it was about time somebody substituted some facts for the mythology which had been flourishing in this controversial area. We had no more proof that the BMG was the potential villain so many surmised him to be, than that he was either selfless or even effective in the public service. We decided to find out.

It quickly became apparent, however, that to describe the BMG with any degree of accuracy was a lot more complicated than taking the measure of a man for a suit of clothes. The rounded picture we wanted involved attitudes, motivations, the individual philosophies of people concerned, and performance records based on something more than self-appraisal. We already knew, for example, that the BMG had not produced consistently good results as a public servant. We had to find out why. Also, why had there been such a rapid turnover of this particular kind of Government official?

A host of other basic questions clamored for answers. Did the Federal Government really need these businessmen? Assuming they were needed, why were they so hard to get? Where in the Government service do business executives serve most effectively and what professional qualifications and personal attributes do these jobs require? What about the attitude of the businessman himself—why should he want to serve in the Federal Government? If, indeed, this wedding of the businessman and the Federal service is a desirable thing, what can the Government and the business community do to promote it? What is the present situation?

It was our conviction that if we could turn up significant information in answer to questions like these, it might be helpful both to the Federal Government in recruiting business talent and to business executives themselves in deciding whether they or their colleagues should serve.

Even General Motors and Standard of Jersey executives should be in awe of a public concern which has as stockholders 173 million citizens, which owns some of the best real estate in every important capital on the globe, and which runs the largest medical research and the largest retirement and disability insurance operations in the world. It would require a list of superlatives to attempt to measure the dimensions of the wealthiest and most influential government in contemporary times. Suffice it to say that the presentation of the gigantic Federal budget requires a document the size of the New York City (Manhattan) telephone directory for its minute listings of proposed expenditures.

How does the businessman fit into this colossus? What kind of businessman goes into Government service, for how long, and for what purpose? Does he get along well with the career civil service people upon whom he must depend for effective action? To answer these and many other basic questions about the BMG, we dispatched detailed questionnaires which were answered by 456 businessmen who had previously served, by 153 of those presently serving, by 437 businessmen who had never served, and by 530 uppergrade Federal career civil servants ($12,000-and-up salary range).

For the purpose of this study, we defined our businessman as a business executive whose primary duties are those of administration. He would thus be a man concerned with planning, organizing, developing, directing, and controlling. It should be understood that in the Federal establishment there are approximately 5,000 positions requiring this kind of skill and that the salary range is from $12,000 for lower administrators to $25,000 for a member of the Cabinet. The average salary for executive positions in the Government is around $13,500. Obviously, considerable financial sacrifice is required for some top business executives to take one of these positions. Such sacrifice becomes a critical factor which bears, as we shall see, upon a man's willingness to accept such jobs, his length of tenure, and his feeling of satisfaction in doing the required work.

PROFILE OF THE BMG

Since many of the BMG's most in the news spotlight, like former Secretaries George Humphrey, of Treasury, and Charles E. Wilson, of Defense, had reached or were near retirement age, a general impression had been created that all businessmen serving Government were in the same situation. From the answers received, we found that the typical BMG is about 45 years old when he begins Government service. This compares with a reported age of 48 for top-level civil servants who answered the inquiry and 46½ for a cross section of responding business executives who have never served the Government.

What he earned

The typical BMG had 3 or 4 dependents and a salary of $14,600 just before he entered Government. Twenty-six percent in this group did not say what their investment income was, 44 percent reported investment income of from zero to $5,000, while 30 percent had more than $5,000.

Businessmen who had served and left the Government averaged $14,400 in salary just before they entered (1940–56 period). Twenty-four percent did not report their investment income, 46 percent received from 0 to $5,000, and 30 percent more than $5,000.

Of businessmen now serving, the median salary was $15,800 just before entering Government with the middle 50 percent running from $11,000 to $31,200. Twenty-nine percent were making less than $10,000. Some 34 percent did not say what their investment income was, 35 percent had an investment income of from 0 to $5,000, while 31 percent received more than $5,000.

Figures from these groups are pretty close to those given by responding businessmen who never served in Government. The typical salary for these was $15,800, with 26 percent having an investment income of $5,000 or more.

Here it is well to distinguish between Government jobs which are political appointments, and those which require entrance into the civil service. The political jobs would include Cabinet members, their Under Secretaries, Assistant Secretaries, and numerous specialized positions not included in the career civil service. Since most of the political positions pay higher salaries than the civil-service jobs, it was to be expected that businessmen entering the latter category would have come from lower salaried positions in industry.

Where he came from

Of the businessmen surveyed, 41 percent entered Government from manufacturing industries and 11 percent from service industries, the next highest category. Since

the pre-World War II period, the number of businessmen coming to Government from manufacturing industries has progressively increased.

Incidentally, most (65 percent) of the civil servants we polled felt that businessmen with varied experience were most valuable in Federal jobs.

What he did

The BMG was not only from manufacturing, but probably had ben serving as an administrator (37 percent). The second largest (22 percent) came from sales departments, 8 percent from production, 5 percent finance, 3 percent each from accounting, personnel, and promotional activities. In all agencies (where sufficient data are available) businessmen from big business were favored by civil servants over men from small business by a margin of 5 to 1. In the Defense Department the ratio was 9 to 1.

His work in business primarily involved helping to make major policy decisions or determining which major policies were to be executed. That he was pretty good at these things in government was demonstrated by the fact that 45 percent of the responding civil servants reported that BMG's were above average in ability to make decisions (14 percent thought him below average; the rest considered him average). Also, 38 percent of them thought the BMG above average in ability to delegate responsibilities (16 percent thought him below average). Fifty-six percent of them thought him above average in demonstrating loyalty to superiors (5 percent below), and 18 percent regarded him as better than average in getting people to work together (14 percent below).

Life with father

But life in Washington was not all triumph and comfort for the BMG. For one thing, 70 percent of the BMG's said they could spend less time with their families than in their usual jobs. That word of this had got around was indicated by the fact that 18 percent of all businessmen who have served or are serving, said that family considerations were a factor against accepting Government employment. Other factors that bothered them were: unwillingness to make the financial sacrifice (17 percent), restrictions on making independent decisions (14 percent), hestitation to sever business connections (12 percent), political interference with performance (11 percent), and inability to freely select subordinates (10 percent).

Why he served

How was the BMG who served motivated to get into the Battle of the Potomac? Most of them (89 percent) said that opportunity for public service was a primary reason. Many had personal considerations—24 percent felt Government service would enhance their chances for greater personal prestige when they returned to business, 22 percent though that learning Government procedures would help them when they got back into private business, and 13 percent listed personal prestige as a consideration. (Many gave more than one reason for serving.)

There was a strong suggestion of conflict between the career civil servants and the BMG's in the responses received from the former as to what they thought were the motives of businessmen in taking Government jobs. Many career civil servants unblushingly accused the BMG's of getting into Government to enhance their personal prestige (60 percent named this as a factor), but most named more than one factor. In descending order, the civil servants cited other BMG motives, as preparing for future business position (48 percent named this), opportunity to extend business acquaintances (30 percent named this), profiting from knowledge of Government techniques for future use in business (29 percent named this), and opportunity to extend political acquaintances (24 percent named this. Some 35 percent named 1 of a number of other less important factors.

The career civil servants were, on the whole, quite complimentary in their recognition of many of the abilities of the businessman. They were most impressed by the fact that he brought something different into the halls of government. They also were impressed by his ability to make decisions. Some 52 percent of the civil servants who responded though that the one businessman with whom they had had the greatest contact—without reference to other occupations—was definitely above average in developing major policies (13 percent thought him below average and the rest average). The same group felt BMG was above average in executing policies already established (49 percent) while 6 percent thought him below; 47 percent thought him above average in determining policy to be placed in execution and 14 percent below. On analysis and review of operations (27 percent above, 23 percent below) and advising others on technical matters (29 percent above, 25 percent below), he did not do so well.

How long he served

Our survey confirmed the impression that businessmen usually serve short periods with the Government, but many stayed longer than most of us believed. For those BMG's presently in Government, 41 percent have served 3 years or less, 23 percent from 3 to 6 years, and 36 percent more than 6 years. One out of five (21 percent) has served 12 years or more. The average term of service for the current crop is 4½ years.

However, of those BMG's who have served and left Government over the past 16 years, as many as 48 percent served 1 year or less, 19 percent served 2 years, 19 percent served 3 years, and 14 percent served 4 years or more. The median for this "have served" group is 1¼ years.

Satisfaction of Government service

What about the satisfactions—or lack of them—that the BMG got out of Government service? The largest number (30 percent) described their greatest satisfaction as a sense of having made a contribution to the public service. Many others (23 percent) admitted that the experience broadened their point of view.

Significantly, 14 percent of the BMG's said that Government service helped them to get a new job. But most of them (74 percent) returned to the same company they had left. Strikingly, one-third of all of them returned to better jobs. Even more impressive was the statement of 49 percent of the BMG's that their business careers were enhanced by their background of public service, while only 4 percent said their careers had been injured.

And what about this? Seventy percent of the BMG's expressed the view that Government experience had made them better business executives. The rest, 30 percent, felt no benefits.

How he entered Government

How did businessmen get into Government? Were they invited, or did they solicit jobs? Almost 90 percent of the serving businessmen were offered their Government jobs, while only 10 percent made an initial application. Of those who were invited, 37 percent received the offer from a Government executive whom they already knew. In 19 percent of the cases, the offer came from a Government agency, in 20 percent from the businessman's industry, and in 22 percent from his own company.

Employers' reaction to Government service

Only 9 percent of the responding BMG's said their companies disapproved of their entering Government service.

The generally favorable attitude of employers toward Government service was borne out by the fact that in many cases leaves of absence were arranged. This was true for 50 percent of those responding. In about half of these cases it was for a specific period of time and in the other half for an indefinite period. Complete severance of the employment relationship was involved in 22 percent of the cases and informal severance was found in 11 percent of the cases. Other arrangements were made in 17 percent of the cases. It did not matter when a man came into Government service—under Presidents Eisenhower or Truman, in war or peace—his firm was, for the most part, in favor of his Government service.

ASPECTS OF THE FEDERAL JOB

The BMG normally did not work in a career civil service classification. Fifty-eight percent indicated that their Government jobs were not covered by civil service. Thirty-eight percent worked within the civil service system; 4 percent held commissions in the armed services.

In recent years there has been a growing tendency for businessmen to take noncareer rather than career civil service jobs. Of those entering Government service prior to 1941, 52 percent took noncareer jobs; in the 1942–45 period, 40 percent; in the 1946–49 period, 75 percent; in the 1950–52 period, 67 percent; and in the most recent period, 1953 and later, 82 percent of the entering businessmen took noncareer positions.

Policymaking

The Government service of the BMG ordinarily involved either assisting in the development of major policies or in the execution of already determined policies. Assisting in the development of major policies was the primary duty of 32 percent of the businessmen serving in Government. Thirty percent were involved in the execution of already-established policy, 17 percent in advising others on technical or administrative matters, 10 percent in determining those major policies that were to be placed in execution, 7 percent in the analysis and review of operations, and 4 percent in other miscellaneous activities.

Challenge of work

The adjective "challenging" was checked by 58 percent of the responding BMG's as descriptive of their Government work. Fifteen percent found it to be "rewarding," and 12 percent checked the adjective "pleasant." A negative reaction toward Government work was expressed by 16 percent of the businessmen, with the adjective "frustrating" being checked by 11 percent. Of those men who found Government work frustrating (11 percent of a total of 445), nearly all of them found their private work after leaving Government rewarding, whereas all of those who found their private work frustrating reported their Government experience rewarding.

There was a noticeable difference in attitude toward Government work, depending upon the particular years of service. It suggested a correlation to war or preparation for it. In the pre-1941 (defense) period, 87 percent of the businessmen serving regarded their Government work as either challenging or rewarding. In the 1942–45 (war) period, the figure was 80 percent, and in the 1945–49 (postwar) period, 71 percent. The percentage of businessmen regarding their work as challenging or rewarding dropped to 58 percent in 1950–52; and, in the most recent period of 1953 and after, the percentage rose slightly to 64 percent.

Political interference

Most businessmen in Government were not bothered in the discharge of their duties by political party interference. The large majority of businessmen (81 percent) stated

that there was no political party interference. Of the remaining 19 percent, half of them indicated that there was some pressure for preferential treatment of private interests. The rest felt that there was pressure either relating to hiring and firing or in the direction of dictating policy.

Indoctrination

On-the-job indoctrination was completely lacking or frequently not satisfactory. While 39 percent of the respondents described their indoctrination as being good, some 61 percent received none or were not impressed by it. Thirty-seven percent indicated they received none, 6 percent indicated that the indoctrination was unsatisfactory, and 18 percent checked the adjective "indifferent" as describing their one-the-job indoctrination.

Social activities

His social activities while in Government service were regarded as normal. In an effort to find out whether social commitments for top-level Government executives were a problem, the serving businessmen were asked to check their social activities as "too demanding," "normal," or "inadequate." "Normal" was checked by 86 percent of the respondents," "too demanding" by 7 percent, and "inadequate" by 7 percent.

Cooperation of associates

Almost 2 out of 3 businessmen in Government service found their Government colleagues to be, on the whole, cooperative. Some 50 percent of the respondents checked the adjective "cooperative"; 14 percent indicated a friendly attitude. "Suspicious" was the adjective used to describe the attitude of Government colleagues by 32 percent of the responding businessmen. Only 2 percent felt that the adjective "resentful" applied to those with whom they worked in Government.

On the other hand, many businessmen serving in government (55 percent) thought that there was no civil service employee in the office capable of performing the BMG's government job. Twenty-four percent said that there was somebody available who could do the work, but not so well, 18 percent felt that there was at least one person available who could do about as good a job, and only 3 percent indicated that there was a civil service executive who could perform the businessman's government job better than he could do it himself.

Attitude toward Government

The BMG's Government service made him more sympathetic toward Government, its problems, and its people.

That businessmen change their opinion toward civil servants from critical to complimentary was asserted by 86 percent of the Government career people we questioned. Eleven percent felt there was no change, and 2 percent believed they changed from complimentary to critical.

Termination

The serving businesaman terminated his Government service primarily because of the expiration of the time originally agreed upon to serve. Fifty-nine percent gave this as the reason for termination.

Civil service executives agreed that the reason businessmen leave Government service is that their agreed tenure has expired. This was what the largest group (31 percent) stated in questioning on the point, although 18 percent felt the BMG left to take a better position, and 10 percent felt it was because of the financial loss involved.

Red tape

Least surprising of all was that the BMG should list red tape as his chief complaint against Government service. Indeed, these familiar characteristics of Dickens' circumlocution office—going in many circles unnecessary to get somewhere—were so outstandingly impressed upon the businessman's mind that aside from 48 percent who mentioned red tape specifically, no other dislikes were mentioned in any significant number.

Batting average

Finally, rounding out our look at the BMG, we had to have something more than generalities on how he performed. If he proved to be a misfit or ineffective in Government service, the whole matter of need for business executives in public service would be open to question.

The BMG came through our test with flying colors, but it was significant that the BMG's (past and present) thought more of their own performance and that of other BMG's they worked with than experienced top career civil servants thought of the performance of BMG's as a group.

Businessmen who have served stated that approximately 90 percent of other business executives they observed in Government were either average or above average. Some 65 to 70 percent were above average. Businessmen presently serving were slightly more conservative, indicating that approximately 90 percent were either average or above average and 55 to 60 percent were above average.

On the other hand, career civil servant executives indicated that approximately 35 percent of BMG's were better than men of other occupations and that only 20 percent were not so good as others. If they were staffing key positions, 9 percent of career civil servants would prefer BMG's above all others, 21 percent would prefer them as a group to most other occupational types, 63 percent would be willing to have them along with other groups, only 5 percent would accept them with reluctance, and only 1 percent would refuse to have them.

RECRUITMENT

Our search showed that there were five main elements in the resistance of businessmen to Government service, and these we set out to explore. The five problem areas were conflict of interest, compensation, duration of stay, the belief that Government executive processes are different from business in basic ways, and disinterest in Government service.

Conflict of interest

Conflict of interest is a term which has been applied to those situations in Federal Government where the possibility exists that decisions made by Government executives might be influenced by the personal interests of the executive. Those interests which have been referred to primarily by Congress, the press, and others generally have been defined only as pecuniary interests. But it is significant that there can be all sorts of other personal interests such as religious, social, fraternal, familial, or ideological interests which can influence Government decisions. However, the one receiving the most attention in recent years, which will be discussed here, is the conflict arising from ownership interest.

Present Federal Government policy in regard to conflict of pecuniary interest is not easy to define. The policy is derived in part from a statement of legal principles contained in an opinion rendered by the Attorney General (40 Op. A. G. 187); in part from a variety of Federal statutes, many of them adopted many years ago to meet specific situations; in part from regulations adopted by the heads of various administrative agencies; and in part from congressional reflection of what it regards as general public concern.

There is apparently no statute of general application requiring a businessman or anyone else who enters Government service to sell investments which may effect decision made during the course of Government service. It is worth noting that the celebrated cases of recent years involved Presidential appointees requiring Senate confirmation. They undoubtedly received tremendous publicity all out of proportion to their significance in terms of numbers of jobs affected since only 5 percent of the responding present or former BMG's stated they were required to relinquish their investments. This problem appears to be limited to a very small number of businessmen who serve, probably those in the most important positions. On the other hand, it could mean that a considerable number of businessmen declined Government jobs because they refused to dispose of their investments.

During the term of their Government employment many BMG's continued to receive some income from their previous employer. Fifty-six percent of the businessmen received some income from the company for which they worked prior to accepting Government employment. A significant difference appeared in this regard between the have-served and the presently-serving group. Among the have-served respondents, 62 percent received supplemental income, whereas only 31 percent of the presently serving businessmen receive additional income from their pre-Government employer. Income received by the businessmen included salary, bonuses, pension payments, severance payments, stock dividends, and all other forms of payment. Included in this total are many BMG's who served the Federal Government without compensation.

Businessmen who have served and are presently serving were asked for their attitude on the requirement of relinquishing personal investments upon entering Government service.

The BMG's opinion on the conflict-of-interest problem was that in most circumstances a rule of divestment is unnecessary. Fifty percent felt that a requirement of divestment was unnecessary and unfair and would let BMG's keep investments. Only 9 percent indicated a general attitude in favor of relinquishing.

Approximately 35 pereent would require relinquishing only if a conflict of interest actually existed, but the remainder felt investments should be kept. The comment, "you can't legislate honesty" was repeated many times in the questionnaires and interviews. Significantly enough, civil servants agreed with the businessmen's attitudes. Eighty percent stated that the BMG should be permitted to keep his investments unless there is a clear-cut conflict of interest.

The solution to the problem of potential or actual conflict of investment interest is not simple. Businessmen who have served in government generally feel that the present policy is unnecessary and unfair, although not all of them take the position that in no case can there be a conflict of investment interest.

Five suggestions were made to remedy the situation:

(a) Bring about increased public awareness that most businessmen enter government service with a sense of integrity.

(b) Bring about a recognition of the fact that pecuniary interest is just one of the several types of interest which give rise to the possibility of conflict.

(c) Provide for disclosure by the businessmen of all relevant investment interests at the time of entry into government service, and provide for disqualification with respect to any matter concerning which there is, or might be, or there is reasonable likelihood that the public would believe there might be, a conflict of interest.

(d) Establish substantial criminal penalties for those found to have violated the public trust.

(e) Establish a requirement of divestment of ownership interest only where the job, the ownership interest, the relationship between the company and the government job are such as to indicate a clear and present danger of personal conflict.

Compensation

The civil servants felt that the Government could best attract administrators by increasing salaries. Thirty-five percent of the responding civil servants felt that the Government should increase the salaries of the men from business. Other means of attraction were mentioned, none of them by more than 10 percent of the civil service people. They included protection from attack, increased prestige, and more job latitude.

Three general categories were identified by this survey. First is the last job group, including those who are within a year of retirement, those being retired, or those already in retirement from their industry job. Second is the top management group, including those who have reached the presidency, vice presidency, or chairmanship of the board of their company, and are finally in the exceptionally high-pay bracket. Third is the middle range group, including men who have great potential for top management positions but are presently striving for recognition and not yet financially secure.

For the last job group, compensation is of minimum concern, if any. Adequate salaries, of course, are desired to permit them to meet their status obligations and to live comfortably while serving in Government. This group even reflects a willingness to go in the hole to some extent to do a job for the Government and fulfill their responsibility.

For the top management group, tremendous losses in compensation can be involved in accepting Government service. The difference is so great (for example, Mr. Neil H. McElroy was reported to have gone from a salary of $280,000 as Procter & Gamble Co. president to $25,000 as Secretary of Defense) that it becomes evident that governmental compensation, of itself, is not a compelling factor in the determination of whether businessmen will serve or not. Presumably the top management man has reached financial security for himself and his family. His motivations for or against Government service are ones of public service, prestige, and challenge.

But in considering salary levels, it is well to bear in mind the strength of other motivations toward accepting Government positions. While the respondents to our questionnaires did rate the financial problem highest in general, it by no means stood alone as a major consideration; 24 percent (the largest group) of men now serving named this as the most acute need. Twelve percent of the BMG's now serving think that protection from slanderous attacks is the most important need, while an equal number feel it is having more latitude in the job. Nine percent think that increasing the prestige of Government service is most needed, and 8 percent think that removing the political atmosphere is required. No more than 4 percent selected any other single factor. Those mentioned were: Better job placement, education of businessmen, and publicizing the civic duty of the job.

Duration of stay

At the time of entry into Government service, the BMG usually planned to serve less than 1 year. Of the responding businessmen in the have served category, 44 percent planned at the time of entry to serve less than 1 year (48 percent actually served less than 1 year), a 1-to-2-year stay was planned by 16 percent (19 percent stayed 2 years), a 2-to-4-year stay was planned by 4 percent, and an indefinite stay by 36 percent (33 percent stayed up to 4 years).

Younger men are more likely to serve a longer period of time than older men. For example, a higher percentage of men under 40 who have served accepted a job to stay a longer period of years than did men between 40 and 50; the same holds true for men between 40 and 50 compared to men over 50. For example, of men under 45 who have served government, 46 percent accepted their jobs for 2 years or more, whereas of the men between 45 and 70, only 21 percent accepted for as long as 2 years or more.

Of the responding civil servants, 36 percent felt the businessman should serve a minimum of 2 to 3 years, 32 percent 3 to 4 years, 17 percent 1 to 2 years, and 13 percent over 4 years. They came to this conclusion because 39 percent thought it took up to 6 months for the businessman to adjust to his new job, and another 19 percent, 6 to 9 months. Eleven percent felt the businessman never became adjusted.

It was stated earlier that 48 percent of the BMG's who have served stayed on the Federal Government job less than 1 year. The breakdown by periods shows that the psychology of civilian service during a war is far different from that which prevails at other times, for only 16 percent served less than 1 year during World War II while 70 percent of those answering our questionnaire and who have served since 1953 stayed less than 1 year.

Of BMG's who have served, percentage who served 1 year or less

Period during which service began:	Percent
1941–45 (World War II)	16
1946–49	37
1950–52 (Korean conflict)	67
1953–56	70

The businessman, as well as any of the top appointive executives, is consistently reported as bringing a new point of view to Government administration. It follows, then, that an overextended tour will result in the outsider's losing his original purpose and acquiring, whether he likes it or not, a career outlook on Government operations.

The survey gave further evidence of the need for longer tours by the responses to questions concerning the time it took to adjust to the job. Civil servants stated that 61 percent of the BMG managers of their acquaintance took over 6 months to become adjusted; 42 percent of them took over 9 months; and 26 percent over 12 months. For the Government to obtain a return on its investment, longer terms appear appropriate and necessary. Further, since these positions are key in nature and exert great influence on the overall operation of Government, it would appear reasonable and in the Government's interests that they should be longer. One top personnel executive in Government stated he had seen many cases where a new man came in and announced he was leaving in 1 year. With that tactical error, his career associates and subordinates marked him down at once as a 1-year man and did not really take his ideas seriously.

From some individual businessmen's point of a view, a quite different attitude on the length of tour prevailed. As a major factor repeatedly advanced in the interviews, these executives felt that long tours of duty would cause them to "lose contact," "the boss would think of promoting those active in the company," or "any time away is time lost on my career." Only a small percentage looked upon a tour in Government as an opportunity to broaden themselves and thereby enhance their long-range business careers. Of those who served, only 4 percent committed themselves to a 2- to 4-year stay. Likewise, the business community, industries, and the individual companies appear to be one the side of the short term.

Clearly, the survey has provided no quick and easy solution to this problem. The conclusion appears justified, however, that some lengthening of the tours would be in the interest of better Government. Education of industries and companies to the need and as to their responsibilities in this connection would be helpful. Also, education of potential executive candidates to the advantages of a 3- to 4-year tour in Government might convince some.

Differences between business and Government

The fact remains, however, that a considerable group of experienced men felt the processes of Government and business were dissimilar to the prejudice of Government service. This being the case, we took a further look at the factors which actually made, or appeared to make these processes dissimilar. To this end, businessmen were asked for their observations on aspects of Government administration which made it different from private enterprise. They were specifically questioned about the absence of a profit motive, goldfish-bowl environment, and size of Government operations.

Most businessmen working in Government (55 percent) felt that the goldfish-bowl nature of top-level Government jobs either was not substantially different from top jobs in private industry or, although different, did not affect the ability of a man to perform effectively in Government. Thirty-one percent felt the existing differences did affect performance. So it was with other supposed dissimilarities—they found the basic processes of administration in Government and industry similar, but laid considerable emphasis on the different environment. Most of the BMG's found the essential functions—developing policies, making decisions, reviewing performance, and policymaking—similar or somewhat similar in both business and Government. Nearly all of the men who found the functions similar were able to use effectively in Government the techniques used in business.

Size and complexity: The BMG's agreed that there was a significant difference between Government and private business in terms of size and complexity. They were about equally divided as to whether this difference affected job performance, and the differences they mentioned were more concerned with complexity than with mere size. What they usually mentioned were such things as complex organization charts, the vertical layers for reviews and approvals, the large numbers of people giving attention to staff details, and the alphabetical jargon which is everyday talk to the more permanent employees. They found that many agencies of the Government may be involved in executing a single national policy or law. They often wondered about the extent of their own authority, especially if they had acted on their own only to be reversed or stopped by other agencies.

BMG respondents advised caution in executing decisions within this large and complex organization and patience in becoming acclimated to it.

Yardsticks of Progress: The absence of acceptable or familiar yardsticks for progress measurements related mainly to the absence of the profit motive so familiar to industry. This, the BMG's thought, represented a difference of considerable magnitude. In some of the Government operations, however, greater similarity to industry (Government Printing Office, industrial fund operations, etc.) permitted consideration of the profit motive, or substitutions for it, which were reported as very helpful. The substitutions or alternate satisfactions for the profit motive cited by the BMG's were one of the surprises of our study.

Rigidity in Government operations: This problem was manifest in the following connections:

(1) Personnel administration (civil service appointment complications, the job classifications, salary systems, promotions, dismissals of unsatisfactory or mediocre employees), (2) financial administration (elongated and detailed budgetary processes, apportionment controls once money is appropriated, accounting restrictions and re-

views), (3) recordkeeping (legal or regulation requirements, susceptibility to review after long periods of time), (4) organizational status (major job to change formal organization) and purchasing (limited latitude of negotiations), and (5) expense accounts.

Outside pressures: Outside pressures are exerted by the Congress, other executive branches, the public, and the press. They constitute a further difference between Government executive action and that of private enterprise. Suitability and security investigations were also cited as part of the difference between Government and business. BMG's generally accepted the need and importance of these outside pressures, although they felt they tended to slow down operations. They objected strenuously to unrestrained criticism, particularly when it had political overtones. Opinion was strong in many cases on this point. One respondent observed: Businessmen are not likely to take responsible Government positions if they are subject to a procedure, which, if not conducted by our august legislative bodies, might be described as a kangaroo court.

Coordination difficulties: The process of coordination, similar to both business and government, is present in greater detail and in greater quantity within government. BMG's were concerned by the large number of people or agencies who can compel others to consider their ideas, thus impeding speed of action. The businessman seemed aware of the need for this coordination, but quite impatient in accepting it. The checks and balances in government made getting the job done relatively difficult for the BMG. One of them said: "Democratic action is by its very nature less efficient than is one-man direction. However, in the public interest, cause without it we would no longer be a this lack of efficiency is absolutely vital, bedemocracy." Another questioned the extent of coordination prevalent in government by pointing out that while it is so necessary in the policy formulation process, it becomes an undesirable habit as it reaches higher levels of authority which have complete authority for determining policy. Another pointed out that when authority was not too clear cut, it resulted in unnecessary consultations on even minor matters.

Disinterest in Government service

Both the Government and the business community have responsibilities for the recruitment of the executive talent from business and industry which our survey clearly showed was needed. What of these responsibilities? And what are government and business doing about them?

Businessmen who had never served in the Government said they had tried to offer their services, had been unable to find the right contact and, inevitably, finally tired of trying. Candidates should not have to wear themselves out to see officials who are too busy doing the things they would not have to do if they took the time to interview and hire candidates who could ultimately do the work. One vigorous retired businessman even came to the office of this survey project as a last resort, to see if his services could be advertised. He was directed to an agency official who plans to use the applicant as a top United States representative in a foreign country.

Government does not at present take continuing action to recruit and retain businessmen, or any other type of executive manpower. Its activity, except for as yet untested results with the embryonic Executive Reserve program, is centered at the political level. Activity of this kind appears to be limited to the party in power. The present administration began with a management firm survey of the executive positions needed to be filled with political appointees. It required that all proposed appointees for the executive departments be cleared informally for political adequacy prior to appointment.

However, no discussion of the apathy and disorganization which besets recruitment can ignore the closely related problem of placement. A vigorous recruitment program should find the right person for the particular job; individuals must not be placed solely by reason of their availability accompanied by pressure on the hiring agency. Almost without exception this practice results in a disgruntled, briefly serving executive who neither does justice to the job while he is in it nor acts as a disciple in convincing his friends and business acquaintances that a tour of duty in Government is a part of their civic responsibility. But both interviews and questionnaires contained evidence that the availability and pressure basis for placement too often occurs.

One Federal department head stated that whenever he had a vacancy for an assistant secretary he first approached capable people he knew to consider the job, then asked friends to help him locate a candidate, then friends' friends, and after months of searching, finally came up with a placement. Lower echelons in his department duplicate his procedure. We found this method of recruitment equally common in other departments.

Another recruitment approach was reported by an official in the Executive Offiec of the President. He said that after every trip he makes around the country, he brings back the names of business executives who are anxious to serve in the Federal Government. He distributes these to people in the executive branch and, according to him, nothing ever happens.

James F. Brownlee, partner, J. H. Whitney & Co., who did a considerable amount of executive recruitment for the Federal Government during the war years, points out: "There is no question whatsoever in my mind that there are many businessmen who would be willing to serve if there was a proper recruiting program which would point out to them the particular needs that the Government might have. There is certainly small chance that businessmen are going down knocking at the door in Washington, where their connections are often limited and where there is no central agency that can direct them to parts of the Government which would have needs of their kind of talent."

CONCLUSIONS

Having looked over the Washington employment scene, we are forcibly reminded that democracies (or republics) that have perished, have perished for lack of capable, properly oriented public servants, supported by a citizenry which should have demanded superlative public service.

The survival of democracies has been perilous throughout all recorded history, and, in the opinion of many, is even more perilous now.

To be sure, it is more of an achievement to raise the standard of living of our 173 million people than to produce the first sputnik, but this should not blind us to the fact that recent Soviet scientific accomplishments symbolize an enemy which, by whatever means, can with the will of its system surpass our own at times. How are we facing this test? What does the evidence show about our adeptness at getting the right skills into the places in government where they are most needed?

It is not a comforting picture. The evidence of our survey indicated that, whatever the need, there exists a frightening lack of interest in the business community for participation in the government service. For example, of businessmen who had not served in the government, 50 percent stated that they did not know the attiude of their companies toward government service. This clearly indicated little discussion of the problem had occurred in the typical firm. The conclusion was underscored by the responses to many letters sent to major trade associations requesting information on the attitudes and policies of their member firms toward government service by their executives. In approximately 85 percent of the replies, the attitude expressed was that this had just not come up as a live issue in their industry.

Government service today is looked upon by business in general (and the individual in particular) as a career detour. Notwithstanding this, there is a self-interest viewpoint that such service gives the executive a broadened experience which is useful both to himself and to his firm, as well as to the political system of which he is a beneficiary. This suggests that business could give recognition to the advantages of government service by considering a tour in government as one worthwhile prerequisite to a top management job. The short range benefit to industry is the creation of leaders with greater vision and with sharpened awareness of the part government plays in their personal and corporate life. The corollary benefit to government is an increased flow of middle-management executives into service. Finally, for the long range there will be greater understanding, by the returning top business executives, of government problems and of the interplay of forces that takes place at the policymaking levels of government. There is, therefore, a clearly discernible reward.

The trade associations and similar groups can help by encouraging discussion of these neglected problems. To this end, men from industry who are currently serving in Government should be asked to discuss their Government experiences and problems both at industry meetings and in the various trade publications. In addition, central groups such as the Chamber of Commerce of the United States or the Society for the Advancement of Management should be urged to prepare reference material which can be made available to each interested association. The primary goal must be first to obtain a recognition of the problem on the part of businessmen themselves.

Is this program too altruistic for aggressive business? More and more, it has found that such programs are not altruistic but rather a very necessary part of commercial success. Business has given extensive support to higher education through grants and scholarships and has benefited through a greater number of trained persons. It has supported community welfare programs and has obtained returns in the form of a more prosperous and stable community. The returns to business for its investment in Government can be better government and better business.

The problem of effective government in these times surely transcends government and industry. In the final analysis, the roots of this problem are grounded in the American society in its entirety. Therefore, it is to each segment of this society that we must look in seeking a permanent solution.

There is overwhelming evidence that the rapid growth of the American Government has not been accompanied by a corresponding understanding in our society of the complexities and problems of modern day government nor of its tremendously increased impact upon the individual. Yet, such an understanding is basic to the development of an environment in which the nature and the demands of government service are understood—an environment that provides a fertile soil for both the enlistment and longer retention of qualified executives.

To assist in creating such an atmosphere, participation by each segment of our social and economic structure is required in what

may be termed a combination "orientation-education" program designed to overcome a problem in communications. The need for such a program has existed in the past and exists to an even greater degree today. But our survey indicates that to varying degrees, we are not accepting this responsibility. We are convinced that educational institutions, political parties, organized labor, civic, fraternal and social organizations, the press, radio, and television have the opportunity to increase awareness of Government's vital role and the need for experienced executives to guide its operation.

That the political party in power desires to place candidates of its own persuasion in positions of authority and policy is a foregone conclusion. Vacancies in top posts are obvious but vacancies in lower echelon, noncareer posts usually are known only to the immediate supervisors and the personnel departments and seldom to agency heads. Federal agencies have an obligation to call these vacancies to the attention of the party in power and to provide job specifications indicating qualities, abilities, and talents needed.

The political party, on the other hand, has an equal obligation to furnish candidates possessing abilities specified and not to pressure agencies to take prospects who have little else to offer besides availability and party loyalty. To do this properly, the party in power must develop a strong, formalized recruitment program stressing selection and placement. The party out of power, if it wants to get down to business immediately after winning an election, must take these steps before an election.

While political pressure are ever-present on the employment departments, personal pressure by careerists as well as noncareerists also is persistent. Everyone wants to hire his friend and it is only through insistence on impersonal selective techniques that poor placement can be avoided.

Usually the new BMG and his top personal staff do not have the know-how of government operations. Many pitfalls, embarrassments, and even international incidents can be avoided by obtaining the advice and counsel of experienced career civil servants. The great majority of them are eager to carry out the mandates of their new bosses and are just waiting for a chance to display their abilities. Unfortunately, there are those who delight in telling their bosses that "it can't be done under government regulations" whether it be the carrying out of new policy or personnel procurement of special talent. There always is a way around most obstacles and the skilled career civil servant knows the way.

It is seldom that industry plunges a man into a new administrative responsibility without proper indoctrination and yet it happens regularly to the BMG's. The task would be so much lighter and progress so much faster if agencies adopted off-the-job orientation for its noncareer people. So that the neophytes would not be suspicious of career brainwashing, these courses could be conducted by a nongovernment organization with foundation money.

The BMG has been accused (as our survey proves) of not staying long enough in government to learn the ropes, of leaving just as he is beginning to become useful. Responses to our inquiries indicate overwhelmingly that tours should seldom be for less than 2 years. For those jobs that require a shorter tenure, the use of consultants is recommended.

While Congress, the press, radio, and television have played up "conflict of interest" cases, our responses showed that generally statutes and regulations concerned were not too great a bar to acceptance of Federal employment. Persons who have spent a lifetime accumulating savings, however, should not be required to divest themselves of stocks and bonds if ownership of these investments does not conflict with the use of honest judgment in their jobs. The methods employed by some Congressmen bothered our respondents. Congress should recognize the human dignity and professional attainments of the people in the executive establishment and not subject them to needless harassment.

Any long-range program of action must include greater emphasis on education. All levels of education should be reviewed as to the adequacy of instruction in the processes of modern government. In this respect, secondary educational institutions have the primary responsibility, but there should be a carrythrough in college. All students—regardless of their major academic field—should be required to take courses in the functioning and significance of contemporary government. These courses should be concerned not only with political and economic theory but should also be strongly oriented toward actual problems of public administration, day-to-day operations, and the responsibilities of American citizens to serve in their Government.

Such a program, in which each segment of our society participates, is the only way to cultivate an atmosphere necessary for the development and retention of sufficient qualified Government executives. That points especially to better teamwork among Government, the political parties, business, and education in the recruitment of the needed businessmen. This teamwork should comprise the following nine basic activities:

1. The executive branch of the Federal Government should take immediate steps to improve the situation by establishing a central recruiting office in the White House, which could catalog the requirements of the departments and at the same time act as a clearinghouse for businessmen willing to serve. Such an office could actively recruit when no candidates are available and maintain an executive reserve file of businessmen who are capable and may be willing to serve.

2. The business community should develop a greater appreciation of the need for service by businessmen in Government, without regard to political lines.

3. The business community must respond to requests from Government by providing the type of individuals requested (and not ineffective executives) and by recognizing the greater worth and ability of men who have served Government.

4. Trade associations and industrial organizations should be of major nonpartisan influence on the potential executive and on their companies, through an active program of education, information, and orientation.

5. Rosters of candidates should be developed by trade associations.

6. The Chamber of Commerce of the United States of America, National Association of Manufacturers, American Management Association, and other organizations representative of the business community should further studies and programs of this kind and educate members as to the needs of Government for executive assistance.

7. Companies should define, adopt, and publish their policies on the subject of their executives leaving for Government service.

8. Educational institutions, particularly business schools, should place a greater emphasis on education of the individual concerning his responsibility to Government.

9. A general philosophy to make "public service" a desirable factor in our society must be developed and recognized as a basic principle of our society. In the present context of world affairs it may have more to do with our survival than does the profit motive.

It all adds up to the fact that we have to take a hard new look at recruitment of Government personnel. It could well be argued now, we believe, that getting the best men into Government service is at least equally important to recruitment of men for military service. For, more and more, the wise men of our era are expressing the conviction that the "new competition" with Soviet Russia is more likely to be won in the sprawling bureaucracy of Washington, D. C., than on some remote battlefield. If the military services can command a certain allegiance in their recruitment, how much more should the civil departments of the Federal Government do the same.

Unless some kind of effective centralized recruitment service is set up in Washington with good communication with, and cooperation from the American business community, the new urgency is going to find us as a nation very much wanting. Only by standing up as men with a heritage to proclaim and defend can we meet the challenge of survival.

Plywood Imports Injure Pacific Northwest

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. MACK of Washington. Mr. Speaker, considerable discussion has taken place on the floors of the House and Senate and in the press over whether plywood imports are injuring employment in and the prosperity of the Pacific Northwest fir plywood industry.

The Douglas Fir Plywood Association which is comprised of nearly all the plywood manufacturers of Washington, Oregon, California, and Montana says these imports do injure the softwood plywood industry as well as the hardwood plywood industry.

The position of the Douglas Fir Plywood Association mills, which produce 86 percent of all fir manufactured in the United States, is made quite clear in a resolution passed at a meeting of its management board in Eugene, Oreg., on Wednesday May 14, 1958.

The resolution of the Douglas Fir Plywood Association follows:

Whereas the importing of foreign plywood has had a serious effect upon the plywood industry: Now, therefore, be it

Resolved, That the consensus of opinion of the Douglas Fir Plywood Association is that the great volume of imported plywood has had a highly detrimental effect on domestic production and employment. This consensus rests on the following facts:

Import figures of record show that the United States imported 53 percent of all hardwood plywood consumed in the United States during 1957, a total of 847 million square feet during the year.

Seventy-nine and three-tenths percent of all imported plywood came from Japan, where the average rate of wage per hour is 15 cents as compared with an average rate per hour of $2.52 in the plywood industry in the States of Oregon, Washington, and California. Practically all of this imported plywood is hardwood. It is not only replacing hardwood plywood manufactured in the United States, it is replacing our Douglas-fir plywood. It is possible for Japan to sell this better grade of plywood cheaper than we can produce Douglas-fir plywood with hardwood faces.

The 847 million square feet of plywood imported this year will represent a loss of $40 per thousand square feet in employment in

the United States or a loss in payrolls amounting to $34 million.

We feel that should foreign countries continue to exploit their economic advantages, such as cheaper timber, cheaper labor, and cheaper transportation and should they be permitted to continue to sell their production in the United States unchecked, the economic effect on our plywood industry, and especially on the States of Washington, Oregon, and California, will be serious.

Douglas-fir plywood was an extremely important critical construction and building material during World War II, and as such was subject to a very high priority, and it is of vital importance that this industry be left in a sound and healthy condition in case another such grave emergency faces this country.

We recognize the need for, and encourage foreign trade. All we ask is that sufficient restraint on the importation of foreign plywood be applied to permit our plywood industry to survive and maintain our wage structure and standard of living and to enjoy prosperity so necessary to the economic welfare of our area.

Social Security as a Path to Prosperity

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. ANFUSO. Mr. Speaker, according to reports, some of our economists believe that an upturn in business activity will not come before the end of the year and possibly not until the early part of next year. By now, it is clear to all that the recession has gone much further and may last considerably longer than expected. The people of this country demand that the necessary precautions be taken to deal with the situation before it gets completely out of hand.

The question of primary importance is: What steps are we to take? Many steps have been suggested, but which of these will serve the best purpose from the standpoint of the Nation's economy? Most of them appear to be sound, though some are of a temporary nature and will not bring the desired results, while others would benefit only a certain segment of the population.

I shall, of course, be glad to support any proposal which holds promise of improving our sagging economy, but I should like to see action taken that will strike deep roots and help to bolster the Nation's economy on a wide scale and on a durable basis.

Such a step appears to me to be available through our social-security system. This is the system established more than 2 decades ago, when we were experiencing the greatest depression in our history, and it proved to be an important factor then in helping to pull the country out of the economic mire. It can do so now, too, if we bring it up to date and liberalize its benefits to reach more people. It will repay the extra cost by providing greater purchasing power and more jobs.

In the Full Employment Act of 1946, the Federal Government assumed the responsibility to stimulate useful employment opportunities and also to promote the retirement of older citizens from the labor force and to provide them with a decent standard of living. I suggest that the time has come to do just that, that is, retire as many of our older citizens as possible and provide them with an adequate standard of living in their retirement. This will help them maintain their purchasing power, while their retirement will provide jobs for younger citizens.

I propose that we increase the benefit payments under the Social Security Act to allow for the increase in the cost of living since the end of World War II. This increase will help raise the standard of living of the elderly and the retired people who have no personal savings and must rely entirely for their subsistence on their monthly social security payments.

In a bill which I am introducing in the House, I am proposing the following two steps:

First. Reduce the retirement age for all to 62, with full social security benefits available to both men and women.

Second. Increase the monthly social security payments in the following manner:

(a) Minimum payments to be increased to $50 a month, instead of $30 at present;

(b) Maximum payments to be increased to $150, instead of $108.50 now; and

(c) Those falling in between to receive an across-the-board increase of 40 percent.

It is estimated that, by reducing the retirement age to 62 for men and women, an additional 4 million people in the 62 to 65 age category would become eligible for social security benefits. In November 1957 the number of those receiving old-age and survivors insurance benefits was 11 million people. By lowering the retirement age to 62, the number of people receiving such benefits would increase to about 15 million. That means that perhaps as many as 4 million people would be encouraged to leave the labor force to make room for younger job seekers.

In addition, it should be noted that there are at the present time approximately 1.8 million persons over the age of 65 who are still working, but who would be eligible for social security payments if they chose to retire. If we were to increase the present benefits by 40 percent, as suggested above, many or perhaps the overwhelming majority of those over 65 who are still employed might choose to retire. This would open additional hundreds of thousands of jobs for younger people.

As for the cost involved in realizing these proposals, namely, adding 4 million additional retirees and a 40-percent increase in monthly benefits, it is generally estimated that the social-security trust fund would have to pay out about $5 billion more per year. Current annual payments out of this fund are approximately $7 billion.

How would this additional cost be financed? The level premium cost of this proposal is estimated to be about 7 percent of payroll. To full finance this cost would require an increase in the payroll tax for both employer and employee alike of 3½ percent. Thus, while employers and workers are now paying 2¼ percent of wages each toward social security, by the adoption of my proposal for a lower retirement age and increased benefits they would be required to pay a little over 5½ percent of wages in order to cover the cost.

I admit it is a bit high and appears to be a drastic step. When social security was first introduced, it was also considered a drastic step, yet today the whole Nation realizes its importance and would not discard it. What is needed today is an overhaul of the system to bring it into step with the times and to make its benefits available to our elderly citizens so that they may enjoy the fruits of their labor in their declining years.

Let us look at this thing from another point of view. By instituting these newly proposed social-security benefits, considerable sums could be saved in unemployment-compensation and relief expenditures, since many of those drawing or eligible to draw unemployment-insurance or relief checks would be able to retire on social security. Exact figures on such savings are, of course, impossible to ascertain. Government statisticians familiar with such expenditures have come up with the following estimates:

If insured unemployment—meaning those entitled to receive social-security payments—reaches 2.6 million persons, payments on unemployment compensation under the present arrangements would be about $3 billion per year. If legislation to increase unemployment compensation to 39 weeks is enacted, then compensation payments to 2.6 million insured unemployed persons would reach $4.5 billion a year. If the number of insured unemployed goes up to 3 million or 4 million persons, the extra cost would be proportionate.

This is not to be interpreted that I am opposed to the extension of unemployment benefits in the current emergency period. On the contrary, I favored the more liberal proposals to extend unemployment compensation as advocated by the Democratic leadership when the House considered this measure recently, and I opposed the administration proposals because it discriminated against some 2 million unemployed who worked in uninsured industries and are therefore not entitled to unemployment benefits.

I merely wish to point out the fact that this type of assistance is of a temporary nature. When the unemployed will have used up the additional weeks of compensation allotted them, they will still remain unemployed because basically the economic problem from which they are suffering will not have been solved. Hence, it may be asked: Would it not be advisable, from the standpoint of the national economy, to direct some of these additional billions into the so-

cial security fund and to liberalize the payments and the retirement age along the lines suggested above? In so doing, we would achieve the following:

First. Make possible for an additional 4 million people between 62 and 65 to retire on social security.

Second. Encourage 1.8 million persons over 65 to retire on increased benefits.

Third. Provide employment for several million younger persons and decrease the unemployment lists by taking the older citizens out of the labor force.

Fourth. Increase social security payments by approximately 40 percent, giving the retirees more purchasing power and a more decent standard of living.

Fifth. Save billions of dollars now expended on unemployment compensation and on relief assistance.

Sixth. Provide a boon to the economy which would be of a more permanent and lasting nature.

It should also be noted that whatever economic reforms are instituted at this time on a national scale should have a double purpose: we must aim to end the recession as soon as possible, but we must not overlook the dangers of inflation. I am firmly convinced that the improvements and adjustments in the Social Secuity Act, as advocated above, will achieve both of these purposes—help to end the recession and curb the threat of inflation.

In short, I believe that my proposals are of the kind that would strike deeper roots and provide a more durable and a better solution to the present economic problems. Let us roll back the recession. The path to prosperity lies through social security.

Disarmament

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. SIKES. Mr. Speaker, I take pleasure in having inserted in the CONGRESSIONAL RECORD a letter which I have received from Mr. C. C. Hiles, of Panacea, Fla., on the subject of disarmament. Mr. Hiles is a very careful thinker and has a genuine interest in the welfare of this Nation. I suggest careful reading of his letter, which follows:

PANACEA, FLA., *May 14, 1958.*

The Honorable BOB SIKES,
United States Representative for Third District of Florida, Washington.

MY DEAR CONGRESSMAN: The ever-increasing manifestations of a hostility toward the United States and the growing anti-American policies throughout the world are most distressing and alarming, and clearly indicate that there are other factors involved besides communistic opposition and propaganda. Even those nations that have been so much benefitted by our generosity have become lukewarm in their obligations to us or even disaffected. We have failed completely to put over the ideals we so often profess to follow, but do not. I shall not go into details as to the reasons for this failure. They should be known to all. I shall confine my comment to the fact that it is a sickening and disheartening spectacle when one has to witness the loss of respect and prestige once enjoyed by this great country which, while not always right, was once nearly so. All of this aside from the perils to which we find ourselves exposed.

Time was when outrages to the flag or the person of a Vice President of these United States would have been the signal for mobilization of the Armed Forces and the almost unrestrained indignation of the American people, but today no one turned a hair and its business as usual, with the baseball scores coming in on time and everyone apparently satisfied. I do not propose any action to set these matters straight because I feel that the blame lies here at home and squarely in our own lap.

Favored geographically and endowed with the abundance of domain and natural resources, and further enriched by the finest of traditions handed down by those to whom life, liberty, and the pursuit of happiness were God's own gifts to a chosen Nation, America stood out as the leader of all men who strove to make the world a better place in which men could live, prosper, and worship God. Nations respected America for her espousal of the rights of the underdog. During the last great war our finest slogan was the four freedoms, of which freedom from fear was the one that meant the most to an embattled world—most of all to us.

Now we have failed and are failing, not only our own people but the rest of the civilized world that looked to us for moral and spiritual guidance at a time when mankind has most need of such support. We, ourselves, are going along hand in hand with, and are a party to, the inspiration and creation of fear itself, to plague humanity for as long as it is privileged to be here. How long that will be is anyone's guess.

Somewhere we have lost our way; we have forgotten our duty to the cause of mankind in our selfish, mad race for power that, by all the chances of probability, may well be entirely unnecessary and uncalled for. So blind have we become to the consequences of our blind headlong rush to destruction that we have even forgotten the primeval urge of all men since creation, that "self preservation is the first law of Nature," which applies to our potential enemy as well as to us. The recognition, once more, of this first principle should point out to us today that the position of the Russians is just as precarious as ours and that they are just as badly frightened at the course of current events as we are, and this knowledge should strengthen us in finding a sane solution of the world's troubles.

There is 1 course, and 1 only, that will, at 1 stroke change all this, and I respectfully urge that either the Congress or the executive department, or both, working in harmony and unison, at once initiate such action. That there be advanced, at once, and publicly, for everyone to see and hear, a policy of complete disarmament for all nations of the world. That such policy encompass all necessary safeguards for security. That such policy, as expounded, be positive and unequivocal, and without any reservations whatever, and totally devoid of any vague or misleading diplomatic windowdressing—so worded as to be fully comprehensible to any and all people.

Such action could only—

Bring to fruition that which we are so earnestly seeking—peace and disarmament, or

Establish, once and for all, the stand of the United States in the matter of world peace, and restore its lost prestige, and respect of all the nations of the world.

By our advocacy of such a move, without equivocal reservations or unpalatable conditions, the Soviet Government would be completely denied any opportunity for further evasion of the issue of peace, and would be compelled to accede or else find itself in the unenviable position of being the only barrier to peace.

Be, propagandawise, more effective than the launching of a thousand satellites.

Restore the United States to its former position of being the true advocate of the common man and champion of the oppressed underdog.

Now, Congressman, you have, in the past, given me to understand that you favor disarmament, and I believe you will agree that it must be complete to be effective. This is not a plug for my own plan which is well known to you. Any plan that makes sense and meets with the proper conditions of security wold be acceptable to the people of the world. There are many good ideas being expressed now by reputable, thinking men in this country that could well be heeded.

What I desire to know right now is your own honest opinion as to the possibility of acceptance of a plan that could well bring us what we seek. If the plan for total disarmament is feasible and workable why has no effort been made to advance it by those in a position to act in the best interests of the country? There appears to be a cool attitude toward such action. Why? Is it because there is some jeopardy involved in it? Or, is it because of a lack of political courage to advance it? I invite you, most respectfully, to give me your views on the matter. By this, I do not mean in terms of generalities. If there is jeopardy, just where, specifically, does it lie? If such exists why do we continue to pretend to advocate disarmament?

It is time the people knew these things, Congressman. Even if the Russians were to reject the proposal suggested there would be some relief from the present untenable and equivocable position of this country, and even that much would serve, partly, to relieve our minds. At least, we would know just where we are—something none of us now know. We would have an end of the constant bickering which we consider demeaning and unworthy of our Government. There was a time when all the world knew what the United States stood for but today no one knows, least of all, its own people.

I urge you, once more, Congressman, to be sufficiently indulgent to give my proposal your fullest consideration. I urge that you bring this letter to the attention of, not only the Florida delegation in the Congress, but all the membership that have the best interests of the country at heart, and those of the executive department that are in a position to affect the necessary reforms so badly needed to restore the lost prestige of the United States. You may use this letter as you deem expedient. There is nothing in it that I do not openly advocate daily, and the questions I have asked are no different than those which are asked every day by those inarticulate Americans who also wonder where we are headed.

With one closing remark I shall end this letter. Nearly 44 years ago I entered the service of the United States and took an oath to support and defend the country and its Constitution from all enemies and, as I take it, that means from within as well as from without. Although I am retired and my twpewriter must now supplant my sword, I propose to do just that, and I am certain that you will join me.

It is not necessary that I reiterate my respect for you. I think that goes without saying since I have been so frank with you in the expression of my views. I know that these are trying times for the Members of Congress; but the least they can do is to be honest with themselves and the country, and

this, I am confident, will be no problem for you. Need I say more?

With my heartiest best wishes for whatever you undertake on behalf of your State and this country, I am,

Most cordially yours,

C. C. HILES.

Dangers of Groupism

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to bring to the attention of the Congress an editorial which appeared in the Mesa Tribune on May 14.

The Mesa Tribune is my hometown paper. Its editorial writers have unusual ability to put into print reflections on current trends upon which all of us might well meditate.

The editorial follows:

DANGERS OF GROUPISM

In recent months some observers of American life have commented with some force on the dominance of the group in so many of our activities.

Government is a kind of group to which we are all beholden in ways not common a few decades ago. We are taxed and regulated and managed in considerable areas of our lives by Federal, State, and local authorities.

Those millions of us who work for some company, large or small, know allegiance to still another group that, in effect, governs a substantial portion of our lives.

Whether we live in city, suburbs, town, or open country, other parts of our lives are affected by group doings. Particularly is this so in the larger cities and suburbs, where most Americans now live.

Naturally, things vary from place to place, but organized social, community and general civic effort blankets much of the field.

In both school and playtime, children are taught to blend with the group, to join in group doings. The tendency to organize is seen in juvenile gangs, which in turn reflect the criminal combinations of the adult world.

Of course much good flows from group organization. It can spell order, regularity, some measure at least of discipline, security. It can satisfy man's need to belong, to be accepted and be protected.

The difficulty is that so much organization, such widespread allegiance to the group, can smother his individuality. It can make him timid, afraid to rebel against set ways of living, complacent behind the group's stout shield.

If what the group does, what the group authorizes and approves, represents normality, then the man who fails to join or reparts from group thinking is odd, nonconformist, sometimes a nuisance, now and then even dangerous.

In an America so engulfed by group standards and doings, the true individualist is becoming a rarer and rarer species. Most men find rebellion risky and costly. They yield to pressures to play along.

Yet this country was pioneered by rebels, individualists with the nerve and the energy to burst bonds and strike out alone. The same kind of men built the Nation.

We're still a great country. But we'll stand a better chance of being a greater one when we somehow manage, in spite of the great weight of the group, to recapture the fire of individualism that lifted us so high.

James P. Warburg's Proposed Agenda for a Summit Meeting

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. REUSS. Mr. Speaker, James P. Warburg has for some years been advocating a more imaginative foreign policy. In his recent lecture at Bowdoin College, Brunswick, Maine, he addressed himself to the journey toward a summit meeting that this country is apparently embarked upon without an adequately prepared Western position. Under leave to extend my remarks, I include significant excerpts from Mr. Warburg's challenging talk:

Since it now appears not unlikely that we shall reluctantly attend some sort of high-level conference with the Soviet Union before the end of the year, it seems appropriate to discuss what we might seek to accomplish at such a meeting.

Although predictions are hazardous—especially optimistic predictions—it seems likely that the forthcoming conference will achieve at least one positive result; namely, an agreement to ban nuclear tests, enforced by some sort of inspection. The world has been clamoring for a ban against further pollution of the atmosphere; the Russians have offered it; and, thanks very largely to Governor Stassen, to the Senate Subcommittee on Disarmament and especially to its chairman, Senator HUBERT H. HUMPHREY, of Minnesota, our Government seems about ready, at long last, to separate this one item from its other disarmament proposals.

If this agreement is achieved, it will be of considerable importance, not only as a step toward halting the arms race but as a breakthrough in reaching any agreement whatever in the existing atmosphere of mutual suspicion and distrust. If the agreement is reached and adhered to, it will create a climate of opinion in which other agreements may more readily be negotiated. Additionally, once any degree of inspection is permitted, an important key log in the log-jam will have been lifted.

Though highly desirable, a ban on nuclear tests should not, in my opinion, constitute the sole American objective at the summit conference. It looks, however, as though the United States intends to resist any broadening of the agenda. Our delegation will in all probability restate its often-rejected demand for free all-German elections and for the liberation of the East European satellites, but this would merely be an indirect method of refusing to discuss any of the recent proposals for disengagement in Europe which have emanated not only from the Soviet Union but from the German Social Democrats, the British Labour Party, and a number of Americans, most recently Mr. George F. Kennan.

If we rule out sheer obstinacy in clinging to a bankrupt European policy, it is difficult to understand this attitude on the part of our Government.

The policy of seeking to bring about the reunification of Germany by creating a position of strength through building up West Germany as a sovereign state and later rearming it, was originated chiefly by former Secretary of State Dean Acheson with the enthusiastic concurrence of West German Chancellor Adenauer. The rearming of Germany was never popular in France or in Germany itself. It was agreed to with great reluctance by the British Labour Party.

Here, in this country, only a handful of students of European affairs publicly expressed their misgivings. As one of that small group of American dissidents, I testified before the State Department Policy Planning Staff, of which Mr. Kennan was then chairman, as well as before General Eisenhower's Advance Study Group in the Pentagon (General Eisenhower was then Chief of Staff), and before the Senate Foreign Relations Committee. This was in 1948 and 1949, when the North Atlantic Treaty was under negotiation.

The chief points of my testimony were these:

1. That making West Germany into a sovereign state would inevitably result in the creation by Russia of an East German puppet state; and that it would also in all probability result in a Soviet effort to push the Western Powers out of Berlin.

2. That stretching the Atlantic Treaty commitment into a promise to defend Western Europe at the Iron Curtain would constitute the making of an unfulfillable promise; and that the attempt to fulfill any such undertaking would result in rearming West Germany, in spite of Mr. Acheson's unqualified assurance that no form of German rearmament would be considered.

3. That rearming West Germany would not, if undertaken, create a position of strength from which the West would be able to negotiate an all-German settlement permitting all of Germany to join the NATO alliance; but that, on the contrary, it would freeze the partition of Germany and of Europe, undermine West European morale, and increase the tensions between Russia and the West without making Western Europe defensible against Soviet invasion.

The first two of these prognostications were, as you know, promptly fulfilled. The third contention still remains a matter of debate, although it is difficult to see how anyone can claim the contrary.

Some of you may have seen the plea against altering our present policy by Mr. Acheson in the April issue of Foreign Affairs. Mr. Acheson and Mr. Dulles make strange bedfellows. Both are convinced that the policy we have pursued since 1949 has been and still is a great success. The facts, however, speak for themselves.

We are no nearer to German reunification and a European peace settlement than we were 9 years ago.

NATO is getting weaker, not stronger. Its members have failed to develop anything like a common political policy, as witness Cyprus, Algeria, and the invasion of Egypt. They have not even reached agreement on a common military policy, as evidenced by their repeated failure to live up their own force goals and by the current disagreement over the distribution of atomic weapons and the establishment of launching sites for ballistic missiles.

The long delay in German rearmament, the reduction of the British Army of the Rhine and the withdrawal to North Africa of 400,000 French troops have made a mockery of the defensive shield contemplated by the NATO planners. The dispute over Cyprus has broken up the Balkan alliance and alienated both Greece and Turkey from Great Britain.

Not only is the obsolete defensive structure of NATO deteriorating but NATO's value as a bargaining counter is rapidly diminishing.

The sole and very real value of the NATO alliance has been that it served notice on the part of Canada and the United States that they would consider an attack upon any of the European signatories as an attack upon themselves.

Disengagement of the opposing forces in Central Europe will have no effect whatever upon this commitment.

As long ago as 1949, the alternative to the Acheson-Adenauer policy—now the Acheson-Adenauer-Dulles policy—was to recognize three facts: that there could be no European peace settlement so long as Germany remained partitioned; that neither Russia nor the West could hope, without war, to gain control of a reunited Germany; and that the only sensible solution would be an agreement providing for mutual withdrawal and the military neutralization of a reunified Germany.

* * * * *

I venture to express the opinion that, if it were not for American intransigence and European fear of opposing the United States, majority opinion in Europe would for some time have been overwhelmingly in favor of such a solution. I would go further and say that, were it not for the iron grip in which Chancellor Adenauer holds his country's foreign policy, the Germans themselves would today gladly accept military neutralization as the price to be paid for reunification.

In order not to discuss disengagement in the somewhat imprecise philosophical generalities of Mr. Kennan, let us consider what might be gained by a specific proposal.

You may recall that, in November 1956, the Soviet Government proposed to the United States a mutual withdrawal from all of Europe west of the Soviet frontier and the working out of a general European security agreement. This was shortly after the Polish and Hungarian uprisings. Let us suppose that, instead of brushing off this overture as insincere propaganda, our Government had made a counter-proposal. Let us suppose that this counter-proposal would have contained these suggestions:

That the United States welcomed the Soviet proposal as a long-range objective but that a mutual withdrawal must be undertaken gradually, in a carefully phased step-by-step procedure.

That the first such step might be for Soviet forces to retire behind the Oder-Neisse line in exchange for an Anglo-French-American withdrawal to the western bank of the Rhine.

And that this mutual withdrawal should be accompanied by agreements providing for the release of West Germany from NATO and of East Germany from the Warsaw Pact, and for the neutralization under United Nations supervision of the evacuated area, with the four-power status of Berlin to remain unchanged pending reunification of the two German republics.

The Russians would, of course, have boggled over the demand that Western troops should remain in occupation of that small part of Germany which lies on the left bank of the Rhine. We might have countered by saying that the proposal provided for the Western evacuation of considerably greater, more populous and more important territory than that to be evacuated by the Russians. We might even have suggested to begin with, as British Labour leaders have suggested, that Russia evacuate Poland and Czechoslovakia as well as East Germany. We cannot antipicate what sort of bargaining might then have resulted.

But let us assume that some sort of bargain, not too far from our hypothetical counter-proposal, might have resulted. What would have been gained?

A major cause of East-West tension would have been removed through the neutralization of Germany. Germany would have been prevented from coming into possession of nuclear armament. A laboratory would have been created in which the United Nations could test out the techniques of inspection and enforcement. A state of affairs would have been established in which the two German states could gradually find their own way toward reunification. And, most important of all, the first step would have been taken toward the liberation of Eastern Europe from Soviet coercive power.

Now, as a matter of fact, the hypothetical counter-proposal just stated was actually submitted to President Eisenhower in December 1956 by the participants in the Arden House Disarmament Conference, of which I was one. The proposal was taken to the President by 2 Senators, 1 a Republican and the other a Democrat. It was rejected chiefly on the grounds that Chancellor Adenauer would not like it.

This was not the only occasion in the past on which I have wondered whether American policy was being shaped in Washington or in the West German capital of Bonn.

Since then, a number of rather similar proposals calling for varying degrees of mutual withdrawal have been put forward. The Poles have produced the Rapacki plan, which does not provide for any mutual withdrawal but for the creation of a nuclear-free zone including West and East Germany, Poland, and Czechoslovakia.

The Rapacki plan has aroused considerable interest in Western Europe, particularly in Norway and Denmark. Our Government has flatly rejected it. My own view is that, by itself, the Rapacki proposal would tip the balance of power on the continent in favor of the Soviet bloc; but that it might be an important adjunct to an agreement providing for mutual withdrawal of conventional forces.

* * * * *

Let me now pass on to other possible items for the agenda of a summit meeting.

The Russians have not only suggested that they might consider disengagement in Europe but have also put forward some interesting proposals for disengagement in the Middle East. Their note of February 17, 1957 proposed what amounted to a hands-off agreement, including an arms embargo and a mutual undertaking not to interfere in the internal affairs of the Middle Eastern countries. It likewise indicated a willingness to consider an agreement to strip economic assistance of political overtones.

The proposition as a whole was unacceptable because it added up to a one-sided withdrawal on the part of the West. Britain and the United States have certain military commitments and several bases in the Middle East. They have very large commercial interests and investments. Britain still has a colony in Aden and certain valuable preferential positions through its protectorates over the gulf sheikdoms. The Russians, on the other hand, have little to give up except their recently acquired political influence over the United Arab Republic—Egypt, Syria, and Yemen—and, of course, their hopes of expanding their newly gained political bridgehead.

Nevertheless, the Soviet proposals for an arms embargo, for noninterference in the internal affairs of the region and for stripping economic aid of political conditions were, I think, well worth exploring. Our Government, however, failed to express the slightest interest, rejecting the whole proposal out of hand with the usual denunciation of insincere propaganda.

I would like to suggest that, at the forthcoming summit meeting, it might be well to consider disengagement in the Middle East along with disengagement in Europe. Our present policy in the Middle East is no less bankrupt than our policy in Europe. * * *

It is almost certain that any proposal for disengagement in Europe acceptable to the West will call for a disproportionately large Soviet withdrawal, so long as Britain, Canada, and the United States feel that they cannot withdraw their troops from the Continent altogether. It is hard to find in Europe any compensation acceptable to the Russians for a disproportionate withdrawal. But it is not too difficult to see how the discrepancy might be offset in the Middle East.

In my view, the fundamental basis for a bargain at the summit meeting lies in the fact that, while Russia occupies an ultimately untenable position in eastern Europe, the Western Powers occupy an ultimately untenable position in the Middle East.

Neither side will retreat if it thinks that the other will move in on the heels of its retirement. Neither side will retreat if, by withdrawing, it sees itself as the victim of an unequal bargain.

The Russians want us to withdraw from bases in the Middle East which threaten Soviet security much as Soviet bases in Mexico would threaten our security. We want Russia to retreat from positions in eastern Europe which threaten the security of our allies.

The quid pro quo for an unequal withdrawal in Europe might well be the evacuation of our Dahran base in Saudi Arabia and our agreement to stop any further arming of the middle eastern countries which border on the Soviet Union. Turkey would have to be an exception because of its membership in NATO, but the United States could agree not to maintain or establish American bases on Turkish territory. The Russians, for their part, would have to agree to stop arms shipments to Egypt, Syria, Yemen or any other middle eastern country.

As a final Middle East item on the agenda, I would suggest a mutual agreement to guarantee the existence of Israel within its present armistice boundaries, except to the extent that these boundaries may be eventually rectified by mutual agreement between Israel and its Arab neighbors.

This would be my docket for the forthcoming summit meeting. I should scarcely hope to see all of these objectives achieved, but I should definitely hope to see some real progress toward their achievement. I only wish that our Government were approaching this meeting with anything like such a program.

Mr. Speaker, Mr. Warburg is to appear before the Senate Foreign Relations Committee on May 23. It is well that his views are to be accorded a hearing. I hope that the Secretary of State will see fit to tell the committee, and the Nation, what he thinks is wrong with them.

Oil Import Limitation

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1958

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a release entitled "The Oil Imports Problem, an Effective and Desirable Answer." The economic health of the oil industry is vital to the southwestern part of our country, indeed to the entire Nation. For some time it has been apparent that voluntary limitation of oil imports has not been effective, so that other steps must be taken to preserve this industry. Yet Govern-

ment regulation is repugnant to those enterprising businessmen comprising the oil industry. The risk, speculation, profit, and loss that constitute private enterprise are all present in oil exploration and drilling. For some time the normal demand and supply factors of this domestic industry have been upset by excessive importation of oil. In Texas production of oil has been cut back to such a few days "allowable" of pumping that many small oil producers are threatened with extinction. Widespread loss of such oil production would seriously endanger this Nation's economy, and defense posture, since domestic oil most certainly would be needed in time of national emergency.

Therefore, I would like to call the attention of my colleagues to a bill presently pending as an amendment to the Trade Agreements Act, which is before the Rules Committee for a rule. This bill, known as the Mineral Resources Security Act of 1958, deserves the thoughtful consideration of every Member. To aid in its understanding, I would like to present a description of "the oil imports problem, an effective and desirable answer," by the information service of the Texas Independent Producers and Royalty Owners Association.

The release follows:

THE OIL IMPORTS PROBLEM—AN EFFECTIVE AND DESIRABLE ANSWER

The oil imports bill now favored by independent producer groups throughout the Nation and most other congressional and industry proponents of a curb on excessive oil imports is known as the Mineral Resources Security Act of 1958—H. R. 11781, by Representative FRANK IKARD, Democrat, of Texas.

This bill, which would amend the Trade Agreements Act now before the House Ways and Means Committee, would make sure that oil imports increase only when domestic production is also growing, and would provide a self-executing means of administering the limitation without running the risk of extending Federal control.

Imports of both crude oil and products would not exceed a 16.6 percent relationship to domestic production, the ratio found to be the maximum consistent with national security and which Congress clearly intended as the limit when it last extended the Trade Agreements Act of 1955. Licenses or rights to import would no longer be allocated by arbitrary decision of a governmental agency, with all the discriminations and controls-promotion that entails, but through a competitive bidding arrangement similar to that practiced by Brazil and by our own Government on certain State and Federal lands.

This plan is superior to the numerous other courses considered for several reasons:

1. All the straight quota plans so far devised, including the current voluntary program now in effect, contain fatal deficiencies which this bill would avoid.

On any straight quota plan, no means has yet been devised for allocating import rights to companies that doesn't involve discriminations and encourage ever-expanding Federal controls. Most people who have studied this matter closely agree that the nearest thing to a fair quota allocation program would be one allocating quotas only to refiners based on refining through-put capacity—a plan some administration officials are known to favor over the current chaotic one.

Yet even that proposal is far less desirable for several reasons. In the first place, it contains no provision for limiting products of oil, which would unavoidably have the effect of encouraging refining capacity abroad at the expense of United States refiners and employment. Second, allocating import rights to refiners, many of whom would sell such certificates to other refiners because they are in no position to process foreign oil, would be tantamount to a Government subsidy. This is true because there is an admitted economic advantage in imported oil which accrues to any person with an import quota or certificate. Third, this refinery allocation plan would do nothing to equalize costs of foreign and domestic oil, thereby posing a constant threat to United States crude price structure and particularly the marginal or stripper wells which would be abandoned with a price collapse here. Fourth, such a quota program would contribute little toward reducing the clamor of ever more newcomers for import rights. The obtaining of a quota would be a virtual guaranty of a profitable enterprise.

2. The Mineral Resources Security Act would avoid objections of some to a straight tariff program.

Equalization tariffs or duties are beyond doubt the most equitable means of removing unfair advantage of foreign imports when restraint is essential to security and economy, and they are in keeping with the best tradition of the American free-enterprise system. Nevertheless, occasions arise, just such as this, when the imposition of a straight tariff or excise tax would not achieve the intended objective of encouraging reasonable imports from accessible sources while preventing undue dependence on unreliable scurces.

Since Middle East oil is vastly cheaper than oil produced particularly in Canada and to a lesser extent in Venezuela, a straight tariff high enough to slow Middle East imports would be altogether prohibitive of imports from sources in this hemisphere. This is contrary to defense objectives.

Additionally, there are deep-seated prejudices in some quarters against tariffs as such.

This bill would avoid such objections. Duties would be set on the basis of normal economics based on competitive bidding by the importing companies. Obviously bidding for licenses to import Middle East oil would be much higher than licenses to import Canadian oil, thereby achieving the intended defense objective without encountering the most-favored-nation obstacle. And the stigma attached to tariffs would be averted.

3. This proposed imports plan would work to the distinct advantage of free world allied nations which supply the United States with oil.

Under the present unsuccessful voluntary plan, or any other quota plan, nations such as Canada and Mexico—those we can depend most directly upon in emergency—will inevitably find their oil squeezed out of this market by vastly cheaper oil from such unreliable areas as the Middle East. This has already been proved in the case of Canada which has lost most of her markets here in recent months primarily because cheaper oil outside this continent displaced it.

Under this plan imports from Canada would be at no price disadvantage. Competitive license bidding would equalize prices and, additionally, the President would be authorized to assign country or area quotas as needed to assure reasonable access to this market by reliable sources in this hemisphere.

4. This plan has distinct advantages also for legitimate importing companies, as opposed to those entering the international field strictly to profiteer from the price differential between foreign oil and domestic oil.

Under the present voluntary arrangement or any other quota plan there will be demands from more and more newcomers for import rights—there being a virtual penalty for not importing. Any company or broker who can gain adequate financing will insist upon being granted a quota, and the Government agency apportioning them out will be unable to resist such demands for fear of promoting monopoly in imports.

Under any such quota arrangement, where import quotas amount to outright subsidies without regard for normal economics, the established importers will be compelled to yield more and more markets.

Under this bill, on the other hand, the artificial incentive for newcomers to demand import rights would disappear as bidding became competitive, and their only reason for entering the field would be the desire to go legitimately into foreign operations. Yet the field would be open to assure that bidding for import licenses remained truly competitive. For the most part, these speculators in the import field have neither the facilities nor financing to develop foreign markets, and are interested solely in capitalizing on the virtual subsidy that now goes with the assignment of import rights. Those with a legitimate interest in oil operations abroad would not be hurt, and the windfall resulting from the cost differential in imports would be effectively removed. This would be a small price indeed to pay for industry stability and an orderly imports program.

5. The Government and consuming public would benefit from this program.

Most direct benefit accruing to the Government would be in the form of substantial revenue derived through competitive bidding for import licenses or certificates. This would return to the Government a significant percentage of its cost in promoting these foreign investments, and would recoup a portion of the revenue lost to State and local governments when imported oil displaces domestic production.

An additional benefit would be the maintenance of a program with a minimum of governmental expansion to provide regulation. Under any quota plan, including the current voluntary one, endless complications develop and controls powers are necessitated, not the least of which expenditures are the regular emergency meetings of the Cabinet Committee to deal with new problems.

The consuming public would be the beneficiary through the assurance of, first, a continuing adequacy of oil resources to meet free-world requirements in peace or war, and second, a guaranty against the price gouging that would assuredly result if our Nation ever became dependent upon foreign sources for this critical mineral.

Mrs. Ray Godbey, National President of Ladies' Auxiliary to the Veterans of Foreign Wars, United States of America, Carries Forward Nationwide Classroom Helpers Program

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1958

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present more information and timely and very significant facts about the remarkable service already having been rendered by members of the Ladies' Auxiliary to the

Veterans of Foreign Wars, United States of America, in initiating and carrying forward their very remarkable and appreciated classroom helpers' service in the schoolrooms of our Nation.

But first I should like to pay tribute to the work of the 375,000 members of the Ladies' Auxiliary to the Veterans of Foreign Wars, who this year have sponsored an outstanding new project called Classroom Helpers, to bring direct aid to our Nation's schools.

Serving as classroom helpers, thousands of auxiliary members in all 48 States have worked in the classrooms and offices of their local schools during the 1957–58 term, on a regular schedule, week after week, as unpaid volunteers.

The classroom-helpers project was planned and organized by one of my constituents, Mrs. Ray Godbey, of Lynwood, Calif., who is the national president of the VFW Auxiliary.

Alarmed by the fact that the Nation's schools this year would be operating with a shortage of 135,000 teachers, a shortage of 159,000 classrooms, a shortage of time for 840,000 youngsters who would have to go to school half time in swing shifts, early last fall Mrs. Godbey called on leading educators to find ways that the VFW Auxiliary could help.

She discovered that in the average classroom as much as one-third of the teacher's time was consumed by routine, nonteaching tasks such as keeping attendance and other records; duplicating and distributing work materials; collecting money for school lunches; milk funds, and drives; helping to supervise on the playground and in the lunchroom. If these jobs could be handled by volunteer workers, this time would be available to the teacher for all-important instructional work. The VFW Auxiliary offered to take on these jobs wherever they were needed in their 7,000 home towns.

The classroom-helper project was launched last October in Kansas City, Mo., and already the impact of the volunteers' work in easing critical school problems has been felt in numbers of cities and towns across the Nation. The classroom-helpers plan has won the praise of teachers, principals, and local superintendents. It has been warmly endorsed by leading educators, not only for the immediate aid it offers, but for contributing to the continuing interest and participation of citizens in their schools.

Dr. Lawrence G. Derthick, United States Commissioner of Education, said of classroom helpers:

> It has been my observation during more than 30 years of educational work that when our citizens become conscious of the problems of our schools, they take effective action. The activities of the Ladies Auxiliary to the Veterans of Foreign Wars which lead to greater public understanding of our schools will contribute much to the enrichment of American education.

I became so interested in this significant service of these distinguished American women that I asked my great friend, Mrs. Ruby Godbey, national president, to give me her own statement about it so that we all might share some of her experiences and to the further end that the uniqueness and timeliness of this worthy program might be better understood and possibly patterned after in a great many of our communities. Following is a memorandum which I have received from Mrs. Ruby Godbey:

MEMO TO CONGRESSMAN CLYDE DOYLE FROM MRS. RAY GODBEY, NATIONAL PRESIDENT, LADIES AUXILIARY TO THE VETERANS OF FOREIGN WARS

Since last October, I have made official visits to all 48 States and the District of Columbia. Each place I stopped—in large cities and small, industrial States and agricultural—I have talked about classroom helpers. I can tell you now that never in my memory has there been an auxiliary program that provoked such immediate interest, not only on the part of our own members, but of the public as a whole.

It is as though we as a nation are at last becoming aware of a fact the noted writer H. G. Wells predicted nearly half a century ago: "Human history becomes more and more a race between education and catastrophe." The events of the past few months have emphasized that fact—and I believe the public concern about education and the shocking shortages under which our schools have been forced to operate has at last been aroused.

It will take time and intensive interest and support from the public to correct these shortages and provide for the ever-growing number of youngsters to be educated in the future. So I am not suggesting that a volunteer effort such as our classroom helpers' program can provide the whole answer for the problem—but our experiences this year have proved to us classroom helpers can provide an immediate and vital part of the answer, by relieving teachers from time-consuming nonteaching jobs, so their time can be devoted to instruction work.

That our helpers have provided an invaluable service this year in hundreds of schools across the Nation is substantiated by the letters I've received from teachers, principals, school superintendents. Letters from parents, newspaper articles, radio, and television broadcasts have shown me how enthusiastic is the public's approval of our work.

And this, of course, is only the first year for classroom helpers—a year which, understandably, had to be devoted largely to working out details of the plan with individual schools to determine their specific needs and to find the right helper for the right job.

Despite this, we found the program was so needed in some areas that our volunteers were pressed into immediate service and have already chalked up several months of work.

In a north Georgia town when our volunteers went to offer their services, one principal said, "There is never a day when we don't have work for you to do." Another asked simply, "Can three of you start in my school day after tomorrow?"

In South Dakota one school system was able to open its libraries again, when our VFW Auxiliary members came in to help sort and mend the books and stay on duty during the day.

In a New Mexico town, helpers have added to their list of duties and relieve teachers supervising at crossings before and after schools. In Rhode Island they make it possible for teachers to go on with their classwork instead of having to take time out to assist with eye tests and other health checks. In a number of areas some helpers have been specially screened and assigned to serve in schools for retarded and physically handicapped youngsters.

And these are just a few of the stories.

I could not conclude this brief report to you without mentioning the helpers' reaction to their work. Without exception they have told me it is the most thrilling, the work they've ever done as volunteers.

Faith of Our Forefathers

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1958

Mr. BOSCH. Mr. Speaker, Mr. Leonard J. Demchak, national chairman, Catholic Action, Catholic War Veterans of the United States of America, resides in Richmond Hill, Long Island, N. Y., in my Congressional District. He is doing an outstanding job in bringing forcefully to the attention of our citizens the fact that we must not forget one of the principles on which this Nation was founded—belief and trust in God.

Under leave to extend my remarks, I include a letter written by Mr. Demchak and the parchment, Faith of our Forefathers, to which he refers. This pinpoints the necessity for an expression of faith such as is outlined in my bill, H. R. 6762, introduced on April 9, 1957.

The letter follows:

To: All commanders, first vice commanders, and Catholic Action chairmen.
Subject: "Faith of Our Forefathers."

Since the successful launching in October 1957 of the Russian satellite moon Sputnik, and even following our own launchings of the American Explorers and Vanguards, there have been repeated comments that our country's educational system has fallen far behind the Russian system, and has need for radical revision. The need for curriculum changes is there, but of far greater import is the need to return moral training to the classroom.

The Communists in Russia teach their children in school that the state is supreme and that the children must dedicate themselves for the greater glory of the state. They will not acknowledge that it is God's laws and His creation of the universe that keeps even their satellite circling the earth.

Here in the United States, God has too often been expelled from our public schools, cut from our films, red penciled from our literature. Our Nation was born of the marriage of God and law, therefore, law without God will never make a fitting home for the American Nation.

As our Nation embarks upon a new scientific program, and our school systems are revised to bring more science and math into them, let us not forget that our forefathers placed their trust and belief in God, and asked of us to teach our children and our children's children, that God must be supreme. As long as we have faith in God, we will love our country, and as long as we love God, we will serve our country.

We urge all members and units to call upon their friends and neighbors to join us in spreading the message of the Faith of our Forefathers in God and His commandments. We, therefore, ask that you display the parchment of the Faith of our Forefathers in schools, public institutions, and your homes.

Yours in the C. W. V.,

LEONARD J. DEMCHAK,
National Chairman Catholic Action, Catholic War Veterans of the United States of America.

FAITH OF OUR FOREFATHERS: GEORGE WASHINGTON (FEBRUARY 22), THOMAS JEFFERSON (APRIL 13), BENJAMIN FRANKLIN (JANUARY 17)

Faith in God—Service to country—love of home. These phrases distinguish the great moral strength and vital spiritual fiber of our forefathers.

We honor them, for their undying courage in the face of extreme dangers; for their belief that the earth would yield food if tilled honestly; for their confidence in themselves to shape their own destiny; for their loyalty to their country and their faith in Almighty God. Their ideals, their strength and their work made America great.

May we who shoulder the responsibilities of citizenship remain true to the heritage they forged. May we enrich our freedom and faith and acknowledge our debt to our forefathers.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Daily Digest

HIGHLIGHTS

Commerce Department appropriation bill passed by House.

Senate

Chamber Action

The Senate was not in session today. Its next meeting will be held on Wednesday, May 21, at 12 o'clock noon.

Committee Meetings

(*Committees not listed did not meet*)

APPROPRIATIONS—COMMERCE

Committee on Appropriations: Subcommittee continued its hearings on fiscal 1959 appropriations for the Department of Commerce and related agencies, with testimony from Secretary of Commerce Sinclair Weeks and James R. Durfee, Chairman, Civil Aeronautics Board, both of whom were accompanied by their associates.

Hearings continue tomorrow.

MILITARY CONSTRUCTION

Committee on Armed Services: Subcommittee on Military Construction continued its hearings, today in executive session, on S. 3756, military construction authorizations for fiscal 1959, with testimony from the following Air Force representatives: John M. Ferry, Special Assistant for Installations; Brig. Gen. William Rentz, Deputy Director of Installations; Maj. Gen. Bernard A. Schriever, Deputy Commander for Ballistic Missiles; Brig. Gen. Christian Dreyer, Deputy Director for Real Property; and Col. William Leonhard, Ballistic Missiles Division.

Hearings continue tomorrow in executive session.

FHA AUTHORIZATIONS

Committee on Banking and Currency: Committee, in executive session, ordered favorably reported without amendment S. J. Res. 171, to increase FHA authorizations by $4 billion.

HOUSING

Committee on Banking and Currency: The Housing Subcommittee continued its hearings on pending housing legislation with testimony from Senators Bible and Javits; Silas F. Albert, Grand Rapids, Mich., and Walter J. Gill, Newark, N. J., both representing the National Association of Real Estate Boards; Roland Boyd, Wherry Housing Association; and Frank Flynn, Jr., Home Manufacturers Association.

Hearings continue tomorrow.

SMALL-BUSINESS FINANCING

Committee on Banking and Currency: The Small Business Subcommittee, in executive session, ordered favorably reported to the full committee S. 3651, Small Business Investment Administration Act of 1958. The bill was amended by striking all after the enacting clause and inserting in lieu thereof language embodied in a committee print.

The full committee will meet in executive session to consider this matter on May 27.

TARIFF AND ANTIDUMPING

Committee on Finance: Committee, in executive session, ordered favorably reported with amendments H. R. 9291, to define parts of certain types of footwear for tariff purposes; H. R. 6006, to amend the Antidumping Act to provide for greater certainty, speed, and efficiency in the enforcement thereof; and H. R. 10015, to continue for 1 year the suspension of import duties on metal scrap.

FOREIGN POLICY

Committee on Foreign Relations: Committee, in executive session, agreed to the following two motions: (1) that the committee authorize its Subcommittee on Latin American Affairs to proceed forthwith with a study of United States-Latin American relationships and problems and that the said subcommittee report its findings to the full committee for such action as the latter deems appropriate, and (2) that a subcommittee of four, to consist of Senators Green, Fulbright, Wiley, and Hickenlooper, explore the possibilities of an examination of United States foreign policy throughout the world somewhat along the lines of the study conducted last year by the Committee on Foreign Aid.

South Texas County Judges and Commissioners Deplore Veto of Omnibus Public Works Bill

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 21, 1958

Mr. JOHNSON of Texas. Mr. President, among the many messages I have received from Texas citizens deploring the President's veto of the omnibus public-works bill passed by Congress is a resolution passed by the South Texas County Judges' and Commissioners' Association.

I ask unanimous consent that the text of this resolution, as set to me by Elmer Zahn, secretary-treasurer of the organization, be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Be it resolved, That we go on record as deploring the Presidential veto of the Omnibus Public Works Act Senate bill for a second time.

We assure all our Members of Congress, Majority Leader LYNDON JOHNSON, and Speaker SAM RAYBURN that the county judges and commissioners of south Texas have confidence in their leadership and they have our unanimous support in any course which they in their judgment determine to be in the interest of Texas and national welfare in order to secure the final passage of these necessary authorizations either by a vote to override such veto or by new legislation.

Address by Hon. William F. Knowland Before American Feed Growers Association

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 21, 1958

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered at the American Feed Growers Association conference luncheon in Chicago, Ill., on May 20, 1958.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH OF UNITED STATES SENATOR WILLIAM F. KNOWLAND DELIVERED AT THE AMERICAN FEED GROWERS ASSOCIATION CONFERENCE LUNCHEON, CHICAGO, ILL., MAY 20, 1958

This is not the year for men of little faith to dominate our thinking or our actions.

It was only a few short months ago that men of little faith were prepared to accept the false notion that the godless men in the Kremlin had an economic, a political and a military ascendancy over the United States because they had sputnik and mutnik in the air and we had none.

In November of last year I stated in my home State of California:

"This is no time for either defeatism or complacency. It is no time to sell America short."

In the intervening months our Nation has successfully put into orbit Explorer I, Vanguard II, and Explorer III.

It is, of course, always dangerous to underestimate the opposition. It can also be fatal to overestimate it.

We must not take our constitutional form of government or our free enterprise system for granted.

Neither fall into the category of something that can be locked in a safe deposit box and kept forever secure. Each generation must be prepared to make the necessary sacrifices to maintain them that our Founding Fathers were prepared to make in the first instance.

Other nations have been or now are larger in land area, in population and in natural resources. Yet they have not been able to give to their people the freedom and the standard of living Americans have enjoyed.

As important as is the productive capacity of our Nation and its military strength, these are not the factors which alone could preserve our freedom or enable us to maintain a free world of free men. The inner strength of America has not been its great cities, its huge industrial plants, its extended transportation systems or its variety of natural resources as important as these are.

The factors which made America an inspiration to the rest of the world grew out of our Declaration of Independence, the Constitution of the United States and the spiritual values which the founders of our republic recognized and by which they were guided.

We have recognized that there is a higher moral law to which governments are also accountable. We have humbly acknowledged the divine inspiration which has made and preserved us as a nation.

America is still the authentic revolution. The flame of freedom which was struck at Concord and Lexington still is an inspiration to the enslaved behind the Iron Curtain.

But it is also an ageless lesson that no outsiders can win independence for a people. They must be willing to pay the price in blood and resources to gain their our freedom.

We do recognize, however, that when freedom is destroyed anywhere a bit of freedom is destroyed everywhere.

We have read of and been inspired by the action of George Washington in kneeling in prayer during the dark days of Valley Forge and of Lincoln seeking divine guidance during the dark days of the Civil War.

The priceless ingredient for our people has been our constitutional form of government which guarantees our religious, personal, and economic freedom.

In my judgment we do a disservice to the Nation and to ourselves when we lose sight of the fact that business profits, wage increases, and other benefits depend upon increases in productivity.

Our objective always should be to increase and put more of our productivity within the reach of more of our people. It should also be to leave sufficient incentive and resources, after taxes, for the people to exercise their freedom of choice in the market place.

Big government with confiscatory taxes can deprive them of that incentive.

Big industry and big labor with monopolistic power can also deprive them of that freedom of choice.

No group in industry or in labor has the right to strangle the economic life of 170 million Americans.

This is too much power for responsible men in business or labor to want, and is far too much for irresponsible ones to be allowed to have.

Our political freedom and bill of rights is closely related to our economic freedom. If one is destroyed the other will not long endure.

In no other political or economic system do the people have a greater freedom of choice.

The monopolistic power of business was checked by our antitrust statutes. That of the labor unions in recent years has been unrestrained. The power of the labor boss over the rank-and-file member has in many cases become tyrannical and unchecked.

The tragic and sordid revelations of the Senate's select committee, under the chairmanship of Senator MCCLELLAN, of Arkansas, with its uncontested evidence of widespread corruption, arrogance, and abuses in the operations of the unions investigated to date, have, in my judgment, not only shocked the working men and women who make up the membership of organized unions but also the American people throughout the Nation.

The American worker believes in our constitutional guaranties for our citizens. Why then does he tolerate the dictatorship and corruption in some of his unions.

The only reason, in my judgment, is because he does not have the tools to clean house.

How bad has corruption become? Let me quote from two well-known Americans. On Sunday, December 8, 1957, in New York, Francis Cardinal Spellman said:

"Daily we learn the sordid details of corruption and violence featured by newspaper, radio, and television. The close association of some union leaders with known criminals, the creation of dummy locals, the rigging of elections, extortion, acid throwing, graft, and the misuse of union funds—these blatant violations of the trust of their fellow

workers make all of us who are friends of labor feel shame and indignation.

"But we must do more than be shocked or feel morally aggrevied. We must act, and, while there is still time, remove from power unscrupulous leaders and their underworld hirelings."

Senator JOHN L. MCCLELLAN stated the situation as he found it in the following words:

"We have had ample evidence in our hearings of intimidation and victimizing of rank-and-file members by hoodlum control of some of the unions. The hearings have also revealed raids and plundering of union treasuries, violence against workers themselves, as well as instances of violence against management. The continuation of our work will, we are confident, result in legislation of benefit to the country and to the 17,385,000 working people in the United States who are members of unions."

The Interim Report of the select committee on Improper Activities in the Labor-Management Field stated:

"As an overall finding from the testimony produced at our hearings, the committee has uncovered the shocking fact that union funds in excess of $10 million were either stolen, embezzled, or misused by union officials over a period of 15 years, for their own financial gain or the gain of their friends and associates."

I believe in and unqualifiedly support:

1. The right every American worker to join a union.

2. The right of collective bargaining.

These rights are now and will continue to be protected by law.

The right of every union member to have a free voice in the administration and activities of his or her union is a vital civil right of the first magnitude. If the union does not act in the best interests of the membership, the individual should be able to express his dissent without fear of coercion of retaliation.

I have introduced legislation in the Senate, and support similar legislation in California, which will guarantee democratic control by union members over the officers and activities of their respective unions. This legislation does the following:

1. Guarantees the election of union officials by secret ballot and assures that the ballots cast are those that are counted.

2. Provides for the recall of union officials who misuse their positions of trust and responsibility.

3. Prevents conspiracies between management and union officials that work against the welfare of union members.

4. Protects union members' welfare and pension programs.

5. Requires that where unions are permitted, under law, to represent all employees in an industry or plant, all employees must be admitted into the union if they should desire union membership.

6. Provides that union members shall have a voice in the conditions, terms, and duration of strikes.

7. Prevents arbitrary control over local unions by trustees appointed by national or international unions.

8. Provides for regulation by union members of the actions of their unions on questions of excessive union fees, or assessments.

It is necessary, I believe, to raise the issue of a worker's bill of rights at this time in our Nation's history. It is important to the worker and to the public.

This is not a partisan issue. I have great faith in the ability of the citizens of this Nation to independently see the difference between truth and falsehood.

The stake which 170 million Americans have in democratically conducted unions is a large one.

One hundred and seventy million Americans also have a vital interest in American agriculture throughout the Nation. These farm facts are pertinent:

Income per person on farms last year was highest on record—up 2 percent over 1951, the previous high year.

Farm assets are an alltime high—$188 billion as of January 1, 1958.

Farmers have less than $11 in debts for each $100 of assets. In 1940, the ratio was $19 for each $100.

Owner equities rose 7 percent during 1957 to a peak of $168.4 billion.

Farm ownership is also at a record high. Only 1 in 3 farms has a mortgage.

Not long ago there was a lot of carping criticism of our Secretary of Agriculture.

As for me I have respect and high regard for the ability, courage, and integrity of Ezra Benson.

As a Californian, I have an added interest in agriculture and its future. We are now the leading agricultural State in the Union.

Our farmers produce nearly all of the Nation's almonds, dried figs, olives, and artichokes. California contributes to the country's market basket more than 90 percent of all apricots, dates, grapes, lemons, plums, dried prunes, walnuts, and brussel sprouts.

California's cash farm income—$2,800 000,000 last year—leads the Nation. In 1 year it exceeds the value of all the gold ever mined in the Golden State.

We rank first in the production of 36 products ranging from alfalfa to turkeys. We slaughter more than 2½ million head of cattle annually—more than any other State in the Union. Each year, more than 1 million miles of food labels are printed for the cans that hold the products of the California farmer.

Yes, we have a great interest in agriculture today and the developments that are in the offing. New horizons are always looming up ahead.

For a long time we have referred to farming as a basic industry. It is basic in the sense that over half of all the raw materials consumed in the United States, including industrial consumption, come from the farm.

But the significant fact about agriculture today is that it is almost impossible to separate farming in the pure sense from the great complex of industries which has sprung up about it.

This relationship works two ways.

First, there are the vast food processing and marketing establishments, the great meatpacking houses and other businesses which are essential links between the farm and the dinner table.

Second, there is a huge bloc of industries which came into being purely to meet the needs of the man on the land. These include the fertilizer industry, the farm machinery manufacturers and even the auto makers, for farmers are heavy purchasers of trucks. Also in this group is the vital feed industry.

This country has never been faced with famine. Perhaps that is the reason why the true state of affairs in agriculture has not been fully appreciated by the public.

United States farmers always have produced in sufficient quantities to keep our growing population well fed.

We have acknowledged only casually that unless scientific progress is stepped up our food producers might 1 day be unable to grow enough for all.

When you attempt to predict the future you deal in tricky stuff. Before World War II, for example, some experts estimated that the United States population would level off at around 165 million after 1975. This figure was exceeded in 1955 and the estimate for 1975 has now been increased to 225 million.

There are risks in making any kind of forecast. But it seems reasonable to estimate that in order to feed that many additional mouths we will have to increase the present rate of production by a least one-third.

If I were to choose one phrase to describe modern agricultural progress, I would pick the agri-dynamics age. If you will look at the record, you will see why it fits so well.

In 1956, production of all crops in this country was about 50 percent above that of 25 years earlier. The dirt farmer of today produces enough for 21 persons. In 1940, he grew enough for somewhat less than 11 persons.

This production miracle stems from advancement on many fronts.

The results reflect tremendous increases in the mechanization of farms, in rural electrification and in marketing methods.

They also reflect advances in the breeding of livestock and poultry, improved control of insert and plant pests and development of better seeds and improved varieties of crops.

The feed industry has been quick to grasp the significance of this scientific revolution in agriculture over the past 50 years. Indeed, it has served as a bridge between scientific advance and the men in the feedlot and the poultry house.

In this sort of progress the consumer has as much at stake as the farmer. It is developments of this kind that help to keep production costs in line.

Few, if any, of us expect the forward surge in agriculture to slow down. Thirty years ago we knew little or nothing about improved fertilizers, antibiotics, better feeds, seeds, and breeds. As Secretary of Agriculture Benson puts it:

"Today the laboratory is as much a part of American agriculture as the barnyard."

Every time the sun rises we have an additional 7,000 mouths to feed. Very soon it is expected that each farmer will produce enough for 25 persons instead of 21. It is highly unlikely that scientific progress will stop there.

You all know that for many years fewer and fewer people have been needed on our farms to meet our constantly growing demands for food.

Today the farm population is only 20 million—less than 12 percent of the total population of the United States. In 1940 we needed 30 million farmworkers, more than 23 percent of the population at that time, to keep us well fed.

Some view this as an indication that the so-called family farm is on the way out.

Actually, our family farms have been developing into larger, more economical units. About 96 percent of all farms and ranches are still family affairs. This is about the same ratio as existed 30 years ago.

It is perfectly sound to speculate that scientific progress to date has merely laid a firm base upon which the family farmer may build toward greater security in the future.

But the farmer himself is not in a position to do the research which will assure his future progress. Historically, this has been done by the land grant colleges and the Federal Government, and now much is being done by private industries associated with agriculture.

The three-way partnership should be continued and strengthened. The outlook is that industry most likely will—and indeed it should—assume an increasingly important role in research.

New acreages that can be drained or irrigated are relatively small when compared with present productive areas. Our cities, towns and industries are expanding outward and eliminating many farms, orchards and ranches. For our future needs our researchers must find new ways to improve production per acre and per animal unit.

This is an area in which the feed industry is particularly well versed. Just one illustration: As late as 1947 it took an average of more than 4 pounds of feed to put a

pound of gain on a broiler chicken. Last year the average was down to a little more than 3 pounds of feed per pound of gain. I am told that prospects are good for reducing the average to a pound of gain on 2 pounds of feed in the near future. In fact, many of the better producers already are doing just that.

Similarly great strides have been made in the production of hogs, sheep and other livestock and in boosting output of milk and eggs. Work with beef cattle and sheep now promises advances commensurate with those in other lines. In every instance, animals are being made to put on more weight on less feed. All species now reach market weights in much shorter periods of time than they once did.

Still, one of the greatest needs for more agricultural research lies right in this area. There must be a continuing drive to keep production costs under control.

Industry as a whole is fully alert to the fruits of research. The fact is, it has no choice except to climb on the research bandwagon. Our economic history clearly shows that companies or industries which do not foster a vigorous research program sooner or later expires or declines to a place of minor importance.

There remain vast fields ripe for exploration.

Intriguing opportunities challenge those who would find new uses for food and fiber crops, new ways to improve distribution and marketing of agricultural commodities.

Research must tailor foods to consumer tastes. It is as sure as night follows day that consumers will dictate more and more the kinds of food which reach the market and the form in which they are marketed.

Why cannot all of agriculture cooperate in giving the man in the street a complete concept of the industry and its problems?

Organized labor and consumers as a whole must be shown that they, as well as the farmer, have a vital interest in maintaining a sound base under agriculture. They spend 25 percent of their incomes for food, much more than for any other family necessity.

Consumers must be made aware that farmers have been doing a good job. In 10 years prices of foods have gone up a little more than 16 percent. What about rents? The tenant pays 47 percent more today than he did in 1947. What about transportation? The cost is up 42 percent compared with 10 years ago. What about fuel? The cost has risen 47 percent since 1947.

Food is still one of the better buys. Why is it a better buy? In large measure because scientific progress has helped the farmer to keep his production costs in line.

But agriculture's role in keeping the country well fed at reasonable prices is far from being the whole story of the industry's contribution to the total economy. More and more, farm commodities are supplying the raw materials for finished items on the consumer want list. These include plastics, chemicals, new fabrics, and so on.

Ultimately, the natural oils, minerals, and other resources from which many of these products have been made in the past will be depleted. But so long as the land is properly cared for, it will go on producing crops year after year. Agriculture, therefore, will assume much greater importance in the future as a supplier of raw materials to other industries.

This brings up another point. Few of us have taken time to consider the sweeping changes in production patterns which are altering the whole complexion of agriculture in this country.

The Corn Belt is expanding from the Midwest to the South. Livestock production is now so dispersed that both the South and the Far West are important factors in the beef industry.

How about cotton? California last year produced 75,000 bales more on 716,000 acres than did Georgia, South Carolina, North Carolina and Tennessee combined on 1,908,000 acres.

Irrigation helped to make the difference, but efficient and progressive production plans were an important influence, too.

Simultaneously, sweeping social changes have been taking place. Rural life today has been accurately described as city life widespread.

Farm people have come a long way toward attaining many of the facilities, comforts and conveniences that city dwellers long have taken for granted. They spend many billions each year for consumer goods. Agriculture is a great stimulus to other industries.

It brings you up short to realize that 10 million full-time jobs are provided just in the the marketing phases of agricultural products. Another 6 million persons are employed in plants which make materials and supplies for farmers' use.

In terms of dollars, agricultural producers spend $12 to $13 billion each year for production goods and services, and that does not count consumer items.

These facts make the point that agriculture, in its broadest sense, is big business. It is larger by far than any other comparable industry. As of last January 1, farm assets alone were at an alltime high of $188 billion.

With America's traditional respect for bigness per se, it is unthinkable that we can any longer deny an industry of this size the recognition it deserves.

Agriculture must, and will, attain coequal status in our economic structure. Industries associated with the agricultural complex must assume a full measure of responsibility in bringing this about.

This means that concrete action must be taken in at least four directions:

1. To find the best possible solution to the problem of surpluses—through improved nutritional standards, to develop new industrial uses for products, and to fully exploit modern marketing methods.

2. To tell agriculture's story so that consumers recognize the broad area of common interest.

3. To recruit an adequate supply of young brainpower capable of staffing the infinite and expanding variety of jobs throughout agriculture.

4. To foster to the greatest extent possible research, both basic and applied, which will give agriculture the tools it needs to keep the country well fed at reasonable cost.

Future careers in agricultural research will be particularly rewarding. One reason why this is so is that agriculture is the one major field, other than medicine, where it is possible to work almost exclusively with living things—to improve upon nature.

Atomic radiation already is being applied in fundamental research with plants and anmals. It can provide us with new and better information on such subjects as how and when to apply fertilizer, or how to further improve livestock and poultry nutrition.

The business end of agriculture must come alive to the intriguing opportunities for improving the preservation and marketing of foods.

For example, milk is still packaged and delivered to the door in much the same way that it was 50 years ago.

As a result of improved refrigeration and transportation, every part of the country now enjoys highly perishable fruits and vegetables the year around.

But billions of dollars' worth of these foods are still lost through spoilage between the truck farm and the dinner table.

The cosmetics industry long ago realized that attractive packaging was a great stimulus to sales. Agricultural processors have made a start toward applying these sales aids to the food field, but the opportunities are still almost limitless.

By using modern merchandising concepts, it is possible to tap hitherto unreachable markets and to stimulate impulse buying. In many parts of the country, machines installed in schools and industrial plants have made large dents in local milk surpluses.

These examples give only a sketchy hint of the broad areas in which leaders throughout agriculture must be up and doing. Legislative fiat alone will never solve all of agriculture's problems.

Agriculture has become big and diverse. The component parts naturally have interests of their own, but they also have some things in common. Advance of the well-being of the industry as a whole is the concern of all.

Again I say, this is no time to sell America short.

We have great problems but also great opportunities.

If we of this generation only use the same courage and commonsense as motivated the men who sat at Philadelphia and with what I believe was divine inspiration, gave us our Declaration of Independence and Constitution of the United States, there are none of our domestic problems we cannot solve and there is no foreign foe we need ever fear.

Departure of Ambassador Mehta of India

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 21, 1958

Mr. HUMPHREY. Mr. President, I have already had occasion to mention on the Senate floor the departure from Washington of Mr. G. L. Mehta of India. There have been many comments in the public press concerning Mr. Mehta's achievements here.

An editorial in the New York Times of April 27, 1958, was entitled "Farewell to An Envoy." I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

The well-known correspondent of the Manchester Guardian, Mr. Max Freedman, wrote a tribute in his newspaper on April 24, 1958, entitled "The Achievement of Mr. Mehta." I ask unanimous consent that the article, too, be printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the New York Times of April 27, 1958]

FAREWELL TO AN ENVOY

Ambassadors, even in these days of instantaneous communication and jet plane travel, still play important roles for good or bad in international affairs. India has been fortunate in her Ambassadors to Washington as the United States has in its envoys to New Delhi.

A notable Ambassador from India, Gaganvihari L. Mehta, is now ending a mission that started on September 25, 1952, when he presented his credentials to President Truman. This has not been an easy period for an Indian envoy. Prime Minister Nehru's efforts to strike an attitude of independence between West and East and to treat both sides in the cold war with equality has sometimes looked from this end like Russia being treated with more equality than the United States. However, Mr. Nehru is recognized for what he always was—a bulwark for democ-

racy and freedom in south Asia. For this the Ambassadors both in Washington and New Delhi deserve thanks.

Where Ambassador Mehta probably was of greatest service to his country was in the fields of economics and finance. He is an expert in these subjects, having come from the business and financial worlds, not from a career service. The first 5-year plan was under way when Mr. Mehta came here, and now the preparations are completed for a new and ambitious program. This has been well explained to Americans, and the help being extended is generous and could be even more so.

G. L. Mehta leaves his successor a task made easier by the fund of good will and understanding he built up here during the last 5½ years. Americans see him go with regret and wish him new triumphs in his native land.

[From the Manchester Guardian of April 24, 1958]

THE ACHIEVEMENT OF MR. MEHTA

(By Max Freedman)

WASHINGTON, April 22.—The departure of an Ambassador from Washington rarely calls for public comment beyond a graceful little tribute to his personal qualities: But there are special circumstances which give Ambassador Mehta of India what it is perhaps not excessive to describe as a unique position in the Washington scene during the first few years of India's independence. A number of Ambassadors came and went like embarrassed phantoms. For the last 5 years all this has changed, as Mr. Mehta has represented the Government and people of India with unwearied tact and heroic devotion.

No country was ever welcomed to nationhood with more acclaim by the American people than was India as she began her inheritance of freedom after the end of British rule, never so noble as in the manner of its surrender. But this country soon learned that India had no intention of basing her policy on debts of gratitude. India's course might be baffling or inconsistent, but it was resolute and independent. The initial spasm of irritation had passed long before Mr. Mehta arrived in Washington. Everyone knew that India's support on critical issues had to be won by the merits of American policy. It could not be taken for granted, nor exacted as an inevitable tribute to the wisdom of Washington. Still more important, there has slowly developed a recognition that India and America can differ in dignity without blemishing their covenant of friendship. Many influences were at work to produce this result, but the constant wisdom of Mr. Mehta will never be omitted from the final account.

In all essentials Mr. Mehta displayed a gift for justice and perspective. It is no secret that he was disappointed by America's criticism of India's policy in Kashmir, disturbed by the shipments of arms to Pakistan, and disgusted by the indiscretions over Goa. Yet none of these grievances ever was suffered to interfere with his balanced and detached judgment.

A test case of central importance was presented by the quarrel over segregation in Little Rock. At all times he has been extremely sensitive to questions of discrimination, to the rights of minorities, and to every aspect of the color problem. There were many voices which were telling India and the rest of Asia that Little Rock was a tragedy of racial hatred that shamed the promise of American equality. This surge of prejudice received no sanction from the Indian Ambassador. Alike in Washington and in his reports to New Delhi, he insisted that the importance of Little Rock should be measured not by the truculent defiance of Governor Faubus but by the determination of the Federal Government to protect the rights of Negro children. The State Department has reason to be grateful for the constructive influence of Mr. Mehta's dispatches during a period when prejudice was enthroned in ugly supremacy. Not only India benefited from this wise counsel; through his leadership among other Asian representatives, many other countries in the Far East were better able to know the true challenge and inner meaning of Little Rock. This was a diplomatic service of enduring value.

In recent years the destiny of Asia has been seen to turn in large measure on the race between India and China to raise their living standards. India has chosen the method of freedom, China the way of compulsion. This rivalry has helped India to obtain a more cordial hearing in Washington. The Eisenhower administration has understood after some delay the importance of India's 5-year plans, and has helped to meet her exchange problems. Can there be more impressive proof of India's essential integrity than the way she has treated this rivalry with China? One can think of many Governments which would have used this situation to extort more generous favors from Washington. It would have been easy to apply this pressure, since the hostility of America to China was already profound and implacable. Instead the representatives of India tried at all seasons to make the State Department less suspicious of Chinese policy.

Mr. Mehta has too much respect for human values to defend everything done in Peking's name, but he gradually taught some officials to look upon the Communist revolution in the context of Chinese history instead of as a wild adventure sanctioned by the blundering folly of misguided American officials. He also warned the Americans to move slowly in applying the philosophy of military pacts appropriate in Europe to the very different conditions in Asia. There is no sign as yet of any change in American policy, but in private conversation some officials have shaken off their servitude to ancient dogmas. In this necessary work of tuition and challenge, no one has played a more tactful or more constructive role than has Mr. Mehta.

Within these spacious horizons, he conceived his task with vision and fulfilled it with distinction. Mr. Mehta's departure weakens the diplomatic traditions of Washington. He leaves an exacting and exalted standard for his successor to sustain.

The Mellon Institute

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 21, 1958

Mr. MARTIN of Pennsylvania. Mr. President for many years the Mellon Institute has been recognized for its development of new products and processes. It has been in the forefront in scientific discovery. The institute under the leadership of Gen. Matthew B. Ridgeway is now entering new fields. This is being discussed in an article in the Pittsburgh Press and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BIG GUNS TRAINED ON STEEL BY MELLON INSTITUTE—RIDGEWAY MAPS NEW 3-POINT PROGRAM HERE

(By Edwin Beachler)

Mellon Institute is training its big research guns on replenishing the storehouse of knowledge in iron and steel.

An accelerated discovery program in metals, both fundamental and applied research, was announced yesterday in the 45th annual report by Gen. Matthew B. Ridgeway, chairman of the board.

The famed Oakland science center, long a pacesetter in developing new processes and products, now is aiming at basic research in corrosion mechanisms, high-temperature alloys, liquid metal studies, magnetic materials and phase transformations.

Fundamental research also will be expanded in physical chemistry, chemical physics, inorganic and organic chemistry, solid-state investigations, polymer chemistry and physics, radiation, biophysics and biochemistry.

This course, advocated by the 1958 Parliament of Science to step up scientific development in the Nation, has been in the planning stage for 5 years and reaffirms the institute's original purpose of research for the benefit of mankind.

Thus, Mellon Institute propels itself to the forefront in the race for scientific discovery and reinforces Pittsburgh's position as a leading research center.

During the year ending February 28, covered in the report to the trustees, the Oakland institution reorganized its structure to point its principal investigations toward long-range fundamental research. The primary objective is to free the creative research scientists from administrative demands while providing the most in service facilities.

"Although it is the aim eventually to direct the main efforts along the lines of fundamental scientific research," General Ridgway stressed, "there is no intention to depart from the field of applied research."

A healthy collaboration between the two will be fostered.

Under the new setup, there are three divisions—all of which report to Chairman Ridgeway.

Research, under Dr. P. J. Flory; administration, directed by G. A. Webb; and finance, handled by Comptroller H. C. Davies.

The board of trustees, acting at times through an executive committee, sets the policies. Two advisory groups make recommendations to the board. One is an inside board of scientists and the other is the Robert Kennedy Duncan Advisory Council. The latter is a group of scientists with interests and activities outside the institute. The members are selected annually from the RKD Club composed of Mellon employees.

Highlights of the past year in fundamental research, which Dr. W. A. Hamor, senior director of research, describes as the "armor of applied science," included:

Two studies in the physics of metals and the reactions that take place between metals and substances dissolved or in contact with them.

A new molecular-spectroscopy lab to study molecular interactions in solids and learn more about the structure of excited electronic states of small molecules.

A joint project with Pitt Medical School to develop procedures to detect corrosion of metal inserts in repairing bone fractures.

New research program in radiation chemistry and radio chemistry installed along with Cobalt bomb and Van de Graaff accelerator.

This program will be expanded and shifted to the Bushy Run Radiation Research Laboratories, now being built on a 230-acre campus 23 miles east on Route 22 in Westmoreland County near Murrysville.

The 18,000-square-foot radiation-research building is to be finished by August. Along with the cobalt bomb, Van de Graaff accelerator, it will house a mass spectrometer, radiochemical, and isotope work.

On the opposite side of a 300-foot mall, structural steel has been erected for the 30,000-square-foot chemical-hygiene building to expand the research of the Union Carbide & Chemical Co. fellowship. It will be ready in 1959.

During the year, the Oakland research center produced 3 books, 7 bulletins, 55 research papers, 23 articles, and 23 patents. The cost of research was $4,128,504, with 590 members working on fundamental research, in the departments and on 61 fellowships.

The Monahans Sandhills of Texas

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 21, 1958

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the concluding portion of an address delivered by J. Conrad Dunagan, of Monahans, Tex., president of the Monahans Sandhills Park Association, before the Fort Stockton, Tex., Historical Society. I also ask that there be included with Mr. Dunagan's remarks a brief statement by Robert G. Larson, manager of the Monahans Sandhills State Park and director of the Sandhills Museum.

There being no objection, the portion of the address and the statement were ordered to be printed in the RECORD, as follows:

MR. DUNAGAN. I think you might be interested in a few historical notes on the impressions the sandhills made on early-day explorers. The first traveler who kept a fairly complete journal seems to have been Capt. R. B. Marcy. In 1848, Captain Marcy had commanded a military escort from Fort Smith, Ark., to Santa Fe, N. Mex., protecting a party of gold seekers, and he then sought a new return route to the southward.

Dropping down the Rio Grande to Dona Ana, he engaged a local man to supplement Manuel, a Comanche Indian guide he already had, and struck out along the 32d parallel, about where the present Texas-New Mexico boundary line is, until the party came to the Pecos. They followed this river to the southward until they reached a point about 20 miles below the site of the present town of Pecos. There they crossed the river and headed eastward.

The following is an excerpt from Marcy's own report as given in Senate Executive Document No. 64 (31st Cong., 1st sess.), being reports of the Secretary of War, transmitting among others, the reports of Marcy and Michler:

"September 22: This morning we made a march of 9 miles down near the left bank of the river in a direction north 82° east, where we struck a narrow laguna or lake, which we followed for about 2 miles and encamped near the southern extremity. There the soil has been a rich loam, and I have no doubt would prove very productive. There has been a chain of sandhills in sight today, running from north to south across our course, about 20 miles to the east of us (upon the Llano Estacado) in which our guide informs me that there is water, but that we are obliged to pass over a sandy road for some 15 miles to get through them. I have, therefore, determined to remain at this place until I can send ahead and ascertain whether I cannot pass to the south of them.

"September 23: I sent out Lieutenant Sackett, with an escort of dragoons, this morning, to explore the country in the vicinity of the sandhills, and shall remain here until tomorrow evening, by which time I expect to learn the result of his exploration.

"September 24: After filling our water barrels, and giving our animals all they would drink, I made a start this evening at 2 o'clock and traveled 10 miles in a direction nearly perpendicular to the valley of the river. Shortly after we left the laguna, an express from Lieutenant Sackett, informing me that after making a thorough examination of the range of sand for 40 miles south of our course, he was of the opinion that there was no place within that distance where they could be crossed with wagons. The whole surface of the country in that direction seemed to be one continuous succession of white sand hills, from 20 to 100 feet high, in which his horses sunk to their knees at almost every step, from which I infer that the route indicated by our guide is the only one in the vicinity where this formidable obstacle can be passed. I shall, therefore, take a direct course for the pass in the morning, and expect to reach the hills during the day.

"September 25: We reached the sandhills this afternoon about 2 o'clock, over a good level road, except about 4 miles near here which is sandy, making the distance from the Pecos 23.4 miles. There is a great abundance of good water at several places in the sandhills, but it is necessary to drive the animals to it as it is half mile from the road and wagons cannot pass nearer. There is a trail leading to the water from where the road strikes the hills. These hills, or mounds present a most singular and anomalous feature in the geology of the prairies. They extend (so far as we have explored) at least nearly 50 miles in a north and south direction, and from 5 to 10 miles east and west; they are white drift sand thrown up with much uniformity into a multitude of conical hills, destitute of trees, soil, or herbage.

"In the following up the trail from our road into the midst of this ocean of sand, we suddenly came upon several large, deep pools of clear water—the very last place on earth where one would ever think of looking for it. We are told by our guide that water can always be found here in the dryest season, and judging from the rushes and other water plants growing in the ponds, I have no doubt that such is the case.

"September 26: As we have a long march before us still, and as the road through the hills is sandy, I have concluded to double teams today, and send one-half of the wagons to the last watering place, 5 miles from here; and take up the remainder tomorrow.

"September 27: We moved up today with the wagons we left behind yesterday, and found water at this place equally as good as the other. Although there are but two particular points at which trails lead from the road to water in the hills, yet it can be found almost anywhere between the two points by going about half a mile to the east of the road, among the highest hills.

"September 28: 8 miles of sandy road which we passed over today brought us to the hard prairie today. Thus the entire distance from where we first encountered the sand to this place is about 17 miles; but only about one-half that distance is bad, and this not worse than some parts of the road on the Rio Grande. There is good grass near the hills, and sufficient wood for fuel."

(NOTE.—Three months after Marcy traversed the sandhills, Lieutenant Michler, Jr., traveled Marcy's route in a reverse direction.)

Upon reaching the sandhills, he said, "We found for the first 12 miles, low ridges of sand, running parallel to each other, plains of the same kind interspersed between them with small hillocks. The sand here was of a black color. Then came the white sandhills which are really an object of curiosity. They are perfect minature Alps of sand—the latter perfectly white and clean; in the midst of them you see summit after summit spreading out in every direction, not a sign of vegetation upon them, nothing but sand piled upon sand. They form a belt 2 or 3 miles in width, and extend many miles in a northwest direction. But a matter of the greatest surprise is to find large waterholes among them; they are found in the base of the hills, are large, deep, and contain most excellent water, cool, clear, and pleasant. The water is permanent."

The next early-day explorer of whom we know who wrote of the hills was Capt. John Pope, who passed this way in 1854, and whose account is contained in a paper called "Report of Explorations and Surveys To Ascertain the Most Practicable and Economical Route for a Railroad From the Mississippi River to the Pacific Ocean, being House Executive Document No. 91, 33d Congress, 2d session, volume II, page 70:

"Camp No. 24, Friday, March 24, 1854: Left last camp at 20 minutes past 6 o'clock a. m., and moved in the direction of the trail discovered yesterday (probably Marcy's). We struck our road at the emigrant crossing about 9 o'clock a. m., distance from camp upward of 4 miles. This is an extremely bad crossing; our oxen swam for upward of 30 feet to the opposite bank. It would be utterly impossible for wagons to cross without rafting. It cannot for a moment compare with the crossing of the Pecos (mouth of Delaware Creek), the former presenting many difficulties—soft bottom, deep stream, and on the east side miry banks. The latter affords many facilities, and is strongly recommended to emigrants. We halted here to water, which had to be done with buckets. As we will not reach water until we strike the sandhills our kegs were filled. We are now upon the long-desired trail.

"Camp No. 25, Saturday, March 25, 1854: Left last camp at 20 minutes after 6 o'clock a. m., an moved in the direction of the sandhills. Our road today, for 9 miles, was over a level prairie; the road for this distance was excellent. Before reaching the hills we had nearly 7 miles of bad, sandy road. We could perceive them at a distance of 12 miles, stretching away as far as the eye could reach. For 2 miles, before camping, we passed around their western base. We arrived in camp at 20 minutes after 2 o'clock p. m. These hills present a curious and interesting formation. They extend about 50 miles from north to south, and 15 miles east to west. They consist of white drift sand, thrown up into innumerable conical mounds, totally destitute of all vegetation. One would suppose that this region of sand is the last place where water could be expected; yet, however incredible as it may seem, there is an abundance of water in these hills, contained in basins of the finest sand. When amongst the hills, one would suppose that there had been a heavy fall of snow. Our camp was about a quarter of a mile from water. The animals were driven up to water, sinking to their knees in the sand. The team mules were fed with corn; six animals picketed in camp for the purpose previously mentioned.

"The soil for 10 miles from the Pecos was good, with plenty of prairie grass and mesquite root. As we near the hills these become scarce. At camp we had some brush. The grass was very poor and scanty. The weather

changed suddenly to cold with a high wind. A slight rain fell during the night.

"Our camp is 31.2 miles from the emigrant crossing the the Rio Pecos. No observations taken during the day. Heavens cloudy at night. General direction north 7°30' east; miles 16.4.

"Camp No. 26, Sunday, March 26, 1854: Left camp 20 minutes to 7 o'clock a. m., and proceeded in the direction of the next watering place in the sandhills, 5 miles distant from camp. There is a well-marked trail here leading to the water, which can be obtained, however, at any point in the hills by driving the animals about half a mile from the road. The mules and stock were watered and turned loose to graze some time. We passed from last camp from northeast to southwest in arriving at this point, over a deep, sandy road, which was very trying to the animals. From the great quantity of fragments of abandoned wagons, this place has evidently been a general camping ground.

"Having halted an hour and a half, the command started. The remainder of our route for this day was over a very fine and deep sand; we encountered many steep hills of the same nature. There could not, indeed, be a worse road, as was sufficiently evident from the exhausted condition of our animals. We fortunately overcame all the difficulties of this miserable road without doubling teams or meeting with any accident. As we did not expect to reach water until the following day, all the casks were filled at the above halting place. The grass is poor and scarce; there is no wood, although we found vegetation on this arid and sandy plain.

"From the point where we first struck the sandhills, we proceeded along their western base and crossed the main ridge of sand at the lowest apparent point. At 5 miles across we came to the last known watering place to the eastward. In this direction we passed over many ridges of deep sand separated by valley of the same character. They are in reality impassable for heavy wagons. From the above point to the hard prairie east of the sandhills, a distance of 13 miles, we continued to cross deep sandy ridges, with intervening bottoms of a similar description, totally destitute of vegetation. From the Pecos River to the level prairie east of the sandhills, the road passed through about 30 miles of the heaviest sand. It is the worst road to be found in New Mexico, on the Rio Grande, or indeed anywhere else. It cannot be too strongly urged on emigrant parties never to attempt traveling by this route, except in the rainy season from August to the middle of October, as the distance without water from the sandhills to the first permanent water to the eastward is 67 miles, 13 of which (immediately to the eastward of the hills) are through sand so deep and heavy as to be absolutely impassable to heavy-laden teams. With animals perfectly fresh, and lightly loaded wagons, it required all our exertions to overcome the difficulties of this dreadful road. It is also to be observed that our animals were in fine order, with 8 and 10 mules to each wagon."

This apparent contradiction between Pope's appraisal of the difficulties of crossing the sand and Marcy's appraisal, may have been caused by a slightly different routing, difference in equipment, or merely a difference in the subjective attitude of the two men.

I'd like to read you one more impression by an early traveler as recorded by Mody C. Boatright, in a West Texas Historical and Scientific Society Bulletin:

"One oldtimer relates that in the early days he was traveling on horseback from El Paso del Norte to the settlements further east taking the route afterward followed by the Texas and Pacific Railroad.

"One night he found himself overtaken by dark near where the town of Monahans is now. He unsaddled his trusty mount, as was his custom, and tied him to a small cottonwood tree, the only shrub available. Using his saddle blanket for a bed and his saddle as a pillow the traveler was soon lulled into a sound sleep by the melodious music of the coyotes and the haunting harmonies of the panthers and the lobos.

"He slept peacefully until morning, when he awoke to find himself near an immense cottonwood tree. His horse was nowhere in sight. The beast, however, was an animal of unusual intelligence, whom he always called by name, and addressed as an equal.

"He called, 'Frijole, where are you?'

"A pathetic neigh came from among the leaves of the cottonwood, and looking up into the branches, he saw poor Frijole suspended and almost choked to death.

"The explanation dawned upon him instantly. He had tied the animal on top of a sand dune. During the night the wind had arisen, the sand had shifted, and what had appeared in the evening to be a small shrub had turned out to be a tree so large that the lariat was not long enough to let the horse over halfway to the ground.

"With great presence of mind the traveler whipped out his six-shooter, severed the rope, and released poor Frijole just in time to save his life.

"After the horse had 'blowed' for awhile, he was none the worse for his experience, and the traveler continued on his way. As the day advanced, the sandstorm increased in intensity, and it was only by tying huge rocks to the saddlehorn that the equestrian could keep his horse on the ground. As he rode through the drifting sand, however, his own misfortunes were mitigated somewhat by the deep sympathy which he felt for the prairie dogs, many of whom he observed as high as 10 feet in the air, digging with all their might in a vain effort to regain their holes."

And now I would like to introduce to you the man whom we found after a search of the whole country. He was selected from a field of thirty-odd applicants to be manager of our park and director of our museum. We had applications from literally every section of the Nation—from New England to Florida—from Washington to southern California and every region in between. He is a talented painter—having studied at the Layton School of Art, and served as staff artist for the Milwaukee Public Museum, under Keith Gebhardt, art director, during the time when that institution was emerging as one of the most progressive museums in the country. He has successfully created and operated his own small business for 7 years in Minnesota's northern vacation country. He returned to creative work as staff artist for the Missouri Resources Museum at Jefferson City, and from there he came to us.

He is also a talented photographer, and he has taken a number of exquisite colored slides of the sand and ski in their many moods. He has something to say to you and something to show you. I am glad to present to you Mr. Robert G. Larson, manager of the Monahans Sandhills State Park and director of the Sandhills Museum:

Mr. LARSON: Mr. Chairman, members of the FSHS, guests, since first being informed of the Sandhills Park plan, it represented an exciting adventure in cultural development with unlimited possibilities. I believed then, as I do now, that our project at Sandhills Park will become a great asset to this area of west Texas.

All across our Nation there is a need for cultural institutions geared to general public appeal. These institutions should fulfill the recreational and cultural appetites of the greatest number of responsive people. When people are allowed these cultural and recreational satisfactions it has a great civilizing effect.

Some people have never been afforded an opportunity to know this better side of life. What is never known and appreciated cannot be passed on to the youngsters. This failure leaves a great number of children wholly without concern or appreciation for the arts and sciences.

These notions of the cultural world should be fostered as early as possible in the young minds, and quite certainly the youngsters will develop an acceptance and admiration for the finer pursuits during their life span.

The modern museum has every opportunity to aid in awakening the youngsters and the whole public to a wonderful world around them, both past and present.

If an institution such as the Sandhills Museum is to be a means of introducing the cultural life of the area and exhibiting the products of that life, its facilities, and exhibits must be designed to carry the message clearly, precisely, and, above all, in a manner that will be interesting, colorful, and understandable.

In developing Sandhills State Park proper we are convinced of this. If it is to function as a first-rate recreation center it must be built on a foundation of sound ideals carried to realization through a program of creative action.

Whatever and whenever it is possible I hope we may be able to build installations in Sandhills State Park that wil be a source of pride to every visitor.

To achieve these lofty goals we will face many difficult hours of negotiations and painstaking work, both in the park and in the museum.

In the past months we have built exhibit equipment that has enabled us to make a start in the direction of a dynamic program of changing exhibits which will include, as time permits, paintings, drawings, sculpture, architecture, and many of the crafts.

We are working at this time on the more complex problem of setting up our historical exhibit which will be permanently housed in the east end of the museum. This hall will eventually show and explain the gargantuan effort man has made in settling and developing this west Texas area.

Though we will begin with a number of temporary exhibits based on objects we have borrowed from other institutions, we hope eventually to cover thoroughly a period dating back to the Stone Age Indian of the lower Pecos River up through the Spanish era, the buffalo hunters, Indian fighters, trail drivers, ranchers, railroaders, irrigators, and, finally, the modern oil industry.

The accomplishment of this outlined show will represent must time and effort, but I feel confident that Sandhills Park and Museum will grow in beauty, prominence, and importance as time passes.

Milwaukee and Transcontinental and Intercontinental Air Travel

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 21, 1958

Mr. WILEY. Mr. President, a number of welcome decisions by the Civil Aeronautics Board now confirm the fact that the great air center of Milwaukee will undoubtedly prove to be the most important air terminal in central United States, second only to Chicago.

Wisconsin's largest city is now among the top 25 cities in the United States so far as number of air passengers is concerned; a position in keeping with the

tremendous industrial growth of the city, with its metropolitan population of 1.1 million.

By way of illustrating the type of decision which is helping Milwaukee achieve its place in the sun, I cite the fact that the CAB is now in the process of reviewing a 131-page initial decision filed by an examiner which will rightfully help assure direct flights from Milwaukee to the Southeast, without stops at the Chicago bottleneck.

Not only is Milwaukee a great national and international air center, but it continues to grow as a port on the St. Lawrence seaway, and to be a great railroad, bus, and truck center, as well. It is a convention capital, a tourist center, and a gateway to the wonderful vacationing of the northern lake country.

An article in the business section of the May 11 Milwaukee Journal confirmed these facts. I ask unanimous consent that the text of this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal of May 11, 1958]

TRANSPORT ROUTES LINK US TO GLOBE'S FARTHEST POINTS—RAILROADS, AIR AND SHIPPING LINES, BUS AND TRUCK SYSTEMS MOVE PASSENGERS AND FREIGHT; NATIONAL TRANSPORTATION WEEK BEING OBSERVED HERE

(By Emil Schneider)

Almost every country in the world, including several behind the Iron Curtain, can be reached from Milwaukee via transportation facilities represented here.

Although Milwaukee may not be a transportation hub such as Chicago or New York, it still has a considerable representation of railroads, trucking firms, airlines, bus firms, and steamship lines to carry both passengers and freight about the globe.

The city's transportation facilities line up like this:

Six railroads directly serving Milwaukee and 35 other lines with offices here.

Some 75 common-carrier trucking firms plus private trucking operations and numerous truck lines not serving the city directly but maintaining representation here.

Six airlines flying in and out of the city daily, and six others, including four foreign-operated lines, with operations here.

Thirty-five Great Lakes steamship lines, 25 regular overseas services, 2 car ferries, and 1 barge line.

Four bus lines headed by the nationwide Greyhound system.

EXHIBIT THE MODES

All of these agencies are combining to celebrate National Transportation Week this week. Exhibits of various modes of travel by land, sea, and air have been set up around Milwaukee to point up the available facilities here.

Railroad coverage is extensive. The 6 lines directly serving the city spread out to 22 of the 48 States, and the off-line roads represented here cover all but 2 of the remaining States. Connections with other railroads, of course, will cover the 2 left-out States—Connecticut and Rhode Island.

Of the city's two major railroads, the Milwaukee road links Milwaukee with Chicago, and westward through Omaha to Los Angeles and San Francisco or across the Pacific Northwest to Seattle, while the North Western road, also connecting with Chicago and Omaha, runs as far west as Lander, Wyo., where, reportedly, there is "some mighty fine trout fishin'" out behind the depot.

MOST IS FREIGHT

The North Shore line is generally a commuter run between here and Chicago, and the Soo Line, which comes into Milwaukee via Milwaukee road tracks, links the city with points in the northwestern section of the State.

The other 2 railroads that directly serve Milwaukee—the Chesapeake & Ohio and the Grand Trunk & Western—actually come into the city by water. They operate the two car ferry systems from Milwaukee across Lake Michigan to Ludington (C. & O.) and Muskegon (Grand Trunk).

Although all but 2 of the 41 railroads directly and indirectly serving the city offer passenger service, the bulk of their business here is freight, hauling the raw materials and finished products of Milwaukee's heavy capital goods industries and commercial enterprises.

Actively competing for these freight dollars are the multitude of trucking firms that operate here, rolling over the Nation's highways—and back roads—to deliver their cargoes of "you name it, we'll haul it."

ONE THOUSAND EIGHT HUNDRED FLY DAILY

Although the trucking industry generally relinquishes the hauling of the heavier, bulkier items to the railroads, occasionally a piece of machinery is so large and cumbersome—too big to pass under a railroad trestle, for example—that the railroads turn it back to the trucks—special trucks designed for heavy hauling to travel where the bridges are not.

By bus, Milwaukeeans can travel to east or west coasts, to the Canadian border or the Rio Grande.

But the romance of far-away places in overseas lands lies with the airlines and ships.

The 6 airlines flying into Milwaukee carry 1,800 passengers a day, as well as freight and air express, in and out of General Mitchell Field to 41 States and 8 foreign countries.

Northwest Airlines, for example, stretches from coast to coast and west to Honolulu and north to Edmonton and Winnipeg in Canada and on to Alaska and across the polar route to the far east—Japan, China, Korea, and the Philippines. United Air Lines also extends to Hawaii, and American flies south of the border to Mexico.

SEVENTY-FIVE PORTS ACCESSIBLE

Flying Tiger Lines, an air-freight-only operation, currently serves Milwaukee by truck from Chicago, although it has said it plans to resume direct flights here in the future.

The "off line" airlines represented here extend around the world. Air France, whose closest American stop is Chicago, reaches more than 215 cities in 76 countries on 5 continents, and KLM Royal Dutch, picked up at New York, Miami, or Houston, stretches to 118 cities in 74 countries.

London, Paris, Berlin, Madrid, Milan, Cairo, Johannesburg, Istanbul, Bangkok, Calcutta, Saigon, Singapore, Hong Kong, Tokyo, Mexico City, Buenos Aires, and Sydney Australia, are on the flight schedules. Also included are cities in several of Russia's eastern European satellite countries—Poland, Bulgaria, Rumania, and Czechoslovakia.

Foreign shipping serving Milwaukee also reaches to the far corners of the globe—the Caribbean and South America, Western Europe, and the Scandinavian countries and all of the countries bordering the Mediterranean—from southern Italy and France to ports in North Africa and the Near East. In all, Milwaukee reaches by water to 75 major overseas ports on 4 continents.

The barge line? It links Milwaukee via the Mississippi River with ports along the Gulf of Mexico.

Security Rather Than Opportunity

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 21, 1958

Mr. MARTIN of Pennsylvania. Mr. President, that Americans have lost much of their initiative is now being discussed by many people. There is now much talk about security rather than opportunity. Too many are interested in getting something for nothing. They forget that America was made by thrift and hard work. The Pittsburgh Sun-Telegraph had a fine editorial appearing in their Sunday issue on the subject Something for Nothing. I ask unanimous consent that this be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Pittsburgh Sun-Telegraph of May 18, 1958]

SOMETHING FOR NOTHING?

A searching inquiry by Newsweek magazine into the causes of the recession finds widespread the opinion that the American people have lost much of their initiative.

Most of those interviewed in the survey are convinced that people need not and do not work as hard as they once did—and they believe this is a good thing.

Many say salaries are much larger today than 20 years ago but that they can save less.

Others declare high taxes deaden incentive for seeking higher rewards.

Many seem to feel the Government should insure employment, although others express cautious doubts about this.

Nearly all voice desire for security, as though this outweighed almost every other factor.

Some believed that the recession might help to shake the country loose from lethargic acceptance of patterns of mediocrity.

Unfortunately, all these disquieting subjects are present to greater or less degree in the world of 1958.

But the suggestion that they have come to stay or are controlling is something about which there can be a great deal of argument.

The Nation is too young and still possesses too many opportunities to close the door against the power of individual initiative.

Everyone knows that a great many persons are interested in getting something for nothing.

There always have been.

They have been the easy marks for the sharpers since the beginning of time.

The truth is that there is no such thing as something for nothing. Those who learn this truth soonest are those who get ahead in the world, make their own security, and live proudly, with some dignity, until the end of their days.

Moreover poverty is not entirely confined to emptiness of the pocketbook.

Emptiness of the head or the bankruptcy of ideals can represent poverty in its most devastating sense.

There is nothing original in this idea.

Shakespeare expressed it quite clearly when he wrote:

"He who steals my purse steals trash * * * but he who robs me of my good name takes that which naught enricheth him but leaves me poor indeed."

The ideal of America has been equality of opportunity for an individual to succeed, to establish home and reputation, to be recognized for accomplishments.

Such opportunities are present today in more diversified forms than ever in the new world of science.

The frontiers today are those of atomic power, medicine, chemistry, electronics, and their many related branches.

Nor are the doors closed to young men starting in business. The statistics on new business installations attest to that.

The only limit on the individual American in these new business undertakings in whatever field he may select is that his efforts shall be constructive, and shall not take unfair advantage of others who strive with him in competition.

True, taxes are high but where are they lower? Where is there more individual freedom? Isn't it time for the lazy and the downhearted to take a look around them and see whether they have been missing something.

The opportunity for individual initiative is always there, but who is to blame if the individual does not use it?

Poland Constitution Day

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 21, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me paying tribute to the people of Poland on the anniversary of Poland's Constitution Day.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

It gives me great pleasure to express my sympathy with the captive Polish nation, on the anniversary of the establishment of its famous constitution of 1791, embodying, like our Constitution, the hopes of men of good will that the world was moving slowly but certainly in the direction of freedom for all nations.

Little did the people of that day or the following century dream that the 20th century would give birth to the most cruel and shameful tyranny the world has ever seen.

The memory of Attila the Hun and Ghenghis Khan has come down through the ages, but they were barbarians seeking to lead their hungry people from lands of famine to lands of plenty. What shall we say of our time which has perverted all the intellectual, scientific, economic, and political achievements of the centuries to making tyranny both horrible and successful?

Every bit of knowledge which men have gained in their slow upward climb from barbarism has been used by the Soviet rulers to make a monstrous engine for enslaving all the people within reach of their armies, and chilling with fear and dread all the people within reach of their sleepless propaganda.

No age has ever been confronted with a challenge as great as the Communist marriage of savagery with technology which is dominant for the moment in the world of today.

We shall escape from the fate they plan for us, but we shall not escape until we have grown strong enough and wise enough to use all the economic and political and technical wisdom of our day to bring about a new birth of freedom to regenerate the world.

The Polish nation has the harsh fate of living under the heel of Soviet tyranny, but all the decent nations of the world are as one in being the object of Soviet conquest and the fighters for a new and greater freedom. Poland is the outer frontier of the Soviet Empire. But it is also the front line of the fighters for freedom who must press upon and ultimately destroy the Soviet monster state.

How To Win the Cold War With Russia

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 21, 1958

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by our former Ambassador to Canada, Mr. James H. R. Cromwell.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HOW TO WIN THE COLD WAR WITH RUSSIA

(Address of Hon. James H. R. Cromwell, dinner of the International Services of Information Foundation, Inc., Belvedere Hotel, Baltimore, Md.)

I am sure the facts of life—of military life, I mean—that you have just heard from one of General MacArthur's most trusted officers, have left you with the same feeling of alarm and dismay with which they left me. For my part, I have not felt such a degree of alarm, concerning the welfare and security of our country, and of our GI's, since I delivered the Cassandra-like address in Toronto in 1940, just mentioned by Mr. Cleveland. So, not having sounded an alarm for 17 years, I can contend—with some assurance—that I am not an habitual alarmist.

Today, I am convinced that Secretary Dulles' "agonizing reappraisal" of American foreign policy has overtaken us with a vengeance and that, as was the case in 1940, our Nation has once again come to the crossroads. By crossroads I mean that we must soon decide whether or not to withdraw our GI's from Europe. For the frightening comparison of NATO and Soviet divisions on the European front, just quoted by General Willoughby, conveys only one message to me. That message, to put it bluntly, is that our GI's are caught in a booby trap. And now, let me give you the reasons why I have come to that conclusion.

Seventeen years ago, we volatile Americans were as frantically isolationist as we now appear to be frantically internationalist. And, it seems to me, the circumstances and problems confronting us have changed as completely, within those disastrous two decades, as has our national psychology.

I say disastrous advisedly. For the Communists, within a few years after World War II, added over 750 million souls to their empire of slavery, and they have been—and still are—winning the cold war, hands down. That, you will agree is bad enough, but now we must add to the debit side of our ledger, three vital, fundamental, and alarming facts.

The first fact is that our atomic weapons, which the No. 1 political brain of our century, Winston Churchill, described as "the shield and buckler" of the free world against Communist aggression; our atomic weapons, I say, are now shared by the Soviets. So, we have apparently reached an atomic stalemate, and our shield and buckler has gone with the wind. A wind, let me add, of which the evil genii were spies of the Soviet Comintern in the guise of British, Canadian, and American citizens.

Inasmuch as General Willoughby was trained by the No. 1 military brain of our century, Douglass MacArthur, to deal in facts and not in fancy, I submit that his estimated ratio of 75 Soviet divisions to twenty-odd NATO divisions, adds up to fact No. 2. And fact No. 2, alas, carries with it some extremely disagreeable and far-reaching connotations. As a famed military intelligence expert, General Willoughby cannot deal in connotations. But, since I am not an expert of any kind I can exercise my privilege as a plain citizen of our great democracy and speak freely—about connotations, or anything else. For which we can all thank God and the great wisdom of our Founding Fathers.

The connotation directly deriving from fact No. 2—or shall I state boldly that it is fact No. 2—is that our NATO Allies—those, I mean with the greatest military potential—have lost the will to defend themselves. Apparently they have come to love social welfare more than liberty, for what other interpretation can one apply to national budgets wherein guns give way to butter? To disabuse your minds of any uncertainty on that score, allow me to quote these statistics from the British budget. For armaments: four billion, three hundred-odd million dollars, and declining. For social welfare: four billion, five hundred thirty-odd million dollars, and rising.

Now, unfortunately, facts 1 and 2 add up to fact No. 3, which is the most disagreeable fact of all. For it is the fact I have already mentioned, to wit: That our GI's in Europe are caught in a booby trap. In the good old days of the atomic shield and buckler—and the genesis of NATO—our American Divisions in Europe represented a symbol, and that symbol was the bulwark of freedom behind which the free nations of war-torn Europe could recover and rearm. If the preponderant Red Army dared touch a hair of that old grey head, there would be visited upon them, without hope of retribution, the utter devastation of atomic warfare.

No one could complain about that picture, it made sense, but need I state that today, while the symbol remains, the shield and buckler have vanished, and the free nations of Europe have failed to rearm. We can, furthermore, be certain that the Communists will prefer the risk of external war to internal revolution, and if and when such a Hobson's choice should come to pass in Moscow, and the preponderant Red Army suddenly sweeps across Europe, what then would our choice be?

Would the American people be prepared, either to start a thermonuclear war—and thereby court their own destruction? Or, would they dispatch another vast expeditionary force, composed of the flower of our youth, once again to liberate a Europe that lacked the will to defend itself? Now, I ask you—if that Hobson's choice is not of itself a booby trap, then what is it?

Let me digress for a moment at this point, to state that I am one of those weird and amphibious creatures known as an Eisenhower Democrat, and having campaigned hard for the General, I can scarcely be accused of being prejudiced against his administration or any member of it. Yet, I must voice grave concern and disappointment from my careful reading of the major foreign policy speech of Secretary Dulles of April 22. For, I found therein no slightest indication that the long bankrupt and defeatist spending and appeasement policies of the State Department had changed an iota. Scarcely an iota, I say, to meet the utterly metamorphosed conditions which

General Willoughby and I have described, and with which we are confronted in Europe today.

Grants are henceforth to be called loans, and our free-wheeling and spending bureaucrats are to be given carte blanche for years to come—without recourse to Congress. That is about all, except this, and I quote, "we revere and honor those who as martyrs gave their blood for freedom. But we do not ourselves incite violent revolt. Rather we encourage an evolution to freedom."

In the meantime, as is common knowledge, the Communists are working night and day, with every power at their command, here in America and all over the world, to incite violent revolt against democracy, and to encourage revolution to slavery. Now, may I call your attention to one more fact—the fact that the incredible victories of the Communists since war's end, have been won without a shot having been fired by the mighty Red army. They have been won by subversion, by meticulously planned and perfectly implemented incitement to violent revolt.

Inasmuch as my associates and I are convinced that the reason for Soviet success, as compared to American failure, since the inception of the cold war in 1945, is our unwillingness to fight the Communists with their own subversive weapons, I wish to emphasize the vital difference between the rival policies. And here it is, that very policy which we have failed to pursue—incitement to violent revolt is the means by which the Communists have expanded their empire of slavery by 750 million souls and won their incredible victories. And, let me add, they have won those victories to the tune of the utter frustration of our $40 billion annual bill for armaments, and the $60 billion we have spent on foreign aid since 1945.

Allow me to quote from the announcement of February 11, this year, one of the purposes for the formation of the Citizens' Foreign Relations Committee. I quote:

"We should fight fire with fire. We should abandon the defensive policies of the past. Since war's end, we have been like a boxer in a ring with his hands tied—getting punched and unmercifully beaten by our Red antagonist, but never striking back. To make ourselves perfectly plain, we are talking about volunteer fighters for freedom, and about democratic subversive cells and groups behind the Iron Curtain."

Since that announcement was made, a subcommittee has been formed, under the auspices of the parent committee, to persuade the Congress to organize a liberty legion as a vehicle for the actual enlistment of volunteer soldiers and to coordinate and equip the patriot groups behind the Iron Curtain. Generals Willoughby and Wedemeyer, along with Colonel Amoss and I, presently constitute the nucleus of the new legion subcommittee.

Before launching into a brief exposition of the legion idea, I should like to explain that we of the legion subcommittee, do not believe for a moment that any incitement to violent revolt behind the Iron Curtain is in the least necessary. On the contrary, we believe that the pressures deriving from the failure of communism to function are becoming so intolerable that revolts such as those in East Germany, Poland, and Hungary, are certain to occur with increasing frequency.

In short, our concept of the liberty legion's task would be to aid, equip and organize the enslaved patriots to the end that the kind of leaderless disorganization that engendered the needless slaughter of thousands of the irreplaceable and heroic youth of Hungary, should henceforth be prevented.

It is right at this point that we criticize the policies of our State Department. For we believe that the so-called Kennan thesis of accepting the status quo, which has been completely refuted by the aforesaid violent revolts and unrest behind the Iron Curtain, still remains our underlying policy. And we further believe that the continuance of that hands off policy is largely responsible for the slaughter of the innocents in Hungary.

This occasion in Baltimore has been chosen as the kickoff in our effort to activate and implement the liberty legion idea. So, since I am here to seek your interest, advice and cooperation, please bear with me while I read a letter I wrote to President Truman on March 1, 1951. It still expresses, concisely and with clarity, what our executive subcommittee has in mind. I quote:

"Dear Mr. President: The purpose of this confidential letter is to obtain your support of a project to organize a counterinfiltration and subversive corps to operate chiefly behind the Iron Curtain. Inasmuch as the expansion of Communist power over the past 5 years has taken place without the firing of a shot by the great Red army, the success of the politburo must be due to the meticulously organized and directed work of its elite subversive corps.

"Your courage in halting Communist aggression in Korea last June finally awakened our country to the Red sword of Damocles, hanging over the head of western civilization, and we are now planning to spend tens of billions of dollars, for years to come, in the effort to deter further aggression. Yet, apparently, the best we can hope for is decades of this appalling waste of our natural and human resources, accompanied by the constant psychosis of the Red sword.

"Since preventive war is impossible for democracy, must we stand condemned to bear these terrible burdens ad infinitum? The answer is no. The weapon which will permit us to seize the initiative from the politburo, and can ultimately encompass the destruction of Russian militarism, lies ready to our hands.

"It is the Politburo's own major weapon and the key to its success; the planned and disciplined subversion, conducted within the frontiers of a friendly nation, which rang down the Iron Curtain upon democratized and western oriented Czechoslovakia, without the presence of a single Red soldier. But Russian militarism, masquerading under the cloak of communism, is infinitely more vulnerable to this weapon than democracy—for the more it expands, the longer time is given to illuminate the false promises and to highlight the stark fraud of the Red terror—the more susceptible it becomes to fatal penetration by its own sharp spearhead—subversion.

"Mr. President, there is only one method I know of, by which we can promptly and properly implement an American counterinfiltration corps without, as a democracy, committing an overt act. That method is by organizing a foreign legion, upon the facade of which appropriations can be hung, for an intelligence corps which would constitute and, in fact be, the proposed counterinfiltration corps. * * * The breath of life can be blown into this vital project only through executive and legislative action."

In view of the status quo policy of the State Department, which I have just termed long bankrupt, and which was inherited from the "Pal Joey" days of the Roosevelt regime, I was not surprised never to have received an acknowledgement of that letter from President Truman. And the same applies to President Eisenhower, when I hopefully sent him a copy of the Truman letter, following the campaign of 1952.

Our committee adheres to the notion that changing times require changing policies and we believe that the Legion idea is the best vehicle presently available to extricate our Nation and our GI's from the booby trap described by General Willoughby and christened as such by me. The Legion concept is sufficiently flexible to meet foreseeable American requirements, not only for volunteer alien military manpower, but also for the counterinfiltration and subversive activities set forth in the Truman letter.

From what source, you might ask, could we obtain the alien manpower that our military staff and executive officials might determine we would require and could afford? It is estimated that there are today, approximately 10 million refugees and expellees in Western Europe, most of whom would be glad to risk their lives to insure the defeat of communism. For, they have suffered its evils, they have been deprived by it of their homes and property, and they who have had the courage and good fortune to escape its clutches, know for certain that their lives would be forfeit if communism ever caught up with them again.

Ladies and gentlemen, we are convinced that there is no alternative to the Legion idea. Either we must supply and equip enough alien infantry divisions to offset the Red preponderance on the European front, and thereby give our boys a fighting chance to survive, or we may be compelled to withdraw our divisions to Spain or to the United States.

We are now in the process of organizing a campaign which will seek to show President Eisenhower, Secretary Dulles and our State Department, that there are thousands, perhaps millions, of red-blooded American citizens who, like my fellow committee members, believe that the road of appeasement leads but to the grave of democracy and of freedom, and of our American way of life. The kind of American citizens I mean, who further believe, as we believe, that we must, to save our boys from death, and our country from bankruptcy, henceforth fight fire with fire and do unto the Reds what they do unto us.

Please let me assure you that we are not so ingenuous as to expect Mr. Dulles and our State Department to announce publicly that the United States of America now proposes to incite violent revolt within the U. S. S. R. Of course not, we only hope that while, to do as the Russians do, our good Secretary of State will have to oppose the Legion idea publicly, he might approve it privately.

Soon, my friends—and I hope you will permit me to call you friends and well-wishers—we will be ready to come to you with our hopes, ideas and ideals all formulated, set forth and ready to go. We will come to ask you to join us and help us in seeking to destroy that Red sword of Damocles which hangs, like an endless nightmare, over the head of Western civilization. We will ask you to work with us, under the banner of our new and cogent slogan: "Keep our boys—and our dollars—home."

Problems of Automobile Merchandising

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, May 21, 1958

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Mr. J. O. Wright, Ford Motor Co. vice president and Ford division general manager, before the Lorain, Ohio, Chamber of Commerce, Tuesday, May 13, 1958, Lorain, Ohio.

Mr. Wright has admirably explained some of the outstanding problems of automobile merchandising which I believe will be of considerable interest to many Members of the Senate.

There being no objection, the address was ordered to be printed in the RECORD, as follows;

REMARKS BY J. O. WRIGHT, FORD MOTOR CO. VICE PRESIDENT AND FORD DIVISION GENERAL MANAGER, BEFORE THE LORAIN, OHIO, CHAMBER OF COMMERCE, TUESDAY, MAY 13, 1958

I am glad to have this chance to visit with you again here in Lorain. * * *

I can say to you without reservation that the Lorain assembly plant is the best and most modern assembly plant in Ford Motor Co. and very probably in the world. It stands as a concrete indication of our feelings about this area and its people—and about the bright future of our country. I am sure you will be interested to know that this plant was not built specifically to meet our present needs for productive capacity. We had enough capacity to cope with any contemplated market prior to the early 1960's. This plant was and is in fact an essential part of our production planning for future markets that will surpass anything our Nation has ever known.

* * * * *

The automobile business is one that is full of drama and emotion. People feel strongly about it. * * * Second guessing this business is a favorite national pastime. Everybody has his own ideas about how he would run the show, if he had a chance. And, as you would expect, we sometimes find ourselves in the position of the baseball player whom the fans regard one day as a genius and the next day as a bum.

We are preesntly going through one of those periods when the auto industry is the center of white-hot attention. Much as we normally like attention, we kind of wish it would ease off just a little at the present time, because we feel that it is hurting sales—and that's not good for anybody.

You are familiar with the general line of reasoning. It is argued that there has been a sudden switch of consumer preference away from the large, powerful, high-styled automobiles typical of North American manufacture toward smaller, relatively inexpensive, low-powered, economy cars typical of European manufacture. Some writers say indeed that most people really never did want the big, flashy jobs, but that they had no choice except to take the cars that manufacturers were offering for sale.

* * * * *

Some observers go so far as to plant the blame for the recession on the automobile business, right in the face of the fact that the sharp dropoff in car sales did not begin until several months after the recession was well underway.

Most of these things that are being said lead to the inevitable conclusion either that industry management has gotten out of touch with the consumer, or that it is arrogantly trying to push unwanted products into the hands of consumers.

It is certainly not my intention to offer a bold and fearless defense of the products of our industry or of the brilliance of our management decision. I do think that the industry should give serious attention to the charge that it is willfully and wrongfully pursuing a course contrary to the wants of the consuming public.

The one overriding point I want to make today is this: We are an industry whose existence depends on seeing facts and dealing as intelligently as we can with facts. As individuals, we in this business may have widely divergent opinions. But in making decisions as manufacturers and managers, we all must act upon the basis of the same body of fact. The hard demands of the market place, and not any sense of divine inspiration or intuitive genius, are what dictate our actions.

Some of the questions being raised today are not easy to answer with flat assertions. I would like to comment, however, on what seem to me to be the 2 or 3 critical questions at this time.

First, I would like to examine the proposition that we are either failing to read the customer right or that we are trying to force-feed him with the diet we think is best for him.

Second, I would like to give you our view of what is really going on in the automobile market today, including the slump in domestic car sales and the rise in sales of small imported cars.

And, third, I would like to discuss with you a little of how we go about planning our own future products and show you some of the evidence and reasoning on which we base our plans.

On the first score, let me point out that the automobile industry involves management problems and decisions of a difficulty certainly not surpassed and very probably not equaled in any other larger industry.

The ones that lie all about us in Detroit serve as a constant reminder of the penalties of careless or casual decisions. The companies that have survived almost half a hundred years of fierce automotive competition have not done so by being careless or casual about meeting the wants of the consumer.

That is not to suggest even remotely that automotive management is infallible. This is a business offering numerous and superb opportunities for dramatic boners. And, being human, we sometimes make the best of those opportunities. But I do mean to suggest that mistakes made in this business reflect the complexity of our choice, rather than poor homework.

Above all, as one who lives with these problems from day to day, it is incomprehensible to me that anyone should accuse our industry of "force feeding." Our normal position is one of abject prostration at the feet of our customers. Far from leading the consumer by the nose, we are forever trying to fathom his wants and keep up with him. Every year we spend millions in the effort to find out what he wants, hundreds of millions to make what we thinks he wants, and finally tens of millions to tell him that the car we are offering him is the product he has indicated he wants.

In the present depressed car market, it would certainly be just to label this industry both arrogant and foolish if we did not examine critically both the market itself and our future automobiles to make sure to the best of our ability that the cars we are now planning and designing for 1960 and 1961 and later years will be the cars our customers really want.

I would like to tell you something of how we examine the market and plan our products, what relevant facts we are accumulating from that examination.

One question that is raised in current discussion of the industry is the extent to which general styling of automobiles is contributing—if at all—to the present sales slump.

To begin with, we have a very simple and, I believe, accurate explanation for our present difficulties. It is very hard to believe there has been a rapid drop of almost 30 percent in car sales for the sole or even primary reason of a sudden, cataclysmic change in a nation's car-buying habits. It is particularly hard to believe that when a much more obvious reason lies right under our noses.

The fact is that we are in a general business recession. We have never gone through such a recession without suffering comparable reverses in the car market. This is a risk business, and historically we have always tended to fare better than most industries on the upswing and worse than many on the downswing.

In the 1938 business recession, we had a drop of 10 percent in consumer income that brought about a drop of 50 percent in auto sales. In the present recession, a 3- to 4-percent drop in consumer income has contributed to a 30-percent drop in car sales.

And let me point out that, due to inflation, real per capita income has been on the decline since 1956. The present business recession, moreover, began last summer. And the serious slump in car sales became apparent only in January of this year.

Here is concrete evidence both that the primary factors underlying the car market are broadly economic in nature and that the automobile is the victim and not the cause of the present recession.

Styling has played a role in the present market, but not at all the role that some people might think—a point I will get to in just a moment.

It's pretty easy to understand why the automobile should be hard hit during any recession. Ninety-five percent of new cars are bought by people who already own cars. We have presently in this country a very substantial number of good cars of fairly recent vintage. For most people, the car is a deferrable purchase. If a man has been disturbed by recession talk, if he knows of a fellow down the street who has just been laid off, he can readily decide to hold on to the old car for a while longer. Aside from a house, a car is the biggest item in the budget of most families, so it is a logical victim of a general anxiety about the economy.

The main reason for the theory that sales are off because most or all Americans really want a puddle-jumper car lies, of course, in the expanded importation of small cars that has taken place in recent years. The trouble is that some people are seeing an avalanche in what is really a rather respectable trickle.

I can assure you that no one phenomenon has been given more careful attention by the automobile business than this increase in imported small-car sales that began discernibly back in 1956. Ford Motor Co. has been in the business of importing small English Ford cars since 1949, and we have participated in that way in the general rise. We have carried on numerous and continuous studies to try to see just what this thing means and where it seems to be going. I don't have time here to go into our findings in detail. I can give you just a few general observations.

First of all, the small car spree reflects both novelty and economy buying, and often a mixture of the two. If you eliminate all considerations other than operating economy, it would not make sense to buy a small car. A good used American car can be had for one-half to one-third the price of a new foreign car. You could drive the small car till it falls apart and be hard put to make up the difference in gas economy. Moreover, many imports and some American models which are not really small cars are priced at or near American makes.

We do not, incidentally, classify the American Motors Rambler as a small car. It is substantially bigger than, for example, the Volkswagon, and competes in general operating economy with such cars as the Ford Custom 300 six-cylinder car. In fact, most Ramblers sell for more than the lowest-priced Ford.

Our studies indicate a very strong element of "fad-buying" and a sort of reverse prestige buying in the small-car market. The small car is the smart thing to have in certain circles—usually, I might add, where you already own a standard American make. We have particularly noticed lately a tendency

among substantial public officials and other gentlemen whose position regrettably requires them to ride in large black limousines to extol the virtues of the small cars—for others, that is.

We find that there are important self-limiting factors in the small-car surge. One is the probability that their resale value will decline as they become available in greater numbers in the used-car market. This has already begun to happen in the case of several foreign makes. The other is the inadequacies of a small car which has been designed for the short distances and narrow streets and terrific gasoline prices of the old world when it is measured against the requirements of our topography, our highways and the expanding vistas of the American family.

It now appears that imported small-car sales will level off at a rate of 300,000 to 350,000 cars a year.

The problem we as manufacturers face in examining the small car is not whether it is the coming, dominant factor in the car market, but whether we should place our own entries in this field. That is not an easy question to answer. Nor is it one on which I can enlighten you at this time.

I should like, however, to tell you something about what the customer is actually buying in the present market and what signals he is giving us about his probable future wants.

This is a matter directly related to some of the current comment about the supposed public reaction to big cars with plush interiors, high-powered engines, chrome decorations, options and accessories.

During all our advance product planning, we are kept very busy trying to fathom the customer and his probable wishes 2 or 3 years hence. In that process we have three main aids.

First, we have the all-important facts about what the consumer is actually buying in the present market and what he bought last year, the year before and back as far as you want to go. What people are actually spending their dollars for is our best single piece of evidence. Here we can directly measure trends and developments and changes in consumer taste.

The fact that today we are dealing with a shrunken market does not alter the importance of what is going on inside that market. We find, for example, and expect to find that in such a market economy buying is a relatively larger factor than it would be in a boom market. We are selling more six-cylinder engines today than last year. But if we find that costly options and accessories are still holding up relatively well, and if the more expensive models of cars are selling strongly in terms of that market, we will have a strong evidence to dispute the claim that the long-term upgrading of the automobile by the consumer has come to an end.

What do we find in today's market? We find first of all that the three strongest performers, relatively, are the Chevrolet Impala, the Oldsmobile, and the Ford four-passenger Thunderbird. These in their respective ranges are not economy cars. With the exception of the Thunderbird, they wear at least as much chrome as any other car on the road.

In the case of our own company, 61 percent of Ford's current automobile sales are accounted for by the combined Fairlane series and the station wagon series. The Fairlane's share of our current production is down somewhat from last year, but is still more than double its share as recently as 1954. On all Fairlane models, sales of extra-cost equipment such as automatic transmissions and power steering run high. Even on our economy model, the Custom 300, the demand for extra-cost accessories is substantial compared to 4 or 5 years ago. So far as ornamentation is concerned, on the Custom Ford, there is a decorative gold-anodized aluminum strip for which there is an extra charge. Seventy-six percent of our customers currently are buying cars with that strip.

The May 5 issue of Ward's Automotive Reports announced that the installation rate of power steering for the whole industry through March was up 8.7 percentage points over the sales rate for all of 1957. Installations by all Ford products were at a 40.5-percent rate in the first quarter of this year as compared with 31 percent for all of last year. Similarly, installations of power brakes for the industry increased 4.6 percentage points over last year's rate.

When you look at what people are actually buying, it makes you hesitant indeed to throw all your plans out the window and start building a complete new line of stripped-down jobs for 1961. It just could be that when 1961 rolls around, we will be in the middle of another economic upsurge, leaving us with a lot of unattractive cars that nobody wants.

The past experience of our industry has left us with a healthy fear of downgrading—at least on the basis of the kind of evidence we now have.

During the past decade, a number of what might be called downgraded cars fell by the wayside. Where are the Crosley, or the Henry-J, the Aero-Willys, or the Willys Americar?

Or consider if you will, our own experience in our long, see-saw struggle for leadership in the low priced field. Here, very briefly, is what has been happening.

In 1949 we introduced a new Ford automobile that was 5 inches lower than the previous model and repersented completely new styling. At the time this car was introduced, Ford was obtaining 16.7 percent of the market, Chevrolet 21.3 percent. We continued to emphasize new styling and within 6 years we had recaptured our position in the market and were selling at approximately the same rate as our principal competitor.

In 1954 Ford and Chevrolet each obtained slightly more than 25 percent of the market. Meanwhile, Plymouth in 1953—running counter to Ford—shortened its wheelbase by 4 inches, maintained chair height seats, and emphasized interior package. This reflected a decision that what the consumer really wanted was a good old-fashioned car—the kind that carried Dear Old Dad—"smaller on the outside, bigger on the inside," as the commercial put it. Plymouth sales promptly dropped from 600,000 in 1953 to 381,000 in 1954.

In 1954 a new Ford V–8 engine was introduced which, together with the accumulative effect of the new longer, lower styling initiated in 1949, helped Ford to increase its share of the market by six percentage points over 1953. For the first time in 20 years, we sold more cars to retail customers than our principal competition.

In 1955 Chevrolet introduced new styling and, for the first time, a new V–8 engine and sold more cars than any make had ever sold in postwar history, outselling Ford by 67,000 units. Meanwhile, in 1955, Plymouth reversed its field and introduced a completely restyled vehicle that was the longest (204 inches) of the low priced three. It added 266,000 units to its sales and increased its share of the market by 2.1 percentage points.

In 1956 we did not change our styling as much as Chevrolet did. We emphasized safety; Chevrolet emphasized its new performance. That year Chevrolet sold 190,000 units more than Ford did. Plymouth followed Ford's pattern and dropped 120,000 units.

In 1957 Ford redesigned completely—4 inches lower, 9 inches longer—and we won a 37,000-unit victory over Chevrolet. Plymouth also went to new styling—longer, lower and wider—and increased its sales by 112,000 units.

And here's another pertinent item.

From 1950 to 1955, American Motors had a small-sized Rambler which it dropped in 1955 because of a poor sales showing. In 1956 American Motors introduced a Rambler which was longer and heavier and had the same interior size as the low-priced three. They subsequently increased their penetration from 1 percent in 1955 to 1.5 percent in 1957. In other words, the American manufacturer who is leading exponent of the small car altered its course to parallel more closely the course of the low-priced three.

With this kind of experience behind us, you can imagine we are reluctant to jump to any hasty conclusions that there has been a big switch in the auto consumer.

But I can assure you we do not stop here. We have been and are at this moment polling the consumer, up, down, and sideways, and checking what he says against what his neighbor says, and against what he is actually doing and what he has done in the past.

All evidence points to the fact that we have not given the customer more than he wants. If anything, we have failed to move rapidly enough to keep up with his desires for product innovations. We are convinced that the race in the future will go to him who is first with greater innovations, particularly in components that enhance the functional and riding characteristics of the car.

After all, we are building automobiles for a people and for an economy that has been in a state of continuous and explosive expansion for a long, long time. We are convinced that our growth will accelerate, that the tremendous impulses of our expanding population, our new technologies, our drive for better and better living standards for ourselves and our children all point to continued dynamic growth. Our industry is an integral part of that growth. For us, there can be no turning our backs on the future. We intend to continue to look ahead.

Rumania Independence Day

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 21, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me paying tribute to the people of Rumania on the anniversary of their independence day.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

It gives me great pleasure to pay tribute to the people of Rumania on the anniversary of their independence day. We are glad to do our part in celebrating this occasion, for a people who must honor their own patriots in the grim silence imposed by a brutal alien dictatorship.

It has been a long time since the blackness of Communist rule settled down over the people who live in the troubled borderlands that have long protected Western Europe from barbarian invasions. The hope of liberation which swept over the countries on the borders of the Soviet Union when the Nazi tyranny was liquidated was quickly replaced by the more horribly ingenious tyranny of Communist rule. The Soviet rulers

made many solemn commitments to the Government of the United States that the people of the states on the Soviet border should have truly free elections. Every one of these commitments has been broken.

President Roosevelt told Stalin that the United States could never consent to abandonment of these agreements, or subjection of free nations to Soviet rule. President Truman and President Eisenhower have made the same pledge.

The American people are firmly committed to the principle of independence for all nations in the orbit of great military powers. That was our belief in 1776. It was our belief when we supported the nations of Latin America against the Spanish power. It was our belief when we supported weak and divided China against the great powers at the beginning of this century.

Because we love our independence we respect the desire of all other nations for their independence. That has always been the policy of the United States and I promise you it always will be our policy as a nation.

The Consumer Price Index in the Current Price Situation

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, May 21, 1958

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from a speech entitled "The Consumer Price Index in the Current Price Situation," which was delivered by Ewan Clague, Commissioner of Labor Statistics of the United States Department of Labor, before the Milwaukee Control of the Controllers Institute of America, at Milwaukee, Wis., on April 8, 1958.

In offering these excerpts for printing in the Appendix of the RECORD, I wish to call the attention of my colleagues to the fact that Mr. Clague, who delivered the address, has given an expert analysis of why the consumers' price index has been rising during the recession; and in the address he points out that some of the influences—and of course it is important that we also evaluate the entire situation—are temporary in character, and that one of the main ones has been an absolute and urgently needed rise in the price of food grown on the farm.

Whatever may be our views of the validity of Mr. Clague's conclusions, certainly it is important that we give them our earnest consideration; and it is with that thought in mind that I offer the excerpts from his address for printing in the RECORD.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

THE CONSUMER PRICE INDEX IN THE CURRENT PRICE SITUATION

(By Ewan Clague, Commissioner of Labor Statistics, United States Department of Labor, Before the Milwaukee Control of the Controllers Institute of America, Milwaukee, Wis., April 8, 1958)

Each month when the Consumer Price Index is issued to the public, we in the Department of Labor's Bureau of Labor Statistics are continually asked to answer this question, Why in the midst of a business downturn with mounting unemployment does the price index continue to go up? Economists have commented on the "paradox" of declining business and rising prices. And occasionally some critics have tried to explain away the situation by questioning the accuracy of the statistics. A number of times during the past 2 years, the Bureau of Labor Statistics has had to defend the essential accuracy of its price statistics. So I welcome the opportunity to discuss the Consumer Price Index and its behavior under present conditions.

First, at the very outset, let me assure you, if you have any doubts, that the Consumer Price Index is accurate, substantially, and reasonably accurate. We price for the index about 300 different commodities and services; we get reports from 46 cities, ranging from a dozen of the largest with over a million population each to some small towns with a population as low as 2,500; we collect prices in a wide variety of stores and we have careful methods of checking the accuracy of the prices reported to us. The index does not misrepresent retail price levels.

CRITICISMS OF THE INDEX

Second, I would like to call your attention to some of the mistaken or misleading criticisms which have been made at various times recently. One of these is that the Bureau simply accepts list prices for durable consumer goods and, therefore, does not obtain the real prices at which automobiles or household appliances are purchased by the consumer. This charge is not true. We do make every effort to obtain the final realized price. We make allowances for trade-ins; we price in specialty stores which are likely to give heavy discounts; and we obtain a reasonable number of quotations for each item.

Another is that we do not take into account special sales at which articles can be bought more cheaply than usual. The answer here is that if a sale lasts for a long enough period (for a week or two) so that consumers have a reasonable chance to take advantage of it, then we use sale prices. In January we reported a drop in the price of house furnishings, partly because of the white sales in that month. We do not, of course, include the sale prices of items which are being closed out, such as a discontinued line of clothing; nor do we include special sales that last such a short time that the average consumer would not be able to take advantage of them.

Still another criticism is that we do not obtain weekend prices for foods and, therefore, use higher-than-average food prices. To this we have two answers. One is that our primary purpose is to measure changes in prices, not to determine the level of prices. If we measure the change from first-of-the-week prices in one month to first-of-the-week prices in the next month, our index of food price changes is just as accurate as if we had measured it from weekend prices in one month to weekend prices in the other. But we have a second answer which is equally significant. Over a period of nearly a year we checked early-week prices against weekend prices for several food items. We found that the difference between the two was small on the average. It is true that a given store may have spectacular weekend reductions in some prices, but other stores select different items for weekend specials and keep up their other prices. We found wider ranges of prices toward the weekend, but not significantly lower on the average.

Finally, before leaving this subject, I would like to mention one other charge that is made quite often. It is that the careful consumer switches his buying from higher priced items to lower priced items and, therefore, can actually live more cheaply than the index would show. Surely this is true. We know that any careful housewife can beat the index by shrewd and discriminating shopping. But we can't follow this careful housewife around and find out just how well she succeeds in keeping her particular cost of living down. We have to deal with the general average, and, believe me, there are many consumers who are on the other side of the line from this good housewife. Prices are high because somebody is buying. We get the prices as they exist.

LIMITATIONS OF THE INDEX

I would like now to go on to a third subject, namely, limitations in the index which we recognize fully as much as other people. One is that the index does not measure the complete cost of living. It used to be called a cost-of-living index, but we changed its name because it was misunderstood. A family's cost of living may increase in many ways. More children may be born into the family, thus requiring more food, more housing, and more clothing. A family may move from one town to another and find that it will cost them considerably more in the new place. A family can decide to raise its standard of living by purchasing a home instead of renting, or by shifting from a lower price model car to a higher one. The Consumer Price Index is not designed to measure a rise in the standard of living. Our objective is to measure as carefully and precisely as possible one factor in the cost of living, namely, changes in prices. We try to measure by the index the effect of price changes upon the cost of living, and price changes only.

In pursuing this objective we encounter many technical problems of index making, most of which we solve reasonably well, but some of which cause considerable difficulty. Since we concentrate on measuring price changes only, we collect prices of a fixed market basket of goods and services, that is, a market basket in which the quality of the products is maintained constant. If there is a decline in quality, as often occurs in wartime, we try to take this into account. If there is an improvement in quality, we try to factor this out of any price increase which may be associated with the change in quality.

However, it is not always easy to achieve this goal. Many consumer items are standardized, and we have little trouble in matching quotations from month to month, or even over the years. On the other hand, some goods, especially durables, are changed in style from year to year, and we have the problem of taking that into account. For example, when a new model car comes out with an automatic transmission and at a higher price, we exclude from the index the effect of that change. So, too, with a hillholder, a car radio, or any other extra that we can detect and measure. On the other hand, we know that there are many less obvious changes, often without any price increases at all, which we do not find it possible to exclude from the index. Certainly, the automobiles of today are easier riding, faster, and more durable than they were 20 years ago. And these improvements undoubtedly cost more. Some of that cost is reflected in the index.

However, to those of you who are users of the index, I must point out that the effect of these unmeasured improvements is extremely small in the short run. From month to month, and for a few years, these would have very little effect. Over a 10-year period, or longer, they could be quite significant; although I must also point out that there are some downward biases in the index which would partially offset this upward bias. However, our main answer on this point is that the major uses of the index are based on the short-run changes—the wage escalator contracts, for example.

In summary, the index is more accurate over a period of 3, 5, or 7 years than it is

over a period of 10 to 20 years. In fact, about every 10 or 15 years the index should be basically revised anyhow in order to enhance its general accuracy.

FLUCTUATIONS OF THE INDEX

May I now turn to a discussion of the actual behavior of the index—why does it fluctuate in the way it does? Why is it now going up when, according to current business conditions, it should be going down?

1. In the first place, all users of the index should recognize that it moves quite sluggishly, and that it generally lags behind other gages of the economy. Retail prices are the end of the line. They represent the buildup and the accumulation of the processes of production and distribution. They represent costs which have been incurred all along the way. They reflect the stability and the (usually) steady growth of consumer incomes. Therefore, consumer prices as a whole do not fluctuate quickly and widely, as do the prices of raw materials.

2. Second, the Consumer Price Index covers the entire range of family buying. As a rough count, we estimate that there are as many as 2,000 different products or services consumed by the average American family. From among these we have selected a sample of 300 of the more important ones. This sample includes over 80 foods, apparel of all kinds, rents, home ownership costs, public transportation, automobiles and their operating costs, reading and recreation, personal care, etc. Some of these items are commodities; others are services. Some are perishables; some are durable and last for years. The very comprehensiveness of the index practically insures that many of the price movements within it will counterbalance and offset each other.

3. However, the different parts of the index respond very differently to current business conditions. For the purpose of this discussion, I shall divide the index into three major groups: (a) foods, (b) commodities other than foods, and (c) services of all kinds. You may be interested to see how these three have behaved in recent years.

(a) Take services first. These include items of personal care, such as hair cuts, and permanents; streetcar fares; recreation items, such as movies; doctor's fees and hospital costs; gas and electricity rates, etc., etc. The prices of these are heavily influenced by law and by custom. Streetcar fares can be changed only when approval has been obtained from a public service commission. The price of a haircut or of a visit to a doctor's office is governed to some extent by custom. They change slowly, but when once raised they usually remain there. For the past 20 years the prices of the services represented in the index have climbed slowly but steadily. They will continue to do so for some time to come. They usually lag behind commodity prices, but they can move on upward after commodity prices have fallen. These service charges are not influenced directly or immediately by business fluctuations. In a long and deep depression they could and would fall, but in minor business recessions they continue to rise, slowly but persistently. Since these make up nearly one-third of the index, they constitute one important factor in the rise of the index in recent years.

(b) Let us move to foods next. These constitute roughly 30 percent of the index, somewhat less than one-third. However, they are as a group the fastest movers in the index. This is due in part to the seasonality of many food products. All the perishables, such as fresh fruits and vegetables, have a short harvest season. In the old days, before refrigeration, many of these foods appeared on the market for only a few months of the year. Today, because of deep freezing and household refrigeration, nearly all of them are available throughout the year. And, of course, most of them have always been available as canned goods.

Most of the meats have seasonal factors in their prices. Cattle, hogs, sheep, chickens, etc. have heavy marketings in the spring and fall, at which times the price of meat is influenced by the increased supplies.

So, foods are responsible for many of the minor fluctuations of the index within the year.

In the recent rise of the index from the spring of 1956 to the spring of 1958, foods played an important part. This was due to two factors, both associated with the hazards or the economics of farming. In 1956, in 1957, and again now in 1958 bad weather has seriously affected the supply of fresh fruits and vegetables. In the summer of 1956, potatoes rose to a peak of 12 cents a pound, the highest price ever recorded in this country. In January and February 1958, fresh fruit and vegetable prices reached the highest level the Bureau has ever recorded for those months. This is because the American people have become accustomed to fresh fruits and vegetables in their diets. If the supply is short, the prices rise. But people continue to buy at those prices.

The bad weather recently is only a temporary factor in the rise of the Consumer Price Index. If we have good growing weather this spring in the middle States and in the north, we should have large crops of fruits and vegetables in the late spring or early summer. When these local crops come to market, all these prices fall sharply, oftentimes as much as 25 to 50 percent. Fruits and vegetables are always cheaper in the second half of the year, and they will be this year, too.

Meats (including poultry and fish) are half again as important in the index as fruits and vegetables. In fact, meats make up about one-fourth of the entire food index. The American people are heavy meat-eaters. At the present time meat prices are rising. They reached bottom at the end of 1955 when there was a heavy supply of cattle and hogs brought to market. In fact, the price fell so low that farmers cut down on their herds during the next year or so. This was simply the response of the farmer to low prices and high costs. Some farmers could not make a profit feeding high-priced corn into low-priced hogs.

At the present time, the Department of Agriculture reports that cattle and hogs are being raised in somewhat larger quantities, but they have not yet come to market. When farmers are building up their herds they save the female animals for breeding. At the present time this seems to be the dominant factor. However, later this year some increase in marketing of hogs and cattle (especially prime feeders) should occur, while chickens and turkeys have been generally increasing in recent years. So we may see lower meat prices later on in 1958.

(c) The remainder of the index consists of commodities other than foods—soft goods and durables. Soft goods are such items as clothing, shoes, house furnishings; household supplies, gasoline, etc. These have a weight of somewhat more than 20 percent of the total index, and the group as a whole ordinarily shows the influence of the spring and fall seasons in apparel prices. The latter are usually high in March when the new spring lines are introduced and they are high again in September when fall clothing is introduced. Apparel prices are usually low each year in January and February, following the Christmas shopping, and in July and August, when summer sales take place.

The durable-goods group consists of automobiles (new and used), furniture, household appliances, TV, and radios, etc. All of these combined make up about one-seventh of the whole index, or 14 percent. This group also has a strong seasonal element, usually toward the end of the calendar year when the next year's new models are introduced. These often sell at or near suggested or list prices. However, discounting by retailers begins in a month or two and accelerates during the model year. So prices on the current year's models are at their lowest in the autumn months just prior to the introduction of the next year's models.

Durable goods were an important factor in helping to maintain the stability which the Consumer Price Index exhibited from the summer of 1952 to the spring of 1956. During that period, this group declined about 10 percent at retail. Then the prices of durables turned upward, due partly to higher manufacturers' prices and partly to smaller discounts by retailers. The retail prices of durables have leveled off during the past year, except for seasonal fluctuations. The peak was reached in November 1957, the month in which the 1958 models of all automobile manufacturers reached the market at the same time. The manufacturers' list prices were only about 3 or 4 percent higher than the prices for the 1957 models, but dealers' discounts were sharply curtailed, as they usually are at that time. But by January 1958 larger discounts again appeared, and car prices began to decline.

From November to February the prices of commodities other than foods (including both soft goods and durables) declined 0.5 percent. But the index as a whole rose 0.7 percent, because of the 2.3 percent advance in food prices and 0.9 percent in services.

Return of Liberal Arts—Differentiating the Profession of Teaching

---

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, May 21, 1958

Mr. SALTONSTALL. Mr. President, I ask unanimous consent that the comments of Dr. Max R. Goodson, dean of Boston University's School of Education, on two very important questions affecting American education be printed in the Appendix of the RECORD.

Dean Goodson's comments on, first, the return of liberal arts; and, second, differentiating the profession of teaching were presented as a part of a comprehensive symposium in conjunction with the 40th anniversary of the school on the topic What Needs To Be Conserved and Changed in American Education in the Next Decade. Certainly, Dr. Goodson's statements deserve the attention of every American.

There being no objection, the comments were ordered to be printed in the RECORD, as follows:

COMMENTS OF MAX R. GOODSON, OF WELLESLEY HILLS, MASS., PROFESSOR OF EDUCATION AND DEAN OF THE SCHOOL OF EDUCATION, BOSTON UNIVERSITY

On the return of liberal arts:

In the educational times just ahead there will likely be a return to the liberal arts and sciences. This movement should influence elementary and high schools, colleges and

university programs of professional preparation. An appropriate question is: Return to what?

In the quest for educational reform there are arts and sciences which could profit the student in his pursuit of a free and informed mind and which of necessity belong in his education. A predominant part of any education is the arts and sciences; they do not have to be justified in principle.

In practice, however, a particular instruction in art and science may not be worth the effort of return and would substitute very little substance for a college course in fly casting. They may be taught without student contact or in an atmosphere of dilettantism and supercilious isolation. The current event, ethical and political issues of modern life and the principle of using scholarship for solving problems may be ignored. Instruction in the liberal arts and sciences needs methodology so as to assure that the teaching joins the concerns of the learner, releases and disciplines his mind, and forms his personality. Without interpersonal competence that is nurtured by the liberal arts only when instruction is favorable, the arts and sciences may not generate a trustworthy human situation. The liberal arts can turn sour unless they are prized and communicated through a humane climate.

A balanced program in the humanities, natural science, and social studies is relevant at every age from the first grade through a doctor of philosophy degree. An affection for the intellectual life is a requirement for revitalizing American life. A liberal education responsive to social welfare and friendly to the theory of democracy is needed. A scholarship oriented to cultural reform and national purpose must become more central to education.

Asking for a return to liberal and science education makes an earcatching slogan. But the substance of an education that honors our destiny as an American people as well as the arts and sciences still needs attention. A conserving perspective that is constructive in intent—such is the appropriate attitude toward education in the next 10 years. The task is more than making a return.

On differentiating the profession of teaching:

Perhaps one reason the profession of teaching is suffering from low social status is that it has not stratified its personnel who perform the teaching act. "A teacher is a teacher," and all teachers have tenure and move automatically on the salary schedule in accordance with experience and education.

The principle of paying a teacher in accordance with merit has a great deal to recommend it. One reason the principle is now resisted in its application is the difficulty of making a valid difference between teachers. In theory it's admitted that some are more competent than others, but how to make these differences apparent in the system by which the teachers are given status and are rewarded is a problem in need of solution.

It is conceivable that now is the time, in the face of a teacher shortage and a further impending shortage, for the public schools to differentiate the profession of teaching. More people and better-qualified candidates might be attracted to the teaching profession if it were stratified.

There are four categories of teachers that might be established in a school system. The first is that of career teacher. Nominees to this category would be highly qualified by their educational background, through their professional awareness and competence, and because of their motivation to make a life career of teaching. People in this category—and they are to be found in any school system of every size—break the ceiling that is set by any certification requirements or any pattern of preparation for teaching.

A second category is that of teacher in its conventional connotation. Persons in this category differ from persons in the first primarily because of a lower grade of leadership capacity. They meet certification requirements and have been produced by accepted patterns of education for the teacher in colleges and universities. Persons in this category should be periodically appraised as a candidate for a career teacher position. Devotion to the responsibilities of the profession and demonstrated excellence would be the principal criteria to be applied.

A third category is associate teacher. In this group one might expect to find the younger members of the profession, the teachers in preparation and those who have not met minimum certification standards.

A fourth category is that of amateur teacher. People in this category would not compete with professional people for pay, but would participate in the educational program of an elementary or high school on a part-time basis and for reasons other than financial gain. These people would be established in the community, and in a profession or occupation, but would not have trained themselves directly for a teaching position.

They may be the mothers of the community who are willing to give a half day, 3 days a week to assisting professional teachers in the school's work. They may be the research scientists who devote 5 hours a week to teaching advanced physics or mathematics to a select group of high-school seniors. Or they may be the retired businessmen who out of a rich life experience and successful community work have a great deal to offer young people on the subject of the community.

There are ways in which very fine human talents might be recruitment to the educational program of the community if the role of amateur teacher should be established and honored. One of the expected valuable outcomes of this role is that the amateur and the professional would interact with one another with a resultant enrichment and vitalization of the educative processes.

The Supreme Court and the Constitution

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 21, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the column by Holmes Alexander entitled "On the National Front," a nationally syndicated column, which appeared in the press April 10, 1958.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

ON THE NATIONAL FRONT
(By Holmes Alexander)

WASHINGTON.—There goes the eighth amendment. Everybody knows how the Constitution's fifth amendment ("No person * * * shall be compelled in any criminal case to be a witness against himself.") was destroyed by ill use.

Well, just before Easter, Chief Justice Warren set a precedent which could rob us of another gem in our American heritage. In giving his opinion that Congress could not take away the citizenship of a military deserter, the Chief Justice cited as his authority the eighth amendment, which reads:

"Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted."

The Chief Justice contended that Congress was practicing "cruel and unusual punishments" in the Nationality Act of 1940. This law declares that an Armed Forces' deserter, having been convicted with all the protections in our system of justice, no longer is an American citizen.

This use of the "cruel and unusual" phrase is something that periodically turns up in a smart-aleck column or in the plea of a desperate attorney whose client has one foot inside the gas chamber. You don't expect it from the Supreme Court. The drafters of the eighth amendment were trying to write in a safety catch that would prevent the American Government from visiting inhuman atrocities upon prisoners, as was an official practice in the Old World. The first Congress which concurred in making the amendment part of the Constitution, could hardly imagine that a future Chief Justice would wrench the phrase out of its meaning.

Think it over. The Constitution forbids the Federal Government to gouge out a man's eyeballs, or to feed his liver to the vultures, or to do any of the heartless and indecent things that Spanish kings and Chinese war lords did to political captives. So, more than a century afterward, a Chief Justice reasons that the same amendment prevents Congress from denationalizing a convicted deserter. That would be "cruel and unusual," like slicing off a traitor's ears or branding him as a convict.

But what would seem incredible in 1791, when the Bill of Rights went into effect, is today tolerated, though not with approval, as a commonplace abuse. Last October-November the enterprising Indianapolis Star ran a series of editorials called The Runaway Court, tracing the mad dash of the headless horsemen under Earl Warren. The response was astounding. Hundreds of lawyers, jurists, legislators and newspaper publishers wrote in to express agreement with the editorial series and disapproval of the Supreme Court.

In February 1958, National Review magazine analyzed the voting on 10 recent Supreme Court cases which bore upon internal security of the United States. The record is staggering to look upon. Three Supreme Court members voted against protecting their country's internal security in all 10 cases. Only one Supreme Court member did more than break even. The three who used every opportunity to strike down precautions against enemy subversion were Messrs. Warren, Black, and Douglas. Justice Clark stands out as a dissenter against this trend. Clark cast 7 votes for internal security measures and 2 against them.

This summary, of course, did not include the opinions given last month on citizenship. But the same lineup held. Justices Black and Douglas joined the Chief Justice, as did Justices Whittaker and Brennan, relative newcomers. It seems certain that the United States is to be deprived of the basic right of self-preservation as long as Mr. Warren remains the intellectual leader of the Supreme Court. Mr. Warren's forceful personality, and evidently his concept of judicial duty, are shaping history in a way that is not good for our side.

What can we do about it? The Constitution very wisely makes it extremely difficult to remove Justices. This remedy is not practical and probably not desirable. The Senate is very determined not to confirm any more legislating judges, for high or lower courts. This in time will rectify the judiciary, provided that Senators do not backslide in their resolve.

But meanwhile, a sickness keeps eating into America. The Supreme Court is only one of many daily symptoms which show how listlessly we cling to our life as a nation. The

fierce will to live has left many parts of our body politic. The man-in-the-street who can't see why President Eisenhower should shun a meeting at the summit; the greedy merchant who thinks we should trade with Red China; the pacifist who prefers to give up H-Bomb supremacy rather than live dangerously as a sovereign nation; the sentimentalist, the seduced internationalist tramp and the Supreme Court Justice who believes that non-Americans are just as important as Americans—all these, I would consider it self-evident, have no quivering passion to see the United States endure.

Well, any doctor can tell you what happens to a very sick man who doesn't want with all his might to live. It can happen, and often has happened, to an ailing nation, too.

The Area Redevelopment Act

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 21, 1958

Mr. THURMOND. Mr. President, when the Area Redevelopment Act was being considered by this body, I opposed it vigorously. I pointed out that it is a socialistic bill with so many defects in it that even the alleged advantages of socialism would not be obtained.

The weaknesses of this bill have since been clearly pointed out by the Honorable Robert M. Hitt, Jr., the able editor of the Charleston Evening Post, of Charleston, S. C., in an editorial published in that newspaper on May 17.

I ask unanimous consent that the editorial entitled "THURMOND Correctly Labels It" be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THURMOND CORRECTLY LABELS IT

The United States Senate ought to be thoroughly ashamed of itself for passing a bill which was correctly labeled by Senator STROM THURMOND as a socialistic measure.

What it proposes is both bad government and bad business.

The law would make available $375 million of Federal funds to cities and rural areas declared to be in a state of "chronic" distress.

Sponsors claim passage of the measure would offer hope of comeback to about 70 industrial areas over the Nation and to as many as 300 rural counties.

They can hardly have asked themselves why any particular community or county should be experiencing prolonged economic trouble. Why are other cities, other counties, holding their own or progressing? If they can do it without Federal handouts, why can't the others? In short, what are the economics of the matter, and not the politics of it?

There are throughout the United States ghost towns which died when economic reason for their creation ceased to exist. There are any number of cities and prosperous rural areas which once were wilderness—before their locations and natural resources became of economic value, attracting settlers and investors.

It is a pity the United States Senate did not heed the statesmanlike protest by Senator THURMOND. The South Carolina solon cited just about every one of the several potent objections to this socialistic proposal—a proposal doomed to failure if ever it becomes enacted into law.

"The Federal Government," Senator THURMOND said, "should not be permitted to spend and lend the money of all the people for the purpose of favoring any one area over another with industrial development. * * * It is a socialistic bill with so many defects in it that even the dubious advantages of socialism would not be attained."

The measure selects for rural redevelopment the 300 counties which, by the arbitrary criteria written into the bill, are classed as most in need of Federal financing.

Commenting on this feature, Senator THURMOND had this to say:

"In view of the setbacks which agriculture has suffered in recent years, it is important that more industries be located in our rural areas. The task of locating industries in our rural areas, however, should be the job of local communities, their development boards, their chambers of commerce, and private industry."

No such boondoggling shot in the arm can cure any chronic ailment brought about by changing economic conditions. It would mean not only an added cost of Government, but another expansion of an already bloated bureaucracy. It would be another perversion of the Government's spending, lending, and taxing powers. Who doubts that much of the Government's aid would be diverted to sheer political use? It would open up another field of opportunity and temptation for waste and corruption. It would be more of socialism's sickening futility.

The Power of Negative Thinking

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Wednesday, May 21, 1958

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Frank J. Smith, the vice president of marketing, Columbus Boat & Forging Co., which article was published in the Sample Case. The Columbus Boat & Forging Co. is an important manufacturing concern of my home city, and Mr. Smith is an accomplished economist and leader in the field of marketing.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE POWER OF NEGATIVE THINKING

(By Frank J. Smith, vice president, marketing, Columbus Bolt & Forging Co.)

I have always been a positive thinker. I've had to be—and I still am. However, I'm afraid that I am a member of a rapidly diminishing group, the optimists. There seems to be a growing delight on the part of a good many people to be gloomy, pessimistic, and discouraged. As a matter of fact, whenever I try to point out some of the silver linings I see in our economy, I find myself many times outnumbered. There are those who look down their noses, wrinkle their brows, shake their heads, and look at me as though to say, "What a dreamer." or "You just don't know the score, Bud." I get the feeling that those of us who do have confidence in the future of our companies, our country, and ourselves, are being looked upon by some of our fellow men in much the same way folks must have viewed Columbus when he expressed his idea that the world was round, and set out to prove it.

As happens all too frequently today, I recently overheard a conversation between two men that went something like this: "Business sure is bad, isn't it?" said the one. To which the other replied, "Yep, it sure is," shaking his head and letting out a sigh that sounded like it came right from the tip of his toes. The longer they talked, the gloomier they became.

This sort of thing is happening today wherever you go. People are talking about economic and world affairs. And whenever and wherever such conversation takes place, it is often audible to others—just as I couldn't help overhearing these two men talking. Similar conversations go on daily in such places as buses, factories, offices, and locker rooms. Because world conditions are changing (and when haven't they been doing this?) and business is readjusting in certain areas, many men are discouraged, frightened, and ready to throw in the sponge. Little do they realize, however, that what they set in motion with this kind of talk is dangerously powerful.

If there was ever a time when our thinking could exert a powerful influence for good or bad, it is now. Consider the power of negative thinking. Negative thinkers are quickly imitated by others. And thus begins a contagious spiraling effect that starts to draw all of us down. Sure, we must be honest and face up to realities. Things are tough; sales are off in many lines; profits are down, and a good many people are unemployed. But does that mean that we should just sit around feeling sorry for ourselves and give up? I think not. Negative thinking and talking affects people in much the same way as throwing a lead weight to a drowning person when he's crying for a lifesaver. Now is the time to fight. Now is the time to think, act, and preach optimism, faith, and good will. Now is the time for renewed confidence supported by forceful actions. But what do we too often find? We find men talking the blues, like the ones mentioned previously.

I wonder if we realize that what each of us says and does may change the lives of others with whom we come in contact. One man touching the life of another man cannot help but exert some influence upon it. The effect may be minor or tremendous. It may be for good or for bad. Negative thinking is a powerful influence. In fact, it can be just as powerful in a harmful way as positive thinking can be powerful in a beneficial way. This negative thinking, and the power of it, we find all about us. We find men seeming to want to outsell others about how bad times really are; pointing out bits of evidence gathered from here and there to strengthen their case. We find men seeming to take pride in having a mouthful of arguments to put across and prove their point that things are really rough—and going to get much, much worse. We find such men sewing up their arguments with the parting shot, "Just you wait and see." Others within earshot pick up this weeping and wailing. Some of it rubs off. That which does is often distorted, twisted and magnified to sound even worse when passed on again by the eavesdropper.

A remark such as "I understand that company X is laying off 55 workers," is often passed on by a second party as, "Have you heard that company X laid off 150 workers?" and by a third party as "They tell me company X gave the ax to 500 workers." And so, like a grass fire that gets out of hand, little sparks of pessimistic chatter flying out

in various places ignite into a major conflagration. The situation gets out of hand. A seemingly harmless exchange of comments between two men about conditions grows into a monster. For what is said between them passes from mouth to mouth like a chain letter, multiplying over and over again, touching and influencing the lives and actions of all it passes through.

Now is the time for each one of us to check ourselves. Most of us, if questioned, would say that we are positive thinkers. Yet, perhaps without realizing the implications, we all too often are guilty of doing exactly what the men to whom I referred were doing. How about you? Do you choose your words wisely? Are you careful about the mood you are reflecting to others with whom you come in contact? Are you an optimist or a pessimist? Are you a booster or a knocker? Do you think and act in a positive or a negative way? Suppose you do feel badly about some reverses, will it help to make others feel badly, too?

William James, in a line from one of his writings, says "Be not afraid of life. Believe that life is worth living, and your belief will help create the fact." If each of us thinks as William James suggests, and then acts and talks accordingly, we can destroy the source of the power of negative thinking and build up a dynamic force, powered by constructive attitudes and actions.

If, on the other hand, we contribute to this power of negative thinking, you and I may be helping to write pages of history that will read that these days were most noted for being the first time that any peoples talked, thought, and acted themselves into a depression. Who wants to be famous that way?

Let each of us do our share where we are right now to cut off the power of negative thinking by not contributing to it. Let's face up to our problems and buckle down to solve them, but let's do it in a confident, optimistic, and positive way.

Manufacture and Sale of Antipolio Vaccine

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Wednesday, May 21, 1958

Mr. PAYNE. Mr. President, I ask unanimous consent that two editorials from the Washington papers in regard to the antitrust action against the five drug companies in connection with the sale of Salk vaccine may be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington (D. C.) Evening Star of May 16, 1958]

PATRIOTS OR PLOTTERS

Presumably the Government has evidence which it thinks justfies prosecution of five drug companies for conspiracy in connection with their manufacture and sale of antipolio vaccine. It is ironic, however, that so soon after these companies had been acclaimed by Federal authorities and the public generally for meeting the demand for the lifesaving Salk vaccine they should find themselves branded as greedy connivers.

When Dr. Jonas Salk, early in 1953, first disclosed the development of a vaccine that was highly effective against the long-dreaded crippler-killer disease, poliomyelitis, there was in existence only a tiny supply in his laboratory. No facilities were available for large-scale production of the vaccine and no techniques had been worked out for commercial manufacture. But the drug companies, in response to an urgent appeal by the United States Public Health Service for a partiotic effort to solve the supply problem quickly, launched a crash program. It cost them a great deal of money. One of them, Cutter Laboratories, ran into difficulties and had to quit, with a reported loss of several million dollars. The five others continued to step up production—and to cut prices—until there was an abundance of the vaccine for everybody.

Against the background of so-called patriotic effort that has produced the vaccine needed to assure victory over the polio scourge, the Department of Justice's action in indicting the five companies for restraint of trade is startling, to say the least. Although details of the broad charge have not been revealed, the general accusation is that the firms conspired to prevent a free market in the vaccine. It does not charge that prices were kept high (actually they have dropped steadily until they are about half of the initial prices) but that prices have been kept uniform.

All of this will be very puzzling to many persons, especially to those who have had the benefits of Salk shots. One of the companies, Eli Lilly, which has produced more than half of the vaccine to date, has called the Goverment's charges complete nonsense. Certainly in fairness to the accused firms, the public ought to withhold judgment until the evidence is of record and the companies have had their day in court.

[From the Washington, D. C., Post of May 18, 1958]

UNSOCIALIZED MEDICINE

Antitrust suits are inescapably abstruse. Perhaps, therefore, the presumption of innocence to which defendants are always entitled under American law is even more than usually obligatory in the case of the five major pharmaceutical firms indicted a few days ago by a Federal grand jury on charges of conspiring to fix prices and eliminate competition in the sale of Salk antipolio vaccine to Federal, State and local government agencies. It must have taken some temerity for the Department of Justice to bring this suit. Inevitably, it recalls the monstrous bungling with which the administration—and especially the Department of Health, Education and Welfare under Secretary Hobby—conducted the entire Salk vaccine distribution program 3 years ago in the spring of 1955.

Do you remember the system of voluntary controls which the President and the Secretary of HEW kept advocating as the way to determine priorities for allocation of the scarce vaccine supplies? The Government itself seemed to be suffering from paralysis at that time. There was a frenzied demand for Salk vaccine. Exhorted by the Government to produce it as speedily and plentifully as possible, the five firms now under indictment were authorized to go ahead with production; and, in point of fact, they went ahead so efficiently and so successfully that by mid-1956 the supply was abundant and priorities were no longer necessary.

Whether these five firms conspired in any way to fix the price of the vaccine, we have no means of knowing; since a grand jury found evidence suggesting that they may have done so, it seems altogether proper that the Government should move against them in vigorous prosecution. Price fixing is bad enough under any circumstances; it seems especially odious in connection with a medicine needed for the protection of children. When one considers, however, that the Federal Government was, for a time at least, the drug companies' sole customer, with authority to bargain respecting the vaccine's price, one can hardly help wondering whether the indictment ought not to include a charge that the Government itself was woefully lax and ineffectual in its whole handling of the Salk vaccine program.

Terrorism and the FBI

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 21, 1958

Mr. PROXMIRE. Mr. President, the 45 bombings and dynamitings of churches, schools, and other buildings in the South in recent months are condemned, I am sure, by American citizens wherever they live.

Every society has within it a small, irreducible core of hoodlums and vandals who hate society and every good thing that is in it. Civilization depends upon keeping these elements down—driven back into the corners and dark places where they belong.

The full power of the governments, State and Federal, should be employed in stopping this terrorism in the South. The Attorney General has been asked to use the FBI, with its incomparable resources, to help local authorities combat it. So far he has declined to do so.

Surely it is too late in the day to adopt so crabbed a view of federalism as the Attorney General seems to entertain. These are real bombings. They are inflicting real damage, not only on property, but on the fabric of our collective life. The Constitution is broad enough to meet this challenge to our peace and security, as it has so many others.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Let FBI Hunt the Terrorists," which appeared in the Milwaukee Journal on May 19.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET FBI HUNT THE TERRORISTS

The wave of terrorism in the South that has resulted in 45 bombings and dynamitings of religious institutions, schools, and private property during the last 16 months has left Attorney General William P. Rogers unmoved. He has not ordered the FBI to probe the violence.

Rogers apparently is worrying about whether there is an interstate conspiracy behind the bombings. If there is, the FBI would have definite jurisdiction. Meanwhile, the terrorists are at large and the danger that they may strike again is imminent. It has been 3 weeks since the Anti-defamation League (ADL) of B'nai B'rith formally appealed to Rogers to put the FBI on the trail. So far, he has not replied either way.

The acts of violence have been directed at Negroes and Jews. There have been incidents in Alabama, Tennessee, North Caro-

lina, Georgia, Texas, South Carolina, Florida, Arkansas, and Oklahoma.

Arnold Forster, general counsel for the Antidefamation League, pointed out during a recent visit here that the FBI acted in January 1952—on orders from the Justice Department—to investigate racial violence in Florida during the previous year. There had been 13 explosions at Jewish and Catholic institutions and physical violence against Negroes.

The same question arose then as now over whether any Federal laws had been violated. However, J. Howard McGrath, then Attorney General, was more concerned about the inability of the local law enforcement officials to stop the terrorists.

McGrath boldly gave the FBI unusual authority to track down the criminals in Florida. He told the investigators to find the persons responsible and worry about the exact jurisdiction later. McGrath's action abruptly ended the violence and the FBI probe resulted in six grand-jury indictments.

The Antidefamation League's recent appeal to Rogers stated that there appeared to be a virtual southwide conspiracy of lawless elements. Actually, this time the FBI has more justification for stepping in than in 1951–52 because the recent bombings have occurred in nine different States. When McGrath acted, the violence had erupted only in Florida.

Here is a situation where the FBI with its abundance of highly skilled manpower and superior methods of crime detection can be of great service. We hope it won't take continued bombings to convince Rogers of the need for Federal intervention.

The Little Rock Incident

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 21, 1958

Mr. THURMOND. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial "Enforcement Can Create Injustice," which appeared in the Greenville News, of Greenville, S. C., on May 17.

The editorial discusses President Eisenhower's recent remarks at a gathering of Negro leaders, in which he gave some sound advice.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"ENFORCEMENT CAN CREATE INJUSTICE"

The Negro leaders who gave President Eisenhower a citation for distinguished service for employing Army troops to force integration of a school in Little Rock, Ark., should have read between the lines of his remarks some sound advice and an admonition to the Negro to do more with the opportunities he has.

At least one Negro leader at the same meeting in Washington likewise urged his people to do something about the rising crime rate among Negroes in large urban centers, a situation that has been both ignored and covered up to some extent, but which is rapidly becoming a national scandal.

The President has said before some of the things he said in accepting the citation, but he seems to have gone farther in some respects and to have given more emphasis to the thought that the Negro can't depend on laws and force alone to achieve the purposes espoused by the organizations which speak for him.

The Negro, he said, "must have patience and forbearance," and "must depend more on better and more profound education, than the letter of the law."

It has been apparent from the beginning of the law suits seeking admission of Negro pupils to White schools that the NAACP, which successfully pushed them, was interested not in education but in integration for its own sake.

Yet it should be obvious that the Negro's greatest need, in the North as well as in the South, is better education to teach the masses to live decently where they are before thought can be given to moving them elsewhere.

Perhaps Mr. Eisenhower had Little Rock in mind when he made the most significant statement of all:

"Enforcement itself can create more injustice. * * * Laws themselves will never solve the problems in human hearts and emotions."

No greater truth than this has emerged from the whole controversy over integration. The United States Supreme Court was warned during the hearings that preceded the antisegregation decision that such a decree from the court would create more problems than it would ever solve.

And it is true that enforcement already has created more injustice. In Washington, where the school officials voluntarily complied with the decision, educational standards have fallen and many white parents have been forced to move to other communities to find a better environment for their children.

In Little Rock, the presidential action praised as a contribution to justice and respect for the law succeeded in forcing eight or nine Negro children into a white school. But what of the white pupils who came in for rather rough treatment, and what of the effects on the educational process? The Negroes got their rights, but what of the hundreds of other pupils?

Equally telling in the discussion on the occasion were the remarks of Dr. J. H. Jackson, president of the National Baptist Convention, who challenged the Negroes to reduce the mushrooming crime rate. Crime statistics in New York, Chicago and elsewhere show exactly what he was talking about.

The sum and substance of it is that integration as such will solve none of the Negro's problems. He and his leaders must learn to place more reliance on education, religious inspiration and economic improvement.

Need for Expansion of Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 21, 1958

Mr. MURRAY. Mr. President, there is growing public recognition of the fact that Congress should act promptly to assist education and specifically see to it that more classrooms are built and teachers are paid decent salaries.

A number of Senators joined in cosponsoring S. 3311, which would help meet this need. My distinguished colleague from Montana, Representative LEE METCALF, introduced companion legislation, H. R. 10763, in the House. The General Education Subcommittee and the Special Education Subcommittee of the House Committee on Education and Labor have been conducting joint hearings on the meritorious Metcalf bill.

This bill enjoys widespread support in the teaching profession. Newspapers have also viewed it favorably. Recently the Great Falls Tribune dealt with the issue in an editorial entitled "METCALF Explains Need, Purpose, of School Assistance Bill."

Mr. President, I ask unanimous consent to have printed the Great Falls Tribune editorial, which appeared in the May 14 issue, in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

METCALF EXPLAINS NEED, PURPOSE OF SCHOOL ASSISTANCE BILL

While there is continuing public sentiment in this country for some sort of broad expansion of Federal aid to education, the congressional climate does not appear favorable to the passage of such a bill in this session.

Representative LEE METCALF, of Montana, is author of a bill, however, which has the official backing of the National Education Association and which is broad in scope. The current issue of Montana Education magazine carries an explanation by METCALF of the provisions and purpose of his bill (H. R. 10763) and its relation to Montana education problems.

Stressing the critical nature of Montana education financing at the State level, METCALF says in part:

"The School Assistance Act of 1958 is an attempt to meet this national crisis. It would provide Federal aid for school construction and for increases in teachers' salaries. Each State would decide for itself how the money would be spent. A State could decide to spend all its allocation on school construction and basic instructional equipment. It could decide to use all its allocation to increase teachers' salaries. It could decide to spend part of the money for each of the two purposes.

"During the first year of the program, each State would receive $25 per school-age child. That amount would increase by $25 each year until it reached $100 during the fourth year.

"This legislation, cosponsored in the Senate by 13 Senators, among them Senators JAMES E. MURRAY and MIKE MANSFIELD, is of particular importance to Montana.

"At best, it is estimated that Montana will go into the next biennium with a $5 million deficit in the State general fund. If the increased liquor excise tax and the university millage levy are voted out, estimates of the deficit range up to $15 million. As you can see, therefore, there is little hope for increased legislative appropriations for schools. The only other source is Federal aid.

"Montana's allocation during the first year of our program would be $4,388,000, which would increase to $18,851,000 for the fourth, and succeeding years.

"Each level of government—local, State, and Federal—has a responsibility in the effort that must be made unless we are content to become intellectual second-raters. Under the legislation I have introduced the Federal Government's responsibility to prevent this from happening will be partially met."

Supreme Court School Integration Ruling

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES
Wednesday, May 21, 1958

Mr. JOHNSTON of South Carolina. Mr. President, recently a South Carolina newspaper published an editorial concerning the Supreme Court school integration ruling of May 17, 1954, and the so-called implementation, enforcement, and interpretation of this ruling by the present administration and the courts.

The editorial is entitled "Fourth Anniversary of Ruling on Race Brings Issue to Harder Ground," and was published in the Charleston (S. C.) News and Courier of May 16, 1958.

The editorial splendidly outlines the terrible problems we are faced with in the South. Quoting the editor of the Richmond News Leader, James J. Kirkpatrick, the News and Courier says, among other things:

> There is a maxim that no law can be effective when it is imposed upon a community against its will; and when such imposition is attempted it is not called law; it is called tyranny.

No sounder truth has been spoken, and the courts in this land had best pay heed to such things in forcing upon millions of southern people a philosophy and doctrine which is foreign to them and which will not be voluntarily accepted by them.

Mr. President, I ask unanimous consent that the editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Charleston (S. C.) News and Courier, May 16, 1958]

FOURTH ANNIVERSARY OF RULING ON RACE BRINGS ISSUE TO HARDER GROUND

Tomorrow will be the fourth anniversary of the United States Supreme Court's decision outlawing separation of the races in public schools. It is timely to review what has happened and to look into the future.

Such an examination has been prepared in masterly fashion by James J. Kilpatrick, editor of the Richmond News-Leader, and author of The Sovereign States. Mr. Kilpatrick's article appeared in Human Events, a Washington weekly news letter. From it we submit the folowing summary of the situation today:

"The 17 States and the District of Columbia affected by the school cases have a public-school enrollment of some 9,431,000 white pupils and 2,922,000 Negro pupils. Their school systems are subdivided into school districts, of which 3,000 districts are biracial. The fourth anniversary of the opinion finds approximately 760 of these districts 'integrated,' and 2,240 not integrated. I put the word 'integrated' in quotation marks to suggest that, in some of these districts, integration has been accomplished in the barest token degree: 1 Negro pupil among 6,800 in Winston-Salem, N. C., 4 among 7,700 in Charlotte.

"The statistics on this whole subject are deceptive, and need to be examined with care. When it is said that 2 million white children and 350,000 Negro children are now in 'integrated situations,' it should also be said that except for 9 districts in Arkansas, 3 in North Carolina, and 3 in Tennessee, all these integrated situations are in border States and in the District of Columbia. Four years after the decision, not a single public school is racially integrated in Virginia, South Carolina, Georgia, Florida, Alabama, Mississippi, or Louisiana.

"What carries perhaps the greatest significance is the fact that the trend toward voluntary integration has all but stopped. Of the 760 school districts now classified as integrated, 537 were integrated by the fall of 1955, and 723 were integrated by the fall of 1956. The movement now has stalled. Except for a few mopup districts in fringe areas, the advance of integration will move henceforth an inch at a time. Court orders, directed at resentful defendants and backed by Federal force, will be required, and these will have to be carried out in an atmosphere not of acceptance but of active or passive hostility. There is a maxim that no law can be effective when it is imposed upon a community against its will; and when such imposition is attempted, it is not called law; it is called tyranny. It is in this light that the Court's decrees are viewed over most of the remaining unintegrated districts."

What may southerners expect in the future? The courts are pressing two districts in Virginia to hasten the mingling of races in classrooms. The showdown may come in September. Mr. Kilpatrick forecasts hard resistance.

"These have not been happy years for the South," says Mr. Kilpatrick, "not for the white southerner, and I suspect, not for his black brother either. But we survive. Both races in the South fortunately are characterized by a vast and almost boundless patience; we share a certain genius for procrastination, and facing what often seems to be a crisis, we sometimes are able to resolve the urgency by what John Randolph called a policy of judicious neglect. It may be, in time, that a new relationship of agreeable stalemate will provide us an acceptable modus vivendi. Each race needs the other, at least in terms of the southern economy, and one day the process of gradual adjustment halted by the Court will have to be resumed.

"But on this particular issue of public schools, the white South has not the slightest intention of yielding; and the Negro leadership seems determined to press its legal advantage at any consequence. Both sides, looking to the autumn, are a little apprehensive. We do not know what will happen, but we do know this: Over the past 4 years, the apostles of integration have won the easy ground; and now, for good or ill, the easy ground is about used up."

Mr. Kilpatrick, an acknowledged authority on the United States Constitution, speaks with a great background of knowledge both of law and of people. He reflects the sentiments of many Virginians. We believe South Carolinians share those sentiments.

Trying as the times ahead may be, the qualities of courage, patience, and decency will enable people of both races to surmount their troubles and to work out an acceptable way of life. We hope this result can be attained without violence and with a minimum of outside interference.

Sputnik III and the Long, Long Future

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Wednesday, May 21, 1958

Mr. PROXMIRE. Mr. President, last week I had printed in the RECORD an article which deplored the general apathy toward our urgent educational needs which has followed our successful launching of a satellite of our own.

The Christian Science Monitor, in an editorial appearing on May 19, expresses the hope that the very considerable achievement of the Soviets in putting up a sputnik weighing 3,000 pounds will stir us to continue to press hard on our missile program and long-range defense planning. I think the editorial is right. But even more than what is there stated, I think we ought to make use of the sense of urgency Sputnik III should give us to spur our people to build the schools and recruit the teachers, upon which our destiny ultimately depends.

Mr. President, I ask unanimous consent that the editorial entitled "The Spur of Sputnik III," from the Christian Science Monitor for May 19, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SPUR OF SPUTNIK III

The launching of the third Soviet sputnik was a prodigious achievement. Its weight of a ton and a half makes it the heaviest man-made object orbiting our planet.

It took tremendous rocket power to launch such a vehicle. Thus the Soviets have once again demonstrated their abilities in this militarily significant field.

As with previous sputniks, the new satellite was announced as part of the International Geophysical Year program. We are glad that the Soviets are demonstrating their rocket might as part of this peaceful international scientific effort. But we hope that the implications of this demonstration will again drive home the need for intelligent urgency to American military rocket planners.

The sense of urgency that prevailed following Sputniks I and II began to dull after a few small American satellites were also shot into orbit. The former apathy toward pleas from research managers for sharply stepped-up missile development and truly long-range space defense planning seemed to be returning.

From the viewpoint of western nations, the new sputnik will be of double service if, in addition to contributing to scientific knowledge, it helps keep defense planners on their toes.

The Language Race

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES
Wednesday, May 21, 1958

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Jacob Ornstein entitled "The Language Race" which appeared in the May 1958 issue of the Kiwanis magazine.

In this article Mr. Ornstein points out the lack of foreign language training available in our colleges and secondary schools and contrasts the attitude in the United States toward the importance of teaching our young people foreign languages which will enable them to com-

municate with people from all parts of the world with the stress being placed on this phase of education by other countries, particularly the Soviet Union. If we are to achieve better understanding and mutual cooperation of nations in all parts of the world, it is essential that our people in government, in private industry and in other forms of American representation abroad be able to communicate with the peoples of these nations.

In this connection, Senator MANSFIELD and I introduced S. 3552, a bill which would improve the language training proficiency of foreign service officers. It is my sincere hope that this bill, which is a step toward correcting the language deficiency in the Foreign Service, will receive favorable consideration by the Senate Foreign Relations Committee during this session of the Congress.

This morning in the Senate Appropriations Committee we heard a discussion of the very serious need for further language study by our Foreign Service officers.

There being no objection, the article was order to be printed in the RECORD, as follows:

THE LANGUAGE RACE

(By Jacob Ornstein)

Somewhere in the Middle East a crowd listens to a loudspeaker mounted on a sound truck in the village market place. First the listeners hear a news summary, then a bitter propaganda barrage against Washington, and finally a declaration of Moscow's love for the Moslem world. An American official stands by, completely unable to understand the rapid flow of gutteral sounds. Not far away, a Soviet diplomat smilingly turns to a group of bystanders and strikes up a conversation with them in fluent Arabic. This Russian is one of a vast army of linguists trained in the U. S. S. R. to fight the West, not with automatic rifles or atomic artillery, but with the ordnance of foreign tongues.

The Soviet Union, realizing that words are weapons in the struggle for men's minds, has launched an all-out offensive on the language front that no other country has shown the willingness or ability to match. Bright Russian youngsters of eight are sent to special schools for a thorough grounding in French, German, or English, along with their three R's. High-school students spend 5 years at rigorous language study. Talented youths receive scholarships to state institutes of foreign languages, where 5 years of full-time training are given them in 1 of the major world languages. Diplomats must master the language of the country to which they will be sent—as well as 1 or 2 additional tongues—before they ever set foot on foreign soil. Publishing houses are turning out dictionaries and texts in over a hundred languages, including Chinese, Amharic, Uzbek, and even Zulu.

America is many noses behind in this language sweepstakes. The Arabic tongue, key to the culture and peoples of the entire Middle East, is studied by no more than 85 students in all our universities. Chinese, spoken by 650 million people in Mao's militant state, is offered by only 35 of our higher institutions, mostly to small classes. A recent survey, made by the writer and published by the Department of State's External Research Staff, found that of our 1800 colleges, only 165 teach Russian, to less than 5000 students. By contrast, there are about 10 million Russians of all ages mastering English, and Soviet educational authorities have called for an even more vigorous English teaching program.

As a leader in the Free World, we are finding linguistic ignorance to be a formidable stumbling block in international relations. Secretary of State Dulles not long ago declared, "The United States carries new responsibilities in many quarters of the globe and we are at a serious disadvantage because of the difficulty of finding persons who can deal with the foreign language problem. Interpreters are no substitute."

What happened in Indonesia a few years ago has become a classic illustration of the dangers of working through native translators. When that new state was created, we simply had no personnel able to handle the language of the country. Natives were hired, who, out of deference to their employers, translated everything in a manner highly complimentary to America. When linguists trained by the State Department arrived on the spot, read the newspapers, and attended sessions of the legislature, they found that a bitter wave of anti-American sentiment was raging there.

So serious has the situation become that the United States Office of Education last March called a public conference on the language problem. Representatives of some 20 agencies were invited to sound off on their linguistic woes. An official of the United States Information Agency, for example, reported that of the 65 otherwise qualified applicants interviewed by him on a recruiting trip to eight leading universities, only three had a real working knowledge of such simple languages as French, Italian, or Spanish. According to a spokesman for the International Cooperation Administration, which annually sends some 1200 persons abroad, among a typical team of 50 men dispatched last spring for work in underdeveloped areas, only three could speak anything but English.

Why is the American, with all his educational facilities, the low man on the linguistic totem pole? It is simply because our school system has for decades regarded foreign language with indifference, apathy, or outright hostility.

The story of the tragic decline of language study in the classrooms of our Nation can be briefly told. Up to 1914, a knowledge of 1 or 2 languages was considered essential for every educated person. However, during the first World War, anti-German hysteria eventually spread to all things foreign. Heights of absurdity were reached when sauerkraut was named liberty cabbage and the Katzenjammer Kids were rebaptized the Liberty Kids. Twenty-two States passed legislation curbing language study.

After the war, isolationism and the attacks of super-progressive educators combined to deal language a knockout blow. Emphasis was shifted to life-adjustment courses, such as cosmetology, basket weaving, and even dating Indeed, the more extreme theorists confidently asserted that foreign tongues were a frill and a waste of time for young Americans, few of whom would leave our comfortable, monolingual shores.

Pearl Harbor was a rude awakening. From the time of our entry into the war until V–J Day, 11,453,000 Americans went overseas—most of them tongue-tied in anything but English. Reviewing his experience on several fronts, Gen. Jacob L. Devers had the following to say:

"The inability of American troops to communicate with their allies * * * led to frequent misunderstandings which caused frictions and even delays in the prosecution of the common war effort."

GI's returning from the cockpits of war helped bring a mild boom in languages, and enrollments went upwards. A number of universities added new languages to their curricula, overhauled teaching methods, and installed modern equipment. The armed services and the Government, determined never to be caught linguistically flat-footed again, set up their own teaching programs to supply the know-how that they had despaired of receiving from the public schools.

In spite of these developments, America is still dangerously short of language skills. A survey conducted in 1953 by the American Council of Learned Societies for the Department of Defense, identified only 1 person with an advanced knowledge of Thai, and 3 who spoke Burmese. When we need to win friends among the Asian-African nations that are being so ardently courted by Moscow and Peking, this lack of tongues constitutes a dangerous chink in our armor.

Although World War II taught us a bitter language lesson, our school system has still not retooled to meet present-day needs. According to Modern Language Association figures, there are fewer students, percentagewise, learning languages in our high schools today than there were 40 years ago. Although in 1914, 40 percent of American secondary-school students were enrolled in modern-language classes, at present only about 15 percent are so enrolled. Worst of all, fully 56 percent of our high schools do not offer a modern language, even to those interested in pursuing it. Is it any wonder that prominent language educator Donald D. Walsh has termed the high schools our "linguistic wasteland"?

In the colleges the situation is also depressing. Between 1920 and 1952, exactly 90 accredited institutions (13 of them in 1950, 5 years after the war) dropped the language requirement. Unruffled by the ferment in the Near and Far East, many institutions continue to concentrate, as they did 20 years ago, on Western Europe. Of these antiquated curricula, Lawrence G. Derthick, United States Commissioner of Education, recently observed, "Today our schools teach mainly French, Spanish, German, and Italian, yet three-fourths of the world's population do not speak these languages." To make matters worse, the geography, history, and backgrounds of large and strategic areas of the globe are badly neglected. "So far as the American undergraduate is concerned," Prof. G. L. Anderson of New York University has charged, "the Orient is still the land of Marco Polo and Dr. Fu Manchu."

Unfortunately, it is the younger generation that must pay the price of our shortsightedness. Many feel bitter and disillusioned at being sent out as linguistic ignoramuses into a complex, multilingual world. It is small wonder that the young man faced with military service feels cheated when he is sent to an overseas post minus a foreign tongue that might spell survival. Associated Press correspondent Harold Martin, in a dispatch from the Korean War, once wrote, "I saw a battalion badly bloodied because nobody could understand what an excited Korean was trying to say—that a strong Red force was lying in ambush just behind the hill." Speaking before the General Staff School several years ago, Senator Henry Cabot Lodge warned of the shape of things to come when he stated, "An American officer who wants to succeed in the future may have to show his proficiency in commanding some sort of foreign troops."

High school and college graduates in search of jobs learn, often too late, that language know-how can be translated into dollars and cents. An examination of a recent issue of The New York Sunday Times disclosed 57 positions in which language was required. These ranged from bilingual stenographer, in which language skill brought five to ten extra dollars weekly, to Spanish- or Portuguese-speaking auditor, with a $1,200 yearly differential for the linguistic competence. The ever-growing demand for American products creates an increased need for young men able to solicit prospective clients in tongues as diverse as

French and Burmese. Here, too, our young countrymen will find stiff competition from the polyglot Germans, Swiss, Japanese, and Russians, who have bitten big chunks out of our foreign trade balance.

Travel is in the cards for young Americans. By 1960, the United States Passport Office expects to issue one million passports annually. The recipient of each passport is now also given a letter signed by President Eisenhower, reminding him that while abroad he is a responsible representative of his nation. Whether in Naples or Timbuctoo, the American globetrotter who can approach the other fellow in his own tongue helps cement foreign relations more than he may ever imagine. While in Jakarta, Vice President NIXON received a thunderous ovation and made friends for the West by uttering the single word "merdeka"—Indonesian for "freedom."

This is not all. By denying our youngsters a foreign tongue, we also deprive them of the rich byproducts of this subject. The intellectual and cultural values of language study, neglected in America as if by a tacit conspiracy, have long been recognized by leaders and thinkers in most lands. It is not claiming too much to say that the pursuit of languages engenders habits of orderliness, perseverance, and logical analysis, while at the same time opening doors to other civilization. The French writer Anatole France once noted that "the merest smattering of any language that is new to you is a step away from ignorance and a step forward toward more knowledge of men and their thoughts."

The superiority of students presenting language for college entrance has been clearly established by experiments during the past 25 years. Last year, Dr. Robert Skelton, after studying incoming freshmen at Alabama Polytechnic Institute, concluded that students who had pursued a foreign language in high school almost invariably scored higher in all entrance tests, including mechanics of English, effectiveness of English, reading comprehension, mathematics, American history, and linguistic ability. Although this sounds like a panacea for all that ails humanity, the moral is obvious.

What can be done about our appalling neglect of foreign languages? The problem will not be solved by calling more high-level conferences or by asking Congress for increased appropriations, even though these measures have their values. The answer lies in the overhauling of our hopelessly outdated language teaching system.

At the college level, it is necessary to expand the range of languages to include Indonesian, Vietnamese, Tamil, Swahili, Persian, as well as Russian, Polish, and many other vital Eastern and Slavic tongues. The traditional concept of 3 or 4 hours of classwork weekly needs to be scrapped for more intensive instruction. The language requirement for college entrance and graduation ought to be made universal.

In the high schools, foreign languages should be required for all but the mentally deficient. The range of languages also needs to be expanded, with Russian, Arabian, Chinese, and Hindi made available to gifted youngsters. Poorly qualified teachers ought to be replaced by professional linguists with the finest of equipment at their disposal.

Most important of all, the teaching of foreign languages needs to be widely introduced at the elementary school level. It is ironic that American educators have consistently failed to recognize a fact long appreciated abroad—that childhood is the ideal age for language learning. Dr. Wilder Penfield of the Montreal Neurological Institute, and Dr. Frances Ilg, of the Gesell Institute of Child Development, recently emphasized that "the optimum age for beginning the continuous learning of a second language seems to fall within the span of ages 8, 9, and 10."

Although belatedly, the movement to introduce foreign languages in the elementary school (known as FLES by the teaching profession) is beginning to get off the ground. From a small beginning in 1952, the enrollment has now risen to about 300,000 youngsters in some 2,000 schools studying French, Spanish, German, and Italian tongues. Impressive as this may seem, it still means that less than one American youngster out of a hundred can have a chance at language learning—even when it is literally child's play.

Doubting Thomases may look with a jaundiced eye at FLES, objecting that the curriculum is already overcrowded. A look at current practices, however, will allay their fears. Two basic types of programs are now in operation. In the first, a teacher, in circuit-rider fashion, visits a number of classrooms, spending 10–20 minutes in each. Language is usually begun in grade three and continued through the sixth grade, by which time the junior linguist should have a good command of the everyday, spoken idiom and be ready for more advanced work.

The second type of plan does not require that a special period be set aside. Instead, language instruction is integrated by the homeroom teacher into regular classwork. For instance, in geography class the students also learn their geographical facts about Germany, Austria, and other lands both in German and English. In either system, the amount of time consumed by language instruction is so small that no other subject need be sacrificed.

So dramatic have been the results schieved by most FLES programs that television, newspapers, and other public media have accorded it an amount of attention rarely devoted to educational events.

In the final analysis, the language problem must be attacked at the grassroots. When the American public fully realizes how its youth is being hamstrung by inadequate linguistic training, it will demand and receive a language-teaching system geared to modern times. Public leaders can do much to awaken Americans to the seriousness of the situation. The United States Commission for UNESCO has organized several hundred "citizen consultation groups," to acquaint laymen and educators with the facts. Civic groups, particularly the parent-teachers' associations, have put their shoulder to the wheel and spearheaded moves to improve language facilities at the local level. In some communities, they have even carried out "language" drives to provide funds for adding linguists to the school staff.

Unhappily, the teacher shortage may sabotage any real progress in language improvement. Informed estimates reckon that by 1960, about 1,900 and by 1970, some 6,500 new instructors, not counting replacements will be needed. Unless language teaching is made more attractive, through higher salaries and such fringe benefits as travel and study opportunities, we will continue to lose our best linguistic talent to better paying but less critical fields.

Meanwhile, America lags dangerously behind in the language race. When it is entirely possible that the real battle for survival may be won or lost in the classroom, we cannot afford much longer to tolerate our horse-and-buggy language system in an age of space travel.

Marxism in Latin America

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, May 21, 1958

Mr. BEALL. Mr. President, Dr. Joseph F. Thorning, associate editor of World Affairs, and an eminent authority on the Communist menace throughout the world, continues to inform the reading public with much that is important to apprise us of the evils attendant upon the movements of this ideology. As professor of international relations in the Catholic University of Chile, Dr. Thorning has been an avid student of communism, particularly in the nations of South America.

His views on this matter are among those for which I have a very real personal respect. I commend to the Members of the Senate his recent article, Marxism in Latin America. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MARXISM IN LATIN AMERICA

(By Joseph F. Thorning, professor of international relations in the Catholic University of Chile)

Although signs of the stepped-up activity of Marxist-Leninist agents are apparent almost everywhere in Latin America, they seem to cause little apprehension among State Department officials. Speaking at Miami on January 14, 1958, Assistant Secretary of State for Inter-American Affairs, R. R. Rubottom, Jr., declared that Marxism-Leninism, although a constant danger, did not constitute an immediate threat to the other American republics. The Kremlin agitators, Mr. Rubtottom insisted, were in no position anywhere in the hemisphere to gain power through legitimate means.

In the same vein, the Assistant Secretary played down the Soviet menace by citing figures on the number of Communist Party adherents in Latin America. The number varied, he claimed, "between a few Communists—as is the case of Central America—and from 50,000 to 80,000 in Brazil and Argentina, respectively." In estimating that the total throughout the 20 other American republics might be less than 200,000, he did admit that numbers frequently do not represent the influence they have.

Obviously taking into account the Kremlin's frantic efforts to promote trade with Brazil and the actual presence of an Argentina commercial mission in Moscow, Mr. Rubottom discounted this threat by pointing to a 12-precent decrease in business between Latin America and the Soviet bloc in 1957.

Mr. Rubottom also mentioned the religious spirt of the Latin Americans, 95 percent Catholics, who have a deep faith in God and spiritual values of freemen. He considered this outlook upon life as an obstacle to Soviet expansion.

Finally, Mr. Rubottom alleged that Kremlin attempts to intimidate the free world with the sputniks have had no effect in the other American republics. Evidently, the United States official considered that Soviet

advances in technology would be more than offset by cultural exchange and an ever-increasing cooperation among the American republics, based on centuries-old bonds which unite them.

In an earlier interview, Secretary of State John Foster Dulles predicted that the Soviets would not be able to penetrate the hemisphere. Acknowledging that a sharp drop in prices for raw materials imported from Latin America furnished the groundwork for the Kremlin's economic offensive in that area, Mr. Dulles expressed confidence that an improvement of business in the United States of America would produce a leveling up of prices. He added that substantial assistance was available to the other American republics through the Export-Import Bank and the United States program of technical aid.

State Department complacency about the situation is not shared by United States leaders in the legislative branch of the Government. Democratic Senator GEORGE A. SMATHERS, who has been outstanding in his devotion to the good-neighbor policy, called for a top-level conference of United States policymakers to concert action for freedom against new subversion in Guatemala. The Florida lawmaker also promised that he would introduce a bill to increase Latin America's share in the mutual security program. As soon as Senator SMATHERS announced his plan to provide a $30 million increase, another specialist on inter-American affairs, Senator MIKE MANSFIELD, of Montana, declared that he would support the initiative of his distinguished colleague from Florida. Meanwhile, important leaders in the United States House of Representatives pointed out that the $3 billion that had been wasted on a Marxist-Leninist tyrant, Mr. Josip Broz-Tito, should have been invested in Latin America.

Both Senators and Representatives emphasized that it would be the part of wisdom to strengthen the effectiveness of inter-American cooperation by making more funds available to the Organization of American States. The Secretary General of this valuable regional group, Dr. José Antonio Mora, in an exclusive interview with this associate editor of World Affairs, drew attention to two interesting anomalies: (1) Although Europe, Asia, and Africa receive rich consideration in the United States mutual security program, Latin America gets little or no attention; (2) after all the fanfare at the meetings of Chiefs of State at Panama, the 21 American Republics, although favoring spectacular plans for expansion of health, education and welfare programs through the Organization of American States, scaled down that group's 1958 budget as it applied to specific projects, by three-quarters of a million dollars.

A veteran Washington observer, commenting upon this development, remarked: "Slashing the budget of the Organization of American States is a curious way to profit by the experience of this body in the domain of cultural, technical and economic cooperation. 1958 should be a year of fresh initiative and broadened activity. Latin American farm products, minerals and professional skills are in urgent need of markets. This is bound to accelerate inflation which, in Argentina, Bolivia, Brazil, Chile, Haiti, and Uruguay, is approaching disastrous extremes. Guatemala is not the only country where the Soviets are ready to establish another beachhead. This time, the men under the discipline of the Kremlin are shooting for big stakes: oil-and-iron rich Venezuela. Caracas is Target No. 1 of the disciples of Karl Marx."

In Brazil the Marxists are using the bait of trade as the spearhead of an attempt to get the Government in Rio de Janeiro to agree to the establishment of full diplomatic relations with the Soviet Union. Brazil already has Soviet-dominated Legations from Czechoslovakia, Hungary, and Poland. It is well known that these Legations are centers of Soviet propagnada and espionage. The Marxist-Leninist agents are supplied with plenty of capital for their subversive operations.

Several members of the Brazilian Cabinet, including the Finance Minister, José Maria Alkmin, are urging President Juscelino Kubitschek to set up an Embassy in Moscow and to allow the Soviets to accredit an Ambassador to Brazil. Finance Minister Alkmin claims that the Brazilians must find additional markets for their coffee, minerals, and fruit. He and other civilians in the cabinet are impressed by the relatively low prices that the Moscovites are quoting to Petrobras, the Brazilian national oil monopoly for exploration, drilling, and exploitation equipment. In their eagerness to do business on what appear to be advantageous terms the civilian officials seem to be blind to the experience of other nations with Soviet inferior machinery which breaks down in the oilfields.

Brazil now has for sale huge quantities, not only of coffee, tropical fruit, cocoa, cotton, wax, and vegetable oils, but also cattle, hides, wood fibres, sugar, and a variety of minerals. Representatives of a newly organized Marxist trade agency, Torgbras, are painting commercial possibilities in bright colors. Promises are made lavishly to the effect that Soviet-Brazilian trade can amount to $560 million.

A curious feature of Torgbras (more than faintly reminiscent of the United States of America Amtorg) is that the frontman is a Brazilian, Col. Eleuterio Tito Lemos Do Canto. His partners are two Russian-born residents of Hong Kong, Klimenty and Valerian Odintsoff. They are a father and son combination. Their trip from Hong Kong to Rio de Janeiro was made with documents from the United Nations Refugee Office. The Odintsoffs and Do Canto now have representatives in the principal Brazilian cities. They acknowledge that they are in contact with Soviet commercial offices in Buenos Aires, Montevideo and other South American capitals. According to the best military sources in Brazil, Chile, Bolivia, and Paraguay, the whole network of trade and political agents is financed by the Soviet Embassy in Uruguay.

On January 16, 1958, Mr. Amaury Kruel, chief of the Brazilian federal police, revealed that all the aforesaid activity was planned at the 20th Congress of the Communist Party in Moscow in 1956. Present at this meeting, according to the report made by Crief Kruel, was the notorious Soviet boss of Brazil, Luis Carlos Prestes. The latter, who is described by his cohorts as the "cavalier of hope," was able to escape from Brazil and make his way to Moscow by means of a Soviet visa furnished in the Montevideo Embassy of the Soviet Union.

It was on the basis of this information that the military members of the Brazilian Cabinet voted to act as a unit in opposition to the proposed diplomatic rapprochement with the Kremlin. It is no secret that Gen. Enrique Teixera Lott, Minister of National Defense, is determined to have no part in the move to give the Marxists an additional foothold in the armed forces and in the nation. His Eminence, Jaime Cardinal da Camara, Archbishop of Rio de Janeiro, also issued a solemn warning to the people about the value of freedom and the need for caution in any dealings with the men in the Kremlin.

In the meantime, the Brazilian unit of currency, the cruzeiro, continues to sag. Whereas the rate of exchange of the cruzeiro to the dollar was 65 to 1, not long ago, it now stands at the rate of 95 to 1. Obviously, this is a condition that prompts all Brazilians to get into debt, to buy on the installment plan and do do nothing to store up savings for the morrow. The whole economy has become the adjunct of a gambling fever and a gambling casino. No end of the monetary inflation is in sight.

Basic to this inflation is the fact that Brazil must import petroleum products valued at almost $300 million each year. This is a huge item in the adverse balance of trade. Nevertheless, the proved petroleum reserves of the country are more than ample for the industrial and transport needs of Brazil. But another fever, rampant nationalism, keeps the populace chanting: "The oil is ours." This is true. The Brazilian economy, however, requires that the oil be extracted from the subsoil, refined and distributed. Under present circumstances, this indispensable mineral resource is simply buried treasure.

No high Government official has the moral fortitude to educate the Brazilians on the virtues of production in cooperation with foreign technicians and overseas money. This could be done, it has been noted, on the basis of the Venezuelan formula, splitting the oil royalties 50–50, or even in a proportion more favorable to the Nation. Until some agreement is reached, the oil will remain in the ground. And the Marxists will have a fertile field of propaganda and agitation. Liberty is at stake.

Savings From Shipment of Surplus Farm Products via Great Lakes-St. Lawrence Seaway

---

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 21, 1958

Mr. WILEY. Mr. President, I was pleased to receive today a most informative letter from H. G. Bethune, Jr., of the General Steamship Agencies, of Milwaukee, representing a large number of shipping lines.

The letter pointed out the tremendously impressive savings which have been already realized, thanks to the movement of surplus farm products via the direct, all-water route from the Midwest through the present St. Lawrence seaway.

Mr. Bethune estimates that America's taxpayers have saved no less than $600,000 based upon economies achieved by moving these farm items through Milwaukee and Green Bay alone.

Mr. President, this is a most heartwarming report, for several reasons:

First. It demonstrates sound economy for the American taxpayer on the part of Federal agencies' handling the surplus disposal program.

Second. It demonstrates an awareness of the significance of the present seaway—a significance which will, of course, be multiplied manyfold, when the present 14-foot depth gives way to the future 27-foot depth.

Third. It demonstrates the effectiveness of one of the finest humanitarian programs conceivable, and that is, ship-

ments under church auspices to aid needy people abroad.

I cannot too highly commend what America's great religious faiths have done in fulfilling the ancient admonition that we are our brother's keeper.

It is most appropriate that the bounty produced from the fertile soil of America, from the good earth of this continent should serve to feed the hungry and help make whole the bodies of those abroad which have been impaired by malnutrition.

American farm products should not be piled up in warehouses. They should be used as under Public Law 416 and Public Law 480, to bring health and happiness to people who need to consume them.

In the spring of 1959, when the Great Lakes-St. Lawrence seaway opens, then the savings reported by Mr. Bethune, in this one small instance, will be magnified to a vast extent. This will come about, not only through Government-sponsored shipments abroad, but infinitely more important, through an ever-rising volume of private commercial trade.

I send to the desk now the text of Mr. Bethune's letter, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[Fjell-Oranje Lines (Lakes-Europe-United Kingdom), Fjell Line (Lakes-Scandinavia), Swedish-Chicago Line (Lakes-United Kingdom, Scandinavia), Niagara Line (Lakes-Mediterranean), Concordia Line (Mediterranean-Persian Gulf), Thorden Line (Scandinavia), West Coast Line (west coast, South America), Brodin Line (east coast, South America), Harrison Line (United Kingdom), Knutsen Line (Far East), Spanish Line (Spain), Vacuba Line (Cuba), O. S. K. Line (Japan), C. T. O. Line (Far East), Chargeurs Reunis (West Africa), Eckert Line (Portugal-north Africa), West Line (Caribbean), Guatemala Line (Guatemala-Honduras)]

GENERAL STEAMSHIP AGENCIES, INC.,
Milwaukee, Wis., May 20, 1958.

The Honorable ALEXANDER WILEY,
United States Senator from Wisconsin,
Senate Office Building, Washington, D. C.

DEAR SENATOR WILEY: As the foremost sponsor and proponent of the St. Lawrence seaway and its development and usage, and knowing as we do of your intense and continuing interest, you will undoubtedly be pleased to know that Wisconsin ports, i. e., Milwaukee and Green Bay, are benefiting from the movements of surplus dairy products in overseas relief programs via the direct all-water route.

Several years ago we interested the Department of Agriculture in making available at Great Lakes ports some shipments of surplus cheese and dried milk, which, under Public Law 416, had been donated to various relief agencies for distribution overseas to needy people. The experience proved most satisfactory and economical and, as a result, more and more such shipments were allocated for movement via the Great Lakes to destinations principally in continental Europe, Mediterranean and north Africa, to which areas the ocean rates from Great Lakes ports are the same as the ocean rates from seaboard ports.

With the cooperation of some of the relief agencies, principally the Catholic Relief Services, and also the Lutheran World Relief and Church World Service, plus the encouragement, interest, and splendid cooperation of the various interested branches of the United States Department of Agriculture this movement, during the 1957 lakes shipping season, reached a total of approximately 120 million net pounds of surplus dairy and grain products which moved via the Great Lakes-St. Lawrence seaway route to the destinations mentioned above. Of this total about three-fourths moved through the Wisconsin ports of Milwaukee and Green Bay.

As you know under the terms of Public Law 416 the inland freight charges from point of origin to port of exit are paid by Commodity Credit Corporation, and the relief agency takes possession at the port and arranges for payment of ocean freight charges which are, in turn, reimbursable by ICA. By clearing these shipments from Wisconsin ports and because most of these surplus dairy products originate in Wisconsin and Minnesota the saving in inland rail charges is considerable as opposed to sending the products to eastern or gulf seaboard ports. Figuring conservatively the average rail savings amount to about $15 per gross ton, and if we extend this to the approximately 85 million pounds or roughly 40,000 tons which moved through Milwaukee and Green Bay this past year we come up with a total dollar freight saving to Commodity Credit Corporation and the taxpaying public of about $600,000 on that portion alone. Because, as stated above, the ocean freight rates are the same from both lake and seaboard ports to the destinations listed there is no additional cost to the relief agencies.

These savings in freight costs are quite impressive and certainly a great deal of credit should be given to the Food Distribution Division, Direct Distribution Branch, and the Dairy Operation Branch, shipping section of the Livestock and Dairy Division, and the Grain Division of the Commodity Stabilization Service of the Department of Agriculture for their encouragement and cooperation in facilitating these movements through lake ports. The assistance of the Cincinnati office of the Commodity Stabilization Service has also been of tremendous value in expediting these shipments to the various lake ports for clearance.

The Department of Agriculture, through the various branches mentioned above, is well aware of the economy resulting from the utilization of lake ports and the St. Lawrence seaway and we are sure will continue to take full advantage of these opportunities.

I am sure that you also are interested in its continued use.

Yours very truly,
GENERAL STEAMSHIP AGENCIES, INC.,
H. G. BETHUNE, Jr., *President.*

Our Foreign Policy Seeks To Defend and Advance the Interests of the United States

---

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1958

Mr. MERROW. Mr. Speaker, under leave to extend my remarks, I am pleased to include in the Appendix of the CONGRESSIONAL RECORD an address by the Honorable John Foster Dulles, Secretary of State, delivered before the Atomic Power Institute sponsored by the New Hampshire Council on World Affairs, New Hampshire Hall, University of New Hampshire, Durham, N. H., Friday, May 2, 1958, at 8 p. m., eastern daylight time.

In presenting Secretary Dulles to the New Hampshire audience, I said:

The Honorable John Foster Dulles needs no introduction to any audience either in the United States or abroad. There is no American in public life today who has a clearer grasp of international problems or who has displayed a greater leadership in solving them than Secretary of State, John Foster Dulles. In international conference after conference, he has countered successfully Soviet attempts to confuse, to disrupt, and to dominate the world. The country has every reason to be justly proud of the many diplomatic victories he has won and of his leadership in international affairs. His deep insight, his vision, his dedication to the principles for which the United States stands enable him to give us inspired leadership and statesmanship in this troubled nuclear and space era.

I count it a distinct privilege and a high honor to be on the platform with the Secretary this evening. All of us are grateful to you, Mr. Secretary, for honoring the New Hampshire Council on World Affairs, the University of New Hampshire, and our State with your presence at this banquet tonight. Ladies and gentlemen, I present to you the Honorable John Foster Dulles, the greatest Secretary of State in our time.

The address follows:

There is nothing mysterious about the goals of United States foreign policy. It seeks to defend and advance the interests of the United States. These interests are of several kinds:

(1) There is the life of our people and the physical safety of our homeland. These would be endangered by war.

(2) There is the well-being of our economy. This would be gravely impaired if hostile forces dictated the pattern of world trade.

(3) There is the integrity of the principles for which our Nation was founded. Our Nation is more than population, more than real estate. Our Nation represents ideals. These ideals are an integral part of America, to be defended and promoted by our foreign policy.

Now let me comment briefly on these three aspects of our foreign policy.

I. PEACE

We defend our people and our homeland against armed attack by having the power to hit back hard at anyone who attacks us or our allies. This causes any potential aggressor to pause, for he knows that he could not, by aggression, gain as much as he would stand to lose. In order to have that assured capacity to strike back, we need cooperation with other countries.

Potential aggressors need to be put on notice that they cannot, with impunity, pick up nations one by one, leaving the United States to the last, when even we will be relatively weak. Accordingly, we have made collective defense treaties and similar arrangements with nearly 50 other countries. These commit each nation to help the other in the event of armed attack.

A further benefit from these arrangements is that under them the burden of the military effort is shared. For example, the ground forces of the cooperating free world nations amount to about 5.6 million men. But only about 950,000 of these are American.

Also our Strategic Air Command is afforded well dispersed positions around the world.

This dispersal greatly increases the effectiveness of the deterrent.

Our collective security arrangements are serviced by our Mutual Security Program. It supplies our allies with a certain amount of military equipment. In a few cases it helps them financially to maintain military establishments which are needed but which their economies are too poor to support without some outside help. And we provide development assistance to certain less developed free world countries. We do that to help them build their societies on the principles of freedom and to escape pressure to turn to the Communist bloc with the peril of liberty which that involves.

The Soviet Union tries hard to disrupt our defensive efforts. It portrays the United States as militaristic and our collective defense groupings as aggressive military blocs.

Of course, as you and I know, the American people are among the least militaristic of any people in the world. George Washington called upon us to maintain what he called a "respectable defensive posture." By that he meant a military posture strong enough so that others would respect it. Unfortunately, we have not always done that. At times our military strength has been so negligible that militaristic despots treated us as a cipher, not to be taken into account in their aggressive plan.

We are trying not to commit that fault again. We do not intend to make ourselves weak merely because the Soviet imperialists urge that we do so to prove our idealism.

Our collective arrangements are defensive, as specifically authorized by the United Nations Charter. These groupings are more than expedients. They introduce a fresh concept into the structure of world order.

Within our own country and every civilized country, local security is sought on a collective basis. We unite to provide a central police force, a central fire department, and the like.

Now, at last, within the free world, we are beginning to apply that enlightened collective concept. In that way weaker nations can be made secure from being picked up one by one. In that way a strong nation can avoid having to become a garrison state, and even then, being encircled and strangled, as a result of the smaller nations being picked up one by one. On a collective basis nations get maximum security at minimum cost.

No doubt our people would not hesitate to provide the vast funds needed for our solitary defense and our youth, if necessary, would give a greatly increased measure of their time to military service. But even with that maximum effort we would be less secure.

Every American who wants to see his country safe and solvent ought to get out and actively support our mutual-security program, now before the Congress.

II. ECONOMIC WELFARE

Our foreign policy also tries to assure our people a prosperous home economy. That depends in good part upon foreign trade. Our exports are running at a rate approaching $20 billion a year. Our foreign trade employs about 4.5 million people. Our imports provide many important things that we need and could not readily, or at all, produce here at home. Furthermore, our trade relations help to keep the free world together. Without ample trade with the United States, many countries would be virtually forced to accept absorption into the Communist economic bloc.

The major expression of our foreign trade policy is the Reciprocal Trade Agreements Act. The principle of the act was first adopted in 1934 and 10 times the Congress has acted to renew it. Under it our trade has flourished. In 1934 our total foreign trade—exports and imports—amounted to $3.7 billion. Last year it amounted to $32.4 billion, excluding military exports.

The latest renewal expires next month, and further extension is now being sought from the Congress. Failure to extend would be a major disaster. A very few might temporarily benefit. But very many, and, in the long run, all, would suffer gravely.

Surely we do not want to go back to the early 1930's. Then our high tariff and monetary devaluation policies wreaked havoc upon international trade and boosted into power, in Germany and Japan, extreme nationalists who later plunged the world into World War II.

Every American who wants to see his country economically sound, who wants allies, and who wants peace, should work for the extension of our Reciprocal Trade Agreements Act.

III. IDEALS

Let me speak now about our efforts to promote the ideals of America.

Our Nation was founded by men of religious faith. They believed that our Declaration of Independence was not merely rhetoric but truth, and that all men were in fact endowed by their Creator with certain inalienable rights. They believed that they had a mission to help men everywhere to have the opportunity to exercise their God-given rights.

Under the impulsion of their faith and works, there developed here an area of unusual spiritual, intellectual, and economic vigor. It became known as the Great American Experiment. The ideals that stimulated it have been projected throughout the world. They have more than once helped to turn back the tides of despotism.

America would not be America if it were stripped of such idealism.

The values of personal liberty are, of course, best demonstrated by individuals. It is they who have liberty and it is their use of liberty that can make it a dynamic force. On the other hand, their misuse of liberty plays into the hands of despots. That means that individuals should exercise self-discipline and self-sacrifice, and not turn liberty into license. The individual deportment of free Americans is the most decisive force, for good or evil, in the present contest with despotism.

I do not imply that Government has no part to play. It too, can find ways to reflect the ideals of the people whom it serves.

Government may not interfere in the internal affairs of other countries. That is contrary to accepted international law and practice, and forbidden by many of our treaty engagements.

But your Government can, and does, make clear to all the world what are the ideals for which our Nation was founded.

We can, and do, refuse through our Government to give official sanction to the oppression of other peoples and the denial to them of the rights by which they are endowed by their Creator.

Your Government can, and does, see to it that captive peoples know that they are not forgotten and that their hopes for freedom have the sanction of a vast mass of world opinion.

IV. WORLD ORDER

One of the ways to protect and advance the interests of our people is by strengthening the fabric of world order. Peace will never be secure until there is an adequate body of international law and effective means of enforcing that law and means of changing that law as needed to promote justice.

The United Nations was a great step forward. It was largely a United States initiative. But its Security Council is hobbled by the veto power.

President Eisenhower recently proposed that the permanent members of the Security Council should exercise greater restraint in the use of the veto power. The Soviet Union reacted violently against that proposal. Nevertheless, we shall persist in seeking to strengthen the United Nations.

We seek, under its auspices, a rule of law for such newly developing areas as Antarctica and outer space. A Law of the Sea Conference has just been concluded at Geneva as an effort to create and modernize international law. The 86 nations attending reached agreement on important segments of that law. We are making progress in this field.

Still the United Nations has not yet found the way to guarantee law and order. That is why we have to maintain the system of regional collective defense arrangements to which I have referred, and which the charter authorizes. It is our ardent hope, however, that the United Nations can more and more be the framework within which all may find justice and peace.

V. AGREEMENTS WITH THE U. S. S. R.

In the meanwhile, there is an immediate problem that concerns us greatly: Can we reach agreements with the Soviet Government which would mitigate the sharpness of our conflict and reduce the danger of friction which could flare into war?

I can assure you that that is constantly in our minds. There are, however, great difficulties.

For one thing, the Communists do not look upon agreements as we do. We consider ourselves bound to live up to our agreements. This is important, because nations, unlike individuals, are under no superior force that compels them to live up to their promises.

But the Communists feel no obligation to perform their agreements. They have broken one agreement after another, confirming what Lenin said that, to the Communists, "promises are like pie crusts, made to be broken."

It would obviously be reckless for the free world to weaken itself merely in reliance of Soviet promises to perform in the future.

A second obstacle is that the purposes of Communist rulers are so basically acquisitive and aggressive that there is very little common ground between them and us.

Recent exchanges of views with the Soviet Union disclose their negotiating goals. They want:

(1) Our acceptance of Soviet Communist domination of the nations of Eastern Europe. They want us to abandon there the concept of our Declaration of Independence, and the explicit provisions of the Atlantic Charter and of the Yalta agreements, that the peoples of these countries are entitled to choose the form of government under which they will live;

(2) Our acceptance of the continued partition of Germany, or its reunification only on conditions that would give the Communist puppet regime in East Germany an opportunity to extend its rule over all of Germany;

(3) Liquidation of our collective defense associations, such as NATO, and abandonment by the United States of the concept and practice of collective security;

(4) United States recognition of Communist China, its seating in the United Nations with veto power on the Security Council, and acknowledgment of the Chinese Communist claim to Taiwan (Formosa);

(5) Elimination of the present trade controls by which the free world avoids sending strategic war goods into the Sino-Soviet bloc.

Each of these objectives represents an immense gain for the Soviet Union and a great loss to the free world.

Soviet propaganda suggests that if we would accept these losses, then the Communists might end the cold war. However, Mr. Khrushchev has, in other contexts, stated that it was inevitable that the cold war should go on, and he intended that it should go on.

It would be reckless to weaken the free world on the gamble that that would end the cold war. It is more likely that it

would continue under far more difficult conditions for us.

A few days ago Mr. Khrushchev said in Moscow: "We Bolsheviks are ravenous people. What we achieved through struggles in the past is not sufficient for us. We want more—tomorrow." They already have a billion people—and are still ravenous. I wonder how many more they need before their appetite is sated.

Now I do not, of course, conclude that there are no areas for useful agreement.

In 1953 we made an armistice agreement with the Communists which ended the fighting in Korea.

In 1955, we, with the British and the French, concluded with the Soviet Union, the State Treaty that liberated Austria

Earlier this year the United States concluded with the Soviet Union, a cultural exchange agreement of limited scope.

We believe that there can be other carefully negotiated agreements of mutual interest. We have been trying hard to get an agreement for reciprocal inspection in the Arctic area. The Soviet Government professed to fear our air maneuvers in the north. It took these alleged fears to the United Nations Security Council and complained of our activities. We explained that we needed to keep some planes in the air all the time because we fear that a massive and sudden surprise attack might be launched over the top of the world. So, to allay both fears, we proposed international inspection on both sides of the Arctic area to give assurance that there could not be any surprise or accidental attack. The matter came to a vote just a few hours ago. Ten of the eleven members of the Security Council supported our proposal. There was only one vote against—that of the Soviet Union. But that one negative vote constituted a veto. So, at the choice of the Soviet Union, the fears and risks continue. They continue for one reason alone, and that is because the Soviet Union rejects international inspection against surprise attack.

The significance of that is frightening. The result is tragic. It means that at the will and choice of the Soviet Union we have to go on living on the edge of an awful abyss, from which we could, so readily, be rescued if only the Soviet Union did not insist upon retaining for itself the possibility of massive surprise attack.

But we refuse to be discouraged. We remain willing to join in any dependable arrangement which will reduce the risk of surprise or accidental attack or, on a fair basis, reduce armaments.

VI. THE STRATEGY OF VICTORY

We must, however, assume that we face a long period of effort, sacrifice, and strain. That will come to an end when the Soviet rulers moderate their imperialist and idealogical urges.

Today the Soviet Communist rulers seek to implement their materialistic doctrine. They believe that human beings are in effect material particles to be fitted together as cogs in some well-oiled machine. Also they believe that that fitting together should be carried out through the world under Soviet Communist dictation. They profess to believe that this would assure world harmony, peace, and maximum productivity. All of this is a way of rationalizing the usual desire of despots for more and more power.

Experience, however, is teaching the Soviet rulers what has been taught so many times before, that man is not just a vivacious particle of matter. Men have souls and minds and individuality. They can never for long be forced into conformity. The Soviet Communist Party has undertaken the impossible, as they are beginning to learn.

They are learning a lesson in the satellite countries. A former adherent, Yugoslavia, is independent. In the other eastern European countries there is a sustained, and growing demand for independence. It has manifested itself in violent outbreaks that occurred in 1953 in East Germany, and in 1956 in Poland and, most conspicuously, in Hungary in late 1956. There has been a constant flow of refugees from East Germany into West Germany.

In the case of the revolts, and in the case of the refugees, it is the youth who figure most largely. Throughout their mature lives they have never known anything but intense Communist indoctrination and discipline. But love of God and love of country still survive. Human differences still persist. No materialistic regime can wholly or permanently crush them out. Sooner or later the Soviet rulers are going to have to face up to these practical facts. Indeed, there are occasional signs that they are already beginning to do so.

Even within the Soviet Union itself the Communist Party finds that human beings cannot be forced into a single mold of conformity. Under Stalin this was sought to be effected by the brutal terrorism of the secret police. There was a revulsion against that, and the system has been moderated. As the Soviet Union competes in the field of modern weapons and modern industrial techniques, increasing numbers have to be given a high degree of education. Thus there is developed an intelligentsia. And minds trained for one purpose cannot be kept thinking merely in the channels that the Party chooses. They think about other matters, including the unsoundness of the Communist dogma and the cheapness of Communist slogans.

There is more personal security and independent thinking within the Soviet Union now than there has ever been since the October 1917 Revolution.

The Soviet economic centralization has proved unworkable, and now there is economic decentralization. This means more local administration of affairs, with more regard to local differences and local habits.

There has also been a change in the foreign policies of the Soviet Union. In 1939, and between 1945 and 1950, it resorted primarily to violence. It attacked Poland and Finland. It took over Latvia, Lithuania, and Estonia by military occupation. It assisted, and in some cases instigated, Communist warfare in China, Greece, Malaya, the Philippines, Burma, and Indochina. It used force or the threat of force to take over Czechoslovakia and to blockade Berlin. It backed open war in Korea.

But these violent techniques no longer pay off. They are checked by the free world network of collective security. So the Soviet rulers now smile, and pretend to be friends, and to adopt what they hope will be winning ways, giving aid in the form of trade, technicians, and loans; and giving pleasure through ballets and the like. In this way the Soviet Union has gained increased influence and acceptability as against the time when it only growled and bared its teeth. But it is impossible to go on smiling for a long time without its having an internal effect on character. In the long run a nation, like an individual, tends to become what it pretends to be.

The essential is that, for this long run, the free world should stay strong and united. It must be willing to make the sacrifices needed to prevent the Soviet rulers from gaining external victories bringing new victims into the Communist camp. That would enhance the prestige of the Communist extremists and embolden them, and enable them to hold back the evolutionary trends at work within the Soviet bloc.

The United States, as the strongest of the free nations, can contribute immensely to giving evolutionary forces of freedom a chance to make themselves decisively felt.

President Eisenhower, speaking at Paris last December at the NATO meeting, said that "there is a noble strategy of victory—not victory over any peoples, but victory for all peoples."

The essential is that the American people hold fast to the ideals bequethed us by our founders and implement those ideals with courage that is traditional with us. We shall need a sustained, sacrificial effort. We may have to do some of the things that we do in war—but without the killing and being killed.

Why should we not make that effort? The stakes are perhaps the greatest for which men have ever had to strive, in peace or in war. And, if we strive aright, these stakes can be won in peace, without the awful horror of World War III. Surely for the averting of war and the safeguarding of freedom men should be willing to make a sustained and sacrificial effort. We can do so in confidence that peaceful victory is attainable, and that our efforts can bring the day when the dark shadows which now oppress humanity will give way to an era of light and gladness.

The Asian Revolution

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 21, 1958

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three articles by Mr. William Clark—The Asian Revolution—which were recently published in the Washington Post and Times Herald. These articles vividly capture the problems which we face in Asia and the special responsibility which the situation of India imposes upon us and other free nations.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

ASIAN REVOLUTION COULD ECLIPSE MISSILE RACE

(By William Clark)

(First of three articles)

LONDON.—There is far too much talk about this being the space age. It is more likely to be known to historians as the age of the Asian revolution. For it is in Asia, and other undeveloped parts of the world that rapid changes are taking place which affect the lives of two-thirds of the earth's population. For us in the West, in our struggle with the Communist world, this problem of adjusting to the Asian revolution is far more important than the refinements of the missile race.

To anyone who has spent a year in Asia (as I have just done in India) this all seems fairly self-evident, but on returning to the West the thesis appears to be quite startling. Yet it should not be so; the nuclear stalemate has made it less likely that the East-West struggle will be decided by weapons and more likely that it will be decided by competition for the uncommitted countries.

THE DIVIDING LINE

For virtually all the uncommitted countries of the world, the most important aspect of national life is not what form of government they have but how well it succeeds in improving their standards of life. That is what the Asian revolution is all about; how to gain control over nature so as to harness

it for the benefit of the peasant masses who have so long been at its mercy.

This 20th century version of our industrial revolution is something in common between Ghana and China, India and Rhodesia. The dividing line is not the aim (higher living standards); not the practical method (irrigation and hydroelectric power for industrialization); it is the political system (revolution by force or by consent).

Across this dividing line stand the two champions: China, the standardbearer of the Communist world and the revolution by force, and India, the standardbearer of the free world and revolution by consent.

At first sight it may seem rather odd to hear India called our champion, and I must sadly report that it seems just as odd to most Indians as it does to us in the West. But it is the way the world struggle is viewed in other parts of the world.

ALL ASIA KEEPS SCORE

I talked to an African politician in Ghana who was quite frankly watching the competition of India and China to see which paid off better, democracy or communism. In Ceylon, on the edge of the struggle, there is a propaganda battle going on between China and the West comparing the achievements—particularly in rice cultivation—of Communist China and India. Just because the West does not see clearly that India is its champion, there is little doubt that communism is winning the campaign in Ceylon, not against India but against the whole idea of a free society.

No single thing impressed me more in Asia that the fact that our future is bound up in the success or failure of the Indian experiment and that neither we nor the Indians realize it. We remain, as Britain and America so often have in the past, at best sparring partners, unaware that we are involved, whether we like it or not, in a real partnership which is one side in the tug-of-war known as competitive coexistence.

DEMOCRACY AT STAKE

The interdependence of the West and free Asia is as real as the interdependence of the Atlantic Community. If India fails to carry out her industrial revolution by democratic methods, it will be the democratic methods which are abandoned, not the aim of modernizing India. And if India ceases to be a democracy, there will be very few of those countries which are trying to modernize themselves which will not draw the conclusion that somehow democracy and development just do not go together; that it is necessary to establish a dictatorship in order to progress.

If that very plausible political theory became widespread, the West would soon find itself an isolated group of nations which shared only the historical accident of having had their industrial revolution a century before the rest of the world—an accident which made them rich, and plunderable.

To most Indians, as well as Africans, the West does not appear so much the free world as the rich world. That is the basic reason why they do not recognize any community of interest with us. Russia, however much it may boast that it is capable of producing greater wealth, is regarded as one of the poor nations, a have-not which is making good. That is a link of which Russia makes very subtle and effective use, representing herself as the leader of the world proletariat of nations against the oppressive rich.

Until a few months ago, however, the West was also regarded as the only source of the tools whereby the poor could make themselves rich: American technology was the key to wealth. That was all changed by Sputnik I.

GENIUS AND DIVINITY

From the moment that "baby moon" was seen sweeping across the Asian sky (and in no part of the world were so many people convinced that they saw it), Asians were convinced of Russian superiority in technology. The educated few gasped at the engineering feat; the illiterate masses worshiped the divinity which could create a new moon in the firmament; no one was interested in its military potentialities.

Today the West is losing the struggle for the uncommitted nations, and in particular for free Asia. The reason is that wo do not recognize our friends. Russia is now obeying the classic precept of imperialism: Divide and rule.

THE ASIAN REVOLUTION

(Second of a series by William Clark)

NEHRU'S INDIA IS THE STANDARD BEARER

LONDON, May 11.—If we are to save Asia, or rather save ourselves by preventing all of Asia from going the way of China, the first necessity is that we should know who are our friends and allies, what trends we can hope to foster, what policies are hopeless.

So far the West has been slow to recognize that Nehru's India is the standard bearer of the free world in Asia. Equally blind is India in failing to recognize the extent to which her future (as well as her past) is intertwined with the great democracies. Why is there this confusion and mutual misapprehension?

A good deal of the blame can be placed on India's leaders, particularly Mr. Nehru and Mr. Krishna Menon. Both these brilliant men have spent so much of their lives in opposition (it might be called resistance) that they have not fully adapted themselves to the position of responsible leaders. In particular this is so over foreign affairs where they have both confused foreign policy with foreign commentary; in English terms Mr. Nehru has confused being a pillar of the state with being a columnist in the New Statesman; in American terms both men have failed to distinguish between the roles of Mr. Lippmann and Mr. Dulles.

The result is all to well known to those of us who have covered the New Delhi beat, or the United Nations. When any international event occurs it is always posisble to get a detailed commentary on it from one of India's leaders, and the commentary is nearly always idealistic, failing to take into account the realities which practical democratic politicians have to bear in mind. In other words, like most independent-minded commentators, the spokesmen from India are critical, and tend to criticize first their own side.

Inevitably this leaves the impression of carping hostility, of the unwanted candid friend. Neutralism has come to mean for many in the West, neutral against us. Yet that is, in fact, a superficial judgment based on commentary, not on action.

In action Mr. Nehru's policies are very different. First of all in spite of all the pressures, and all the pledges to leave the Commonwealth, Mr. Nehru from 1947 onward has kept India (and thus all the other new colored Dominions) within this West-centered organization. Secondly, one has only to travel in the Himalayas, which separate India from the Chinese Communist empire, to see how desperately India is working to keep that strategic area under her own control. In Nepal, Sikkim and Bhutan there are Indian representatives, quite as determined as the British residents ever were, to keep the passes over the Himalayas firmly in friendly hands. Not even Tibet, where India seemed to have been outwitted by China, is wholly written off: the Dalai Lama's visit to India in 1956, and Mr. Nehru's forthcoming visit to Lhasa, are signs that occupation by China has not ended Indian influence in Tibet.

Yet professions of neutralism, or nonalinement, constitute, in fact, a very sensible, hard-headed policy for a state in India's stage of development. It is the policy of creating a cocoon within which, undisturbed, India can carry out the metamorphosis of her state; it is the policy of "no entangling alliances" developed by George Washington, Jefferson, and Monroe.

The West is somewhat to blame for failing to see through the pretenses of Indian policy to the reality underneath. What is our canon of judgment as to whether a state is part of the free world or not? Is it agreement on foreign policy? Or is it more concerned with those values of the individual that we say are basic to our way of life? Which matters more about India, Krishna Menon's dislike of the Baghdad Pact, or the fact that twice in the last 10 years 200 million Indians have trudged through the heat to choose their government in free elections?

The future of democracy in Asia (and so probably in the whole underdeveloped world) depends on its success in India. But democracy is not struggling to survive, it is struggling to be born. That is what makes India so exciting a place to live in today, and should make it a place where the free world feels its most vital interests are at stake. It is easy to think of democracy as something left over from the British rule, which did in fact leave the valuable heritage of the rule of law, but not democracy. All the British statesmen from Macauley to John Simon (in his famous report also signed by C. R. Attlee) agreed that Indian society, divided by caste, religion, language, tradition, and geography, was quite incapable of supporting a democratic system.

When Mr. Nehru came to power he soon saw that these prophets were right. But he did not abandon the idea of democracy because it did not suit Indian society; he determined to change Indian society. That is what lies behind the Nehru revolution in India; this attempt to create a society capable of being democratic, modern, and progressive.

The watchwords of Nehru's revolution are the creation of a new society that is secular, Socialist, and scientific. All three concepts are diametrically opposed to Indian tradition. By secular Mr. Nehru means a society in which religion is not the dominating influence, in which Moslem and Hindu live together, work together, vote together. By Socialist he means egalitarian (the concept has little to do with state ownership) in contrast to the whole Indian tradition of vast inequalities of wealth, and a stratified caste society. By scientific he means modern, changing, progressive, and not superstitious, tradition-ridden, and immobile.

It is on the success of this colossal transformation of 400 million people that the future of democracy in India depends, and on that, too, much of our own future hinges.

THE ASIAN REVOLUTION

(By William Clark)

(Third and last of a series)

WEST NEEDS TO BECOME PARTNER IN INDIA'S STRUGGLE

LONDON.—It is rather disturbing to realize that one of the most important cold war engagements is being fought in the villages of India. Yet undoubtedly it is on the success of India's social revolution, in its attempt to create the conditions for democracy, that the future relations of south Asia and the West depend. After 10 years it is possible to make some preliminary judgment on the success of Mr. Nehru's efforts.

My first impression during a year in India was one of wonderment at how much had been achieved. The foundations of a nationwide industrial organization had been laid; food production was increasing quite rapidly; the stranglehold of the Hindu religion had been broken, and, for instance, the

1950 constitution made it illegal to observe some of the traditional caste distinctions. Universal suffrage had been introduced and two general elections had been freely held.

Yet all is not going smoothly. Undoubtedly today the pace of change has slowed down very considerably, and the self-confidence of the leaders (particularly Pandit Nehru) is sadly shaken. What has gone wrong?

To some extent the Nehru revolution, with its watchwords secular, Socialist, scientific, has simply run headon into the vast inertia of India. Living on the margin of existence, as Indians have done for generations, breeds conservatism because change may so easily be fatal. What I used to feel traveling in India was the immense difficulty of doing anything to improve the lot of so many people—one could feel the downward drag of a population of 380 million increasing at the rate of 5 million a year. Indeed it is difficult to see how India—or for that matter China—can effectively increase standards of living unless it can control that population explosion.

At the same time that these Himalayan-size difficulties are becoming apparent, the revolution is losing much of its elan. The Congress Party which began as a nationalist party to gain independence, has achieved its objective and should properly sing its nunc dimittis and depart. But there is no democratic alternative to Congress at present, so that the energy and new ideas which should be springing up from the people through their political organizations still have to be supplied from above by Mr. Nehru himself. Today he is tiring and discouraged enough to talk of retirement. The people, too, are tiring of Congress and turning to nondemocratic courses.

It is a mistake to imagine that the only possible successor to Congress is communism. There is a strong right-wing movement (which nearly captured the state of Orissa at the same time that the Communists did capture Kerala), toward which a sizable section of Congress is drifting. These conservative Hindus object to Nehru's attempt to modernize (and westernize) India, and wish to return to the traditional virtues of India and Hinduism. They are strengthened (just as Nehru is weakened) by the wretched quarrel with Pakistan, which drains away India's wealth and skill into an arms race, and heightens the anti-secular pro-Hindu sentiments of the population. Another section of this conservative wing consists of the neo-Gandhians, led by Vinoba Bhave. They oppose the whole idea of industrialization, and appealing to the Indian tradition of nonviolence, wish to create a sort of village Utopia in which each village would be self-sufficient, producing its own food, its own tools, spinning its own cloth, and building its own houses. India, for them, should cease to try to progress and, instead, reconcile its population to living in dignified, unchanging poverty.

This right-wing reaction has very considerable support in the country, but its political organization is almost nonexistent. At the other extreme the Communists have an excellent organization, and are playing the political game with such skill that they appear far more popular and powerful than in fact they are. With only a handful of members in the Lok Sabha (Lower House) they have established themselves as the leaders of the opposition, and as the apparent alternative government to Congress. By capturing control of the problem state of Kerala they have given a practical demonstration of their ability to govern. The Communists turn every setback suffered by the existing government to their advantage, for their claim is that though they agree with the aims of the Nehru revolution they do not agree with the doctrine of revolution by consent. They maintain that change cannot take place at the speed of the slowest oxcart, there must be the full use of the state's powers to force change.

I found it difficult, looking at the immense difficulties in Nehru's path, not to sympathize with those who wished to turn back, or even with those who wished to use political high explosive to smooth the way. Sometimes it does seem that the choice before India is to go back to 1300 with the conservatives, or forward to 1984 with the Communists. Yet that is to ignore the strength of the center, which has as its program progress through a series of 5-year plans proposed by the Government and accepted by the people. What has gone wrong in the last year has been that this dynamic policy has lost its momentum because of financial difficulties.

These difficulties are not so enormous, but they have slowed up the pace of India's advance, and so given the impression that the second 5-year plan has failed. It has not, but if it is to avoid the appearance of failure it must obtain rather larger loans from overseas than have so far been granted.

It is at this point that Americans (and to a lesser extent the British and Germans) begin to shuffle their feet and look for the exit. All this sounds as though it were leading up to the routine suggestion that the West should buy India's loyalty for the price of a loan. Unfortunately, it is not so simple as that. America and the West have given large loans (and promised more). They are already the patrons of India's revolution, but that is not all that is needed; it is also necessary that they should become partners in it. The era of interdependence has come for us with Asia quite as much as within the Atlantic community. Somehow we have got to create with Asia that feeling of community of interest, which informs the Western alliance and which is far more important and lasting than the military aspect of NATO, or the economic links between Europe and America.

It is my conviction after a year spent in India and Africa that if we are to play our part in winning this crucial cold-war engagement we must reexamine our relationship with the underdeveloped countries. We must see that unless the West finds friends and partners amongst these nations it will soon find itself an isolated clique of wealthy nations, cut off from the growing, changing, developing world and probably hated by its people.

The Inquiring (Woman) Reporter: Sarah McClendon

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, May 21, 1958

Mr. YARBOROUGH. Mr. President, this past week has been one of great recognition for Texans of prominence in the fields of music and journalism. The current issue of Time magazine carries a cover story on Van Cliburn, the pianist from the piney woods of east Texas who captured his Russian audience with a piano at the recent music competition in Moscow.

Another Texan, this time in the field of journalism, and this time a woman, also from east Texas, received accolades for her work in a column by Josephine Ripley in the May 17 issue of the Christian Science Monitor.

Sarah McClendon is the Washington correspondent for 13 newspapers throughout the country, from Manchester, N. H., to El Paso, Tex. But Sarah McClendon is a Texan by birth, her newspaper career began on Texas papers, and she represents more Texas newspapers in Washington than she does papers from any other State.

Sarah McClendon's expert reporting of the President's press conferences has received national attention. She is first, last, and foremost an able newspaperwoman. She refuses to be deterred from her job by pleasant smiles. Her questions are to the point. She seeks the news to keep America informed.

Sarah McClendon is descended from one of the oldest and most distinguished and illustrious families of Tyler, Smith County, east Texas. Her career is adding a new luster to the family name of McClendon. Our family have known the McClendon's for generations. Sarah McClendon's father was postmaster of Tyler, Tex. I am proud of Sarah McClendon. The article I am asking to have printed in the RECORD is a fine tribute to her inquiring mind and her courage. It reflects the ability of the independent reporter. I ask unanimous consent to have printed in the Appendix of the RECORD this article entitled "The Inquiring (Woman) Reporter," published in the Christian Science Monitor.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor of May 17, 1958]

THE INQUIRING (WOMAN) REPORTER

(By Josephine Ripley)

Sarah McClendon, Washington correspondent for a string of newspapers from Texas to New England, attends the President's press conferences regularly; always asks a question, always sits up front under the President's nose where she cannot be ignored.

Of course, it would be hard to ignore Sarah anywhere. "The blond bombshell of the profession," one newspaper called her recently. She is hard-working, vocal, aggressive newspaperwoman.

And if women are devious, as reported, you can't prove it by Sarah. Or by most newspaperwomen, as a matter of fact, when it comes to asking questions. Men correspondents may pussyfoot around a delicate point, or hesitate to put the question at all—but not the women of the President's press conference.

Sarah is a leading exponent of the bluntness technique. She asks the question that is on everyone's mind, and in the fewest possible one-syllable words. It is often her bullseye query which scores the day's headline.

All this has paid off for Sarah who has run up her newspaper representation from 2 papers several years ago to 13 today. Newspaper correspondents, in asking a question, at the President's press conference, must first identify themselves with the paper they represent. Sarah, one week, declares she is from the El Paso Times; next week, from the San Antonio Light or the Sherman (Tex.) Democrat.

Now that her fame has spread and her papers multiplied, it may even be the Camden (N. J.) Courier Post or the Manchester (N. H.) Union Leader. This varied representation once caused the President to turn

the tables on Sarah with a blunt question of his own.

"Do you get fired every week and join another paper the next week?" he asked.

"No, sir" replied Sarah, ignoring the general laughter, "I try to give representation to all the papers I work for." And she went on to ask her question.

The President is frequently amused by Sarah and her questions, occasionally irritated. It was a pointed query from Sarah on his Pentagon reorganization program which touched off the President's recent, rare show of temper.

Sarah may ask questions to be heard; she may ask regional questions which bring patronizing laughter from some of her colleagues; but it's serious business to her. For a close-up of the President from where she sits, and the value of the President's press conference from her point of view, here it is in Sarah's own words:

"I don't make the President angry. He does that to himself. Often, I don't honestly see why." An important thing about the President, she feels, is that "he is extremely likeable personally."

Of his press conferences, she says: "To reporters, a press conference is either good, bad, or fair, depending on how much productive news they get out of it. I have seen some of his (the President's press conferences) that were not so good, and from others I have come away actually lifted and thrilled at his expressive leadership and true patriotism. * * *"

Sarah feels the President is a man who "believes so strongly in his heart that he is right, because he has the desire to do what is morally right for the country, that it hurts him to the quick for anyone to doubt him. It seems sort of unjust to him. And this is why he gets angry."

Eternal vigilance being the price of liberty, Sarah firmly believes that the presidential press conference offers modern-day reporters an opportunity and a responsibility to exercise this kind of vigilance in their country's behalf.

As she sees it: "Even though we like Mr. Eisenhower personally, even if we are great fans of his politically; and even should our papers be for him—some of mine are and some are not, and some are at times for and at times against—even so, it is our duty as reporters to observe, to inquire into, to check on, to point out to this man, and to get his observations on the issues of the day."

She feels that "history owes Mr. Eisenhower a great debt for making possible and developing the press conference as it is today." And "if it were not for him, we would never have had the press conference live, on radio and television.

"What other man in history has allowed himself to be so clearly shown in print and on the screen in this way? That alone takes a mighty big personality. This whole operation of the press conference he has given to the American people.

"Remember," she adds, "he does not have to hold these press conferences."

No, he does not have to, but he does, and it is greatly to his advantage—just as it is to Sarah's.

Nixon's Reputation Enhanced

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1958

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Evening Star of May 11, 1958:

NIXON'S TOUR
(By Roscoe Drummond)
REPUTATION ENHANCED

Vice President NIXON returns from his Communist-harassed tour of eight Latin American Republics with a bruised shoulder and an enhanced reputation as a brave spokesman for the United States.

What, it seems to me, stands out when you look at Mr. NIXON'S long and, occasionally, rocky road from Buenos Aires to Lima, Peru, is:

That there were no spontaneous demonstrations against the Vice President. They were engineered by known Communists.

That there was only one capital, Lima, in which there were serious incidents—this in a country where American-Peruvian relations are thoroughly cordial.

That Mr. NIXON demonstrated personal courage of a high order.

That he showed ability to expound American ideals and policies under the most adverse circumstances—at emotional student mass meetings dominated by Communist leaders—and to make friends by his actions and by his words.

There are, of course, many others who would do well. Undoubtedly Adlai Stevenson or Senator Lyndon Johnson or Senator William Knowland or Senator John Kennedy would do a fine job. It happens that Mr. NIXON was on the spot and handled himself—and the situation—exceedingly well.

One of the most interesting phenomena in Washington political circles—and probably it is general throughout the country—is the sharpness and depth of feeling about RICHARD NIXON. The pro-Nixon Republicans can see no wrong and the anti-Nixon Democrats can see no right and reporters who try to be objective are usually berated by both sides not matter what they write.

I suspect that it is a very real asset of the Vice President that nobody is indifferent to him. This nonindifference toward Mr. NIXON even rubs off on those who write about him. For example, Max Freedman, one of the most perceptive and objective foreign journalists in the United States—he is Washington correspondent for the liberal Manchester Guardian—recently spent an evening with the Vice President along with other British reporters and afterward wrote his impressions. In the course of a substantially favorable article he said:

"Recent speeches have shown his capacity to speak with courage and conviction on matters of extreme controversy. These qualities gleam with yet more distinction in the relaxed intimacies of private conversation when he lets his mind brood on the overcast world scene.

"Many Americans who carry an ugly image of Mr. NIXON would be very surprised if they heard him expound his personal philosophy in world affairs. He studied these world problems with an incisive and creative mind.

"Most important of all, it is a generous, constructive, and spacious philosophy, akin to the vision which once led Senator VANDENBURG and not very different in essentials from the saving faith of the Democratic sages. The Democrats will not like this comparison but they really must begin to examine Mr. NIXON and not the malignant myth of their own invention."

Mr. Freedman was only partly jesting when he remarked to colleagues that, after his Nixon article reached Washington, all his Democratic friends stopped speaking to him. "But," he added, "I can't in all honesty take any of it back."

In Lima after Communists tried to prevent him from speaking to the students and sought to maim him with rocks and eggs, Frederico Basadre, a reporter for Peru's largest newspaper, said: "NIXON made a great impression with his courage. He won."

Evidently no one, not even the Peruvians, can be indifferent to NIXON.

Reexamination of the Foreign Aid Program

EXTENSION OF REMARKS
OF
HON. HENRY DWORSHAK
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Wednesday, May 21, 1958

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Idaho Daily Statesman, a newspaper published in Boise, Idaho.

The editorial, written prior to House passage of the foreign-aid bill, brings up some considerations that we in the Senate might well review when the bill comes before us for action. The editorial points out that it will be up to Congress to determine the extent of foreign aid, based on the results obtained by past expenditures, and urges critical reappraisal of this program.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IF IT DOESN'T WORK

Disorders lately flaring in South America and in the Middle East have come in for concerned attention in congressional debate on the foreign-aid bill which is heading toward an early vote in the House of Representatives.

In Lime, the Vice President of the United States has been made the target for violent attack and the United States flag has been defiled.

In Tripoli and in Beirut, mobs have vented their rage with torch applied to libraries established and maintained by the United States Information Agency.

These are offenses that would be disturbing at any time and under any circumstances, but they are particularly grievous coming, as they do, at the hands of peoples who have been the longtime objects of our solicitude and the recipients of rather substantial shares in the unprecedented outpouring of our taxpayers' dollars during the past decade.

Our mutual security program for the fiscal year 1957, for instance, apportioned to Lebanon $2,100,000 and to Peru $2,996,000. This is in addition to whatever loans there may have been from the Export-Import Bank or the World Bank, both operating largely with American dollars. And it's all for the purposes of "strengthening friendly relationships" and to "assist other nations to maintain their security and safety."

During the last few years, Peru's economic life has been guided largely by a United States economic mission and the country has been favored by "northern" capital and technical assistance to advance public works such as roadbuilding, irrigation and electrification.

Lebanese industries have been expanded and, on the whole, it is reported, Lebanese economy has prospered and set new records in several fields.

Notwithstanding, these apparently favored areas now are providing foothold for the machinations of a conspiracy that poses an unprecedented threat to mankind's freedom and that thrives on the exploitation of an-

cient animosities and new hatreds in a world already overburdened with them.

Thus we are not only brought face to face with bitter disappointment over these evidences of ingratitude but we are compelled to recognize that we seem to have failed somehow with our grandiose program to achieve an enduring peace with justice.

This foreign-aid program is supposed to make us firm friends. But there are these significant instances indicating that it doesn't always work that way.

So what do we do now?

That's the question that the Congressmen have to answer.

There is evident thus far a disinclination to even consider that this foreign-aid program on which we have already laid out so much of care and treasure has been in anywise based on error, or that in its concept and administration the heart may have taken over command from the head, and that the wish may have obscured the actuality.

House Foreign Affairs Chairman THOMAS E. MORGAN, Pennsylvania Democrat, opening the debate, won't concede that there may have been any failure in United States foreign policy. He argues that trouble spots around the world are demonstrations of Kremlin efforts to spread communism—which probably is the exact fact.

On the premise he has adopted, though, there is patent implication that we have suffered these reverses because our foreign aid has fallen short, and if that idea is accepted, then it would pretty well rule out any reduction in foreign aid appropriations; because it must follow that any appropriation that is inadequate to do the job must be counted only as so much waste.

Along the same line, the Republican committee leader, Representative JOHN W. VORYS, of Ohio, argues that the anti-American outbreaks are all the more reason to bolster friendly countries with dollars. He says he thinks the American people are not going to take these new challenges lying down.

If that's the prevailing attitude in regard to foreign aid then we might be well advised to do the best we can to be reconciled with the idea that we are stuck with it.

And, if we don't start out taking it lying down, we may count ourselves extremely fortunate if we don't wind up in a prone position, indubitably sadder, and perhaps wiser.

In view of these new and disturbing developments, though, it would seem to us that there is more reason than ever before for a critical reexamination of this foreign-aid program.

It might just be that it is hardly the weapon we should have to counter the Soviet threat, even though the Russians have lately picked it up.

Greater Hazleton Chamber of Commerce Receives Award in Statewide Contest

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Hazleton Plain Speaker of May 14, 1958, which discloses that the Greater Hazleton Chamber of Commerce has been selected for an award in a statewide community development contest:

HAZLETON SCORES AGAIN IN STATEWIDE COMMUNITY DEVELOPMENT CONTEST

Hazleton has scored again, receiving an award for the second consecutive year in a statewide contest on community development, it was announced today.

The Greater Hazleton Chamber of Commerce has just received word that its entry in the 1957 Pennsylvania community development contest won fifth place and $300. Hazleton took first place and won $1,500 in the 1956 contest for its highly successful can-do project.

Four projects won the latest award for Hazleton:

1. Securing at least two new male-employing industries at Valmont Industrial Park: General Foam Corp., and negotiations for a lease with Capitol Products Corp.

2. Operation trees and operation home-improvement programs, including planting of 92,500 trees in strippings, culm banks and in several sections of the city for beautification; and a four-month campaign for remodeling and repairing homes.

3. Improvement of transportation and parking facilities in the Hazleton area, including work toward the Keystone Shortway and Anthracite Expressway and improvements to the Hazleton Municipal Airport.

4. Celebration of Hazleton's Centennial.

This city's certificate of award and ash award will be made here at a date to be determined, according to W. P. Schenck, secretary of the community development contest committee. Schenck said the date would be sometime after June 1.

The presentation will be made by a member of the State chamber's community development committee.

A National Engineering and Scientific Automatic Data Processing Information Center and Clearinghouse for San Diego

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1958

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following proposal made by American Legion North Island Post of San Diego:

A NATIONAL ENGINEERING AND SCIENTIFIC AUTOMATIC DATA PROCESSING INFORMATION CENTER AND CLEARINGHOUSE FOR SAN DIEGO

A means to shorten the time lag between engineering a project and placing it into production is the most grievous problem facing our national defense effort today.

1. If research and development information obtained from similar projects is not exchanged, long periods of precious engineering time must be duplicated. It is the intent of this proposal to establish a centralized automatic data processing and foreign language translation system whereby scientific and technical information is indexed and stored on magnetic tape or memory drums that are electronically scanned, abstracted, and electronically distributed where needed to engineers and scientists assigned to a Defense Department project or related civilian agency.

(a) The United States has had the equipment and machines available to accomplish this task for a long time.

(b) Russia has had a similar program in operation since 1952 providing her with a means of playing leapfrog over all the other countries of the world in engineering and scientific fields since the program was put into action.

(1) The program is sufficiently successful so that prominent American scientists have said that the best way to find out what American science is doing is to read the Russian literature.

(2) Our research laboratories (and the world) were caught by surprise by the Soviet's use of 20 and 40 megacycles for telemetry in Sputniks I and II, despite 2 articles naming these frequencies in the Russian magazine Radio last June.

(3) Russia is this year spending $4.5 billion for research and development. It is obvious there shall be a vast amount of technical information which could be translated and disseminated for United States scientists use.

(c) Should this proposal be accepted it would directly provide full-time employment to at least 2,000 skilled technicians, librarians, engineers, and scientists. (1) This program would supplement and centralize the work of Research and Development Laboratories and Department of Defense Libraries such as the caliber of the Armed Services Technical Information Agency.

(d) Because of the instability of appropriations and constant manpower supply of civil service, it is suggested that this proposal be contracted by the Defense Department to private enterprise.

2. San Diego is a logical location for this center because:

(a) San Diego is the birthplace of the charactron tube—the fastest automatic data-processing readout and printer in the world today. (1) Rate of printed output is 4,680 lines or 85,000 to 100,000 words a minute.

(b) Our large naval electronics laboratory and library facility located here.

(c) The southern California missile and electronic industries.

(d) Our general atomic laboratory location.

(e) San Diego's large pool of skilled manpower for a project similar to this.

3. This proposal has received national interest since being introduced by the American Legion North Island Service Post, San Diego, January 9, 1958.

Not the Time To Adopt Any Proposal That Will Curb Advertising or Selling

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. COLLIER. Mr. Speaker, on May 27 a public hearing will be held on proposed regulations that will drastically change the longstanding tax treatment of cooperative advertising programs. It is my understanding that many protests have been filed in objection to the proposal which was originally intended to be effective on April 1, 1958.

The notice would provide that taxable prices for manufacturers excise tax purposes includes any amount which manufacturers require dealers to pay to obtain possession of taxable articles. The proposed regulation is particularly

related to so-called cooperative advertising expenses.

To illustrate what the change would involve, let us use the following example. A manufacturer sells an article to a retailer or wholesaler for $200 and makes an agreement to rebate $5 of the price if the wholesaler or retailer later shows that he spent that amount for local advertising. The Internal Revenue Service has for many years treated such a rebate as a reduction of the taxable price from $200 to $195 and in turn allowed the manufacturer a refund of a portion of the manufacturer's excise tax paid at the time of sale. The proposed Treasury regulations would deny that such a rebate is a price adjustment. Accordingly, the manufacturer would be forced to pay the tax on the full $200 even though he receives a net of only $195. The proposal to revise the Internal Revenue Service's long-standing position is not a result of any change in the taxing statutes. Instead, it would appear to represent an attempt to change the law by administrative action.

With Congress today struggling to come up with measures that would reduce a portion of excise taxes, it seems that such a regulation is most untimely. Certainly, it would, in effect, increase excise tax rates on certain items and would compel manufacturers to curtail cooperative advertising programs. This, in turn, would deprive retailers of the assistance they are now deriving from such programs.

I believe that a fundamental change of this nature should properly be made only by Congress. And I do not believe that Congress would make it at a time when its purpose is to stimulate advertising and selling activities. I further believe that any such change proposed by an administrative agency should be provided by the Congress after appropriate hearings in which the business and economic consequences are closely examined.

The proposed regulations expressly state that they would be retroactive to 1939. This retroactive feature is clearly unconscionable. For years the Internal Revenue Service has properly treated cooperative advertising allowances as price rebates and has allowed refunds or credits based thereon. If the Treasury attempts to apply the proposed regulations retroactively, manufacturers would be faced with claims for back tax liabilities aggregating many millions of dollars, even though they merely pursued a course that has had, until now, the approval of the Service.

The injustice of this result is emphasized when it is realized that in 1956 the Treasury represented to the Forand subcommittee that it would shortly publish a ruling expressly approving the treatment of cooperative advertising rebates as price adjustments. A draft of the text of the promised ruling was included in the Forand subcommittee's report to the House Committee on Ways and Means dated April 20, 1956, page 2. It seems clear that the Forand subcommittee was satisfied with the promised ruling and treated the matter as settled, for no clarifying legislation was included in the Forand bill, H. R. 7125, now before the Senate Finance Committee.

The Internal Revenue Service never issued the promised ruling. Instead, the Treasury now comes forward with proposed regulations diametrically opposed to the tax treatment outlined in the 1956 representation to the Forand subcommittee.

Historic and Beautiful Nacogdoches

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, May 21, 1958

Mr. YARBOROUGH. Mr. President, recently, while reading the Beaumont Enterprise, a leading newspaper of the Texas gulf coast, I came across the column, It's Like This, by the Enterprise's editor in chief, Robert W. Akers. This particular column was magnificently written and steeped in Texas history—Texas history going back to the year 1716.

Mr. Akers drove a few weeks ago from Beaumont to Nacogdoches, and Nacogdoches and the remarkable and unique role it has played in the history of Texas is the subject of his column.

What struck me so keenly about Mr. Akers' column, though, was the sheer beauty of the language he employed in his description of east Texas, the area when I was born and raised and where my father still lives. It is language such as this that makes full the heart of an old east Texas boy:

> It's a 125-mile trail of easy curves and gentle rises and dips through countryside that has the fresh smell of plowed earth, mowed grass, spring vegetation, and newly sawed timbers. There has been plenty of rain, and the earth is giving forth another generous yield.

I firmly believe that this column is one of the most superbly written and beautifully articulated descriptions of east Texas that I have ever seen in print. The article also deals with Nacogdoches, which was settled by Spain in the 18th century. It narrates some of the incidents in the Fredonia Rebellion, which preceded the successful Texas revolt by about 10 years. It mentions the last resting place and describes the lives of some of those illustrious citizens, including Thomas J. Rusk, who was one of the first two Senators from my State. He was a practitioner of law in the State of Georgia, the State so ably represented in part by the distinguished occupant of the Chair [Mr. TALMADGE]. He came to Texas shortly before the revolution, and his abilities were so quickly recognized that he was elected to the Constitutional Convention. He signed the Declaration of Independence of Texas. Because of his valor on the field on the first day of the Battle of San Jacinto, he was put in command of one of the wings. When Sam Houston was wounded the third time on the field and the third horse was shot from under him, Thomas J. Rusk succeeded him in command of the Texas forces in the Battle of San Jacinto, and commanded them until October 1836.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the column, It's Like This, by Robert W. Akers, which appeared in the Beaumont Enterprise of Wednesday, May 14, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Beaumont (Tex.) Enterprise of May 14, 1958]

IT'S LIKE THIS

(By Robert W. Akers)

On the flagpole in front of the fine, new Fredonia Hotel in Nacogdoches fly 3 banners: The Stars and Stripes at the top, then the Lone Star emblem, then the flag of the Republic Fredonia.

The United States is a nation.

Texas was a nation.

Fredonia was to have been a nation.

A Sunday drive from Beaumont to Nacogdoches in May is a journey through the lush green beauty of forests and fields into the very heart of east Texas and more than 2 centuries deep into Texas history.

It's a 125-mile trail of easy curves and gentle rises and dips through countryside that has the fresh smell of plowed earth, mowed grass, spring vegetation, and newly sawed timber.

There has been plenty of rain and the earth is giving forth another generous yield.

Vegetables that will provide good eating at many tables this summer are just now coming up in farmhouse truck patches. Beans are taking hold at the base of poles. Corn is about knee high, with the roasting ears to be only tender folds of green.

Whatever the condition of business in the cities, rural east Texas is thriving.

If you've never been to Nacgdoches, the first mental image you must create is trees. Great, spreading oaks, magnolia, gum, pine. Trees so ancient that their branches hide a whole city beneath a shady, green cover.

Nacogdoches is a place to live serenely—quiet streets, fine old homes, attractive new homes, all sheltered by the forest within which the city has grown.

This is the first center of civilization and culture in the whole of east Texas. It began in 1716 when the Spaniards established the mission of Nuestra Senora de Guadalupe. San Antonio itself would have a hard time proving a prior settlement.

In 1779 came a captain of Spain, one Gil Ybarbo, to erect the Old Stone Fort, the structure from which Nacogdoches grew.

A new century was born, the 1800's, and Americans moved into the promising area called Texas, Sam Houston walked these streets as a citizen of Nacogdoches.

Hayden Edwards, the empresario, came to Nacogdoches about 1825 with a permit from the Mexican Government (which lately had run the Spanish colonial overlords out) to bring in 800 families from the United States.

He found his allotted acreage around Nacogdoches occupied by old families with Spanish crown grants for the same tracts and by Mexican and American renegades.

Hayden Edwards was hot-headed. He kept complaining to the Mexican officials in San Antonio until they were fed up and cancelled his permit. Then the fiery-tempered Mr. Edwards organized a military force and marched through a December snowstorm to capture Nacogdoches and establish the Republic of Fredonia, independent of Mexico, the United States and everyone else.

That's the flag that still waves in front of Hotel Fredonia. It has two horizontal fields, white on top and red at the bottom. In blue lettering on the white field are the proud words: "Independence, Freedom and Justice."

In spite of this attractive flag, however, and the pleasant sound of the word "Fredonia," the new republic lasted only a few weeks.

The Mexican authorities were hopping mad. Even Stephen F. Austin didn't like it, because he was operating under a Mexican grant, too. Austin and the Mexicans started for Nacogdoches with armed men to put down the rebellion.

Before they could get there, though, loyal Mexicans in east Texas had banded together and had driven Hayden Edwards out.

Fredonia wasn't a total loss, though. It was, in fact, the first seed of the Texas Revolution which won independence from Mexico a decade later on the battlefield at San Jacinto. The spirit implanted by Edwards lived and grew.

Weathered headstones in the old Oak Grove Cemetery at Nacogdoches bear names that live to this very day in Texas history books, that are studied in Texas classrooms.

There was Thomas J. Rusk, Charles S. Taylor and John S. Roberts, Nacogdochans who signed the Texas Declaration of Independence

William Clark, who representing the municipality of Sabine as a signer.

Hayden Edwards, who, I was happy to note, returned to the city that was for a brief moment the capital of Fredonia and who now sleeps beneath the Nacogdoches oaks for all time.

Adolphus Sterne, who came from Cologne, Germany, to a new world and whose home, built in 1828, served as a refuge for women and children during Indian raids. The old house still stands.

Dr. Robert Irion, Texas Secretary of State, and Mrs. Anna Raguet Irion.

Hayden Arnold, Thomas L. Buford and David Rusk, who fought at San Jacinto.

Gen. Kelsey Harris Douglass, whose forces drove the Cherokee Indians out of Texas in 1839.

All that seems a long time ago when you loll in the May sunshine at the edge of the Hotel Fredonia's swimming pool, and look up at the modern design of the six-story hostelry.

Only three blocks away is the first university the State of Texas ever had: Nacogdoches University, founded in 1845 by the Republic and operated after statehood.

Of classic academic design, it is built of red brick, 2 stories high, with 4 massive, white, Greek columns in front and a tall white cupola on top. Although it hasn't been used since 1904, you can almost hear those scholars of another and more austere day reciting their Greek and conjugating their Latin verbs.

A little farther out, also in the midst of heavily wooded land, is the modern version—Stephen F. Austin State Teachers College, with its more than 2,000 students and its old and new buildings on a charming campus.

You reach SFA along an esplanade of magnolias.

There's a story of modern Nacogdoches in the Hotel Fredonia:

They tell me the realization of this fine building 3 years ago brought about a unification of all factions in the city as nothing else had done in years. It was built by local subscription—1,200 stockholders. The result is a hotel of which the entire citizenry is proud—and well it may be.

The old Nacogdoches names live on in the new Fredonia, too—you may dine in the Thomas J. Rusk Room or hold a committee meeting in the Anna Raguet Room.

Did I say Nacogdoches is in the very heart of east Texas?

Nacogdoches is Texas.

The Greatest Peace Movement in the World

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1958

Mr. FINO. Mr. Speaker, the Army and Navy Union, United States of America, through its national public relations representative, Floyd I. Silk, issued the following statement entitled "The Greatest Peace Movement in the World" on the occasion of National Hospital Week.

I invite each and every Member of Congress to read this statement:

THE GREATEST PEACE MOVEMENT IN THE WORLD

The miraculous medical-research program undertaken by veterans' hospitals has done much to alleviate human suffering and saved many lives.

The doctors at the veterans' hospitals should be given congressional citations for the great developments in medical research that they have accomplished. They have served above and beyond the call of duty.

The veterans, who volunteer themselves for experiments necessary for medical research, should also be recognized by Congress.

These developments in medical research prove that the Veterans' Administration and the veteran are working for the good of humanity, in a fashion that could bring peace to all the world.

Medical Research in the Veterans' Administration, a report prepared by the Department of Medicine and Surgery of the Veterans' Administration, and submitted to the Veterans' Affairs Committee of the House of Representatives, 1st session, 85th Congress, on April 26, 1957, states that more than 5,000 successful developments in medical research have occurred. All this despite the curtailment of funds, in the name of economy. The wonderful job that has been done to alleviate the suffering of humanity is all the more remarkable because of their many handicaps; principally the lack of funds to work with.

Every good American citizen should be willing to have our Government continue this work with greater appropriations for the extension of further medical research by the Veterans' Administration. The cost of upkeep is not as great as the amount of good accomplished. There are only 121,000 beds in 173 hospitals.

Most veterans use private physicians and hospitals, where they must pay. When all their money is gone, these hospitals and doctors refer them to veterans' facilities.

At most, approximately 250,000 of the 23 million veterans are hospitalized in a given year. Little enough, when you realize what the veterans have given of themselves in the service of our country.

The amazing results of the Veterans' Administration's medical research are most highly commendable.

The program for the extension of the Veterans' Administration's research is one that will continue to benefit humanity all over the world.

We always have money for wars that bring death and destruction. Why? Why can't we find the money for a program that will benefit humanity and that can and will bring greater health and happiness to all peoples?

If we want a healthy and peaceful world, we must pay for it, instead of paying for war and destruction.

Scholarship Named After Calvin Leichtman, of Hazleton, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Hazleton Plain Speaker which announces that a scholarship has been named by B'nai B'rith in honor of Mr. Calvin Leichtman, prominent Hazleton businessman and civic leader:

B'NAI B'RITH TO NAME SCHOLARSHIP IN HONOR OF CALVIN LEICHTMAN

Calvin Leichtman, 92, of this city, will be honored by B'nai B'rith, the 400,000-member Jewish service organization during its annual convention Monday at Lake Kiamesha, N. Y.

Leichtman, who founded the ice cream company that continues to bear his name in this city, will be honored during a special ceremony by delegates of lodges from Pennsylvania, New Jersey, Delaware and West Virginia.

A YOUTH SERVICE PROGRAM

Maurice Bisgyer, executive vice president of B'nai B'rith, said yesterday in Washington, D. C., that a college fellowship, to be administered by the organization's youth service program, will be established in Leichtman's honor.

The elderly B'nai B'rith leader will be cited at the convention for a lifetime of unselfish devotion to his community and fellow men by Philip M. Klutznick of Park Forest, Ill., president of B'nai B'rith.

The Hazleton ice cream manufacturer is a past president of the B'nai B'rith District 3 and is now its honorary treasurer.

Since he entered the organization's work 68 years ago, he has helped establish 15 lodges, all but one of these in his adopted Pennsylvania.

NATIVE OF AUSTRIA

Leichtman was born in what is now Austria and came to America at the age of 16. With his young bride, he set out for the growing West and settled in Spokane, Wash., where he esablished a general store. The first son of the couple, Milton, was born at Spokane.

It was in this city that Leichtman founded the first B'nai B'rith lodge. Shortly thereafter he returned with his family to Pennsylvania.

They settled in Freeland and a few years later moved to this city where the ice cream company was organized.

Leichtman is a past president of the Hazleton Chamber of Commerce, is a member of the Hazleton Public Library Board, a charter member of the Kiwanis Club and a leader in the United Charities of Hazleton. He was a founder and past president of Beth Israel Temple.

Among the communities in which Leichtman organized lodges are Wilkes-Barre, Pottsville, Scranton, Olyphant, Shenandoah, Mahoney City, Danville, Easton, Shamokin, Stroudsburg, Honesdale, and in this city, where his fellow members renamed the lodge in his honor several years ago.

Arnold Sukenik, president of the local B'nai B'rith, will be a delegate to the New York convention.

TVA's Twenty-fifth Anniversary

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 21, 1958

Mr. SPARKMAN. Mr. President, on Sunday, May 18, TVA had its 25th anniversary.

In Sunday's New York Times appeared an article by R. L. Duffus telling something of TVA after its 25 years.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

I also ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "TVA's 25th Anniversary," published in the Decatur (Ala.) Daily of May 18, 1958.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

TVA'S CHALLENGE—AFTER 25 YEARS

(By R. L. Duffus)

KNOXVILLE, TENN.—The world's most dramatic experiment in the use and control of a river reaches its 25th birthday today under circumstances that would have astounded those who dreamed it up.

When President Franklin D. Roosevelt put his signature, on May 18, 1933, to the act creating the Tennessee Valley Authority, he planned a great hydroelectric system. Today TVA is such, but it is also the largest buyer of coal in the world, and three-fourths of its power is produced by steam.

President Roosevelt, urged on by such down-to-earth dreamers as the late Senator George W. Norris of Nebraska, looked to electric energy to revitalize the life of the valley. He foresaw the power of the Tennessee River furnishing cheap and abundant energy for cities and towns and for rural cooperatives. This has been achieved. But today nearly 60 percent of TVA's power sales are to the Federal Government, most of them to an agency whose name would have had no meaning in 1933—the Atomic Energy Commission.

Thus TVA has moved into a field of extensive preparation for defense, indeed into a new and almost unimaginable world. Even steam is not the last word. To the force of water running to the sea, and the energy extracted from coal, will some day be added beyond any doubt another power. Already a dozen or more young scientists on the TVA payroll are studying at Oak Ridge, Brookhaven, the Argonne Laboratories. They are studying the design and operation of atomic plants that may supplement steam as steam supplemented waterpower—or supplant them both.

Waterpower, once harnessed, is cheap, and it will be a long time before the seaward-moving waters of the Tennessee system cease to turn the turbines in the dams. The cost of steam power, too, is being steadily reduced. But if Congress ever orders TVA to harness the atom it will be ready.

A pilgrim who first traversed the valley a quarter of a century ago, between the old Wilson Dam at Muscle Shoals on the main river and the site of the Norris Dam above Knoxville, on the Clinch, may feel like Rip Van Winkle returning to scenes that are both strange and familiar.

The valley in that late spring of 1933 seemed like a title of one of F. Scott Fitzgerald's books: it was beautiful and damned. The hills and the plains, the winding pools and rapids of the river and its tributaries, the people themselves, largely derived from an old Scotch-Irish stock with a relatively small percentage of hard-working Negroes—all existed in a kind of quietness, but it was not a hopeful quietness.

At Muscle Shoals in 1933 there were 8 generators in the Wilson Dam. Only two of these generators were ordinarily operated at one time. The Army officer then in charge told his visitor that there was no demand for more power. Two plants had been built by the Government to make nitrate for explosives. One of them, its machinery rusty, its windows broken, was a habitation for pigeons that fluttered in and out and made cooing noises among the girders.

A little stir of hope had run through the three little cities at the Shoals. But there had been so many disappointed hopes before. People thought Henry Ford would buy the dam and plants, but in 1933 weeds were growing over the new streets laid out by land speculators.

Up river the situation was not too different. The cities of Chattanooga and Knoxville had been hit by the depression. People living on subsistence farms in the hills were almost too poor to suffer from hard times, but if they depended on sales of corn or cotton they could be hurt.

At Norris, as the visitor saw it in the late spring of 1933, the Clinch came quietly round the bend as it had done from time immemorial. On the right bank, at the site of the proposed dam was a dog-trot cabin that was to be inundated when the dam was finished. On the left bank, just opposite, a lane was cut through the brush where the outline of the dam was to take shape. The scene was infinitely peaceful. It was like a land in a dream.

The river and its tributaries were hardly being used. The Tennessee had a low-water depth of 1 foot to 4 feet. Freight carried on the river was mostly sand and gravel. About three out of every hundred homes had electricity. The per capita income was only 44 percent as high as the national average. Hardly anything had been done to preserve the forests or build up and maintain the fertility of the soil. Thousands of people were sick from avoidable diseases. Malaria had infected 25 percent of the population, and in some communities ran as high as 60 percent.

This is what the valley had come to, many generations after the first surge of settlement. Progress had passed it by, though the people who lived on the land loved it.

Into this picture came TVA, not only with electric energy, but with improved fertilizers, with a system of conservation, with a determination to make use of all governmental and private agencies that could build up the well-being of the valley—and all this with the aid of the native ingenuity and energy of the people who lived there.

After 25 years the change is startling. TVA has constructed 20 new dams on the main river and its tributaries. Norris, the first of these dams, already shows the patina of time, its concrete surface mellow, its reservoir banks, above high-water line, trim and well-wooded. But Norris Dam, imposing though it seemed when it was planned and built, produces only about 100,000 kilowatts as compared with more than 10 million in today's TVA power system.

The completed dams are serene and beautiful. Their very names are like the echoes of long-past battles—Cherokee, Douglas, Fontana and Hiwassee in the Great Smokies, Chickamauga on the main river, Guntersville above the town of that name, and Kentucky, below the beautiful Lake Kentucky, lowest of all on the main river. These are impressive structures and their machinery is tranquil.

The seven major steam plants that were built in haste after the beginning of the Korean war are not so picturesque, but they are tremendous in their power. Three of them—Kingston on the main Tennessee, Shawnee on the Ohio River and Widows Creek above Guntersville—can produce about as much energy as all the hydraulic powerhouses combined.

There are two ways to see the Tennessee Valley. On is to drive through it, the other is to fly over it. Either way one does not find as yet an earthly paradise but even from the air one is in no doubt whatever as to the efficacy of the conservation projects that have been carried out within the last quarter of a century. There are patches of green, enfolded flatland high in the mountains. There are slopes that used to be bleak and eroded but now have been saved by the proper kind of plowing, by crop rotation and by fertilization. The land is greener than it was about the same time of year in 1933. The farm buildings seem better. There are more good roads. But there are still muddy or dusty back roads too, eroded slopes, and farms on which nobody can make a decent living—even within a few miles of cities or in the neighborhood of the Norris, Douglas or Cherokee Dams.

The changes, of course, are not entirely on the land. As elsewhere, the tides of population have ebbed toward the cities. In 1940, 70 percent were still on the land, but in 1958 only 40 percent. The hill people have drifted into Knoxville, Chattanooga, Memphis and numerous other towns. Numbers of them work in the great atomic plants to which TVA sends so much of its power. If one drives to Oak Ridge at quitting time, he meets long lines of workers' cars. Some of these workers go home to sleep in cabins on farms which are farms no longer.

In the lower reaches of the valley at Muscle Shoals, the great chemical plants which make phosphate and nitrate fertilizers are thunderingly busy places, and their presence encourages other industries. Even after weeks of economic recession, the valley, though it has slowed down, is not stagnant. The civilian sales of TVA power have been increasing at the rate of 10 to 12 percent a year.

The material progress of the valley since 1933 can be expressed in dramatic statistics: a thirtyfold increase in ton-miles of freight carried on the river; a fortyfold increase in power generated; a tenfold increase in the residential use of power; an increase in average per capita income from $163 to $1,165, in depreciated dollars. Nevertheless, the TVA area's income has not yet caught up with that of the country as a whole. Its present income is still less than two-thirds the national average.

But the valley is catching up. Its people are living better than they did 25 years ago. It has quickened its stride. It is healthier and happier than it would have been if TVA had not been created. The work that TVA has done was not being done in 1933, and there were no signs that it would be done, by any other combination of public and private enterprise.

Nor has this contribution been entirely to the people of the valley. The valley, with TVA assistance, served magnificently in the Second World War and in the Korean war. It provided aluminum and other basic necessities in the struggle against Germany and Japan. In addition, a score of other industries fed the arsenal of America. It made gas

shells and let the Germans know that it was doing so; they did not have to be used. It is capable of making the terrible compound known as nerve gas. It has made components of today's space rockets and missiles. More dramatically TVA power, swiftly added to, enabled the United States to plunge ahead in its A-bomb and H-bomb programs.

But TVA works also for peace. The great plants at the Shoals send their products into two-thirds of the States, enriching not only the agriculture of the valley, but nearly all the rest of the country. TVA provides a growing market for electrical appliances by the very fact that it generates cheap electricity for their use.

In doing all this TVA has incidentally broadened the tax base not only of the Tennessee Valley States, but of the Federal Government. It has done this without becoming a ward of the Government. The Federal money flowing into the valley States is below the national per capita average.

The lesson of TVA, therefore, is not that the Federal Government can enrich some of its citizens by taking money away from other citizens. That has not happened. The lesson is one of cooperation among many agencies and many people and extending literally into the grassroots.

But one cannot write about TVA without considering whether or not its power-generating apparatus receives a subsidy from the rest of the country. Spokesmen for the power industry say it does. Spokesmen of TVA are convinced it does not. An observer who has been watching TVA for a quarter of a century is willing to report once again that the subsidy, if it exists, is small indeed.

The basic facts here are two. The first is that TVA pays a percentage of its total power revenues to State and local governments in lieu of taxes (as Federal property, it does not pay direct taxes), and in addition the distributors of its power either pay taxes or make in-lieu-of-tax payments; together, TVA and the distributors pay something between the lowest and the highest tax rates paid by private companies in the adjoining areas.

The second fact is that TVA is required by law to pay the Federal Government sums sufficient to amortize the costs of power installations within a period of 40 years. The average has been about 4 percent annually. At the end of 40 years, that is to say, the Government will have recovered the cost of the power structures but will still own them. It may be plausibly argued, therefore, that the Government is not losing anything on its venture and that the Federal taxpayer outside the valley is not being seriously mulcted.

There would be no disagreement with this view from the three members of the present TVA Board: Brig. Gen. Herbert D. Vogel, the chairman, a veteran of the United States Army Corps of Engineers; Dr. Frank J. Welch, an educator and agriculturist; and Arnold R. Jones, an accountant with long experience, who came to TVA after a term as Deputy Director of the United States Bureau of the Budget.

Chairman Vogel, who is no disciple of any kind of socialism, creeping or otherwise, puts it this way.

"The public power aspects of TVA are but one part—an inevitable part—of the comprehensive program for development of the valley's resources. There can be no separation of this function from the whole, and there should be no conflict between the responsibility of TVA in this respect and aims of private industry. In the years ahead it will be necessary to develop to the fullest all sources of power in the United States, by whatever means, if we are to maintain supremacy in productive strength over nations of the Soviet bloc.

"Public and private power, operating harmoniously side by side, can perform great service to the Nation. There is work in abundance for both, and needs of the future will test each to the utmost."

One comes to the final question: Is TVA, born in a time of deep depression, bred during a period of experimentation and adventure, brought to maturity during a world-wide war and the secondary struggle in Korea, profoundly changed by the advent of the atomic weapon and the possibility of cheap atomic power—is TVA to grow and prosper in its own territory, and is it destined to inspire similar public enterprises in other river valleys?

At the moment there are no signs that it will provide a pattern for other rivers and valleys. For one thing, there are not enough rivers. The Colorado has been developed, but not in the TVA fashion; the Columbia, but not in the TVA fashion; the Sacramento and San Joaquin Rivers, but not in the TVA fashion.

For another thing, the future of power is uncertain. The time will almost surely come when power will not require rivers, though we or our children may find it convenient to locate powerplants on river banks. There is an absolute and measurable end to all hydraulic power; when this end has been reached there will be no possible additions.

Accordingly, one may judge that the TVA power formula raises questions, not because it has to do with rivers but because it has to do with the relations between public and private power. The power development on the Tennessee rested on two assumptions: first, that governmental intervention was necessary if all the possibilities of the river were to be harmoniously utilized; second, that it was not safe, in a democracy, to permit private power monopolies.

The shift from water power and steam power to atomic power would not answer the second of these assumptions, though it may be that energy would be made so abundant and so cheap that it would not really matter who owned and controlled it.

As of today, TVA does not seem to the returned pilgrim to be a threat to private enterprise—no matter how spokesmen for a part of private enterprise regard it. It is not even as much of a threat as it seemed to be a quarter of a century ago, for in those days its territorial boundaries were not precisely fixed, its effects on electric rates were not clearly understood and there was no guarantee that it was not merely the first of a flock of similar undertakings.

In the opinion of this pilgrim there will not be, and cannot be, a duplication of the TVA, if only for the simple reason that there cannot be a duplication of the Tennessee Valley. Nor need there be destructive competition with private utilities. As Chairman Vogel says, "there is work in abundance for both."

But, by the same token, the existence of TVA as a splendidly successful going concern is an admonition to private interests to avoid the shortcomings of pre-TVA years, to expedite technological progress (as some of them are now doing in the most admirable fashion) and to develop their retail markets.

TVA, under any Federal administration, will remain a challenge.

[From the Decatur (Ala.) Daily of May 18, 1958]

TVA'S 25TH ANNIVERSARY

This week 5 million people in this valley are quietly celebrating the 25th anniversary of the creation of the Tennessee Valley Authority. And they are not alone, for TVA has meant and will continue to mean a great deal to the Nation and to the world.

Created for the purpose of rejuvinating a river valley, TVA has become a symbol of flood control, navigation, reforestation, electric power for defense and low cost electric power for farms, homes, and factories. The example set by TVA has gone around the world for the interests of the people everywhere are the same. They are interested primarily in food, clothing, and shelter for themselves and their families and TVA spells out sound economics.

To better understand the human values contained in TVA you would have to compare the valley today with the valley of 25 years ago. To put it mildly, a transformation has taken place on the farms, in the homes, in the factory, in the thinking of people. We are no longer afraid in this valley for the right economic factors are present. We may have recessions, but depressions are wholly unlikely.

And after all, the measure of any governmental activity, or any partnership between Government and people, rests in what results are accomplished for the people.

Had TVA been unsuccessful there would be no battle fought in Washington today. Private power interests would not be out to scalp TVA. There would be no charges of subsidized electric bills. Nor would there be lower-power bills all over the Nation for there would have been no yardstick. But the yardstick has been there for 25 years and it is still measuring private as well as public-power bills, and the public likes it that way. Sound management backed up by the people has made the first 25 years of TVA an outstanding success. We can keep it that way for the next 25 years with the same qualities of sound management backed up by the people.

Meeting the Challenge

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 21, 1958

Mr. KUCHEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a speech which I delivered on May 16, 1958, before the 20th District Optimist Clubs in Fresno, Calif.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MEETING THE CHALLENGE

(Speech by United States Senator THOMAS H. KUCHEL before the 20th District Optimist Clubs, Fresno, Calif., May 16, 1958)

In a gathering of this sort, I assume there is a direct and widespread interest in the role of the Federal Government in our Nation's economy. As men active in business, in industry, and in professions, you have a continuing concern about the conduct of public affairs as they affect the financial health and vigor of our people.

The overwhelming majority of Americans believe in the system of free economic enterprise upon which our country was founded and upon which she has grown to her present position of greatness among the nations of the world. They see every day how we have achieved almost unbelievably high standards of living. They are conscious of the conflict of ideologies—individual initiative and free enterprise versus socialistic slave-state theories—which underlie both our international relations and our domestic problems.

As our Nation has grown, our Government has grown. Decisions in Washington—those embodied in legislation enacted by the Congress and in administrative actions of the

executive branch—have profound impact and far-reaching implications on all of us. This is inevitable when you consider that our Government each years spends on the order of $70 billion. That figure is more than 17 percent of our annual four hundred billions a year national economy. When such a vast sum is disbursed for the payment of services, for the employment of people, for the purchase of goods, it necessarily has a tremendous effect upon people and their livelihood.

For this reason alone, only a few short months ago, the fear of runaway inflation was very real. It permeated the thinking of Americans in all walks of life. More recently, there has been discussion, debate, and expressions of alarm about a swing in the other direction. Instead of inflation and sputniks, the recession has been a prime topic of conversation and a motivating factor behind many governmental actions.

We have become painfully aware of some regrettable soft spots in our economy across this country. Sometimes we say conditions are spotty. Because we are not a one-industry or one-crop State, because we have diversification in most areas, California fortunately has not suffered as painfully the effects of reduced consumer spending, of curtailed buying, which have been deadly serious in some parts of our Nation.

Because these soft spots have shown up and because our national economic structure is so complex, it became imperative for our Federal Government to take actions to help get our industrial and business machine back on the track. Without attempting to catalog all of the actions, I should like to note that a variety of steps was taken to counteract the recession. And even more moves still are under consideration back in Washington. In taking any action, we run into the ideological conflict which I already have mentioned: free enterprise versus socialistic theory.

Early in the present session, the Congress took a position that the Federal Government might check the slowdown by speeding up certain regular activities of Federal agencies. We have undertaken to accelerate purchasing and procurement. We endeavored to channel life-giving dollars into the bloodstream of our economic body. We have passed certain laws to provide a stimulus to some distressed industries and thus to create employment.

One of the earliest efforts was enactment of a new housing law. That was designed to achieve a dual purpose. It was written to improve prospects of families in lower income brackets for purchasing a home of their own. It was designed to loosen credit so builders and contractors would be encouraged to step up their activities. It reduced downpayments and broadened and eased loan features of the Federal housing and veterans' housing programs.

Such action as the housing bill was warranted, in my estimation. It makes for better living and for happier families in America. Although that bill became law only a few weeks ago, I have been told by people in industry and business that already it has helped improve the economic climate. And when we build homes, we not only put carpenters and masons and plumbers and other craftsmen to work, but we create demand for materials that will rejuvenate industry, such as California's economically damaged lumber mills, and steel and cement and fixtures.

The passage of the latest comprehensive highway bill is another achievement which will improve our economic health. I was glad as a member of the Senate Public Works Committee to have a direct hand in framing that legislation. It is designed to put the big, the vital 13-year 41,000 mile, Interstate Highway construction program back on the track. Our Nation requires an up-to-date, soundly engineered network of interstate routes to carry our ever-mounting volume of traffic with greater safety. We must have the best built highways to speed goods to market, to expedite personal travel, and to meet needs of national defense.

This bill did more than improve the chances of building such a highway network on schedule. Provided in part that the historic allocation of Federal financial assistance to the States would be more generous for a limited period of time so that necessary contracts could be let at once and men put to work on the traditional primary-secondary-urban highway projects. By provisions for advances of Federal grants, we helped to create jobs, whether they are in California or Maine or Texas.

In passing, I should like to point out that this piece of legislation also contains one significant innovation. It has a provision with which I had considerable to do and in which I feel a degree of pride. For the first time in history, Congress laid down the policy that you and your families as you drive along the new superhighways shall be able to enjoy the scenery with which God endowed this country. We established the principle of giving States and localities—those instruments of government which have police and zoning powers—an incentive to control outdoor advertising on the interstate system. There were violent arguments, of course, against this innovation. For my part, I believed that the Congress had a right—indeed, a duty—to do what it could to preserve the scenic beauty and the inspirational and aesthetic values of America's terrain for our people.

The President has moved to accelerate certain other activities in similar fashion. He has requested additional funds for public works of a sound, worthwhile character. At the same time, he has stood firm against proposed leaf-raking and boondoggling programs which drain the national Treasury without resulting in a long-range contribution to America's wealth or health. Additional funds have been voted and more have been requested and are under consideration at this time in Congress for flood control and reclamation projects.

Here, I want to say that I object to—in fact, I resent—a tendency in some quarters to characterize public works as "pork barrel" undertakings. True, now and then some agency embarks on a project of dubious worth which slipped through Congress. But the overwhelming proportion of these projects are essential to the safety of America, to the efficient functioning of our transportation, to the supplying of ever-growing demands for food and fiber. That is why I twice voted for the omnibus bill authorizing river and harbor improvements, beach erosion work, and flood prevention and control projects. That is why, as I have stated on several occasions, I deeply regretted President Eisenhower's veto of our most recent authorization bill.

I have been in accord with the philosophy and principles on which the Eisenhower administration operates. I generally have supported the positions taken by our President. But I also have a duty to the people of California to exercise my own judgment and to vote as I think best for their welfare. For that reason, I stand ready to vote to override the President's veto of our omnibus public-works bill. I do so because my examination shows 96 percent of the projects in that bill had been thoroughly and intensively investigated and found feasible on the basis of both economics and engineering. Only 4 percent of them were open to challenge as to their soundness and reasonableness of cost.

I may have served in the United States Senate a relatively few years. But I say to you that I have been a Member of that body long enough to realize that if I withhold my approval of a bill until it meets my standard of legislative perfection, I will be unable to vote "Aye" very many times in the Congress.

In thus believing the vetoed bill was about the best obtainable, I think of the fact that for 4 years we have not enacted a single authorization for a new flood-control project. Yet, during that time, storms heavily loaded with rain and snow have borne down on our Nation and dumped their burden of precipitation with disastrous effect on numerous sections of our land.

Only a little more than a month ago, farmers and homeowners in these lush central valleys of California and not far away in our thickly settled coastal region were struggling to reinforce levees. Many families were evacuating their homes. The inexorable runoff from our hills and mountains wrought widespread damage and brought much suffering. Just before leaving Washington, I sent the Senate Appropriations Committee a letter in which I pointed out that incomplete and partial figures showed that the worst of our recent series of storms did $34 million worth of damage. Yet, the flood prevention and control works, built by the Federal Government prevented $113 million worth of further potential damage. Expenditures for flood control are an investment which returns tangible and measurable dividends.

In all the recent uneasiness about the state of our national economic health there have been repeated demands for tax reduction. The President several times has said he is studying the wisdom of recommending such action. But he, like all of us, is aware of the problem of maintaining our Government's fiscal soundness. We must be conscious of the immense outstanding national debt. Incidentally, let me recall that early in the present session, Congress was called upon to raise the debt ceiling by $5 billion to afford elbow room in handling the Treasury's financing problems.

I have not joined in sponsoring any bill to reduce taxes. Even though I personally would like to reduce the drain on your pocketbook and mine, I cannot be unconscious of the possible repercussions of such a step. I do not want my daughter or your children to go through life unnecessarily weighted with the necessity of paying the costs of actions which might better not have been taken.

Furthermore, I question the benefits of most reductions which have been advocated. I voted against one attempt to reduce the personal income tax load because I felt it would have cost the Treasury an indefensible loss of income. Beyond that, I was not persuaded that giving the average family a paltry sum such as $50 per year would have a constructive effect on our economy. In view of the mechanical problems involved now that we have a system of withholding, I question the effectiveness of a modest immediate increase in exemption. At least, I doubt that it would be as a speedy shot in the arm for our economy.

To talk intelligently about tax reduction, one must know what part of the tax structure is meant. If the administration, after its studies and its weighing possible benefits against disadvantages, recommends action along that line, of course, I will consider it carefully. But, at the moment, I am not persuaded that a nation which last year increased its savings to the unprecedented total of $69 billion should hastily move to chop several billions off its revenues when we already are having trouble keeping within our expanded debt limit.

There are a couple of types of Federal taxation which I do think we might properly consider reducing or eliminating. Both of these would have a long-range beneficial effect as well as, I believe, an immediate result. I question whether we are not doing a greater disservice to the Treasury and our economy by keeping on the books the pres-

ent percent excise taxes on automobiles and on transportation of persons and property.

The automobile excise tax is a very direct blow at the consumer's pocketbook. More than that, it is a psychological deterrent to spending. There is good reason to believe that the continuing down-trend in automobile sales may be due in large part to reluctance of potential purchasers to sign on the dotted line while there is talk of cutting or wiping out this levy. Curtailed automobile sales not only mean a drop in income from the excise tax, but reduced earnings by manufacturers and dealers and therefore lower income tax payments next year.

The automotive tax is a particularly significant item. No doubt it is a good revenue producer. But it is far from painless. In the last fiscal year, it brought in nearly $1,150,000,000. When the 1959 budget was prepared last December, estimates were it would yield this current fiscal year $1,290,000,000. This latter guess obviously is—as I was told by a Treasury Department official last week—in need of adjustment. But even before the downtrend in automobile manufacture and sales began snowballing, the Treasury had written down the expected yield for the fiscal year which begins next July 1. The estimate for fiscal 1959 was only $989 million, a drop of $300 million due to the indicated slackening of activity visible last fall and early winter when revenue estimates were computed.

Thus, we might well ask whether it is not better to forego part if not all of the income from this source, stimulate more buying, and therefore more manufacturing, put more workers back on the job, and prevent a progressive decline in Government receipts from individual and corporate income taxes.

In this connection, the role of automobile manufacturing in our total national economy should be taken into account. I have heard that one out of every five persons in our labor force owes his job directly or indirectly to automobiles. It may be time to consider whether an industry with such far-reaching effect on our total economic activity does not warrant the sort of relief, does not qualify for the stimulus to greater productivity that a reduction in the excise tax would provide. At any rate, if tax reduction is to be considered, here, as I view it, is one area for study.

The tax on transportation, on both persons and property, is another which has extensive effects. To us in California, its consequences are particularly obvious. Our agricultural products to a great extent are shipped long distances to market. Many of our industries import raw materials and send substantial proportions of their finished product across our borders to market. The tax on transportation of property thus is an integral part of the sales price of both agricultural and industrial products. In many situations, this levy pyramids, thus unduly influencing the retail price level.

For us in California, a better competitive situation would result if this transportation tax were lifted. Our fruits and vegetables sent to the big cities of the Atlantic seaboard would be on closer parity with those from Florida, Texas, and other competing areas of the East and South. Our fabricated products from Los Angeles, San Francisco, and other industrialized communities would come closer to meeting on even terms similar articles from Illinois, Ohio, Michigan and New England. And for us at home, we would get relief from that footnote we read in so many national advertisements, the line saying "prices slightly higher west of the Mississippi."

There is one field of tax law revision aside from potential rate revision, virtually crying for attention. Our complicated revenue structure imposes many undue burdens on and puts many obstacles in the way of small business. By the phrase "small business," we mean to cover a broad range of enterprises, industrial production, distribution, wholesaling and retailing. These are the establishments typical of the American free enterprise system, the small corporations, partnerships, and family operations. These are the type of organizations which can grow into substantial economic units, given the proper climate and opportunity for development.

Early this session, a comprehensive bill to revise revenue procedure on small business was introduced as the result of nationwide Senate committee hearings. I am a sponsor of this legislation, and I participated in our Small Business Committee hearings.

This bill recognizes that the impact of Federal taxes is not the same on all segments of our economy. This is not class legislation. It does not attempt to set segment against segment. It endeavors to recognize that smaller establishments need more flexibility in dealing with such problems as retention of earnings essential to expansion and in paying estate taxes and in figuring depreciation. It would end double taxation on fledgling enterprises. In essence, tax relief for small business would create opportunity and thereby enable newcomers with initiative and courage to take their place in our national economy. This is an indispensable ingredient of national growth.

Those are some of the considerations which we have faced, and are facing, in the field of our national economy. Congressional action upon some of them, which has thus far taken place has been, I believe, generally good. And in the months ahead, I trust we may, without resorting to too much politics or to unvirtuous extremes, create a climate in which we all may enjoy economic well-being.

The people in attendance at this convention share with all our countrymen the same prayers for the maintenance of liberty under law and for the attainment of a just and enduring peace in the world. We are united in our aspirations that our freedom may be assured and that international conflict may be honorably averted. Politics, American style, do not divide us in these commonly held and exalted hopes; there is nothing partisan about them at all. Indeed, I feel assured that the hearts of plain people of every land beat in unison as they contemplate the nobility of the human life span freed from the fear of another war.

And it is upon our own country—our people and our Government—which passing events have placed the heavy burden of leadership in the ceaseless struggle to attain these goals. The difficulties of this labor are both many and complex, but I think all of us pretty well appreciate both the worth of such exertions and the magnitude of the difficulties.

Within a fairly short number of years, international communism has taken over 17 sovereign nations, in whole or in part, and almost one thousand million people have been swept into the Red orbit to become the subjects of Soviet rule. Nations, great and small, on this side of the Iron Curtain, began to sense the mounting dangers to their own independence. They began to enter into defense agreements, by which it was mutually agreed that any communist assault upon one would be treated as Communist assault against all. This concept of collective defense, of interdependence among free countries against a continuing potential foe has paid off very handsomely, I think. Not one such country belonging to any of the now farflung mutual security agreements has been subjected to armed attack by international communism. Meanwhile, the techniques of the Soviet have undergone some changes. The danger remains. Some in a position to judge believe it has increased. The challenge to freedom has become more farflung.

Mr. Khrushchev has told America:

"We declare war upon you—excuse me for using such an expression—in the peaceful field of trade. We declare a war we will win over the United States. The threat to the United States of America is not the ICBM, but in the field of peaceful production. We are relentless in this and it will prove the superiority of our system."

And he also told America:

"In 50 years, your grandchildren will ask themselves how you could have been so stupid as to fail to rally to the banner of communism when it is evident that communism represents history and the future."

"I have this certainty," said Khrushchev in one of his speeches, "that in a few years, communism will have triumphed throughout the globe."

The economic, political, and cultural things free peoples stand for, indeed, even the fundamental principles of free religion, are subjected to challenge from communism on economic and political as well as military fronts. In responding to those challenges, free governments need continually to make decisions, sometimes basic, sometimes collateral, but always important, in the fields of defense and foreign policy. If mistakes are made, all of us will suffer for them. And to the contrary, if correct decisions now become the basis for strengthening the free world's position, then we shall all share in their beneficience.

I said earlier that politics do not divide Americans in their commonly held prayers for peace and freedom. Neither war nor peace distinguishes Republicans from Democrats. Differences of opinion, there are. But differences based on potential partisan advantage in this top-most important area, there are not, and there must not be.

I respect the United States Senate in its attitude, and in its history, in dealing with questions of defense and foreign relations. This is my sixth year in the Senate, and I am proud to attest that the leadership of both parties has always tried to find the basis on which our country's interest might best be served, and the cause of freedom might best be advanced. Disagreements which have arisen came from individual differences and not because of party politics. Senate support, and Senate opposition, for example, to the Mutual Security Act in the last Congress both came on a bipartisan basis. And in the coming weeks in Washington, we will, I feel sure, once again cast our votes on legislation in this area on the same basis of what is best for America as we, individually, see the light.

THE MILITARY CHALLENGE

First, let us look at the military challenge we face. During the years since the war, Soviet Russia has pushed steadily ahead to develop a great warmaking potential equipped with the most modern scientific weapons, including those of a nuclear nature. We saw evidence of Soviet progress during the Korean war, when the performance of MIG fighters left little advantage to us. We have been reminded of Soviet military strength by reports received on their hydrogen testing. Last fall, the extent of Soviet scientific advance was forcibly demonstrated by the launching of the first earth satellites. In the years since the war, the Soviet Union by strict state control has put steel into military equipment instead of into consumer goods on the scale which we have done in the States.

The Soviet military challenge is not being ignored.

President Eisenhower recently focused attention on the need to adapt our defenses to the demands of modern war. He has called for an increased centralization of military control so that the United States can respond to any attack with coordinated and integrated force with each branch of the military services able to act in the area of defense or offense for which it is best equipped.

I shall support the President in his recommended changes for our Defense Establishment. Most particularly in this kind of problem, his experience and his wisdom are unique and unexcelled. Interservice jurisdictional strife would, as it should, under his proposal, be curtailed, without stultifying esprit de corps. Wasteful overlapping would be eliminated. Efficiency would be increased. It is true that some, in and out of Congress, both Republicans and Democrats, oppose the President. But, I was very glad to see Gen. Omar Bradley and Adm. Arthur Radford, who together have 8 years' experience as Chairman of the Joint Chiefs of Staff, testify unequivocally in favor of the President's plan. They have informed the Congress that Eisenhower's proposal is essential to our country's best interest, and, like the President, are in a position to know what they are talking about. In my judgment, the Senate will give enthusiastic bipartisan majority support to the recommended reorganization. I venture the hope that the House of Representatives would do the same.

We are now in a period of history when war between the two great powers could exterminate all mankind. Until the time comes when an inspection-proof disarmament agreement may be successfully negotiated, we will, unhappily, be required to maintain an efficient, effective—and costly—Military Establishment, of the most modern type, to deter aggression through the sure knowledge on the part of the potential warmaker of what obliterative retaliation his folly would at once entail.

You are acquainted with the constant readiness of our gallant Strategic Air Command and of its powerful retaliatory forces now located at various points around the globe. And you know, too, of our splendid Navy and her expanding nuclear potential, and of the wonderful accomplishment of our great Army, both in conventional and in out-of-space achievements, where all Americans salute her, and in her vast capability for mobility and strength in her ground forces. The Marine Corps will, if called upon, continue to play her dedicated role in our defense, under the new reorganization, exactly as she has in her long history.

I might add that $3 out of every $4 which the President has requested for mutual-security expenditures is for the purpose of supporting the military efforts and forces of our allies. These are allies with bases from which we would operate in the event of attack. These are allies who have permitted us to establish IRBM bases on their territories within range of the Soviet Union. These are allies who have men under arms in greater numbers than do we.

Our modern Defense Establishment is a good investment in security and a sure means of checking the challenge. Overseas bases from which we may operate and from which missiles may be fired are an important part of our defense system. Allies who will stand with us in defense of freedom are a good investment in security for the future as they have been in the past. Just how effective the SAC deterrent is has recently been illustrated by Soviet concern at our state of readiness. Our free friends stood by us in rejecting the recent Soviet attempt to compel us to disarm SAC. And then they upheld our own excellent recommendation that the United Nations establish an inspection and warning system in the vast expanses of the Arctic. It is a tragedy that the inscrutable Russians vetoed this proposal in the Security Council. But unquestionably her veto has served to knit more closely the common bond between our allies and ourselves, and it constitutes a valid measure of the foe of freedom with which we deal.

THE ECONOMIC CHALLENGE

We are challenged, too, on the economic front. The Soviet military challenge must not detract from the Khrushchev boast that the Soviet contemplates overtaking free peoples and engulfing free states. Her economic challenge is two pronged. She places heavy emphasis on her domestic economy. For the first quarter of 1958, for the first time, Soviet steel production was equal to our own, although our own production has been below maximum capacity. The Soviet economy is now expanding at, roughly, twice the rate of our own.

The second economic challenge is in her program of economic penetration. Already we are seeing the Soviet Union searching for export markets and standing ready to import raw materials from abroad, by way of loan repayments or otherwise.

Over the last 3 years the Sino-Soviet bloc has extended some $2 billion of development and military aid to countries outside the Soviet bloc. These countries have been assisted by loans and gifts. Their accompanying indoctrinated technicians are carefully chosen for their ability to spread the Communist doctrine. Nasser's Egypt, astride the lifeline of Europe, has received generous financial and military assistance. Syria, which flanks our NATO ally, Turkey, successfully has been penetrated. Yemen, at the entrance to the Red Sea, where it commands access to oil shipments, has received Russian aid. Ceylon, Indonesia, Laos, all countries which the Communists covet, have had help from Russia or Communist China.

The Sino-Soviet bloc is not helping these countries out of love and affection or of unselfish devotion to the cause of man's freedom. Those countries are receiving aid from Russia, first, to help to make sure they stay outside the free world camp, and, second, to try to put them under Soviet influence and obligation.

I do not believe that we should permit ourselves to be jockeyed into the position of competing with the Soviet Union in supplying aid to any country. And I do not believe that we are. I think the situation is the other way around. We have honestly attempted to extend a helping hand to weak nations and new nations which want to live in peace and whose ideals of human dignity are not dissimilar to our own. In the early days of our own country, we utilized money from abroad by which our own industry originally got underway. One of our policies today is to promote the investment of private capital in constructive projects overseas in friendly lands. But in some such areas, private funds simply are not available because of the risks involved. And by this economic aid program which President Eisenhower has laid down, as part of our mutual security program, the intention is clear: We desire to help ourselves by helping others. We believe it is good for nations which are free to remain free. And we do not believe there is any difference so far as liberty is concerned between a country which goes down the drain through Soviet military occupation and one which goes down the same drain through economic or political subversion. That is the intention by which the President asks the Congress to adopt his economic aid legislation and, here again, as an American, I shall support him.

In discussing the Soviet economic challenge and American economic aid programs, I wish to emphasize that most of our aid—over half—is now on a loan basis. The economic programs for next year calls for total appropriations of $1.3 billion. If this program were to be emasculated by the Congress, I have not the slightest doubt that our own defense appropriation would be considerably increased.

The economic challenge must also be met by a continuation of our reciprocal trade legislation. We cannot grow and prosper in any sanctuary of economic isolation. Our ever increasing labor and productive force cannot be profitably employed to produce for our own consumption alone. And our needs for raw material cannot be supplied entirely from domestic sources.

I believe in reciprocal trade. But, I must say in frankness that I do not believe that the administration of our trade laws has given proper effect to the provisions in our reciprocal-trade laws which deal with the so-called peril point and escape clause. These phrases refer to Federal statutes designed to prevent foreign-trade policies from destroying our own American agriculture and industry. I want to continue mutually profitable international trade, but I do not intend to vote any of my fellow Americans into bankruptcy. I know something about the problems of the American tuna-fishing industry, and something, too, about the fig growers of this Fresno area and the date growers of the Coachella Valley, and the deleterious effects upon them of unfettered competition from abroad.

The Senate Finance Committee will hold extensive hearings on this exceedingly complex problem. And while I tell you that I shall support, as the President has requested, a continuation of reciprocal trade, I trust that the committee may find a proper way to assure that when our own American economy, or any segment of it, is in peril by reason of foreign competition, relief, swift and sure, will be available, exactly as the statutes have ever intended.

THE POLITICAL CHALLENGE

It is difficult, in few words or many, to comment on the political challenge which international communism poses to all. None can honestly question Russia's inexorable desire to communize the globe. Stalinism, then anti-Stalinism, scowls then smiles, collective dictatorship and now, apparently, a return to one-man rule, high-sounding declarations of peace and then the ruthless killing of Hungarians, agreement to Austrian sovereignty, but belligerent opposition to self-determination for the stricken satellites—Russia's Soviet leadership, in international politics, is completely inscrutable. It is also very wearing on patience. The Kremlin is quite unrestrained by moral scruples. She zigs and zags on the basis of what best serves her course at the moment.

Against this formidable, ruthless world power, stand the United States and her allies. Our leadership, in freedom's cause, needs ever to be bold and courageous. It needs to be, as it always has been, honest and forthright, fair to all. We believe in peace with justice for all. And, I think recent events have demonstrated that our proposals for advancing peace have added to our stature. We need to wage peace constantly and with vigor. And it sometimes seems that the very intransigence of the Soviet leaders may, in the long run, contribute to the victory of an honorable peace which we continue honorably to seek.

We will meet the challenge.

Shakespeare's Polonius said it:

"This above all
To thine own self be true
And it must follow, as night the day,
Thou canst not then be false to any man."

George Foster Peabody Award Citation

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1958

Mr. SANTANGELO. Mr. Speaker, the theater industry has its Oscar awards, the television industry has its George Foster Peabody awards. Outstanding

people in their respective fields are frequently distinguished by appropriate awards. The George Foster Peabody radio-television award for meritorious and distinguished public service was presented to the Westinghouse Broadcasting Co. on April 2, 1958. The Peabody awards have been called the Pulitzer prize of broadcasting. They are highly regarded and deeply cherished. The citation which was presented to the Westinghouse Broadcasting Co. was as follows:

The Boston conference of the Westinghouse Broadcasting Co. brought into sharp focus the significance of public service broadcasting—both to this company and to the industry. The conference was in a sense a creative sounding board, the message of which was more attention to better local public-service programing.

Westinghouse merits special recognition for this conference, but also for the high quality of its own public-service broadcasting. Every Westinghouse-operated station reflected in 1957 projects and programs too numerous to mention, the admirable concept of which is hereby recognized with this special Peabody radio-television award for meritorious and disinguished public service.

Statement of Mayor Robert F. Wagner on the Current Unemployment Situation

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. MULTER. Mr. Speaker, on May 16, 1958, the House Banking and Currency Committee, of which I am a member, had the privilege of receiving the testimony of our distinguished mayor of New York City, the Honorable Robert F. Wagner, regarding the current recession and unemployment situation in New York City.

I am pleased to direct the attention of our colleagues to Mayor Wagner's statement, as follows:

STATEMENT OF ROBERT F. WAGNER, MAYOR, CITY OF NEW YORK, BEFORE THE BANKING AND CURRENCY COMMITTEE OF THE HOUSE OF REPRESENTATIVES, WASHINGTON, D. C., MAY 16, 1958

Gentlemen, I welcome the opportunity of appearing before this distinguished committee to speak about the recession with which we have all been increasingly concerned over the past several months.

We in municipal government observe the effects of recession not as a set of graphs and statistics but as a series of disturbing human problems. Even if there were no statistics we would know that there was a recession.

We know it because we see more and more families in difficulty arising from the loss of income, as fathers and working mothers lose their jobs or work fewer hours.

We know it because of the increase in idleness among our older workers and minority groups.

We know it from our social agencies who deal with juvenile delinquency and other problems of adolescents. They are deeply concerned by the prospect that many of our young people will not find jobs this summer, and will be forced into a long period of idleness. Lack of jobs for the adolescent and breakdown in the financial stability of the home will seriously hamper us in our program of delinquency control and prevention.

Although the situation is not as bad in New York City as in many other parts of the country, still the picture we see at the local level is indeed not a pleasant one.

How long is this situation to last? I am not going to try to forecast our economic future. Our data on the city's economy does not show with any certainty how soon we may expect an upturn. Nor does it give us reliable evidence as to whether we have or have not reached the end of the decline. In this kind of uncertainty, I believe that unless appropriate action is taken now we do run the risk that the decline which in a relative sense is at present still minor will begin to spiral and may carry us into a severe depression.

The latest available estimate of total unemployment in New York City, which is for March, puts the number of people out of work at 340,000—an increase of 47 percent over March of 1957. March unemployment thus amounted to 7½ percent of the city's labor force. More recent data on insured unemployment indicates that total unemployment in April will be somewhat higher than in March. In fact, the proportionate rise in unemployment in this recession has already exceeded the worst months of the two previous post-war recessions.

In New York City as in the rest of the Nation it is our manufacturing industries that have been hardest hit. As elsewhere, the largest relative increases in unemployment have been in our hard goods industries. For example, insured unemployment for April in the transportation and equipment industry is up 158 percent over a year ago. In fabricated metal products industries the increase is 160 percent; in machinery, 195 percent; in instrument and photo goods, 187 percent.

The largest number of unemployed persons, however, come from our most important manufacturing industry, the apparel industry. The number of garment workers drawing unemployment compensation this April was over 74,000, almost twice as many as April 1957. In addition, other nondurable goods industries have experienced a substantial increase in unemployment, such as textile mill products, leather, and printing.

Construction is another industry that has suffered this year. In April there were over 16,000 unemployed—some 56 percent over a year ago. The first 3 months of this year housing starts have been 20 percent below the first 3 months of last year and nearly 50 percent below the level achieved in 1956. Nonresidential construction in the city is also down.

In short, although New York City is not as badly off as many other areas in the country, some particular industries are in severe distress.

Recession makes itself felt not only through complete loss of job but in partial unemployment and other indicators of economic hardship. Average weekly hours worked in manufacturing in March was 36.7, a drop of 4 percent from last year. Business failures in March of 1958 were up 16 percent over a year ago, with the bulk of these failures concentrated, of course, in small firms.

Economic decline and the rise in unemployment in New York City has affected the city's welfare program. As the recession continues more and more persons exhaust their claims to unemployment compensation. In the first 4 months of this year over 20,000 persons in the city have exhausted their benefits.

Our public assistance caseload is up to 145,100, with over 300,000 persons receiving assistance. This is an increase, during the course of the present recession, of 7,000 cases involving 27,000 persons. We have already exceeded the caseload peak of the 1953–54 recession, and by July we expect to exceed the postwar peak of 353,000 persons reached in June of 1950. This will happen even if we have an economic upturn during the summer. Public assistance caseloads always continue to rise for many months after an economic upturn sets in.

We can measure the effect of joblessness by increased welfare caseloads and their cost in dollars; what we cannot do is to measure its effect in human misery and social deterioration.

We in New York City are aware of the fact that the prosperity of our local economy cannot be dissociated from national prosperity. We know that much of the decline in our city's economy results from recession throughout the State and the Nation. It can be truly said that what is good for the Nation is good for New York City, and every other community.

I would like to advance the following proposals with a twofold purpose: (1) To provide a stimulus to local economies directly; and (2) to raise the general level of economic activity in the Nation as a whole.

One important way in which the Federal Government can act constructively and expeditiously to combat the current recession is to provide grants to local governments to finance short-term public works and improvements. Such grants would provide needed new spending which would be channeled in the first instance into depressed industries. In this way, the Federal Government can give a powerful lift to the national economy, while at the same time getting maximum value for every dollar spent. This is in no way a make-work proposal. On the contrary, the use of idle resources for highly worthwhile purposes would benefit the largest number of people directly and would make an important contribution to our long-range economic progress. It keep responsibility for local action at the local level.

I know that this committee is considering the community facilities bill which would provide Federal loans for public works construction. But I want to emphasize that this bill would not benefit New York City at all. Our problem is not with ability to obtain funds, or with high interest rates, it lies in constitutional restrictions on our borrowing power. Many other cities are in a similar situation; I note that the mayor of Detroit recently indicated to this committee that his city had reached the statutory limit on bonded debt.

Therefore, I advocate that the Federal Government make grants to local governments for the following purposes:

1. Rehabilitation and modernization of run-down physical facilities.

2. New construction which can be initiated and completed within a short period of time.

In New York City alone there are numerous projects on the shelf whose importance has been established beyond question but which we have had to postpone simply for lack of funds. These are projects which have been thoroughly studied, and which are backed by careful plans. If the money were available, today, we could quickly produce many dramatic improvements in the city's facilities and services.

There are well over $100 million worth of such projects which could be started and completed within a relatively short period of time. These projects include modernization of schools, libraries, police stations, health centers, and ferry terminals, and improvement of streets and parks. They would furnish some 2¼ million man-days' work. Should further economic decline justify undertaking longer-term construction, we could increase our projects 10-fold.

Speedy enactment of a program of temporary Federal grants for local improvements for the entire Nation would produce an excellent weapon to fight the recession. The program would provide almost immediate spending but would not tie up our productive facilities for an extended period of time. Therefore, even if an economic upturn should actually come at an earlier date than now seems likely, the program would not be a source of inflationary pressure. We would be using capacity mainly during the time it would otherwise be idle.

I shall shortly transmit to our congressional delegation a draft of a bill embodying our ideas of how such a program might be set up.

It should, I think, constitute a prime element in national antirecession policy, and I wanted to give it particular emphasis before this committee today.

I would now like to turn attention to other proposals related to the recession problem.

There are several programs of long-range social betterment which I feel ought to be advanced at the present time when idle resources are available. These items include school construction, more low- and middle-income housing, and urban renewal and redevelopment, for which I have recently testified before a Congressional Committee, and a much greater effort to combat water and air pollution.

Now is also the time for increasing social security payments. The increase would provide money that would be immediately spent, and thus provide an additional shot in the arm to the economy. It is amply justified by the present high cost of living. Congress has several times in the past increased social security payments to meet changing economic conditions. It should do so again.

I am convinced of the need for extending the duration of unemployment insurance benefits to at least 39 weeks and I believe that the bill passed by the House is a move in the right direction. Also, I believe that ultimately all workers should be included in our unemployment insurance system and that adequate standards for benefits should be established throughout the Nation.

I believe that as an emergency measure, the Federal Government should provide unemployment benefits to those workers not now covered by the unemployment compensation system, who have lost or will lose their jobs during the current recession.

There are many suggestions for Federal tax reduction to combat the slump. There is at present no unanimous opinion on the best form of tax reduction. My own viewpoint is that a tax reduction of $7 to $10 billion is needed, and should emphasize increasing the purchasing power of low-income groups and assisting small business. Tax cuts of this magnitude have already been recommended by many business groups including the Committee for Economic Development.

Your chairman has asked my opinion of H. R. 10345, the bill to establish a small-business capital bank system. I have good reason for favoring the objectives of this bill. Small firms predominate in the New York City economy; one of our important roles is that of a seedbed of new business ventures. Our small firms, like small firms everywhere, have trouble getting capital; this difficulty is magnified in times of recession.

Many small and large business firms in the New York City area have, over the years, become geared to produce a substantial quantity of goods for our defense effort. Many of these firms, and their thousands of employees, are dependent on defense production for their continued existence and livelihood. A number of small firms have suffered in recent months because of the decline in defense production.

Production facilities in this area are presently underutilized.

The size of the city and the diversity of our industry may create the illusion that we can afford to be overlooked when nondefense, as well as defense, contract allocations are made. While we are not a distressed area, we harbor distressed industries. These include shipbuilding, with its excellent facilities for construction and repair; machinery and instrument manufacture, and our very important apparel industries. I, therefore, urge that the Federal program of contract allocation make the fullest possible use of the many diversified production facilities in the New York City area.

In closing let me emphasize that we in New York City are not just going to wait for the Federal Government to act to help our local situation. We are taking action on our own. I have directed various city departments to accelerate to the maximum extent possible all programed expenditures on public works and public improvements.

I have appointed a special committee to study the recession problem in our area and to maintain continuous liaison with the New York congressional delegation. This committee includes representatives of business, labor, and the city government, and will be meeting with the delegation in the very near future with specific suggestions for immediate action.

But efforts by localities taken individually can be of only marginal help in combating recession. This cannot be a bootstrap operation; it is basically the responsibility and the obligation of the Federal Government.

And I urge this committee and the entire Congress to act now.

Meat Promotion Up Again

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1958

Mr. POLK. Mr. Speaker, the Chicago Daily Drovers Journal is one of the oldest and most respected journals in the livestock industry. In the April 14, 1958 issue of the Drovers Journal there appeared an editorial on the controversial livestock industry. In the April 14, 1958, under consideration by the House Agriculture Committee.

No matter on which side of this controversy one finds himself, this editorial is worth reading for it expresses the views of a very important spokesman for the livestock industry in the Middle West.

Under leave to extend my remarks, I am including the Drovers Journal editorial entitled "Meat Promotion Up Again":

MEAT PROMOTION UP AGAIN

The House Agriculture Committee is getting set to begin hearings again on a bill to allow market deductions from farmers' livestock checks for the purpose of promoting meat.

We use the word "again" advisedly, for it was just about a year ago that hearings were held on the same subject. Later in the year the House, by a vote of 216 to 175, refused to debate the question and the deduction bills were killed for that session of the 85th Congress.

Evidently the proponents of the deduction legislation are not intending that the current crop of bills—7 identical measures in the House and 1 in the Senate—shall meet a similar fate. It has been announced that a grassroots campaign for the passage of such legislation is being organized and that many representatives of cattle, sheep and swine organizations will testify in favor of the bills.

This projected legislation, like that which was turned down last year, calls for amending the Packers and Stockyards Act of 1921. It specifies that "nothing in this act shall be construed as prohibiting a market agency, upon request of a livestock producer sponsored association or organization, from making deductions from the proceeds of sales of livestock or any species thereof to finance research or sales promotion programs, provided that in accounting to the shipper of such livestock, the shipper is advised of the amount of the deduction, the purpose thereof, the organization it was made for and that upon request of the shipper, made within 30 days from date of deduction, the amount deducted will be paid to the shipper."

In other words, it would enable any livestock group in any way connected with livestock producers to go to any market and request the commission firms or other auditing agencies to deduct a specified amount from the check of every seller of livestock. This money would then be turned over to that group for whatever use it wanted to make of it for research or sales promotion programs. If the farmer objected to contributing, he could get his money back by applying to the withholding agency within 30 days from date of the deduction.

Recognizing the need for and value of good promotion programs and being well aware of the fact that livestock producers agree generally on the need for promoting meat to the limit of good economics, we feel duty-bound to raise some of the same questions as were raised last year in consideration of this legislation. These are:

(1) Is it necessary legislation? That is doubtful. There is nothing in the law now to prohibit such deductions if the prior consent of the seller of the livestock is obtained. A commission firm can deduct any amount for any purpose if so instructed by the seller. It is only necessary to have this legislation to permti deductions from the seller's check without his permission. When this is done, the program is no longer voluntary. The seller's proceeds are violated and he is forced to take steps to regain them if he does not wish to permit the violation to stand.

(2) Would it result in more effective meat promotion? We do not know. The legislation is only enabling in nature. It does not set up a program of any kind. It simply opens the door to any or all organizations which qualify—and there are literally dozens of them—for any program they may want to pursue toward the ends of research and promotion of meat. The danger in this is that a number of organizations could engage in a scramble for the promotion money, with the result that the pie would be split too many ways for any program to be effective.

(3) What would it mean for existing meat research and promotion organizations? It could seriously threaten, and possibly even destroy, such organizations as the National Livestock and Meat Board by fragmentizing the meat promotion effort. The latter board, which has been carrying on an effective program of meat research, education and promotion for over 30 years, depends in part on the voluntary contributions of livestock producers made through approved deductions from their sales proceeds. Participating packers match these funds on a per head basis to give the board its operating budget. There is nothing in the proposed legislation to safeguard the existing structure of the board's source of funds. A definite danger is that the funds now going to the board would

be split among many groups and that the board program would have to be seriously curtailed or even given up entirely.

(4) Can more meat promotion funds than are now being spent (an estimated $100 million a year by all livestock and meat and food agencies) be utilized to any great advantage to meat producers? Proponents of the bills say yes, but there is reason to doubt that the total consumption of meat could be increased much or that livestock prices could be raised at all, no matter how many millions were spent. In future editorials this possibility will be explored more fully.

These questions are not raised in the hope that they will discourage any livestock farmer in his belief that meat should be promoted. Meat must be promoted—we subscribe to that belief 100 percent. The question is not whether meat needs promotion, but how it shall be done. Any moves which might result in failure and even in the destruction of already existing, successful meat promotion machinery are wrong. This discussion is intended to emphasize the need of being sure any meat promotion moves are right before they are made.

National Lottery Law Should Get Serious Consideration

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1958

Mr. FINO. Mr. Speaker, I am happy to inform the Members of this Congress that national interest in my bill to establish a national lottery in the United States continues to gain support and approval. I am happy to insert in the CONGRESSIONAL RECORD an editorial which appeared in the April 30, 1958, edition of the Fort Lauderdale (Fla.) Daily News:

NATIONAL LOTTERY LAW SHOULD GET SERIOUS CONSIDERATION

(By Jack Gore)

A few weeks ago in Ireland another drawing of the annual Irish Hospital Sweepstakes took place.

All over the world millions of ticket holders who had plunked down the equivalent of $3 for an opportunity to win a large or a small fortune in one of the most famous of all national lotteries, literally held their breath waiting to see if they were one of the fortunate winning-ticket holders.

The vast majority of those participating in this lottery won nothing. Some, however, took down substantial returns on their $3 investment. But nobody really got hurt, and when the drawing was over Irish hospitals were the beneficiaries of a sizable chunk of money for expansion and improvement needs.

The curious thing about this Irish Hospital Sweepstakes is that despite the fact lotteries are illegal in this country, Americans buy more sweepstakes tickets than the citizens of any other nation. Exact figures are difficult to come by but it is estimated that some $25 million was spent by Americans for tickets on this year's lottery.

So great is the interest over here in the results of the drawing that our national wire services will provide member newspapers who request it with a list of the American ticket holders fortunate enough to win a major prize.

All this shows how asinine and ridiculous we are in our official attitude toward legalizing lotteries in this country. There is certainly nothing more vicious about the Irish hospital sweepstakes than there is in parimutuel wagering at our race tracks and jai alai frontons. It doesn't come close to the evils we have spawned through illegal offtrack horse-race betting, bolita and numbers games of various types.

But in hypocritical fashion we won't permit lotteries even though by the very act of legalizing them we could wipe out almost overnight many of the gangster-controlled rackets that are bleeding our low-income groups of millions of dollars every week.

We have never been one to urge unlimited legalized gambling. But when illegal gambling is as widespread as it is in this Nation today, and when it provides a major source of revenue to finance the growing activities of nationwide criminal syndicates, it is perfectly obvious to any clear thinking individual that a reversal of our attitude toward a national lottery in America would produce far more good than harm.

Think, for a minute, of the money that could be made available for medical research through the operations of a national lottery. Most of this money is now being channeled into the pockets of our criminal element who are operating outside the law. Obviously, these people would bitterly oppose establishment of a national lottery in America for it would dry up their sources of revenue right quicklike. Even more important it would put funds now being diverted into the pockets of a few, into projects that could be of vast benefit to all of our people.

If we had no legalized gambling in this Nation, if our people weren't spending millions each year on foreign lotteries, and if they weren't financing a billion dollar a year illegal gambling racket, we could give some weight to the moral arguments against a national lottery.

But all this other gambling, both legal and illegal, is going on in our Nation today and to such an extent that it seems absolutely ridiculous not to recognize the great amount of money that could be raised for extremely worthwhile purposes every year in this Nation through the operation of a national lottery conducted on a monthly or quarterly basis.

The whole thing could be condutced simply and inexpensively under the terms of a bill already introduced in Congress. It would give the Federal Government airtight control over the lottery process as tickets would be available only through post offices and a special commission would be appointed to regulate the entire operation.

As we said above we have no desire to see all types of gambling legalized. But with the Federal Government spending as much as it is today, with taxes as high as they are, and with millions of dollars being siphoned out of America into foreign lotteries and into the pockets of criminal elements via illegal gambling rackets, we can see no valid reason why a national lottery bill shouldn't be given serious consideration.

W. G. Huxtable Honored by Engineers

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1958

Mr. GATHINGS. Mr. Speaker, it is my extreme pleasure to advise the membership of the House of Representatives that Mr. W. G. Huxtable, of Marion, Ark., known to many of us in this body as Mr. Billy, was recently honored by the United States Corps of Engineers, the Mississippi River Commission, and his thousands of friends everywhere when he was presented with a certificate and citation signed by Secretary of the Army Wilbur M. Brucker for his 45 years of outstanding service in the field of flood control.

Mr. Billy is well known to Members of Congress, for he is one of the Nation's leading authorities on flood control work and river and harbor improvements. The Committee on Public Works and the Committee on Appropriations subcommittee on civil functions regularly look forward to his appearance. They know him to be highly qualified, the soul of integrity, and a source of unquestioned information on all problems of flood control and civil engineering.

Mr. Billy is chief engineer for the St. Francis Levee District in eastern Arkansas, but in a larger sense, he is Mr. Flood Control throughout that great alluvial valley created by the mighty Mississippi. He knows the river and its tributaries and for 45 years has worked to protect the lands in that alluvial valley. How well he has succeeded is indicated by the noteworthy acclaim given him. With this brief statement I wish to include an editorial from the Memphis (Tenn.) Commercial Appeal of May 14, 1958 entitled "Merit Recognized." With this editorial I would like to place in the RECORD a news story from the Forrest City (Ark.) Times-Herald of May 13.

And, as a further indication of the work Mr. Huxtable has done and that such work is a continuing task with problems all up and down the river that combine into the great scheme of controls developed by the Mississippi River Commission and the United States Corps of Engineers, I place with this account the story of the Memphis high-water hearing before the Mississippi River Commission as written for the Commercial Appeal by Mr. George Sisler:

[From the Memphis (Tenn.) Commercial Appeal of May 14, 1958]

MERIT RECOGNIZED

For his 45 years of engineering service in the flood-control field, the Army has awarded a certificate of appreciation to William G. Huxtable of Marion, Ark. It could not have picked a more deserving man.

Billy Huxtable, chief engineer of the St. Francis Levee Board, is one of he best known, best liked and most capable flood control engineers in the Mississippi Valley. The massive and well-maintained front-line levees in his sector of eastern Arkansas are as much a monument to his efforts as to those of any other person. When his imminent retirement takes effect he can look back with pride on what he has achieved and with the satisfaction of knowing that it is recognized by the Army as well as by the people he has served.

[From the Forrest City (Ark.) Times-Herald of May 13, 1958]

W. G. HUXTABLE RECEIVES HONOR FROM ENGINEERS

The United States Army Corps of Engineers thinks highly of William G. Huxtable, chief engineer of the St. Francis Levee District of Arkansas—so highly, in fact, that when the Mississippi River Commission, on annual high-water-inspection trip aboard

the steamer *Mississippi*, docked at Memphis the morning of May 13 a surprised Uncle Billy Huxtable was invited to appear before Maj. Gen. William A. Carter, commission president, who presented to him the Department of the Army certificate of appreciation, signed by Secretary of the Army Wilber M. Brucker and by Maj. Gen. Emerson C. Itschner, Chief of Engineers, with the following citation:

"In recognition of more than 45 years of outstanding engineering effort devoted to the progressive economic development of a large area of the alluvial valley of the Mississippi River through the reclamation of swamplands, the construction of roads and highways, and the construction and maintenance of flood-control works on the Mississippi River and its tributaries, and in appreciation of the knowledge, judgment, unity of purpose and action manifested by his cooperative efforts with the local interests of the Valley, the Corps of Engineers and the Mississippi River Commission in combating great floods and in the development, execution, and maintenance of flood-control projects, particularly on the Mississippi and St. Francis Rivers."

Along with the certificate and citation, Mr. Huxtable received a handsome lapel pin bearing the United States coat of arms with the legend "patriotic civilian service."

Mr. Huxtable's association with drainage and flood-control problems dates from his graduation from the University of Arkansas in 1910, with a degree in civil engineering. For 5 years he was in charge of location and construction of many miles of drainage ditches in eastern Arkansas and southeastern Missouri. During the next 10 years, while carrying on his own farming activities at Lansing, Arkansas, he was engineer for drainage district No. 2 and Commissioner for road district No. 8 of Crittenden County and in 1921 was elected to the board of directors of the St. Francis Levee District of Arkansas.

On July 1, 1935, Mr. Huxtable assumed his present position as Chief engineer of the St. Francis Levee District of Arkansas. Since that date he has worked closely with the Corp of Engineers through the Memphis District and Mississippi River Commission offices. His often expressed opinion is that his levee district and the Corps are in partnership in their progress toward making the valley safe from floods, an opinion equally shared by Corps personnel. Because of his intimate knowledge of flood-control and drainage problems throughout his area, he has won the respect and confidence of landowners and government officials alike.

Mr. Huxtable now resides in Marion, Arkasas, not far from his birthplace, Mound City, in Crittenden County. He is a member of the Engineers' Club of Memphis, Arkansas Society of Professional Engineers, and the Rotary Club, and is a registered professional engineer.

[From the Memphis (Tenn.) Commercial Appeal]

DELEGATION ASKS AID FROM MISSISSIPPI RIVER COMMISSION—WEST TENNESSEANS SEEK FLOOD CONTROL FUNDS—HUXTABLE IS HONORED

(By George Sisler)

Witnesses at the Mississippi River Commission's annual high-water hearing here yesterday asked Army Corps of Engineers help in obtaining appropriations for immediate and long-range flood control and river-taming projects.

Representative ROBERT A. "FATS" EVERETT, Democrat, of Tennessee, headed a delegation of west Tennessee landowners at the public hearing aboard the engineers' steamer *Mississippi*. They asked that bank-protection works be installed to prevent the Mississippi from clawing away farmland along its banks.

John L. Yarbrough, of Dyersburg, Tenn., cited a very serious problem in the caving away of Island 18 towhead. Inroads of the river at that point, he said, "have knocked out a State and county road and are about to cave off 10,000 acres of the best land in the region." He asked that dikes be installed at the head of the chute to prevent caving.

GOOD LAND LOST

Lack of channel stabilization at Islands 26 and 27 is causing the loss of "a lot of good land on both sides of the Mississippi," said Lauren M. Shoup, of Ashport, Tenn. General Carter, replying to Mr. Shoup's statement that perhaps the Mississippi River Commission "is not interested in farmland," reminded the group that keeping such land from the river's clutches is the primary purpose of the Corps of Engineers' flood-control programs, which include constructing bank revetments at a cost of $750,000 a mile.

Will T. McKie, of Clarksdale, Miss., chief engineer of the Yazoo-Mississippi Delta Levee Board, reported on bank-full conditions along 100 miles of the Yazoo River. He urged early completion of flood-control work which would, if completed now, result in 3 to 4 feet less water, he said.

Mayor Edmund Orgill and W. B. Fowler, city engineer, expressed hope that channel stabilization work now in progress above Memphis will be effected soon so a site for the proposed new bridge can be located. General Carter said the dredging of a pilot channel above Loosahatchie Chute "is working the way we figured it would, and the river is doing what we want it to do."

CERTIFICATE GIVEN

General Carter opened the hearing with the presentation of the Army Certificate of Appreciation to W. G. Huxtable, of Marion, Ark., chief engineer of the St. Francis Levee District of Arkansas. Signed by Army Secretary Wilber M. Brucker and Maj. Gen. E. C. Itschner, Army Chief of Engineers, the citation recognized Mr. Huxtable's more than 45 years of "outstanding engineering effort devoted to economic development" of the Mississippi River Valley through reclamation projects.

The steamer Mississippi left Memphis at 11 a. m. for the remainder of the downriver inspection trip, with these Mississippi River Commission members aboard:

General Carter; Col. Carl H. Bronn, secretary; E. F. Salisbury, of Kansas City, Mo.; Rear Adm. H. Arnold Karo, of Washington; Maj. Gen. Harry L. Boien (United States Army, retired), of Cairo, Ill.; Dewitt L. Pyburn, of Baton Rouge, La.; Brig. Gen. Lyle E. Seeman, division engineer of the Southwest Corps of Engineers division, at Dallas, and Maj. Gen. Gerald E. Galloway, division engineer of the Missouri River Division, at Omaha, Nebr.

Statehood For Alaska

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1958

Mr. POAGE. Mr. Speaker, the Members of this House have received a great many letters in behalf of statehood for Alaska. It is, of course, impossible to reply to each one in detail.

I have written to Mr. Miller of Fairbanks and have pointed out what seems to me to be an obvious weakness in the pending statehood bill. I hope that it may be of general interest. The letter follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 19, 1958.

Mr. ALEX MILLER,
Democratic National Committeeman for Alaska,
Fairbanks, Alaska.

DEAR MR. MILLER: Let me thank you for your letter of the 12th urging my support of the pending bill for Alaskan statehood. As I see it, we would all make a terrible mistake to pass a bill which does not carry out the sound and historically proven policy of the United States in regard to the creation of new States. The Territory of Alaska is approximately the same size as the original Louisiana Territory which was purchased from France in 1803. I presume that the present population of Alaska is about comparable to the then population of Louisiana and the location of this population is somewhat comparable.

The bulk of the population of the Louisiana Territory was centered around New Orleans, in the extreme southeast corner. The bulk of the population of Alaska is located from Fairbanks southeast. When we created the State of Louisiana we cut off the developed portions of the territory and admitted the State with its present boundaries. It was a hundred years later before we finished giving statehood to all the area of the territory, but we did give statehood as the various areas developed, as population became large enough and the economy strong enough to support State governments. Oklahoma was the last full State created from the Louisiana Territory, and it was admitted in 1906 but the last portion of the Louisiana Territory was the northeastern portion of New Mexico which was admitted in 1912 (of course the New Mexico territory had been subject to transfer by the United States to Spain and thence back to the United States by Texas.)

I recognize that we can today probably justify larger States, territorially, than we felt it was advisable to create 150 years ago, but if we were to admit simply the southeast corner of the present Territory of Alaska as a State we would be giving statehood to most of the people. We would not be burdening the new State with the responsibility of building roads, maintaining schools, courts, etc., over such a vast area as the present bill contemplates. The State government would at least have a far better chance to succeed without Federal subsidy. It would still mean an area something comparable to the area of the State of Texas to be supported by a population which is less than my home county. That of itself is a tremendous undertaking but it holds some prospect of success. To burden this small population with the maintenance of governmental facilities over an area one-third as large as the entire United States, seems to me to be perfectly fantastic. Obviously it can only be accomplished through tremendous Federal governmental subsidies, and here is where I think every citizen of the United States has a vital stake in this question of admission of Alaska.

Is it not absolutely inevitable that within a few years after admission that the new State, if it includes the entire Territory, will be asking the Federal Government to give it special treatment in the way of aid for its State institutions and obligations? How else can the State exist? Once the Federal Government has done this, I, as a practical legislator, know that we will inevitably be forced to extend the same kind of aid to every State in the Union regardless of need. My people in Texas and the people in New York and in California are not going to long remain satisfied to pay taxes to support courts, schools,

roads, etc., in the State of Alaska and not get the same kind of aid in the States of Texas, New York, and California. Thus the admission of Alaska, at least on the grand scale contemplated by the pending bill, must mean a further breakdown of our present ideas of the division of State and Federal responsibility. On the other hand, if we would but follow the historically proven formula of admitting new States we could avoid at least a large part of these dangers.

Nor have I been able to understand the attitude of many of the present proponents of this bill. The great majority of those who now favor the admission of Alaska with the gift of eighty-odd million acres of land to the new State, bitterly criticized the quitclaiming of title by the United States of the tidelands to the existing States, even though for generations it has been supposed that the States held the title and the recognition of State title was only a part of the settlement of a good faith dispute.

I find myself completely at a loss to understand the attitude of those who feel that it is "robbing the schoolchildren of America" to let Texas, California, and Florida retain their coastal lands, but who seem to now stand ready to support the gift of a far larger acreage of equal potential mineral value, to the proposed State of Alaska. Apparently they must have been actuated by some venom against the existing States, or they must have suddenly lost their interest in "protecting the schoolchildren."

Personally, I see no objection to giving new States substantial areas of public lands as they are created, but it seems to me that equity requires that we should use a formula which is, at least, somewhat in keeping with that which was used in giving lands to the States that presently make up the western part of the United States. These public lands in the present Territory of Alaska were purchased by the United States of America. They are not the property of any other sovereignty as were the public lands in the 13 Colonies and in the Republic of Texas. They are presently the property of the United States of America. Any grant or gift of these lands is a definite gift of existing public property and it is not made in the settlement of any kind of disputed title. It, therefore, seems almost beyond belief that those who in the past strove so mightily to take the title to the tidelands away from the States, who certainly in good faith believed they owned it, should now come forward and advocate the granting of 1 section out of every 4 to the new State whereas we only gave New Mexico, Arizona, and similar States 1 section out of each 18 which the public or Government owned.

To say the least, Alaska has already made great progress toward securing the specially favored treatment at the hands of the Federal Government which I anticipate will shortly be accorded to any State which may include the entire area of the present Territory.

I am not unmindful of the party platform commitment to which you referred. Of course, the Republican platform contained the same commitment, but I think that these commitments created an obligation on the Congress to present reasonable legislation for the orderly and proper development of this vast Territory—not a commitment to support any legislation which might be proposed.

I stand ready to try to help work out such legislation, but I cannot sacrifice what seems to me to be a sound concept of American government by voting for the admission of the present Territory of Alaska as one new State.

Thanking you, I am

Yours sincerely,

W. R. POAGE,
Congressman.

Lessons From Good Will Tour

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial entitled "Lessons From Good Will Tour," which was published in the New Orleans Item May 15, 1958:

LESSONS FROM GOOD WILL TOUR

Everyone's sore about the shameful attacks in South America on Vice President NIXON, his wife and his party.

President Eisenhower, "hopping mad," flew paratroopers and Marines into the Caribbean—in case Venezuela had needed them to protect NIXON in his final hours there. (This is the first time we've had to back up a "good will" mission with standby troops.)

The North American public is angered because the United States, personified by NIXON, was shockingly humiliated before the entire world.

We are certain, too, that many Latinos are equally disturbed by the violence. They are a people who place great store on hospitality and dignity—and both have been stained by the anti-United States agitators.

It would be highly unfair to our friends to the south to assume that the actions of a relatively small group reflected the feelings of all Latin America.

In Caracas, for example, leaders of every major Venezuelan political party except the Communists went on the air to express their regret over the Day of Sorrow.

There are, it seems to us, several obvious conclusions to be drawn from the tragedy of the last few days:

The Communists did an effective job of stimulating the demonstrations in Lima, Bogota, and Caracas.

United States restrictions on trade with Latin America added high octane fuel to the flames.

Our intelligence reports from Latin America on the general temper of the people NIXON was to visit either was miserably lacking in facts—or were sidetracked in the Washington maze and never reach the White House. If the latter is true, it won't be the first time.

Where do we go from here?

In the first place, we feel the Vice President should make a public report on his trip, evaluating what happened and why.

Secondly, there ought to be a full-scale review of our trade relations with Latin America, which is understandably disturbed by our new tariffs on lead, zinc, and metal products, by our curbs on Venezuelan oil, and by the overall problem of coffee surplus and falling prices.

(Only last month, President Carlos Ibanez of Chile canceled a state visit to Washington reportedly because of our plan to reimpose copper import taxes.)

Thirdly, the administration—with NIXON taking the lead—should push to extend the reciprocal trade agreements law, now in dire danger in Congress.

Failure to extend would give the Commies and other extremists in Latin America a powerful propaganda club—and would give a major assist to Russia's economic offensive in the hemisphere.

Fourthly, we ought to consider giving more technical assistance to Latin America and less military aid. The point-4 benefits help the people. The military hardware usually is for the personal support of whoever is running the show.

Throughout his South American tour, NIXON handled himself in a courageous and commendable fashion.

The trouble which developed can, if properly handled, be turned into an asset—if the administration moves positively and imaginatively.

Otherwise, we chalk up another loss for the United States at a time when we simply cannot afford it.

Harry Goofed

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1958

Mr. KILBURN. Mr. Speaker, I include herewith a column entitled "The Roving Reporter" of the Clinton Herald of Clinton, Iowa, of May 9, 1958. My colleague Mr. TALLE is serving his district and the country well.

HARRY GOOFED

How Representative HENRY O. TALLE, one of the most serious, thoughtful, and conscientious men in Congress, cut down to size flamboyant and wisecracking Harry S. Truman is something which promises to provide Washington with a conversational tidbit for some time to come.

The two men collided head on when Truman appeared as the first witness at a hearing before the House Banking and Currency Committee, of which the Second Iowa District Representative is a veteran member. The hearing was in regard to legislation to relieve unemployment in chronically depressed areas.

Truman was in fine fettle. He answered questions with one wise crack after another, flashed his stock—what a man I am—smile and in general proved a source of delight to those in the audience section.

But Representative HENRY TALLE was more interested in digging out facts than he was being entertained so be proceeded to pin Truman down on some of his obviously wild and unfounded opinions on unemployment and the Nation's economy.

During the course of his questioning he referred to an interview which the former president gave a New York Times reporter in 1950 while he was in the White House.

The Iowa Congressman reminded Truman that in his interview he was quoted as having said, "It is a good thing that job seeking should go on at all times. This is healthy for the economic body."

TALLE then very quietly pointed out that unemployment at that particular period amounted to 8.1 percent of the labor force. By further calling attention to the present jobless percentage of 7.7 TALLE put Truman in the position of being more alarmed over a 7.7 percentage during a Republican administration than he was over 8.1 percentage during his own.

And then the Iowan let loose with the final barb, "What has happened to make you change your mind?" he inquired.

Resorting to his usual practice when confronted with a question he couldn't answer, the former President said he had been misquoted, that the interview had been taken "out of the air" by Arthur Krock of the New York Times.

TALLE knew better. So did some of the veteran newsmen covering the hearing who recalled all the furore which had resulted from Truman granting Krock an exclusive interview and then heatedly defending his action at a subsequent news conference.

But the Iowan had set the stage for some crow-eating by the former President and he didn't pursue the matter any further.

The New York Times picked it up where he left off. The day after the hearing, Krock wrote an article in the Times giving details of the time, place and circumstances of his interview with Truman. He said further that Truman had read and approved his story before it was published.

There the matter stood until a few days later when the former President admitted he was wrong. His lame explanation went something like this, "I had forgotten about the interview. I regret very much what I said before the committee. But you know when you appear before committees and they throw questions at you, you can't always think as fast and your memory doesn't work so good."

He couldn't even muster a wise crack to divert attention from his blooper.

Meanwhile Representative TALLE, who isn't interested in taking any credit for making the bantam rooster draw in his claws, summarizes Truman's appearance before the committee in these words:

"By his own admission, questions of finance and economics are Greek to him. His testimony before the committee was amusing. He afforded members of the committee and spectators many a good laugh, but it remains for the witnesses who followed him and who will yet appear before the committee to develop a realistic, workable program for meeting the problem of unemployment in depressed areas.

Expansion of Medical Education Overdue

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1958

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Tribune of May 17, 1958:

DOCTORS ON CALL

If enough doctors are to be on duty in the United States 10 years from now, some major decisions about medical-school training must be made soon.

Opinions on whether or not there is a shortage of doctors already vary widely. The American Medical Association judges that the country is well supplied except for a few problems of distribution in rural areas. But a survey made by the AMA indicated that 20 percent of the physicians questioned and 53 percent of the public said the shortage was here now.

New York and New England States, with important city and university medical centers, are at the top of the list in ratio of doctors to population. Minnesota ranks high. North Dakota, South Dakota, and the far South States have the lowest ratio.

Just keeping the present ratio of doctors will require the establishing of 22 new medical schools by 1975, according to Dr. Vernon W. Lippard, dean of medicine at Yale University. The prospect is staggering in its financial aspects, because medical training calls for expensive laboratories and other equipment, expensive teachers, small classes, and the use of a modern hospital. A university spends about four times as much per year on a medical student as on a liberal-arts student. About half of the operating funds, on the average, now are provided by Federal, State, and local government.

Clearly it will take some study and planning and determined action to see that Americans are not caught short of enough medical services a decade or so from now. It will take analysis of such factors as the increasing percentages of very young and very old people (requiring the most medical care), of medical advances which are wiping out some diseases, of increasing use of medical services by the public and increasingly complicated programs of research and treatment which absorb great numbers of physicians, and of the problem of attracting enough intelligent young people with the right talents to enter the profession.

There should be no question about providing the country with the doctors it needs for a growing population, even if it will be difficult and expensive to expand the training facilities.

Statehood for Alaska

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1958

Mr. LESINSKI. Mr. Speaker, there are many good reasons why Alaska should be granted statehood. Among them is a very good argument contained in the following article by Albert Colegrove which appeared in the May 1, 1958, issue of the Washington Daily News:

THE CASE OF THE VANISHING SALMON

(By Albert Colegrove)

PETERSBURG, ALASKA, May 1.—It is almost impossible to exaggerate the dislike most Alaskans feel today for the Federal Government overlords who rule this Territory's lifeblood industry—fishing.

They believe Washington's experts have all but ruined them.

Ruin will come inevitably, they think, unless Alaska can get statehood, then take fishing matters into its own hands and save the salmon.

This is a bitterly personal matter for the fishermen and canners who live along Alaska's coastlines.

COMPLAINT

This is their grim complaint:

Twenty years ago, Alaskan waters were giving up 6.5 million cases of salmon a year. The catch has dropped steadily. This year they'll be lucky to get 2.5 million cases.

The Federal Government must accept responsibility for the mess. It has had complete control of fishing regulations, and has made its own rules with little heed for Alaskans.

There are other villains in the Case of the Vanishing Salmon; namely, the fishing industry moguls of Seattle and the Japanese. But they play secondary roles.

To understand this situation, keep in mind that there are two main types of fishery workers:

The 10,000 boatmen and canners who come up here from the States in May and go home in the fall with their year's wages. Most of them don't give a hoot, one way or the other, about Alaska or its statehood bid.

The 15,000 Alaskans who depend on fishing for a living, and live here the year around. Almost 1 out of 3 working Alaskans is in this group.

CONCERN

The disappearing salmon are of great concern not only to this second group but to the entire Territory. For sick as it is, the fishing industry will put about $68 million worth of seafood into cans and frozen packages this year. About $20 million will be paid to those who live here. This is far and above the money Alaska will get from any other single business.

Typical of the year-rounders are those in Petersburg, a community of 850 persons, mostly of Scandinavian descent. Their spokesman is Lew Williams, Jr., 33, editor of the weekly Petersburg Press. He thunders every Friday against the United States Government's Fish and Wildlife Service.

And if the Government is the villain, the symbol of its villainy is the trap.

The fish trap is, in the words of the Petersburg Fishermen's Union, "the most efficient fish killer ever devised." Briefly it works like this:

A fence is built in the water, extending up to 1,000 feet out from the shore. Salmon swimming near the shore on their way to streams where they would spawn, reach the fence. They start swimming out to sea to get around it.

Instead they pass through a series of funnel-shaped corrals, eventually arriving in in a huge, fenced-in underwater room from which there's no escape.

A fishing boat comes along. Its crew raises the room right out of the water and dumps the thousands of trapped fish into the boat's hold. End of the fish.

ILLEGAL

Fish traps have been outlawed in every State of the Union.

But not in Alaska. (States of the Union control their own fisheries; in Alaska the Federal Government has complete control.)

It is odd, but true: Alaskans, whose lives depend on the amount of fish they catch, time and time again have voted overwhelmingly against the fish trap. And—

The Fish and Wildlife Service—supposedly dedicated to conservation—time and time again has ignored Alaskan voters and permitted the fish traps to continue.

"What's more," said Lew Williams, "our fishermen have pleaded with the Fish and Wildlife people for many other conservation measures.

"Few of our pleas have been heard.

"We want conservation because Alaska is our home. We're not interested in making a quick buck and then moving on."

In Juneau Fish and Wildlife officials proudly told me they had drastically cut the number of fish traps operating in Alaska in recent years.

"Sure," said Lew Williams. "They horse trade with the big canners. For example: A cannery will have two fish traps in 'played-out' locations. So the owner will offer to remove those two traps—if the Government will let him put just one in a new location. At the one new location, he catches three times as many fish."

SIGN

Ernie Haugen is mayor of Petersburg. He also runs the Pastime Cafe, Petersburg's only restaurant. Prominently displayed there is a can of salmon packed by one of America's best-known companies. On it is a sign: "This salmon was caught by Japanese fishermen." The implied message is clear: Don't buy it.

Most fishermen with whom I talked had nothing personal against their Japanese colleagues. They simply feel our Government was out-alicked in its dealings with Japanese officials.

In the North Pacific Fisheries Treaty a line was drawn which was supposed to separate the areas of origin of North American and Asian salmon. It now appears that the areas to which the Japanese have access contain many salmon of American origin and

the Japanese have been catching them in quantity.

Further, we have not been able to get the Japanese to agree to conservation rules which our fishermen obey, such as having nets whose meshes are large enough to let the younger, smaller fish escape. The State Department is now negotiating for changes in the treaty to remedy these situations, but no one seems to know whether it will be successful.

Bigtime canning companies in Seattle defend their purchases of Japanese-caught salmon by saying:

"We have to keep our canneries operating. If Alaskans could furnish us enough fish, we wouldn't buy from the Japanese."

They use the same argument for fish traps—that traps provide an almost guaranteed supply of salmon.

OPPOSITION

It's no secret, here or in Seattle, that the biggest opposition to Alaskan statehood comes from Washington State business interest, mainly salmon packers.

They are making money from Alaska. They have supported politicians who have opposed Alaska statehood and who have opposed efforts to get rid of the fish traps. The salmon packers want no change. They also fear revenge measures, such as higher fishing license fees for non-Alaskans if the Territory becomes a State.

Certainly, they stand to lose certain privileges if Alaska makes it. The fish traps are bound to go. So are some other types of fish-catcher devices.

"But there'll be no revenge action," said Lew Williams. "It'll be because we aim to stay here and make this land a better place for our kids and their kids. We want to live in Alaska, not ruin it."

Talle Scores

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1958

Mr. KILBURN. Mr. Speaker, I include herewith an editorial from the Cedar Rapids Gazette of Cedar Rapids, Iowa, of Tuesday, April 22, 1958. I am glad the people in Iowa have the fine services being rendered by our colleague, Representative HENRY O. TALLE.

TALLE SCORES

The Talle-Truman episode appears to be over, and the winner, by unanimous decision, is Representative HENRY O. TALLE, Republican, of Decorah. A review of the match is in order, especially for Mr. TALLE's constituents in the Second District.

First round came when former President Truman appeared before the House Banking and Currency Committee, of which Mr. TALLE is a member. He was the first witness in the hearings on legislation to relieve unemployment in chronically depressed areas. Mr. Truman was in fine fettle, answering questions with one wisecrack after another, to the delight of all.

In the course of the hearing, Mr. TALLE, whose personality is nothing like that of Mr. Truman's, referred to an interview the former President gave a New York Times reporter in 1950, while he was Chief Executive, regarding unemployment. The Times article quoted Mr. Truman as saying that "it is a good thing that job-seeking should go on at all times" because it is "healthy for the economic body."

"That exclusive interview did not happen," Mr. Truman told Mr. TALLE. "That came out of the air." The next day after the hearing, Arthur Krock of the Times appeared with a column giving details of the time, place, and circumstances of his interview with Mr. Truman. He said further that Mr. Truman read and approved his story before it was published.

There the matter stood until the weekend, when Mr. Truman admitted he was wrong. "I had forgotten about that interview," the former President was quoted as saying. "I regret very much what I said before the committee. But you know when you appear before committees, and they throw questions at you, you can't always think as fast, and your memory doesn't work so good."

What is Representative TALLE's reaction to the Truman appearance before the House committee? "Mr. Truman puts on a good show," concedes Mr. TALLE. "He is clever in turning away basic questions with a wisecrack."

"But, by his own admission," continues Mr. TALLE, "questions of finance and economics are Greek to him. His testimony before the committee was amusing. He afforded members of the committee and spectators many a good laugh, but it remains for the witnesses who followed him and who will yet appear before the committee to develop a realistic, workable program for meeting the problem of unemployment in depressed areas."

Iowa's Second District Representative, who took on a bantam rooster and made him draw in his claws, apparently chooses to be charitable in his attitude toward the Truman appearance before his committee. Mr. TALLE can afford to. He is one of the best informed Members of Congress on economics and is thus in a position to look on Mr. Truman as a committee witnes for what the former President is—a good showman, but no expert on economic matters.

Wilkes-Barre Pastor Appointed Superintendent of Binghamton (N. Y.) District of Methodist Church

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Wilkes-Barre Record announcing the appointment of Rev. Dr. Norman W. Clemens, pastor of First Methodist Church, Wilkes-Barre, as superintendent of the Binghamton (N. Y.) District, Wyoming Conference:

WILKES-BARRE PASTOR OF METHODIST CHURCH WILL SUCCEED FOOTE

Appointment of Rev. Dr. Norman W. Clemens, pastor of First Methodist Church, Wilkes-Barre, as superintendent of Binghamton district, Wyoming conference, has been announced by Bishop Fred Pierce Corson, of Philadelphia area.

Rev. Dr. Clemens will succeed Rev. Dr. Adrian B. Foote, who died last week in Methodist Hospital, Brooklyn. The appointment of Rev. Dr. Clemens will be formally announced Sunday when Bishop Corson reads the list of pastoral appointments at the closing session of Wyoming conference at Elm Park Church, Scranton.

Rev. Dr. Clemens announced his appointment to his congregation yesterday morning. Following the singing of the final hymn, the clergyman asked the congregation to be seated and then told of being selected for the new post.

Last night, Rev. Dr. Clemens said:

"Deeply though I regret leaving First Church and the Wyoming Valley, where we have had such happy years of fellowship, I have accepted this new position as an opportunity for a broader service to the church and the Kingdom of our Lord. The spiritual leadership of a district comprising 53 pastoral charges offers a challenge which one cannot well ignore. I look forward to the privilege of working with the pastors and churches in advancing the cause of Christ in the local communities and throughout the world. I am profoundly grateful for the love and loyalty of the people of First Church throughout the 13 years of my ministry here, and bespeak their devoted support of the pastor who will be selected as my successor."

Rev. Dr. Harold C. Buckingham, Wilkes-Barre district superintendent, stated:

"The pastors and churches of the Binghamton District are to be congratulated on having Dr. Clemens selected as their new district superintendent. He will take to that important position a rich experience as a pastor and an understanding of church and community relationships. His superior qualities of leadership will undoubtedly find expression in districtwide endeavors that should challenge the Methodists of that district to new heights of achievement."

The new district superintendent has been in Wyoming Valley 26 years. He has been pastor of the Wilkes-Barre church 13 years and, prior to that, served First Church, Kingston, 13 years.

NATIVE OF SCRANTON

A native of Scranton and a graduate of Scranton Central High School, Rev. Dr. Clemens received his AB and MA degrees at University of Pennsylvania. He took three additional years of graduate student at Pennsylvania and special work at Philadelphia Divinity School.

While in Philadelphia he was assistant pastor at Arch Street Methodist Church 3 years. He then served at Castle Creek, N. Y., and Dalton, moving from the latter church to Kingston.

In 1936 he received the Doctor of Divinity degree from Syracuse University.

The clergyman has had a successful pastorate in Wilkes-Barre. In 1956 his church raised about $100,000 for extensive improvements to the edifice.

He has been selected frequently for important assignments both in Wyoming Conference and in the Methodist Church in general. He is chairman of conference board of ministerial training and qualifications and board of hospitals and homes; vice president of Corporation for the Home for the Aged.

He is also a member of the General Board of Education of Methodist Church and a trustee of Wyoming Seminary. He was a delegate to the General Conference at San Francisco in 1952 and at Minneapolis in 1956 and was also a delegate to Northeastern Jurisdictional Conference those same years. He was also a delegate of Methodist Church to the second assembly of the World Council of Churches in 1954 at Evanston, Ill.

Locally, Rev. Dr. Clemens has been prominent in Wyoming Valley Council of Churches, of which he is a past president. He is also a member of Wilkes-Barre Kiwanis Club and Torch Club and serves on YMCA Public Relations Committee.

Mrs. Clemens is also active in civic work, being first vice president of Mozart Club and treasurer of United Church Women. She is a former vice president of Wyoming Valley Woman's Club and was a member of World Fellowship Committee of YWCA.

The couple has two sons, Norman Drew, a third-year student at Harvard Medical School, and David Bowman, a junior at Wesleyan University, Middletown, Conn.

They will move to Binghamton district parsonage after May 15.

Major Health Organizations Announce Program for Aged

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. REES of Kansas. Mr. Speaker, under permission granted by the House, I am including an interesting and comprehensive statement issued jointly by the American Dental Association, American Hospital Association, American Medical Association, and the American Nursing Home Association.

These organizations outline a constructive program for the aged people of this country. The project is worthy of our consideration:

MAJOR HEALTH ORGANIZATIONS ANNOUNCE PROGRAM FOR AGED

CHICAGO.—Better health care for the Nation's 14 to 15 million aged is the goal of a comprehensive program announced today by the Joint Council To Improve the Health Care of the Aged.

The council's attack on the more knotty problems of health care for the aged is designed to: (1) increase opportunities for older people to obtain voluntary health insurance coverage, (2) expand health care facilities tailored to the needs of the aged regardless of economic status, and (3) develop more community health services for the aged.

The program will be implemented through the active and aggressive leadership of the council's four sponsoring organizations—the American Dental Association, American Hospital Association, American Medical Association, and the American Nursing Home Association.

"Member organizations of the joint council," said Dr. Edwin L. Crosby, director of the American Hospital Association and interim secretary of the council, "have already undertaken studies and work projects aimed at improving the health care of the aged." Among the many activities which these groups have undertaken or in which they have cooperated he listed the following:

(1) The American Hospital Association, in cooperation with the Public Health Service, is conducting a conference on the care of patients with long-term illnesses.

(2) An American Medical Association committee is working with the American Nursing Home Association in preparing upgraded standards for nursing homes which will result in improved nursing home care for the aged.

(3) A national conference on homemaker services is being arranged under the joint auspices of the Department of Health, Education, and Welfare and 26 national voluntary organizations including the American Medical Association. This project is aimed at reducing the financial expense of disabling illness among the elderly by performing the necessary household tasks to enable them to remain at home among their family and friends, with qualified nursing and medical attendance in the home.

(4) Six regional conferences have been held under the auspices of the American Medical Association to help doctors cope with problems of the aged, and a national conference will be held in September

The joint council will appraise the success of these programs and seek their application through united effort.

"The long-range aim of the council is better health for all the aged," Dr. Crosby asserted. "This can be achieved by helping everyone to prepare throughout his life for the later years. Our more immediate concern is better care for the aged who are chronically ill, and better ways to meet the financial and social problems that accompany such illness."

He said, "The joint council has found that sufficient up-to-date information concerning the problem is not available. A series of research projects has been launched to pinpoint the problems that require the most urgent attention."

"In addition," he continued, "the joint council will seek the expansion and improvement of health care facilities by encouraging legislative action to accelerate construction and remodeling of hospital and nursing home facilities for the aging."

To better meet the problems of the financial expense of prolonged hospitalization for chronic illnesses, the joint council is working with the voluntary health insurance industry, including Blue Cross and Blue Shield prepayment plans, to accelerate and broaden their programs that have already resulted in some degree of coverage of 6 million persons over 65 in a few short years.

The joint council has emphasized the need for State and local government to assume their proper responsibility to indigent patients, by providing realistic financial support for medical, dental, hospital, and nursing home care for the aging who are unable to pay.

Dr. Crosby said, "The broad health care plan of the joint council includes an educational program at the National, State, and local levels. Its purpose is to make all citizens aware of the growing health problems of the aging and what can be done by the individual to assist in this field. The council plans to enlist the continued aid and support of America's voluntary community organizations."

Progress Report of Reserve Forces

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I set forth a letter from Assistant Secretary of the Army, Hugh M. Milton II, regarding the attendance record and participation of the Army Reserve and the Army National Guard. This short report of May 20 should be of interest to every Member of Congress:

DEPARTMENT OF THE ARMY,
Washington, D. C. May 20, 1958.

Hon. OVERTON BROOKS,
House of Representatives,
Washington, D. C.

DEAR MR. BROOKS: Because of your deep and sincere interest in the Reserve forces programs, I am taking this opportunity to apprise you of certain significant facts which indicate the progressive improvement of the Reserve forces.

Individual participation in the weekly drills is necessary to insure a high standard of individual and unit readiness. In this regard, the United States Army Reserve has shown steady progress during fiscal year 1958, with officer participation rising from 85 to 88 percent attendance, and enlisted participation increasing from 70 to 78 percent in attendance. The Army National Guard individual participation in weekly drills is maintained at approximately 95 percent for officers and 88.5 percent for enlisted men.

The number of individuals participating in the Reserve programs in a paid drill status is a clear indication of the progressively improving readiness posture of the Reserve forces. In January, February, and March of 1958, the National Guard increased from 404,182 to 407,083, and the United States Army Reserve increased from 252,318 to 273,336.

It appears to me that the foregoing is a clear indication of progress being made by the Reserve forces toward meeting the mobilization readiness goals that have been established.

Sincerely yours,

HUGH M. MILTON II,
Assistant Secretary of the Army.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1958

Mr. CHIPERFIELD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Moline Daily Dispatch, May 17, 1958:

FOREIGN AID

It was a tribute to the sense of the Members of Congress this week when, in the midst of unrest and anti-Americanism, the House of Representatives approved the $3.6 billion foreign-aid measure.

In this climate, there is a temptation to believe that present and past recipients of American generosity are not very grateful and that, therefore, they should receive no more gifts. There is a temptation to abandon the program of foreign aid as a failure in an expensive attempt to buy friends.

The foreign-aid program is not an international Christmas charity. It is not a crude attempt to buy friends.

If humanitarianism or bribery were the excuse for sending dollars overseas, they should be kept home.

The foreign-aid program is really a composite of programs, designed to advance the economic and military interests of the United States.

It recognizes that the principles of production machines produce more than Americans can consume, and that consumers must be developed in other lands.

It recognizes that the United States must maintain access to raw materials to feed its consumer-production needs and its military-production needs.

It recognizes that it is cheaper to arm and maintain foreign nations than to attempt to police the world with American servicemen, guarding American economic and political commitments.

It recognizes that the principles of the free world are only as good as the ability of the free world to defend them.

As Representative ROBERT B. CHIPERFIELD, Republican, of Illinois, said in a major floor speech:

"The economic and military programs should be continued for our own self-interest. Without them we might find ourselves standing alone in a hostile world with neither friends nor allies to support us in our resistance to the totalitarian, alien doctrines of the Kremlin."

Not for globalism but for Americanism, the program is sound.

Address by Secretary of Defense at Armed Forces Day Dinner

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 21, 1958

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Honorable Neil McElroy, the Secretary of Defense, at the Armed Forces Day dinner held in Washington, D. C., a few days ago.

Secretary McElroy delivered the address before one of the largest gatherings which I believe has ever observed Armed Forces Day at a dinner in the city of Washington. In view of the pendency of the President's proposals for reorganization of the Department of Defense, the address by Secretary McElroy has special significance at this time, and I believe it should be read by all Members of the Senate.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SECRETARY OF DEFENSE NEIL MCELROY, AT THE ARMED FORCES DAY DINNER IN WASHINGTON, D. C., MAY 16, 1958

We are gathered on this occasion to do honor to the men and women of the Army, Navy, Air Force, Marine Corps, and Coast Guard and their Reserve components and auxiliaries.

It is fitting that we should honor them. For to a degree that is hard for us as a peaceloving people to realize, this Nation is dependent today, and in the years to come, on the alertness, dedication, and abilities of our Armed Forces.

We are living in a period almost unique in our history—a period which can be called peacetime but one in which the thought of war is never far from us. For the first time in history, this Nation finds itself still surrounded but no longer protected by vast stretches of ocean, because of new weapons which can cross those oceans in a matter today of hours, tomorrow of minutes. Weapons have been developed which can on short notice bring major disaster to our centers of population. And we know these weapons are in the hands of powerful forces which are committed to world domination.

We have always owed a great debt to our Armed Forces. Throughout periods of peace, they have formed the core around which we could in wartime quickly mobilize the larger Army, Navy, Air Force, Marine, and Coast Guard forces which have so successfully defended this country in times past. But the nature of war has changed. If all-out nuclear war comes—an event which surely all intelligent people throughout the world will work constantly to avoid—it may well last a matter of days or, at the most, weeks. It is unlikely that in such an event we would have time to train our nonmilitary citizens, equip them and make them part of an effective military force. More than ever before, we are dependent on our existing defense forces. They and their weapons must be our shield.

We hear much these days concerning new weapons systems, and indeed they are of immense importance.

The speed with which one technological development outraces another, so that the fantasy of today becomes the practical reality of tomorrow, makes a weapon system obsolescent almost literally by the time it can be produced in sufficient quantities to be widely available to our forces.

The importance of science, of our ability to press forward with vigor our programs of research and development, is immense; our security 5 or 10 years from now undoubtedly rests on the skill and energy with which today we are pursuing the development of weapons of the future. Our very survival as a nation in modern war will depend on our ability to move forward on the technological front.

I would like to interpolate at this point something, which you may or may not have noticed in your newspapers, because it has been an example today of just what I've referred to—this tremendously rapid advance in our technological capabilities in the weapons field. Today an Air Force jet boosted the airspeed record a whopping 200 miles per hour by flying between 1,412 and 1,420 miles per hour over a measured course, and this single jet 104A which reached a new speed today is the same type of plane which 9 days ago smashed the world altitude record back from France for the United States. It hit 91,000 feet. I cite this as a typical example of what I'm referring to as the essentiality of our retaining a priority in the new weapons field.

But weapons without people are valueless. It is inevitably true that the strength of any organization, military or otherwise, rests on the people in it. As we employ more and more the advanced equipment and weapons that are so vital to the present military, we need to an ever greater degree people skilled in handling them—people with aptitude who may be trained in the handling of communications equipment, radar, and the other complex equipment involved in the modern airplane, ship, or tank. As the time we are given in which to react is increasingly shortened by new weapons, and as warfare becomes more complex, we need to an ever greater degree men and women who are alert, intelligent, and imbued with leadership qualities as well as the devotion to country and freedom which must be the basis of all military service.

Both Houses of Congress have seen fit to pass legislation which recognizes this need and which increases the pay incentives provided for our Armed Forces personnel. This legislation is now awaiting the President's signature. The revised pay bill embodies principles developed by a committee of public spirited citizens under the very able chairmanship of Ralph Cordiner, chairman of the board of the General Electric Co.

The results of its studies, plus the able and intelligent work done in the Armed Services Committees of both Houses of Congress to build sound pay legislation—and again I should interpolate, that on the platform tonight there are members of both of those Armed Services Committees (Senactor FRANCIS CASE, of South Dakota, and Congressman MELVIN PRICE, of Illinois)—have produced results which can be of great importance in helping to attract to the services in sufficient quantities people with the high qualities of leadership needed, and the capacity to learn the skills required in modern warfare. The military career makes severe demands on those who pursue it: we must see that it offers also the rewards that are commensurate to the high type of service that is demanded.

Of almost equal importance to the quality of people in their ability to work together to achieve common goals. There is great strength in competition; it has been a key vitalizing factor in the development and progress of this country, in industry, education, throughout our society. It has been a constructive force in the military field as well, where the traditions of the individual services have built loyalties and enthusiasms which have contributed much to the strength of these services. Constructive competition must be preserved; but with it must go the overall desire and intent to work effectively together.

The need for cooperation and coordination is a primary one today for many reasons. First, we no longer can think in terms of separate ground, sea and air combat. The developments of modern warfare have obliterated such distinctions, and future wars will be fought with whatever combinations of forces and weapons are needed to win. There must be no confusion of responsibilities, no delay in our responding with all the power that may be required in the form of unified, completely coordinated forces. Second, the size of our expenditures makes it imperative that we get the most we can for our dollars. If we are to buy the sophisticated and increasingly expensive weapons that we must have for our modern defense forces, our budget either will grow to appalling proportions or we must find ways of using our dollars with increasing efficiency. This cannot be done with duplication of effort, overlapping activities and lack of coordination and direction.

Another impelling need for us to work effectively together arises from the fact that our defense activities now call for the services, in the military or working for it, of something more than one-half the people in America who are trained in advanced science and technology. These people constitute one of the Nation's valuable resources; they are needed in industry, in teaching, in medicine, in many fields which are of importance to our normal development as a nation. We cannot be wasteful of their talents; we must organize ourselves to make maximum use of their scientific capabilities.

The reorganization of the Defense Department which has been recommended by the President and legislation for which is now under the consideration of the Congress, recognizes this need for unity.

Again I must interpolate because things seem to move rapidly on Armed Forces Day and Armed Forces Week in Washington, and I must compliment the Armed Services Committee of the House which today brought out a bill to implement the proposals of the President, and in my judgment—and I believe that it was clearly stated also by the President—that a most constructive effort was made by this committee to implement these objectives of the President and with what I think are exceptions that will be—can be—worked out and not the most serious exceptions either, but nevertheless important exceptions, a bill has been brought out which will meet most of the objectives of the President. And I must compliment that committee, of which Mr. PRICE is one of the members. This committee report was adopted 32 to 0, I believe.

It is centered on the concept of the unified command, such as the one which in World War II under then General Eisenhower grouped in Europe the forces of this

Nation and its allies into a magnificently articulated, powerful, and fast-moving force. Or the Pacific Command under Admiral Nimitz and the Southwestern Command under General MacArthur which combined our ground, sea, and air forces into two of the most gigantic striking forces in history. The unified command is derived from lessons learned in World War II; it ties in with today's need for quick decisions and greatly stepped up speed of reaction, and it assures full coordination of our available power.

The President's plan proposes to make absolutely clear the authority of a unified commander over all the component units at his disposal. It provides the needed unity in our strategic planning and in the operational direction of our unified commands. It also proposes shortening and clearing the line of command between the President as Commander in Chief and the commander of the unified command. The stepped-up tempo of modern warfare makes this imperative. In every war this Nation has fought during the last hundred years, we have had to change our military organization after the war had started. In the future we will no longer have time in which to revise our command lines or shift from a peacetime to a wartime organization. We therefore propose to make the necessary changes now.

The President has made very clear, and the proposed legislation repeats with assurance, that there is no intent or desire to merge or abolish the Army, Navy, Marine Corps, or Air Force. The separate traditions of these services are sources of great strength to the Nation and will be preserved. But, they need not and must not constitute obstacles to the development of truly unified and efficient military commands.

I have spoken of the importance of future scientific developments through research and engineering. I should like to spend a moment on this part of the President's proposal.

Our present rate of expenditure for research and engineering is close to six billion dollars and so far as we can see the rapid advance in technology of all types pertinent to weapons development indicates that there will need to be continued major attention assigned to the research and engineering programs of the Defense Department. In order to make more effective this essential part of the Defense Department's program the President has proposed the creation of a major new position under the title of Director of Defense Research and Engineering. It will be the responsibility of this executive to supervise and direct all Defense research activities, regardless of which portion of the Department may actually be undertaking the projects.

This unified supervision and direction protects the program in two ways: It avoids any possibility of undesirable duplication and overlapping with resultant savings in expense; and also it makes certain that there is no failure to support a needed program because of any doubts as to which of the services might appropriately take up a given high-priority project.

This proposed unified supervision and direction of the program of Defense research and engineering must be accomplished not only to avoid the waste of our resources but also for our very security.

Undoubtedly by far the largest part of our research and development activity will continue to be done by the military departments themselves. These military departments will also continue to have the tremendous responsibility for recruiting, training, equipping, and supporting the component elements of the unified commands. It will leave in the departments responsibilities and functions of major significance—in fact, practically all of those they fulfill now. These departments will remain as today indispensable administrative and operating units, each preparing its parts, human and material, of our Military Establishment.

The defenses of our Nation rest on a great many shoulders. They rest in part on every one of us who pays taxes, a large share of which goes to support our defense budget. The rest in part on the hundreds of thousands of men and women in manufacturing concerns, large and small, which make the weapons, equipment, and supplies needed in our great defense program. They rest in part on the dedicated men and women of science whose steady assault on the boundaries of our knowledge promises to continue the technological advances on which our future security so greatly depends.

Our defense rests also on the thousands of civilians who make up such a large part of this great Defense Department. Day after day and often far into the night these people quietly apply their strength, energy, and intelligence to the many complicated problems of running an enterprise of this scope. Anyone who has had the experience of working with them can have nothing but respect for the high quality of their service and their wholehearted devotion to what they are doing.

But most of all, of course, the security of all of us depends on the men and women in uniform. Although there is strife in many parts of the world and open warfare in a few, at present our Armed Forces are not engaged in active fighting anywhere. But their alertness, their readiness to expose themselves at a moment's notice to any situation that may arise and to make any sacrifices that may be demanded of them is in itself a great shield which permits us all to enjoy peace and security.

The men separated from their families at outposts in the frozen north, those spending endless days and nights in the lonely patrol of our early warning line, the men living in constant alert, ready in a matter of minutes to move resolutely into action, the officers on whose calm judgment may well depend the course of history and the safety of all of us, the countless men and women who are devoting themselves to the manifold stern demands of military life—to all of these, the men and women of our Armed Forces, our debt is beyond all measurement.

They are making many sacrifices for us. They must find much of their compensation in the knowledge that our Nation depends on them, and that we are conscious of the debt of gratitude we owe them.

It is a great privilege for all of us to join here this evening in honoring the members of our Armed Forces. For their services in the past, for their continuing unselfish dedication, let us unite in extending to them an expression of our honor and esteem, and the heartfelt thanks of a grateful nation.

Wilkes-Barre Church Celebrates 50th Anniversary

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wilkes-Barre Record on the 50th anniversary of St. Stanislaus Kostka Church of Wilkes-Barre:

ST. STANISLAUS CHURCH MARKS JUBILEE MASS—BISHOP OFFICIATES AT CHURCH SERVICE—500 AT DINNER

Fiftieth anniversary of the founding of St. Stanislaus Kostka Church, North Main Street, was celebrated yesterday with a solemn pontifical high mass of thanksgiving offered by Bishop Jerome D. Hannan of the Scranton diocese. Approximately 500 parishioners and friends attended an anniversary dinner last night at Sacred Heart Hall, North Main Street, where Msgr. Wenceslaus Losieniecki, pastor of Maternity of the Blessed Virgin Church, Park Avenue, was main speaker.

Delivering the sermon at the thanksgiving mass yesterday morning was Rev. Anthony Kozlowski, pastor of St. Mary's Church, Nanticoke. Rev. Father Kozlowski discussed the meaning of the Jubilee Year when God called upoh Moses to set aside every 50th year as the year of Jubilee. He also cited the fact the Church in Rome proclaims a Jubilee Year every 25th year and pointed up the importance of a jubilee to parishioners in their own home parish.

Looking back at the history of the St. Stanislaus Kostka parish, Rev. Father Kozlowski spoke of the pioneers who came here from Poland and the hardships they faced. "Despite these hardships and not knowing the language, they established the church because they never forgot their religion," he said. He also lauded the acomplishments of Rev. Francis J. Zolcinski, pastor of the church, and his parishioners.

Assisting Bishop Hannan at the mass were: Rev. Father Zolcinski as archpriest; Rev. Joseph Pilny and Rev. Simon Struckus, deacons of honor; Rev. John Piontek, deacon of the mass; Rev. Henry Zapotocki, subdeacon; Msgr. Joseph Madden, master of ceremonies; and Rev. Thomas Gola, assistant master of ceremonies.

Organized in 1908, St. Stanislaus Kostka Church saw dedication of a new edifice October 25, 1933. Rev. Father Zolcinski has been pastor there since April 1940.

What the People Think About Our Nuclear Tests

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. PORTER. Mr. Speaker, on the 7th of May of this year, the day following my return from the Eniwetok Proving Grounds in the Marshall Islands in the Pacific Ocean, I reported my findings and recommendations to the Members of this House.

In the course of my remarks, which were carefully checked and cleared by the Atomic Energy Commission, I noted that the first of the atomic tests of the Hardtack series had been exploded before my arrival.

This was the first time the people of our Nation or the world had been told our tests had started. Contrary to what a few people have said, I did not "jump any gun" or carelessly release classified information.

A stunned American public realized with alarm that the secrecy surrounding the operations of the AEC once again had effectively kept them uninformed.

For a long time I have deplored this secrecy curtain just as I have spoken against the search for that ultimate detergent, the clean hydrogen bomb.

I have made three proposals. Simply they are: Stop the testing, and arrange

immediately for international inspection under U. N. auspices; tell the world more about our atom policies and programs; and finally, as mature adults, let us realize the always present danger of unauthorized or accidental nuclear explosions.

I am delighted that this country now seems to be moving toward cessation of testing and that the United Nations may have its overdue opportunity to set up international inspection.

Mr. Speaker, space limitations prevent my placing in the RECORD all of the letters I have received from the men and women who wrote to say they agree with my stand. But I would like to place in the RECORD at this sime some pertinent examples of their written and telegraphed remarks.

I hope they will be read. As samples of United States thinking, they ought not be overlooked. I should add that the ratio of letters and wires favoring an end to the tests is better than 12 to 1:

Thank you for standing up to the big brass on the matter of stopping bomb tests. We need more men of courage and conviction, and I hardly ever meet a person that does not admire you for your courageous stand.

WILLIAM GOOLD.

LEBANON, OREG.

It was indeed encouraging to have you call attention to the danger of continuing the atomic tests and asking why the AEC has not announced the first test in the Congress.

Please continue to press for cessation of the tests and for more controls over AEC. The program can only lead to suicide of the human race. We are all supporting you.

JOHN E. MAGRAW.

WALDRON, WASH.

A group of a dozen housewives here wish to send you their thanks for your stand on stopping nuclear testing. We hope you make a good fight for your convictions and ours. We feel this is the biggest issue ever to face mankind, this and a solution to wars.

As a group we are very actively working in our community for a ban on nuclear testing for we are greatly concerned about the futures of our children and all mankind. If there is anything we can do to help you, we would be pleased to do so.

F. F. FODOR.

150 BROOKS STREET, CLAREMONT, CALIF.

Deeply pleased with your stand on nuclear tests. You have our moral support in any efforts made to prevent bringing dishonor on our Nation by continuing explosions at Eniwetok.

PERRY and GRACE DILLEY.

BERKELEY, CALIF.

We heartily uphold your position in demanding immediate cessation of United States atomic testing.

Mr. and Mrs. NORMAN HOWARD.
Mr. and Mrs. CHARLES MOORE, Jr.

PALO ALTO, CALIF.

How I admire your stand on ending nuclear testing. What can we do to further your stand?

Mrs. ROBERT HALL.

RAMSEY, N. J.

It has come as a shock that our country secretly conducted such tests in late April. You have spoken for the concern and conviction of many of us.

EDNA C. HAVILAND.

CAMBRIDGE, MASS.

Thank you for what you have done and are doing toward halting of nuclear weapon testings. I am expressing my appreciation as a mother, and know that untold mothers of the world also thank you.

Mrs. C. D. HORNIG.

SAN JOSE, CALIF.

In behalf of the Farm Bureau members of Vanderburgh County of Indiana, I want to thank you for demanding the end to the nuclear testing.

Not only are we who till the soil alarmed by the unusual weather throughout our country for the past year, which has not been favorable for many crops, but we feel that the fallout undoubtedly will affect the health of all the people of the world if an end is not soon called to these nuclear weapons tests.

Keep on with your good work. Thinking people are with you. Individual letters will soon be on their way to our Congressmen to support your stand.

LAWRENCE STAHL,
Chairman, Vanderburgh County Farm Bureau, Evansville, Ind.

Your voice is all the more important because it is apparently the only one in Congress.

NORA STANTON BARNEY.

TARU, FRANCE.

I read in this morning's paper that you have renewed your demand for an end to nuclear testing. Congratulations. It's about time we get some congressional concern and leadership on this matter.

Rev. ROBERT M. BRASHARES,
Granada Park Community Methodist Church, Alhambra, Calif.

Your report to the people over NBC news last night concerning the news blackout with regard to the current nuclear weapons tests was most revealing to the American people. Your position on this subject is commendable and most important to the public welfare.

JAMES M. SIMS.

ARCADIA, LA.

Please pass on my protest on testing. That radioactive rain in Japan is too chilling. Can't Congress stop all these tests? Russia did.

A. MOREAN.

PETALUMA, CALIF.

The rapidly multiplying trouble spots in the world emphasize the necessity of complete renouncing of nuclear weapons if suicidal war is to be averted.

MARY H. DOUGLAS.

GRANTHAM, PA.

Please accept my heartfelt gratitude for your recent remarks to the House following your return from the Pacific. They certainly pointed up the deep moral vacuum now hovering over Washington. There exists in this country and in the world in general, a great ground swell of sentiment against continued nuclear testing. Cannot those in Washington who make the decisions feel this swell? A decision by us to halt tests would result in the biggest victory we could ever achieve in the struggle for the minds and hearts of mankind.

The danger of fallout cannot be minimized by a Dr. Teller's word against over 12,000 scientists including the 15 in Germany who refuse to work on atomic weapons. What has happened to us as a people when we can glibly talk of a clean bomb? Is a bomb clean that kills millions at a time? Is it not time for an agonising reappraisal of our national ethics?

I sincerely hope and pray that people in high places will awake before it is too late. May God give you courage to continue to fight for the things you know are right, regardless of the pressures put on you.

MAHLON R. HAGERTY, Jr.

PHOENIX, ARIZ.

On the west coast and Nevada there is increasing protest against this crazy policy of devastation—petitions, meetings, etc.—and yet, it goes on in defiance of God, man, and history.

I urge you, Mr. PORTER, to use your influence in behalf of poor humanity caught in this incredible political power trap. If men in Washington were not so paralyzed by fear and absence of imagination, I'm sure these manmade problems could be settled without ruining our planet.

M. WHEELER.

BERKELEY, CALIF.

You are to be congratulated on the stand you have taken to remove the veil of secrecy from atom-bomb testing. The arrogant and possessive attitude of Lewis Strauss is an unbearable situation to find in a Government by, for, and of the people.

The elements of air and water belong to the public domain, but again Lewis will not even let the Public Health Service have the last word in their protection. I say again, you are to be congratulated in firing the opening gun which may bring to light the dictatorship of this man who claims all things are his alone.

WILLIAM J. CURN, Jr.,
President, Stanton Products Co., Steubenville, Ohio.

Tobacco and Taxes

EXTENSION OF REMARKS
OF

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1958

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks, I would like to call the attention of my colleagues to an article by Aubrey Graves which appeared in the Washington Post and Times Herald on May 4, 1958, and a letter to the editor by the Honorable James P. Richards, former chairman of the House Foreign Affairs Committee. Those sharing my interest in tobacco will find both articles interesting:

[From the Washington Post and Times Herald of May 4, 1958]

SEEMS A PACK OF CIGARETTES OUGHT TO COST A FORTUNE

(By Aubrey Graves, the Squire of Grigsby Hill)

In Upper Marlboro's auction warehouses, farmers linger around their "burdens" of tobacco long after they have been knocked down to the highest bidders. They seem almost sad to part with the fruits of their labor.

And small wonder. Perhaps no other type of farming is so exacting, or so intensively personal. In the five counties of southern Maryland, for 325 years, culture of the plant has been carried on almost entirely by hand labor.

While the crop produces a high money return per acre, it requires complete devotion and a prodigious amount of backbreaking work.

Seeds are sown in cold frames early in the spring, at the rate of a heaping tablespoon to each 25 square yards. Large sheets of

cheesecloth protect the seedbeds from late frost, strong sunlight or heavy rains.

When 6 inches high (from 6 to 10 weeks, old), the plants are taken up and reset in heavily manured and commercially fertilized fields, about 4 feet apart in rows, each way. Each plant must be watered at time of transplanting.

After flower heads have developed, the plants are topped. This consists of cutting away the top which carries the flower head and upper leaves. Suckers in the axils of the leaves must be pinched off. All this is done by hand, from a stooping position. This pruning sends all available nourishment to the 16 or so leaves left on the stalk.

As they grow the plants must be cultivated and protected from their chief enemies—root rot, mosaic disease, and blue mold. Hail or heavy rains can also play havoc with an entire crop.

In July and August, the leaves begin to mature. As they ripen, they are plucked from the stalks, beginning at the bottom. From 2 to 5 leaves are taken at each picking. During a single week, a field may be gone over as many as five times.

The base of the midrib of each leaf is pierced with a needle and a cord run through the hole. From 20 to 40 leaves are tied to curing sticks, each about 4 feet long. First, the tobacco is dried by leaving it out in the sun. Next, the sticks are strung horizontally across rafters of a well-ventilated barn. Air curing, completed here, takes from 3 to 12 weeks, depending on the weather.

After the leaves have been cured, they are too brittle to be handled without breaking, except after a period of damp weather. If such weather doesn't arrive, moisture must be applied by hand sprinkling.

The leaves are separated by hand into various grades (10 or more), according to size, color, and texture. Grading completed, they are tied into small bundles or "hands." This is done by wrapping a folded leaf around the butt end of all leaves in the bundle.

Tobacco is heavily assessed by the Federal Government. If you smoke 20 cigarettes a day, you pay $21.90 per year in taxes. The 6 cents tax per pack is greater than the amount received by the farmer and the manufacturer combined. Distribution costs take a lion's share.

Many of Maryland's farmers harvest only 900 pounds, or so, per acre. At 50 cents a pound (which last year's crop is now averaging) that amounts to $450, not enough to live on after expenses are deducted.

With increased yield goes better quality, however. The skilled farmer who gets 1,600 pounds of tobacco per acre and sells it at 60 cents can pay his higher production expenses and still make a good profit.

All segments of business are on edge each year as the southern Maryland tobacco auctions open. Tobacco is the chief cash crop of the entire area.

Of Calvert County's total agriculture income, 96 percent comes from the weed. In Charles County, the percentage is 85 percent; in St. Marys, 75 percent; and Prince George's, 65 percent. In more diversified Anne Arundel County, 57 percent of all agriculture income is from this source.

Since 1952 domestic use of relatively bland Maryland tobacco has dropped by 10 million pounds annually. For one thing, filter cigarettes require a greater percentage of coarser, more tasty leaf. This is giving the industry acute concern.

The tobacco experimental farm operated by the University of Maryland recently found that Maryland tobacco contains less nicotine than the other two major domestic types.

If this finding can be sold, industry leaders are hopeful of stopping the decline in its consumption.

[From the Washington Post of May 12, 1958]

PUFFING FOR PROFIT

The squire of Grigsby Hill on May 4 wrote a fascinating account of how the culture of tobacco has been carried on for 325 years in southern Maryland and why no other type of farming is so exacting, or so intensively personal.

He also indicated the tremendous importance of tobacco growing to the economy of the State—running as high as 96 percent of total agricultural income in Calvert County.

Then he added the inevitable observation: "Tobacco is heavily assessed by the Federal Government." Indeed, the headline writer emphasized it with this: "Seems a Pack of Cigarettes Ought to Cost a Fortune."

However, the squire was low by 2 cents in his basic arithmetic—and thus by many dollars in his calculation of the taxes the smoker pays. Instead of 6 cents tax per pack, the Federal levy on cigarettes is actually 8 cents per pack. Thus his conclusion should read: "If you smoke 20 cigarettes a day, you pay $29.20 per year in taxes"—instead of the $21.90 he figured. And he certainly is right in saying that the 8 cents per pack is greater than the amount received by the farmer and the manufacturer combined.

Since 64 percent of the people of the United States smoke, the cigarette tax produced more than $1 billion in Federal revenue in 1957 alone—no small item in the national upkeep—not to speak of the additional hundreds of millions of dollars poured into State and municipal tobacco taxes.

It should not be forgotten that the District collects in addition 2 cents tax on every pack of cigarettes. Montgomery County does the same. The State of Maryland will put a 3-cent tax into effect July 1.

Is there any other pleasurable habit of the American people which figures so mightily in the economy of this country and pours so much into the public treasuries?

JAMES P. RICHARDS,
President and Executive Director, the Tobacco Institute.
WASHINGTON.

We Are Not Yet Winning the Battle for the Minds of Asians

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1958

Mr. JUDD. Mr. Speaker, the first target of the Communists in China beginning 35 years ago was the mind of the students and the intellectuals who have always been the most influential group in that country. It is clear our American tendency to concentrate on food, dollars, guns, and other material measures for assistance to people in Asia has kept us from being as smart and effective as the Reds have been in their approach to Asians. To fill that gap at least partially, a few of us recently organized American-Asian Educational Exchange, Inc. I am pleased to include with my remarks an editorial supporting it from the New York Times of May 19, 1958.

The editorial follows:

[From the New York Times of May 19, 1958]

ANOTHER APPROACH TO ASIA

A new organization has come into operation to deal with some of the problems of our approach to Asia. This is the American-Asian Educational Exchange. Its founders are a distinguished group of American citizens who have had special interests in the Asian field.

The technique to be employed, however, is somewhat different from what has usually been tried in our efforts to help our Asian friends. This organization proposes to publish short works of importance in the international field, to translate them into some of the Asian languages and then make them available for distribution. It is frankly an effort to make a contribution to the winning of men's minds.

It has often been asserted that we are far behind the Communists in the use of the printed word to win supporters for our cause. This group is trying to catch up on that score. It can be more specific than can a Government agency and can, perhaps, more effectively spot its work.

The first of its publications is a short monograph by a distinguished American, Dr. Stanley K. Hornbeck, on what communism has done and is doing on the Chinese mainland. It is terse and factual and undertakes to set the tone for the publications that are to follow.

We are, all of us, rightly sympathetic to appeals to give something to alleviate suffering in various parts of the world. But this is an attempt to give something to men's minds rather than to their bodies. The emphasis is sound and the objective praiseworthy. We need to embrace all our opportunities to encourage human freedom and to make it known how and why we think as we do.

Report on the Civil Air Patrol

EXTENSION OF REMARKS
OF
HON. GEORGE H. MAHON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1958

Mr. MAHON. Mr. Speaker, the Civil Air Patrol held its annual dinner on March 6, 1958, in Washington, D. C. On that occasion Gen. Walter R. Agee, the National Commander of the Civil Air Patrol, made a report on the work of the patrol. The report by General Agee follows. It gives a clear picture of the important work of the patrol:

REMARKS OF MAJ. GEN. WALTER R. AGEE, UNITED STATES AIR FORCE, NATIONAL COMMANDER, CIVIL AIR PATROL, AT THE 1958 CIVIL AIR PATROL CONGRESSIONAL DINNER, WASHINGTON, D. C., MARCH 6, 1958

When the 79th Congress of the United States enacted Public Law 476 it was decreed that each year the organization so chartered to foster aviation, provide aviation education, and minister to the public welfare, would make an annual report to Congress of its activities.

It is most gratifying to look around this room tonight and see that so many of you are able to be here to receive our report for the calendar year 1957 and to meet the men and women who lived that report.

The year just past has been a most interesting and productive one. In the operational field, at the request of the United

States Air Force, the Civil Air Patrol launched a program to train hundreds of amateur astronomers to man observation posts across the country as part of Operation Moonwatch. The Smithsonian Astrophysical Observatory recruited the volunteers, and the flight crews of the Civil Air Patrol took to the air to train them.

CAP planes, towing behind them a small, 62 gadget designed by the Naval Research Laboratory and the Air Force, crisscrossed our skies. At the right altitude and speed this almost exactly simulated the appearance of a real satellite and provided the ground observers with both realistic and inexpensive training.

When the Soviet satellite appeared in orbit this training turned out to be invaluable to the Moonwatch people.

Still other volunteers were called on for assistance—amateur radio operators and electronics experts to take part in Operation Moonbeam—an electronic tracking program. Members of the American Society of Photographic Scientists and Engineers were asked to put the Satellite Phototrack project into operation.

Suddenly the men who had the responsibility for these programs realized they were faced with a problem. The problem of communications.

If the men and women of Operation Moonwatch, Operation Moonbeam, and the Satellite Phototrack project were to do their part, certain technical information available only in Washington had to be transmitted to them on a daily basis.

This is where the years of organization and training that went into the Civil Air Patrol's nationwide communications network paid off. Twenty-four hours after CAP assistance was requested the first scheduled broadcast of orbital predictions on the Russian satellite was made from the Civil Air Patrol national headquarters station Victor Pappa Zero. In every State this information was rebroadcast to the men and women waiting for it. These broadcasts have been made every day since.

In Louisiana, Kentucky, Colorado, Texas, West Virginia, Tennessee, Pennsylvania—in fact, in almost every State in the Union—Civil Air Patrol flight crews and communicators, ground rescue personnel, and first-aid technicians gave freely of their time and effort to bring assistance to their neighbors.

In air search and rescue mission an all-time high in flying hours was recorded by the Civil Air Patrol—more than 15,000 hours or an equivalent of a million and a half miles.

This amounted to 3,000 more hours than in 1956 and 6,000 more than 1951. It represented 64 percent of all the hours flown by all agencies—civilian as well as military—on the 176 official search missions directed by the United States Air Force in the United States and Alaska.

The gasoline and oil used by the CAP on these missions cost the United States Air Force $36,500 last year. If this same time had been flown in the Beechcraft C–45 smallest multiengine plane in general Air Force use, it would have cost $640,000. If it had been flown in the Grumman SA–16, standard aircraft of the Air Rescue Service, it would have cost $1,705,000. To this cost you would have to add the salaries, allowances, flying pay, and per diem of the crews if the military performed the same number of hours.

Further, Civil Air Patrol pilots know their own territories like the back of their hands. Their planes are able to fly low and slow—the only way an effective search can be carried out.

In July 1957 the Continental Air Command assumed responsibility for all search and rescue activities in the continental United States. This enabled the Air Force to provide even more direct supervision to CAP units engaged in search missions.

World War II surplus aircraft donated by the military services totaled approximately 1,100 at the beginning of the year. At the end of 1957 less than 900 still were operational. This was due primarily not only to the age of the aircraft but also to the fact that replacement parts are no longer readily available except at high cost from commercial facilities and the units are unable to bear the financial burden of commercial major overhauls. The Air Force has few, if any, spare parts left as they were donated to CAP at the time the surplus aircraft were donated.

It appears that unless some solution is found, and we are certainly trying to find one, that Civil Air Patrol flying will be reduced to such an extent that eventually certain of our programs will be seriously curtailed or even have to be discontinued.

On the bright side, we were successful in obtaining a rather large amount of surplus office, vehicular, and communications equipment from the Department of Defense and this has been most helpful in our program.

I have already referred to the valuable work accomplished by the Civil Air Patrol radio net. As 1957 drew to a close the organization had 13,158 licensed radio facilities situated in every State in the Union. Certain stations in every State are on the air day and night. Others can be in operation only minutes after an emergency is declared. These stations are divided almost equally between fixed stations at permanent locations and mobile or portable stations.

Originally conceived to provide a command link for CAP's air and ground activities, the communications network now is assuming the importance of one of the organization's major operational capabilities.

The watchword in our adult or senior program for 1957 has been quality rather than quantity. We instituted new, streamlined personnel procedures and a considerable amount of deadwood has been weeded out. Our goal is to establish a hard core of dedicated, thorouoghly trained men and women with the resources to perform whatever noncombatant task is given them.

Now, as to our education and training programs, during 1957 the Civil Air Patrol cadet program brought some 36,000 young people in direct contact with the airplane and helped educate them to the economic, social, and political effects of this air and space age in which we and they live. In addition, through the Civil Air Patrol-high school coordinated aviation education program students in 289 American secondary schools were given the benefits of the same academic courses provided for CAP cadets.

Nearly 300 teachers from all over America attended the Civil Air Patrol sponsored national aviation education workshop held at Miami University, Oxford, Ohio. Over a thousand other teachers attended courses in aviation education at 31 local and regional workshops held in cooperation with the Civil Air Patrol.

During the year more than 17,000 sets of the new Civil Air Patrol aviation text books were distributed. We believe that these texts are the best in this field in the Nation today. A revolving fund, using a portion of the annual dues paid by its adult or senior members has been established. This, combined with the talents available in national headquarters for research, preparation of manuscripts, etc., enables us to make these texts available at a minimum cost not only to our own members but also to any school or individual that wants them.

During 1957 more than 1,800 young men and women received the Civil Air Patrol certificate of proficiency attesting to their completion of the academic and military training requirements of the program. This training is such that any young man or woman holding such a certificate may enlist in the Air Force in the grade of airman third class—the first rung up the promotion ladder.

The excellence of our cadet training is further attested by the announcement I was privileged to make only this morning. A new category of selectees has been established by the Air Force, especially for female CAP cadets and senior members who would like to become WAF officers. For these candidates a Civil Air Patrol certificate of proficiency will be accepted in lieu of 2 years of college training required of all other civilian applicants.

You might also be interested to know that 86 former Civil Air Patrol cadets are enrolled in the Air Force Academy. From reports, the leading officials are highly pleased with the training and motivations which these young men have had.

Legislation was prepared and introduced into the Congress in January and February 1957—H. R. 3232 and S. 1233—which was designed to authorize appropriation of Federal funds to assist Civil Air Patrol in its efforts to provide aviation education and training for its cadet members and to further motivate the youth of our country to seek careers in the aeronautical sciences and related technologies.

The funds were to be used in establishing flight scholarships for outstanding Civil Air Patrol cadets, the flight training to be conducted by recognized fixed-base operators and flight schools across the Nation.

Although the benefits sought by this legislation were widely recognized, the Bureau of the Budget could not look with favor upon the use of public funds for such an undertaking by Civil Air Patrol. As a result action has been suspended on this legislation.

I will not go into any further facts and statistics about 1957 except to say that the international cadet exchange, the summer encampment program, the jet orientation and the national and international drill competition were carried out most successfully and that you will find information pertaining to them in our printed report. The fact that I am not covering them in detail does not mean that they are not most important to our youth program.

In conclusion, the challenge of the space age is one our Nation cannot afford to avoid. In this respect the Civil Air Patrol will continue to contribute its full share within its capabilities.

Operational assistance to the United States earth satellite program, begun in 1957, will be continued and expanded as required.

The Civil Air Patrol's aviation education program already is geared to preparing young men and women for technical and scientific careers in aviation as it applies to space as well as aviation as we know it today. In both, the basic fundamentals are the same.

As it becomes necessary this program will be enriched with additional material relating directly to problems of this new age. A new text, Missiles, Rockets, and Astronautics is already in preparation and will be available by early fall.

The citizens of this Nation can be assured that the members of the Civil Air Patrol will use their skills, their resources and their efforts in the public interest, be it on a local or national basis.

Devaluation Great Disaster Threat

EXTENSION OF REMARKS
OF

HON. EDGAR W. HIESTAND
OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958

Mr. HIESTAND. Mr. Speaker, on May 5 there was in the Appendix of the RECORD a very eloquent appeal for devaluation of the currency. Because it came from a successful businessman of considerable stature, and because he appeals for "sound money" and "to stop inflation and further dollar depreciation" but advocates the opposite, his speech calls for a reply.

I must take emphatic issue with his advocacy of the cause of raising the price of gold from its present price of $35 per ounce to $100 per ounce or in fact any other price. That, in my judgment, would, indeed, be one of the greatest disasters that could hit this country. I also take issue with him on several of his predicted results and certainly on the desirability of all the rest of them.

Here are his five distinct steps in the economic cycle which every nation at some stage has passed through, and the United States is no exception. They are:

1. Currency debasement.
2. The issuance of irredeemable paper money which is followed by great government and consumer credit expansion, leading to higher prices, higher costs, spiraling inflation, and a steady decline in the purchasing power of money.
3. When inflationary forces become too great to be controlled, a collapse of the economic structure built inflated prosperity.
4. Depression.
5. The return to sound currency which brings a drastic shakeout with attendant misery and suffering.

If he is correct in his analysis, why does he want us to follow in that tragic path? The very move he advocates is exactly the No. 1, debasement of the currency.

He even alleges a Russian threat of convertibility. We are all aware of rumors that the Russians have developed large gold reserves, but why indeed should they even consider making the ruble convertible? The whole history of the Kremlin masters is the exact opposite. They not only have devalued it many times, but even repudiated their own bonds. And what does he mean by convertible? Surely he does not imagine they would make the ruble convertible internally. Would not the Russian peasant hoard every gold ruble he could earn or steal? Can you imagine the Kremlin masters letting Russians have gold?

Or, what meaning can external convertibility have when there are no rubles outside of Russia? The gold with which Russia settles her balances is bullion, the same as all other international settlements, and at the United States price of $35. International settlements cannot be made in coin. They are book entries or gold bullion at $35 per ounce. And lastly, is there any reason at all why we should imitate the Russians, even if they should make the ruble convertible?

Mr. Speaker, make no mistake about it. I am in favor of making our dollar convertible. That would be a great step in strengthening our national economy. That would, indeed, establish a sound currency, the finest in the world. And I believe not only West Germany, but Canada, Switzerland, and other nations, such as Holland, Belgium, and then Britain would soon follow us.

However, the gentleman advocates the direct opposite, almost complete debasement of the currency. He states that our gold reserves are "wholly inadequate." How would devaluation change this? We would simply have vastly more and smaller-valued dollars. The ratio as commodity prices rose would be the same.

Perhaps some people regard the Swiss franc, the deutschmark, or the Canadian dollar as more sound than the United States dollar, but if these people are more than a very few we would witness a large flight from the dollar into those currencies. Each of these currencies is highly regarded because these countries balance their budgets and refrain from wild and unrestrained spending projects beyond their means. The "premium" he refers to for the Canadian dollar is a misnomer. The Canadian dollar is an entirely different and independent currency and has nothing to do with the United States dollar. If it had been called a pound or a ruble it would have no different relation than at present.

And what does he mean by that crack about "our Nation caught without gold"? How could that possibly happen at present? We now can refuse to convert. Of course, under his plan of gold at $100 per ounce the pressure for our gold might be three times as great as at present. And if, as he advocates, it were "freely convertible" would it not rush out of this country faster than ever?

And he claims that devaluing the dollar would not only thwart Russia but at the same time arrest the depression, and he states the results would be 11 in number:

First, the immediate reopening of "closed and marginal gold mines," putting back to work thousands of miners. I agree, that would be a bonanza to the 3,000 people in the gold mining industry, but what a disaster to 170 million people of the United States.

Second. He claims an official devaluation of the United States dollar would strengthen the sagging price of all commodities, particularly farm products and nonferrous metals. I agree, possibly prices of lead, zinc, and copper may be "sagging," but when he talks about all prices, just where is the "sag"? Consumer prices now above 123.3 in the aggregate are at an all-time high. Food prices at an all-time high, 120.8. Housing, 127.5, rents, 137.1, transportation, 138.7, medical care, 142.3, personal care, 128.3, all at record highs, and wholesale prices in the aggregate, all commodities in March, 119.7, an all-time high. Farm products, 100.5, highest since 1952. Processed foods, 110.7. And farmers are doing all right. The April 15 figure, 266, for the consolidated Farm Price Index, higher than any time since 1952 in the middle of the Truman-Brannan downslide on farm prices.

But do we want our prices for food and everything jumped? Is that the way to cure the claimed recession? The savings of the millions of American people who have accounts in savings banks and savings and loan associations are at an all-time high. The people have the money, department store sales and consumer demand, except, of course, for automobiles and durable goods, are excellent.

With 186 percent increase in the price of gold, marking down the buying power of our present dollar to 34 cents would mark down the value of the prewar dollar all the way down to 16 cents. What folly. I do not defend subsidies, any of them, but if we subsidize one commodity, we simply put up its price in relation to the dollar or the basis of the value of other commodities. But gold is different. If we subsidize gold, we debauch the dollar in relation to all the thousands of other commodities. We upset the whole standard of all values. Why create this bonanza for a few to the disaster of the 170 million?

Third. I agree that "the high cost of labor has priced some manufactured products and to some extent our farm products, out of world markets." But I emphatically disagree that devaluation of the dollar "would quickly restore our competitive position." Do you not think that all of these nations with pegged currencies would very quickly follow us and devaluate their currencies by two-thirds? Of course. They did in 1934. Thus, would it "clear out our astronomical surplus of farm products—at a loss of over $2,000 million to Uncle Sam—and stimulate manufacturing, conceivably to boom proportions?" Is that what we want? It is tantamount to turning on the dollar printing presses, as was done with the French franc, the German mark, under Hitler, and all other currencies that have been devalued as a result of inflation. It is another step toward horrible disaster. And who pays for it? Those in the lower income group, especially those on fixed incomes, pensions, et cetera. To them it is real and stark disaster.

Fourth. "Corporations struggling with inflexible costs and diminishing volume," he says, "would quickly have a resurgence of buying" and "improving profit margins." That I deny emphatically. Anyone who has traveled around in these countries where the beautiful paper money runs into the 50 and 100 thousand francs, lira, cruzeiros or pesos, knows the disaster that those business firms have faced and struggled against. What he claims would happen did not happen all the way from 1933 until 1940 when war orders poured in. Devaluation itself simply did not do it. And it never will.

Fifth. Exports, he claims, would step-up as a result of devaluation. There again the immediate devaluation of the other currencies would put them in the same relative position. And as for "re-

duction in the billions of give-away money," that surely we would like to do, but how would this infamous measure help? Would not the demand triple to offset the shrunken dollar?

Sixth. "The intolerable burden of gigantic national debt—and taxes—would become bearable." Just how? The value of the dollar's interest we pay on the national debt would be less in purchasing power, but how about the disaster to the millions of widows, orphans, investment company stockholders, insurance companies, whose stockholders and policyholders run into the millions, and who are owners of United States bonds, also devalued automatically. Had he thought of that? Imagine the millions of people suddenly thrown on public welfare.

Seventh. Marking up gold to $100 per ounce would very possibly "create a Treasury surplus of around $41 billion," as he says, but how would it "permit a sharp reduction in taxes for many years to come"? Do you not think we would need three times as many dollars to run the Government, and tax our people three times as much?

Eighth. He suggests that the "increment created by the new gold price could be used to reduce our national debt." Yes, indeed, that could be done, but again, what of the disaster to the many millions of people holding United States bonds who put their savings into them at hundred-cent-dollars, only to have them paid back in 34-cent dollars. That is worse than Russia's repudiating the interest on her national debt. It is confiscation. And what is devaluation except confiscating the savers?

Ninth. "If not a single informed economist in the world believes the United States can measurably reduce its national debt until the dollar is devalued," God help our country. I have heard that before, and perhaps you have. But I suggest that is a sad commentary on the integrity of the American people. Only crooks disavow their honest obligations. Surely we have not sunk that low.

Tenth. "Restoration of full convertibility, both internally and externally," I agree is desirable and practicable. But how would it block the Russians? I see no possible connection. Furthermore, I do not believe the Russians have any idea of establishing a convertible ruble.

Speaking of Russia, who would benefit from the devaluation of the dollar in terms of gold? In addition to the gold-mining industry, obviously the countries with large gold production and holdings, especially the largest, Russia. One hundred dollars per ounce would nearly triple the valuation of her gold holdings in international trade. Ponder that one a moment.

Eleventh. This "hysterical grasping for straws to arrest the downward plunge in our economy," is, as far as I can see, only in the shoutings of those who would spin us into a real depression. The great American economy must be mighty sound and solid to have withstood the vicious attack of these gloom and doom howlers without disaster, and every day we are getting more and more signs of the leveling off. Perhaps at a little lower level than the extreme peak of 1957, but a sound and stable American economy.

As for his comparison with the 1930's, who can call that devaluation a success? As far as we can see, all it did was to raise prices drastically, stretch out the depression until 1940 when there were approximately 10 million still unemployed. It destroyed the value of the insurance policyholder's assets, the value of the savings of investors in bonds of all kinds, and threw disaster right into the teeth of a great many families on fixed incomes, who suddenly did not have the price of food. Does he want us to repeat that type of a disaster?

Actually, the 50-plus measures the administration has taken to step up the economy and combat unemployment are now having effect. But they are becoming effective without the frantic and wild spending orgies for which the gloom and doom howlers are screaming.

Is not the way out of this leveling off, or recession, if you wish to so call it, a sound working our way out by sane methods, rather than by wild, frantic panic gestures that can be ruinous?

Apparently, Mr. Speaker, the gentleman has given no thought to the financial chaos that would result from such devaluation. The banks would have to recapitalize immediately and they would have to put up more reserves with the Federal Reserve. Their capital now totaling some 18 billion and insured for roughly 1.8 billion would present problems. They would have to put up enough to keep their ratios in line and immediately, and from where could the money come? The purchasing power of the Deposit Insurance Fund would be only one-third of what it now is.

Fancy the consternation and chaos in the vast financial institutions of our land, insurance companies, investment trusts, mortgage companies, holders of fixed-price guaranteed bonds, debentures and especially land contracts and mortgages.

I do not know where this gentleman gets his information from inside Russia. What does he mean by "persistent reports from informed—Russian—sources"? Who are these sources? The intelligence services do not seem to have it. Could it be purposely pipelined out of the Kremlin to get us to destroy our currency? Maybe we have not debauched our currency as fast as Lenin predicted when he outlined the way to conquer a nation.

I suggest, Mr. Speaker, that about the worst thing we could do at this time would be to devalue the currency.

Americans Fiddling While Monster Grows

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1958

Mr. ABBITT. Mr. Speaker, I wish that every American could read the splendid editorial entitled "Americans Fiddling While Monster Grows," which appeared in the Courier-Record on May 15, 1958. This weekly newspaper is published by the Nottoway Publishing Co., Inc., of Blackstone, Va. This is one of the best editorials I have read on the present condition of our country.

I realize that we have gone a long way in this country toward creating a socialistic, welfare state dominated by a power-crazed Federal judiciary and would-be bureaucratic dictators in the executive branch of the Government. It is still not too late, however, for our people to awaken and to arouse themselves so as to throw off the shackles and put this country back into its proper perspective as intended by our Founding Fathers.

Most of our people have been so busy trying to amass material wealth that they have failed to keep up and understand the rapid deterioration of our republican form of government and to note its fast change into a socialistic, welfare state.

I desire to commend not only the Courier Record for this splendid editorial but to compliment the editor for his thoughtful presentation and to personally thank him for the effort he is making now, and has been making, in an endeavor to point out to the people the dangers that confront us and the pitfalls that are ahead unless we stop the octopus-like growth of the Federal oligarchy that is about to engulf and devour the rights and liberties of our people. The editor and his associates on the paper are dedicated Americans striving to protect and maintain our way of life and the Constitution that we have known and loved so long and which has meant so much to the well-being of this country. I only wish there were more editors like him in every section of our country. If there were, we would not be in the crisis in which we now find ourselves.

I am including the editorial with my remarks in the hope that it will be widely read by people in other sections of our country and that as a result thereof they will awaken to what is happening to us before it is too late.

The editorial is as follows:

AMERICANS FIDDLING WHILE MONSTER GROWS

We have just finished reading a little booklet entitled "Nine Men Against America" and at his moment we are both angry and discouraged. Our anger is toward all Americans, ourself included, who have allowed the power of the central government of the United States to grow into a mammoth, foraging off the freedoms we once knew and ripping the American way of life to pieces with its ugly tusks.

We are discouraged because we can see no immediate way to revive these freedoms nor do we know where one big gun can be found to slay the giant with one shot. The giant that lurks in Washington has become immune to the small arms fire of individual citizens and even to the volleys of the few States, mostly Southern, that realize the kill must be made while there is still time.

The predicament in which we find ourselves today did not come about overnight. Americans, dreaming of a Utopia, where 37½ hours of being on the job could provide enough income for everyone to have two $4,000 automobiles parked in the double garage at the end of a 3-bedroom rambler, plus color TV, swimming pool, and everything else our hearts desire, have been caught in a trap. There's nothing wrong

with dreaming and certainly nothing wrong with wanting new cars and nice homes but the cost of our Utopia has been high.

While we gained a higher standard of living we lost our freedoms and became a slave of the monster in Washington which has been put together by both political parties. So cleverly have the powers of States been usurped and so painlessly have we gradually lost individual freedoms that few have awakened to the reality. We have even been fools enough to believe that our central Government could give us choice tidbits with one hand without plucking something from us in return. We have run to Washington every time we needed a handout and have really believed we were getting something for nothing. Some people, even today, don't realize that when the Government provides money for some project or the other, it's their money, that's being handed out. There are others, too, who know the cost, but don't care as long as they can get Federal aid.

Then, of course, there are individuals and organizations who know well what has, and what is continuing to happen to America. Virginia and some other States have Senators and Congressmen who have been fighting the Washington monster for a long time. They have helped to slow its growth, and organizations, to mention only one, like the Defenders of State Sovereignty and Individual Liberties, are doing what they can. The question remains, however, will they be able to slay the beast in time?

This is where you come in as an individual citizen. Only when all of us become determined that we will not sit by and see ourselves further enslaved will there be a change. When all Americans look up from their TV sets and see clearly where Washington is leading us, no doubt they will rise up and demand a return to the constitution and the ideals of government we once took for granted.

On page 2 of the booklet we just read is a quote from Thomas Jefferson, who saw the dangers of strong central government in 1821. We print below that quotation with the suggestion that you take time out to read the entire pamphlet.

Said Jefferson:

"It has long been my opinion, and I have never shrunk from the expression * * * that the germ of dissolution of our Federal Government is in the constitution of the Federal judiciary; an irresponsible body—for impeachment is scarcely a scarecrow—working like gravity by night and by day, gaining a little today and a little tomorrow, and advancing its noiseless step like a thief, over the field of jurisdiction, until all shall be usurped from the States, and the Government of all be consolidated into one.

"To this I am opposed, because, when all government, domestic and foreign, in little as in great things, shall be drawn to Washington as the center of all power, it will render powerless the checks provided of one government or another, and will become as venal and oppressive as the government from which we separated."

"Israel Healthful at 10"—Analysis by Howard A. Rusk, M. D., in the New York Times, Sunday, May 18, 1958

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1958

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the text of an article appearing in the New York Times as aforesaid from a recognized medical authority: to wit, Howard A. Rusk, reporting as to health standards and achievements in the State of Israel of its recent 10th birthday. Not having observed any such report or information recently when the 10th birthday of this young Republic was being observed, I felt sure that this information would be timely and very helpful to all who read this record of very worthy, and I would say remarkable, achievement under very difficult circumstances:

ISRAEL HEALTHFUL AT 10—ANALYSIS OF HOW NEW NATION ACHIEVED STANDARDS EQUAL TO THE MOST ADVANCED

(By Howard A. Rusk, M. D.)

As the State of Israel observes its 10th year as an independent state, it has many reasons to be proud. Primary among these are its health services.

Health conditions in Israel are comparable with those of the most advanced nations and stand in sharp contrast to the low health standards in many other parts of the Middle East.

Israel's ratio of physicians to population is one of the highest in the world—one physician for each 400 persons. Comparatively, there is one physician for each 760 persons in the United States, 700 in Switzerland, 7,100 in India, and 3,500 in Egypt.

Life expectancy among the Jewish population in 1956 was 69.4 for males and 72.1 for females, as compared to 66.6 and 72.7 in the United States.

This writer well remembers when he visited Israel in 1951 that it was a common occurrence to find several dead infants in the refugee-crowded airplanes arriving from Yemen. Emergency hospitals were set up next to the landing fields for immediate care for the acutely ill. Through this program, infant mortality was reduced among this group 90 percent within 6 months. Now the general infant mortality rate is 32.3 per 1,000 live births as compared to 26.6 in the United States.

Maternal mortality rates are also very low. This is a particularly significant achievement since the largest part of the recent immigration has been from countries with low health standards.

During this 10 years, hospital facilities have almost doubled. Israel now has 102 hospitals with 12,500 beds as compared with 63 hospitals with 4,626 beds in 1949. These are supplemented by 200 infant welfare clinics, mental health clinics and a polio rehabilitation center.

OTHER HEALTH FACILITIES

Other health facilities are operated by nongovernmental agencies, the largest of which is the Workers Sick Fund, a health insurance association organized by Histadrut (General Federation of Labor). Two-thirds of Israel's population of a little under 2 million belong to the fund, which has a budget more than twice as large as that of the Ministry of Health. The fund operates 910 clinics, 14 hospitals, and 12 convalescent homes.

Additional medical facilities are maintained by Hadassah of the United States; Malben, the American Joint Distribution Committee's program for the care of sick, aged or physically handicapped new immigrants; Mogen David Adom, Israel's equivalent of the Red Cross, and a number of smaller voluntary agencies.

Hadassah supports 7 hospitals with a total of 750 beds and a number of urban and rural health centers. Within the next few years Hadassah's health and medical training facilities will be consolidated in a new $21 million Hadassah-Hebrew University Medical Center. This center, now being built at Kiryat Hadassah, 5 miles west of Jerusalem, will have an American-type medical school in which almost all of the faculty will have had graduate training in the United States. Hadassah has provided 130 fellowships for advanced study outside of Israel (primarily in the United States) in medicine, nursing, and public health.

One particularly difficult health problem has been disease-control programs among the Arab population. Israel's Arab population of 204,000 is the only minority group in the nation. It is mainly Moslem, but includes some 50,000 Christian Arabs and about 20,000 Druses.

The infant mortality rates of 61.2 among the Arab community has nearly doubled that of the nation as a whole, but still represents a 50-percent decline since 1944.

CLINICS FOR ARABS

In 1950, the Ministry of Health established twenty-eight clinics at the Arab population centers and four mobile clinics to serve Arab citizens in Galilee and the Negev. All public clinics are open to the Arab population.

A tuberculosis hospital has been set up in Nazareth, the largest Arab community, special clinics for maternal and child care have been established and special training courses for Arab nurses have been developed.

Among the Jewish physicians assisting in these programs is Dr. Eva Landsberg, a pediatrician who was formerly head of the Bureau of Physically Handicapped Children, New York City Department of Health. Dr. Landsberg, whose husband is a government economist, practices in the Israeli portion of Jerusalem.

On her day off she gives her services to a children's clinic which she herself established in the small Arab village of Abou Gosh, which has a population of about 1,000. This village, like many other Arab communities, had no modern medical care until Dr. Landsberg started her free clinic.

Through its new Academy of Medicine and its research centers, Israel is now also conducting basic and clinical research in medicine, of significance not only within that nation but internationally. Reports of such research appear regularly in medical journals throughout the world.

Israel is but 10 years of age. Courage, imagination and vigor, however, have caused it to become of age medically.

Latin America: The United States Reappraisal

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1958

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Life magazine which appeared in the issue of May 26, 1958:

LATIN AMERICA: THE UNITED STATES REAPPRAISAL

When Vice President NIXON called for a reappraisal of our policies in Latin America, the State Department had already launched one, and so now has a Senate committee. Let us hope these reviews get at the real roots of the problem, and avoid such partisan bypaths as whether the whole Nixon trip was a diplomatic mistake. It is never a mistake for a nation to learn unpleasant facts about itself.

The real roots of our problem lie deep. They run back to the profound difference between the Spanish and the Anglo-Saxon heritage; to the many brave attempts (beginning with the Monroe Doctrine) to bridge that difference in the name of hemisphere freedom; to North America's long political and economic lead. Latin America has been a backward area by our standards. It is still working to master the art of self-government and the secret of wealth.

Its people have usually given outsiders the least trouble when under discipline by their own revolving strong men. When a strong man departs with his loot, an attempt is made at free government, which the Communists exploit until the next strong man drives them to Mexico or underground. Meanwhile the wreaths pile up on Bolivar's many monuments, currencies fall, the Communists gain, and the near-unanimity of our votes in the U. N. makes Pan America look healthier than it is. Such at least has been the tedious pattern. But it is not the trend.

The trend is hopeful—and our problem in Latin America is to help the trend break through the pattern.

Economically, Latin America is in the van of the revolution of rising expectations which has swept all backward nations. But the United States recession has given these expectations a sharp check. Latin America is still a group of one-crop countries (coffee, oil, copper, lead and zinc, tin). Their exports make them too dependent on too volatile world markets, whose prices are now all down.

The Latin Americans want the United States to help them stabilize these markets by long-term agreements. On sound free-market principles we have refused. However, our own big export crops, wheat and cotton, enjoy as much stability as the United States Treasury can buy; and minerals are protected against Latin American competition. This hypocritical policy, made worse by tactless timing of our protectionist measures, has smoothed the way for Soviet trade missions, now doing a brisk South American business.

Take Venezuelan oil, on which United States consumers increasingly depend. When oil sales fell off last summer, the President, under Texas pressure, imposed a voluntary cut on United States oil imports from Venezuela (also from Canada). Our excuse is national security, but the effect is to export our recession.

Texans last week heard a sound lecture from a Venezuelan oil expert, Eduardo Acosta. Why should not United States oil policy be hemispherewide? "From a continental point of view," said he, "oil found in the [Americas] is domestic oil." Certainly if our defense policy is continental, an oil policy which invokes defense arguments should be no less so. The moral applies to other vital raw materials as well.

United States capital, both public and private, has been amply available to Latin America. Our loans and investments total more than $10 billion. We are officially committed to better balanced and more industrialized Latin economies. Our capital problem is chiefly to sustain and deepen this commitment. In doing so, we could well give a friendlier hearing than hitherto to certain Latin proposals for formalizing the commitment—such as an inter-American development fund or bank.

Politically, the root of our problem is to be as democratic in Latin America as we are at home. This is not as simple as it sounds. In deference to old Latin fears of United States intervention written into Pan American agreements, we tolerate petty tyrants whom neither we nor their subjects like. This dilemma is an old one. Dictators able to boast of United States official favor have stunk up the political climate of the Americas for many years. By 1957, however, there were only 5 such dictators left in the hemisphere and 2 of the worst have since been overthrown: Colombia's Rojas Pinilla and Venezuela's Pérez Jiménez. Great was their fall. And great is the trend toward democracy and freedom which must sooner or later doom their three lone survivors: Stroessner in Paraguay, Batista in Cuba, and the incredible Trujillo of the Dominican Republic.

Pérez Jiménez left a legacy of hate in Venezuela which Americans grossly underestimated during his 10 years of corrupt and murderous rule. A United States Ambassador even pinned a medal on him; the fact that Pérez Jiménez and his policeman, Estrada, got an easy visa and now live comfortably in Miami is additionally offensive to free Venezuelans and was part of the reason for the outrage against NIXON last week. Although the United States must remain formally impartial to all American governments, even Trujillo's, it is now time for a marked shift of emphasis in our policy toward dictators. It is time for us to show more clearly whom we are neutral against.

The Latin Americans can be trusted to clean their own political house eventually; education, the press, recently the Catholic Church are all helping to force the democratic trend. The United States Government is considered, somewhat unfairly but unquestionably, to have blocked this trend, to have been indifferent to the great Latin effort toward political maturity. Latin Americans hate dictators and want freedom as much as we do. Let us rejoice at that, and find more ways to support in their continent the feelings and hopes we really share.

Voting Restrictions: A Report From the South

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1958

Mr. ROOSEVELT. Mr. Speaker, I have previously included in the Appendix of the CONGRESSIONAL RECORD the introductory address of Mr. Aubrey Williams, president of the Southern Conference Educational Fund delivered at its recent conference on voting restrictions in the Southern States.

Mr. Williams pointed out that relations between the races in the South have worsened since the 1954 Supreme Court decision. Although channels of communication have closed, he went on to note that while an atmosphere devoid of antagonism would be desirable, nonetheless, there is something positive in the Negro's present attitude which seems more and more to reflect a determination to insist on his rights. The harmonious relations between the races had been purchased at the price of the Negro's self-respect. The tensions which exist now are at least honest. Peace at any price will no longer do.

In closing, Mr. Williams devoted some time to an examination of the effect that the situation in the South can have on the political complexion of the area. The political emancipation of the Negro could well presage a major political realinement among the liberal and conservative forces in the two major parties, and the overwhelming weight of evidence is that the Negro has made up his mind to secure his rights as a citizen.

The barriers in his way are illustrated by the following reports on voting restrictions in Alabama, Florida, Georgia, and Louisiana which I include in the RECORD under leave to extend my remarks:

VOTING RESTRICTIONS IN ALABAMA

(By Charles G. Gomillion, chairman, division of social sciences, Tuskegee Institute, and president of Tuskegee Civic Association)

In 1956 Negroes represented 30 percent of the total population of Alabama of voting age, but only 6 percent of the number of persons registered to vote. Currently there are only about 50,000 Negroes registered in my State.

There are many factors which contribute to the low rate of voting and registration among Negroes in Alabama. Some do not qualify to vote because of their limited recognition and appreciation of the significance of voting.

Others who are greatly dependent on the white community for their economic well-being are afraid to manifest any interest in, or to participate in, politics. Perhaps the most important factor is the difficulty of getting a certificate of registration.

The questionnaire which each applicant is required to fill out contains 21 questions, some with several parts. Persons who do not like to fill out questionnaires postpone applying for registration, sometimes for a very long period. Those who read and/or write slowly often prevent others from appearing before the board.

In many counties, if a Negro applicant fails to answer every question, or if he makes a single mistake, the application is not approved, the applicant is not notified, and he is not given an opportunity to complete or correct his application.

In some counties, the registrars do not work full days. They come to work late, and/or leave work early. Occasionally, only one of the registrars reports for work, and cannot work because the law requires that at least two be present when applications are accepted and/or applicants certified.

The registrars themselves retard the process by holding conversations with the applicants. In some counties, the registrars do not function regularly because they lack adequate supplies or equipment, or there is no room available in which they can work. Some boards have resigned rather than provide opportunities for Negroes to qualify as electors.

Several times within the last 15 years Macon County has been without a functioning board of registrars. The last period extended from January 16, 1956, to June 3, 1957. When the State appointing board delays filling these vacancies, prospective voters are denied the opportunity to register.

Some boards of registrars require Negro applicants to secure white voters to vouch for them. The voucher must state that the applicant has lived in a stated place for a specified time and that the voucher knows of no reason why the applicant should be disqualified from registering. In many cases it is a very difficult task for some applicants to obtain vouchers, and impossible for others. There are known instances in which a Negro applicant appealed to at least a dozen white voters in his efforts to secure a voucher.

Even in cases where the boards permit a Negro voter to vouch for a Negro applicant, the board will recognize and accept only a Negro voter who is known to a board member. Often when Negro voters are permitted to vouch for Negro applicants, they are restricted by having a quota assigned, such as 2 or 4 applicants per month. Some applicants have filled out as many as five

questionnaires before receiving their certificate of registration.

Of those who receive such certificates, many do not vote. Some fail to vote regularly because of placing little value upon the act, because of not wanting to pay the poll tax, because of forgetting to pay the tax, or forgetting to go to the polls on election day. Some do not vote because they believe one vote does not matter or Negro votes are not counted.

Other registered Negroes do not vote because they are afraid that if they vote they will lose the good will of white citizens or will lose their jobs, or will not be able to secure credit. Some are discouraged from voting by whites who tell them that the whites have always been good to them, that they will continue to look out for them, and that they should not become involved in politics. Some who work for whites are not permitted time off to go to the polls. Some are threatened, told that if they attempt to vote harm will befall them and/or members of their families. Many Negro businessmen in the rural areas, towns, and small cities who have encouraged Negroes to vote have been forced out of business because wholesale dealers refused to sell them commodities. Some have met with violence.

In Macon County, Ala., in 1957, approximately 400 Negro voters were gerrymandered out of the city of Tuskegee by a legislative act in order to prevent them from voting in municipal elections, and a legislative committee has been holding public hearings in 6 counties in an effort to formulate a recommendation as to how Macon County should be reduced or abolished in order to reduce or scatter the voting strength of 1,100 registered Negroes. The majority of white citizens in Macon County are determined that the number of Negro voters not exceed that of white voters, and that no Negro be elected or appointed to public office in Macon County or in any municipality within the county.

VOTING RESTRICTIONS IN FLORIDA

(By the Reverend Ben F. Wyland, executive secretary, Florida Council for Racial Cooperation)

In Florida we are facing two ways. We have political leaders who face the future and favor the Negro's basic right to vote and to advance himself. And then we have political leaders who face the past, determined to block the path of the Negro by threats and intimidation.

The Negro population in Florida is around 600,000. Of these, 369,463 are old enough to vote but only 148,636 have been able to avail themselves of that privilege. There are thus 220,827 who are politically nonexistent, silent, and unable to express their will.

Five counties in northern Florida use intimidation whenever necessary to prevent or discourage Negroes from registering. There are 16,533 Negroes old enough to vote in those counties, but only 110 have been able to register. Union County has 2,542 Negroes over 21 and not 1 is registered to vote; Gadsden County has 10,930 with 5 registered.

At one courthouse, loungers told Negroes who came to register: "Go ahead and register if you can take what comes afterward." In Liberty County, where there is 1 Negro registered, the Reverend Dee Hawkins and 3 others went down to register.

Mr. Hawkins said the supervisor was polite and told them to go ahead and register, but that night "all hell broke loose." The minister wrote me a letter saying "they are causing me to leave home. I was bombed-shot in my home." He fled from Liberty County.

Madison County, also in northern Florida, deserves special mention because it shows what can be done when Negroes act together and some white people display a little good sense. Fifteen years ago not 1 of the 3,151 Negroes over 21 was registered to vote in that county.

During the 1944 primary period, 586 Negroes went to the courthouse in a body to register—and they were registered. The following year, many people wondered whether the new registrants would have the courage to vote. Many did vote, with the result that a white man flourished a gun and cried that no Negro would vote so long as he lived.

Other white men intervened and persuaded him not to use the gun on the Negro voters. Negro registration in the county has since increased to 1,010 and Negroes continue to vote without any show of violence against them.

There is a more favorable atmosphere in St. Petersburg, Pinellas County, but only 3,208 of the 12,118 Negroes over 21 have registered to vote. The situation is different in Jacksonville, where 27,368 Negroes have registered out of 52,832 old enough to vote.

However, Jacksonville has also shown what happens to Negroes when they try to exercise civic responsibility as well as civil rights. To vote means to have the right to hold office when qualified to do so, but not in Jacksonville.

Ernest D. Jackson, a well-known and highly qualified Negro attorney, decided to run for justice of the peace 2 years ago. He has a law degree from Howard University, is a disabled veteran, is a member of the Baptist Church, the American Legion, and the Masons, and is active in Boy Scout work—among other things.

He was nominated for justice of the peace, receiving 7,716 votes to 6,103 and 950 for two opponents. It appeared that he would be the first Negro elected to public office in Florida in modern times. So the county attorney ruled that the justice of the peace setup was illegal. The Circuit Court and the Florida Supreme Court upheld that opinion.

So the former system of having 9 justices of the peace instead of 5 was reinstated. The County Democratic Committee nominated one of the men that Attorney Jackson had defeated in the primary. As a result, Jackson ran as a write-in candidate. He received 5,379 votes and was beaten by only 875 votes.

In Jackson's district, Negroes voted 10 to 1 for Adlai Stevenson over Eisenhower in 1952. After the Jackson incident, they voted 55 to 45 for Eisenhower in 1956.

Republican leaders also asked the Negro voters: "How can you vote for the party of Eastland?"

And that is becoming a good question all over the country, both North and South.

THE STATUS OF NEGRO REGISTRATION AND VOTING IN GEORGIA

(By Austin T. Walden, attorney)

Negroes in Georgia have had, and in some areas still have, great obstacles to overcome in the acquisition and exercise of the ballot. With great labor, trial of spirit, and expense grandfather clauses and white primaries were declared illegal and unconstitutional. However, that did not end the Negroes' troubles nor make a free ballot possible.

There are slightly more than a million Negroes in Georgia in a population of more than 3 million. One hundred and sixty thousand are registered out of a potential of 650,000, remembering that 18-year-olds may vote in Georgia. More than four-fifths of that registration was placed on the books within 2 years following the legal demise of the white primary. It is noteworthy that the above increase in registration was directly responsible for doubling the white registration during the same period. Approximately a million and a quarter of the more than 2 million white population are qualified to vote.

The Negro registration is pretty largely concentrated in the larger cities and other urban areas. Our problem, therefore, arises in the rural areas. This is to some extent attributable to the county unit system, which often affords politicians the opportunity to ride to office on the Negro question.

In the immediate past, lives have been lost and property practically confiscated. Negroes have been driven out of the community, their homes fired into at night, because of their efforts to register and vote. Threats, intimidation, economic reprisals, cross burnings in their neighborhoods on nights before elections—these have been some of the devices used to deter Negroes from exercising their suffrage rights. In some areas, registration and election officials have been conspirators in various schemes to accomplish the above objectives. They have used every kind of technicality to avoid registering Negroes.

It is true that the law permits an appeal when a registrant's name has been stricken from the rolls, but such appeals are of no avail because the election at which the registrant intended to vote will have long since passed before an appeal could be heard. Such appeals have no priority over pending cases triable at the next term of court following removal of the registrant's name. The latter makes it highly desirable—if not imperative—that a challenge to a citizen's right to remain on the registration rolls should have to be made in ample time to permit final determination of the issue before the election in which the registrant intended to participate. Such a provision, which is included in one of the proposed Federal civil rights bills, would nullify one of the most nefarious devices used to deprive citizens of the rights guaranteed by the supreme law of the land.

Candor and fairness demand that it be stated that the evils complained of are not really sanctioned by the great majority of the people of our State. It is the political demagogues who cause the trouble—those to whom in the past it has been politically profitable to exploit the prejudices of the uninformed at the expense of a racial minority. Georgians are fair-minded but, in many instances, are afraid to be vocal for obvious reasons.

Now it would be inaccurate and unfair to say the picture is totally dark. Over the years in my State, for instance, there have been quite a few occasions when prominent white citizens have boldly and forthrightly protested against arbitrary and illegal purges of Negro registrants. This has righted some injustices. It is fair to say in this connection, however, that instances of fairness on the part of some registration officials are partially nullified by the actions and attitude of the chief officials of the State of Georgia, including its legislature, aided and abetted by illiberal groups like the White Citizens Council.

The legislature recently adopted more stringent qualifications for the exercise of the electors' franchise, particularly for those not able to qualify under the educational clause and, therefore, would have to qualify under the provision relative to good character and good citizenship. The intent and purpose was to curtail the increase of the Negro vote in the State. However, the new regulations are so burdensome and ominous that great opposition to them has already developed among the white electorate. This is because if the rules are halfway decently administered they will likewise result in reducing the number of whites who could qualify under the law.

We have every reason to believe, therefore, that when this law is put into effect it will prove to be such an obstacle for the average citizen to register that the white electorate, as it did 8 years ago, will revolt against its operation and thereby bring about repeal of the same.

You will recall that the 1949 law, wherein the whole registration list was abolished, saw Negroes re-register in much larger proportion than did the whites.

In all candor, and notwithstanding the attitude of the State officials, it should be said that the greatest obstacle in the way of registration of Negroes arises from the indifference and timidity on the part of too large a segment of the Negro people of Georgia. This observation is not made at all for the purpose of justifying the discriminatory practices which prevail in some remaining areas of our State, nor to condone the unjustifiable attitude upon the subject manifested by the top political figures of our State. Our biggest job, therefore, is one of education among our own people.

VOTING RESTRICTIONS IN LOUISIANA

(By Kenneth Walker, editor, the Colfax (La.) Chronicle)

About voting restrictions in Louisiana: the situation is, shall we say, more white than black.

Politics is the favorite game of Louisianians. Everybody plays. Politics is the very big reason why there are 118,758 Negroes registered in Louisiana today. Many, many more will register before the next big campaign, I assure you.

There are two distinct factions in Louisiana politics—the Longs and the anti-Longs. The Long faction expects, and deserves, the bulk of the Negro vote. Generally speaking—and this is important—the opposition to Negro voting comes from the anti-Longs. The mainspring behind any move to bar Negroes from the polls is both racial and political. On the surface, blame, or credit is given to the racial situation. For the life of me, I do not know if this is more important than the political side of things.

The "purges" of registration rolls—there have been many, there will be more—are conducted strictly according to ancient law. These tricky stipulations as to how to fill out a registration card are being enforced in quite varying degrees over the State—reflecting local opinions and politics.

Under the law, any voter may challenge the registration of any other voter for the slightest flaw in the registration card. A hundred cards, taken in alphabetical order, were checked in Grant Parish. Ninety-nine were subject to challenge. A "purge" is an organized move to go through the voter rolls and challenge imperfect registrations. In most parishes, only Negroes are challenged; in some parishes both whites and Negroes are challenged.

Yet, Negroes presently registered equal 16 percent of the white vote. Between December 31, 1957, and January 31, 1958, white and Negro registrants increased at about the same rate. In 1952, statewide Negro registration was 97,101; in 1956, it was 152,387. During this 4-year period, white registration decreased while Negro registration increased by 55,000.

In 1952, 23 out of 64 parishes in Louisiana had no Negro registrants. Now there are just four such parishes.

At the polls, in contests that I know about, hot segregationist candidates have fared badly. In New Orleans, several Negroes have become candidates. They didn't win but still they didn't do so badly.

As mentioned in some few parishes, and this is a fascinating facet of the whole thing, whites have been challenged right along with Negroes. In one parish, 6,778 white voters were challenged and 5,940 Negroes. Not answering the challenge were 4,318 Negroes and 2,434 whites. Of the 1,632 Negroes who answered the challenge, 961 were reinstated.

Colfax, where I live, is a little country town in the small, poorish parish of Grant. Eight years ago there was an attempt to move the courthouse from Colfax. Colfaxians—there are Negroes on only the Colfax side of the parish—went out and brought in Negroes to register. They did it in such numbers that the election was never held.

A leader in that move, Williams Jennings Bryan Jones, is now president of the local White Citizens Council and as such recently sparked a purge. Again, politics. The move, pushed over by State Citizens Council leaders, came just before the last presidential election and before the voting on a batch of Long-inspired constitutional amendments.

These political overtones enabled politicians on the other side of the fence, without raising the racial issue, to take steps to defeat the purge. Some 800 Negro voters were challenged. Of these, 488, or 64 percent, answered the challenge and were reinstated. (There are several methods of answering the challenge. I can only tell you of one method. The challenged person merely presents an affidavit signed by three voters certifying that he is who he is and has lived in the political area long enough to vote.)

Considering the number who had died or moved away, 64 percent is a high proportion to be reinstated. This purge received full coverage in the Colfax Chronicle—the only instance I know of where such goings-on have received full, honest reporting. And this was done with the full cooperation of the citizens council. As a result, there are few hard feelings in the community and the purge was 64 percent unsuccessful. The council has lost face and prestige and members. Negroes are registering without restrictions in Grant Parish.

It is my conclusion that in any political situation, Negro votes, in proportionate degree, assume the absence of effective restrictions on Negro voting. I think the shortage of Negro registrants in Louisiana stems from essentially two things. One is lack of concern on the part of the Negro—a don't-want-to-cause-no-trouble attitude. The other is plain lack of ability to read and write well.

Negro registrations in Louisiana will continue to grow, in part because of the schools on how to fill out registration cards, but more so because of the coming of a better educated generation.

Voting restrictions do exist in Louisiana—with political as well as racial overtones. Where voting restrictions exist, that is bad. You know, though, when there is a shortage of meal in the house but the corn in the field is ripening, that's good. In this sense, the situation in Louisiana is good—and getting better.

The Great Mail Robbery

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1958

Mr. CURTIS of Missouri. Mr. Speaker, I am placing in the RECORD today an editorial from one of our fine midwestern newspapers, the St. Louis Globe-Democrat. This editorial, captioned "The Great Mail Robbery," appeared in the May 12, 1958, edition.

I would like to call attention to that portion of the editorial which reads as follows:

The Globe-Democrat, like other right-thinking newspapers, hates to accept this handout. We are against subsidies, and we would like to pay our own way.

This statement reflects the commonsense of our free-enterprise system. It is a plea to place our Post Office Department on a sound fiscal basis:

THE GREAT MAIL ROBBERY

Every year, American taxpayers pick up the bill for a $250 million subsidy that Uncle Sam's postal service gives to the Nation's magazines and newspapers. This is the difference between what the magazines and newspapers pay for postage and what it costs to deliver copies of them to subscribers.

The Globe-Democrat, like other right-thinking newspapers, hates to accept this handout. We are against subsidies, and we would like to pay our own way.

For that reason, we have urged Congress, time after time, to hike second-class postal rates. Once again, this appeal seems to have fallen on deaf ears.

The news from Washington is that a joint Senate-House committee has refused to face this problem squarely. Instead, it has made a face-saving gesture. Its members agreed to hike the second-class rates, but only by the token amount of $25 million a year.

Worse still, this increase won't become effective at once, in time to help wipe out the Nation's large postal deficits. Instead, it will be spread over three annual installments. The first increase will start January 1, 1959 and the last on January 1, 1961.

On the matter of second-class postal rates, Congress can deal fairly with the taxpayer who foots the postal deficit in one way, and one way only. As we said last October 28:

"Newspapers have for years pleaded with the Postoffice Department to set up an accounting system separating newspapers from magazines, and have urged the Congress, when costs have been determined, to pass legislation raising second-class rates for newspapers and magazines to a point where we no longer receive, in effect, subsidy from the Government for mailing our newspapers. * * *

"According to the CONGRESSIONAL RECORD, the estimated loss in handling 5 leading magazines in 1955 was as follows: Life, $9,494,000; Saturday Evening Post, $6,069,000; Readers' Digest, $4,809,000; Look, $3,482,000, and Collier's * * * $3,177,000.

"Contrasted with this, the itemized breakdown of the amount of deficit occasioned by handling the 5 newspapers listed in the CONGRESSIONAL RECORD is: Chicago Tribune, $1,788,000; New York Times, $1,700,000; St. Louis Post-Dispatch, $452,000; Detroit Free Press, $232,000; Los Angeles Times, $180,000."

We hope that the Senate-House committee will think over the way it has pussyfooted around the postal rate issue. Let's give John Smith, Jane Doakes and all the other taxpayers a break, by ending the mail subsidy.

Report of New York County Lawyers' Association on S. 3275

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1958

Mr. MULTER. Mr. Speaker, the Committee on the Federal Courts of the New York County Lawyers' Association adopted, on April 28, 1958, a report recommending enactment of S. 3275 which provides for the representation by lawyers of indigent defendants in criminal cases in the district courts of the United States.

The report of the committee is as follows:

NEW YORK COUNTY
LAWYERS' ASSOCIATION,
COMMITTEE ON FEDERAL LEGISLATION,
New York.

Report of Committee on the Federal Courts on S. 3275, which seeks to amend section 3006 of title 18 of the United States Code, in relation to providing counsel to indigent persons charged with a crime.

RECOMMENDATION: APPROVAL

This permissive bill is approved because:

1. It provides means of assistance to indigent defendants, and

2. It provides that the district court shall choose the method of providing counsel for the indigent which is most appropriate to the judicial district.

Respectfully submitted.

COMMITTEE ON THE FEDERAL COURTS.

Who's Sorry Now?

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. PORTER. Mr. Speaker, my distinguished colleague the gentleman from Washington [Mr. MACK] has in recent weeks, become greatly alarmed over the injuries supposedly suffered by the Pacific fir industry from imports of Japanese hardwood plywood. Despite the fact that Douglas-fir plywood is softwood and hence, as stated by the United States Tariff Commission, not competitive with hardwood, imported or domestic, and despite the fact that the Pacific fir plywood industry is producing at the greatest levels in the industry's history, Mr. MACK's heart still bleeds for the alleged injuries to this thriving business from Japanese imports.

I want to call my distinguished friend's attention to a news story appearing in the May 15, 1958, issue of the Aberdeen (Wash.) Daily World. The headline reads "Vancouver Door Plant Closing; MACK Blamed."

The story goes on to say that because of Mr. MACK's sponsorship of a bill imposing an import quota on hardwood plywood, the Japanese Government has imposed an export quota on hardwood plywood, thus shutting off imports from Japan. The Vancouver Door Co. has been unable to obtain its requirements from domestic manufacturers and hence will have to close its doors indefinitely on June 1. If the gentleman from Washington [Mr. MACK] has any more tears to shed, let them pour out for this company in his own district, whose 40 employees will be out of work because of his misguided activities.

Under leave to extend my remarks I include the following article from the Aberdeen Daily World:

[From the Aberdeen (Wash.) Daily World of May 15, 1958]

VANCOUVER DOOR PLANT CLOSING; MACK BLAMED

MONTESANO.—Restricting the import of mahogany plywood skins from Japan is forcing the Vancouver Door Co. to close down on June 1, according to Paul Anderson, company representative.

Speaking before the Montesano Chamber of Commerce, Anderson said: "Pending legislation sponsored by Representative RUSSELL MACK on restricting imports has been primarily responsible for the decline of imported mahogany."

He explained that mahogany skins are very essential to the flush-door industry, and that other door plants eventually will suffer because of these restrictions.

To show just how detrimental the restrictions are to the door industry, Anderson said that Vancouver Door Co. will have to close down indefinitely starting June 1.

"All of our 40 employees are from Grays Harbor County," he said. He also pointed out that most likely the employees in other plants also will be deprived of work because of the restrictions.

"Roughly, 70 percent of our production has been dependent on plywood door skins. And there is no domestic supply to meet this demand."

BAD EFFECT SMALL

"The main reason given for these restrictions is that import of plywood from foreign suppliers is harmful to the fir-plywood industry in this country. However, only a small percentage of our plywood industries are adversely affected by these imports.

"The flush-door industry is unable to obtain its requirements from domestic manufacturers. This is the prime reason why we have been forced to close down.

"We hope that Representative MACK will reconsider his position on imports of mahogany door skins," he concluded.

Hon. Brent Spence

SPEECH
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. O'HARA of Illinois. Mr. Speaker, it is with a sense of deep appreciation of his high qualities of statesmanship and of affection because of his warm human attributes that I join with my colleagues in paying tribute to the Honorable BRENT SPENCE. In three Congresses it was my good fortune to serve on the great Banking and Currency Committee. In the 81st and 84th Congresses BRENT SPENCE was the chairman and in the 83d Congress the ranking minority member. In the 83d Congress the Honorable Jesse Wolcott was the chairman and in the other two Congresses the ranking minority member. I doubt if any committee in the Congress ever was more ably chaired. To me it was a great and inspiring experience to serve under statesmen of the caliber of BRENT SPENCE and Jesse Wolcott.

The career of BRENT SPENCE is a story of Americana. When the history of these almost three decades of his service in the House is written the name of BRENT SPENCE will be high on the roll of glory. So much of the legislation in the economic field that saved our Nation in time of crises and that bolstered us in times of uncertainty and danger bore the imprint of the brilliant mind and warm heart of BRENT SPENCE that there is not time even to start in the recital of his accomplishments and legislative achievements.

I am very happy at this opportunity to pay tribute to a truly great American and to voice the prayer that for many more years the Congress of the United States will have the benefit of his experience and of his legislative genius.

Walter Reuther's Socialist Background

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. HIESTAND. Mr. Speaker, before I am once more chastised as a labor baiter or labor hater, let me make one point clear. I believe in voluntary organized labor. Having been an employee for many years; the years which saw the formation of much of the labor movement, I am of the opinion that organized labor has done much good.

When it comes to conspiracy, embezzlement, goon squads, and acid throwing, many thousands of honest, hard working union members want no part of it. I have received letters from hundreds of such Americans who back my stand on labor and my bill, H. R. 10351, the workers bill of rights, designed to help curb abuses of union power.

Just as strongly as I support voluntary organized labor. Just as strongly as I oppose corrupt union leaders and gangster labor tactics. Just that strongly, I also oppose socialism and Socialist leaders wherever they are found. One prominent Socialist leader is also a labor leader. I am referring, of course, to Walter Reuther.

About 2 years ago I called Reuther America's No. 1 Socialist. Nothing has happened since then to change my mind.

Reuther came out of the recent labor rackets hearing smelling like the proverbial rose. Whether that was by accident or design is another story. For the moment, review with me, if you will, just a part of Reuther's Socialist background.

This man is not a Johnny-come-lately to socialism. He is a third generation socialist. His grandfather, who came to the United States in 1892, has been described as a German Socialist Democrat. Reuther's father was a labor organizer and a known Socialist.

Walter and his brother Victor attended Wayne University in Detroit for 3 years. During this period they were associated with many red, pink, and racial movements on the campus.

Later, Reuther studied and lectured at Brookwood Labor College at Katonah, N. Y. This school received great renown as a center for Socialist, radical, and leftwing activities.

Walter and Victor went to Europe in 1933. They worked and studied in an industrial plant in Russia. On January 20, 1934, they wrote a letter to a friend in Detroit which has received consider-

able attention, though not nearly so much as it deserves. Excerpts from the letter are quoted below:

The daily inspiration that is ours as we work side by side with our Russian comrades in our factory, the thought that we are actually helping to build a society that will forever end the exploitation of man by man, the thought that what we are building will be for the benefit and enjoyment of the working class, not only of Russia, but the entire world, is the compensation we receive for our temporary absence from the struggle in the United States.

Mel, if you could be with us for just 1 day in our shop you would realize the significance of the Soviet Union. * * * Here are no bosses to drive fear into the workers. * * * I tell you, Mel, in all the countries we have thus far been in we have never found such genuine proletarian democracy.

We are watching daily socialism being taken down from the books on the shelves and put into actual application. Who would not be inspired by such events?

And finally, the Reuther brothers sign off with:

Carry on the fight for a Soviet America.

The letter is signed, "Vic and Wal."

In 1935, Communist Nationalist Students League for Industrial Democracy merged. This was done at a conference in Columbus, Ohio. Three Reuthers, the brothers Walter, Victor, and Roy, participated in this conference. Celeste Strack, representing the central committee of the Communist Party, vouched for them.

Walter Reuther was an active supporter of the Young People's Socialist League. On March 18, 1936, at a meeting of this organization Reuther was introduced as "Comrade Walter Reuther." He made a speech and then answered questions. One question put to him was, "Do you believe in religion and God or in science as a religion?" His answer was, "We do not believe in God, but that man is God."

This could go on and on. Reuther has denied being a Communist. He has never, to my knowledge, denied being a Socialist. Therefore, it isn't really necessary to document his background of socialism, except as a reminder.

The leopard has not changed his spots.

Van Cliburn, an American Boy

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1958

Mr. KEOGH. Mr. Speaker, the tremendous ovation accorded to the young and brilliant American pianist Van Cliburn is evidence of the virility of our system and also of the universality of the arts. Much has been said and written about his great triumph—much more undoubtedly will follow but the article which appeared in the New York World-Telegram of May 20, 1958, written in the inimitable and fascinating style of the well known and reputable staff writer, Ed Wallace, is one that might well be recorded for all to read. In it Mr. Wallace happily has portrayed the momentous event in typical American fashion so that one need not himself be a Horowitz, Rubinstein or even a Van Cliburn to sense the tremendous genius of this young American:

WONDER BOY WINS THROUGH

(By Ed Wallace)

By 7:30 last night a great crowd had gathered at the place where the young man was to go on trial. It was an orderly crowd which made no move to liberate the boy.

A woman said, "I'd give anything if I could go in there."

Her companion played down the excitement. "Two months ago these people never heard of this kid. Now they're all worked up because he plays the piano. So what's a piano player?"

Inside, where the trial was to take place, every seat in Carnegie Hall was filled. The ushers (female) were fidgety. The crowd leaned heavily to society, that is to say many of the ladies wore very little above the waist, and the men were either meek, or forceful and bored.

As at every trial or execution one thought filled the crowd—what does he look like? The symphony of the air played through one piece and then Van Cliburn, the piano's wonder boy, came dangling out on stage. The boy is so tall and thin, he had the appearance of a rope hanging from the ceiling, until he bowed and smiled.

MOSCOW WAS RIGHT

There was a polite ovation, but nothing wild. Van Cliburn came back from Moscow this week where he won the Tchaikovsky International Contest. The Russians said he was the greatest player in the contest—but who's going to believe the Russians?

Van Cliburn sat down at a 9-foot piano and Kiril P. Kondrashin, a conductor he brought back with him, sicked the band on Tchaikovsky's B-flat minor concerto.

Van raised his hands and looked at them, like Ted Williams making sure the trademark is up, then attacked the first movement: Allegro non troppo e molte amestoso. That means that Tchaikovsky meant for pianists to belt the living daylights out of it.

In this Mr. Cliburn proved no disappointment. In 3 minutes he proved that the piano was well made. At the end of the first movement, world peace seemed a possibility. Moscow had told the truth. There was no trick to this report. Van Cliburn is not just good, he's great.

When the concerto was finished the kid unfolded, loped over and kissed the conductor on both cheeks and wrung the hands of several nearby fiddlers. I investigated this kissing matter and was told that the Russians have a custom, chacun a son gout, or something like that.

NEW RUBINSTEIN?

The first concerto had relieved the tension. Half the crowd had wondered if the kid would fall on his face and prove to be just another pianist. At the intermission people were calling him the new Horowitz, or the new Rubinstein, according to their preference.

When Mr. Cliburn came back for the final concerto it was possible to get a better look at him. To me he looks like a kid who would work for an Astoria roofing contractor, or maybe be a lineman for the Southwestern Bell Telephone Co. Put levis on him and he could be deputized by Marshal Matt Dillon. Down there in Texas they call that kind, a big old long drink of water.

Van came to bat again in the ninth and got the good wood on Rachmaninoff's D minor concerto. One chord in the allegro ma nontonto would have gone 400 feet if it hadn't hit the 57th Street wall.

When it was over Van had entered that select little group of a dozen or more men who can make a living in this country playing concert piano.

He had proved that he is both great and lucky, and also proved that hundreds of other young talents are wasted like water because they never get the big break.

Outside Carnegie arguments were raging at the concerto's end, but one young man was making more sense than all the rest.

"Van Cliburn or Joe Blow—thank God it finally happens to somebody," he shouted. "Who cares who he is? It finally happens to some guy. Who cares if a hundred others can play as good. * * *

"This is fabulous—the good luck, the big break didn't keep on not happening to anybody. Tomorrow the automat will be full of concert pianists, but the greatest thing in the world has happened to this guy."

Reorganization of the Army National Guard and the Army Reserve

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1958

Mr. BROOKS of Louisiana. Mr. Speaker, many questions have been asked about the reorganization of the Army National Guard and the Army Reserve, as proposed by the Defense Department. A complete report on this subject was made on May 21, 1958, by Gen. Maxwell D. Taylor, Chief of Staff, United States Army, before the State Governors' Conference at Miami, Fla.

I am pleased to present to the Congress this report, for careful study. It is as follows:

ADDRESS BY GEN. MAXWELL D. TAYLOR, CHIEF OF STAFF, UNITED STATES ARMY, AT THE GOVERNORS' CONFERENCE, MIAMI, FLA., MAY 21, 1958

I appreciate the opportunity of appearing before you to discuss the planned reorganization of the Army National Guard resulting from what we, in the Pentagon, call the 1960 Reserve Forces structure. I know that this is not a new subject to you. Secretary Brucker discussed the matter with your adjutants general at their meeting at Phoenix on April 15. The Vice Chief of Staff, General Lemnitzer, went into the matter in considerable detail at the conference of senior National Guard commanders and their staffs at Fort Leavenworth some 2 weeks ago. Although I am sure that much of this information has reached you, I was most happy to receive the opportunity to come to Miami and talk directly to you gentlemen about this very important readjustment of our Reserve Forces structure.

This proposed change in the Reserve Forces structure is not an isolated incident unrelated to the events which are taking place throughout our defense organization. It is but one part of a broad program designed to aline all of our Army forces, active and reserve, in consonance with the requirements of modern warfare. It is the direct outgrowth of our estimate of the role to be played by the National Guard in the execution of our approved war plans. It follows in the trace of the reorganization of active Army units which began some 2 years ago and was completed last March. It is the interrelationship of this National Guard

problem to our overall defense problem which I want to make clear in my discussion today.

I would like to initiate the discussion by posing the question: Why is it necessary to reorganize the National Guard at this time? I would then answer by saying that there are two fundamental reasons. First, it is essential to reorganize the National Guard divisions in accordance with the so-called pentomic structure which has been adopted by the Regular Army divisions. Second, it is essential to adjust the Reserve Forces structure to the requirements of approved war plans. Now, if you will permit, I would like to develop both of these points.

After several years of study of the effects of modern atomic weapons and their impact upon the tactics of future warfare, the active Army decided in the autumn of 1956 to initiate the reorganization of its divisions in line with the pentomic concept. This concept derived from the need to equip our divisions with atomic weapons, while at the same time giving them a pentagonal structure by increasing the basic combat units within the division from 3 to 5. Hence this artificial word, "pentomic," to describe the new structure.

The new organization of these divisions was based upon four considerations. The first was to give the division commander atomic weapons within the organic structure of his division. The second was to organize the division so that it could disperse readily in the case of atomic attack into semi-independent battle groups replacing the present infantry regiments. Third, the new organization was to take full advantage of the progress in signal communications which permits a division commander to control more subordinate units than formerly. Finally, it was considered important to reduce the organic equipment in a division to that which is habitually needed in any theater of operations.

The resulting divisions are considerably smaller than those of World War II. For example, the infantry division has been reduced in strength from 17,500 to 13,700. At the same time the number of companies in a division has gone from 114 to 77. However, whereas there are 37 fewer companies in the pentomic divisions, in the case of the infantry rifle companies, their strength has increased from 196 to 243. In short, the trend, particularly in infantry, has been to fewer company-size units but with greater strength.

The reorganization of National Guard and Army Reserve divisions along these lines has been deliberately held back pending the completion of the reorganization of the active Army. We took this decision with the thought that experience of the active Army would perhaps develop solutions which would assist in the conversion of the Reserve forces. It is now time for the reorganization of the Reserves to begin. Plainly, all of our divisions, active and Reserve, must have a common pattern. They must be trained along similar lines and have a similar measure of combat effectiveness. I believe that all, or virtually all, of your National Guard generals will tell you that they heartily favor this kind of reorganization.

However, you will note that its acceptance implies a rather drastic reorganization of units and a reduction in company size units within the division. It does not account for the whole problem facing the guard, but it does account for a substantial portion of it. Nonetheless, the National Guard officers with whom I have talked seem to accept this problem and are anxious to get on with the business of reorganizing along pentomic lines. I emphasize this point to establish that, regardless of other features of the plan we are discussing, a considerable measure of reorganization is inevitable if we are to give a modern configuration to the guard divisions.

The second requirement for the reorganization of the Reserve forces which I mentioned was the need to aline our Reserve structure to the requirements of approved war plans. We are in a critical period in our defense preparations, when the demands made by the Armed Forces are constantly mounting. Our weapons systems are becoming more complicated and more expensive. In order to man these new weapons, we require better people who in turn must be better trained and better paid. The consequence is a constant mounting of the military budget to the concern of all of us who are involved in national defense.

At such a time, the armed services are properly called to an exact accounting as to the essentiality of their needs. We must verify that the assets entrusted to us contribute materially to the improved security of the United States. There is no room for the nonessential nor the nice-to-have. Every part of our military organization must be prepared to pull its weight in time of war.

In such a climate, all of our Army forces—active and Reserve—come under the probing scrutiny of the Joint Chiefs of Staff and of the Secretary of Defense. We Chiefs examine each other's forces and demand an accounting as to how they contribute to the deterrence or the winning of war. If the responsible Chief is unable to justify his forces, we feel compelled to insist upon their elimination or modification.

Thus it is that the Army's Reserve structure, both that of the National Guard and the Army Reserve, has been very closely examined to determine whether all of the individuals and units have a role to play in approved war plans. If this relationship cannot be established, they have been earmarked for elimination or for conversion. In particular, Reserve units have been examined to determine whether or not they must be in existence in time of peace in order to meet the mobilization schedule approved for implementation in time of war. If they can be organized and trained after M-day and still meet their schedule, they should be scratched from the peacetime roster.

I can illustrate the problem by describing a hypothetical mobilization plan which shows in the simplest form the basis for establishing the need for Reserve Forces. Let us assume that an approved war plan requires the deployment overseas of 4 Army divisions per month for 12 months following mobilization day. Let us also assume that we can ready high-priority reserve divisions for deployment by the fourth month following mobilization. Let us also assume that we can create entirely new divisions from scratch, without having been in the peacetime reserve structure, by the tenth month after mobilization. Question: How many divisions should be in the active Army and how many in the Reserves?

Under the terms of these assumptions, the active Army should consist of those divisions deployed overseas plus the 12 divisions to be deployed in the first 3 months of war. Currently, we have 7 divisions overseas, so that in this exercise, the active Army should consist of 19 divisions, whereas the reserve divisions should amount to 24, corresponding to the 4 deployed each month for the 6 months from M+4 to M+10. Of these 24 divisions, those to be deployed earliest, in the fourth and fifth months for example, will need to have a higher degree of readiness in peacetime than those required toward the end of the deployment schedule. That is to say, it will be necessary to favor the earlier divisions over those which do not have so high a degree of urgency. By favoring I mean giving them greater peacetime strength in personnel and equipment than others farther down the list.

For this particular hypothetical war plan, then, the Army needs 43 divisions, 19 in the active Army and 24 in the reserve structure. I have spoken only in terms of divisions because they are the most visible units of Army strength. Our actual mobilization plan is much more complex. For example, not only must we have divisions, but also the supporting troops necessary to balance these divisions. Our antiaircraft units must be ready to fire on M-day and, as you know, we are counting heavily on National Guard units to reinforce the antiaircraft missile units of the active Army. Finally, we must have hundreds of thousands of individuals to fill positions which do not exist in time of peace.

The actual war plan and its supporting mobilization plan are similar in general outline to this hypothetical plan which I have presented. Without going into detail, I can tell you that the Joint Chiefs of Staff have determined that the reserve divisions strength corresponding to the 24 in the foregoing exercise is 27 for the approved mobilization plan. This then is maximum reserve divisions strength for which the Army can seek budgetary support. If additional divisions are needed in case of war, they can be formed from scratch after the commitment of these 27 reserve divisions. Hence the Army should readjust the reserve component structure so that it will contain no more than 27 tactical divisions with the necessary supporting units and individuals. This is the requirement to realine our forces to the approved war plan which I mentioned at the outset.

As you know, in the present Reserve component structure there are 37 tactical divisions—27 National Guard divisions, and 10 United States Army Reserve divisions. If we proceeded in accordance with the logic of the foregoing discussion, we should now convert 10 of these divisions. Until quite recently we had proposed to convert 6 National Guard divisions to so-called combat support divisions and 4 United States Army Reserve tactical divisions to replacement training commands. This plan which was described by Secretary Brucker at Phoenix and by General Lemnitzer at Leavenworth was developed by the Army in strict compliance with the directives of proper authority.

However, as an outgrowth of the meetings mentioned above we have received a large number of comments and suggestions from members of the National Guard and the United States Army Reserve. Many of you governors have communicated your thoughts on the subject to the Secretary of Defense or to the Secretary of the Army. This morning Secretary Brucker and I are happy to announce that there has been a relaxation of the original guidance upon which our plans thus far have been based. The Army has been authorized to develop a plan looking toward the retention of the present 37 divisions in the Reserve Forces structure, that is, 27 National Guard divisions and 10 USAR divisions, provided that this troop structure is maintained with no increase of cost or personnel beyond currently programed levels. As a result, the Army will make a complete review of its present plans in order to bring them in line with the revised guidance. We are indebted to the Secretary of Defense, Mr. McElroy, for giving us the authority to take another look at the problem under less restrictive guidelines.

I am sure that you would like my estimate of the probable outcome of such a review. Prior to a thorough study by the staff, I would not wish to say anything which might imply a commitment. My off-the-cuff re-

action is that it will be possible to retain all 37 divisions under the conditions laid down by the Department of Defense; however, it will be essential to establish priorities, both in personnel and equipment, consistent with the requirements of the mobilization schedule. In other words, those divisions which must be ready at an early date must continue to receive priority treatment. The problem, in the case of the National Guard, will be to spread over 16 infantry divisions the personnel and equipment presently planned for 10 divisions. In order to create 16 divisions in this way, it will probably be necessary to scale down each of the present triangular divisions to pentomic divisions of 3 battle groups. However, the great advantage of such a plan would be that no State would lose a division presently organized, and that each division would have a balanced tactical structure permitting ready augmentation for its combat employment.

I might say for completeness that a parallel adjustment is being considered in the case of the plan for the USAR divisions. The thought is that the four divisions previously earmarked for peacetime conversion to replacement training commands would retain their present tactical organization.

Now, a few words as to how we propose to implement this reorganization plan. First, the Chief of the National Guard Bureau will inform each State of the units and personnel strength allocated to it. Based on that allocation, the State will draft its own plan for the reorganization of its units and submit it to the Chief of the National Guard Bureau. Then, when the State plan has been approved, the Chief of the National Guard Bureau will specify the time for the plan to be put into effect. This program will be phased over a period of about 2 years to allow ample time for consultation with the States and to avoid involving the entire Guard at one time in the turmoil of reorganization.

You will note that I have said nothing about the reduction in paid drill strength of the Reserve Forces. This is a completely separate matter. As you know, the President's budget before Congress proposes a reduction from 700,000 to 630,000 for the combined National Guard and Organized Reserve paid drill strength. This action would result in a reduction in the National Guard paid drill strength of some 40,000, to a new paid drill strength of 360,000. Whether or not this reduction wil be effected depends, of course, upon the action of Congress and higher authority. But such a reduction, I would emphasize, has no direct bearing upon this matter of the reorganization of the force structure. A higher paid drill strength would allow a somewhat increased authorized strength level in certain units. It would not result, however, in the creation or the retention of additional units.

I have described this matter to you as viewed through the eyes of the Chief of Staff who is deeply concerned over obtaining maximum combat effectiveness from the resources made available to the Army. I know that this point of view is not the only one to be considered. I recognize that you gentlemen, as Governors of the States, have a vital interest in this matter. Furthermore, I realize that you may see the matter from a somewhat different angle than mine. It is for that reason that I wanted to come here today to talk very frankly to you about the problem as I see it. I hope that, in the question period, you will be just as frank in expressing your point of view about this whole matter. I do want to state, however, that it is my unqualified professional opinion that the acceptance and implementation of a reorganization plan such as I have described are essential to the vitality and effectiveness of the National Guard as an essential component of our national defense.

Parity Prices and Price Supports

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1958

Mr. SCHWENGEL. Mr. Speaker, under permission to revise and extend my remarks, I wish to make a few observations which were prompted by the remarks of the gentleman from Massachusetts, the distinguished majority leader, with reference to the current prosperity on the farm. The gentleman says that the administration has broken its promises to the farmer, and intimates that although the Republicans are responsible for the decline in farm income, they have nothing to do with the present upturn in prices.

It is becoming increasingly clear that political management of agriculture does not work very well. By the time Congress can recognize a new situation and enact legislation to deal with it, the situation has changed and the legislation enacted no longer fits.

A rundown on the farm situation in the May 12 issue of Time commented as follows:

The best economic news in the United States last week, bar none, was the boom in United States agriculture. From all over the country reports trickled into Washington showing that the farmer, after being the lowest man on the economic totem pole since 1955, is making an astonishing comeback. Agriculture Department experts scarcely dared believe some of their own figures. As of mid-April, the prices that farmers get are up 9.8 percent over the same time last year. The prices they pay are up, too—some 3 percent. But the net improvement is pushing their annual income to $13 billion versus $11.5 billion last year.

Moreover, the picture in individual farm commodities is even brighter. Items:

"Thanks to a brisk competition between steak-hungry consumers and farmers trying to rebuild their drought-depleted cattle herds by holding back or buying up heifers, beef prices were running 30 percent above last year, spreading joy from Texas to the feed lots of Kansas City."

"Hogs were up 20 percent above last year and holding long after most farm economists expected a seasonal price break; many counties in the corn belt reported the most favorable corn-hog ratio in history—up to 25–1. (Usual make-money point for hog raisers is when 1 hundredweight of live hog sells for 12 bushels of corn.)"

"Even the egg—a big thing from California to Delaware—was selling for 25 percent above last year, so high that many poultrymen feared consumers might rebel."

"Partly because of the Florida freeze, but also because of continued high food demand from city folks, fresh vegetables were selling 40 percent higher than last year."

"And the one heavily subsidized potato was selling, unaided, more than 150 percent higher, carrying the new farm prosperity all the way up to Maine's Aroostook County."

I note with amusement an item in the May 19 issue of Time:

Running unsuccessfully for the United States Senate against Indiana's Republican HOMER CAPEHART 2 years ago, Claude R. Wickard accused the Eisenhower administration of basely betraying the United States farmer. Cried President Franklin Roosevelt's Secretary of Agriculture (1940–45): "I have before me (Candidate) Eisenhower's promise to farmers in 1952 and (President) Eisenhower's veto message of the first 1956 farm bill. Like the man on the flying trapeze, he has switched from one to the other with the greatest of ease."

Last week, with farm prices rising rapidly (Time, May 12), Claude Wickard, no longer running for public office, abandoned agricultural recession as a Democratic issue. Confiding to reporters in Kansas City that his 620-acre farm at Camden, Ind., is making money hand over fist, Wickard said: "I can't complain about $21 hogs. My son-in-law and I sold 10 Holstein cows the other day for $250 each. I didn't believe in Santa Claus until then."

Had we succumbed to the specious reasoning of candidate Wickard 2 years ago—had we been so reckless as to adopt the remedies proposed by candidate Wickard—I doubt that farmer Wickard would today be enjoying the hog and cattle prices he is now receiving.

Farmer Wickard attributes his newfound prosperity to Santa Claus. But his gratitude is misdirected. He should attribute his prosperity to the stubborn persistence of our Secretary of Agriculture in adhering to economic principle and sound commonsense. Had Mr. Benson listened to candidate Wickard, had he chosen to take the easy road of political expediency, I do not think farmer Wickard would have any reason to thank Santa Claus or anybody else today.

Now it is interesting and perhaps instructive to note that the commodities currently making the most contribution to better farm income are the commodities that, comparatively speaking, have been neglected in national farm legislation. They have been neglected largely because no one has been able to figure out practical and workable ways and means whereby production and marketing controls may be instituted. How fortunate they are.

But there has been no lack of interest in trying to devise schemes for political intervention in the price, production, and marketing of these products. In recent years the Secretary of Agriculture and the Congress have been pressured from time to time to institute programs for beef, for hogs, for poultry products.

Had the Secretary or the Congress responded to these pressures the market outlook for these commodities would be far more pessimistic today. Had we gone along with these pressures, a tremendous stimulation to production would have been provided. We would find ourselves today in the situation that our cold storage warehouses would be full and overflowing with meat products. The problem of rotating stocks would be a major difficulty. We would be seriously debating impractical and unworkable production control programs to keep from being buried by the deluge of meat production encouraged by Government price fixing.

The reason for the new hope in many fields of agriculture today is not what Congress and the Secretary of Agriculture have done, it is what they have avoided doing.

The short run expedient that looks like it will help an existing situation, will often do so, on a short run basis, but it creates long run consequences that are disastrous to the future earning ability and opportunity of farmers.

The May 12 issue of Time went on to report:

Main Street Evidence. But as far as the general United States economy was concerned the best evidence of farm recovery was on the main streets of farm towns. In Oskaloosa, Iowa, a typical midwestern farm market town (population 11,000), where farmers long were sullen and resentful over drought and low farm prices, Time correspondent Jonathan Rinehart found cash registers jingle-jangling more merrily than in years. * * *

Clay Carriker, manager of Green's Ford, said that his new-car sales for the past 60 days were 20 percent ahead of 1957, used cars, 30 percent; highpriced new trucks were slow, but lower-priced used trucks were hot. Another major beneficiary of the farmer's new-found prosperity was the farm machinery business. Owner Don Berkemeir of the Lytle Implement Co., reported that he sold 25 new tractors so far this year; * * * "Business," said Berkemeir, "is within a few dollars of double last year."

Not only has returning farm prosperity benefited virtually every Oskaloosa business (lumber dealer Jim Mathew figures his sales are up 50 percent due largely to farmers fixing up the old home place or repairing the barn), but it has brought a flock of new civic improvements in progress, e. g., three new schools, a $200,000 bowling alley and amusement center. * * *

Oskaloosa's good fortune was not unique. The Central Iowa Farm Business Association completed its annual report on 153 representative farms, reported net income in 1957 averaged $11,200, or 32 percent over 1956's $8,467 and more than 2½ times 1955's low of $4,235. For a national view, the Farm Journal polled its regional correspondents, found business noticeably better in every section except the Southeast, where row-crop farmers have been hit by weather and acreage cuts, but livestock and poultry farmers are prospering.

It is time that the Congress stopped dealing with farm problems in political terms.

It's time to recognize that sound economies must be the foundation of farm programs.

As an Iowan, I am particularly interested in corn, and the livestock products produced from corn. Thank goodness that the corn farmer has gained a relative degree of freedom from government.

But it is time for Congress to eliminate the present ridiculous program for corn—a program that few farmers comply with except by accident.

The annual establishment of unrealistic corn allotments that nobody pays any attention to, is a waste of money and effort that can be better expended for other purposes. I can see no warrant for the continuation of corn allotments. I hope the Agricultural Committee is not going to come up with proposals designed to tighten up on corn production, or any program based upon the erroneous assumption that price fixing and production control programs will work for corn or other feed grains. They won't.

It is also time for Congress to permit corn price supports to reflect market factors, so that corn producers can produce for the market and market what they produce, and avoid the creation of burdensome surplus stocks. The future of corn producers is not to be found in comprehensive Government programs involving regulation of the production and marketing of corn.

Report of the Honorable Perkins Bass on the Mutual Security Program

EXTENSION OF REMARKS

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1958

Mr. CHIPERFIELD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include a report by Hon. PERKINS BASS on the mutual security program:

Foreign aid or mutual security—call it what you will—this much is certain: No other Government program has been subjected to such constant and intensive critical investigation and study, year after year, by so many different groups and individuals, the motives of most of whom have been, at least originally, severely critical.

And yet, year after year, Democratic and Republican Presidents have recommended multi-billion-dollar military and economic aid programs for countries all over the world.

And, year after year, Congress has first authorized and later appropriated most of the money requested for these programs—almost always reluctantly but nevertheless regularly and substantially in the amounts needed.

As a further paradox, all the evidence points to the conclusion that the mutual security program has been the least popular of any Government activity, in the sense that there's no interested or spontaneous public demand for what so many condemn as a giveaway.

How can one account for this paradox?

I've seen no more effective justification than the simple and direct words of the President last week: "No nation, not even the United States, can isolate itself from its friends and still be secure."

Or in the equally compelling words of the House Foreign Affairs Committee report: "The termination or drastic curtailment of the mutual security program would inevitably mean that we would lose the cold war."

Neither of these views is new. Rather, it is the increasing evidence that these statements are true, which has convinced more and more of our people we need this program.

It has been most revealing over the past 3 or 4 years to watch this conviction sink in. It has been impressively demonstrated in the results of opinion polls taken in their districts and States by a number of once-opposed Congressmen and Senators.

Behind this growing support has been greater public understanding of the fundamental facts of foreign aid—facts which were more effectively brought home in many cases as a result of the studies and investigations their own earlier opposition and questions had caused.

Facts like these: That this is no giveaway program. Instead of sending dollars abroad, we are providing military equipment, food, loans, and technical advice to help strengthen allied military forces and encourage higher living standards in underdeveloped countries.

That without friendly military forces and bases, it would cost the United States about five times as much to station Americans abroad where they would be required for our own security.

That more than 80 percent of all foreign aid is spent immediately in the United States to purchase military hardware, equipment and supplies from our factories. This provides jobs for about 600,000 persons, including 24,000 jobs in New England.

That we are not trying to buy friends, which we know is impossible, but rather we are helping to build genuine independence among weaker countries, based on political and economic stability, as the best way to resist the spread of communism.

That many, but not all, of the weaknesses in the foreign-aid program have been eliminated and its administration tightened up as a result of the constant pressure for better performance directed at the agency by Congress and other public and private watchdog groups.

This year's mutual-security authorization bill included a request by the President for approximately $3.3 billion, which the House Foreign Affairs Committee carefully pruned to $2.96 billion—$1.64 billion for military and $1.32 billion for economic aid.

The most controversial area of foreign aid—assistance to Poland and Yugoslavia—is only slightly involved in this bill. Poland is not included at all, since aid to that country has been limited to the sale of some of our agricultural surpluses and to loans through the Export-Import Bank—two separate programs. No more military aid is scheduled to Yugoslavia, though a certain amount of economic aid is provided in this bill. In view of the fact that Yugoslavia's insistence on her independence is infuriating the Soviet Union, such aid may be justified as a calculated cold-war risk, though I have some doubts about this.

In the last analysis, it seems to me the question of our mutual-security program is nothing less than the question of our national security. We've stopped the Russians and are continuing to hold them in check militarily. But the cold war is now being fought in the shops and factories and steel mills of the world. The prize is the power to guide the industrial and economic growth of the world toward freedom or slavery.

Khrushchev, in his recent declaration of economic war on the United States, bluntly warned that the Soviet threat to the United States is in the field of peaceful production. "We are relentless in this," he said, "and we will prove the superiority of our system."

Unless we meet them successfully on this ground, ground we always considered our strongest, the alternatives are, as President Eisenhower put it, "grim." "They are," he said in this order, "a fortress America, then a regimented America—finally a defeated America."

These are the reasons why I shall again support this program.

Report of New York County Lawyers Association on H. R. 11102

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1958

Mr. MULTER. Mr. Speaker, the committee on the Federal courts of the New York County Lawyers Association adopted, on April 28, 1958, a report recommending against enactment of H. R. 11102 which seeks to amend the jurisdiction of district courts in civil actions with regard to the amount in controversy and diversity of citizenship.

The report of the committee is as follows:

NEW YORK COUNTY
LAWYERS ASSOCIATION,
COMMITTEE ON FEDERAL LEGISLATION,
New York.

Report of committee on the Federal courts on H. R. 11102, which seeks to amend sections 1331 and 1332 of title 28 of the United States Code, in relation to increasing the amount-in-controversy limitation in original jurisdiction civil actions and in diversity cases to $10,000.

RECOMMENDATION: DISAPPROVAL

This bill would tend to make the Federal district court a rich-man's court by denying access to persons having causes ranging from $3,000 to $10,000.

Respectfully submitted.

COMMITTEE ON THE FEDERAL COURTS.

Midland Tex., Junior Chamber of Commerce Election Workers

EXTENSION OF REMARKS
OF
HON. J. T. RUTHERFORD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. RUTHERFORD. Mr. Speaker, the Midland, Tex., Junior Chamber of Commerce has recently made what I believe to be a fine contribution to good government. It was my thought that perhaps the Members of this body would be interested in knowing the details.

In Texas, cost of elections are not paid for by tax funds. Candidates for office must pay a filing fee sufficient to take care of all election costs. Early this year, Democratic County Chairman Frank Bezoni of Midland announced the costs would be high enough to make it necessary to assess each individual candidate some $600 to cover all costs.

Mr. James N. Allison, Jr., who is vice president of the Midland Reporter-Telegram Publishing Co., and also president of the Midland Junior Chamber of Commerce, immediately went into action. After contacting members of the Jaycees, Mr. Allison offered to furnish volunteer workers at the polls in order to eliminate the $20 per day per person cost of having paid election officials. This made it possible for the candidate to pay only $25 each in Midland County as opposed to the $600 each earlier contemplated.

Both County Democratic Chairman Bezoni and County Republican Chairman Tom Culberson of Midland have expressed appreciation to the Midland Jaycees for their offer. They said such a program should be of great value in encouraging greater participation in political activities.

Several other county chairmen in Texas have asked for details of the plan to be carried out by the Midland Jaycees, and for a report of the results. With the eyes of Texas on them, I have no doubt the Midland Jaycees will prove themselves equal to the task they have cut out.

The Midland Junior Chamber of Commerce has long been recognized for its nonpartisan, constructive work in the field of government. They won statewide recognition in advocating a plan whereby substantial salary increases would be paid to the members of the Texas Legislature. These acts, and their other many civic services, are much appreciated by the people of Midland, a progressive, modern city of some 55,000 people in west Texas. I wish to extend my congratulations to President Allison and the membership of the Midland Jaycees for their continued fine work.

Although each individual State has its own election laws, it may be the actions of the Midland Junior Chamber of Commerce will be helpful in other States and will open up new and unexplored avenues of approach toward solving election costs. Their plan could be the first step in getting many Americans, both as members of organizations and as individuals, to help with Government at the local level. This would be a great thing for the Nation. I am happy to have the opportunity to call to the attention of the House this most commendable action on the part of the Midland Junior Chamber of Commerce.

American Labor and Foreign Affairs

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1958

Mr. SHELLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by AFL–CIO President George Meany to the Commonwealth Club of California.

This speech, entitled "American Labor and Foreign Affairs" sets forth with great eloquence the interest and enthusiasm the American labor movement is showing in foreign affairs.

The address follows:

When I last had the pleasure and privilege of appearing before you—almost 12 years ago—I spoke to you in a broad and general way about the American trade union movement—its aims, principles and ideals. At that time, I emphasized the fact that American labor was an integral part of the American system and, as such, it had to make its contribution in every way possible to the preservation of that system.

Today, I wish to discuss with you the trade union attitude in regard to the most important problem facing our Nation—the position of the United States in world affairs or, even more explicitly, might I say the role our country must play as the leading Nation of the free world in the titanic struggle now going on between the free way of life as represented by the democratic nations and the slave system represented by the Soviet Union with its clearly defined objective of Communist domination over the entire world.

American labor's interest in foreign affairs is not something new. When I was with you last, I think I told you that during all the years of its existence American labor had a keen and vital interest in the welfare of workers throughout the world. Back in 1919, Samuel Gompers was the dominating influence in bringing about the creation of the International Labor Organization when the Peace Treaty was signed after World War I. Ever since that time, American labor has been active in all international problems which have an impact on the overall question of world peace.

In recent years, American labor's interest in the international situation and its pressing problems has become more and more intensive. For one thing, with the rapid advancement of transportation, science and technology, the world itself has become much smaller. Happenings in far-away places that tend to develop political and economic tensions have an almost immediate impact on our country's position in world affairs. It is quite natural, in view of our Nation's new world position, for workers—as citizens—to try to help our country meet its many world responsibilities. In a sense, labor's growing interest in our Nation's foreign policy and our increasing involvement in international labor affairs reflect the rising interest of the American people, as a whole, in these matters.

Today, no voluntary, nongovernmental organization is as keenly interested and as actively involved in foreign affairs as American labor. In this light, you will be interested to know that our interest and participation in world affairs have already reached such a point that our policies arouse worldwide attention and response. Of course, the response from overseas is not always warm and friendly. When it is from Moscow, it is always hot and hostile.

The other day, Pravda, the mouthpiece of the Soviet Communist Party and Trud, the voice of the Kremlin's labor front, bitterly denounced the AFL–CIO for sponsoring an exhibit, in Washington, portraying forty years of Soviet dictatorship and aggression. I am sure that there must be some who ask: Why should American labor be so vitally interested in world affairs? Isn't the trade union movement just a bread-and-butter movement? Why should the bricklayer in San Francisco, the steelworker in Pittsburgh, or the garment worker in New York be so interested in what happens in some village in Tunisia, or in what goes on in Indonesia or some other faraway place?

The answer to this is quite obvious—in this age of sputniks, explorers, vanguards, and other scientific advances—American labor for its own preservation must have an interest in preserving peace and promoting freedom. That is why we face the present world crisis both as American citizens and as free trade unionists.

As citizens, we have a duty to contribute everything we can to our Nation's efforts to preserve freedom for ourselves and others who likewise cherish freedom.

As trade unionists, we have a natural urge to advance the cause of democracy as the only way of life under which it is possible for workers to join one with another in creating and maintaining unions for their mutual aid and protection.

Mankind's experience with modern totalitarian dictatorships—whether they be Fascist, Communist, Nazi, Falangist, or Peronist—has taught the wage earners of America some valuable lessons.

We have learned from bitter experience that workers are the number one victims of dictatorships of every type—right, left, Fascist or Communist. We know that there cannot be a free movment of workers dedicated to a better standard of life in a society that is not free.

More than this, we know without question that there cannot be a free society unless workers are free to form and maintain trade unions. Every dictatorship of modern times has destroyed the free trade union movement as a necessary first step to the establishment of complete state control. So, by their very nature, trade unions are the mortal enemies of dictatorship and injustice.

We have come to believe that in this atomic age it will not long be possible for the world to remain half free and half slave. The 20th century slave state, as exemplified by the Soviet Union, is a barbarous and brutalizing power. It does not hesitate to destroy tens of thousands—yes, even millions of lives—in order to maintain and extend its hold on more and more people—more and more territory.

It has no regard for the value of human life. It is not deterred or turned aside by any religious or moral concepts of human decency. Its spreading influence and control over more and more peoples; its implacable, constant, and sustained warfare on human freedom in every part of the world, compels those of us who cherish freedom and decency to give what aid we can to others who are struggling to achieve or maintain the right to govern themselves.

Applying this yardstick of supporting all peoples aspiring to freedom, American labor—in line with the best anticolonialist traditions of our own Nation—has been in the forefront of the fight by the international free trade union movement against every form of colonialism—the old western type as well as the new Soviet colonialism which masquerades under the designation—people's democracies. American labor favors the national independence and freedom of the Algerian people no less than it favors national freedom and democracy for the people of Hungary, Korea, Poland, Germany, Albania, Israel, and Egypt.

Fully aware of the direct relationship between economic well-being and political independence, American labor was in the forefront of the campaign 10 years ago for the Marshall plan which contributed so much to the economic buildup of the war-ravaged countries of western Europe and without which, in my opinion, all of Europe would have gone down under the subversive tactics of the Communists. We have consistently championed other foreign-aid programs to help people develop and strengthen their economy, their freedom, and their human rights. In the same spirit, the AFL-CIO has been supporting our country's reciprocal trade program.

With these lessons uppermost in our minds, we of the united American labor movement have utilized our strength and influence in the community to help build an ever-better and stronger America. We are convinced that only a prosperous and progressive America can provide the free world with the effective leadership and support it must have in order to deter Soviet aggression and defeat communism. Social injustice, low living standards, unemployment, and racial discrimination at home seriously impede our Nation in meeting its worldwide responsibilities abroad.

The present economic recession that we are experiencing here in America cannot be looked upon as a purely domestic affair. It has, without question, a definite bearing on our position as a nation in world affairs.

Today, with much of the free world prosperity, stability and security dependent on American economy being healthy, a sustained economic depression in the United States could prove fatal to the freedom and well-being of all democratic countries.

We cannot afford to risk delay in taking measures to keep our economy healthy, strong and growing. The Communist enemy within and outside our borders is cunning, ruthless and tireless in its drive to destroy our way of life. Never forget that Soviet economy is based on inhuman exploitation of the individual worker for the benefit of a militarized totalitarian state dedicated to aggression and world domination. Never forget that the Kremlin is ever on the alert to exploit for its own sinister ends weaknesses in our economy—no less than weaknesses in our defense system.

Nikita Khrushchev, the present czar of Russia, has boasted that his Communist dictatorship will beat us in technical progress and higher living standards.

Let me tell you how American labor feels about such Soviet boasts. As we see it, the Kremlin does not stand a chance of beating our free American economy, if, we increase our productivity, raise the purchasing power of our people and help improve the living standards—especially of the economically under-developed countries which are devoted to human liberty and peace. But, if we do not follow such a course, while making ourselves and our allies militarily strong enough to deter, and, if need be, defeat Soviet aggression—then Moscow can and will secure global domination and remold the world on the Soviet pattern of Communist enslavement.

Our freedom and our future depend on what we do with out country and what our country does abroad—far more than on Khrushchev's boasts and threats.

We must have much greater integration of our foreign and domestic economic and political policies. We cannot afford to permit our great industrial potential and mighty technical resources to run down or fall behind and yet expect to beat the Communist challenge or meet the Soviet threat effectively.

Positive action must be taken by Government to meet the economic situation now. There is too much at stake for us to wait any longer in the hope that things will right themselves.

In the field of foreign affairs, the American people as a whole have a duty as citizens of a democracy to seize every opportunity that avails to become more knowledgeable as to the position of our country in relation to the other nations of the world.

We have no right to sit back and leave the formation and implementation of national policy to a comparatively few elected officials. Under our system, with its free press, the columns of the country's newspapers are the daily medium for the transmission to the American people of all the vicious and subtle propaganda that is spewed forth daily from the Soviet Union by means of speeches, letters, raido broadcasts and statements from the Soviet rulers in the Kremlin.

Unless the American people, as a whole, take the trouble to find out the real truth about the so-called Communist paradise and its rulers, the constant stream of propaganda is bound to have an effect on American public opinion and, of course, that is just the end result which the Communists are seeking.

It would be in our best interest and in the interest of our future security as a nation for us to take a look every so often at the Soviets and ask ourselves—if no one else—certain questions like these:

What kind of a country is the Soviet Union?

What kind of men are those who rule in Russia?

When the leaders in the Kremlin speak of peace and freedom, just what do they really mean?

Can we find anything in the 40 years of Communist rule in the Soviet Union that would justify our acceptance at face value of Soviet promises?

What really happened in Hungary 17 months ago?

How did the people of Czechoslovakia, Poland, Rumania, Albania, Lithuania, Estonia, Latvia, and Bulgaria lose their national independence and become slaves behind the Iron Curtain?

What has happened in East Germany since it was occupied by Soviet troops at the end of World War II?

How many treaties of friendship with neighbor states have been treacherously violated by the Soviet Union in the last 40 years?

What was the agreement reached by the so-called Summit Conference of July 1955 regarding the re-unificatiton of Germany? Did the Soviet Union keep this agreement?

What was the real reason for the brutal attack by the Soviet Union on the people of Hungary in November of 1956?

What was the official action of the United Nations on the Hungarian matter taken after months of investigation by a committee from five of the small member nations?

Do the Russian people have anything at all to say about the foreign and domestic policies of the Soviets?

What is behind the present—almost frantic—propaganda campaign of the Soviets for a summit conference?

Do the Soviet leaders really want to reduce world tensions?

I am not going to attempt—because of time limitations—to answer all of these questions at this time. However, any one listening can get the factual documented answers to all these questions, and more about the Soviets, by writing to the AFL-CIO in Washington, D. C Incidentally, the American press could render a great service to our country if they would, from time to time, tell the American people the real facts in regard to the Soviet Union.

At this time, I would like to comment briefly on a few of these matters.

First, what really happened in Hungary in late October and early November of 1956? Simply this. The Hungarian people completely fed up with more than 10 years of Communist rule imposed upon them by Hungarian Communists—backed up by Soviet troops—turned on their oppressors; dispersed the cruel Security Police and took over the reins of government. This was a spontaneous revolt of the ordinary people of Hungary which came after years of the cruelest kind of oppression, amounting to virtual slavery and culminating in a situation where workers—despite long hours and constantly increasing norms of production—could not earn enough to keep their families from starvation.

For a few short days the Hungarian people were free. They made plans for the formation of a democratic government by holding free elections, allowing all political groups the right to participate in these elections and guaranteeing basic human rights to all. The Soviets withdrew their troops and entered into negotiations with the representatives of the Hungarian people under a flag of truce. A few days later, without warning at dawn on Sunday, November 4, 1956, the Soviets launched a brutal attack on the Hungarian people with thousands of tanks and planes and tens of thousands of fresh Russian troops.

As a result, thousands of defenseless Hungarians were brutally murdered, several hundred thousands fled into self-imposed exile and countless tens of thousands more were shipped off to the slave labor camps of Siberia.

Why this insane attack by Khrushchev on a defenseless people?

For many years, Soviet propaganda has emphasized a desire for peaceful coexistence between the democratic world and the Communist nations. In November of 1956, the Hungarian people gave the Soviets the opportunity to demonstrate the sincerity of their desire for peaceful coexistence. Here, the Hungarian people—after definitely rejecting a Communist form of government—merely desired to set up a democracy and live at peace with their giant Comunist neighbor.

The Soviet Union had no reason to fear economic or military aggression from defenseless, poverty-stricken Hungary. By no stretch of the imagination could little Hungary be a threat of any sort to the Soviets. What then did they really fear? It is quite simple. They feared freedom.

They could not afford to have the Soviet people look across the border at a country that had gotten rid of its Communist overlords and had set up a form of government dedicated to human freedom.

They could not afford to have the Soviet people gazing across the border into a former Communist country which was now holding free elections in which all political parties were free to participate. In short, they could not allow the enslaved people of the Soviet Union itself to get any ideas about such things as individual freedom, human rights, free elections and things of that sort. This then is the real reason behind the brutal murder of tens of thousands of Hungarians by Khrushchev and his ruling clique in the Kremlin.

This is why the United Nations, after months of investigation by a committee from 5 of its small member nations, condemned the Soviet Union by a vote of 60 to 10.

Now another item. Let us look at the present propaganda campaign by the Soviets for a summit conference—and, also look at the record to decide whether or not the Soviet leaders really want to reduce world tensions by such a conference.

First, keep in mind that there was a summit conference with the Soviets in July of 1955, in which our Nation participated along with the French and the British. Agreement was reached by the heads of government calling for the reunification of Germany by free elections. This was agreed to unanimously by the heads of state of the four great powers.

The American people and the world at large felt that, at last, there had been a step taken to relieve world tension and that, at last, the world could hope for peace.

But, at a meeting of the Foreign Ministers of the summit nations, called in November of 1955, to implement the decisions reached and the agreements consummated at the July meeting, the Soviet delegation repudiated every single agreement to which they had committed themselves at the conference of the heads of state.

Remember, too, that the present rulers of Moscow have become past masters in the arts of chicanery and hyprocrisy. They have learned well—by experience—the art of devious diplomacy used to make agreements to further their own objectives of the moment and then to break these agreements when it suits their purposes to do so. Actually, by the record, they have been making and violating agreements for 40 years.

So, in considering the Soviet drive for a summit conference in order to reach agreement with our Nation and its allies, keep this one amazing fact in mind—that the Communists took over control of every single one of their neighbor countries, who are now Soviet satellites, in the face of a treaty of friendship with each and every one of these nations.

Also, from the record, you will find that every time Mr. Khrushchev or his recently demoted mouthpiece, Mr. Bulganin, have called for a summit conference in recent months, they have hedged and fenced in their call with restrictions and prohibitions against the leaders of state even discussing the vital issues and differences which are at the bottom of present world tensions.

It must be obvious to anyone who has studied the situation that they do not want to eliminate the causes of world tension through the medium of a summit conference but rather desire to exploit these tensions in the interest of Communist world domination.

This is why our Secretary of State, in commenting recently on this Soviet propaganda drive, stated that America does not want to be a party to a fraud or a hoax; or be a party to a conference which did not actually deal with anything of significance but would merely be a spectacle and could possibly increase, rather than reduce, world tensions.

One of the conditions which Moscow has set up in its communications calling for a summit conference is that there be an understanding barring discussion of problems like the plight of the Hungarian people and of other captive peoples in the Soviet satellites. Also, under the Soviet terms, the question of German reunification could not even be placed on the agenda of the conference—let alone be considered and settled in a just and decent manner by the conferences.

If our Nation, Britain, and France were to submit to this maneuver by the Soviets; if the western statesmen were to go to a summit conference on these terms, it would be disastrous for world peace and freedom. If President Eisenhower and Secretary Dulles were to agree to attend a summit conference, under the present Soviet terms, they would, in effect, be placing the stamp of approval and final legalization on Communist Russia's destruction of the national independence and democratic liberties of the people of the 10 European nations now held as captive states of the Soviet Union.

This would be a disastrous step toward the domination of free democracies and independent people all over the world. And this, let us remember, is the real Communist goal, to be attained by brazen fraud or brute force, or both.

An other field in which Communist propaganda has been hammering away at the free world is the testing and production of nuclear weapons. If we were to fall victim to the constant hammering of the propagandists of Moscow, you might get to believe that the Soviets were willing to give up nuclear tests and were in favor of banning production of fissionable material.

The truth of the matter is that the Soviets have never been ready to accept an agreement which could guarantee that both sides would keep their commitments in these matters.

For years, our Government has consistently proposed an agreement which would ban further nuclear tests and also ban the continued production of fissionable material, through enforcement and supervision, under a system of international inspection.

As long ago as December of 1953, President Eisenhower presented his atoms-for-peace plan which would have directed the use of nuclear material exclusively for the benefit of humanity. This plan was never accepted by Moscow, nor was any plan yet proposed which could be enforced through a system of international inspection accepted by the Russians.

Yet, if we were to listen to Soviet propaganda, it is the Soviets that want to ban nuclear tests and the production of nuclear weapons.

Now, one more item. What has happened to Eastern Germany since it was occupied by Soviet troops at the end of World War II—13 years ago? Here, we find 20 million people brought into the so-called Soviet paradise.

Actually, for the past 13 years, Eastern Germany has been one gigantic slave camp with millions of Germans working under conditions that add up to virtual peonage. Here we find a continuing situation that is practically without precedent in world history. Over a period of 13 years, more than 10 percent of the population of East Germany have become refugees and voluntary exiles despite the efforts of tens of thousands of Soviet troops to keep them prisoners behind the Iron Curtain.

More than 2 million people of East Germany have fled to the West in the past 13 years. And, despite the fact that today it is a capital offense, punishable by death, for any person in East Germany to aid a refugee with technical or mechanical skill to escape to the West, there are still 1,500 East Germans coming across the border to freedom in the West every week. Just think of it, after all these years, the East Germans are escaping from this Soviet slave-labor camp at the rate of more than 75,000 a year.

Place this stark, brutal fact alongside of Khrushchev's boasts of the wonderful conditions and living standards behind the Iron Curtain.

Incidentally, I wonder what would happen if Mr. Khrushchev, in one of his more boastful moods, should decide to lift the Iron Curtain that separates the Soviet Union and its satellites from the West. I am quite sure that if this happened you would find out, for the first time, that there are far more anti-Communists behind the Iron Curtain than there are in the free world. Never forget, that the first and major victims of Communist repression and cruelty are the people of Soviet Russia itself.

A few days ago, a prominent British politician, who has been marked as the next Foreign Minister of Great Britain—that is after the next election, stated that he was tired of hearing Americans ask the question: "Can you trust the Russians?"

Well, I think the time has come for us to stop asking ourselves that question and answer it in pretty frank language. The answer: No, you cannot trust the Russians. No individual anywhere on earth who cherishes freedom for himself and for his neighbors has the right to trust the Russians unless and until they prove by actions rather than words that they are worthy of trust.

The American people, as a whole, must squarely face the facts in this most vital field of foreign affairs which finds our Nation in the forefront of the fight to preserve human freedom. We must be aware of the propaganda methods of the Soviet rulers who really believe that they can, by constant repetition, convince the rest of the world that white is black.

The American people should not allow their natural yearning for a peaceful world to influence them to the point where they become victims of this Soviet art of constant propaganda by repetition.

This so-called cold war between the forces of communism, headed up by Mr. Khrushchev, and the forces of freedom, represented by the Western powers, could undoubtedly go on for a long time. The American people must have the fortitude and patience to insist, no matter how long it takes, that our statesmen deal with the Soviet Union on the basis of their actions rather than their statements or their promises.

In addition, the American people must be prepared to make every necessary sacrifice to insure that our country and its allies will always be militarily strong enough to deter and turn back aggression, if the Soviets should decide that this is the immediate way to Communist world domination. In this way, our officials who must deal with the Soviets will be able to negotiate on a basis of strength—which is the one thing that the Communists understand above all else.

A Good Will Fiasco

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very timely article concerning our Latin American policies, which appeared in the Boston Daily Globe, on May 15 1958:

A Good Will Fiasco

The screaming mob attack upon Vice President Richard M. Nixon and his wife in the Venezuelan capital has carried to an unhappy climax one of the most ineptly handled episodes in this country's foreign relations in the entire postwar period. What was undertaken as a good will tour of eight Latin American States has carried inter-American relations to a new low.

Twice within a fortnight the Vice President's life has been in danger. Neither the President's dispatch of Marines and paratroopers to the Caribbean, nor the explanations offered by Mr. Eisenhower yesterday, obscure the patent fact that Mr. Nixon was unwisely sent on a mission without adequate preliminary study as to its feasibility at this time.

Under the Constitution, responsibility for the direction of the foreign policy of the United States rests solely upon the President himself. The Secretary of State is merely his chief adviser in such matters. The public, understandably indignant at the discourtesies visited upon Mr. Nixon, who traveled as an official spokesman for the United States, still awaits an explanation of our own Government's delinquencies in conducting thoroughly such an advance survey of the risks involved.

Mr. Nixon, who has handled himself ably and with level-headed commonsense during this protracted ordeal, obviously fell victim of that default back home. Once embarked on this tour, he had no recourse but to see it through. The fiasco was not of his making.

In the various Latin American capitals visited by the Vice President, it was apparent from the outset that troublemakers had been preparing against his arrival, and that tightly organized and centrally directed Communist groups were awake to the opportunities his journey offered. In each capital they sought to ignite the tinder of nationalism aggrieved by economic adversity. In several, their efforts spluttered out or were effectively dispersed. At Lima and Caracas they flared out of control.

The important point in all this isn't the disposition of Moscow's obedient followers on the South American continent to carry out orders. There, and elsewhere throughout Europe and the Middle East, such tactics have become familiar enough. Mr. Eisenhower himself noted this at his press conference yesterday.

The question of primary importance is—why has such tinder been permitted, by those directing this country's policy, to accumulate around United States relations with our neighboring continent during the past several years?

Peddling of arms to Latin American dictators whom we later receive as refugees, after their outraged peoples have expelled them, does not make for neighborly relations. Nor do abrupt reversals of our tariff and trade policies, which accentuate distress among Latin American nations heavily dependent upon us for markets.

For well over a decade, the United States has been distributing foreign aid plenteously elsewhere around the world. The allotment to the 20 Latin American States has been and remains trivial. This despite the fact that Washington pledged full postwar assistance, during World War II, in return for the unbalancing of Latin American economies to provide us with the materials for victory.

President Eisenhower declared yesterday that the time has come to overhaul our Latin American policies. The truth is that it came long ago. Once more we have been taking traditional friends for granted. Let us hope that this time, with the embarrassing experiences of Tuesday before it, the administration means what it says.

Uncle Dudley.

The Italian National Elections on May 25

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1958

Mr. SANTANGELO. Mr. Speaker, every American, like myself, whose forefathers came to this land from Italy, is looking forward to the 25th of May with hope and expectation. On that day the citizens of Italy will vote for a new Parliament. Our hope is that the Italian nation will rally to support the democratic parties and that a coalition can be formed to continue the postwar development of Italian democracy. We expect that this will happen and that the new Italy will continue to grow as a political, economic, and social democracy with a firm commitment to cooperation in the Atlantic community.

Since World War II there has been a vast expansion of Italian-American friendship and of the mutual concerns of our two countries. This has led a great many Americans with no Italian background whatever to be deeply interested in the May 25 elections. The reconstruction of Italy after World War II was the result of the energy and courage of the Italian people and of their Government, but Americans can feel proud that through the foreign-aid program we were able to contribute in a small way to the birth of the new Italy. In the years from 1948 to 1955, the United States extended more than $1½ billion in economic assistance alone to Italy.

Our cooperation has been continued in the North Atlantic Treaty Organization where we are allies in the common struggle to prevent Soviet domination of Western Europe.

Americans in general are more interested in Italy today than ever before. Italian motion pictures have won a warm reception in the United States. The books of Alberto Moravia are on our best seller lists. Capezio shoes and Fontana dresses set the fashions for American women. Even the men are wearing Italian-neck sport shirts, low-cut shoes, and silk suits from Italy. Italian typewriters, cars, and other precision equipment are common in the United States. And, of course, American tourists flock to Italy each year in ever-increasing numbers. All of this testifies to the new burst of Italian vitality and creativeness that has shot up in the last decade.

The new Italy is a land where the old sources of economic dissension are being eradicated and where political and personal freedom exist once again after more than 20 years of Fascist dictatorship. The 10-year Vanoni plan, instituted in 1955, is designed to tackle the twin problems of how to increase the national income and how to decrease unemployment. It places particular emphasis on building up the economy of southern Italy. Reforms have been instituted providing formerly landless farm workers and peasants with good inexpensive farmland which they can pay for over a long period of years. And the per capita national income rose from $296 to $429 in the last 7 years.

I had the good fortune to make an inspection tour of Italian industries during the last 2 weeks of September 1957. In the short space of 2 weeks, from September 14 to September 30, I travelled far and fast examining factories, inspecting plants, talking to workers, and drawing conclusions and impressions. I visited the following cities of Torino, Milano, Lake Como, Vicenza, Venezia, Rome, Frascati, Napoli, Capri, Palermo, Corleone, Pisa, and Larderello, as well as many other small towns and hamlets.

In passing through Italy, I did not fail to note the artistic beauty of Milan, the romance of Venice with its canals and gondolas, the lore and history of ancient Rome, the enchantment of Naples with its resorts of Capri and Ischia, a teeming city without comforts and adequate housing, but whose people still live with a song on their lips and love in their hearts. I did not overlook Palermo, a vibrant city, and its surrounding towns whose people are eager to know when the American immigration barriers would be let down. I could not pass by the opportunity to visit the Vatican City, where a humble and stately figure in white instills peace to all who are fortunate to come within his presence, and who, daily, encourages nations to discard the sword to follow the cross.

I was impressed mainly by the fact that Italy is in the midst of revolution; not a political revolution, but an industrial revolution. Industries are booming and factories are springing up everywhere. I expected to see a country helpless and groaning amidst ruins of devastation of war, but I found very little evidence of destruction caused by World War II. I found a people grateful to the United States for past aid, and a country seeking trade not aid. I found a country and a people asking to be treated not as sick offspring, but as a healthy adult. Communism as a threat has been frustrated in a large measure by the Catholicism of the native people and the ambition to go ahead under democratic principles.

The youth, while yearning passionately to emigrate to the United States, the land of opportunity, are practical. They are not sitting back in resignation, but are aggressively determined to march forward on the economic front with technical skills.

Few countries have accomplished so much with so little resources, and while wages are pitifully low compared to our standard, they have been increasing, and there exists certain social programs which United States industry and government could adopt with beneficial results, such as, dependency allowances to married workers. Italy has not utilized, however, the full potential of 50 million people, who can be a major purchasing power if their wages were substantially increased and if the unemployment of 2 million was reduced. However, Italy through its L'IRI, the modern govern-

ment organism, partly governmental and partly private, together with strictly private organizations, is making a laborious attempt to raise wages, to reduce prices by destroying monopolies and to create employment.

Italy is a land of very rich and very poor. There is no middle class. It is a land of workers with inventive skills and determination born of necessity. Italy lacks the art of public relations insofar as industry is concerned. Too much attention is paid to tourist trade and not enough to its industrial accomplishments.

Italy has emerged from the devastation of the last war. Its industries are booming. American aid has contributed immensely to Italy's development and the people are appreciative of our aid, but Italy has failed to publicize her extraordinary ability to produce much from little and her technological advancement. What the people from Italy want from us now is trade, not aid. Its representatives have not publicized widely its economic works and tremendous developments. Our industries can profit by working with Italian industries. I have confidence that Italy, with its native inventiveness and highly technical skill, will overcome its obstacles and deficiencies in resources and will soon take its proper place among the nations of the world.

Most of the advances which Italy has made in the last decade will be at stake on May 25. If the unexpected should happen and the Communist Party gains the power either to control or obstruct the operations of government, Italy would gradually retreat from its new democracy and its foreign policy would come under the influence of Soviet Russia. On the other hand, if the parties on the extreme right should increase their strength so markedly as to threaten the democratic character of the center coalition of parties, we shall most likely witness the decline of Italian international cooperation.

As an American of Italian origin, I urge my friends in Italy and the friends of Italian democracy and Atlantc cooperation in Italy to support the democratic parties in the forthcoming elections. The new Italy must not falter and the hard won gains of the Italian people must not be sacrificed. Avanti Italia.

Taking Science Into the Homes

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. O'HAHA of Illinois. Mr. Speaker, 47 eminent members of the faculty of the University of Chicago, including such world-renowned nuclear scholars as Samuel K. Allison and Herbert L. Anderson, are participating in a TV educational program over station WBKB in Chicago, that is literally taking science into the homes.

The program started on March 17, 1958, with the purpose set forth in the following statements:

Science is the foundation of the future for all mankind. To increase understanding of the basic principles of science and to awaken at all levels a desire to study it more intensely, station WBKB, in cooperation with the University of Chicago, offers Science, 58, a 13-week television series. This presents a rare opportunity for Chicago television viewers to acquaint themselves with the sciences of today—an opportunity which the American Broadcasting Co. is happy to offer the community it serves.

STERLING C. QUINLAN,
Vice President, Station WBKB.

Awareness of the methods and achievements of science is essential for every citizen, for science is a major force in shaping our world. The University of Chicago is cooperating with station WBKB and the American Broadcasting Co. in presenting Science, 58, in the belief that this program by eminent scientists is a valuable service in informing the public and encouraging an attitude of continuing awareness of the dimensions of science.

LAWRENCE A. KIMPTON,
Chancellor, University of Chicago.

The program, now at about the halfway point, has met with a tremendous reception. Schools open an hour earlier to permit students the opportunity to listen in; whole families gather at breakfast tables to learn and discuss together the secrets of science. It has shown the intense awakened interest of the American people in science and their great hunger for scientific knowledge. I am sure that my colleagues will join with me in extending to station WBKA, the American Broadcasting Co., and the University of Chicago the commendation of the House of Representatives of the Congress of the United States for a great contribution in meeting the challenge of the space age.

In order that this experiment in getting science into the homes might be evaluated, I wrote Dr. Herbert L. Anderson, director of the Enrico Fermi Institute for Nuclear Studies of the University of Chicago, and S. C. Quinlan, vice president of the American Broadcasting Co., and received the following replies:

MY DEAR CONGRESSMAN: It is always a pleasure to hear from you and to find that you do seem to follow the work of the University of Chicago with interest.

The television program to which you refer is probably the one entitled Science, 58, which has been appearing locally here on WBKB, channel 7. It comes on at 7 in the morning, lasts one-half hour, and it is 5 days a week. It is about halfway through its scheduled 13-week run.

The program selects various of our professors who attempt to provide coverage over a very wide area of science. The array of talent which the University of Chicago can bring to bear on this subject is really quite impressive. When it comes to explaining things, the professor is, after all, a professional. A great many things in science are being explained in Science, 58, and anyone who takes the trouble to turn on his television set at that rather early hour in the morning stands to learn a good deal about the nature of the world in which he lives.

Since the speaker is a different person every day, it isn't necessary to start at the beginning and follow each program through to the end in order to keep up with what is being said. Each lecture stands somewhat on its own in that each speaker attempts to explain in rather simple terms something about the subject in which he is currently interested and actively exploring himself. Scientific developments today are really terribly interesting and exciting. It is always a thrill to gain some new understanding about the nature of things. This kind of experience has now become available to a much wider audience than was previously possible. The University of Chicago has taken a great step forward in leading the way to show how this can be done. It is only a bit unfortunate that the present effort is limited to the local Chicago area, and that it is a bit of a strain (speaking personally now) to have to get up at 5 in the morning in order to do the job.

A great deal of credit should be given to Miss Lee Wilcox, of the university, who has put the program together and to Prof. Julian Goldsmith, who is doing a wonderful job of getting the program across.

Sincerely,

HERBERT L. ANDERSON,
Director.

DEAR MR. O'HARA: Thank you for your very kind letter with regard to our series of programs Science, 58, which are being televised over WBKB in cooperation with the University of Chicago.

We have received a most gratifying public response to the series and the University of Chicago and its great staff of scientists have done everything in their power to make the programs a success. WBKB has done its part by promoting the series with hundreds of spot announcements on the station. In addition we have placed numerous, eye-catching advertisements in the Chicago papers. The results have been heartening.

More than 100 primary and secondary schools in Chicago and vicinity have written us notes of commendation. A number of high schools, notably Lane Technical High and Foreman High in Chicago, have opened their doors 1 hour earlier in order that special classes might watch the series on television.

In addition we have distributed, on written requests, more than 15,000 booklets outlining the topics to be discussed. I might add that it was most gratifying to us and to the University of Chicago to find that thousands of the letters we received told us how whole families gathered around the breakfast table to watch the programs.

It also was very encouraging to find that many of our viewers were teen-agers both in the primary and secondary schools.

We believe we are achieving the goals we set for ourselves when we initiated Science, 58:

1. To arouse an interest in the basic principles of science in our young people.

2. To awaken in students of all ages a desire to study science more intensely.

Again, Mr. O'HARA, thank you for your interest.

Sincerely,

S. C. QUINLAN,
Vice President.

PARTICIPATING PROFESSORS FROM THE UNIVERSITY OF CHICAGO

Astronomy: Joseph W. Chamberlain, Subrahmanyan Chandrasekhar, Gerard Peter Kuiper, George Van Biesbroeck.

Biochemistry: Earl Elison Evans, Jr.

Conducting Science, 58: Julian R. Goldsmith, Ph. D.

Mr. Speaker, it is heartening to us in the Congress, and to all Americans must be reassuring of the future, that entirely as a public and patriotic service a great TV station is willing to give the use of its facilities to bringing science into the homes and that 47 eminent scholars donate their service and their learning to acquaint the people of Chicago with today's science and to encourage its study.

American Hospital Association Views on Community Facilities Administration Program

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following letter which I received from Kenneth Williamson of the American Hospital Association, dated May 12, 1958. Mr. Williamson enclosed a copy of his letter to Chairman BRENT SPENCE of the House Banking and Currency Committee, which committee is presently conducting hearings into the proposed expansion of the Community Facilities Administration public-loan program.

The letters follow:

AMERICAN HOSPITAL ASSOCIATION,
Washington, D. C., May 12, 1958.
Hon. ABRAHAM J. MULTER,
United States House of Representatives, House Office Building, Washington, D. C.

DEAR CONGRESSMAN MULTER: For your consideration, I am enclosing a copy of my letter of May 9 to the Honorable BRENT SPENCE, chairman, House Banking and Currency Committee, expressing the views of the American Hospital Association on several bills which would expand the public loan program of the Community Facilities Administration.

I thought you would be particularly interested in the fact that the American Hospital Association is urging this committee in its action on such bills to make nonprofit private hospitals equally eligible for loans with public hospitals.

Sincerely yours,
KENNETH WILLIAMSON,
Associate Director.

AMERICAN HOSPITAL ASSOCIATION,
Washington, D. C., May 9, 1958.
Hon. BRENT SPENCE,
Chairman, Banking and Currency Committee, United States House of Representatives, Washington, D. C.

DEAR CHAIRMAN SPENCE: The American Hospital Association appreciates the opportunity of submitting its views to this committee on several bills under consideration which would expand the public loan program of the Community Facilities Administration.

This association strongly favors and endorses the development by the Federal Government of a low-interest, long-term loan program for the construction and renovation of the Nation's hospitals. Such a program will make possible the construction of many needed new hospitals as well as necessary and far-reaching improvements in many existing ones. The construction and renovation of hospitals can contribute in a most significant way to stimulate business activity and provide employment to substantial numbers of persons.

In the study of various proposals to combat recession and to encourage the stability and growth of the American economy, we particularly commend a loan program for construction and renovation of hospitals to the committee's attention. Such a program would have a more immediate impact on the national economy than might many other construction and renovation programs. The demands for services and the tremendous variety of goods which would be required would be more quickly reflected. These results are made possible—and more rapidly than would be the case in most other kinds of construction—because of the years of advanced planning in hospital construction and renovation that has taken place in the communities and States throughout the Nation.

Some extent of the needs of the Nation's hospitals may be seen from the following:

A recent survey report by the Public Health Service indicates that the need for general hospital beds alone, at present construction costs, averaging in excess of $17,000 per bed, would require the expenditure of over $3 billion.

A tremendous need exists for facilities to care for patients suffering from long-term illnesses, especially mental diseases where there is a shortage of 400,000 mental hospital beds.

There are also, according to Public Health Service reports, demands for over 300,000 hospital beds of other kinds.

Merely to keep pace with our rapidly growing population, about 30,000 additional hospital beds are needed each year.

A 1956 study made by this association, with the collaboration of the Public Health Service, found an accumulated backlog of need of $1 billion for renovation and modernization of our older hospitals. This study found, for example, that of 2634 hospitals reporting 435, or 1 in 6, were more than 50 years of age.

This same survey developed that of 1,303 hospitals reporting no need for renovation, 401 of them said that their buildings were too old to warrant the expenditure and that what they needed was to have the facility entirely replaced.

A recent intensive study made of New York City hospitals established that they had an acute need within that city alone for renovation work amounting to about $250 million.

Many of our over 50-year-old hospitals, particularly those in urban centers, suffer major loss of efficiency from their physical inadequacies. Based on an obsolescence factor of 2 percent of existing beds per year, approximately 9,500 general hospital beds ought to be replaced annually.

Every section of the country was found to have obsolete facilities, though the proportion differed greatly. Obsolescence, we may observe, is not merely a matter of age, nor is it just confined to the buildings. Rather it applies also to design and equipment. Rapid advances in medical techniques make many institutions inefficient despite the fact that they may have been constructed within the last decade.

The construction and renovation of hospitals would have far-reaching effects, greater in fact than most construction work. The demands for construction materials, particularly steel, heavy equipment and specialized hospital equipment would stimulate employment in production plants while local labor and suppliers would largely be called upon to do the actual construction and renovation work.

The association's survey, mentioned above, also disclosed that major repairs to utilities and mechanical equipment and the modernization and improvement of equipment and systems represented nearly half of the cost of the renovation work needed. Our survey did not include movable equipment. But an exhaustive study of these needs has been recently made by the Public Health Service, shedding further light on hospital requirements for equipment to make many of the latest advances in medical science available to the American people. The production of this equipment will assist materially in providing stability of employment to large numbers of workers. Additionally, the installation of all kinds of hospital equipment in the renovation and modernization of hospitals will require the services of many types of highly skilled workers.

In terms of the security of the country it is singularly important to keep our highly skilled workers at their specialties. America can ill afford to lose their skills. More importantly we may not in the event of crisis have time to retrain them or train new workers in such skills.

Hospital construction and renovation can then be seen to serve the purposes of stimulating and providing employment quickly in local communities, making business for local contractors and suppliers, sustaining production plants and keeping highly skilled workers in their specialties.

Several bills before this committee expanding the public loan program of the Community Facilities Administration, particularly H. R. 11474 introduced by you and H. R. 11272 introduced by Congresman ALBERT RAINS, makes possible the construction and renovation of public hospitals. We respectfully urge this committee in its action on these bills to make nonprofit private hospitals equally eligible for loans with public hospitals. The reasons for the inclusion of public hospitals in this program apply with like force to nonprofit hospitals. They include the following, among others:

1. Nonprofit hospitals render service to the American people as do the public hospitals.
2. Nonprofit hospitals care for large numbers of patients as do the public hospitals.
3. Both are community institutions financed and supported by their communities.
4. Both nonprofit and public hospitals are the center of our whole system of institutional care for the seriously ill.
5. Both carry large burdens in the provision of care for those persons who find themselves unable to pay.

There is no doubt that if private nonprofit hospitals did not exist State and local governments would have had to build public hospitals to perform the very services now provided by these nonprofit hospitals.

Another consideration which strongly supports the inclusion of nonprofit hospitals in a construction loan program to combat recession is the fact that they normally have greater difficulty than public agencies in borrowing funds from private sources and are compelled to pay higher rates of interest. This does not mean in

any way that hospitals are poor risks. In fact, the situation is quite the contrary. Many hospitals have proven to be good risks. Their financial integrity is a matter of broad community concern. But lending institutions tend to look with disfavor upon nonprofit hospitals principally because they are nonprofit institutions, and because of the one-purpose nature of their facilities.

Regular business rates are prohibitive to many hospitals because of the increase in the cost of patient care which they impose. Each percentage point of interest charged adds at least 50 to 75 cents and often more, to the cost for each patient each day. The time factor in the amortization of principal also effects per diem costs. The present 5¼ percent to 6 percent interest rates available in the commercial market means an increased cost for each patient each day of some $2.75 to $4.50, without adding cost for amortization of principal.

Funds from the hospital survey and construction program have been inadequate to meet a growing backlog of hospital needs. In fact, this program has left largely untouched the serious and rapidly growing need for renovation and modernization of our older hospitals. Since most of these older hospitals are in metropolitan areas, the growing deficiency of their physical plans is important to the total health picture not only because of the large population they serve, but also because they are the centers of medical research and professional training and exert influences which are felt throughout the Nation

The American Hospital Association believes that in expanding the loan program of the Community Facilities Administration the construction of new beds should not be made possible unless they are in accord with the State plan under the Hill-Burton program. We urge, therefore, that loans to non-profit or public hospitals calling for the addition of new beds be conditioned upon certification of need from the State Hill-Burton Agency. But where in renovation or modernization work no additional beds are called for, we do not feel that certification of need is necessary.

Under the Hill-Burton program the States have since 1946 determined what health facilities they need to provide adequate care to their population and where such facilities should be located. We believe this has been a most important factor in guarding against the building of unnecessary facilities, either public or nonprofit. The States have kept these plans up to date, and as a consequence, there is in existence an available body of knowledge reflecting where, what size, and what kind of health facilities are needed. We are confident that your committee desires to limit loans under the bill to needed projects. The existing State Hill-Burton plans furnish a ready-made test of utility.

To accomplish this objective we commen to the consideration of this committee the language adopted by the Senate in its action on S. 3497, "The Community Facilities Administration Act of 1958." That language reads as follows:

"No financial assistance shall be extended under this section for the construction, repair, or improvement of any public or nonprofit hospital involving an increase in the number of beds, or for the construction of any public health center, unless the Surgeon General of the Public Health Service finds, and certifies to the Administrator, that the project is in conformity with the applicable State plan approved under section 623 of the Public Health Service Act (42 U. S. C. 291 f)."

The American Hospital Association also urges that the interest rate in the program be reduced to the lowest practicable figure. As we understand it, the basic philosophy behind this bill is that it is an antirecession measure. The rate of interest charged, therefore, will very largely determine the use which can be made of the program and will affect the objectives which this committee has in mind. With the success of the program the Federal Government stands to benefit materially, through taxes and otherwise, from bolstering the economy of local communities and States and from stabilizing and increasing employment. It is difficult to envision any appreciable financial contribution on the part of the Federal Government if there should be insistence on a high rate of interest for this program. We note that Mr. Rain's bill, H. R. 11272, proposes the rate of 2 percent. That figure would clearly make this program more attractive.

In summary the American Hospital Association believes that a loan program for public and nonprofit hospitals, as is provided for in S. 3497, is desirable; and that the interest in such a program should be at the lowest practicable rate.

It would be deeply appreciated if you would incorporate this letter in the hearings of your committee.

Sincerely yours,

KENNETH WILLIAMSON,
Associate Director.

The Air Force Mission and Capabilities

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1958

Mr. FISHER. Mr. Speaker, there are several kinds of survival—individual survival, family survival, and national survival. In this nuclear age, survival of all kinds is and should be the concern of all mankind. The world-conquest designs of communism, however, are strong indication that the Kremlin playboys might be willing to gamble international survival against Soviet world domination.

Survival of ourselves, our families, our country, and the world can be assured only by working for it. By working for it, I mean producing, creating, and maintaining the essentials of survival.

The United States Air Force is the primary essential of our survival. But more than that, survival and war deterrence are one and the same thing and deterrence of war is the Air Force mission.

The Air Force has grouped its weapons—its missiles and its aircraft—so that it can speedily apply long-range strategic forces or short-range tactical forces against any source which threatens our national survival. Local war or general war—and do not be mistaken, local war can easily lead to general war—the Air Force has the built-in forces to handle either or both.

These concepts, and others, are well described and defined in a speech recently made by Gen. Curtis E. LeMay, Vice Chief of Staff of the Air Force, before the annual convention of American Newspaper Publishers Association. I ask that the text of his speech be made part of the RECORD.

The address follows:

THE AIR FORCE MISSION AND CAPABILITIES

(Remarks by Gen. Curtis E. LeMay, Vice Chief of Staff, United States Air Force, before the annual convention, American Newspaper Publishers Association, New York City, April 24, 1958)

You gentlemen know, and the Air Force knows, how vital your communications medium is to the national security.

My discussion is designed as background to your task of reporting the news and building better public understanding.

There is no audience more challenging, and probably none more knowledgeable. You can believe me when I say that the Air Force wants to be heard and understood. We, therefore, welcome the chance to appear before you.

The Air Force mission derives from the national strategy, including general war, lesser conflicts, and the cold war. This strategy is reflected in an agreed military concept which the armed services have translated into forces, weapons, and capabilities. Service missions are specific charges laid down as part of this method of achieving national objectives.

Briefly, the Air Force is charged with the employment of airpower in the national interest. With equal brevity, I can say that the Air Force can do this job today in all its variations.

We must, under our guidelines, contribute the primary force to the total United States effort to deter general war.

We must also provide for the air defense of the United States.

We have a significant responsibility, together with the other services, for deterrence or resolution of local aggression.

The Air Force has other responsibilities, ranging from the provision of airlift to the development of the first reconnaissance space vehicle.

These tasks require consideration of all possible activities in the airspace field. The activities of a possible enemy also must be considered.

This means that we must know the possible threat, assess it realistically, and help achieve so strong a posture as to deter the attempted application of enemy power against the United States.

There is no threat to the security of the United States that can remotely compare with the ever-present possibility of general war. Nuclear weapons and advanced delivery systems make general war a struggle for survival in near-absolute terms.

The military posture of the Soviet Union is a clear example of dedication to the development of overwhelming force. They have a large nuclear capability, modern and effective, backed up by sizable conventional forces. They can mount a two-sided offensive in peacetime. Their nuclear striking power can be used for atomic blackmail. Communist bloc conventional forces can be used as political pawns in lesser conflicts. These capabilities, supported by a controlled economy, give the U. S. S. R. a safe basis on which to argue the case against nuclear weapons.

Even while propagandizing against nuclear weapons, the Soviet Union retains a general war capability in nuclear striking power and declines to join in genuine steps designed to reduce that power on both sides under adequate safeguards.

This attitude and capability leave the threat of general war a very real one in my mind.

The general war I speak of may come as an outgrowth of local conflict. Since the U. S. S. R. would sacrifice any subsequent element of surprise, this case seems less likely than the possibility that general war will begin with a surprise attack. In either event, the issue is nothing less than survival.

You will wonder, perhaps, whether this threat is on the wane.

Various supporting reasons for this idea have been advanced—including the fact that relative nuclear parity will be a constraint on general war. There is constraint on general war, and in fact on all conflict, when nuclear weapons are clearly understood to be involved. But this constraint, derived from nuclear capability, is a far cry from being mutual deterrence. Let me elaborate briefly on this issue.

Life insurance does not eliminate the threat of death; it is a provision to ensure family survival. The prudent man does not assume immunity to disease just because he pays his policy premiums regularly.

Preparedness does not eliminate the threat of general war; it is a provision to ensure national survival. The prudent nation does not assume immunity to general war just because of regular payments for preparedness.

This is not to say that general war, like death, is inevitable.

General war is, however, inevitable for any nation in the path of Communist bloc ambitions and unable to achieve a deterrent posture alone, or in combination with others determined to stay free. General war is death for the nation that cannot provide or share, in the event deterrence fails, some measure of survival during and after the decisive phase.

The Air Force believes in deterrence. We do not, however, believe in the false security that derives from believing in the myth of mutual deterrence. In our view there is no similarity between the United States and the Communist bloc when it comes to the use of aggression as a national instrument. We will not enter into conflict except in defense of ourselves or the free world. The Communist bloc will aggress whenever and wherever the opportunity looks profitable. We did not aggress while possessing nuclear monopoly nor with clear superiority; they are under no such moral restraint should they achieve nuclear superiority.

As to deterrence, there is no more transitory state in world affairs than that of stalemate. The human impulse is for change and improvements. Stalemate is a natural enemy of progress, even progress in warfare. Our probable enemy is a believer in progress—in fact he is a demonstrated success at it.

The general war threat was never at a lower ebb than when the United States possessed an atomic monopoly. It was at a low ebb when the United States possessed atomic superiority. With every passing day the general war threat is increasing simply because the Soviet Union, who believes in aggression, is achieving a general war capability where none existed before. Their progress is marked and their confidence is real. Where before they had no capability for general war, today they have a nuclear stockpile, 25,000 operational aircraft, and a strong scientific and technical research and development program. The danger of general war is on the increase as these capabilities are moulded to fit their desire for world domination.

The Air Force is dedicated to deterring war. We see this as a savage uphill battle. It is a day-in, year-out struggle to maintain a deterrent posture in pace with new techniques and developments, some of which are the object of tremendous and successful efforts by the Soviet Union.

At the same time we are confronted with U. S. S. R.-induced weaknesses and diversions on the world scene which are aimed at undermining our best capabilities.

The primary threat we must deter is an air or an airspace onslaught. We must assume that it would be delivered with every particle of the enemy's strength. It would recognize no moral or physical bounds.

This means the maintenance of a safeguarded and responsive deterrent force. This force must be able to deliver such punishment as will convince an enemy that aggression represents an absolutely unacceptable risk. It must do more than this. If an enemy is not convinced of this risk or if our determination, then this force must so act as to curtail his ability to destroy us or to capitalize on his initial attack.

We must face this situation realistically. We must be prepared to take the lethal element of the Soviet striking power, represented today by his air forces and their supporting structure, under direct and effective attack. The alternative is to suffer not only the first blow but subsequent blows. The nation which emerges from the initial, decisive phase of general war with a residual capability—with a populace able to work at survival and reconstruction without interference—will have the essentials of survival.

The United States must, therefore, maintain a force which can present the prospect of an unacceptable exchange in general war, concurrent with the ability to use a residual capability to maintain the initial advantage.

This is precisely why the Secretary of Defense has named, as the first of our essential military needs, the existence of a powerful nuclear retaliatory force.

The Air Force has the primary role in this task. The Air Force today has this capability.

The essentials of this capability involve the fundamental attributes of airpower—the speedy application of adequate force against the source of the strength which threatens the national security.

The Air Force has grouped the weapons—missiles and aircraft—to apply this principle into the long-range strategic forces and the shorter range tactical forces.

That these forces are the primary deterrent is apparent when you consider that between them they would be called upon to deliver 90 percent or more of the decisive United States retaliatory effort.

We must maintain this capability in the future and project it into space as the advances of science and technology permit.

There are practical essentials to the immediate preservation of this capability.

It must, first of all, be instantly ready to react in response to the national decision to do so.

It must be secure.

Finally, it must be able to get to the target and destroy it.

These three requirements involve many details of which I will mention only these:

First, the force must be highly motivated, trained, and equipped.

Second, the logistic and communications systems built into the force must be highly effective and in operation all day every day.

Third, the force must be made secure from a knockout blow. The security we seek for the strategic forces is no simple matter of going underground. We must look for improved warning, we must disperse the force and are doing so, and we must harden bases. No one of these produces a secure force—a combination of them can do a great deal. In addition, we are keeping the force on an alert status, ready to launch yet so controlled as to secure from false alarm.

Next, the force must have every possible advantage in skilled personnel and adequate equipment to guarantee that once launched it can do its job.

Involved in the technical side of this process are decoy devices and electronic countermeasures. We are also seeking to avoid the penetration of heavily defended targets by using air-to-surface missiles with nuclear warheads for launching at some distance from the target. This process can have no end, since this force must be constantly modernized, improved, and recast as the state of the art and the enemy threat continue to change. However great, this is a small price to pay for deterrence of a war of survival.

One aspect looms over all others, yet is commonly ignored or taken for granted.

To be responsive to the national will, the strategic force, and in fact all other forces, must be instantly responsive to the highest authority. Only when such forces are, in fact, unified and integrated under single control can this be achieved.

It has been said that if World War II was a war of production, then the next struggle will be a war of organization.

Organization, the framework within which control is exercised, is a deciding feature of the composition of the nuclear retaliatory force. When a nation can combine speed, power, and control, then it has at hand the essential elements of an adequate military force.

We have this force today.

As strategic missiles enter the picture, we will augment our force with these weapons. When we learn more about them and prove them out as effective weapons, strategic missiles will replace a portion of our piloted forces. However, as far into the future as I can see, I feel we will have integrated forces of both piloted and unpiloted systems. In this way we will be able to exploit the best features of each. Among the missiles systems which the strategic forces will use are:

The Snark, a long-range missile with a current capability.

The Thor and Jupiter, both intermediate-range ballistic missiles.

The Atlas soon and later the Titan, both intercontinental ballistic missiles.

In this connection, there is in the offing a new ballistic missile system of startling potential. This system, called Minuteman, can provide an entire family of missiles in quantity and quality, ranging from a theater ballistic missile to an ICBM, at an acceptable cost.

Minuteman is the first real sign I have seen of the breakthrough in missiles. It shows clear promise of making possible a major change in the aircraft-missile mixture. The Air Force is striving to achieve this promise, and this system looks like the right answer.

Development of Improved piloted systems also continues. The B–58, the first supersonic bomber to achieve operational status, will replace a portion of the present B–47 force. Another addition in the near future, designed to preserve the flexibility inherent in piloted weapon systems, will be the B–70. This system will be chemically propelled and should achieve 2,000 miles per hour.

It will be followed by a nuclear-powered aircraft of tremendous range and endurance. Development of this vehicle may give us a permanent airborne alert force.

Thus far I have been discussing the strategic forces. Grouped alongside them are the tactical forces at home and deployed overseas.

This also is a mixed force, today, with both aircraft and missiles. Tactical forces around the world can react with speed, selective weapons, and advanced penetration techniques. They can in fact put atomic weapons of other weapons down at ranges up to 1,000 miles and speeds over 800 miles per hour. These forces are deployed throughout the free world. Their location, dispersal, and rapid nuclear response makes them a real problem to a potential enemy. They are, at the same time, visible evidence of United States determination to deter and resist aggression outside as well as inside our own borders, and hence serve to strengthen the status of our allies.

The maintenance of these forces in a ready state of high effectiveness involves factors paralleling those bearing on the strategic forces.

There are equipping, manning, and allied problems, including reaction time, protection, and the provision of warning.

We have made slower progress with the modernization of the tactical force but new and improved aircraft, such as the F–104 and F–105 are about to enter the tactical inventory. The Air Force has had a tactical missile—the Matador—in operational and deployed status for a considerable time. We are now introducing an improved version of the Matador, called the Mace, which is an advanced surface-to-surface guided missile.

It is apparent that neither the strategic nor the tactical forces provide a direct air defense for the United States. They are, however, the essential element of our defensive posture in that they represent a powerful deterrent to any form of conflict. There is, just the same, the need for active defensive forces.

This is the second category of forces to which the Secretary of Defense has referred—the forces with which we can defend ourselves from attack, particularly air attack.

As with offensive forces, there are essential characteristics to look for when examining defensive forces.

Basically these are:

First, the warning system incorporated in these forces. We need the earliest possible warning to institute civil defense procedures and to launch our retaliatory force. The need to get warning as far away as possible has caused the United States and our Canadian partners to construct the Dew Line and the Mid-Canada Radar Lines in the north. The Navy has established radar patrols in the Atlantic and Pacific with airborne and seaborne early warning units. Offshore radars have been built into Texas Towers; a unified radar network has been built within our borders.

The entire air defense system, active and passive, has been brought into close knit organizational unity in an international military organization, the North American Air Defense Command, in close cooperation with Canada. You will note that already in this discussion there appears this vital link between the defensive and offensive force.

Second, defensive forces must carry out their function so that they do not deny us the use of our own airspace. They must defend so that our retaliatory forces can move to their missions, so that our bases and cities are protected before the enemy can get over them. The kind of defense we need is rapid and far-reaching repsonse to attack, extending beyond the hemisphere and eventually into space.

You will note that there is a similarity between the retaliatory striking force and the defense force. They are keyed to the same problem, they are mutually supporting and interdependent. The Air Force has a primary responsibility fn both of these vital security areas. We have developed a system of control and coordination designed to mold these forces into an integrated operation—any artificial division between them would be counterproductive.

Before leaving the Air Force's air-defense mission, I mention the pressing and probably decisive defense problem of providing a defense against ballistic missiles. The Army and the Air Force have the task of providing ballistic-missile defense under current plans. The development of the detection capability is well underway in current programs. The study of the active defense weapon system is progressing rapidly—but the problems involved are such that no proposed system can be said to now warrant the ultimate go-ahead.

There remains the third mission for military forces as described by the Secretary of Defense—mobile, versatile forces which, with the aid of our allies, can deal with situations short of general war.

The Air Force general war forces contain built-in local war strength. Deployed forces, tactical and strategic, can perform local war missions with speed, power, and finesse.

The real deterrent to local conflict of any significant nature is the availability of nuclear firepower in support of free-world forces. It is the Air Force view that the manifest determination and ability to apply adequate firepower are fundamental to deterrence.

The Air Force is interested in the local war problem and has studied it with great intensity in recent years. We have examined local war from the standpoint of likelihood, the conditions apt to prevail, and the dangers involved in the conflicts themselves.

We note that local wars are frequent, and have always been so. There are air-power tasks involved in local wars, and there is a particular demand for the control of hostile air forces. Finally, it is obvious that local wars can lead to larger conflicts. As we move through this examination we see no insurmountable difficulties and we always come face to face with the real problem.

Local war can lead to general war.

It appears, therefore, that we have gone full circle back to the beginning of this discussion when I said that general war is the primary threat to United States security.

Our general war capability is our general war deterrence. It is the existence of this same general war capability, not any lesser provision, which makes it possible to fight local war. Without the general war capability, any conflict, local or general, would be an automatic victory for the aggressor.

The Air Force believes local war can be deterred. But if deterrence fails, for whatever reason, and United States forces are required, then local war requires the prompt and decisive application of adequate force to end hostilities before they can spread.

To this end the Air Force has, and will, maintain a local war posture of significant capability. This posture can, in conjunction with that of the other services and our allies, make the United States response to local war adequate to the demands of the situation.

You will appreciate that in this brief talk I have not attempted to cover ether Air Force missions and capabilities. I have nŏt mentioned the airlift forces, the Reserve forces, and other essential elements of the Air Force mission in the interest of brevity.

Similarly, I have not mentioned the capabilities of the other United States services. The presence of Army and Navy spokesmen here makes this unnecessary. This is not to say, however, that the Air Force in any way minimizes the effective capabilities inherent in other service forces.

As a closing note, I return to the problem of deterrence of conflict today and in the future.

I am sure you will agree that the United States determination to deter conflict is clear, even to potential enemies. At the same time we have made it obvious that we will prevail ff conflict is thrust upon us.

The free world depends on this determination for its survival.

The force on which we depend today is the nuclear striking power we have labored so long and hard to build.

There are those who would cast doubt upon our determination to come to the defense of our friends and allies with nuclear weapons if necessary.

The Secretary of State pinpointed this problem recently when he indicated that our allies desire "to have greater assurance" that the defensive power of nuclear weapons will in fact be used to aid them.

The Air Force believes that deterrence requires more than armed force. There must be a manifest determination to use this force if need be.

While seeking peaceful avenues of approach to the resolution of tension, we must not cast doubt on our deterrent posture. The search for resolution without conflict can only succeed so long as conflict is effectively deterred.

Our present military air capability is the dominant deterrent force in the world today. The Air Force believes that it will suffice to make good our commmitments. The Air Force is determined to keep this capability fit and responsive to the national will.

It is natural at this point to wonder about the future.

Air Force research and development is now striving for the swift adaptation of current military power to the space age. We have a solid basis for work in this area, with pioneer efforts in the missile field as the foundation. We are looking to space flight, piloted and unpiloted, as the eventual, but by no means the ultimate, achievement. Work on the X–15, an initial entry into the space flight problem, is progressing and we expect to fly this vehicle in 1959. At the same time reconnaissance from space is around the corner. The transition to space operations will be difficult but there is every reason to accept it as being inevitable and timely.

From all of this there is a conclusion I would draw to leave with you.

In these efforts which the Air Force and the other services are making to meet mission demands, we need your active understanding and support. To this end, the Air Force welcomes your attention and your comments, now and in the future.

Islam and Its Culture

EXTENSION OF REMARKS

OF

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1958

Mr. ADAIR. Mr. Speaker, the Moslem religion is certainly one of the world's great faiths. Closely allied with it is the whole culture and way of life of Islam.

This was most eloquently pointed out in a speech delivered by Madame Moussa Al-Shabandar before the Capital Speakers Club at the Westchester on May 20, 1958. Madame Al-Shabandar is the wife of the Honorable Moussa Al-Shabandar, who until recently served so ably here as Ambassador of Iraq. Believing that this speech will be of very wide interest, I include it herewith:

ISLAM AND ITS CULTURE

One of the most beautiful buildings and perhaps the most unusual looking structure in Washington is the Mosque. It is unusual in Washington but anywhere in the Moslem world it would be a common sight. Since its opening the Islamic Center, as they call it in Washington, has become one of the prime tourist attractions and one of the outstanding landmarks of the Capital.

To really understand what the structure stands for, one has to study the building, and also understand the religion it represents.

In the opening of the seventh century, Europe was in the dark ages. Religion, morals, cultures, philosophy, and learning, were at their lowest degree. At the same time, Arabia was in darkness too. Life and property were insecure because of absence of real organized government. There were only family and tribal pacts which helped to keep a little order and to maintain a rough balance. Nobody thought in these dark ages

that salvation will come from the Arabian desert. But this is what happened. A solitary voice was heard calling people to worship one God and proclaiming that in response to this call, mankind will have honor and dignity. The voice of the prophet Mohammed was received with scorn and laughter because the oneness of God infuriated the Arabs who worshipped many gods made of stone or dates, when hungry.

In spite of persecution and scorn, Mohammed continued his call though his life and the lives of his followers were in danger. He and his followers fled from Mecca. Then he was forced to fight in defense of the freedom of conscience which he preached.

Mohammed was a real leader and a statesman. The wisdom he showed in judging difficult cases, with the Qur'an, became the basis for religious law which governs Islam today. He established a religion dedicated to one God. The Qur'an states, "Allah the Creator, the Maker, the Fashioner, whatever in heaven and earth declares his glory and He is the mighty, the wise."

It was this call which swept away all the idols and inspired men and nations to change their way of life. In later years the revelation from God dealt with the organization of society, its laws, procedures, and problems.

Mohammed was a great reformer and established social justice. Among drunkards he abolished alcoholism. Among lazy people he ordered individual prayer five times a day; and in a nation which was in constant feasting he ordered a daytime fast from dawn till after sunset, for one month. He raised woman's position from bondage and abolished the desert custom of burying little girls. The Qur'an speaks of the relationship between man and woman as one of mutual affection and compassion. The prophet recommended the loving care and kindly treatment of women. Islam recognized woman as an independent being. The Moslem law gives her complete power over what she possesses and could dispose of it freely. She is a guardian over minors. She has the right for divorce and the marriage contract assures her security if divorced by her husband. A man cannot dispose of more than one third of his property by will so that woman can never be entirely dispossessed.

The first convert was a woman Khadijah, the prophet's wife, a woman of noble birth and great wealth. She offered her hand to Mohammed when he was a youth, at the beginning of his mission. Other women helped in propagating the faith and some distinguished themselves in religious studies.

An Italian author likened the rapid spread of Islam to an abundant spring of water which became a creek, then a river, and finally it overflowed and broke into channels. Islam spread all over Arabia, soon it triumphed in Syria, Egypt, Persia, lower Russia, reached India, China, Malaya, Indonesia, and even the Philippines, and on the other side from Egypt across north Africa, then covered all Spain and reached southern France.

What was the power behind all this?

1. The Qur'an and its teachings.

The revelations of God that came to the prophet were compiled into this Qur'an. This book is unique in the combination of the dedication to one God, plus down to earth practical instructions. It says, "When ye deal with each other in transactions involving future obligations, reduce them to writings and get two witnesses so that if one errs, the other can remind him."

In addition to the Qur'an, Islam relies upon traditions that is what the prophet said and did. The prophet loved to pray with a congregation so our congregational prayer is taken from the traditions. Till now the Moslems and Arabs greet each other with the traditional salutation, "Peace be with you."

Some of the traditions influenced western behavior. One day the prophet saw a donkey being branded on the face. When the owner was asked why this was being done, he said, "The Romans taught us this to prevent theft." The prophet after reflection answered, "An animal's face is the most sensitive part of his body. If you must brand, do it on the flank where the flesh is thicker" and from then on the custom spread.

Another secret of the spread of Islam is its simplicity. A Moslem does five things.

1. He has to believe in and say "there is no god but God and Mohammed is his prophet."

2. A Moslem must pray five times a day. The reason for this is not only to be reminded of God, but also an exercise for the lazy. The reason that all Moslems take off their shoes on entering the Mosque and put their heads on the floor is to emphasize one of Islam's important teachings, that all men are equal.

3. A Moslem must fast 1 month every year. If he cannot do it for health reasons, he should pay a poor man a day's meal for each day.

4. A Moslem should pay 2 percent of his fortune to the poor every year.

5. A Moslem must go to the Holy Mecca to the pilgrimage, at least once in his life. This might be likened to the gathering of the United Nations because Moslems from all over the world come to the pilgrimage at the same time. This is not only a religious gathering, but serves to unify them.

Islam does not profess to be a new religion, but a continuation of Judaism and Christianity. The Qur'an contains part of the Old and the New Testaments. The Holy Book contains the revelation to all the prophets. We Moslems believe that Jesus and Moses are prophets of God. But Mohammed does not mean to Moslem what Christ means to Christians. We worship only God and Mohammed is only a prophet to us. This is why Moslems object to being called Mohammedans. The word Islam means submission to God.

When Mohammed's son died, an eclipse of the moon took place, so people said this is God's condolences to Mohammed. Mohammed said, "An eclipse is a phenomenon of nature. It is foolish to attribute such things to the birth or death of a human being."

At Mohammed's death his followers tried to make a deity of him, but his administrative successor dispelled the idea by one of the noblest speeches in religious history, "If there are any among you who worshipped Mohammed, he is dead. But if it was God you worshipped, He lives forever.

There are no miracles in Islam and no clergy. Every Moslem has the right to communicate with God directly according to his religious feelings and needs. When there is no mosque, a Moslem can pray in a church, in a synagogue, in his home, in the desert, on a horse, anywhere.

The Quar'an teaches equality and indiscrimination. It says, "O ye people verily, we have created you from a male and a female and have distributed you into nations and tribes that ye may know one another. Verily, the most honorable of ye in the sight of God is the most pious." This passage is significant because it is directed to mankind and not only to Moslems.

The Qur'an commands and recommends tolerance to the people of the Book, that is to the Christians and Judaists, in a time when toleration was a synonym for cowardice.

The sentence of the Qur'an that raised and revolutionized the life in Arabia is this "Read, in the name of the Lord who created man from a clot of congealed blood." This made Moslems and Arabs seek knowledge and spread it. Islam not only accepted and adopted all the scientific theories, but encouraged every Moslem to learn and study as much as he can. Mohammed said, "Seek learning even in China." And that was at a time when other religions considered philosophy, geography, medicine, and astronomy as witchcraft which should be avoided, and books, except the holy ones, to be burned and destroyed.

A Christian author said, "It is to the eternal glory of Islam that it succeeded for the first time in the history of the human thought in harmonizing and reconciling monotheism with Greek philosophy, the greatest contribution of the ancient Indo-European world. Islam thus led Christian Europe toward a modern point of view. To the Moslem thinkers Aristotle was truth, Plato was truth, and the Qur'an was truth.

Because of this new conception in religion almost all Moslem leaders were highly educated, learned men, like Averoes in Arab Spain and Avicenna in Baghdad were philosophers, physicians, astronomers, and theologians.

Ladies, this is what the mosque in Washington represents: Brotherhood, a practical good life, democracy, and tolerance. This same tolerance and democracy was practiced by President Eisenhower on June 28, 1957, when formally he dedicated the mosque. Before his speech, the President and Mrs. Eisenhower toured the mosque. Although slippers were provided to them they walked in stockings on the Persian rugs. In his speech the President said, "I should like to assure my Islamic friends that under the American Constitution, under the American tradition and in American hearts, this center is just as welcome as could be a similar edifice of any other religion. Indeed America would fight with her whole strength for your right to have here your own church and worship according to your own conscience. There will be a broader understanding and a deeper respect for the worth of all men and stronger resolution to work together for the good of mankind."

To me a Moslem, this is not only a monument of worship, but it is a symbol of the long friendship and mutual cooperation between the United States and the nations of Islam.

It is beautiful not only because of its structure, but more because of its symbolic character. To me it is a monument of the United States belief in religious freedom and a living symbol of alliance between the crescent and the cross.

Who Cashes in on Drainage Subsidies?

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1958

Mr. REUSS. Mr. Speaker, there are now pending before various committees of the Congress several bills intended to resolve, or at least reduce, existing conflicts between the federally aided farm drainage program and other Federal programs to protect our Nation's water resources and to conserve our waterfowl and wildlife resources.

There is not the slightest doubt that the Department of Agriculture's farm drainage program, as administered un-

der existing law, has in many cases worked directly counter to the best interests of wildlife, water, and even soil conservation. The farm drainage program has already destroyed nearly one-third of the Nation's finest migratory waterfowl breeding grounds, in Minnesota and the Dakotas. It has depleted water reservoirs and undoubtedly lowered water tables in many areas. It has contributed to soil erosion by hastening runoff.

I do not contend that the entire farm drainage program is harmful. But I do contend that where proposed farm drainage collides head on with conservation interests, farm drainage should not automatically prevail. Put another way, where the Department of Agriculture comes into conflict with the Department of the Interior, Agriculture should not be declared the winner even before the battle starts. That, however, is the present situation.

One approach to correct this situation is contained in 4 bills—S. 2496 by Senator WATKINS, of Utah; H. R. 8631, by Mr. METCALF, of Montana; H. R. 8747, by myself; H. R. 9053, by Mr. DIXON, of Utah—which would give the United States Fish and Wildlife Service and the Secretary of the Interior an opportunity to review and make recommendations on proposed drainage projects with a view to preventing damage to wildlife resources.

Another and more far-reaching corrective approach is proposed in H. R. 10641 and H. R. 10642, introduced by myself and Mr. MCGOVERN of South Dakota. These bills would (a) cut off Federal assistance for farm drainage projects in cases where the Secretary of the Interior finds that wildlife preservation will be materially harmed by the proposed drainage; and (b) amend the Soil Bank Act to provide that farmers can be paid, under the conservation-reserve program, for maintaining their wetlands instead of draining them.

Of course it might be expected that the Department of Agriculture, or at least some persons in that Department, would oppose both of these legislative approaches, because they would restrict the free-wheeling, uncontrolled farm drainage program by requiring that more than lip service—be paid to conservation interests.

But there are other private and special interest groups who badly want the farm drainage program to roll on unimpeded, regardless of damage done to wildlife, and water resources, because they look upon the program simply as a profit-maker for themselves.

One such special interest in the case of farm drainage was exposed in a recent issue of Conservation News, the publication of the National Wildlife Federation.

In an article titled "Who Cashes in on Drainage Subsidies?" this publication stated:

> In the case of farm drainage it is the manufacturers of bulldozers, draglines and other heavy, earth-moving equipment.

And Conservation News then substantiated that statement by reprinting a widely circulated letter from one of these ditching machinery manufacturers—Gar Wood Industries, Inc.—urging all persons interested in farm drainage to express their opposition to all bills that would make conservation sense out of the farm drainage program.

Mr. Speaker, in answer to the questions of who cashes in on drainage subsidies, and who supports virtually uncontrolled Federal farm drainage programs at the expense of conservation, I submit a portion of the Conservation News article and the Gar Wood Industries letter, which eloquently speaks for itself.

(The article and letter follow:)

WHO CASHES IN ON DRAINAGE SUBSIDIES?

In the case of farm drainage it is the manufacturers of bulldozers, draglines and other heavy, earth-moving equipment. Some soil conservation districts are trying desperately to pay out on ditching machinery that slick salesmen talked them into buying on time. Understandably the district officers panic when someone mentions cutting off the drainage subsidies.

Recently conservation news came by an interesting document that throws a good deal of light on the situation. It is a letter, reprinted below, that was sent to soil conservation district leaders in the Dakotas—and probably in many other States—by a corporation that manufactures big, and expensive, ditching machinery. S. 2496 and companion bills mentioned in Mr. Davis' letter are the proposed amendments to the Coordination Act that have been recommended by Secretary of the Interior Seaton. This legislation has been endorsed by the National Wildlife Federation and many other conservation organizations. The facts reported by Mr. Davis are distorted or downright untrue—but his purpose is to frighten farm leaders into opposing the bill.

H. R. 10641 and H. R. 10642, also opposed by the dragline makers, are the Reuss and McGovern bills to eliminate ACP payments for draining marshes that are valuable for wildlife and to substitute soil bank payments to farmers for retaining such wetlands.

GAR WOOD INDUSTRIES, INC.,
Findlay, Ohio, April 1, 1958.

Urgent message to all persons interested in farm drainage:

There are now several bills before the House of Representatives and Senate which could—if passed—inflict serious handicaps on all drainage programs in the United States.

Here are some of the facts about these bills:

The proposed legislation would give the Department of the Interior power to control the Department of Agriculture's drainage policies. This legislation, promoted by wildlife interests, is very vague about how restrictions on drainage would be imposed. But it adds up to this: The Fish and Wildlife Division of the Department of the Interior would exercise control of drainage outlets whenever technical assistance or funds from any Federal agency were connected with such drainage—thereby restricting or controlling a great amount of private drainage needing such outlets.

We have no argument with those who argue for the preservation of our wildlife resources—but we do know that legislation such as this is too awkward to accomplish anything without seriously crippling our country's progressive farm drainage program.

It is imperative, for the preservation of your own interests, that you write or telegraph both your congressional and senatorial representatives and vigorously object to this legislation. When you write, be sure and refer to this legislation accurately. The Watkins bill, the one with the great likelihood of passing (unless you raise your voice), is formally known as:

Senate bill S. 2496 and House of Representative companion bills H. R. 8631, H. R. 8747, H. R. 9053.

Other legislation, even more restrictive—though without too much possibility of passing—should also be referred to by you in your correspondence. This is known as House of Representative bills H. R. 10642 and identical bill H. R. 10641.

There is no time to waste. Your future is at stake right now. Write, wire, or telegraph your Representatives and Senators today.

Very truly yours,

D. J. DAVIS,
General Sales Manager, Construction Machinery.

The Watkins Case Reflects Misunderstanding of Congressional Procedures

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1958

Mr. CURTIS of Missouri. Mr. Speaker, I am placing in the RECORD today correspondence which I received from the St. Louis Civil Liberties Committee which contains a plea for limitations on the Un-American Activities Committee. I was quite disturbed with the thesis behind this plea because I feel it is grounded in error. There has been so much misunderstanding about the Watkins case that I feel it important that we take another look at it and for this reason I place in the RECORD my reply.

The correspondence follows:

ST. LOUIS CIVIL LIBERTIES COMMITTEE,
St. Louis, Mo., February 3, 1958.

Mr. TOM CURTIS,
United States House of Representatives, Washington, D. C.

DEAR MR. CURTIS: In view of decisions by the United States Supreme Court concerning the investigating power of congressional committees we urge that you and other members of the Missouri delegation take early leadership for revocation of the mandate of the House Committee on Un-American Activities.

The Supreme Court, by its decision in the Watkins case, has made plain the illegality of the resolution creating the Committee on Un-American Activities. The committe is instructed to investigate "un-American propaganda activities." As the Court said in the Watkins case, "Who can define the meaning of un-American"? In addition to this fatal vagueness, "propaganda" as such—speaking and writing is and of itself, whether its source and however offensive to Congress and the public—is not a matter under the first amendment concerning which Congress can constitutionally legislate. Therefore, this area is excluded from congressional investigation. Investigation of propaganda cannot be saved merely by calling it an investigation of "activities."

The American Civil Liberties Union has never contested the right of Congress to investigate in legitimate areas of its authority, although we have emphasized that such investigations should be conducted with due regard for the right of individuals. We are as deeply concerned as any Member of Congress that the Constitution, and the demo-

cratic society it protects, shall not be subverted.

The experience of the last 2 decades makes clear to us however, that establishment of a separate legislative committee for the sole purpose of investigating matters of internal security almost automatically brings by-products destructive of civil liberties and produces little in the way of effective results. If the responsibility for investigation of internal security problems is returned to an established committee experienced in examining into the enforcement and adequacy of the Federal criminal laws, such as the House Judiciary Committee, it is our conviction that investigations relating to the security of the Nation will be far more likely to proceed in a responsible, efficient manner calculated to respect basic individual rights and at the same time produce practical results rather than eye-catching headlines.

In addition to these recommendations, we wish to call your attention to another difficulty concerning not only the Committee on Un-American Activities but congressional investigating committees generally. This is the problem of the witness who is unable to determine, before criminal prosecution what would be the consequences of his decision to challenge a committee's right to ask him certain questions. Fortunately, H. R. 259, proposed by Congressman KEATING and adopted by the House Judiciary Committee would alleviate this problem.

This bill would authorize congressional committees to apply to a Federal district court to pass upon the propriety of a question which a witness has refused to answer. If the court found the question proper, it would order the witness to answer. Under this procedure a witness would have the opportunity to raise all defenses—first amendment, lack of authorization, impertinence, etc.—and obtain a judicial determination of the committee's right to ask the question before facing a criminal prosecution. The Keating bill suggests what might prove to be one of the most significant safeguards yet proposed against investigative abuse, and has the union's support.

Sincerely yours,

SAMUEL B. GUZE, M. D., *Chairman.*

MAY 19, 1958.

Mr. HUSTON SMITH,
Department of Philosophy,
Washington University,
St. Louis, Mo.

DEAR MR. SMITH: Thank you very much for your letter of May 5, 1958, in which you state that "you received from the St. Louis Civil Liberties Committee a letter * * * protesting against the Committee on Un-American Activities and the way it has ignored the Watkins decision." I am happy that you enclosed a copy of this letter as I have checked my files and find no record of ever having received it. Because we receive a hundred letters a day in this office, it is entirely possible that it was mislaid, however, this rarely occurs. Under the circumstances I would appreciate your checking to be certain this letter dated February 3, 1958, according to your copy, was actually placed in the mail.

I am happy to reply to this letter and to your letter of May 5, 1958. I am deeply disturbed by the tone of the letters and the obvious misunderstanding of what the Watkins case decided and the apparent unfamiliarity with congressional procedures.

I have publicly criticized the Watkins case ever since it was handed down by the Supreme Court primarily on the basis of its unscholarly approach to a serious problem affecting the Nation. There is ample room for disagreement between judges and lawyers about what decision should be reached in particular cases, but there is little room for disagreement about decisions which, on their face, show a lack of scholarly study, of the subject at hand. The Watkins case shows such an ignorance of congressional procedure that one can only conclude it came from a failure to have made a study of congressional procedure. Regrettably the decision not only reflects ignorance, which is bad enough; it deliberately misstates facts in some instances and in other instances omits important facts.

In my judgment the Watkins case strikes a new low in legal scholarship on the part of the United States Supreme Court. Having said this, I want to go on to state that in my judgment two wrongs do not make a right and accordingly, I have openly opposed the recent attempts on the part of the Congress to limit the jurisdiction of the United States Supreme Court. In other words, I am opposed to the Jenner bill, even as modified.

It is my belief that the basis of civil liberties rests in the maxim that society must be ruled by laws and not by men. The basic structure of the laws of our society is set out in the United States Constitution. The Constitution provides the method for amending it, if at any time the society feels it needs amendment. In spite of the provisions for amendment certain people being so impatient in getting certain things done which they think should be done for the welfare of our society, finding the Constitution blocking their desires, undertake to subvert the Constitution instead of amending it. I am satisfied that the majority of the present members of the Supreme Court generally adhere to the philosophy of amending the Constitution by subverting the English language rather than by amending the Constitution in accordance with the clear cut provisions for amendment. I criticize them greatly for this philosophy. On the other hand, I am convinced that the only way in which the Constitution or any form of government can be followed is through the self-discipline exercised by the individuals who are entrusted with power. So the only manner in which the Congress in pursuit of most of its powers can be restrained to follow constitutional government is through self-discipline. The same is true of the executive and the judiciary. An attempt by either of the three branches of Government to attempt to discipline the other is bound to undermine the very system of Government.

If the Congress wishes to discipline the Supreme Court it should do so through a proposed constitutional amendment. If the Supreme Court wishes to discipline the Congress it should do so as individual citizens by suggesting that the people propose a constitutional amendment. And so if the Executive wishes to discipline either of the two coequal arms of Government he should resort to constitutional amendment.

It comes as strange philosophy from a group which proclaims itself interested in civil liberties to advocate government by men rather than government by law. Because your group does not like what the Congress has done apparently it would encourage the Supreme Court to disregard self-discipline and seek to encroach on the powers of the Congress. I may presume that if the Supreme Court happened to do something your group disliked such as the Dred Scott decision you would propose the reverse procedure and urge the Congress to disregard self-discipline and seek to encroach on the powers of the Court. In other words, it isn't procedure your group is concerned with but specific results. Procedure is government by law; specific results is government by men. I believe every civil-liberties group should have this fundamental belief, embedded in its own constitution.

The letter of February 3, 1958, states "The Supreme Court, by its decision in the Watkins case, has made plain the illegality of the resolution creating the Committee on Un-American Activities." Bad as the Watkins case is, it is not that bad. Nowhere in the decision does the Court state that the resolution creating the Committee on Un-American Activities is illegal. The most that it says is that the resolution is not sufficiently specific to authorize the committee to ask certain questions of a witness.

The Supreme Court in its discussion of delegation of powers by the Congress as a whole to its various committees is completely unaware of the history of the Congress. The oldest committee of the House is the Ways and Means Committee. This committee like most of the committees has never received any clear mandate of its jurisdiction. In fact, it can truthfully be stated that powers and jurisdictions of congressional committees are almost entirely a development of custom and tradition. This is true in spite of the attempt to define somewhat the scope of committee powers and activities in the reorganization of the Congress. Incidentally, the reorganization of the Congress was done by the Congress itself and required no concurrence on the part of the executive branch of the Government. If the Congress wished to operate under no rules of procedure at all it could do so.

However, the Un-American Activities Committee was set up with considerable more formality than any other committee of the House. Its rules of procedure are probably the most exacting of any committee in either the House or the Senate. (I might state that when I was first assigned to the Joint Economic Committee in the 83d Congress I was shocked to find that this committee had no rules of procedure whatever. After several months of fussing with the chairman of the committee, Senator PAUL DOUGLAS, he appointed me on a subcommittee of two to write the rules. This was done and these rules were adopted in 1955, almost 10 years after the committee had been operating.)

The Supreme Court in the Watkins decision shows a complete ignorance of the history of congressional procedure and the manner in which congressional committees operated in the past and in the present. If it looks for formal delegation of authority from the parent group of its committees as is done in the executive branch it will have to look a long time. This is not done and actually would interefere with proper congressional functioning if it were done. The Supreme Court is naive in trying to make the point that * * * "it is evident that the preliminary control of the committee exercised by the House is slight or nonexistent." It is also making a completely false statement. Every committee must make reports to the House and must come to the House for money to operate. Any committee that goes beyond the bounds of what the House wants is called to task pretty quickly. Actually the Un-American Activities Committee has done what no other committee has done, it has insisted that its authorization and appropriation of funds be approved by record vote in the House. The record votes are there for all to see and only 1 or 2 brave souls over a period of years have ever dared vote against the appropriation of the funds the committee requested. And this was after a rather lengthy presentation on the part of the committee on the floor of the House both as to what they had been doing and what they intended to do.

The Watkins decision is so replete with statements made out of ignorance it is difficult to grapple with it on a scholarly basis. I will just point out one more and desist. On page 14 this statement appears: "In the decade following World War II, there appeared a new kind of congressional inquiry unknown in prior periods of American history." This is untrue, as the statement on page 20 points out: "The authorizing resolution of the Un-American Activities Committee was adopted in 1938 when a select committee under the chairmanship of Representative Dies was created." But even this later statement does not give the real his-

tory of the Un-American Activities Committee. The Dies committee was a follower of the select committee set up for the same purposes chaired by the gentleman from Massachusetts, the Honorable JOHN MCCORMACK, now the majority leader of the Democratic Party in the House of Representatives.

Belief in government by laws rather than by men and disbelief in the doctrine that the ends justify the means should be the basis of any group dedicated to civil liberties. I would add another qualifying remark that is implicit in the disavowal of the doctrine that the ends justify the means. Search for the truth is the basis of all true scholarship and leading from ignorance and the tampering with truth is the surest way not only to destroy civil liberies but to stop any advancement into the unknown for mankind.

Yours very truly,

THOMAS B. CURTIS.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Jimmie Aston Has Made Imprint on City of Dallas, Tex.

EXTENSION OF REMARKS
OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, May 22, 1958

Mr. JOHNSON of Texas. Mr. President, James W. Aston, of Dallas, Tex., at the age of 46 years is president of one of the Nation's outstanding financial institutions, the Republic National Bank of Dallas.

Jimmie Aston, as he is known to many thousands of Texans, was a civil engineer, who became a city manager, who became an Air Force officer, who became a banker.

Highlights of Mr. Aston's career are set forth in an article, written by Bernard Brister, of Dallas, which appears in the May issue of Texas Parade magazine.

I ask unanimous consent that this inspiring story about a man born to lead be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REPUBLIC'S JIMMIE ASTON

(By Bernard Brister)

The words flow easily from the big, solidly built man sitting behind the big desk with cowboy-in-the-saddle ease.

"The banking business in its simplest terms is concerned with people and money. Modern banking is complex only because of the many legal, mathematical, scientific, and other technical factors which color the manner in which we conduct the bank's operations. Cutting through this modus operandi, our basic concern is people and money."

Through thin, rimless glasses he regards his surroundings with simple directness. When he meets you, he pumps your hand vigorously. And when he talks, his deep voice is buoyed by his enthusiasm and ready vitality.

"The long-range prediction is that Texas will overtake California and then New York in population," he continued, "and we are constantly planning the development of our bank to meet the challenges of the times. We must always find ways adequately to serve the needs of the people for money, if the country is to grow and to expand in the terms of its full destiny."

The speaker was James W. (William) Aston, 46, who recently completed his first year as president of the Republic National Bank of Dallas. He has reached this eminence in his field at the end of 12 years in the banking business. Before he entered banking, he already had enjoyed two successful careers—one in city management, another in organization, planning, and administration in the Army Air Forces.

The career of Jimmie Aston to date has been steady, swift, and always upward. He is both disciplined and diligent, and probably most important of all, he has been a team player from boyhood.

He grinned in reminiscence: "You learn a lot about teamwork when you are the oldest of six kids in a small country town, particularly in a town like Farmersville, Tex., in those days."

His grandfather Aston moved from Tennessee to Farmersville right after the Civil War and settled there. The farms which he acquired are still in the family today. Jimmie's father, Joseph A. Aston, worked for a while as cashier of the Farmers & Merchants Bank in Farmersville, but soon got into the cotton exporting business on his own.

Farmersville then was a blacklands town of about 2,000 in the center of a prosperous cotton, corn, and onion growing area.

"We lived in a town, but it was just like living in the country," Aston remembers. "There was a barn behind the house with cows to milk and hogs to feed. And there was a vegetable garden to tend. We learned all those things and did our share of the work."

His first job for pay was in a grocery store on Saturday, and later he and his oldest brother, Joe, worked together in a hamburger stand. They also worked Saturdays and during summers on the farm.

All six of the Aston children—Jim, Joe, Hub, Martha, Paul, and Gertrude—went to college, the boys to Texas A. and M. and the girls to TSCW. And behind this story is the story of a father's concept of family teamwork.

The senior Aston set up a farming operation known as Aston Bros. It was started with 20 acres of cotton and 5 acres of corn. All the money which the boys produced from this farming enterprise went into a college educational fund at the bank for all six of the children.

The Aston Bros. account gave each of us a send-off in college, Jimmie says.

Aston played football his last 3 years in high school, quarterbacking the team which won the bidistrict championship from Highland Park High School in Dallas in 1928.

"I didn't know what it was to lose until I went to college," he said. "We played hard and won 'em all."

He decided early in life that he wanted to be a civil engineer, and his dad left his choice of schools up to him, but football helped him to make up his mind. His high school coach had gone to Texas A. and M., and when the time came, Jimmie Aston headed for College Station. To help pay his way, he ran a private postal service for fellow cadets, sold pecan pies, and worked at various other odd jobs.

In his 4 years at A. and M. from 1929 to 1933, he had the kind of career which serves as a forecast of his whole future success. He was elected a colonel in command of the cadet corps, played quarterback and fullback and captained the 1932 Aggies football team, earned a civil-engineering degree, and was graduated with honors. Late last year, approximately 25 years later, Sports Illustrated magazine named him to its Silver Anniversary All-American Football Team.

Today he still has the ruddy, showered look of the athlete, and his big 6-foot-1-inch frame carries exactly the same 200 pounds of weight that he had when he was playing football his senior year at A. and M.

When he got out of college in 1933, Aston went looking for a job. By that time he had decided he wanted to get into city management. He wrote two letters, one to V. R. Smithham, city manager of Wichita Falls, and the other to John N. Edy, city manager of Dallas, and received interesting answers from both.

"It was the only time I ever applied for a job," Aston says.

He visited with Mr. Edy, and decided he wanted to go to work for him.

"He was truly a fine man and I knew I could learn a lot from him," Aston recalls. "He was very interested in me, but just didn't have a job for me. I told him that if he would let me work as his apprentice and learn the functions and background in every department of the city government and let me have 1 hour with him every week, I'd work for nothing."

"Mr. Edy said he'd think it over and let me know. When I went back to see him, he said, 'We have decided to take up your offer, but will pay you $50 a month. You see, we'll have to pay you something so that we can discipline you as a regular city employee,' he explained to me.

"Of course, I took the job on the spot."

At the end of the year, he became assistant to City Manager Edy. He also continued his studies, taking nightwork in government and finance at Dallas College of Southern Methodist University.

Early in 1939 the city of Bryan offered him a job as its city manager. He held the post for only 7 months however, for Dallas called him back as its city manager when he was only 27. It was a big advance and he handled the job with thoroughness and efficiency. He was on the way up.

In early 1941 with the United States on the eve of entering World War II, all city managers with reserve commissions were called into active duty. Aston entered the Army April 15, 1941, as a first lieutenant. In October 1941, he was promoted to captain. In 1942 he was promoted to major and made Director of Organizational Planning, Army Air Forces, and later the same year moved on up to lieutenant colonel and was appointed Deputy Assistant Chief of Staff for Management Control.

Aston became a colonel in 1943 and Assistant Chief of Staff, Supply and Service of the Air Transport Command. In November, 1945, he became Chief of Staff of the ATC. During this time he was awarded the American Defense Service Ribbon, American Theater Ribbon, Asiatic-Pacific Theater Ribbon with two bronze stars, Legion of Merit, and Distinguished Service Medal.

Back in Dallas his tenure as city manager was still remembered.

"One day in 1945 while I was still in Washington, I got a letter from Mr. Florence." (Fred F. Florence, then president and now chairman of the executive committee of the Republic National Bank.) "He asked me to come to see him," Aston said.

"I was on my way from Washington to Honolulu, and I was still in uniform when I stopped off in Dallas to see him on my way out to the Pacific.

"Mr. Florence asked me about coming to work for the bank when I got out of service. A short time later I wrote him that I'd take him up on the offer."

On December 1, 1945, he was named vice president of the Republic National Bank of Dallas. And as in the past, his career hasn't stood still for a minute. He became execu-

tive vice president in December 1955, and president of the bank in January 1957, when he was only 45 years old.

One of his major jobs with the bank was the supervision of its new $25 million home and office building. The design job took 5 years and and put to good use his engineering background and talents.

Aston not only maintains his status as a registered professional engineer, but finds his engineering training of tremendous assistance in his performance of banker to business in the growing technological and scientific fields in the Southwest.

Aston attacks his job with vigor and enthusiasm. He is up every morning by 6:30, breakfasting at 7 and in the bank by 8 o'clock for a meeting of the executive committee where teamwork starts and carries through the whole banking operation. Here in company with Karl Hoblitzelle, chairman of the board, Fred F. Florence, chairman of the executive committee, and other senior officers, vital top policy of the institution is developed.

His duties are primarily executive and administrative, but he still makes loans. He is also involved in the management of the Howard Corp., owned in trust for the shareholders of the bank, and in the separate corporation which owns the bank building. Altogether, he has about 1,240 officers and employees under his direction.

Jimmie Aston has participated in some of the Republic Bank's most accelerated development, first as head of its business development department, and now as its president.

The Republic made national news again last November when its shareholders voted approval of an increase in total capitalization of the bank, including contingency reserves, to approximately $102 million.

"I have had lots of breaks, wonderful breaks," he said in a philosophical moment as he puffed a cigarette. "Lots of people have helped me along the way. You don't really do anything by yourself. It's people working together—teamwork—that really counts."

He looked out his office door which stood ajar.

"This bank is a perfect example of teamwork. We are all working together to do a good job."

"We are trying to do a constructive job. Our challenge is to mass merchandise our services safely, profitably and constructively with appropriate consideration for the welfare of our customers, our stockholders and the whole future growth and development of our country."

"To achieve this goal, we daily engage in the most highly competitive business in the world today—competition for the dollar."

Maritime Day

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Thursday, May 22, 1958

Mr. PAYNE. Mr. President, I ask unanimous consent that a statement I have prepared regarding Maritime Day be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

In recognition of the fundamental importance and great services of our merchant marine the Nation is today observing national Maritime Day. This observance has become an annual occasion to commemorate the sailing of the steamship *Savannah*, the first transoceanic steam vessel, 139 years ago. Since that momentous occasion the American merchant marine has become one of the most modern and efficient in the world.

The history and development of the merchant marine is closely entwined with the history and development of the Nation. Our merchant fleet has always been one of the mainstays of our economy in fulfilling the great need of moving goods and people to and from the United States. In time of war the merchant marine has been our fourth arm of defense and has maintained the supply lines around the world which made possible the operations of our military forces. In short, the record is very clear: The United States must maintain a strong and effective merchant marine in order to continue strong in both world commercial and military affairs.

Maritime Day 1958 is a particularly significant observance. Not only does it focus attention on the great contributions and maritime traditions of the past in which my own State of Maine has played a prominent role, but also it marks the opening of a new era in marine commerce. On this day the keel of the nuclear ship *Savannah*, the first nuclear-powered merchant ship, is being laid. Despite the rapid advances in man's ability to move through space, it is very clear that for a long time to come the bulk of man's goods will continue to move between nations by ships. The American merchant marine is to be praised for its forward-looking, constructive leadership, and its complete readiness to move into the atomic age at sea.

Texan To Represent United States at International Cotton Meeting

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 22, 1958

Mr. JOHNSON of Texas. Mr. President, Mr. Harrell West, of Bishop, Tex., one of the Nation's outstanding farm leaders, has been named as one of three United States representatives at an international cotton meeting to be held in London in June.

Pertinent comment on this announcement was offered recently by Grady Stiles, agricultural editor of the Corpus Christi Caller-Times, and one of Texas' top farm reporters. I ask unanimous consent that Mr. Stiles' observations be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AMBASSADOR

"J. H. West of Bishop, president of the Texas Farm Bureau, has been selected as 1 of 3 men to represent the United States at an international cotton meeting in London next month." (The Bishop News.)

This was a wise selection, Editor Newton; and the American cotton industry will know that it is well represented. We do not know of any person who could perform this important assignment with greater sincerity and broader knowledge than Harrell West. He knows every phase of the cotton business; he is a cotton producer, a cotton ginner, and his association with the cotton trade has given him an intimate knowledge of the problems of the shipper, the buyer, and the spinner. He realizes that cotton is in a precarious situation, at least as far as American producers are concerned. He has long sounded the alarm against further drastic reduction of cotton acreage; for, as he has pointed out, reduction of American cotton acreage brings on an increase in foreign acreage. He is fully aware, too, of the serious threat of synthetic fibers to the cotton industry; and he, as a member of the National Cotton Council, has constantly urged more intensive research to find new uses for cotton. The American cotton producer's cause will be competently stated at the London conference; and, we predict, representatives from other cotton-producing countries attending the meeting will gain a new outlook on the world cotton situation as they listen to the man from Texas. West, as much as any other one person, has been responsible for bringing together the cotton producers of Texas, persuading them to forget their regional differences and present a united front for the cause of cotton. This is an amazing accomplishment; and anyone who can persuade cotton farmers of west Texas, the Rio Grande Valley, the Coastal Bend, and central and east Texas to share the same bed has done a job that has always been considered impossible. For years these regional groups have eyed each other with suspicion and have not hesitated to make their sentiments known. We hope Harrell West's efforts at the London conference will bear fruit not unlike his efforts at unification and understanding among Texas cottongrowers. If he can accomplish this, then we think he's about ready for Mr. Dulles' portfolio.

Tom Stokes, a Salute

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, May 22, 1958

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a moving and eloquent tribute to Thomas L. Stokes by Ralph McGill, editor of the Atlanta Constitution, which appeared in the Constitution and other papers. I join in this tribute to Tom Stokes.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Miami News of May 20, 1958]

TOM STOKES, A SALUTE

(By Ralph McGill)

When a really good man dies each of us dies a little. One thought of that on reading of Tom Stokes' death in Washington, and of the last prayers said over his grave at Arlington.

This kind of gentleman, who could be all steel in a fight, had come out of the South to become one of the Nation's top reporters and then, for years, one of its most respected columnists. In the days before the coma of death came over him he knew that a score of Washington's outstanding personages in government, Congress, the military and business had joined to write guest columns so that his column might appear despite illness. Republicans, Democrats, independents—all joined to write for him.

The Washington correspondents themselves had voted him the correspondent who had done "the best all-around job as measured in terms of reliability, fairness, and ability to analyze the news."

He had exposed the corrupt Huey Long machine in Louisiana and started its collapse. He had won a Pulitzer prize for exposing the sweatshop operation in Southern States by fly-by-night operators. He, an ardent Roosevelt supporter, had blown the lid off WPA scandals in Kentucky. Harry Hopkins had denounced him and called him liar. The Senate investigation proved Stokes had uncovered most, but not all, the corruption.

He had come out of Georgia with what he called the southern chip on his shoulder. As a boy he remembered his home in the old West End section of Atlanta, hard by the home of Joel Chandler Harris and the old Evan Howell home.

FIRST BOOK

The first books he remembered were those of the War Between the States, and the Bible. He went each Sunday to church school and preaching and then, after lunch, with his father to a mission Sunday school in the nearby mill section, down Gordon Street, out West End under the railroad trestle to the unpaved streets, the squalor and poverty of the mill village of that time. He remembered the Christmas tree and the look of joy on the faces of the mill children at the toy, the apple, the orange, the candy.

Each of us is a part of all that we have met. Stokes learned pity then. He learned, from all the preaching and Bible raising, that Christ had turned against greed, had scourged the money changers out of the temple, had looked always to the lowly and poor. This was the essence of his own religion. He too, looked always away from the privilege to the people.

He was in a small town when there was a lynching of a Negro who protested he was innocent, and who was never proven guilty. He saw them storm the jail and he saw them take him away. He waited in his room in the Y. M. C. A., torn with emotions. The man had been burned to death. The next day the local judge excoriated the mob.

"Where was he on the night of the lynching?" wrote Stokes, "and where was I?"

That, too, was one of the things he met along the way. And always he stood against mobs and violence, prejudices and hate.

FAITH IN UNION

He came to feel, did Stokes, an almost mystic faith in the Union. He dedicated himself to being an American. He loved the South, and he was to write of it:

"It will not out of me, and I must go back ever so often to warm my heart in its sunshine, for it has healing power for me. It is blood of my blood and bone of my bone. It is my home, my native land, the land of generations and generations of my family, back beyond the War Between the States, back beyond the Revolution * * * and so, love it as I did, I also hated some of it, but can never pluck it from my soul."

The South carries, he wrote in a book in 1940, "a perpetual chip on its shoulder * * * there is in its soul a confusion of emotions and prejudices and loyalties not worthy of loyalty, a retreating into legends."

His 4 years at the University of Georgia were a fountain of beauty, 4 years of pleasant unawareness.

In September 1921 he went to Washington. From that time on, of Harding, Coolidge, Hoover, Roosevelt, Truman, and Eisenhower, he wrote and analyzed what he saw.

To him the United States was a great answer to the prayers of those who wanted democracy and faith. But he knew only courage and opposition to greed and privilege would save it. And all his life he fought for what he believed best in his country.

When a really good man dies, each of us dies a little.

Eleven Projects for Ashland, Wis.

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 22, 1958

Mr. PROXMIRE. Mr. President, I have a letter from Mayor Harry Simon of the City of Ashland, Wis., listing 11 projects costing a total of $1,107,000, which his community is prepared to go ahead with when public funds are available. This is just one more example of what can be done in putting men to work and providing needed public improvements if the Community Facilities Act is made law.

Mr. President, I ask unanimous consent that the letter from Mayor Simon be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CITY OF ASHLAND, WIS.
May 15, 1958.

The Honorable WILLIAM PROXMIRE,
Senate Office Building,
Washington, D. C.

DEAR BILL: Attached is a list of projects as submitted to me by the city engineer, should public funds be available.

I want to thank you very kindly for the two letters I received from you. I am in hopes to cross paths with you on your return to Wisconsin when the session is over.

With kindest personal regards.

Sincerely yours,

HARRY SIMON, *Mayor.*

Projects they've been crying for—Memo to Harry Simon, Mayor

1. East End interceptor, sanitary sewer and laterals, from 27th Ave. East to Lake Park (estimate)	$190,000
2. Storm sewers, East End on St. Claire and Front Sts	65,000
3. Rural roads in city limits	60,000
4. Primary street improvements (other than State and Federal)	125,000
5. Secondary street improvements (residential and other)	135,000
6. Business and industrial streets	175,000
7. Parks:	
(a) Prentice Park (new pavilion and ground improvement)	25,000
(b) Lake Park (new pavilion and ground improvement)	20,000
8. Off-street parking lots	30,000
9. Second Street Bridge, Bay City	32,000
10. West End sanitary sewers and lift station	140,000
11. West End storm sewers (residential districts, 7th Ave. West, 8th Ave. West, 7th St. West, 12th Ave. West, and 3d St. West)	110,000
Total	1,107,000

R. WHEELER,
City Engineer.

Wayne Flint, Winner of Birmingham News Oratorical Contest

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, May 22, 1958

Mr. SPARKMAN. Mr. President, recently Wayne Flint, 1045 Michael Lane, Anniston, Ala., was announced a winner in the Birmingham (Ala.) News oratorical contest. Wayne is a student in the Anniston High School. I have obtained from him a copy of his oration. It deals with a great and beloved character of the Confederacy, Stonewall Jackson.

I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the oration was ordered to be printed in the RECORD, as follows:

THOMAS JONATHAN JACKSON: THE STONEWALL OF THE CONFEDERACY

"You may be whatever you resolve to be."

"Through life let your principal object be the discharge of duty."

"Sacrifice your life rather than your word."

These bits of wisdom sound like hundreds of others scribbled in college notebooks on many campuses, but what distinguished them was the man who wrote them. He lived by the lines he had written. Though not unusually original or especially deep, these maxims of Tom Jackson's do show an unswerving sense of honor, determination and selfdiscipline. They became guiding principals throughout his life.

Tom Jackson was the third child born into the family of Mr. and Mrs. Jonathan Jackson. Tom's father was a Scotch-Irish lawyer practicing in the small town of Clarksburg, Va. Tom was not destined to have a long family life, however, and in quick succession his father, mother, stepfather, and aunt died. The young boy then went to live with Cummings E. Jackson, his uncle. It was here that the foundation for many of Jackson's later accomplishments was laid.

In 1842, almost penniless, Jackson began seeking an appointment to West Point. The road was exceptionally difficult for the young man, who had attended only a small country school in Virginia. Even after receiving his appointment he found the going very hard. Hampered by a poor memory and a slow mind, tortured by the daily demand to recite, he stuck out the weeks and months at the Academy. Jackson later did many things of heroic valor, but none could surpass his first year at West Point as an example of sheer determination. At the end of his first year he was 51st in a class of 72. After 4 years of study, however, his determination brought success, and he graduated 17th in rank from the Academy. One classmate paid a great tribute to Jackson by remarking about him: "Had the course of study at the Academy been longer, he would probably have graduated at the head of his class." After his graduation from the Academy, he served in the United States Army during the war with Mexico, where he gained renown for his bravery and ability. But when the war was over, he resigned his commission in the Army to become a professor at the Virginia Military Institute.

It was while a professor at V. M. I. that Jackson showed his profound love for man—black or white. He used much of his spare time preparing for the Negro Sunday school class that he both originated and taught. He never forgot that group of Negroes and throughout the war he sent back a portion

of his salary to keep his class in existence. The Negro race never forgot Jackson, either, and the first contribution to his beautiful monument in Richmond, Va., was made by the members of a Negro Baptist Church. Incidentally some have said that the only person who really understood Jackson was his Negro servant during the war.

When war broke out in 1861, he quickly cast his lot with his beloved Virginia. It is unnecessary to ennumerate his successes as a soldier and tactician. His value at Bull Run, Antietam, in the Shenandoah Valley, and on the Peninsula, is summed up by a letter written to Jackson by Gen. Robert E. Lee, his commanding officer. Incidentally, it was just after Jackson had lost his left arm by amputation. The letter states: "You have lost your left arm, but I have lost my right."

In 1863, after one of his numerous reconnaissance missions, he was shot by one of his own sentries. On Sunday, May 10, he uttered those immortal words: "Let us pass over the river, and rest under the shade of the trees."

Was his soul wandering back in dreams to the river of his beloved valley, the Shenandoah, whose rolling valleys and green hills he had redeemed from the invader, or was this the Jordan over which he must cross to find the peace he sought for his battle-scarred Southland? This was one battle that even his ingenuity and bravery could not win for him. But the same determination and faith that so typified his life helped him to resolve that even death was another victory.

Thomas "Stonewall" Jackson—a man whose nobility of character, unaffected piety, and great determination—became the treasured possessions of the South; but finally they have become a part of the heritage of America and of the world.

"You may be whatever you resolve to be."

Resolution Adopted by the Texas Retired Officers Association

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 22, 1958

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a resolution adopted by the Texas Retired Officers Association urging passage by the Congress of Senate bill 1085 and House bill 689.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the Texas Retired Officers Association, incorporated under the laws of Texas has always supported the principle of equalization of rights and benefits, including retirement rights, for the personnel of Reserve components of the Armed Forces as compared with Regular personnel of those forces, and as between the services themselves; and

Whereas such equalization is not only in the interest of justice and fair play, but by force of example encourages participation of younger personnel in the national defense, maintains the active and favorable interest of older reservists, and promotes a high morale among those engaged in the national defense; and

Whereas it has long been the declared intent of Congress to grant equal treatment to Regulars and Reserves, as evidenced by legislation through the years, including the Selective Service Act of 1917, such equalization being also one of the major purposes of the Army and Air Force Vitalization and Retirement Equalization Act of 1948 (Public Law 810, 80th Cong.), and of the Career Compensation Act of 1949 (Public Law 351, 81st Cong.): Now, therefore, be it

Resolved by the Texas Retired Officers Association, in called meeting assembled at Dallas, Tex., this 6th day of April 1958, That we urge the Congress to pass clarifying legislation such as Senate bill 1085 and its companion, House bill 689, so that Regular and Reserve component officers will be accorded equal treatment with particular reference to retirement benefits, and be it further

Resolved, That we urge our United States Senators and our Representatives in the Congress to support the above-mentioned bills, S. 1085 and H. R. 689, both in their respective Armed Services Committees and on the floor of the Congress.

MELVIN CROAN,
President.
FRANCIS B. UPHAM,
Second Vice President.
BERT H. DAVIS,
Secretary.
FRED A. COOLEY,
First Vice President.

Senators Kill Bill To Boost Own Pensions

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Thursday, May 22, 1958

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD an article appearing in the Chicago Tribune of May 14, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENATORS KILL BILL TO BOOST OWN PENSIONS—SPONSOR FLEES FLOOR AS ACCUSER APPEARS

(By Willard Edwards)

WASHINGTON, May 13.—The Senate today hastily shelved a bill which might have made it profitable for some Members of Congress to be defeated next November than to be reelected.

Senator JOHN J. WILLIAMS (Republican, of Delaware), who stopped passage of the measure last week when Democratic leaders had scheduled it for quiet approval, received congratulations for having prevented "a raid on the Treasury."

WILLIAMS exposed features of the bill, revamping the pension system for Capitol Hill employees, including Senators and Representatives, which would have permitted veteran legislators to retire with pensions higher than their salaries of $22,500.

SPONSOR FLEES FROM FLOOR

"I shudder to think what the voters around the country would have said if we approved that bill," said Senator CHARLES E. POTTER (Republican, of Michigan). "With 5 million unemployed Americans, this is no time for a 'bundles for Congress' bill."

Chairman OLIN JOHNSTON (Democrat, of South Carolina) of the Senate Civil Service Committee, who sponsored the bill, was absent. Yesterday, JOHNSTON had charged WILLIAMS with making "misleading statements in a search for newspaper publicity."

WILLIAMS, a quiet man known as the Senate's one-man investigator who has exposed scores of instances of corruption in the Government, marched on the Senate floor today to repeat his original charges, backed by an armful of documentary proof. JOHNSTON fled from the floor.

COULD DRAW 115 PERCENT

WILLIAMS noted that JOHNSTON had proposed to remove the present limitation in the pension law which sets a ceiling of 80 percent of earned salary on pensions granted Members of Congress.

The pension fund is made up of 7½ percent of annual salary contributions which are matched by 7½ percent payments from the Treasury.

TAKES THEIR CANDY

"When you take candy away from a spoiled baby," WILLIAMS told the Senate, "it's going to bawl. And I've taken a lot of candy away from some people around here by revealing the features of this bill. Now, let's bury it and let it rest in peace."

The Senate quickly agreed to pigeonhole the legislation.

Senator EDWARD MARTIN (Republican, of Pennsylvania), former major general, told WILLIAMS that he had merited "a decoration for performance above and beyond the call of duty."

The Tennessee Valley Authority

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 22, 1958

Mr. PROXMIRE. Mr. President, there is no paper in America which has more faithfully, strenuously, and vigorously crusaded for liberal principles than the Capital Times of Madison, Wis. Mr. William T. Evjue of Madison occupies the unique position in American journalism as the Nation's outstanding crusading editor.

Recently the Capital Times carried a typically brilliant and forthright editorial in honor of the Tennessee Valley Authority on the anniversary of its 25th year of service.

Mr. President, I ask unanimous consent that this eloquent expression in honor of the great Tennessee Valley Authority and its magnificent accomplishments be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TVA'S 25 YEARS OF SERVICE TO THE NATION AND TO DEMOCRACY

Twenty-five years ago this month the Government of the United States established the Tennessee Valley Authority to tame a river system that was pillaging the countryside with its floods and carrying away to the sea the precious top soil.

TVA was set up to reclaim this wasteland, and despite the constant campaign carried on to cripple and destroy it the program has succeeded far beyond the expectations of those who fought for its establishment. In addition it has made a great contribution to the Nation as a whole and has provided the world with an example of river valley development. Today the TVA idea is among the proudest of our ideological exports.

Its nonpower functions—flood control and navigation—are accepted. The record cannot be denied. But it was only 10 years ago that completely false reports of floods in the area were being circulated to the newspapers around this country in the campaign to discredit it.

The propaganda campaign against TVA is concentrated today on its production of power. It is financed and promoted by the private utilities who want to get their hands on the distribution rights of the power, which has changed the way of life for the whole seven State area.

TVA has endured against the campaign because here, too, its record is unassailable. Its power is distributed through public and cooperatively owned distribution systems. They are serving more than five times the number of customers served under private ownership in the pre-TVA era. Four percent of the farms in the valley were electrified when TVA started; today 95 percent have electricity.

TVA consumers use twice as much electricity as the national average and pay half has much for it. Its power supply has made the valley an indispensable part of the national defense effort. More than half of the power it produces goes to the atomic energy plants at Oak Ridge and Paducah at a savings to taxpayers of from $50 to $60 million a year.

The low rates in the TVA area have benefited those in the surrounding region also. The TVA yardstick has forced down the rates of the adjacent private utilities. And the records show that their stockholders are doing better than the national average.

The arguments used against TVA in the utility propaganda are that it can sell power at lower rates because it is subsidized and pays no taxes.

The subsidy argument is one that comes with ill grace from the utilities. R. C. Rainwater, chief accountant of the Federal Power Commission, recently testified that in the 1955–57 period private utilities were subsidized by the Federal Government to the tune of $2,621,318,000 under the fast tax writeoff policy. This means that they have received subsidies in a 2-year period that exceed the total Government investment in TVA through a quarter of a century.

And if there is any doubt about whether these writeoffs constitute subsidies, the testimony of Walter H. Sammis, president of the Ohio Edison Co., should settle it. Sammis admitted on the stand in testimony before a Senate subcommittee last year that tax writeoff allowances are subsidies.

As for the tax argument, TVA, of course, does make payments in lieu of taxes to local government units. It does not pay Federal income taxes, for the simple reason that it is federally owned. If TVA had been a private utility it would have paid taxes of some $170 million over the past 24 years. But its earnings, after deducting the interest that would have been paid on the invested capital, during this period have been $212 million—giving the Government $42 million more than would have been paid in taxes under private ownership.

TVA is a great monument to democratic planning to conserve, harness, and make intelligent use out of our natural resources. Its importance to this country and the world was summed up as follows by John Gunther, the distinguished American author:

"Quite possibly the TVA is the greatest single American invention of the century, the biggest contribution the United States has yet made to society in the modern world."

What About Extending Unemployment Insurance Benefits for the Unemployed Railroader?

SPEECH
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. VAN ZANDT. Mr. Speaker, on May 1 the House of Representatives passed H. R. 12065, authorizing temporary unemployment benefits for individuals who exhaust their benefit right under existing State unemployment compensation laws.

The request for the extension of unemployment compensation benefits in President Eisenhower's message to Congress on March 25 not only included unemployed persons in covered employment under the State unemployment compensation system, but also the unemployed railroader covered by the Railroad Unemployment Insurance Act. Thus, the bill the House passed on May 1 and sent to the Senate did not include unemployed railroaders.

Mr. Speaker, railroad employment in the United States as of February 15 of this year dropped to 861,928, the lowest in 70 years. This was a loss of 125,197 jobs as compared with February of 1957. Since last February the number of unemployed in the railroad industry has constantly been increasing as jobs are being abolished because of depressed conditions.

As of May 1, 1958, according to the Railroad Retirement Board which administers the Railroad Unemployment Insurance Act, there were in excess of 143,000 unemployed railroaders drawing unemployment benefits. Already, nearly 40,000 of this number have exhausted their eligibility for benefits. By July 1 another 55,000 will suffer the same fate. As each month goes by additional thousands will lose their right to unemployment insurance benefits.

Mr. Speaker, in my congressional district in Pennsylvania we have nearly 15,000 unemployed and over half of them are unemployed railroaders. The majority of them live in Altoona and vicinity and the remainder in the DuBois-Clearfield-Osceola Mills area.

In this central Pennsylvania area over a thousand of these unemployed railroaders have already exhausted their unemployment benefits, and the number will increase monthly. The situation has been serious for several months, and it becomes more acute as the days go by.

It is common knowledge that the average weekly benefit an unemployed railroader receives is $40. When you consider that he has not had steady employment for years because of frequent furloughs, his economic plight becomes plainly evident. When he loses his unemployment insurance benefits, he is without any income from any source.

Mr. Speaker, recently when in my congressional district I talked to many unemployed railroaders whose unemployment insurance benefits had terminated. In each instance, they had families, their homes were partially paid for, their savings were exhausted, and monthly bills for the necessities of life had to be paid. In short, these men are truly desperate as they reveal their pathetic circumstances.

The only recourse these unemployed railroaders have, unless railroad unemployment insurance benefits are extended, is to apply for State public assistance. To be eligible for such benefits it is required that they convert to cash all assets, such as insurance policies or savings bonds, and in addition give to the State of Pennsylvania a lien on their partially paid for homes.

Mr. Speaker, conscious of the sad plight of unemployed railroaders in my congressional district, as early as March 11, I introduced H. R. 11338 designed to extend railroad unemployment insurance benefits from the present 26-week period to 39 weeks, or a total of 13 weeks. This bill was introduced several weeks in advance of President Eisenhower's message to Congress requesting extension of State unemployment compensation benefits and railroad unemployment insurance benefits. My bill, H. R. 11338, was referred to the House Committee on Interstate and Foreign Commerce, together with other bills on the subject, where no action has been taken or scheduled at this time.

Mr. Speaker, this Congress cannot in good conscience dare to discriminate against unemployed railroaders. We have taken care of their neighbors in other industries covered by the State unemployment compensation laws, and in simple justice to unemployed railroaders it is imperative that they receive equal treatment by extending railroad unemployment insurance benefits without further delay.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. VAN ZANDT. I yield to the gentleman from Massachusetts.

Mr. McCORMACK. I have a recollection that the representatives of the railroad employees did not want to be included in the bill that was reported out of the Committee on Ways and Means. I have not heard from them, and I would welcome their views as to what they have in mind. Usually they contact me, because the relationship between the representatives of the employees and myself throughout the years has been very friendly. I felt it a little strange that I had not heard from them, but my distinct recollection is that they did not want to be included in the bill reported out of the Committee on Ways and Means. Now, if they are interested in some other avenue, I would welcome hearing from them.

Mr. VAN ZANDT. Well, what the gentleman from Massachusetts has said is true about the bill which already passed the House and is now pending in the Senate. They did not want to be identified with that bill because it covered another phase of employment in the United States. However, since then representatives of the labor unions, railway labor groups, unions in my home town of Altoona, Pa., have been in Washington and have contacted me and have asked me to insist on congressional action on the bill that I introduced last month.

Milestone Labor Contract Celebrated at Mount Carmel

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks, I want to call the attention of the House to the wise action taken by a group of fine conservative labor leaders in Mount Carmel, Ill., in cooperation with the Thordarson-Meissner Corp. in writing a 5-year contract agreement, which action, if followed throughout the Nation by labor representatives and management would stop this recession, stop inflation, and cause the economy of this country to surge forward with a prosperity that we have never before witnessed.

Mr. Speaker, I want to also compliment the fine management of the corporation, Mr. Eugene Powers, and others who in cooperation with these fine labor leaders have contributed, and will continue to contribute greatly to Mount Carmel, Ill., and the entire area.

I am inserting an article from the press which will give further details, which I am sure will be of interest to the Members of Congress.

MILESTONE LABOR CONTRACT CELEBRATED AT MOUNT CARMEL

MOUNT CARMEL, ILL.—A unique labor contract began today in Mount Carmel's main industrial plant and the occasion was celebrated with parties, parades, and a half day off from work.

Victory against the recession was the theme of floats in the parade honoring the 5-year pact between the Thordarson-Meissner Co., and the International Association of Machinists, Local 2042.

The contract provides no wage increases and no new benefits for the 400 employees of the electrical parts firm. It is a straight renewal of the old 3-year contract.

Mayor J. Roy Dee, calling it a milestone in labor-management relations, issued an order proclaiming the day Thordarson-Meissner Day.

Because of the contract, plant manager Eugene Powers said the company has been able to expand and hire 230 additional employees.

"It gave us a stable basis for progress," he said. Powers said he believes it is the first contract of its kind.

At 45, Powers has been with the firm for 19 years as an executive. As part of today's celebration the union presented him with an engraved plaque.

Local president Maurice Lawrence, who made the presentation, said the inscription sums up the union's dealings with Powers. It read:

"Eminently fair, always understanding, completely trustworthy, truly just with a profound knowledge of labor-management relations."

His formula for good relations, Powers said, is "just be honest." He cited the new contract as an example.

"When I knew we were going to expand, the question was, if I start hiring additional labor, what about the contract which expires next year?"

In a meeting with union officers, Powers told them he must have assurances that he wasn't creating a labor force the company would be unable to afford after the next contract.

Powers promised expansion of the plant and no layoffs except in an emergency. The union agreed to sign for 5 years.

"The people felt that their jobs were worth a good deal more to them than a temporary pay hike and that those jobs might be in jeopardy if the contract called for pay increases which would increase the cost of the products and hold down employment."

Lawrence said the international union approved the contract. Powers said sales are 20 percent ahead of last years figures when the company's total was $3 million.

Boasting about prosperity is nothing new for Mount Carmel. The town, with a population of 10,000 claims registration of 100 Cadillacs.

Metropolitan District Water Policy Finally Revealed

EXTENSION OF REMARKS
OF
HON. B. F. SISK
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. SISK. Mr. Speaker, the State of California has been developing a State water plan, which includes the Feather River project to transport water from northern California to Kern County, Los Angeles, San Bernardino, San Diego, and other points in southern California. During consideration of this State water plan, and in water proceedings before committees of the Congress, the Metropolitan Water District has assumed the right to speak for all of southern California. On last Thursday, May 15, 1958, the Los Angeles Times published an account of a hearing in Los Angeles in which Mr. Joseph Jensen, chairman of the board of directors of the Metropolitan Water District, for the first time publicly revealed the true plans of the district for receiving and distributing Feather River project water in the southern part of California. I expect it may come as a shock to the people of Kern County, Antelope Valley, San Bernardino, and San Diego. I think it would be fair to conclude that officials of the Metropolitan Water District have very little regard or consideration for the water problems of any area except their own.

The article follows:

COAST ROUTE DESIRED FOR WATERLINE—METROPOLITAN HEAD REVEALS ROW OVER FEATHER RIVER DUCT

"There is no choice except the coastal route."

This flat ultimatum was issued publicly yesterday by Joseph Jensen, chairman of the board of directors of the metropolitan water district, on the controversial issue of the route to bring Feather River water to southern California.

His statement was made at a hearing in the State Building being conducted by a seven-man consulting board, headed by Ralph Tudor, of San Francisco, which is to advise the State on the matter. The State's report on routes is due December 31.

MOUNTAINS OR COAST

Jensen's statement brought out into the open a long-smoldering regional difference of opinion as to whether the proposed 1,800,000 acre-feet of imported water should be transported over the Tehachapis at an elevation of 3,400 feet or along the coast at an elevation of 1,500 feet.

"The coast route is cheapest," Jensen said. "The coast route is good. We protest against an inland route based on convenience for San Bernardino."

He added that the metropolitan wants the water delivered in the San Fernando Valley.

"We are ready to contract for all the water the State delivers to us and to distribute it throughout southern California," he added.

KERN MUST PAY FOR OWN

Jensen also clarified another issue:

He declared that if the Antelope Valley and southern Kern County want Feather River water they must contract for it and pay for its transmission to them on their own, in line with the announced policy of Director Harvey Banks, of the State department of water resources, against paternalistic handouts in the water program.

JENSEN'S statements climaxed his discussion of the three proposals for bringing the water to this area from the north: (1) a long tunnel through the Tehachapis, (2) the 3,400-foot line over the mountains and (3) the coast route.

EARTHQUAKE DANGER

He dismissed the long tunnel as unacceptable because of earthquake danger. Then he challenged the so-called high line which would go up 3400 feet, water the Antelope Valley and Mojave Desert areas and then go via San Bernardino County to San Diego County.

He dismissed this plan as economically unsound, because he contended the idea of getting enough electric power from falling water on this side of the mountains to pay a reasonable part of the pumping cost is not feasible. He declared permanent contracts for the power on this side cannot be made with the power companies—except with ruinous penalties—because of the uncetainty of the amount of water to be delivered, particularly in wet seasons.

"Each area to be served must carry a fair share of the cost of the project," he said. "Director Banks has enunciated this policy. If an area cannot pay, it cannot be included."

SAN BERNARDINO MUST JOIN

However, he went on to say, Antelope Valley can get a cheaper connection to pump water for its own use by hitching onto the coast route than it could if all the water were taken over the high lift. Southern Kern County can arrange to extend the aqueduct to its area, he said. And San Bernardino County can get its fair share of water by joining the metropolitan water district.

In response to a question from Chairman Tudor, JENSEN said the metropolitan will not serve as an agent for San Bernardino County if the latter remains outside the district and hopes to get water from the San Fernando Valley delivery point which the district favors. The price would be prohibitive anyway, he added.

Before JENSEN'S appearance, numerous units of the metropolitan had pledged to abide by the policies to be enunciate by him.

The President's Address on the Economy

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 22, 1958

Mr. PROXMIRE. Mr. President, this morning's Washington Post carries an excellent editorial analysis of President Eisenhower's recent speech. The report points out how unwise and unrealistic it is for the President simply to place so much reliance on calling upon business to hoist its way out of the present recession by its own bootstraps. It calls for Government action to provide progress in education, health, social security, urban living patterns, and a redressing of the world's dangerous economic imbalances, rather than empty Government words.

Mr. President, I ask unanimous consent that this excellent editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PRESIDENT ON BUSINESS

President Eisenhower indicated in New York that if he were a businessman faced with the present recession he would know what to do about it. He would bring costs under control, hold the line against unearned wage increases, modernize his plant, improve his product, hold inventories at something more than minimum levels and get in a strong competitive position for the inevitable upturn. By doing so, he would expect to shorten the recession's duration and contribute to some of the needed corrections in pricing and other policies.

This advice may have been a sound, if somewhat wishful, prescription for business leaders, but it was not a very conforting substitute for governmental action. One of the flaws in the administration's handling of the recession has been its seeming failure to recognize that business simply cannot do all of the things the President enumerated and that, in consequence, Government's role in the furthering of economic growth and stability must be correspondingly more vigorous.

In taxation, the Government has a powerful instrument with which to influence and facilitate some of the steps which Mr. Eisenhower called for. It is good to know that a decision on the use of this neglected tool is coming soon. But procrastination has made things worse, and it remains to be seen whether the administration will put aside its obsession with budget balancing and seek the sharp temporary stimulus that is desirable.

For the longer pull, the administration ought itself to heed one piece of advice which Mr. Eisenhower gave the businessmen. "One of the hopeful developments of recent years is that new knowledge is rapidly being accumulated about the aspirations and wants and motivations of our people," he noted, and he called upon business to explore these wants more intensively. We suggest that it is Government, not business, which faces the largest challenge here—and that Government, by concentrating narrowly on yesterday's budgetary standards, is flubbing its responsibility.

Surely any catalog of today's popular aspirations must begin with more progress in education, health, social security, urban living patterns and a redressing of the world's dangerous economic imbalances. These are tasks which Americans must tackle through Government, Federal and local, and the initiative here will not and cannot come from business even though business will be a beneficiary. These are the tasks around which the President could rally a great new productive effort.

Reciprocal Trade

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. MADDEN. Mr. Speaker, the Rules Committee today opened hearings on the reciprocal-trade legislation. No doubt this bill will be on the floor of the House for consideration next week.

The following editorial by H. B. Snyder, editor and publisher of the Gary (Ind.) Post-Tribune, reflects in general the thinking of the majority of citizens in the industrial Calumet region of Indiana.

VICTORY FOR TRADE POLICY

The reciprocal-trade bill as proposed by the administration has won a substantial initial victory in the House. It has been approved by the Ways and Means Committee with only minor revisions that have been given the unqualified support of Commerce Secretary Sinclair Weeks.

The committee action demonstrated the wisdom of the White House refusal to accept weakening compromises even before the measure reached the House floor. The bill, as originally drafted, already had more protectionist safeguards than are desirable.

The major battle still to be fought on the House floor, and again later in the Senate, will be over President Eisenhower's request for a 5-year extension of the law. Since its original enactment in the early years of the Roosevelt regime, the trade act has never been continued for more than 3 years, and usually for a shorter period.

The President should consider no compromise on the 5-year proposal, however. The victory in the House committee gives much assurance that he can win the full extension if he stands firm. There are various reasons why the act should be continued for the longer period, but the most compelling one is the development of a common market now in progress among the countries of Western Europe. It is highly important to us that there be no uncertainty about our tariff policy at the time the common market plan is taking effect.

The one House committee amendment to the administration bill which has aroused question is that authorizing Congress by a two-thirds vote to override presidential vetoes of Tariff Commission recommendations. Under the existing law, the Chief Executive has the final word.

The Committee for a National Trade Policy, which has been working actively for the bill, has voiced disappointment with the amendment, and Charles P. Taft, its counsel, has objected strongly to congressional review as one of the oldest means used by protectionists to weaken the program.

As the amendment stands, however, it is more window dressing than anything else. Without it, Congress still would have the power to enact a law accomplishing the same thing and, if it was vetoed, to override the executive by a two-thirds vote just as the amendment provides. So while the amendment might be disappointing, it actually gives no extra authority to Congress.

John T. O'Rourke Editorializes on Independence in Cuba

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. PORTER. Mr. Speaker, John T. O'Rourke, editor of the Washington Daily News, is active in the Inter-American Press Association and is now its president. When he writes about Latin America he does so with knowledge, experience, and affection.

The Vice President now believes we should change our foreign policies to treat dictators and democracies in accordance with the principles on which this Nation was founded and which correspond with public opinion here today.

Clearly, we should change our present policies which are based on a perversion of the nonintervention doctrine. 'Cuba, as the cloest and most critical area, deserves first attention. If Mr. NIXON follows through, as we hope he will, he will support logical concrete implementations such as:

First. Public official statements by our Government making our disapproval of Batista and his police state emphatic and unequivocal.

Second. Withdrawal of our military mission to Cuba.

Third. Instruction to our Ambassador to Cuba to use either the formal handshake or the cold shoulder, rather than the warm embrace.

Editor O'Rourke's editorial, included here under leave to extend my remarks, in the Washington Daily News, May 22, 1958, is a forceful statement fully in keeping with what the American people believe but which somehow continues to elude Mr. Dulles:

INDEPENDENCE

Reading our Eve Gordon's report yesterday of the Cuban Embassy's party to celebrate Cuba's Independence Day, gave us, as they say, pause. What's the operating word—"independence" or "day"?

It was, of course, a "day"; the proud anniversary of the throwing off of Spanish dominion.

But "independence"? Independence connotes freedom. That must have seemed a sour joke to millions of Cubans.

In Cuba there is no free press.

In Cuba there is no free speech.

In Cuba there is no free assembly.

In Cuba there simply is no freedom; there is no independence.

And so, apparently as an offset to the bad publicity, the Batista dictatorship has been getting, and in best modern press relations counsel style, the veteran career diplomat who had served here for years, was removed a couple of months ago and a nice, personable, talented young couple installed in his place. Both the Ambassador and his wife

are architects. They had done well planning the new Hilton Hotel in Habana. Before that, the new Ambassador also had done a hitch as Batista's Minister of Public Works. He brought his yacht along to his new post here.

The handsome old Embassy, which had gotten fairly dingy over the years was given a fast facelifting to celebrate current Cuban independence. And night before last the Embassy glowed with new paint, mossy, swamp-soft wall-to-wall carpets, curtains of nerve-soothing green and calm offwhites to help banish back-home visions of sadistic police, beaten-up women, castrated boys, dead bodies, jailed newspapermen, murdered foreign correspondents and the stink of fear, cruelty and corruption that today envelops the island only 90 miles off our shores.

Independence, indeed.

Some Great Smears

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Fort Lauderdale Daily News of Saturday, May 17, 1958:

SOME GREAT SMEARS
(By Richard Milne)

Well, Paul M. Butler didn't let us down, after all.

The political midget with whom the Democrats are struck as national chairman for a while has accused the Republican Party of sending Vice President NIXON to Caracas so he could be covered with slimy spit and come home a hero.

Although careful to say he did not countenance the treatment given the Vice President, Butler made it clear he considered the NIXON visit to Caracas a propaganda stunt.

This is about what we expected of the mouthpiece of the Democratic Party.

Butler claims the whole episode was set up to conceal the fact that the Vice President has gained his reputation as a master of the smear technique.

Those are Butler's words, not ours, and we couldn't more strenuously disagree.

First of all, bully-boy Butler is alleging that NIXON readily agreed to imperil his wife's life, as well as his own, simply to knock off some sympathetic front-page publicity.

How idiotic can the top brains of the Democratic Party get?

Butler has been shooting from the hip like this ever since he took over, perhaps in a gallant effort to succeed Harry Truman as his party's top light artilleryman.

We don't know what he means by NIXON'S smear technique, unless he is referred to the Vice President's leading role in putting Alger Hiss behind bars.

A lot of apologists for the lefties in the party never have got over that one, and even today, after Hiss has served a sentence and should be just another ex-con, there are those who still insist he wasn't really proved guilty. It was just a matter of one jury's opinion—too bad the jury wasn't made up of lefties. Communists and fellow travelers who might have brought in a different verdict.

We think bully-boy Butler is on pretty weak ground when he makes charges about smears.

Who smeared Herbert Hoover? Who smeared Charles A. Lindbergh? Who smeared Martin Dies?

It wasn't Republicans, Butler; it was you and your own party who applied some of the greatest smears of this century to some of America's finest men.

And remember James Forrestal?

Appropriate Uniforms for Medal of Honor Winners

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mrs. KEE. Mr. Speaker, it is my privilege to introduce in the House of Representatives today a bill to amend section 772 of title 10, United States Code, to provide that the Government furnish to Congressional Medal of Honor winners appropriate uniforms, including insignia.

I am advised, Mr. Speaker, that these Medal of Honor winners are asked at least 6 to 8 times a year to participate in civic events, such as Armed Forces Day, Memorial Day, Veterans Day, Medal of Honor conventions, conventions of various organizations, dedications, and other commendable affairs.

Most of these men have been out of the service for years and they do not have uniforms suitable for these occasions. It is highly appropriate, Mr. Speaker, that these men of valor, who have earned the highest recognition within the gift of a grateful Nation, be outfitted with the necessary uniforms to wear at the many public functions which they are expected to attend.

This would be done by authorizing the Secretary of the service involved to furnish, upon request and not more often than once every 5 years, an appropriate uniform, including insignia, without charge.

Approximately 340 men upon whom the Nation's highest military honor was bestowed are still living. They are, Mr. Speaker, symbols of the highest traditions of bravery and devotion of the armed services. This is not, I emphasize, a matter of money. Rather, it is a matter of acknowledging our eternal debt to these brave men.

After all, Mr. Speaker, when the holder of a Congressional Medal of Honor is asked to appear at some public meeting, he alone is not being honored. Rather, all of the armed services and the men and women who comprise them are being honored.

It is fitting that the Congress, in whose name the honor was bestowed, see that these men have suitable uniforms for these public functions.

Therefore, Mr. Speaker, it is my hope that the Congress will approve this proposed legislation before adjournment this summer.

Anti-REA Drive Picks Up Steam

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 22, 1958

Mr. PROXMIRE. Mr. President, in my judgment there has never been any farm program which was more universally popular—and more universally successful—than the rural electrification program. Rural electrification has progressed from only 1 farm in 10 before REA was established to about 9 farms in 10 today—and more than half of the farms which have received electricity since 1935, when REA was started by President Roosevelt, have been electrified by REA-financed co-ops.

There is a grave threat to the REA's today, I am sorry to say. The nature of this threat is brilliantly described in an article by Mr. Roscoe Fleming and his son, the nationally recognized team of journalists in Denver, Colo., who have specialized in issues concerning natural resources development. This article appears in the May issue of the National Union Farmer.

I was particularly impressed by the point which is documented in the Flemings' article, that the proposed legislation to change the REA's basic program which the farm leaders regard as a threat to its continued success would actually result in much higher costs to farmers and much greater financial risk and burdens to the Government.

So far in its history, the REA program has been a truly unprecedented financial success. Losses are almost nonexistant. But some of the proposed legislation would immediately require the Federal Government to sacrifice its first mortgage rights which secure the funds which the Government has advanced, in order to provide what is, in effect, a subsidy to private lenders to induce them to furnish the additional loans that will be needed by the farmers and their co-ops.

Mr. President, this proposal would result in far greater financial risk to the Government than continuing under the present program. It would greatly increase the interest burden upon the farmers. It is contrary to the interests both of taxpayers and of farmers—and contrary to the general public interest, for it could only result in slowing down the progress of the rural electrification movement in expanding to meet the rising demands of farmers for electricity. Any handicap to the further electrification of agriculture would be a severe blow to the industries and the workers who manufacture and merchandise electrical appliances, and all the other industries which serve them.

Mr. President, because of the timelness of this article, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the National Union Farmer of May 1958]

ANTI-REA DRIVE HOTS UP

(By Roscoe and W. N. Fleming)

The rural electrical cooperative program has worked day and night as a mighty engine of prosperity for the Nation since Franklin D. Roosevelt, George Norris and others first threw the starter switch in 1936. But now, Eisenhower administration policies threaten it far more than most REA members realize.

Two bills in particular carry the seeds of its possible stagnation or death, as shown at the National Rural Electrical Cooperative Association convention in Dallas, and continuously since at regional and State meetings.

The 4 million farm families served by REA are as a whole $117 million ahead of schedule in repaying money loaned by the Government, and have paid $307 million in interest. This is perhaps the best repayment record of any group that ever borrowed from the Government. Yet the REA's are being threatened like delinquent debtors.

One bill backed by the administration would simply compel them to pay interest on future loans, at whatever fluctuating rate the Government itself has to pay for money. But the farmers say that the Government has actually "made" $50 million over the years, on REA loans, because much of the time money has been loaned to REA's it has cost the Government much less than the 2 percent REA's uniformly pay.

The other bill is far more sweeping. Purporting to create a "revolving fund" for REA's to draw upon, its net effect might be to force many of them into the hands of private money-lenders.

Private loan rates are always higher than Government rates, and in addition the Government would insure the loans to get private financiers interested. It would charge for this service—a charge which the farmers' REA's would of course, pay in addition to the higher private rates of interest—though the fee is not for REA's benefit, but to insure the safety of lenders.

THREAT HANGS OVER REA

But this is not the worst, REA leaders say. The Government could turn over its first liens on REA properties, held to safeguard its loans, to the private lender. This, says Clyde Ellis of National Rural Electric Cooperative Association, could permit private utilities, or banks which finance those utilities and are allied with them, to acquire first mortgages on REA properties. Any faltering or failure in payments of principal or interest, and private utilities could snap up REA's by foreclosure.

Friends of REA are alert in Washington, and due to the press of other legislation and the hurly-burly of the coming campaign, Congress does not seem likely to pass either bill this year. But they remain a continuing threat for the 86th Congress.

On the other hand, the REA cooperatives must continue to grow, and will require enormous drafts of new capital.

HAMIL CITES RISING DEMANDS

Speaking at the recent Colorado REA Association meeting, REA Administrator David Hamil explained:

"We once talked in terms of a modest 40 kilowatt-hours per month per person. The national average today is 280 kilowatt-hours. We terribly underestimated what rural electrification was going to do for the rural areas. There is one cooperative in Washington State that is using 1,446 kilowatt-hours per person per month.

"This steadily increasing demand—away from the concept of electricity to run household gadgets and a few appliances in the farm toward that of an automated farm operation calling on the mighty muscles of electricity for almost every task—means that the 950 cooperatives that still owe the Government are going to need $1 billion per year of new funds within the foreseeable future." (A total of 81 cooperatives have paid out their Government debt, and are wholly self-financed.)

"But where is the money coming from? I do think it wise to look down the road to the day when we may have our own lending agency, but it can't be done today. The time is not yet.

"Utilities generally figure they are not strong and safe unless they own an equity of 50 percent in their own properties—own half of those properties free and clear, in other words.

"The comparative figure for REA cooperatives as a whole is 13 percent. The gross figures: Congress has loaned the REA's $3.6 billion in 20 years. The REA's have repaid $506 million in principal, beside paying $307 million in interest, or a total gross repayment of more than $800 million. The repayment overall is $117 million ahead of schedule."

"As of March 1958," Hamil added, "there was a little more than $100,000 in REA payments due the Government which was more than 1 month in arrears. This is a 99.9985 percent repayment record."

WHAT ABOUT HAMIL?

Farmers can't make Hamil out. He is one of them, he was one of the organizers of one of the biggest REA cooperatives in the Nation, the Highline in Colorado, which covers a territory larger than Connecticut. He has kept quiet about the two adverse bills; his friends say he is plenty vociferous about them in private, but officially has nothing to say.

Also, final authority over REA loans of more than $500,000 has been taken away from him, following a bitter row in Indiana over a generating-plan loan of $40 million (not yet made) in which virtually the whole Indiana official hierarchy lined up with the private utilities against the farmer, and battled the REA loan clear to the White House.

The second bill—the moneylenders' bill—also would reduce the REA administrator to a figurehead, and put all final authority directly in the hands of the Secretary of Agriculture.

In an elaborate analysis prepared for the 140,000 members of Illinois REA cooperatives, the whole REA situation was pinpointed.

First, the program is a social one, and so REA cooperatives have to serve every farm in an area, no matter how remote. This is contrary to private utilities' custom of serving only those clumps of customers who can be most cheaply and profitably served.

(Only the oldtimers remember it, but F. D. R.'s administration first offered private utilities long-term, low-cost loans to extend electric service into the countryside. They turned him down, and only then did the administration go ahead to create REA. And then many private utilities, as veteran REA organizers well remember, built "spite-lines" to pick off the best paying farm neighborhoods before the REA's could build. This is still going on, by the way. The private utilities move quickly to seize suburban and housing developments in REA territory, and, under the present administration, REA's are generally denied loans to serve such developments, even when far within the farm territory the REA's are serving.)

In Illinois, although farmsteads are relatively close together, there is only an average of three REA customers per mile of line.

Secondly, many farms formerly served by REA's have been abandoned, or consolidated into larger holdings. In Illinois, there were originally 151,000 farms served by REA. Now the number is down to 140,000. The cost of providing the abandoned services was $7 million. The remaining members have had to assume this capital cost.

REA RATES PUSHED UP

Thirdly, every cost item has gone up. The Illinois REA's, like those in Indiana, are served almost entirely by private utilities. The latter at first charged a wholesale rate of 2 cents per kilowatt-hour, one of the highest in the United States. But successive negotiations, backed by the REA threat of building their own generating plants, has cut it to 8.5 mills. Now, the REA's themselves say, they are threatened with a rate increase of 10 percent. If they could get a loan to build their own plant, which would cost $30 million, the threatened increase in REA interest rates from 2 to 4 percent, could alone cost an extra $600,000 yearly.

Lastly, interest and repayments on debt were supposed to increase year by year as the cooperatives got stronger. Now, the Illinois group says, their net margin over operating expenses runs about $2,200,000 yearly, but within the next few years debt service alone will require $3,700,000 yearly. They need $1,500,000 more revenue just to meet this bigger bill.

Ten cents a day is the cost of the farmer's extra hired hand, Willy Wired-Hand, the electrical worker. And that is the farmer's own wage when he chooses to do heavy work by hand that electricity can do for him, says O. J. Trenary, extension agricultural engineer at Colorado State University.

A strong man can develop about one-tenth horsepower at continuous work. But a 1-horsepower motor can do 10 times the work for 1 kilowatt of electrical energy, which costs about 3 cents an hour.

Nixon's Victory

EXTENSION OF REMARKS

OF

HON. EDWIN H. MAY, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1958

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following fine editorial from the Boston Traveler concerning Vice President NIXON's recent trip to South America:

NIXON'S VICTORY

Our South American friends and critics will be talking for a long time about the courageous way Vice President NIXON handled that Peruvian mob scene last week.

What is more, this will be the kind of a story that does not tarnish with retelling. It will continue to stand as a gleaming example of personal bravery and of loyalty to principles.

NIXON knew when he set out to visit San Marcos University in Lima that he was moving head on into danger. Communist agitators had boasted openly that he'd be greeted with violence if he showed up.

He braved their challenge. He refused to flinch in the face of a cowardly attack. And he hurled back a challenge of his own, daring them to meet him on the field of free speech. This they were afraid to do.

There was a lot at stake in this Lima incident. If NIXON had showed the brand of cowardice that his attackers showed, the prestige of the United States would have plunged like a chunk of lead in a bucket of water.

But the sight of the Vice President angrily showing his fist and daring the opposition leaders to come out and face him was some-

thing that has given South Americans a new respect for us.

Communist agents have been doing their best to turn NIXON's tour into a shambles and to develop bad feeling toward the United States. But when they tried to make NIXON look bad at Lima, their plan backfired disastrously. He emerged looking good—obviously the victor.

Mrs. Nixon is said to have remarked after the mob scene that she was so proud she "could almost bust."

Many another American feels that same way.

And many persons at home and abroad, who formerly disliked NIXON, now at least respect and admire him for his show of personal courage.

He displayed American spirit at its best.

Federal-State Relationships

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. MAY. Mr. Speaker, my work on the Intergovernmental Relations Subcommittee of the House Committee on Government Operations brings me into close contact with the problems involved in Federal-State relationships.

The Fountain subcommittee of the the House Government Operations Committee, dealing with intergovernmental relations, has conducted exhaustive hearings throughout the country in this field. We have interviewed many of the governors; heard from 42 of them and also from many mayors and municipal officials. In fact, I was proud that one of our hearings took place at the State capitol in Hartford, Conn. To set the record straight, Governor Ribicoff, of Connecticut, was invited to testify not only by mail, but to appear in person in Hartford, Boston, New York, or even Washington. He declined.

There is a very worthy discussion of this subject appearing in an editorial in the May 17 edition of the Hartford Courant. I commend the thought contained therein to my colleagues:

THE STATES COULD REGAIN SOME FINANCIAL POWERS

The local fashion today in financing capital improvements is to discover the right Washington agency ready to help with the cost. The habit erodes the fiscal independence of States and towns. The taxpayer who sends about a fifth of his income to the United States Treasury every year may not worry over the principles involved in getting some of this money back. Even so, the less the Federal Government pays of a community's bills the better. Only Washington can encourage this trend by leaving more money at home, so that States and towns can finance their own way. The Joint Federal-State Action Committee has now made several recommendations on this point.

The committee suggests that the Federal tax on local telephone service be reduced from 10 to 6 percent; that Federal grants for vocational education be cut out; and that the Federal Government discontinue its grants for building waste-treatment plants. President Eisenhower agrees with these ideas.

His countrymen will also agree, once they learn how the tax credits will be switched to the States. Present estimates are that $150 million would be available from the Federal tax cuts. Legislation on these proposals should be watched carefully by the States, to see that the shifting of responsibility creates a financial advantage.

It will be a bright day for decentralized government when the States can pay for their own disasters, finance their own atomic energy developments, and do their own urban planning without help from Washington.

Murder on the Airways

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. MADDEN. Mr. Speaker, I am herewith submitting a letter dated May 21, 1958, from Mrs. Arthur O. Wooldridge, 3260 North Ohio Street, Arlington, Va., registering an emphatic protest against the negligence of our government in not prescribing rules and regulations against military planes and Air Force Jets from endangering the lives of people traveling commercial airplanes. This letter was addressed to the Washington Star and the Hammond (Ind.) Times.

In the last 2 years over 300 lives have been sacrificed due to the reckless negligence of the Department of Defense in allowing unchartered and unscheduled military planes to cross and travel haphazardly on the designated commercial airlanes.

Mrs. Wooldridge states she is traveling by automobile and train in the future until something is done to protect the lives of air passengers.

A LETTER TO THE WASHINGTON STAR AND HAMMOND (IND.) TIMES

MAY 21, 1958.

When may we expect action to be taken to end these massacres in the sky? Was it not sufficient reason when an Air Force jet rammed into a transcontinental airliner over Nevada on April 21, killing 29 persons when the day was clear and perfect flying conditions prevailed? Must we wait for another disaster such as the one in Maryland on Tuesday of this week?

Military aircraft should be forbidden to fly in or across civilian air lanes.

Is it not time for a complete coordination between the various Government agencies controlling military and civilian flying? A single agency with complete jurisdiction over all planes is an imperative need at present.

Jet pilots confess they do not see the civilian aircraft. Why are they permitted to enter the civilian airways? The Capital plane was on course and at a proper altitude on Tuesday.

Instead of inquiries, I implore Congress to do something. We spend billions to reach the moon, let's do something realistic about a happy landing in U. S. A.

MRS. ARTHUR O. WOOLDRIDGE.

ARLINGTON, VA.

Pacific Northwest Wants Competitive Air Service to the Orient

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. PELLY. Mr. Speaker, the people of Washington State have been greatly disappointed at the denial of the application of Pan American World Airways to furnish air service to the Orient from the Pacific Northwest. Our people support competitive service on the Great Circle flights by allowing Pan American to pick up passengers and freight in the Seattle-Tacoma area on flights between California and the Orient.

Seattle and other west coast chambers of commerce have hoped President Eisenhower would direct the CAB to start a new proceeding in the light of up-to-date figures so that when Pan American obtains jet aircraft the end of next year Washington State will not have inferior service. Most emphatically, the travel public is entitled to competitive United States-flag air service from Seattle in recognition of its natural mileage advantages of 800 miles as against routing from California.

The following editorials express community opinion:

[From the Tacoma News Tribune of May 15, 1958]

LET IT ALONE

A decade has passed since Pan American World Airways and Northwest Orient Airlines undertook the pioneering effort in establishing the direct air service which links Puget Sound with the Hawaiian Islands. In that interval, the competition between the two carriers has produced traffic which statisticians estimate has grown 500 percent in volume. This is a tribute both to the quality of the service and to the free competition and aggressive salesmanship which has sold the public on the economic importance of this direct air service which is most essential to the development of the Pacific Northwest. Today, traffic over the route has developed to a degree that neither line receives a penny of Government subsidy. Continued competition on the run, unlike the excessive competition which exists on some routes, will not call for support from already overburdened taxpayers.

It was something of a surprise therefore when a prehearing conference between representatives of the two carriers and Civil Aeronautics Board Examiner Ferdinand Moran early this month indicated that another route-case controversy is in the making. At the proceedings, preliminary to a CAB hearing which largely may determine the future of air service between Puget Sound and Hawaii, Pan American took the stand that continued competition on the route is desirable and in the public interest. Northwest, with equal sincerity and conviction, argued that the route would support only one carrier and that this sole operator should be Northwest.

Such a dispute, in a day that calls for enlarging rather than restricting the areas of air transport, scarcely seems to be in the public interest. Healthy, active competition ever has been a stimulant to economic development, a matter of vital concern to the

entire Pacific Northwest. In the past, adherence to this principle has won the sound endorsement of civic groups. Chambers of Commerce (including the united front of those of both Tacoma and Seattle), State and local governmental bodies as well as others interested in the growth and development of international trade and travel through the Seattle-Tacoma aerial gateway. On the basis of proven business which in the light of an increasing clamor for Hawaiian statehood scarcely can do anything but grow, it does not now appear logical that the element of competition should be eliminated by Government decree on this overseas aerial route. The competitive situation here seems to be one of improving health for all concerned with the public need for continuation of existing conditions the matter of paramount importance.

[From the Seattle Times of May 18, 1958]

CONTINUED COMPETITION DESIRABLE

For the past 10 years, Seattle and Portland have enjoyed the benefits of competitive airline srevice to and from Honolulu. Both Northwest-Orient Airlines and Pan American World Airways have operated over that route.

The temporary certification of the two airlines for this service has expired. Its renewal will be the subject of a forthcoming hearing before the Civil Aeronautics Board.

At a preliminary conference with a CAB examiner, Northwest Airlines has urged that Pan American's certificate be revoked, on the ground that the traffic would support only one carrier. Pan American took the position that continued competition on this route is in the public interest.

Pan American presented evidence that the volume of traffic over this air route has increased 500 percent in the 10 years the 2 airlines have been operating in this service. At present neither airline is receiving a cent of Government tax subsidy for this operation.

Under the circumstances, it seems to us that continued competition will, as Pan American contends, be in the public interest. We think that all the business that can be obtained for the Seattle-Tacoma International Airport and all the air service that can be maintained for Pacific Northwest air travelers should be encouraged.

Both these considerations, in our view, call for the issuance of permanent certificates to both air carriers to continue their service between the Pacific Northwest cities and the Hawaiian Islands.

Healthy and active competition is the lifeblood of democratic enterprise. We trust the CAB will not take too seriously a proposal by 1 or 2 airlines, serving a steadily growing route, that its competitor be eliminated by Government directive.

One World, and We Are a Part of It

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1958

Mr. PORTER. Mr. Speaker, a Member of Congress today is very much aware of the fact that it is indeed one world, and that we are, whether we like it or not, a part of it. Nuclear-weapons policies, reciprocal-trade agreements, mutual security, and many other such vital questions come before Congress. The local interests of our respective districts are, of course, the principal responsibility of every Member of the House of Representatives, but these local interests today include, among many other things, the drafting of our young men and the use of our tax money for the defense of our country and for the building of a lasting peace.

These matters are very well discussed in an editorial entitled "No Longer Alone," which appeared in the Albany Democrat-Herald on May 6, 1958, and which, under unanimous consent, I include in the Appendix of the RECORD:

NO LONGER ALONE

On just 1 day these events were reported from overseas:

The Indonesian Foreign Minister protested that Americans and Nationalist China nationals are helping the rebels on Sumatra and the Celebes, and is threatening to lay the matter before the United Nations.

Generalissimo Francisco Franco, Spain's military dictator, rounded up leaders of opposition groups to prevent demonstrations that might mar his show of jet fighters, trainers, and other weapons he has received from the United States, that took place Sunday at Torrejon Airfield near Madrid, used jointly by Franco and the 16th Air Force of the United States Strategic Air Command.

At what purported to be and what probably was a free election Korean President Syngman Rhee's Liberal Party won an election.

Vice President RICHARD NIXON continued his Latin American tour, conferring with Argentine President Arturo Frondizi, Uruguayan executive, Luis Battle, and other Government officials.

Prime Minister Jawaharlal Nehru of India allowed himself to be dissuaded from retiring after explaining that he had wanted to seek seclusion in the Himalayan foothills to escape the rising turmoil and ferment that is plaguing the Indian Government.

Greece got a warning from Nikita Khrushchev that it will risk becoming a target for atomic weapons if it permits establishment of guided missile bases on Greek territory by the United States or other western powers.

Each one of these incidents had an important if indirect bearing upon the lives of all Americans.

That a few Americans should choose to fly aid to the Indonesian rebels is not surprising. American soldiers of fortune have always been on the hunt for wars and have usually been able to find them in South America, Africa, the South Pacific, or here and there, for there is seldom a time between big wars that little wars aren't flaring up. The American Government has not sponsored nor assumed responsibility for these volunteer soldiers abroad, but now, it appears, we are being held by the Indonesian Government as not only responsible for our own adventurers but for the Chinese Nationalist daredevils as well. And though Indonesian President Sukarno is avowedly pro-Communist we must sit back and let him suppress the prodemocratic elements of Indonesia whose victory would be a victory for the West and whose defeat is our loss.

Whatever may be his faults, it cannot be said that Syngman Rhee is lukewarm toward the Communists. So the results of Korea's election are down our alley, as it were.

It looks as though Vice President NIXON is laying the groundwork for more and bigger loans to Southern American countries. That will associate us more intimately than ever with Latin America. His suggestion that the United States place greater stress on personal dealings with the southland, in contrast with our absentia policies of the past, is a good one. The need for greater knowledge among our Government officials about Latin American nations south of the Isthmus of Panama has long been apparent.

Franco's show of force in Spain was made possible by the United States, a majority of whose citizenry hold Franco in low esteem. But Spain is so located strategically that it behooves us to keep on good terms with the dictator as long as he is in power, for without his approval we would not have access to the airfield we built for him.

Greece is caught between the United States and Russia. Her decisions could spell trouble or satisfaction for us.

It was no more than a generation ago that Americans would have been no more concerned with a revolution in Indonesia, an airbase in Spain, an election in Korea, guided-missile bases in Greece, Nehru's retirement, and the disturbing circumstances that caused him to change his mind—all these would have been little more noticed in the United States than a dust storm on Mars.

But now we must worry not only about our own domestic affairs but about those of other countries. It was not so long ago that all we had to do was to quote the Monroe Doctrine and then go on about our business. Where is that doctrine now?

The Fund for Adult Education

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1958

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution by AMVETS:

THE FUND FOR ADULT EDUCATION (FAE), AN ADJUNCT OF THE FORD FOUNDATION

Whereas certain forces dedicated to the overthrow of our form of republican government under the Constitution of the United States of America, are disseminating propaganda to agitate and confuse Americans by obscuring the truths of American history, American domestic affairs, and international political affairs; and

Whereas the aim of such propaganda is to implant ideas of a collectivistic world government and to incite action leading thereto through biased information contained in political activity known as adult education discussion groups sponsored by the American Library Association (ALA), various universities and colleges through liberal arts discussions released through university extensions, the American Foundation for Political Education (AFPE), and the Foreign Policy Association (FPA); and

Whereas the discussion group activities sponsored by the above listed organizations are supported by funds received from the Fund for Adult Education whose aggregate funds, amounting to many millions of dollars, are exempted from taxation by privilege extended by citizens of the United States of America; and

Whereas at this time, there is no need nor desirability for politically biased curricula to be implanted in the educational system of the United States of America in the form of prepackaged collectivistic material published by Ford Foundation's FAE, or the latter's subgrantees: Now, therefore, be it

Resolved in view of the disclosures regarding the FAE, That we, the members of Ninth District AMVETS, meeting in a regular and duly authorized session this 18th day of May 1958, in Shenandoah, Iowa, do hereby alert our membership to—

1. Continue followup and study of the ever-changing tactics of the FAE to infiltrate and to propagandize the educational system of the United States of America.

2. Urge the investigating committees of Congress to make thorough investigation and to report to the American public findings concerning FAE activities.

3. Urge that the Internal Revenue officials make thorough investigation of FAE's propaganda activities which, under the Internal Revenue Code, disqualifies FAE for tax exemption, and, finally, to revoke FAE's tax exemption; be it further

Resolved, That this resolution and this alert be brought before the next meeting of the State convention of Iowa, and also brought to the attention of the Iowa Department of AMVETS and the National AMVETS Headquarters in Washington, D. C., for a complete study and analysis of the Fund for Adult Education (FAE) at the earliest possible time; finally, it is hereby

Resolved, That all elements of AMVETS, the American Veterans of World War II and Korea, at the State and local levels, will have no truck with the Fund for Adult Education (FAE) enterprises. If AMVETS posts and departments (State organizations) are offered financial aid or invitation by the Ford Foundation FAE-adjunct, or its subgrantees, in carrying out the FAE programs, it is sincerely hoped that they will decline.

WALTER MAXWELL,
Commander.
ROBERT B. CUNNINGHAM,
Adjutant.

APRIL 1958.

Worthy of Imitation

EXTENSION OF REMARKS
OF
HON. MYRON V. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. GEORGE. Mr. Speaker, under leave to extend my remarks, I should like to include in the Appendix of the RECORD, an editorial column of May 18, from the Independence (Kans.) Reporter, written by the Reverend A. L. Lesco, pastor of a Baptist church in that city:

WORTHY OF IMITATION

(By Rev. A. L. Lesco, pastor, Chestnut Street Southern Baptist Church)

It is always commendable when a man is able to demonstrate Christian grace toward those who would do him harm, especially when his enemies resort to violence in their fanaticism. Certainly this a quality that distinguishes a representative of government as a true statesman, rather than a mere politician. Vice President of the United States RICHARD NIXON has earned the applause of his countrymen, and the respect of honorable people throughout the world, by his restraint and benevolent behavior during the extremely unpleasant situations to which he has been subjected during recent days. His example is worthy of imitation by all of us.

Seldom is it easy to love those who seem adept at making themselves unlovely. And yet this is what is expected of Christian people. When the Creator of us all wanted to tell the creatures of His creation how to live useful and happy lives, He expressed Himself in terms of love. When the enemies of Jesus spit upon Him—when they reviled, persecuted, and finally murdered Him—He responded to their evil and grace and love. Even as they put Him to death, He called out in love for them to the Heavenly Father, asking that they be forgiven. More than a few of the followers of Jesus have been able to follow His example and pray for those who persecuted them. "Lord, lay not this sin to their charge," was the cry of the disciple Stephen as he was being stoned to death.

Surely this is what the Lord was trying to teach us when He said: "A new commandment I give unto you, that ye love one another; as I have loved you, that ye also love one another." (John 13: 34.)

Today in our confusion we seek to solve the problems which obstruct the realization of world peace, and at the same time strive for supremacy in the realm of military might. But the one essential ingredient for securing a satisfying and permanent peace—Christian grace and love for one another—is largely neglected. In such times it is refreshing and encouraging to have the Christian character of one of our Nation's leaders brought to our attention. In the opinion of this writer, Vice President NIXON'S self-disciplined deportment will have a more important impact upon the thinking of a thoughtful world than will the launching of innumerable space satellites.

Labor Management Relations

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. CEDERBERG. Mr. Speaker, the recent actions of the House Subcommittee on Labor Management Relations of the Committee on Education and Labor should make it apparent that the Democrats are more interested in playing politics with the Taft-Hartley law than they are in making any revision in this law. The American people have listened for many, many years while the Democrats groaned about the alleged evils of the Taft-Hartley Act. Let me say at the outset that I know of no piece of legislation that is ever perfect at the time of enactment and certainly revisions are in order from time to time.

It is interesting to read the Democratic platform pledges regarding the Taft-Hartley Act, and I quote the Democratic platform of 1948:

We advocate the repeal of the Taft-Hartley Act. It was enacted by the Republican 80th Congress over the President's veto. That act was proposed with the promise that it would secure "the legitimate rights of both employees and employers in their relations affecting commerce." It has failed. * * * We advocate such legislation as is desirable to establish a just body of rules to assure free and effective collective bargaining, to determine, in the public interest, the rights of employees and employers, to reduce to a minimum their conflict of interests, and to enable unions to keep their membership free from communistic influences.

The 1952 Democratic platform pledges almost the same as the 1948 advocating repeal of the Taft-Hartley Act. The last paragraph of the 1952 provisions of the Democrat platform state this:

In keeping with the progress of the times and based on past experience a new legislative approach toward the entire labor-management problem should be explored.

I know of no way that the pledge of the Democratic platform of 1952 in this regard can be fulfilled unless the Subcommittee on Labor-Management Relations of the House Committee of Education and Labor is willing to hold hearings on this very vital piece of legislation. The 1956 Democratic platform also contains provisions dealing with the labor-management relations. I quote the last paragraph in the 1956 Democratic platform:

Upon return of our National Government to the Democratic Party a new legislative approach toward the entire labor-management problem will be adopted, based on past experience and the principles of the Wagner National Labor Relations Act and the Norris-LaGuardia anti-injunction law.

In view of these facts it seems certainly inconsistent that the Democratic members of the Subcommittee on Labor Management Relations voted unanimously to withhold any hearings in this field.

In his message to Congress on January 23 President Eisenhower emphasized and reemphasized the need for some changes in our labor laws.

The President said:

program today can ignore the disclosures of corruption, racketeering and abuse of trust and power in the labor-management field. Many of these disclosures have been made in congressional hearings and in investigations by grand juries and local law enforcement agencies. * * * In order to protect the basic rights of the individual worker and to maintain the integrity of trade unionism itself, action on the part of the Government is needed.

The President's recommendations include proposals in the labor-management area to protect the welfare of the individual worker and curb union abuses, include amendments to the Taft-Hartley Act, changes in other laws and enactment of new laws. They range from controls over union funds and activities, including boycotts and organizational picketing, to the elimination of the jurisdictional no man's land between State courts and the National Labor Relations Board.

During this Congress there have been a number of proposals introduced to amend the Taft-Hartley Act in one form or another. Some of these are in line with the recommendations of President Eisenhower. Others have been introduced by our colleagues on the Democratic side, all of whom favor outright repeal of the Taft-Hartley Act, and none deal with correcting the abuses which have been shown to exist in labor-management relations.

Both management and labor have acknowledged that abuses have taken place. Both admit there should be some revisions in the law to correct these abuses.

By its refusal to hold hearings the subcommittee thwarts the correction of these abuses.

It is very difficult for me to understand a situation wherein a Member of this body introduces legislation which is then referred to the subcommittee of

which he is chairman and then refuses to permit hearings on his own and related bills.

That is exactly what happened a few days ago when the gentleman from Kentucky [Mr. PERKINS] called to order the first meeting of his Labor Management Relations Subcommittee of the Committee on Education and Labor. This meeting was called to consider the subcommittee's course of action during the remainder of the session. The full membership of the subcommittee was present, being composed of the chairman, the gentleman from Kentucky [Mr. PERKINS], the gentleman from Minnesota [Mr. WIER], the gentleman from Pennsylvania [Mr. HOLLAND], the gentleman from New York [Mr. TELLER], the gentleman from Pennsylvania [Mr. KEARNS], the gentleman from Arizona [Mr. RHODES], and the gentleman from Michigan [Mr. GRIFFIN]. It is my understanding that the gentleman from Pennsylvania [Mr. KEARNS] proposed that the subcommittee set up an agenda and hold hearings as soon as possible on the proposals which President Eisenhower has characterized as vital to protect the basic rights of individual workers and to maintain the integrity of trade unionism. The gentleman from Arizona [Mr. RHODES] proposed that the subcommittee begin hearings on March 12 on the four parts of the President's program on which both management and labor had expressed an interest.

When it came to a showdown, the Democratic members of the committee stood man to man against permitting any legislation of this type to come before the committee as proposed.

Last week, during a discussion of this legislation, the distinguished majority leader said:

> They know that if a bill comes out, you fellows in combination with some others are going to try to put through some antilabor legislation.

Obviously the majority leader was attempting to infer that the Republicans would attempt to put through some antilabor legislation when he said "you fellows."

I feel confident I can assure the majority leader we Republicans will not have any part in punitive legislation but are desirous of constructive revisions of the law.

Who did the majority leader have in mind when he said "some others"? This House is composed of only two parties—Democrats and Republicans. Apparently the gentleman has fears as to what some of the Members on his side of the aisle might do.

Does the majority leader and the chairman of the subcommittee fear the Democrats will support what he calls antilabor legislation? Is that why no hearings will be held on amendments to the Taft-Hartley Act?

The Democrats are in the majority in this House and the Democrats are in the majority on the Labor Committee and on its Subcommittee on Labor-Management Relations.

I would like to call to your attention to the fact that the four Democratic members of this subcommittee, under the chairmanship of the gentleman from Kentucky [Mr. PERKINS] and his colleagues the gentleman from Minnesota [Mr. WIER], the gentleman from Pennsylvania [Mr. HOLLAND], and the gentleman from New York [Mr. TELLER], all of whom unanimously voted against holding hearings in the field of management relations, are among the 80 Democratic Members of Congress who signed the manifesto under the heading of Proposed Program for the Democrats in the House of Representatives, 85th Congress, which is found in the CONGRESSIONAL RECORD of January 30, 1957.

That manifesto said:

> We favor the repeal of the Taft-Hartley Act and its replacement by labor-relations legislation that is favorable to labor, to management, and to the public.

Now I ask you how inconsistent can you be and what can be the motives of these Members? Labor itself in many instances has come out in favor of revisions of the Taft-Hartley Act. I know in many of the political campaigns of the past the Taft-Hartley Act has been an issue and yet the Democrats who are in control and who have been in control of the United States Congress for every year except 2 years since its enactment have done nothing. They have taken no steps whatsoever to revise this piece of legislation.

Just a few weeks ago members of the building trades and labor unions were in Washington and many of them visited our offices. They visited me. Several of the provisions that they were interested in had to do with revising certain provisions of the Taft-Hartley Act, most of which have the support of this administration and have been proposed by the President of the United States. I asked those that came into my office why they do not go to the committee and request that hearings be held so that the provisions in which they are interested can be made a part of the law.

Apparently these men were aware of the doubletalk engaged in by our colleagues on the Democratic side who out of one corner of their mouths pretend to be the great friend of the laboring man and out of the other vote to thwart consideration of this labor legislation we are discussing.

Certainly it is no secret to the gentlemen on the Democratic side that these labor groups have been calling for action on the Taft-Hartley bill. These very building trades people who visited us were here in the interest of legislation.

This AFL–CIO group wants the Taft-Hartley Act amended. The Democratic members of this subcommittee have blocked any possible attempt to consider any amendments to this act.

I certainly feel that the Democratic Party has a great deal of explaining to do. Certainly they should advise the American people as to the reasons for the actions that have been taken by this subcommittee and also issue a statement as to when we can expect some action in this field which they have themselves stated is worthy and deserving of some action. I believe one thing that we must call to the attention of the American people is the fact that the Democratic Party controls the House of Representatives and controls the Senate of the United States, therefore, it is their responsibility in this field if any action is going to be taken.

We Republicans stand ready to do what we can to assist in sensible and reasonable revisions of this act, but we must and feel compelled to state that the record should be crystal clear, that the Democrats are not interested in revisions of this act, but interested in merely playing politics with it. Certainly the laboring man of this country deserves more than that. Lipservice is not enough.

Nixon Gains Stature

EXTENSION OF REMARKS
OF
HON. MYRON V. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1958

Mr. GEORGE. Mr. Speaker, under leave to extend my remarks, I should like to include in the Appendix of the RECORD, an editorial from the Independence (Kans.) Reporter of Thursday, May 15, regarding the visit of Vice President and Mrs Nixon to Latin America:

NIXON GAINS STATURE

Perhaps the most amazing thing about Vice President and Mrs. Nixon's good will trip to Latin American countries is the fact they were able to hold their poise as well as they did. Put yourself in their places and be subjected to mob violence including the hurling of stones, insults, overripe fruit and vegetables, and worst of all, being spat upon, and all of our patience would be taxed to the limits.

The Nixons, who returned to Washington this morning, took the angering embarrassing ordeal in commendable stride. They met the crude challenge with dignity. President Eisenhower has praised them for their courage and fortitude. By the Nixons' action the best traditions of individual free men were upheld and advanced in the face of the apparent Communist inspired demonstrations in Lima, Peru, and Caracas, Venezuela.

All should quickly realize what has taken place in Latin America was not aimed at the Nixons personally nor were they solely Communist led. Rather the American Government and Nation was the main target. The Nixons were unfortunate enough to be present to catch the abuse.

There are many complex reasons for the trouble and Latin America's attitude. Undoubtedly the influence of the Communists has increased and they have been quick to take advantage of the other anti-U. S. A. factors involved. No doubt the Communists are still burning over DICK NIXON'S relentless prosecution of Alger Hiss in the Whittaker Chalmers case.

It is also a well-known fact there is a widespread Latin American recession, particularly in Venezuela as a result of restrictions on oil imports to this country. Then, too, it was just last January that Venezuela went through a revolution and threw out their dictator. There is also probably no doubt the poor peasants dislike the Americanos display of wealth and "better than thou" superior attitude. Like other countries, they seem to also resent our foreign aid. Although the amounts going to Latin and South American countries have been

minor compared to European countries, the old adage, "you can't buy friendship" is becoming more and more apparent day by day.

It is disturbing to find ourselves apparently so heartily disliked by those we thought surely were our stanchest friends. It will take much time to correct this deplorable situation and the causes that have brought it about. It could even be, though, that the Communists will find their plot has backfired on them and they have been made the ones to look ridiculous for their barbarious-led attacks on the Nixons.

Whatever the outcome, Vice President NIXON handled himself superbly. In the course of all the trying circumstances he has added to his own stature as a man and a political figure, both in the world and in our country. It is only too bad that he and Mrs. Nixon have had to prove this fact in such a difficult way.

National Radio Month

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. LIPSCOMB. Mr. Speaker, the month of May is National Radio Month, observed to give recognition to radio as a vital instrument of public service. I am very happy to join in the observance of this occasion, to pay my respects to radio as an invaluable means of communication and, also, to give heartfelt thanks to the many dedicated and public-spirited people who make up the radio industry.

Let us take a look at this modern miracle of communication which is an integral part of the lives of each of us and which we have come to take for granted. Service provided by radio is available to us every minute of the day, wherever we are and whatever we are doing, and it is a personal service. Each one may select what he wishes to hear, without payment other than purchase of receiving sets.

The growth of the radio industry is, in some large measure, attributable to freedom from control by our Government, except for the limited regulation necessary to keep order in the use of broadcasting frequencies. It is significant that in nearly all other countries, government directly or indirectly operates and controls broadcasting. In the United States, Congress has refused to adopt any control measures which remove the direct influence of the free voice of the people in selecting programs from a variety of sources. No one can compel us to listen or make us pay a tax to listen. Radio is free to bring us both sides of public questions.

What does radio mean to us all individually? Everyone depends far more than he realizes upon all the services of radio in his daily life. From the time we awake in the morning until we go to sleep at night, radio provides something of value in our daily lives. Time signals keep us on schedule, weather forecasts helps us plan our activities, market reports assist the farmer, and a variety of programs is available at any hour. Only radio is able to bring us instantaneous, on-the-spot reports of news and events from every country.

One of the primary advantages of radio is that we can listen almost everywhere, at home, at work, in the car, at the beach or picnic ground. We can listen while we work and do not have to take our eyes from the highway to enjoy radio while driving.

The several billions of dollars invested in radio sets have not been spent because radio sets are decorative pieces of furniture but because they provide contact with the world through the broadcasting system. Among the needs fulfilled are obtaining of news of the community, which once could only be heard at the general store; news of the world at large, which once was available only through published journals, sometimes long delayed in delivery; music that once was only available at considerable cost and at a few places which only a few could reach; discussion in which at an earlier date one could only participate by going to the meeting house; all these and many others have come to life in our homes through radio.

At this moment more than 1,000 aircraft are in the air over the continental United States, carrying thousands of passengers and many tons of freight, in touch with the earth only through radio. In taxicabs, in industry, on farms, in the oil fields, in military installations, on trains, and aboard ship, radio is performing a service.

The vital role of radio in local, regional, and national disasters or emergencies such as floods, storms, mine disasters, hurricanes, tornadoes, and others is a matter of record. The voice of the radio broadcaster in such times of crisis is more reassuring than a printed bulletin.

From our own experiences, we know weather news help save time, money, property and inconvenience. But weather disaster news also saves lives when it is given the instantaneous treatment which radio can provide. Radio is almost the first thought of the majority of people in time of emergency or uncertainty. Ability to communicate directly from the spot and without delay is a unique and priceless attribute in rescue or evacuation operations when speed is of the essence.

With the wholehearted cooperation of the broadcasting industry, involving a large amount of time, money, manpower, and equipment, a special system to bring immediate emergency information to you has been developed, known as Conelrad. This system of public emergency broadcasting is the surest and fastest way developed of getting word to the public—you and me—under attack conditions in the event our country should be attacked. In addition to providing the alert for the public, the broadcast stations of our country comprise the main alerting system for about one and one-half million other radio transmitting facilities operated in other services such as trans-Atlantic telephone, point-to-point communication, police, fire, forestry, amateur, and so forth. Under this system it will be possible to receive civil defense instructions on standard radio sets during an air raid.

While much of the service of radio broadcasting is through the networks, the local radio station is most important in many ways. The local station extends the border of your community to encompass the entire earth's surface, and in addition reports the local news and events, supports local civic projects and is a vital part of the life of the local community. Both local and national broadcast facilities always recognize their responsibility in times of stress—storms, floods, drought, earthquakes, epidemics—and broadcast warnings that save lives and property and help alleviate damage and suffering that result from such disasters.

The growth in number of broadcast stations from 600 twenty years ago to the present 3,700, and the 150 million radio sets owned by Americans today are indications of the extent to which everyone relies upon radio in his daily life. It is a good thing to take a look at something so important to us all and which tends to be taken for granted because it is so much a part of our everyday life.

The Italian Elections

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. FINO. Mr. Speaker, on May 25 Italians will hold a national parliamentary election—the first such election since 1953—to determine the composition of the whole Parliament which in turn determines the possibilities of forming an effective government for the next 5 years. This is the third time since the proclamation of the Republic that the whole Parliament will be renewed.

Past legislative periods have shown the difficulty of establishing a firm coalition of democratic parties in the relatively narrow margin between the two extremist groups to the right and the left.

The democratic parties can point with pride to the record of their rule during the last 10 years. Italy as a whole has achieved more substantial progress than in any other decade in its history. National income has almost doubled and one can see the emergence of a modern and progressive Italy in both the cities and in the countryside.

The continued existence of serious problems at home and abroad has not been blithely ignored; it has been faced realistically and solutions are approached in a mood of gradual but solid action. Meanwhile the Communists today, as in the past, are fighting a hard campaign in their efforts to take votes away from the democratic parties in order to destroy their working coalition.

A democratic coalition is the only effective bulwark against the continued Communist threat in Italy. Such a coalition alone can come up with a realistic and democratic solution of the country's pressing problems. The coalition policy is aimed at safeguarding and developing the social and economic gains of the past 10 years. Italy has benefited by this middle-of-the-road program of gradual progress. For revolutionary and extremist forces to gain control of the Government at this time would result in a tragic end to this progress, as well as destruction of Italy's democratic system.

As we observe this election in Italy, we strongly urge her people to recognize and appreciate the importance of their vote in determining the future of their country. The democratic pro-Western policy has been a successful one for Italy in her foreign relations, as a member of NATO. It is our belief that her people, realizing the value of such alinements with peace-loving nations, will renew their vote of confidence in the leadership that has guided her in this direction. May 25 will then stand out as a warning to Communists that Italy has once again chosen the enlightened, progressive, democratic road toward future peace and prosperity.

Trade Bill Progress

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. MAY. Mr. Speaker, in further enlightening their readers on the necessity for passage of the extension of the Reciprocal Trade Agreements Act, the editors of the Hartford Times are performing a very worthwhile public service. This measure will come up on the floor of the House next week, and I believe it important that my colleagues are acquainted with one of the strong areas of support for this measure.

The Hartford Times is in close touch with, and expresses what I believe to be the majority opinion of the citizens of Connecticut:

TRADE BILL PROGRESS

The fight in Congress between the high protectionist and the liberal tariff advocates is beginning to form into battlelines. The House Ways and Means Committee tentatively approved a bill which adopts the liberal provision desired by the proponents of a 5-year extension of the present Reciprocal Trade Act. The last extension was for 3 years and will expire on June 30. This is a good beginning but a hard fight looms in the House, after which the issue will go to the Senate.

The measure embodies all President Eisenhower's major recommendations for legislative authority to carry forward a liberal foreign-trade policy. Amendments to appease some tariff protectionists were written into the extension bill with the administration's cooperation.

The concessions are designed to attract sufficient votes in the House for passage of the measure without drastic curbs on the President's tariff-making powers. Whether they would accomplish the purpose remained in doubt. Protectionist forces were uniting behind a proposed substitute by Representative RICHARD M. SIMPSON, Republican of Pennsylvania, that would severely restrict the President's authority.

Under present law, the President has the final word in this escape clause procedure. The Commission investigates complaints and recommends higher tariffs or import quotas if it finds that serious injury to a domestic industry is threatened by competitive imports.

The President, taking into account broader considerations of foreign policy and the national welfare, may accept or reject the Commission's recommendations. In most instances, they have been rejected.

Liberal-trade advocates held that it would be impossible under any conceivable circumstances for a President's opponents in such a case to muster the two-thirds majorities necessary under the extension bill to reverse his decision.

Reciprocal trade law extension received useful discussion in Hartford this week by governmental, industrial, and labor leaders, under the auspices of the League of Women Voters and the Connecticut Council of Churches. This State has much to gain from a liberal foreign-trade policy. Our industries have a vital interest in foreign markets. The competition of imports, while serious, is heavily outweighed by reciprocal trade advantages.

Communists Behind Attacks on Nixon

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. REECE of Tennessee. Mr. Speaker, the Vice President of the United States has been subjected to the most outrageous attacks ever perpetrated upon such a high American official in a foreign country. The American people are due an explanation.

I have read Latin American editorial comment, United States editorial explanation, listened to my colleagues in Congress, and attentively bent an ear toward foreign-affairs analysts both within and outside of our Government. The reasons advanced for these savage attacks are as numerous and divergent as the sources of their inspiration. The rationalizations range from mediocre leadership in North America, inattention by the United States to its own hemisphere, faulty economic policies by the United States in Latin America, improper attitudes of the United States toward certain forms of government, to selfish interests of high-placed American officials in their own advancement, American attention to the uncommitted nations of the world, and an evil plot designed by the international Communist conspiracy. I have mentioned but a few of the causes assigned by the multitude of observers who have brought their thoughts to bear upon these tragic incidents.

While I am not disposed to see in any one or combination of these reasons the sole and unmistakable answer, it does appear that by far the most important reason lies in the area of purposeful and concerted Communist agitation. Many would state that such a conclusion is merely an escapism. They would argue that to place blame principally on the Communists is not only an oversimplification, but it is the easiest way to find an answer to what otherwise would be an almost insoluble complexity.

One might be persuaded to assign equal weight to the many reasons advanced were it not for the perverted violence which accompanied the demonstrations against the Vice President. There are few in this body more familiar than I with the slings and arrows of political warfare, whether it be domestic or international. It is only human nature to argue, criticize, disagree, and even condemn one's opponents on the field of friendly strife; but freemen have learned to settle their differences or, at least, air their conflicting views in an atmosphere of mutual respect and regard for the inherent dignity of their fellow human beings. Herein lies the fundamental distinction between free man and his atheistic would-be Communist enslaver. The Communists, and only the Communists, denying the existence of God, rejecting the inherent rights and dignity of the individual, can blamelessly and unashamedly spit in the face of the highest form of creation known to this world—man. Do we not recall that pagans of another day, the soldiers of Rome, spat in the face of Jesus as the highest form of mockery?

We would only be indulging in self-delusion if we were to forget that the peoples of Latin America have been justifiably provoked by the United States in the past, particularly in the days of the unfortunate dollar diplomacy. But, in the last 25 years, and particularly since the days of my distinguished fellow Tennessean, Cordell Hull, the United States has pursued the course of a friend and good neighbor throughout the Americas. Indubitably we have made mistakes, made enemies, and followed policies which we have lived to regret, and which have given rise to resentment.

Construing all of our policies and attitudes, however, in the most unfavorable light could not possibly motivate even the most irate of our fellow Americans to the south to so insult the Vice President and his lovely wife. Free men fight and die, Communists spit, vilify, and desecrate. By their work and deeds you shall know them.

The specter of inhuman communism has been casting an ever-increasing shadow over Latin America. Despite the many warnings of competent observers, including many of my distinguished colleagues, we seem to be aghast that the attacks on the Vice President should have occurred. What is truly disconcerting is that, faced with the unmistakable action of Communist agitators, many intelligent Americans are still searching elsewhere for answers they will never find. Shall we never learn that the prime source of the world's ills is communism itself? Perhaps it is too monstrous and diabolic a conspiracy for free men to comprehend. Perhaps the wall has not been built large enough to hold the bloody handwriting of

Communist deeds in the last 40 years. Even allowing for the forgetfulness of man and the passage of time which might have faded the sins of Stalin, the blood of Korea, Hungary, Syria, and Lebanon is still fresh and legible. The hour is late. Look up, America, lest historians report that the free world died because it could not see.

In any objective appraisal of these recent developments in Latin America, let us never lose sight of the evil machinations of communism and in developing a policy to cure and remedy whatever ills may exist, our prescription must contain a large dosage of Communist killer.

Above all, let us not forget and forsake our known friends. I have heard and still hear some of my distinguished colleagues urge that we sack our friends in order to placate what could only be our enemies. In this perplexing world it is difficult to answer the age-old question: Who is my neighbor? Remember the Good Samaritan. He offered not spit and stones but comfort and a helping hand.

I would like to introduce into the RECORD reports of observers more experienced than I, who have seen clearly the Communist menace in Latin America during the eventful tour of our courageous and beloved Vice President.

The following articles need no amplification:

[From the U. S. News & World Report of May 23, 1958]

I SAW NIXON MOBBED

CARACAS, VENEZUELA.—I saw Vice President RICHARD NIXON mobbed and the United States attacked and insulted by Communist-led gangs in South America. In scenes so tense that several times it appeared that American blood might be spilled, Mr. NIXON was shoved, stoned, and spat upon.

Riotous students ripped up an American flag. I saw police stand idly by while Mr. NIXON and his wife were under attack and in danger of their lives.

Through it all, Vice President NIXON appeared poised and unruffled—seemingly unfrightened by the shouting, pushing, menacing mobs.

Only once did Mr. NIXON show real resentment at the indignities heaped upon him. That was after he had been, to use his own words, "covered from head to foot with spit" in the Communist-spurred outburst on his arrival in Caracas.

It is not pleasant, he said, "to have a man spit directly into the face of my wife."

AFTER A SURPRISE, ACTION

The hate campaign started out mildly. It got ugly when the Communists woke up to the fact that Mr. NIXON's good will tour was having a terrific impact on the peoples of the countries he visited. It reached a climax at Caracas in mob vilification and violence—perhaps the greatest indignity suffered by the United States in recent times.

There was no sign of trouble ahead at the first stop, in Montevideo, Uruguay. The Communists passed out anti-United States pamphlets in the crowd, but no violence was attempted.

I saw no hint of hostility in Buenos Aires—although Argentina has the second largest Communist Party in South America—or in Asunción, Paraguay.

At La Paz, in Bolivia, the Communists circulated leaflets demanding that the United States buy Bolivia's tin. Still, there was no trouble.

Then, suddenly, it happened.

The Communists seemed to sense at last that Mr. NIXON was harvesting a crop of good will. They went into action. The results were immediately apparent at his next stop, in sedate Lima, Peru.

A HUNCH PAYS OFF

The Communist-led students' federation of San Marcos University had hurriedly passed resolutions opposing the Vice President's scheduled visit to the university. It appeared that Mr. NIXON would bypass San Marcos.

Yet, playing a hunch, I walked to the plaza facing the university at 10 a. m., a half hour before the time the visit was scheduled. Two men on ladders were painting on the walls beside the university's main entrance, in 18-inch letters, signs saying: "Get away NIXON, merchant of war; get out NIXON."

When the painting was finished, a cheer went up from the several hundred students and bystanders gathered at the scene.

As I watched, gangs of students emerged from the university carrying placards on poles. The signs read, "NIXON snake," "Get out, NIXON pirate," "Away Yankee imperialist," "Go away, NIXON dog." All had the familiar ring of Communist slogans around the world.

A detachment of 15 policemen appeared. They paused in the street 100 feet from the entrance. Soon Mr. NIXON drove up in an open car, followed by secret service and press cars. He waved from the car. The crowd responded with boos and catcalls.

MISSILES: STONES, BREAD

The Vice President got out of his car. He started to walk to the entrance. The crowd pressed in. The police tried to force a passage. At this, the students began throwing stones, oranges, bits of bread—anything they could find. They shouted, "Get out, NIXON" and "Away, Yankee imperialist." Mr. NIXON and his aides were shoved around. There was scuffling between the mob and police.

The Vice President sized up the situation, saw that serious violence might result if he persisted in trying to enter the university. He returned to his car, drove to Catholic University. There the students received him cordially.

Back at San Marcos University, about 5,000 students were milling around the courtyard, shouting and trying to make speeches. Several hundred young women jammed the balconies that extend from the second-floor level of the building.

FOR DEFENDER: A SOAKING

One young man climbed on the base of a fountain and began a defense of Mr. NIXON and the United States. He was pushed into the fountain. Another youth took his place and launched into a denounciation of "Yankee imperialists."

I followed the San Marcos crowd as they marched from the university to the Plaza San Martin in the city's center to await the Vice President's return to his hotel. The students amused themselves by tearing the United States flag from the wreath Mr. NIXON had placed at the foot of the statue of Gen. José de San Martin, Peru's liberator. All the while they chanted, "Yankee, go home."

A deafening chorus of boos, catcalls and whistles arose from the mob when Mr. NIXON reached the plaza. The demonstrators pushed the police aside and swarmed around the official car. Some shoved Mr. NIXON, spat on him. They tore the shoulder decorations from the uniform of Lt. Col. Vernon Walters, the Vice President's military aide. Others threw small stones and tomatoes that struck and spattered the Nixon party.

United States Secret Service men surrounded Mr. NIXON, hustled him into the hotel. The crowd hung around, booing and whistling. Finally, a group of 80 club-swinging policemen dispersed them.

REDS WITH CHEERLEADERS

The Communists were quiet at Quito, in Ecuador, but busy at Bogotá, in Colombia. They did not have things all their own way.

A crowd of about 2,000 awaited Mr. NIXON when he arrived at his hotel from the Bogotá Airport. It included many Reds, but was predominantly pro-United States.

Cheerleaders led the Communists in rhythmic chants of, "NIXON go, NIXON go." Others in the crowd heckled them and shouted them down. Mounted police kept the demonstrators under control and the Nixon party safe. Noticeable among the Red "students" were men and women 40 years old, or older.

It was in Caracas, the Nixons' last stop, that the Communist attacks on the Vice President reached their climax.

Nearly 1,500 teen-agers, with older leaders, packed the airport terminal building. As the Vice President alighted from his plane, the demonstrators set off a pandemonium of shouting.

One youth grabbed Mrs. Nixon's arm and shouted, "Little Rock, Little Rock."

FROM THE MOB: SPIT

Mr. NIXON omitted his speech of greeting because of the noise. Members of the official party made their way between lines of soldiers toward their cars. Jeers, insults, and a veritable rain of spit showered down on them.

A traffic jam halted the official car briefly at the outskirts of the capital. I watched a group of about 50 poorly dressed adults start from the roadside toward the Nixons' cars. A truckload of soldiers blocked them off.

The motorcade moved on again. Once more it was halted by traffic. By this time, the truckload of soldiers had disappeared.

A group of about 150—carrying typically communistic placards on long sticks—ran out of a side street. They attacked Mr. NIXON's car with the sticks, broke several windows, threw rocks as big as baseballs which dented the sides of the cars. United States and Venezuelan flags were ripped from the vehicles.

Mr. NIXON escaped injury. The Venezuelan Foreign Minister, riding with him, was cut by flying glass. Colonel Walters got a mouthful of glass splinters. All the cars near the head of the caravan were damaged.

NO HELP FROM POLICE

All this time, five motorcycle policemen sat astride their machines in the midst of the melee. Occupants of several police cars in the motorcade took no action. United States Secret Service men leaped from their cars. With the palms of their hands, they pushed back the demonstrators and protected Mr. NIXON until the motorcade could get under way again.

The Vice President went directly to the United States Embassy residence. This little plot of United States territory was well guarded. Mr. NIXON and most of his party stayed there instead of at the military club, where a plush suite had been made ready for him.

The Communists still were not appeased. Later that day a small group threw stones at the United States Chancery and attacked an assistant attaché. That night, mobs ranged through downtown Caracas, breaking store windows, looting shops, and destroying automobiles.

The flimsy security precautions caused the Vice President to cut short his stay in Venezuela. On the way to the airport, his entourage was escorted by a heavy guard of military police carrying submachine guns. From thin crowds along the route I heard occasional cries of "get out," but there were no further scenes of violence.

LEADERSHIP BY REDS

It was obvious that not all members of the mobs in both Lima and Caracas were Com-

munists. Some were youngsters looking for excitement. Others were adults who hate the United States for some reason. Many were simply hoodlums out to stir up a little deviltry.

Vice President NIXON is convinced, however, that the leadership in both instances was communistic. The United States through Mr. NIXON, was gaining great good will. The Reds, obeying high-command orders, were out to stop it at any cost.

The result was one of the greatest indignities the United States has suffered in recent history.

[From the Washington (D. C.) Evening Star of May 21, 1958]

BOOMERANG ON COMMUNISTS?—RIOTS AGAINST NIXON HELD LIKELY TO STIR ANTI-RED MOVEMENTS

(By David Lawrence)

There is some evidence that the Moscow government is beginning to be disturbed over the consequences of the demonstrations against Vice President NIXON in Latin America. While steadily encouraging anti-Americanism in South America, the Kremlin, it is reliably reported, did not anticipate the kind of climax which now has brought a vigorous countermovement.

For today the Communist projects of the last several years are in danger. There are more than 200,000 active Communists in various Latin American countries, guided by daily Communist newspapers. A number of trade missions have been aiding in the work of political infiltration. The publicity due to Mr. NIXON's experience and the exposure of Communist intrigue has just given the Communists unexpected worries. Their projects will come under fire now inside every country in Latin America.

Already the four-party junta which rules Venezuela, in which the Communist Party is an equal member, is in trouble. Two civilian members of the junta have just resigned in protest against the inaction of the Venezuelan police. As for the strange behavior of the police—directed by a cabinet minister of Communist sympathies—significant comment comes from Earl Mazo of the staff of the New York Herald Tribune, who was an eyewitness to the incidents in which Mr. NIXON's life was threatened. He writes:

"The Caracas killer mob of 300 screeching Communist-led individuals, ranging from teen-agers to aged derelicts, attacked Mr. NIXON's car as his motorcade was stalled in a mysterious traffic tieup. The Venezuelan police either vanished or froze where they stood. The tieup occurred in a midtown area that is notorious for bloodshed in revolutions and riots. * * *

"This reporter witnessed the attack on Mr. NIXON from a photographers' truck immediately in front of the Vice President's car. The viciousness of the affair was compounded by the fact that the Venezuelan police did practically nothing to protect the Vice President and his wife. The cool maneuvers of a half-dozen American Secret Service agents, several of whom were hurt, prevented injury to Mr. NIXON."

President Eisenhower naturally got reports by telephone about the incident. He decided to send marines to a nearby point in the Caribbean to be ready "just in case." Thoughtless critics promptly assailed him for doing so. But supposing Mr. NIXON had been trampled upon and taken prisoner, what would the critics have said? Of course, they would have denounced the President for not having taken proper precautions.

Should Vice President NIXON have canceled the trip to Latin America? Secretary Dulles answers this way:

"These things, you know, are much simpler to judge after the event than before the event. I believe myself, in the light of what we knew before Vice President NIXON went there, it was a quite correct judgment on his part to go. I think if we had all known what was going to happen there and had been able to foresee the events, probably he would not have gone. But, you know, if you don't go to places because of threats you will be locked up at home. I have never gone to any country in the world, hardly, but what I have had threats and there have been demonstrations of one sort or another. It is so with the Vice President, who has also visited a great many countries. If you allow yourself to be deterred by threats of that kind, the result is that the Communists will imprison you at home. I don't accept that at all.

"The miscalculation in the case of the visit to Caracas was primarily a miscalculation as to the adequacy and efficiency of the police force. It virtually melted away at the sight of trouble. That wasn't anticipated. I don't know whether it could have been anticipated or not. But if there had been an adequate handling of that situation by the police, such as occurs in most countries, there would not have been any reason whatever to have concluded that the trip was unwise to have undertaken.

"Now we can see, in the light of after events, that that might perhaps have been foreseen. The police force that had been maintained under Estrada had been virtually liquidated, and we see now that the substitute police that had been created was inadequate and did not know how to cope with the type of organized rowdy mob such as the Communist agitators put on."

On balance, the episode may boomerang in favor of the United States and against communism. The anti-Communists in South America will have an issue now which will grow into a demand that Communist Parties be banned or, if allowed to exist, that they should not be permitted to participate in the government lest the United States be alienated. For, throughout Latin America, they know that the United States can in the long run do more for all the people of this hemisphere than can the opportunistic Communist regime in Moscow.

Chief Thomas Honored Again

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. MAY. Mr. Speaker, Fire Chief Henry G. Thomas is an often-honored man, and no one deserves it more than he. I am proud of the fact that the Hartford Times has added to his honors in their editorial column and I would like at this time to submit this editorial for publication in the RECORD:

CHIEF THOMAS HONORED AGAIN

Fire Chief Henry G. Thomas is the first uniformed man ever to head the National Fire Prevention Association. The organization is 62 years old, and draws members and executives from the ranks of leaders in insurance, engineering, and many other fields.

Chief Thomas' record as chief of the Hartford Fire Department for 13 years and as fire marshal for some time before that is one of great devotion to the city he serves. He knows Hartford minutely; that is part of his job. But he contributes a zeal for the city's good that is remarkable and highly to be commended.

When there is a job to be done that involves long hours of conference and attention to detail with little or no prospect of remuneration or recognition, Chief Thomas is likely to come to mind as the man to ask. His work as civil defense chief of the city is only one example.

It would be possible for a man to be that kind of administrator and still be hard to like. Chief Thomas in his personal relations with others is approachable, likable, and popular. His voice is soft, but when he speaks people listen.

Congress Needs Leadership

EXTENSION OF REMARKS
OF
HON. MYRON V. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. GEORGE. Mr. Speaker, under leave to extend my remarks, I should like to include in the Appendix of the RECORD, an editorial from the Arkansas City (Kans.) Traveler of Thursday, May 15:

CONGRESS NEEDS LEADERSHIP

Were the outbreaks timed and were they Communist inspired?

This double-barreled question keeps cropping up in view of violence in Algeria and Lebanon, while on another continent the Nation's Vice President was made the target of jeers and spit in one South American country and stoned in another.

At this moment Congress is considering a foreign-aid bill. Possibly millions of Americans are ready to stop foreign aid and they ask, "What are we getting for it? Enemies?"

Leaders in South America insist the Communists are behind the insults against Mr. NIXON. It could be that his visit is serving a purpose. It is showing these nations they are in danger of being taken over by the Reds.

Americans will always be dubious, however. There is a strong feeling foreigners do not like us. Money sent to them does not create goodwill, some people believe. In addition, some foreigners resent our reluctance to buy from them goods which are available in our own country. They believe we should not protect our producers.

Uncle Sam's position is made more difficult because this is an election year and politics overshadows sincerity in the most important foreign and domestic issues. This happens when the Nation is witnessing an economic revolution within while a new power attempts to dominate the world.

Our foreign policy has been criticized since there was a change of administration. Behind much of the criticism is politics. It is during times like this that the level head can do much to calm the nerves of the jittery. Recently one of these persons listened to complaints about the foreign program and noted, "We still have peace. Our procedure can be criticized by many but the fact we are not at war should be worth something." How many people prefer a world of uprisings to outright war? Or have we forgotten what war brings? The citizen who treasures peace believes this Nation is fortunate because he remembers Pearl Harbor and Korea.

As important at the moment is domestic policy and followers of the politicians will see a move underway in Congress to revive the New Deal. All sorts of programs are being suggested to ease a recession. The

plans will be financed on credit. The Nation will be plunged into greater debt. A decade or so hence there will be a day of reckoning. Every individual will be forced to pay for the folly. Then the Red menace will be felt here as it is in many foreign lands.

Internally, a difficult problem has arisen since the last war and Congress failed to cope with it. While attempting to keep peace with the world it neglected a domestic duty. That was to keep up with the economy. Control of the economy changed hands so to speak. Agriculture lost this power while industry—namely, steel and automobiles—took it over. It must never be forgotten that this change came while Government controls pretty well governed the destiny of the farmer.

For several years agriculture had rough sledding but the national economy kept improving. No depression was forthcoming. That was the tipoff to the changing times. Now agriculture is looking up but a recession had slowed business. Steel and auto industries are in a bad way. That's proof the economy is no longer dependent on agriculture.

Unless this Nation takes a firm stand and replaces politicians in Congress with sound businessmen and sincere leaders the domestic and foreign programs will eventually bring chaos. This is no time to spend what the people do not have in order to get votes. If foreign friendship can be bought with the guaranty that American money is not building Communist machines there is reason to move ahead. There is no future for the young American if political leaders insist on increasing the debt in order to make more jobs when a recession is not general. What Congress does now could well destroy the rights Americans want tomorrow.

Ignoring Economic Laws

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Peoria (Ill.) Journal-Star of May 9, 1958:

IGNORING ECONOMIC LAWS

It is obvious that the industries hardest hit economically these days are the automotive industry and the tractor industry, with resulting effects on steel and others.

It can hardly be regarded as pure coincidence that these very business enterprises are the ones which have been subjected for years to the cockeyed economic theories and pressures of Walter Reuther.

Mr. Reuther is a very smart man, but his theories and the policies that he has forced on key industries are born not for practical use in the business field but for their political appeal.

He has sought things that sound good instead of things that actually are good and workable.

Ironically, it is the high cost of "security" in a large measure that has given automobiles and tractors a price structure that is presently destroying the real security of the workers. They are discovering the hard way that the only realistic security lies in the continued business success of their companies and that socialistic idea and runaway costs are not helpful to such success.

It is no secret that the heaviest blow to new car sales is the reluctance of the new-car-a-year people to stay on that schedule, or that the heaviest blow to heavy equipment such as caterpillar tractors is the decision of major users to stretch replacement from 2 years to 5—both decisions due to the high cost of equipment and its rapid depreciation in value.

It reminds us that the coal industry has been in its own private "depression" for almost 20 years, ever since John L. Lewis extorted wages and huge "welfare" funds which coal miners may well deserve but which the customers would not support. An industry regarded as so essential that price could not hurt it has been sick ever since—and the miners have had no real security of work in years.

Security cannot be provided by a piece of paper when economic laws are ignored and violated.

Law Day—Address by Hon. James A. Farley, Lamar School of Law, Emory University, Emory University, Ga., May 9, 1958

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include the following address given by the Honorable James A. Farley at Emory University on Law Day, May 9, 1958:

It is an honor to be a guest of this distinguished university. Both as a politician, which I have been, and as a businessman, which I am, I have many friendships in Georgia which I value highly. With all respect for the institutions of this State, it is nevertheless not amiss to say that Emory has as proud a place in Georgian life as any other.

Perhaps you will, nevertheless, allow me to speak of national rather than local problems today. It seems to me now that national questions transcend all others in importance. The United States is, I think, considering its whole position both in domestic and international affairs. Like most veteran politicians I am sensitive when change is in the air.

The current recession is bringing up for consideration some of the problems which faced the country as far back as 1932. Tension existing between the United States and the Soviet Union is also causing a continuous examination of foreign policy. The thinking is already beginning which will crystallize in political issues and international decisions within the next 2 or 3 years.

This is as it should be. The whole success of American democracy is rooted in just this process. Facts are first studied in universities and are discussed in organizations great and small. Interpretations are given and debated. Points of view and measures are suggested. Eventually in the American party system some of these are selected as political issues. These issues are decided in the ensuing political campaigns. In a sense, the universities, faculties and students alike, are thus the intellectual general staff of the country. Out of them come the accumulation of data and the stream of ideas which make America politically a progressive country. This is true both in domestic and foreign matters.

Internally the recession has brought up, and I think is establishing, certain attitudes on the part of the American public.

In our youth we thought that periodic depressions were unavoidable misfortunes. They were like bad weather or hurricanes. You endured them, and hoped that they would blow over. But there was nothing to be done about them. But during the past 25 years, as economists have studied and businessmen have worked we have come to think that they can be controlled, that in time perhaps they can be eliminated, and that it is part of the business of Government to adopt policies and take measures for that purpose.

The younger of you here will hardly realise how great a change that is. I like to think that it is, at least partly, a result of my own first national campaign—that of 1932. Today most economists and statesmen and practically all politicians consider economic policy very much a part of their business. They do this in part at least because the American public, deep in its heart, considers it fundamentally wrong for a man-made system to tolerate human misfortune if it can be avoided, unless, of course, it is occasioned by the misconduct or fault of the people who suffer. But in our modern economic system the people who suffer in case of recession are very often people who had no responsibility for what happened. As a result, the United States is everywhere discussing antirecession measures which can be taken, either by private business or by Government authorities or by both of them working together. You have to be as old as I am to remember that, a generation ago, it was seriously urged that the Government of the United States had no business concerning itself with these matters. No one is taking that position today, and no one will.

The United States has developed a system of production and distribution which at present is the strongest and most fertile in the world. This is partly due to a high factor of organization in both industry and labor. On an average we have steadily increased the productivity of labor, and its real wages as well. To do it we have steadily increased the standard of efficiency of national industry. Our problem just now is to assure that this improvement shall be continuous. It is not enough to look merely at 10-year averages, satisfying as these are in retrospect. We want the improvement to be continuous, and not to be interrupted and in distress every few years.

Entirely nonpartisan economists tell us this requires two conditions. One of them is maintenance of national production at an uninterrupted and increasing level. The other is making sure that the spendable income reaching individual consumers shall also remain uninterrupted. This means full employment, or failing it, full provision for the involuntary unemployed. That is why, in Washington today, proposals are being made to increase the length of time for which unemployment insurance payments are made and to cut taxes, putting additional spendable income into the hands of the public at a time when it is being cut by unemployment. That is why programs of public works and other similar measures are being discussed.

Meanwhile, private businessmen are taking counsel together to see whether more cannot be done to iron out the peaks and valleys in our economic system. Already this has produced results. Great companies, even in the face of a poor year, are endeavoring not to cut their expenditures for capital construction and to improve the distribution of the goods they have for sale. All of this discussion and counsel seems to me necessary and wise.

If we are to work effectively on these matters, it becomes necessary, I think, to make one change in a historic division of American politics. This is the idea that there is a party of "capital" against a party of "labor." In the old days when the Government went

to work on economic problems the political assumption was that it must be hostile to business and that when business goes to work on problems it must oppose government. Probably there was reason for this attitude in earlier times. But I wonder whether times have not changed.

The fact is that America has chosen, rightly, as it seems to me, to use private business as the method by which it produces. The work done by Socialist bureaus in many parts of the world is done here by private companies, big and little. They are our service of supply. Government, on the other hand, supplies the ground rules and many of the facilities under which these companies work. You cannot, I am clear, have government perpetually in opposition to business or business perpetually in opposition to government. Neither can do the work of the other and both ought to work together. Obviously there is a difference between the staff of the corporation and the staff of a government department, but not as much as you would think. The days when business automatically resisted every social advance, I believe, are over. For one thing, modern business means mass production and mass production needs a mass market. You cannot have a mass market unless you have a prosperous and well-paid population.

It happens that the United States has done better at distributing prosperity than any other country in the world, not excepting Socialist countries. Back in the days of the New Deal we reckoned that the day would come when every American family would have the equivalent of an income of $5,000 a year. We have not quite got there yet, but we are well on the way. As we have moved toward that, American production has moved up and American business has prospered. So it seems to me that we are reaching a point where the interests of government and the interest of business run very close together. Our politics ought to reflect that fact.

I make no pretense of being an economist. But there are two conclusions that even a businessman can safely draw.

The first is that no one will buy what he thinks he cannot pay for now or in a reasonable time. If labor wants jobs and business wants customers, the final decision rests with you and me and all of us who consume the product of the United States. We will buy only if we have jobs and paychecks. For that reason, whenever and wherever it is possible to keep men employed this must be done both as humane policy and as business commonsense. Governments, Federal and State, must assist this process in every way possible. We know some ways to do that. Probably there are more ways than we have yet discovered and it is our business to find them out.

The second is that spending can be done through savings, as well as through consumer buying. This is something which has not yet been said in this discussion and it needs saying. In bad years people do save their money. They may need it later. But that does not mean that the money is not spent. It goes into a savings account or perhaps into an insurance company. It does not stop there; the bank or the insurance company must put it to work. It does this by lending money to build houses or plants or public utilities. Some of it goes to cities and towns for schools and roads. It is the business of the banks and the insurance company to pump savings into useful work. When this is done a builder buys building materials or a contractor buys cement, and both of them hire labor, as do the manufacturers of building materials and of cement. Employees of these enterprises spend their wages. The whole economy moves forward.

I think in combination private business and government can work together to see that neither savings, which are capital, nor individuals, who are workmen, shall be idle.

This is particularly true of America now. We know, almost to dead certainty, that the needs and activities of our country 4 or 5 years from now will be far greater than they are today. We know that we shall need, for example, at least 7 million more houses by 1963. Each of these will need the whole kit and background that goes with a modern house; a road to its door, electric and natural gas conduits to its cellar, lights, facilities, and appliances inside. This means powerplant increases, schools, shops, and services to match. It ought not to be past human ingenuity to arrange that needs we can presently calculate shall be provided for by building now when we have men and money available.

We may, it is true, need to make credit arrangements bridging the present gap. In an earlier struggle with depression, as I have reason to remember, our experiments showed that the American public honestly pays for whatever it buys as soon as it can. It is for economists and financial experts to work out how credit can be used; but our experience shows that while Americans sometimes need time to pay for their houses and other equipment if they are given the time they do pay when they can.

This is why I think the present recession can be handled and why I think we can take another forward step in learning how future recessions can be modified to the point of disappearance.

Whether I am right or wrong about that I am perfectly clear that the American public wants this problem licked, not only for now but if possible for the future as well. I think it can be done and done without putting the country into a Socialist straitjacket either.

International affairs present an added reason for doing this job. Business requires me to travel abroad and I see many men and many businesses in other countries. One fact shows up with great regularity. The United States is no longer merely a country by itself. It is a part of an economic system which interacts with most of the countries of the free world. We are dependent on them and they depend on us. If the 20th century has settled anything it is that not even a country as great as the United States can live alone. What happens here affects the lives of men and women in Europe, in South America, in parts of Asia, just as what they do affects our lives as well.

This statement has more serious implications than many of us realize. Three South American countries, for instance, eat or go hungry, depending on the market price for copper in the United States. Four more Latin American countries depend on coffee. What we do with cotton can make or break several other countries. All of these peoples are saying to us, in one form or another, "Can you not stabilize things sufficiently so that we know from one year to the next about where we are?" It seems to me that they have a point.

They are also saying something else, and not unnaturally. They are saying, "if the United States cannot keep things in balance we must get together and do it ourselves." Six European governments have just joined a common economic pool. Our South American friends and allies are discussing the same thing; a Mexican President was elected last week on a platform which included a common market with the rest of Latin America.

This is not anti-Americanism. These are groups of nations trying to do for themselves what American farmers and American manufacturers have always tried to do within our own country. American policy has thus far refused to deal with these situations except in 1 or 2 cases such as sugar, where we do stabilize, and wheat, where we have in the past made such agreements. I wonder whether the time has not come for a new look at our foreign economic policy.

We dislike recessions in the United States and rightly so; but we are strong enough to handle them here. Smaller nations, especially when they are dependent on the United States, cannot. A small recession for us is catastrophe for them. It seems to me we have to recognize that, in the 20th century world, economic life goes beyond anyone's national borders, including our own. This means we must take common counsel with other countries to work together in matters of economics as well as in matters of defense. If this is wisely done I think it will steadily lower the necessity for foreign aid which at best can be only temporary.

This is not merely economics. It is also national defense. If the United States is to be secure in her defense we have to have allies and friends in a great many parts of the world. For that matter, many other countries in the world depend for their own military security on the strength of the United States. We cannot say to an ally, "of course you will help us in matters of defense, but of course we will fight you in matters vital to your economic life."

There is no clear method by which nations work together in economics. Our European friends are just beginning to try out methods new in the world's history. These European nations, for instance, have a Coal and Steel Community. They are now beginning to study other arrangements. Our South American friends are considering similar measures for the Western Hemisphere. It seems to me that the Government of the United States cannot safely stand aside.

We are not ready to offer a solution to these questions. But we must be ready at least to state them and to move toward their answer, American fashion, by debate and eventual decision. The United States will have to have relations with the new European common market. She will have to recognize the fact that if she wants friends in Latin America arrangements have to be made for orderly and continuous markets in those products such as copper, coffee, and oil on which Latin Americans largely depend. There are at least a dozen similar problems pressing in other parts of the world. On their solution depends not only the economic welfare but the military safety of the United States.

All these problems are, of course, overshadowed by the limitless unsolved problem of war and peace. On that score I am optimistic. I have not much faith in summit conferences because I do not recall any conferences of that kind which really settled questions. I rather doubt if the Summit conference now under discussion can do very much. I have had too much experience in affairs to try to tell the men who at present have the responsibility what they ought to do about holding such a conference. They know their situation better than anyone else. Quite possibly it is more dangerous not to hold such a conference. I cannot tell. It is possible to say, however, that if such a conference is held no one ought to expect too much from it. The Soviet Union, if it is not totally mad, does not want war any more than we do. In the long run, the present contest will be decided by the strength, the equity and the humanity of the two systems which are now opposing each other. It will be finally settled not by bombs but by persuasion.

Persuasion, however, will be closely allied to our capacity first to make our American system work well and, second, by our ability to make it work with the economic systems of other countries. This, in brief, will be the content of political discussions in the United States through the next 2 years.

So I close as I began. Universities, such as Emory, must study the problems, find the

facts and offer possible interpretations. In the great sense, they furnish the material and the thinking on which through its political processes America must base its decisions.

In this work Emory has already made notable contributions. Let me, as guest, as a businessman, as a politician, or perhaps simply as a member of the American public, pay my tribute to what you have done and offer my hope that you will keep up the good work.

Three Hundred and Twenty-fifth Anniversary of Wethersfield, Conn.

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. MAY. Mr. Speaker, one of the most historic towns in the United States, my hometown of Wethersfield, Conn., is celebrating its 325th anniversary.

I have lived in Wethersfield almost 34 years and consider it a great honor to note this important milestone in the town's history.

It is particularly appropriate that we reflect on the great traditions of this town and of the colonial days, especially since consideration of statehood for Alaska and Hawaii is uppermost in the minds of the people today.

The accompanying editorial by the Hartford Times expresses the feeling of the people in Connecticut on this occasion:

WETHERSFIELD'S 325TH MILESTONE

Wethersfield, settled almost a century and a half before the founding of the Republic, is this week marking the 325th anniversary of its existence. Rich in tradition, the town has prospered with the growth of the Nation but happily it has not lost its charm or neglected its historic landmarks.

Life has not always been completely tranquil and unruffled along the banks of "The Long Tidal River." Residents of this old town experienced the horror of an Indian massacre, it saw its maritime trade dwindle with changing times, and, as did its sister towns in Connecticut, sent its sons to all the wars at home as well as to the battlefields beyond the seas.

Although it was only a tiny village, its geographic location made it an acceptable site for the famous conference between General Washington and Count Rochambeau. It was in Wethersfield that the plans were made for the siege of Yorktown and the final triumph of the American cause.

One of the most gratifying things about Wethersfield is that in the span of more than three centuries the townspeople have had the good sense and sound foresight to retain much of the character of the town that has made it such a charming community. It has not been easy because the pressure to cast out mementos of a rich past for the glitter of modernization is great.

But Wethersfiled has saved its trees, it has preserved the essential qualities of its center green and it has resisted the temptation to destroy many of its fine old houses. It is to be hoped that future generations in the town will not succumb to the blandishments of so-called, but sometimes hollow progress.

There is a golden opportunity in this town to preserve the landmarks that are so closely identified with the New England tradition. With the removal of the State prison from the center of the town, problems will arise with respect to the eventual disposition of those structures. The situation will present a real challenge to the town fathers to keep Wethersfield the fine old community it is today.

Wethersfield, 1 of the 3 river towns, is symbolic of the solid virtues that played such a major role in early colonial times as well as in the formative years of the Republic. It made its substantial contribution to the public good, and it will continue to do so as we move forward into a new age, different from the past in everything but human aspirations and ambitions.

Growth of Greater Wilkes-Barre Chamber of Commerce

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of May 13, 1958, on the progress which has been made over the years by the Greater Wilkes-Barre Chamber of Commerce:

Wilkes-Barre Board of Trade, forerunner of our present Greater Wilkes-Barre Chamber of Commerce, was founded March 24, 1884, some 74 years ago. Fewer than 15 members were present.

This evening at Wilkes College gymnasium almost 1,000 members of our chamber, their wives, and guests will gather to observe its founding, and, like the original charter members, they are composed of individuals interested in the general prosperity of Wilkes-Barre.

All of them will be interested in the remarks made by the principal speaker, United States Senator JOHN F. KENNEDY, a man who rides high on the waves of national popularity. Our city is privileged and proud to welcome one so distinguished.

Yet, underneath interest in the principal speaker is the inherent desire of the members to learn what has been accomplished in the year just passed. Those present tonight will listen avidly to reports made by Edmund H. Poggi, Jr., chamber president, and Samuel M. Wolfe, Jr., chairman of the steering committee of the chamber, Greater Wilkes-Barre Industrial Fund, and the committee of 100.

In 1884, we are told the former Board of Trade listened to complaints by businessmen about nonbusiness subscribers to telephone service who tied up lines for 15 minutes. Today, a different generation complains about traffic congestion and insufficient parking areas.

Times most assuredly have changed—and, we hope, for the better; yet new problems forever confront us as a community. With a strong and united chamber, we can face up to these problems and in most instances find a solution. Certainly, the chamber needs support from business and professional men as it never needed it before. Only with such support can we as a community keep pace with a progress that becomes us.

President Carlos P. Garcia's State Visit

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. ZABLOCKI. Mr. Speaker, the President of the Philippines, the Honorable Carlos P. Garcia, is soon to embark upon a visit to the United States where he will be greeted by our President and engage in discussions with our Secretary of State and others of our distinguished representatives. President Garcia's administration is friendly to the United States.

Earlier this year, the Congress has been requested by the President to continue the mutual security program and to provide assistance to meet certain needs of newly independent and economically impaired countries of the world. In his state of the Union message delivered at the opening of the present session of Congress, the President pointed out that if we are to reap the multiple benefits of other countries becoming strong bulwarks against Communist encroachment, of reaching a point where mutually profitable trade can expand between them and us, and of entering a state of mutual understanding and confidence, our economic aid efforts should be made more effective.

The House concurred in that view by overwhelmingly approving the mutual security authorization bill of 1958 a few days ago.

High on the list of countries needing and deserving our aid and cooperation is our proven friend and ally, the Republic of the Philippines.

The economic plight of the Philippines has been and continues to be an obstacle in the path of the growth of this relatively new nation, which came into being in a time of trouble and has struggled to progress in the face of it ever since. The country's international payments position continues to weaken, and dollar reserves have declined until they are at a dangerous figure. There has also been a fall in export earnings and a disproportionately high level of imports. Recently, a shortage of rice, keeping pressure on retail prices, has caused added suffering to the little man.

The Government of the Republic of the Philippines has apparently tried to impose controls wherever necessary, and has been endeavoring to effect drastic economies in current operations. In no particular, however, does it appear that strongly entrenched democratic ideals have been sacrificed. Further, the Government of the Republic of the Philippines, under President Carlos P. Garcia and Vice President Diosdado Macapagal, continues the policy of close cooperation and friendship with the United States.

The particular forms in which our economic assistance to the Philippines should be cast must necessarily be left to experts. As suggested in the state of the Union message, there will probably

be a greater use of repayable loans. Industrial and agricultural assistance must be vitalized and expanded. I recall in connection with one of the Philippines' principal pay crops, sugar, President Eisenhower said, when he approved the extension of the Sugar Act in 1956:

It was not considered feasible to recommend an increase in the Philippine quota at this time. I believe, therefore, that when new amendments are being prepared at the conclusion of the present act, consideration should be given to allowing the Philippines to share in increased consumption.

Since the days of the war, when Filipinos fought at our side, and the dark days thereafter in their struggle against Communist aggression, the halls of Congress have rung with praises of the Philippines and pledges of unending friendship and cooperation. I hope our memories will never grow dim, or our footsteps lag, in the performances of our promises.

Mr. Speaker, the Republic of the Philippines may take heart from these remarks of one who will never fail to give full recognition to its distinguished place in our history.

Cardinal Stritch Never Spared His Right Arm

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to the editor of the Tablet, written by Mr. John C. Sciranka, editor of American Friends of Slovak Freedom, of Passaic, N. J.:

CARDINAL STRITCH NEVER SPARED HIS RIGHT ARM

DEAR SIR: We were all most sorry for Cardinal Stritch when the sad news came that his right arm had to be amputated.

I picture in my mind three occasions, which recall most pleasant memories, when Cardinal Stritch would not spare his right arm. The first occasion was, when he as a young bishop of Toledo, Ohio, readily responded to say Mass for the Slovak parish in need of a priest. I mentioned this in an article dealing with Famous Americans Who Mastered Languages, which was also reprinted in the CONGRESSIONAL RECORD by Congressman DANIEL J. FLOOD before the Cardinal's departure for Rome.

Another occasion was when Cardinal Stritch preached during the centennial birthday celebration of Rev. Stephen Furdek, known as Father of American Slovaks, on Labor Day, 1955, in Cleveland, Ohio. Over 20 archbishops and bishops attended the anniversary in the public auditorium. Cardinal Stritch came to the banquet and spoke again, imparting his blessings.

The third occasion was the 38th national convention of the Slovak Catholic Federation of America, held in Chicago, Ill., in the spring of 1956. Here Cardinal Stritch celebrated Pontifical Mass in the Holy Name Cathedral and also preached the sermon. Although there were more than 100 monsignori and priests present, His Eminence did not spare his right hand, but distributed Holy Communion to all who came to the altar rail, and there were many who received the Holy Eucharist from the Cardinal's right hand.

Cardinal Stritch sensed that many present at the convention came from far and wanted to carry with them a blessed remembrance that they received Holy Communion from his hand, therefore, he did not spare himself. Those many have, indeed, the most pleasant remembrance and, no doubt, are praying for the Cardinal's well being.

Although Cardinal Stritch preached to the crowded cathedral on the importance of good education, in the evening he came to the Blackstone Hotel to be the principal speaker. This is the best evidence that Cardinal Stritch did not spare himself and especially he did not spare his right arm, which had to be amputated.

I am also reminded of a story about a Slovak Franciscan Brother, who died over a year ago in the Gary, Ind., hospital and who had great admiration for Cardinal Stritch. This Franciscian had to have his leg amputated. Shortly after this an amputation of another leg followed. Then one of his friends wrote him that he should cheer up, for the angels thought he was too heavy to be carried to heaven, therefore, they reasoned that one of his legs should be amputated. But he still was too heavy, so off went another leg. I visited the West around that time and wrote up the story. I understand that it reached many American people, even the bishops and archibishops. George Sokolsky liked the story and wrote me about it. So, very likely millions of friends and admirers of Cardinal Stritch, who were blessed with his now amputated right arm, feel that the good Lord wanted his hand to take a rest, for he never spared it.

JOHN C. SCIRANKA,
Editor of American Friends of Slovak Freedom.
PASSAIC, N. J.

Columbus Day for National Holiday

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. MAY. Mr. Speaker, in connection with a bill which I am introducing today to make Columbus Day a national holiday, I should like to emphasize that it is perfectly logical and just that we should give recognition to the man who discovered America and who paved the way for the settlement of the Western Hemisphere. Through his vision, his courage and his Christian spirit, he set an example for all generations to emulate. We, who are proud of the pioneering spirit of the earliest Americans can show in this way our appreciation to the first pioneer without whom we may not have had the privilege of living in a land of freedom and opportunity.

Many States now recognize Columbus Day as a holiday and in Connecticut, many offices and businesses close on October 12 in honor of that great man. It is fitting, I believe, that we, as a nation, in selecting our next national holiday should give first preference to Christopher Columbus. I am sure that most Americans will welcome congressional action to this end.

Baseball Anonymous

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. BYRNE of Illinois. Mr. Speaker, I would like to express a few remarks in the Appendix of the RECORD in behalf of a worthy undertaking by Baseball Anonymous, an organization to which I belong. I am inserting the letter I have received from this fine group which speaks for itself:

BASEBALL ANONYMOUS,
Chicago, Ill., May 19, 1958.

DEAR MR. BYRNE: Last Monday evening, May 7, 1958, our board of directors held a meeting of the board. At this time a very serious and worthy project was planned and enacted into a resolution to go full speed ahead.

Our old friend "Big" Ed Walsh, a former star pitcher for the Chicago White Sox from 1904 to 1917, is gravely ill and bedridden. To help defray medical and hospital expenses and to save his life we have to act and be generous ourselves.

It has been resolved to have Chicago's own Ed Walsh Day on Sunday, June 22, 1958. Tickets and donations will be handled by "Cracker" Ray Schalk at Tony Piet Pontiac, 6603 South Western Avenue. Your help is essential to make this affair a huge success.

We have contacted Mayor Richard J. Daley, Charley Comiskey, and many other dignitaries to assist us in this respect. Television, radio and newspaper sportswriters, announcers and sportscasters will be giving us their full support.

Even sports firms and department stores will do their part to show our city's respect for one of Baseball Hall of Fame's most outstanding players—one of yesteryear's greats.

If you're not certain what you can do to help, besides making a donation, please contact any one of our special committee members who will be happy to accept your contribuiton according to the dictate of your heart and conscience. Remember, it's what we all do as a team that counts. Please do your share.

Sincerely yours,

RED FABER,
General Chairman.

Mr. Speaker, as a young boy I saw Ed Walsh pitch many games. He is still considered one of the world's greatest pitchers. When I was old enough, I joined the Chicago White Sox in spring training and was coached by "Big" Ed Walsh. In those days it was not uncommon for a great pitcher like Ed Walsh to pitch 50 games. From 1904 through 1916, Edward Arthur Walsh, Sr., born May 19, 1882 in Plains, Pa., pitched with Chicago in the American League. In 1917 he was with the Boston Braves, National League.

Here is his record:

Year	Club	Games he appeared	Won	Lost
1904	Chicago	18	6	3
1905	do	29	8	5
1906	do	42	17	13
1907	do	57	24	18
1908	do	66	40	15
1909	do	32	15	11
1910	do	52	18	20
1911	do	62	27	18
1912	do	61	14	8
1913	do	13	8	3
1914	do	11	2	3
1915	do	5	3	0
1916	do	2	0	1
1917	do	4	0	1

Looking at Both Sides of Coin

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an editorial which appeared on May 7, 1958, in the Daily News Record, of Harrisonburg, Va. I believe it is pertinent to our forthcoming consideration in the House of the legislation providing for an extension of the Reciprocal Trade Agreements Act:

When Congress begins debate on proposed changes to our reciprocal trade program, Virginians will do well to follow it closely. What Congress does could have a considerable effect on pocketbooks in Virginia.

The debate will concern proposed stiffer tariff duties on certain items to make it easier for American manufacturers to compete with goods imported from other countries.

American manufacturers in certain lines, including textiles, are faced with tough foreign competition and their problem deserves sympathetic consideration. But there is another side of the coin, as usual. The United States enjoys a favorable trade balance with most of the countries we do business with. They buy more goods from us than we buy from them. Jacking up our tariffs invites retaliation, which would hurt our sales abroad.

Now let's look at the problem as it affects us here in Virginia. Manufacturers and producers in Virginia export millions of dollars worth of products every year. What are these products? Rayon yarn from Front Royal, Fredericksburg, and Roanoke. Cotton textiles from Danville. Apples from the Winchester area. Tobacco products from several places in the State. Coal from our southwest. Cellulose and petroleum products from Hopewell. Industrial chemicals from West Norfolk, and so on.

Virginia's exports to only one country, Venezuela, totaled $6 million in value last year. This was a whopping increase of 54 percent over 1956, according to a survey recently completed by Econometric Specialists, Inc., of New York. The report was released by Creole Petroleum Corp., a United States company operating in Venezuela.

Japan, perhaps, is the best example of the foreign trade problem. More furore has been raised over the importing of inexpensive Japanese textiles than any other single product. Japanese textile manufacturers, with their low wage scales can undersell comparable American-made products on the United States market despite tariff duties and large price markups by American importers, wholesalers and retailers.

Japan has, also, a flourishing optical industry, turning out large quantities of cameras and binoculars which undersell American brands.

This competition must be balanced against the hard fact that Japan is the largest foreign buyer of American products with the exception of Canada, Japan's imports from the United States total nearly three times the value of Japanese exports to this country.

Relatively few American industries are hurt seriously by foreign competition in our domestic market. Congress can go only so far in protecting these industries. To go farther would mean jeopardizing the highly favorable foreign trade balance which the vast majority of American industries enjoy.

Thirty-five Fruitful Years

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of May 17, 1958, on the occasion of the 35th anniversary of the ordination of the Right Reverend Monsignor Wenceslaus A. Losieniecki to the priesthood. Monsignor Losieniecki is the pastor of the Maternity of the Blessed Virgin Mary Church in Wilkes-Barre:

THIRTY-FIVE FRUITFUL YEARS

A mass of thanksgiving in the Maternity of the Blessed Virgin Mary Church, city, on Sunday morning and a testimonial dinner at Irem Temple on Sunday evening will provide a fitting observance of the 35th anniversary of the ordination of the Right Reverend Monsignor Wenceslaus A. Losieniecki to the priesthood of the Roman Catholic Church.

A native of Blossburg, which furnished a score of priests to the diocese, including the late Rev. J. E. Gryczka, of Kingston, Monsignor Losieniecki has had a fruitful career, although he is now only in his prime and the harvest years are ahead in the normal course of events.

The high regard in which he is held by his ecclesiastical superiors is indicated by the honors he has received, including the rank of Domestic Prelate from the Pope, and the responsibilities he has been asked to assume. He not only has one of the most important parishes in the diocese, but he is a member of the board of consultors. Among other diocesan posts he has held are prosynodal judge and member of the board of examiners of junior clergy and seminarians.

He is also a director of St. Stanislaus Institute, treasurer of the Diocesan Council of the Catholic League, clerical representative in the National Council of the Polish American Congress, member of the board of governors of the Catholic University Alumni Association, charter member of the Reccobono Seminary of Roman Law, director of the Rev. Joseph Dabrowski Foundation at Orchard Lake Seminary, chaplain of the Polish Veterans, life member of the Polish Roman Catholic Museum and Archives Association, member of the Inter-Catholic Press Agency Association, and charter member of the Friends of Poland.

The community knows him also for his service on the boards of the Wyoming Valley Playground and Recreation Association and the American Red Cross.

His parishioners think of him chiefly as an outstanding spiritual leader and administrator who has carried on zealously in the footsteps of his predecessors with results that leave little to be desired. The impressive record speaks eloquently for itself and makes it understandable why an appreciative congregation desires to pay tribute to him on this milestone.

The Importance of States Rights in Preserving Americanism

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, May 22, 1958

Mr. THURMOND. Mr. President, the greatest domestic problem confronting the United States today is that concerned with States rights and the usurpation by one branch of the Federal Government of the powers properly belonging to the other branches.

Recently I received a paper prepared by Bland Roper, a senior at Laurens High School in Laurens, S. C., on this subject. It is a well-written paper, and it clearly shows the fine grasp this young man has on the subject of States rights and constitutional government.

I am glad to see that our young people—some of them at least—understand the seriousness of the constitutional crisis. These young people are the citizens of tomorrow, on whose shoulders the continuation of our system of government will rest.

I ask unanimous consent that the paper, entitled "The Importance of States Rights in Preserving Americanism," be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

THE IMPORTANCE OF STATES RIGHTS IN PRESERVING AMERICANISM

(By Bland Roper)

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." (U. S. Constitution, 10th amendment.)

From the unhealed wounds of the American Revolution, liberty sprang. The colonies, fearing for their safe existence, united in a compact to protect their common freedom. Before joining, each State hesitated, doubted, and turned questioningly to her leaders. In the North, Hancock and Hamilton, and in the South, Pinckney and Madison, were quick to assure their States that only those enumerated powers in the Constitution belonged to the central government. Still the States were dissatisfied. Their murmurs rose to demands and, with the addition of the Bill of Rights to the Constitution, States rights became the fundamental law of the land.

Regarding their victory as decisive, the States dropped their guard. Instantly,

power conscious men broke the tight bonds of the Federal Government and invaded the undefended territory. The solitary resistance of the separate States failed. Finally, convinced that the Union no longer cared about constitutional rights, 11 desperate States withdrew and formed the Confederate States of America. Denied the right to secede, the South fought, bled, and fell.

For the next 60 years a conservative Government through its foreign conflicts produced a wave of national feeling, further sinking the battle-torn doctrine of States rights. The road was open for the coming assault on individual liberty.

In the vicious depression of 1929–33, a new liberal era started. Roosevelt's New Deal, Truman's Fair Deal, and Eisenhower's program brought a tightened control of business, the birth of a welfare state, and a complete alteration in the makeup of the Supreme Court. No longer did the Highest Court consider past principles applicable to the present. It wanted something new. As a result unbelievable decisions with only psychological bases were reached. States rights was at its darkest hour.

Following 1954, a deluge of radical decisions descended. The educational system of a fourth of the Nation was upset. State labor and antisedition laws were made invalid. Attacks were even made against the governing of private institutions. An enthusiastic court went wild.

Instead of reprimanding the judiciary, the other two branches of the Government actively supported it. An injuction measure, which would have denied thousands the right of trial by jury, was narrowly defeated in Congress. Bent on enforcing the Court's decrees, the Chief Executive defied an explicit clause in the Constitution and, without a request, sent troops into a sovereign State.

With bayonets in the backs of her citizens, with court interpretations vaguely based on the Constitution, and with the Government stepping into the daily lives of her citizens, America faces a crisis. Shall she continue her present policy and magnify the threat of socialism and the destruction of democracy or return to the doctrine of States rights, the foundation of our Americanism? The situation stands. It is left to us, the up-coming generation, to chart the course.

Milestone on the Coosa-Alabama River

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1958

Mr. ROBERTS. Mr. Speaker, a historic milestone was marked recently when a blast of dynamite shook loose the earth on the upper reaches of the Coosa River near Centre, Ala.

This was the ground-breaking ceremony for the first of 5 dams—4 new and 1 existing dam to be improved—which will be raised on the mighty Coosa River.

It was with much personal pleasure that I was able to take part in the ceremonies, because overall development of the Coosa-Alabama River system has been sort of a pet project of mine for some time. My interest has been intense since coming to Congress, especially since seven of the Fourth Alabama District's counties are bounded by this riverway.

Another development affecting the Coosa Valley is that the world's largest paper machine has gone into production at the Coosa River Newsprint Co. mill near Childersburg, Ala. The new machine will add 140,000 tons yearly to the firm's newsprint capacity, and it culminates a $35 million expansion program for the 8-year-old plant.

Commenting on these two developments in a recent editorial was the Sunday Home News of Talladega, Ala., the Sunday edition of The Talladega Daily Home.

Under leave to extend my remarks, I submit this editorial:

THE MIGHTY COOSA

News that Coosa River Newsprint Co. at Coosa Pines in Talladega County put into production last week the world's largest paper machine came 2 days after news of the groundbreaking for the first of 5 hydroelectric dams to be built by the Alabama Power Co. on the Coosa River.

These two important news stories are closely related for several reasons, particularly as far as Talladega County is concerned.

Recent surveys show that many industries are looking for waterside sites for their new plants. Great quantities of water and power are required in certain modern manufacturing processes. Some industries require water transportation because of its low cost.

A map prepared for the Alabama State Planning and Industrial Development Board shows 67 major industries which have selected Alabama waterways for sites, according to an article in the Montgomery Advertiser.

Fifty-seven of these industries chose streams where barge transportation was available.

The Coosa River Newsprint Co. at Coosa Pines is frequently cited as an example of heavy industry locating on river banks.

One of the greatest paper plants in existence, Coosa River Newsprint, with completion of installation of the large new paper machine, thus culminated a $35 million expansion program.

The machine adds 14,000 tons yearly to the mill's capacity. In a single day the 43-inch-wide machine can make a strip of paper the width of a standard-size newspaper and 14,000 miles long—more than half way around the earth.

This expansion will increase employment in the Childersburg area approximately 600, the company announced.

At the ground breaking ceremonies at the site of the Weiss Dam, first of the series of hydroelectric dams to be built on the Coosa River, Thomas W. Martin, chairman of the board of the Alabama Power Co. said this: "Remember that the building of the dams and powerhouses is just a part of the way. The responsibility rests on the Representatives and Senators to provide the money for building locks at these dams so that commerce may come to the Coosa-Alabama. We are dedicated to the accomplishment of the complete story."

One of these Representatives, ALBERT RAINS of the fifth district, described the Coosa-Alabama waterway as "the second greatest undeveloped waterway in America," the development of which has been delayed too long, thus retarding the growth of the basin.

RAINS reminded the audience at the ground breaking ceremony that many years ago boats plied the Coosa and Alabama Rivers, and added that "in a few short years they will ply the rivers again, bringing new industry and new jobs, and causing income to be moved up considerably."

The Alabama Power Co. is spending $60 million this year to build generating plants, to build or enlarge substations, extend lines and make improvements. During the next 10 years the company is planning to spend many times that amount, company officials announced.

Included in this vast outlay will be the Kelly Creek Dam a few miles west of Talladega in Talladega County and the stream plant at Wilsonville in neighboring Shelby County.

It is of the utmost importance that citizens of the Coosa and Alabama River Valleys get behind the Alabama delegation in Congress and promote the building of locks on the waterway.

As Mr. Martin says, the building of dams and powerhouses is just a part of the way. Congress must provide the money to build the locks which will assure transportation from Rome, Ga., to Mobile and the Gulf of Mexico.

Great quantities of water and electric power will attract industries, but accomplishment of the complete story depends upon water transportation, which means the locks are a must if the dream of almost a century is to be fulfilled.

Mutual Security Act of 1958

SPEECH

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 12181) to amend the Mutual Security Act of 1954, as amended, and for other purposes.

Mr. JUDD. Mr. Chairman, having served on the Foreign Affairs Committee for 12 years, and having been associated during all that period with two of the members, the chairman, the gentleman from Illinois [Mr. GORDON], and the gentleman from Ohio [Mr. VORYS], who are both retiring this year, I am painfully aware of the great holes which their departure will leave in our committee, 1 on the majority side, 1 on the minority side, that no one can fill.

It is too bad that Mr. GORDON, with his wonderful spirit, his deep loyalty and attention to duty has been compelled by ill health to give up this heavy burden. Our affection and good wishes go with him.

As to JOHN VORYS, I do not know anybody in the Foreign Affairs Committee, or in the Congress, or in the United States who has a greater knowledge of our foreign relations, and parficularly the role of the mutual assistance program, than does this man. There just is no one else who has his experience and knowledge—and especially when we need some help on events in the past. He has an elephant's memory. Often when we are wrestling with some current problem he will come up with, "Back in lend-lease we had a comparable situation," or whatever other program it may have been in the last 20 years since he has been in Congress. He not only remembers the occasion, but he also re-

calls all the details, and they are generally very pertinent to our particular situation. One cannot but admire and envy his diligence, his industry, and the imaginative suggestions he contributes. His capacity to retain figures and facts and to marshall them convincingly are unsurpassed. His leaving will be an irreparable loss to our committee.

Another retiring Member whom we will miss greatly is Mr. LECOMPTE, of Iowa. He has been on our committee a shorter time but his faithful attendance and loyal support of constructive measures have made him a most valuable member.

The only redeeming feature of these losses is that the acting chairman this year, and our new chairman next session—if worst should come to worst and his party be kept in control at the next election—my friend and fellow physician, Dr. MORGAN, of Pennsylvania, has already demonstrated to us in the committee, and I think to everybody in the House, his extraordinary ability, his keen grasp of essentials, his fairness, his good judgment, and his capacity to give effective leadership.

Mr. Chairman, it is hard to know just what things it is most important to discuss in a debate of this sort. Almost every item has already been touched upon. The problems we face today are just the same as we faced in previous years only more aggravated and perhaps more advanced.

The first fact is that the Communist conspiracy against human freedom still exists. Its target, of course, is still the United States of America. If it can pull other countries away from the United States, if it can weaken us either militarily or economically; in short, if it can isolate, weaken, and destroy the United States, it will have control of the planet. This is a hard and continuing fact. I wish it were not so, but we cannot deny or duck it.

There is a second fact. Since we live on the same planet with that conspiracy and since we do not care to be subjugated by it, we have to resist it. That conflict is the cold war. Some people talk as if the cold war were something that a President or a Secretary of State under this or a previous administration dreamed up as a nice foreign policy. No, it is the price of our survival. Nobody in the free world likes the cold war but we cannot escape it if we would be free.

There is a third hard fact: We cannot call this conflict off except on the Communists' terms—and their terms are surrender. Not necessarily all at once—they are quite willing to accept our surrender step by step, conference by conference. Just now they are agitating for a conference at the summit, supposedly to relax tensions; but, of course, it must be on their terms which specify, among other things, no discussion of the single biggest cause of the tensions; namely, the enslavement of 900 million human beings, politically and economically. If we were to agree to a summit conference on such terms, it would be a mockery and a well-nigh fatal defeat for the free world.

A fourth hard fact is that we cannot continue the cold war indefinitely. We are not that patient a people; and besides, it costs too much. We know that if we do not spend more and more this year and the next for our own defenses and for those of our allies, we court insecurity—and disaster. But we also know that if we do continue to spend these terrific amounts for defense, we are inviting inflation, insolvency—and disaster. Either way, disaster. No wonder Mr. Khrushchev when in his cups drools in anticipation over what he has already announced as the impending victory over us by the Communists.

Well, if the threat still exists, and we cannot escape the cold war, and we cannot call it off except by surrender, and we cannot continue it indefinitely, then the only course left is to try to win the cold war.

We have to confront them with such unity and sustained firmness and strength—military strength, economic strength, and moral strength—that they dare not start a hot war now, because they could not win it. And we have to hold on and on and on until the disintegrating forces that are plainly at work behind the Iron Curtain so weaken them at home that they cannot start a hot war.

At this point some new facts enter the picture which were not recognized so clearly in previous years and which require some changes in our thinking. The first is that we have never really tried to win the cold war; we have just tried to prevent a hot war. Why have we failed to try our best to win the cold war? I think it is largely because we Americans, in our usual self-confidence in our own energy and ability, just took for granted that if we could prevent a military struggle, we would, of course, win any nonmilitary struggle; we would of course win an economic struggle; we would, of course win any scientific struggle or educational struggle. But we are not so sure today. We have an economic downturn here that has shaken our allies. In contrast, the Communists have made some undeniable economic gains and they have achieved some sensational victories in the fields of science and education that have jarred us. These can be of great benefit to us if we learn the lesson from them, if we see that this is not a contest of which side can outsit the other; but of which side can outwit the other. It is not a contest of which side can outwait the other; but of which will outwork the other—outthink, outsacrifice, and demonstrate the tightest discipline.

Now, although the Communists have made these gains, of which we are painfully aware, the United States still has one superasset. It is described in the middle paragraph on page 25 of the committee report, which to me is the most important paragraph in the whole report. The United States still has access to a string of bases—Army bases, naval bases, air bases—all around the world. Russia does not have any such bases. And, most important, there is no way she can get such a string of bases so long as our mutual security system is strong and effective. The one ace we have—and we must never forget it—the one superiority the Soviet Union and Red China cannot match with their sputniks, manpower or anything else, is our string of forward bases. We have these only because of this mutual security program.

Probably there is considerable agreement with what I have said thus far. The disagreement comes on how best to deal with the changed problem; how best to win the cold war before we ourselves are broken in the process.

Some still put faith in making new agreements with regimes that make a virtue of bad faith. Whenever the Communists offer new proposals, they grasp at them as a drowning man at a straw.

Some would say put faith only in our own power. They argue that these other countries are weak and perhaps undependable. They would let the rest of the world collapse and try to go it alone.

But most of our people, I am sure, believe that our best hope is to continue this mutual-security program, recognizing fully all its shortcomings, its difficulties, and its weaknesses, and working harder and more intelligently than we have to correct those weaknesses.

Perhaps our differences of views as to this program arise from differences in emphasis. Some concentrate on the remarkable achievements of this program, and they are listed at the bottom of page 3 and the top of page 4. What has been accomplished in these 10 years is beyond, I think, anything we dreamed would be possible when we started it 10 years ago. The prospects seemed dark indeed. And, the fact that we have been able to succeed in so many ways is the surest promise that we can succeed in the future, if we work hard to improve, correct, modify, and push ahead.

Others concentrate more on the failures. We have heard a good many talk about them during the debate thus far. There have been plenty of failures, plenty of mistakes in judgment. Often we have tried to do too much too fast; we have spread ourselves too thin. Often we have had less than the most competent personnel. It is difficult to get high-grade persons to bury themselves in these out-of-the-way places. How many of us would be willing to quit our jobs here at home and go out to work at lower salaries in these backward, uncomfortable areas, with bad climate, bad sanitation, endless frustrations, and disappointing inability to achieve spectacular results?

It is hard to get the very best top-flight personnel to go. Sometimes we have sent people who were technically proficient but who were too insensitive to the fact that this program is most of all a matter of dealing with persons. We build dams and dynamos and fertilizer plants, not just for their intrinsic value, but because of what building them will do, we hope, to the morale, the sense of confidence, the will to resist, the unity of peoples around the world who are still free and who want to stay free.

The real test is not whether there have been mistakes, but what are we doing about the mistakes? Are our efforts the very best that can be made under the very unideal circumstances?

Let me take some of the criticisms that have been made by various Members during the debate and give what I think are the right answers to them. Maybe I can at least put the issues in better focus or perspective.

It has been charged that each year the Committee on Foreign Affairs says that this bill will be the last. Mr. Chairman, under the Marshall plan for Europe we did have a 4-year program and there was reason to believe that it would end then. It could have, if only Europe had not been threatened. But the Reds started a war in Korea. We can hardly be made responsible for that. Checked in Europe by the Marshall plan, they moved east into Asia, and later south into the Middle East and Africa. They made it perfectly clear that the Communist conspiracy is a world problem, a world threat. We did not like that but we could not escape it. I have not heard anybody from the Committee on Foreign Affairs, since Korea, say "Just give us 1 more year, and that will be the last." For myself, I never made such a statement. I have said in the past, and I say today, that we can stop this program only when we have succeeded—and that will be when the Communist problem has been solved, which means when it is ended.

We have had a program of aid to the American Indians for 175 years. When is it going to stop? Well, it is not going to stop until we solve the problem of helping the American Indians to adjust to present-day society, so they can handle themselves and their problems more satisfactorily in today's world.

We have a program, larger each year than this program, to aid American agriculture. What will be the last year for that? I do not know. It will be only when the problems of agriculture are solved.

It seems rather pointless to spend much time talking about whether this is the last year for mutual security or how many more years it will have to go on. Please God, it will not be too long; but it has got to be until we win, unless we prefer to surrender, and, of course, we do not.

Another statement made is that we do not need to appropriate more funds because of the billions of dollars in the pipeline. There are several things to say about that. I wish you would look at the section on pages 12, 13, and 14 of our committee report, in which we deal with that at some length, more adequately perhaps than in any previous report.

The first thing to note is that the pipeline in the foreign-aid program is not unique. All other agencies of Government with purchasing programs have a pipeline. It consists of unexpended balances for goods and services contracted for but not paid for because not yet delivered. The agency with the largest pipeline is the Department of Defense. The biggest pipeline or carryover we ever had in mutual security was $10 billion in the fiscal year 1953. Because of the Korean war, we had to expand mutual security that year for obvious reasons. That same year, the pipeline for the Department of Defense was $62 billion for the same reasons.

At the end of this fiscal year of 1958, it is estimated that the pipeline for mutual security will be $5.1 billion. For the Department of Defense it will be $32.1 billion. With the necessity of ordering missiles and new superweapons, the Defense Department carryover, or pipeline, is bound to increase again. I think we can hold it down for mutual security.

The pipeline for the Department of Agriculture at the end of this year will be $4.5 billion. All the agencies of the Government combined, excepting only mutual security, have a total carryover of $64 billion.

Now why do not Members argue that we do not need to appropriate new funds this year for any of these other agencies, such as the Department of Agriculture and the Department of Defense, and just use their pipelines instead? Of course, that would not make sense. The funds in a pipeline are not free. They are obligated. They are at work. They are waiting to be spent, to be paid out just as soon as the goods and services contracted for are delivered.

The second thing to note is that the reduction from a high of $10 billion carryover to a low this year of about $5 billion has largely been made by reducing the military pipeline. We reduced it by $800 million in this last year. That is discussed on page 16 of the committee report. We are going to get it down by the end of next year to about $3 billion, and we were told frankly—I cannot dispute it, I think it is correct—that they cannot operate this kind of a program with a much smaller pipeline than that. If they tried to, they would not have the maneuverability and the continuity to be efficient and economical. No money is wasted by being in the pipeline. It has to be there to be spent when the expensive items that take a long time to manufacture are delivered.

Then there is the argument against the economic aid portion of the bill that funds have not been authorized for specific projects in the same way that we require when we pass authorization bills for navigation and flood-control projects. This is perfectly true. But there were two good reasons for it. One was the shortage of time; heretofore these authorizations and appropriations have been on a year-to-year basis. When our engineers make a study of proposed projects in my district or yours, they are given certain initial grants for planning, for surveys. They study the project very carefully, evaluate it from all angles, and establish benefit-to-cost ratios. Most of the factors—political, economic, psychological—are fairly discernible. Even so, it generally takes a year or more. But when working in other countries with all sorts of unfamiliar and unknown factors, it takes a still longer time. Yet under present procedures, the project has to be studied, evaluated, negotiations completed with the other government, and funds obligated—all within less than a year, or else the funds revert to the Treasury.

A second good reason is that in dealing with other governments, there are special political difficulties that we do not have in domestic projects. When we negotiate with other governments regarding projects there, as we must before we can make firm plans, or even make a study, it inevitably raises hopes in those countries.

You will readily realize what it would do to those governments—and many of them are new, some only 10 years old, and very shaky—and to their peoples' confidence in those governments and in us, if we were to raise their hopes and then not be able to go through with the projects, because the time had expired or we had changed our minds, assuming, of course, that the projects proved sound.

We all know the disappointment that follows when the engineers make a favorable report on projects in our districts, and then the Congress waits years to provide funds—or perhaps never provides them. The disappointment, and the political risks to our foreign relations, are much greater when dealing with projects in other lands. Their governments hardly dare to stick their necks out to make the firm commitments we require of them for projects to produce power or fertilizer or build roads to help their economy, unless they have pretty reasonable assurance that our part of the project is going to materialize also. To raise their hopes and then to dash them—again, in the absence of some overwhelming reason—would weaken the other governments, whereas the major objective of the program is to strengthen those governments.

The Development Loan Fund is an effort to reduce this difficulty by permitting longer range planning. The Fund does not have to meet the fiscal year deadline in obligating its funds. Each year it will have to come to the Congress with its budget, like all other Government corporations. The Appropriations Committee and the Congress will examine its budget and if it appears to be getting off the beam, we can reduce its funds. We can even veto individual projects. But the Fund should go a long way toward avoiding the special risks and difficulties inherent in the year-to-year pattern of the past, and thus improve our prospects of achieving the objectives that all of us want.

It is interesting to note that some of those who object most to the system of voting authorizations for projects abroad that are sometimes not as fully studied in advance as projects at home, are the same persons who object also to the Development Loan Fund, which is the best means we have yet devised for curing the difficulty of which they complain. What means do they propose for dealing with it?

There is a new section in the bill this year—the gentleman from Virginia [Mr. HARDY] spoke about it—section 517, which will require the agency operating the mutual security program to delay

obligating funds for projects which require substantial technical surveys and planning and which require legislative action by the recipient country, until the plans are completed, a firm cost estimate made, and the agency is reasonably sure that the recipient country will complete the necessary legislative action within 1 year. This section is a further attempt to take care of the legitimate objection that has been raised regarding past procedures. We want to be sure that both parties—the other governments and our own—are prepared to go ahead, before either gets in too deep on a given project.

The Communist criticisms of the mutual security program are the charges of waste. Some of them are true. But they are only part of the picture. Frequent mention is made of a cement plant in Korea. Undoubtedly, as we look back on it, some mistakes in judgment were made and the total cost of the project was much higher than anticipated. But look at the Korean program as a whole. Not too many people had much hope for Korea as late as 2 years ago, but today the good results of years of discouraging effort are becoming apparent. The currency has been stabilized for 16 months, although some thought it never could be stabilized. Korea is far nearer self-supporting than seemed possible. The local opposition to our programs, which was bitter, has largely disappeared because the results are now visible to all. In fact, Korea is becoming a showcase of what can be done, even in a divided country under constant threat of war, by cooperation between a country and ourselves. The contrast is dramatic between free Korea and Communist Korea—and even Communist China with its hunger and unrest.

It is never more than 10 percent of the program that is complained of—generally less than 3 percent. Should we, therefore, condemn or knock out the 90-plus percent which is producing remarkably good results?

I was going to report similarly about the gains for the free world in Laos, despite the incredible difficulties there and the relatively high cost of keeping the country free and independent, as we have been able to do. But time does not permit.

Another criticism is of our aid to the neutrals. It is said we should not help any who will not stand up and be counted. But why will they not stand up? We must think of the situation that they face. Generally, it is not because they are pro-Communist. It is because they are afraid. Afraid, first, of the Communists, both the Soviet Union and Communist China. They are closer to those countries than we—and they are less able to defend themselves. Second, they are afraid of the United States—in a different sense: they are not sure of our steadfastness. They hear Americans advocating, in and out of the Congress, that we stop our aid program. They hear other Americans urging us to make a deal with the Kremlin, even at the price of accepting its conquests of other peoples. They do not forget Yalta. They fear they may be next. If they were to stand up and be counted on our side, declaring themselves openly against the Communist side, and then the Congress unfortunately were to do what some are advocating that we do, they would, indeed, be out on a limb, having invited the disastrous reprisals they would face. They are sure of the Communists; but they are not quite sure of us.

It is said the neutrals will not be of help to us in winning a war. That is correct. But our main purpose is not to win a war; it is to prevent a war. And the neutrals are of very great help to us in preventing a war just by preserving their independence. If they do not grant us bases, at least by maintaining their neutrality they deny bases on their soil to the enemy. What they want most of all is to maintain their independence. They do not want to be under European control, or under American control, or under Communist control. The very fact that they are determined to hold on to their newly won independence is exceedingly useful to us. We ought to do our level best, in my opinion, to try to help them keep their independence.

It is said that we have not won friends by this program. But its primary purpose is not to win friends; it is to give other nations increased will and capacity to defend their independence. Its objective is to establish a mutually beneficial partnership, in order better to maintain their independence and ours. They cannot maintain their independence without us as a partner; we can maintain our independence more easily and cheaply and surely if we have them as partners. We hope they will also like us as friends. But that is not the primary objective of this program.

It is said charity begins at home. Of course charity begins at home. But who can contend that this is charity? It is not philanthropy for others; it is survival for the United States. We need them quite as truly as they need us. The justification of the program is not because it does good to others, although it does do that when well handled; its justification is that it does good to and for us.

It is said that we are spending billions of dollars abroad. No; 78 percent of the dollars are spent right here in the first instance. And all the dollars have to be spent in the United States in the end. Why do people all over the world want American dollars? Because of the things those dollars will buy in the United States. Over 700,000 Americans have jobs today, growing and making the things or providing the services these dollars buy.

It is said this program, in fact, our whole budget is too big for peacetime. Of course, it is. But who can seriously contend this is peacetime in any real sense?

It is said that if we were to cut down this program drastically, we could have that much more money for public works, housing, hospitals, schools, social security, here at home. We could take better care of our own people. But could we? The fact is that to cut down this program would weaken our allies and require us to spend far more additional money for our Military Establishment than the amount saved. We would have less to take care of our own people, not more.

I had hoped to speak also of several improvements this year's bill makes in the program. I can only mention them: First, the overall audit that has developed as a result of the finding of the Hardy subcommittee and the General Accounting Office studies; second, the separation under different titles of military and economic aid, although we recognize that almost all military aid serves to protect economic freedom, and almost all economic aid serves a military purpose, and certainly all aid under this program, both economic and military, is political; third, incorporation of the development loan fund to make it conform more to our established pattern for Government lending agencies; and, fourth, ICA's inauguration of longer and more comprehensive training and orientation for its personnel before being sent abroad. These are all forward steps.

Mr. Chairman, there have been many mistakes in these 10 years. But overall the mutual-security program has been brilliantly successful; it has kept the free world free. Let us carry it on—only better.

The forces of freedom are stirring mightily—especially behind the Iron Curtain. They will weaken, divide, pin down, and ultimately pull down the Communist tyrannies—if only we do not build those tyrannies up, and if we steadfastly and skillfully assist all those who resist our common enemies by striving to maintain their freedom and independence.

This is the way to victory and peace.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

The Gallup Poll on United States Prestige

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, May 22, 1958

Mr. PROXMIRE. Mr. President, the Gallup poll reports this morning that United States prestige has dropped disastrously throughout the world. This report preceded the fiasco of the Nixon tour in South America, the gross insults to America in Lebanon, and the dangerous crisis of friendly parliamentary government in France.

Mr. President, I ask unanimous consent that this article, showing how severely our prestige has been damaged, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES PRESTIGE DOWN IN 11 LANDS

PRINCETON, N. J., May 21.—Recent outbursts of anti-Americanism occurred against a backdrop of falling United States prestige in major cities of the Western and neutral bloc nations.

Surveys by the World Gallup Poll on the eve of the trouble in South America, Africa, and the Near East show this pattern of opinion around the world:

In virtually all of the 11 world opinion centers in the international poll, a significant number of persons said their respect for the United States had decreased recently.

In several of the world centers, however—notably New Delhi—this lessening respect is offset somewhat by large proportions who say their opinion of the United States has gone up recently.

Some of the most vehement criticism of the United States was recorded in Paris where, just before the outbreak of the current trouble, the anti-United States sentiment outnumbered the pro-United States sentiment by 11 to 1.

The chief reason for the downturn in sentiment in the French capital was what was felt to be the favorable attitude of the American Government toward the Algerian Nationalists.

Generally speaking, persons in the various cities who said their opinion of the United States had gone down recently attributed their change in view to some phase of our handling of international affairs—such as our approach to summit conferences or reaction to nuclear disarmament.

Very little criticism was directed at our economic situation and its possible effects on other countries.

The United States was praised, on the other hand, for its foreign aid policy.

In all of the 11 world opinion centers, there is a considerable number—ranging from 8 out of 10 in Stockholm to 1 in 5 in Athens—who say their opinion of the United States has not changed recently.

Interviewers for the affiliated world Gallup polls asked this question of typical citizens in 11 major cities of the world—eight of them in NATO countries:

"Has your opinion of the United States gone up or down lately?"

The views in each center:

	Percent			
	Down	Up	Same	No opinion
Oslo	38	11	37	14
Paris	33	3	55	9
London	33	7	41	19
Helsinki	32	9	39	20
Milan-Rome	30	22	45	3
Athens	29	11	21	39
New Delhi	25	28	22	25
West Berlin	22	18	45	15
Amsterdam	20	11	56	13
Copenhagen	17	7	32	44
Stockholm	8	2	79	11

The consensus in the eight NATO centers, based on an average of the results, is as follows:

Opinion of United States

	Percent
Gone up	11
Gone down	28
The same	41
No opinion	20

The Texas Rangers

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, May 22, 1958

Mr. YARBOROUGH. Mr. President, one of the world's greatest law-enforcement agencies is the Texas Rangers. This small body of able men, only 51 in number, is known to the far corners of the world for their resourcefulness, their devotion to duty, and their skill and determination in maintaining law and order.

Throughout the years Texans have been proud of the Texas Rangers. That pride is based not only on their untiring efforts to maintain law and order during the frontier years, but also on the fact that the Texas Rangers have kept up with every modern innovation in fighting crime.

Recently the Dallas Morning News published an excellent story, written by Jimmy Banks, a reporter with the Austin Bureau of the News, which sheds some light on the present-day operations of the Texas Rangers. The article states that although the Rangers now use the most up-to-date machines in their unrelenting war against crime, the essential character of the Texas Rangers, the character which has made them such an effective agency of the law and has brought them worldwide renown, has not changed. The Texas Rangers remain as dedicated to the public weal and as resourceful and unrelenting in their pursuit of lawbreakers as they were when they patrolled the Texas frontier of yesteryear.

Mr. President, because I feel that it would prove of interest to all, I ask unanimous consent to have printed in the Appendix of the RECORD the article entitled "Rangers Maneuver Into Tight Spots," written by Jimmy Banks, and published in the Dallas Morning News of May 19, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RANGERS MANEUVER INTO TIGHT SPOTS

(By Jimmy Banks)

AUSTIN, TEX.—Texas Rangers are now using airplanes in exploits as daring as those that made their organization world-famous many years ago.

But they still believe in terse, old-fashioned daily reports that rival an oldtime Ranger's classic: "We had a gun fight and they lost."

Texas has only 51 Rangers—but the department of public safety's four airplanes keep them within 2 hours of even the most remote points in the State.

Max Westerman, Jr., a pilot-investigator, has landed on highways and mountain tops while chasing—and capturing—criminals.

The exciting details, however, are omitted from his daily reports. For example:

"Made an investigation of arson in Huntsville this date. Picked up subject between Cleveland and Dayton and took him to Huntsville. Secured confession from him for setting fire to Plaza Cafe."

Westerman had flown to Huntsville when local authorities there reported they suspected arson. Westerman investigated and noted that all of the merchandise—even cigarettes—had been removed before the fire.

Westerman learned that the cafe owner had a ranch in southeast Texas and took to the air again, flying along the highway leading to the ranch.

When he spotted the fugitive's car from the air, he radioed for help on the ground. The arson suspect spotted the plane and began going up and down the highway, trying to figure out some way to escape. Every time he turned, the DPS plane turned. It stuck with him for an hour, until Westerman spotted a sheriff's car coming up behind the fugitive.

To close the trap, Westerman landed on the highway in front of the cafe owner's car and taxied up to make the capture.

Another report by Pilot George Burney shows how the airplanes are combined with the old Ranger standbys—horses and six shooters.

"Piloted P-3 with (Ranger) Truemon Stone and 3 dogs Austin to Sweetwater to Austin. Left Austin 5:30 a. m., arrived Sweetwater 7:10 a. m. Followed dogs on horseback 15 miles trailing 3 escaped prisoners. Apprehended subjects after dogs ran them up a tree. Left Sweetwater 6:15 p. m., arrived Austin 7:45 p. m. Miles traveled in State car, 6. Miles traveled in State airplane, 560."

The department of public safety has two single-engine and two twin-engine planes. One of the latter was donated to the department recently by Col. D. Harold Byrd, of Dallas.

The airborne operations of the Rangers are not only highly efficient but economical. They save a tremendous amount of time and money in the war against crime.

Several times, they have been used to spot jail escapees making their way across rugged country. In 1948, a child lost in the northeast part of Young County, near Farmer, was spotted from the air and rescued.

The airplanes have also proven extremely valuable in directing traffic at such events as the Texas A. and M.-Texas football game.

The planes are used extensively in connection with floods, frequently providing the stricken area's only means of communication with the outside world. During the 1954 Del Rio flood, a DPS plane served as an aerial observation post.

Rescuers were directed to hundreds of marooned people.

The planes are important in day-to-day, routine operations. Chemists from the department's topnotch crime lab are flown to various parts of the State to testify in trials. One chemist recently left Austin early in the morning, testified in Amarillo, then in Lubbock, and was back in the office late that afternoon.

Col. Homer Garrison, Jr., director of the department, uses the planes to maintain close contact with his regional commanders and to help supervise many investigations. They enable him to go almost anywhere in the State without being away from his desk more than a few hours.

The airplanes help Garrison in nearly everything he does—except with the time-honored problem of getting detailed reports from the Rangers.

Garrison likes to tell of the early-day adjutant general, then in charge of the Rangers, who finally devised a brief report form asking only for the date, and disposition.

The form lasted only until a Ranger reported the date and name of an offender, listing the offense as "cattle theft" and for "disposition" wrote down: "Mean as hell—had to shoot him."

Growth of International Advertising Strengthens Free World's Economies

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, May 22, 1958

Mr. WILEY. Mr. President, yesterday Vice President NIXON, in addressing the National Press Club, rightly pointed up the desire of the American people to help

strengthen private enterprise in Latin America. Our basic desire is to help improve standards of living there and elsewhere in the world. In so doing, we will help ourselves, as well.

With America beginning to rise out of its recession, we see more clearly than ever the importance of widening the market for United States goods and services abroad.

I might say, parenthetically, that I have just had lunch with a man who has been all over America. He said there is no real recession except in spots such as Detroit, where the automobile industry is centered. But he said:

I represent large groups of labor, and things are in fine shape. All that is necessary is to stop advertising something which is not true; then we would quickly get out of the mess into which we have put ourselves.

TEN BILLION DOLLAR INDUSTRY AT HOME

One of the vital instruments in this process is an industry which has served this Nation well on the home front. I refer to the advertising industry, a $10 billion a year industry in the United States and a growing industry throughout the world.

WORLD INTEREST IN NEW IDEAS, GOODS

Fortunately, literacy is increasing throughout the globe. More people are reading newspapers, magazines, and other publications. More people are watching commercial television and are listening to their radios. They are people interested in new ideas, as well as in new comforts and conveniences. The various mediums of advertising are increasing and opening up new channels of endeavor. Yes, the future of worldwide advertising seems bright indeed.

Meanwhile, however, the Soviet Premier has declared an economic war on the United States. We will meet his challenge, and win. We will see to it that the free world nations continue to have goods to offer to one another on an ever-increasing basis. But that will not be possible unless consumers know what is available, unless demand is stimulated by sound advertising of sound brand-name products and services.

MEDIUMS WILL FLOURISH AS WELL

As advertising increases abroad, mediums will flourish abroad, as they do in the United States. There will be better, stronger newspapers, periodicals, radio, and TV in many nations, as more advertising revenue comes in. With the growth of advertising, there will grow another American concept—another industry—public relations, as well.

WISCONSIN IS AD MINDED

Here at home, my own State has long been an advertising-minded State; not only because of the importance of its own production of goods and services, but because it is a center of the graphic arts. Therefore, it has provided natural technical support for the advertising industry.

Advertising agencies in my State and printing plants in my State have long excelled, each in their respective fields.

FOUR ARTICLES FROM ADVERTISING AGE

On the world front, I was interested to read in two successive issues of the magazine Advertising Age articles depicting the tremendous growth of advertising throughout the world. I refer especially to several articles published in the May 12 and May 19 issues.

The first article lists the 100 leading United States advertisers abroad which in 1957 invested more than $8½ million in 36 international circulated publications, alone. These corporations would not invest their stockholders' funds, in effect, unless that investment paid off in terms of increased sales.

The second article lists eight leading world advertisers outside the United States and Canada.

The third article describes an international advertising conference which was held last month in Tokyo under the sponsorship of the Far Eastern division of the International Advertising Association.

The fourth article briefly cites advertising in a land which represents possibly the greatest single economic recovery since World War II, Western Germany, a bulwark today of competitive free enterprise.

I cite these articles because I think that they will illustrate the growth in this field.

FEDERAL LAWS NOT EFFECTIVE WITHOUT PRIVATE GROWTH

At this very time we members of the Committee on Foreign Relations are marking up the 1958 mutual security bill. Shortly, the Committee on Finance will review the extension of the reciprocal trade agreements bill.

But neither the mutual security bill nor the reciprocal trade bill can fully achieve their objectives unless private trade advances, and largely on its own initiative. That is true of both industrial countries and underdeveloped countries, as in Latin America.

Worldwide advertising can play, and is playing, a vital role in this constructive process of economic growth. Thereby, consumer living standards will rise.

I ask unanimous consent that the articles which I have cited be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

UNITED STATES ADVERTISERS INVESTED $8,481,371 IN INTERNATIONAL PUBLICATIONS IN 1957—PAN-AMERICAN AIRWAYS, DOUGLAS AIRCRAFT BIGGEST USERS OF OVERSEAS BOOKS

NEW YORK, May 6.—One hundred United States advertisers invested a total of $8,481,371 in 36 internationally circulated publications during 1957.

Advertiser investments in international mediums are reported here, for the first time anywhere, as a result of a survey made by Advertising Age.

Heading the list, with an expenditure of $373,400, is Pan-American Airways (including expenditures by its affiliate, Panagra).

In second place, with a total expenditure of $345,563, is Douglas Aircraft, supplier to many international carriers. Champion Spark Plug, in third place, was the only other advertiser to spend more than $300,000.

Seven other companies—Caterpillar Tractor, Ford Motor, Allis-Chalmers, Remington Rand, General Electric, Kodak, and Burroughs—spent more than $200,000.

The 100th leading advertiser, with an expenditure of $19,298, is American Brake Shoe.

The top 10 advertisers accounted for more than 30 percent of the total expenditures by the 100 leaders.

Industrial advertisers, not surprisingly, bulk large in this list, since many of the international publications are business magazines, and even consumer-type books such as Life International, which reach an upper-income audience abroad, compete for heavy goods advertising.

Also, this list does not cover expenditures made locally by overseas subsidiaries of American companies. Many consumer products manufacturers have considerable advertising investments abroad, but they are made locally, in local mediums. Procter & Gamble, for example, ranks 33d on the accompanying list, with an expenditure of $84,158, but P. & G. subsidiaries abroad spend well over $10 million annually.

ONE HUNDRED LEADING UNITED STATES INTERNATIONAL ADVERTISERS IN 36 INTERNATIONALLY CIRCULATED PUBLICATIONS

1. Pan-American Airways (incl. Panagra).

EIGHT LEADING WORLD ADVERTISERS INVEST $10 MILLION PLUS OUTSIDE UNITED STATES-CANADA—UNILEVER, COLGATE, PHILIPS, SHELL TOP THE LIST OF LEADERS

NEW YORK, May 7.—The eight leading world advertisers, outside of the United States and Canada, are (in this order): Unilever, Colgate-Palmolive, Philips, Royal Dutch Shell, Procter & Gamble, Standard Oil (New Jersey), Nestle, and Imperial Tobacco.

Each of these companies spends more than $10 million outside of the United States and Canada. All of them—except Colgate and Philips—have sales in excess of $1 billion annually.

Topping the list by a wide margin is the Anglo-Dutch combine, Unilever, which broke precedent last month by revealing its worldwide advertising expenditures (AA, May 5). Unilever spends an estimated $125 million in markets outside of the United States and Canada.

In second place, with an estimated expenditure of $50 million in 1957, is the American company, Colgate-Palmolive, one of the Unilever's main competitors.

FAR EAST ADMEN COMPARE NOTES: PRINT MEDIA LEAD IN INDIA, MALAYA; RADIO IN THAILAND

TOKYO, May 13.—The first Asian advertising conference was held here last month under the sponsorship of the Far East division of the International Advertising Association.

The meeting attracted 10 delegates from Asian countries other than Japan. They met with some 100 Japanese admen. The conference was held in conjunction with the sixth annual meeting of the Advertising Federation of Japan.

One of the immediate results of the conference was the formation of a committee charged with the responsibility of drafting a charter for the establishment of the Asian International Advertising Association. On the committee is Hideo Yoshida, president of Dentsu Advertising and the IAA's vp for the Far East.

Toyonobu Domen, president of the Ajinomoto Seasoning Manufacturing Co. and president of the Japaneses chapter of the IAA, told the conferencec that "advertising plays a vital role in the economic development of the free world and is no longer a matter of mere domestic concern."

* * * * *

Jagan Nath Jaini, chairman of the Bombay agency, National Advertising Service Private Ltd., presented the conference with this thumbnail portrait of advertisfng in India.

* * * * *

There are now some 3,500 Indian advertisers.

One hundred and fifty national advertisers each spend more than 100,000 rupees ($20,000) annually.

Total advertising expenditures advanced from $4,500,000 in 1951 to "well over $20 million" in 195".

Mr. Jaini said the press is by far the biggest medium in India, accounting for nearly 45 million rupees of advertising. "In all," he said, "there are 6,570 newspapers and periodicals, of which 476 are dailies and 1,903 weeklies."

* * * * *

The next important medium in India is film advertising through the nation's 3,500 movie houses. Advertisers may also use Radio Ceylon, which covers Indian, Burma, and Pakistan.

Mr. Jaini said there are now 109 advertising agencies in India, of which 50 are recognized by the Indian and Eastern Newspaper Society.

* * * * *

The Indian agency man said the largest advertiser in the country is the Government, which spends nearly $2 million in all media, through a panel of 9 agencies.

Miss Elma Kelly, managing director of Cathay, Ltd., Hong Kong agency, reported that newspapers are the leading medium in Hong Kong. There are several English-language papers and 10 Chinese papers.

In Thailand, on the other hand, the leading medium is radio, according to a report by Chatrasobhon Sarasti, manager of the Chatra Press, Bangkok. He reported that Bangkok has 12 radio stations and 2 television channels.

* * * * *

John Weller, manager of Cathay's office in Bangkok, reported that the leading medium in Malaya is the newspaper. There are 2 English dailies, 4 Chinese newspapers, 1 Malayan, and 1 Indian.

* * * * *

"I believe," he told the conference, "it is very possible to improve this market by advertising. For example, many fishermen in the area are buying Johnson-powered fishing boats recently because of the single fact that Johnson Motors has been consistently advertising in the area."

ADVERTISING, SOZIALE MARKTWIRTSCHAFT KEEP WEST GERMAN ECONOMIC BOOM BOOMING

FRANKFURT, May 7.—The amazing economic recovery of West Germany from the ruins of World War II has aroused the envy and admiration of countries throughout the world. In this recovery, generated under the doctrine of Soziale Marktwirtschaft, or socially responsible free enterprise, advertising has played a big part.

West Germany's minister of economics, Ludwig Erhard, is generally credited as the man behind the German comeback. But the man behind Dr. Erhard was the later Walter Eucken, the economist and adviser whose work molded the dynamics of postwar German economic philosophy.

One of Mr. Eucken's main theories was that modern technology proliferates ever greater, wider and keener competition. An extension of this was his theory that the greater, wider and keener the competition, the more stable the national economy.

Germany has therefore tried to stimulate the conditions leading to competition. And in a competitive economy, advertising plays a leading role.

Dr. Erhard himself has stressed the importance of advertising to the new West German economy, going on record as saying:

"The essential purpose of advertising is to make people understand clearly that the sole purpose of all magic of economics is only to serve their good, to bring them happiness and to give them freedom."

The German people, too, have apparently recognized this. In a recent survey by the DIVO-Institute for Market Research in Frankfurt, more than two-thirds of those questioned said they believed advertising was important in the sale of products.

It is estimated that something like 2,927,400,000 deutschemarks ($714 million) was spent on all forms of advertising and sales promotion in West Germany in 1957. This compares with an estimated expenditure in 1954 of 1,869,600,000 deutschemarks ($456 million), an expenditure increase of 56 percent in 4 years. This is further testimony to the importance of advertising in the economy.

Coosa Development Was John R. Hornady's Dream

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. ROBERTS. Mr. Speaker, for many years of his adult life, the late John R. Hornady worked for the fulfillment of a glorious dream. He envisioned the complete development of the Coosa-Alabama River from Rome, Ga., to Mobile, Ala. He worked for this development with all his energy. But this crusading newspaperman and public official died a decade before his dream began to come true.

On April 26, 1958, ground was broken for the first in a series of dams on the Coosa River. With this event, the people of Alabama and west Georgia realized the beginning of John Hornady's dream.

Writing in the Birmingham Post-Herald following the ground breaking, the noted columnist John Temple Graves called the late Mr. Hornady "a moving spirit of the moving Coosa River development," and he added:

The Coosa was dear to his heart, and what is happening now is in fine part a product of his dream and work.

Many people today share John R. Hornady's dream and many are carrying on his work. I think it is fitting that one of those interested in this development is Cecil Hornady, the son of this man of vision, the editor of the Talladega Daily Home, in Talladega, Ala., in the Fourth Congressional District.

Under leave to extend my remarks, I wish to include a portion of an article which appeared in the Rome (Ga.) News-Tribune on April 27, 1958:

In 1930 a man who had just written a book on the history of power development on

the Coosa-Alabama rivers entitled "Soldiers of Progress and Industry," became editor of the Rome News-Tribune. He was John R. Hornady.

For 18 years, until his death in 1948, he spearheaded the efforts of interested citizens from Rome to Mobile toward the goal that now is just over the horizon.

Through strong and constant editorials both in the Rome News-Tribune and the Gadsden Times, which were affiliated until 1943, he advocated the opening of the Coosa-Alabama Rivers, envisioning the vast benefits to all the adjacent territory throughout the 145 mile distance. He went to Washington on many occasions to present the proposal before congressional bodies, and traveled the rivers many times with engineers to study the needs.

It has been many years since those efforts were made, but they are helping to bear fruit now because they had their lasting effect.

In connection with the overall river picture, Mr. Hornady is described as the one man who gave the most time and energy to the final approval by Congress of the erection of Allatoona Dam and the levees in Rome, resulting in a flood-free city, which in previous years was ravaged by high waters at frequent intervals. These projects are estimated to have saved the city at least a million dollars a year in flood damage since their completion 8 years ago.

This was the first major work done on the waterways since the 1920s, when the Alabama Power Co. built dams along the lower river reaches in Alabama.

Mr. Hornady served as president of the Coosa-Alabama River Improvement Association from 1940 until his death, succeeding the first president, Capt. William Patrick Lay, the father of hydroelectric power development in the South and the founder of the Alabama Power Co.

McGee Bend Dam Serves the People

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 22, 1958

Mr. YARBOROUGH. Mr. President, since 1940 the farm population of east Texas has steadily declined, and the maps recently exhibited on the floor of the Senate during the consideration of the area redevelopment bill showed east Texas to be one of the areas of lowest per capita and per unit income in the United States. McGee Bend Dam, in its full multiple purpose building, will furnish jobs for thousands, bring in new industries, and will raise the general level of prosperity and income for east Texas.

People are more important than trees. East Texas is growing more trees and less people than 20 years ago. McGee Bend Dam puts the emphasis on people, jobs, and income. Families who have lived in east Texas for over a hundred years are being forced out of their homeland and their habitat by lack of a means of making a livelihood.

McGee Bend Dam will furnish water and power for farming and industry, will create many new jobs and will make it possible for east Texans to earn a living and dwell in the land their forefathers settled.

The Beaumont (Tex.) Journal, on May 19, 1958, published an excellent editorial entitled "People Outrank Trees and Water Rates Above Wood." The editorial forcefully and clearly highlights the main issues in the battle to bring new lifeblood, new power, and needed water resources to east Texas.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Beaumont (Tex.) Journal of May 19, 1958]

PEOPLE OUTRANK TREES AND WATER RATES ABOVE WOOD

Some conservationists disagree as to the value of big dams and little dams to impound water—one of our great natural resources—but most of them are in complete agreement on one other thing:

Our greatest natural resource is people—ourselves, our children and our generations of descendants to come.

This is true because all other natural resources are no more than rewarding tools at the disposal of people. Wisely used, they feed, clothe, shelter, transport, protect and generally enrich the lives of the people. To assume otherwise, to make people secondary in importance to the natural resources around them, would be to put the cart before the horse and ultimately upset the whole scheme of creation.

So Senator RALPH YARBOROUGH is thinking and talking like a dedicated conservationist when he says people are more important than trees. In this instance he refers to 2 natural resources—water and wood—and correctly infers that of the 2 water is immeasurably more important to people than wood. He refers also to McGee Bend Dam and the necessity of inundating a large area of timber land to make room for water.

Senator YARBOROUGH has both feet on the ground of commonsense when, in pointing out that east Texas is growing more trees and fewer people than it was 20 years ago, he says the mighty multipurpose dam puts emphasis on people, jobs and income. It will also, as he explains, raise the general level of prosperity and income for east Texas and make it possible for more east Texans to earn livings and live in the land many of their forefathers settled.

It will do more. Multipurpose McGee Bend Dam will, when completed, conserve water that is now robbing east Texas soil of valuable minerals and rushing them down to the Gulf of Mexico. Its blessings will extend to the industry-loaded and agriculturally rich section of southeast Texas and thus raise production and the standard of living for hundreds of thousands of other people. Additionally, it will help to solve the State's overall water shortage problem and thereby benefit all Texas.

Senator YARBOROUGH is as right as rain. Water is more important to more people than trees. People are more dependent on water than on wood. Therefore, the water to be impounded at McGee Bend Dam means more to the people than trees which can be grown almost anywhere in east and southeast Texas.

An Economic Danger: Clear and Present

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the remarks of Mr. Robert T. Stevens, president of the J. P. Stevens & Co., Inc., North Andover, Mass., before the annual meeting of the Montana Society of Engineers, Butte, Mont., on April 26, 1958:

AN ECONOMIC DANGER: CLEAR AND PRESENT

(Remarks by Robert T. Stevens, president, J. P. Stevens & Co., Inc., before annual meeting of the Montana Society of Engineers, April 26, 1958, Butte, Mont.)

Mr. Chairman, Governor Aronson, members of the Montana Society of Engineers, guests of the society, and your ladies, first of all I would like to express my appreciation to the distinguished Governor of Montana for the honor he has accorded me in introducing me to this annual dinner of the Montana Society of Engineers. I count Hugo Aronson among my closest friends, value his friendship very highly, and appreciate what he has just said to you.

I would also like to be among the first to congratulate the Montana Society of Professional Engineers on its forthcoming 71st anniversary, in July, and for its importance to the welfare of the professional engineers of this State. It appears that, since you joined forces with the national society in February of last year, the Montana society has been in the forefront nationally in the acquisition of new members. A special note of recognition is due the "baby brother" of this important group and I refer, of course, to the Helena chapter which was "born" last August.

My information is that the Montana Society of Professional Engineers is one of the oldest, most highly respected, and one of the best organized of all the State groups belonging to the national society. I also understand that, through the efforts and aggressive leadership of President Olund and the membership of the society, you are extending your activities and expanding your sphere of usefulness. I congratulate you on the vigor and success of your programs. It is indeed a pleasure to be with you this evening.

Montana is most generous in the way it welcomes the Stevens family and makes us feel at home. When Mrs. Stevens and I visit our ranch at Two Dot, our good neighbors never fail to come by and greet us. They have a wonderful way of indicating that they like to have us in Montana—even on a part-time basis. We hope to spend more time in Montana in the future.

There are many things that have attracted us to this Treasure State. The inspiration of the frontier, the vastness of Montana, the beauty of its rivers, ranges and lakes, the friendliness of its people and the absolute certainty of its tremendous future. All these things appeal to us. And perhaps there is another factor that has unconsciously had an effect upon us. That factor goes back 105 years.

In 1853, the Congress of the United States created the Territory of Washington. That Territory embraced, at that time, much of

the western part of Montana. As a matter of fact, the spot at which we are now gathered was included within the boundary of that Territory. Stevensville, about 80 miles nothwest of here, is also within the then Territory of Washington. And that town was named for my grandfather's cousin, General Isaac I. Stevens, who was appointed in 1853 by President Pierce as the first governor of the Territory of Washington. I am extremely proud of this early connection with our great Northwest.

General Stevens graduated from West Point in 1839. He stood number one in his class and was an engineer. He had a noteworthy record in the Mexican War and became governor of this Territory at the age of 36. He headed an expedition that made the first survey for a railroad route across Montana. I am proud of that soldier-engineer-diplomat ancestor and, perhaps, I was thinking of this engineer member of the Stevens family when I accepted your cordial invitation to be with you tonight.

Since I am not an engineer, it ill behooves me to discuss with you the latest methods of mining copper, or lead, or zinc from our Montana soil. I feel even less than equal to the task of predicting the future advances in this field. However, I do feel that my deep and ceaseless interest in the education of our youth, having in mind that some of these youths will be the engineers of tomorrow, permits me to comment briefly on the educational problem that faces America today.

In preparing for my appearance here, I asked two of my friends in the field of education and two of my friends in government about the engineering needs of our country. These men are Deane Malott, president of Cornell University; Fred Hovde, president of Purdue University; the Honorable Marion B. Folsom, Secretary of Health, Education and Welfare, and James R. Killian, Jr., special assistant to the President for science and technology. They have all been good enough to write me regarding their views.

Without exception, these outstanding men in government and education are convinced that our need for educating engineers of quality is far greater today than at any other time in the history of our country. We should recognize potential scientists and engineers early in our secondary schools. By encouraging their imaginations and by nurturing their ambitions, we need actually have no fear of the future supply of men with creative minds.

Quality even more than quantity is the crying need. In order to obtain more engineers of quality, we should grant incentives to outstanding graduate engineers to encourage them to remain on the faculties of our schools in order to teach the future engineers of America. In this way, we can insure a continuous flow of qualified engineers who possess the creative and imaginative minds needed in our complex society. I was shocked to learn recently that, in New York City alone, there is a present need for almost 900 mathematics teachers to staff the junior and senior high schools. By comparing this deficiency in just one city, in just one subject, with the situation all over America, it is small wonder that the tasks we face in meeting our basic needs for qualitative factors in education are nothing short of monumental.

In addition, we should be much more careful than we have been in the past to make certain that our men of learning are not hidden under the proverbial bushel basket, where their real potential may never be utilized to the utmost. This requires topnotch personnel policies by the employer and it may be necessary for business and government administrators to revamp these policies now, wherever the need exists. There is no room today for wastage of engineering talent.

The position and importance of today's engineer was summed up by Dr. Killian in his letter to me when he said, and I quote:

"One hardly needs to emphasize the fact that engineers steadily assume greater professional responsibilities in our society. We have had a great volume of national discussion on the importance of science and on the need for training more and better scientists. This discussion has tended to overlook the important fact that we need first-rate engineers as much as we need first-rate scientists, and that if we are to have a flourishing, advancing technology we must recognize that the engineer is an essential partner in the tripartite team of scientist, engineer, and manager.

"I suggest that the engineering profession itself has a very great responsibility to make clear the important role of the engineer, and the need for engineering and engineering education to keep abreast of the accelerating scientific advance and discovery we witness today. Both from the standpoint of my experience as an educator in the field of science and technology and my brief period of public service, I am increasingly impressed with the importance of the engineering profession speaking with a more unified voice in our national councils, and with the professional status of the engineer being enhanced."

Incidentally, Dr. Killian has asked me to extend to you, the members of the Montana Society of Engineers, his very warm regards and best wishes.

The dramatic changes in our attitude with respect to higher education since the advent of the sputnik and its American counterpart, best described by the French as the Ikenik, can do nothing but good. These divining rods into the future advances of science and technology have focused the attention and concern of the American people on the importance of education and particularly higher educational pursuits. I am sure the youth of America are ready to respond to the need if only we will point the way. We can surely do something about this at the family and community level.

I surely do not know all of the answers with respect to our educational needs. However, I do know that we as a people have never liked to be second best in any competitive arena. The pioneers who settled these magnificent Western States never relinquished their competitive spirit and I have every reason to believe that that competitive drive continues today. The competition today is not over the survival of the wagon train, but over the survival of our Nation.

While we are on the subject of competition, I would like to turn now to another matter which is of great importance to the continuance of a strong and vital America. It is a subject which involves unreasonable competition. It could impair the dynamic, American economy which we all agree is so essential to the security of our country.

I refer to something that could not only tear down much that you here in this room have erected but much that you dream of bettering. This subject has been described by the use of catch phrases like "trade, not aid" and, in mathematical terms it sounds like 2 plus 2 equal 4, but, in actual operation it is more like 2 minus 2, which equals nothing. I am speaking of the proposed legislation before Congress right now, known as the Reciprocal Trade Agreements Act. It is up for renewal for another 5 years and the plan would authorize substantial additional tariff cutting powers. Many of the top level men of our Government have spoken for the program. These are friends of mine. I differ honestly with them on this measure but that does not lessen my regard for them as public servants or as personal friends. Their voices and pens are, however, diligently at work to keep this amazing world trade anachronism intact. Free trade proponents from commerce and industry are fighting side by side with my friends in government to extend this ill-advised legislation.

An enormous number of well-intentioned and fine people really believe that these so-called reciprocal trade agreements are actually reciprocal. Nothing could be further from the truth. This legislation was enacted originally in 1934 as an emergency measure to aid the country during depression times and was frankly called "an emergency measure for emergency conditions." It has been renewed 10 times for varying periods and the emergency never ends, in spite of the fact that since Pearl Harbor, in 1941, our country has experienced greater economic growth than ever known by any nation since time began. Instead of being an emergency measure, today its friends now call it an "antireeession" measure. They move with the times and always have an opportunistic reason for renewal.

This emergency measure has kept growing like a blight; wider, more complex, and more dangerous, at the expense of many American workers and many American businesses. While textiles and other soft goods were hit hard at first, today, the whirlwind of cheap imports is affecting many kinds of goods and machinery. Our people divide sharply on this subject and the Congress itself breaks up into large blocs of those who are for and those who are against, or those who lean toward or those who lean against. Many of our people have tranquilized their own convictions by repeating a little singsong that deserves some comment. The singsong goes something like this: "Free trade means no conflict between nations and that means no wars and that in the end means that our sons will not go forth to battle." Who among us has the courage to take issue with such sentimental reasoning? It is a strong America that will deter war, not an America with holes in its military and economic armor.

The shocking fact is that many American markets and American jobs are just as easy for foreigners to take as stealing a baby's candy. Let's consider these salient points:

1. Wages paid to workers abroad, making all kinds of goods that we buy, range from 35 cents or 40 cents an hour down to about 8 cents per hour. By comparison I'm sure it is unnecessary for me to cite the hourly rates of the average worker in the United States.

2. In 1934, when the tariff-cutting spree began, the average tariff levels protecting our industries were 46.7 percent—now they are 11.7 percent. The so-called protection is three-quarters gone. And there will be more of the same if the act is renewed as proposed.

This has been mercilessly destructive to the basic foundations of American jobs. You, as engineers, know full well that no amount of technological improvement in processing can compensate for those wage differentials, in the light of what you know about present-day equipment here and abroad. As a matter of fact, many foreign countries have very modern, new equipment that was partly paid for by you and by me, as American taxpayers. How can we as a nation give money, know-how, and lowered tariffs to our friends abroad and not have trouble at home? We can't eat our cake and have it too.

Now what about the reciprocity in our trade agreements? Well, in the first place, as these successive trade agreements were made with various countries, all the benefits were passed around to all the other trade-agreement countries. As you know, this is called the most-favored-nation clause. It is not surprising that the country with the lowest wages and the required skills gets the busi-

ness. Obviously, again, because our wages are 5 to 10 times greater than those of other countries, we didn't get the business; we got the "bizness."

The whole thing reduces itself to very understandable elements if we take a look at the facts and forget the much-touted slogans. For most items, wages are the deciding factor in measuring what country will make which product, depending upon where the necessary skills and materials can be made available. For example, England controlled the wool-goods export market for centuries. In recent years the Italians, with lower wages and excellent skills, have chased the British woolen goods off many trade routes. And now the Japanese are invading the wool-goods export market in a big way. Japanese goods made of wool are seriously affecting the already stricken woolen manufacturing industry of the United States. This is bad for the wool-growing industry in which Montana is so vitally interested, as well as being bad for the American worker.

With our generous showering of goods, services, and money upon so many lands, in addition to having cut our average tariff rates by three-quarters and with foreign wages so far below ours, what did our foreign friends do? How did they reciprocate? The facts show that the 89 trading nations, other than the United States, have developed no less than 36 different, ingenious practices, restrictive to international trade and investment. As examples:

Sixty-two countries require import licenses to get goods into the countries and skullduggery is rampant in this area.

Forty-six require export licenses, sometimes tied up with stringent currency controls.

Twenty-six have restrictions on outgoing capital movements.

Twenty-eight have restrictions on incoming capital movements.

Thirty-three have exchange licenses.

Twenty-three have multiple exchange rates.

Nine have import quotas, but the import licenses operating in 62 countries are, in effect, just the same as quotas.

The problem is the same whether it be in Rhode Island, Ohio, Georgia, or Montana. Only the names of the products involved are different. The blight is on a vast variety of items; textiles, machinery, machine and hand tools, chemicals, metals, cameras, appliances, and countless others. The great State of Montana is probably first in the Nation in zinc, third in copper, and fifth in lead production in the United States. As you know, the price structure is not only disheartening but is ruinous to many American mining companies. It is tough on many Montanans who depend so greatly upon these metals for their livelihood. We get the same end result whenever low-cost imports shut down plants and mines and people are put out of jobs.

Probably one of the least understood phases of the market place, and certainly the phase misunderstood by most of the proponents of free trade, is the psychological effect of the sale of a small quantity of really cheap and unrestricted imported goods on the basic price level of the rest of the domestic supply. The result is dramatic, immediate, and destructive. The price of all the rest of the goods, no matter how high the wages, rent, heat, light, taxes, and other items of cost that went into them, will grind inexorably downward with the sureness of the pull of gravity.

Unrestricted imports encourage the disintegration of price levels based upon American costs. There may be a temporary advantage to consumers but, if uncontrolled, it will wreak havoc on employment in America. The result is decreased purchasing power, hardship, relief, and a lower standard of living. American jobs must be preserved for American workers.

What advantage is there to the American worker and his family if we permit the further liberalization of these foreign-trade laws? The gains that have been made in the fields of minimum wages, overtime pay, social security, industrial safety, health, and welfare could be seriously affected. Any manufacturer can now escape American labor legislation and most American taxes simply by locating his plant abroad. The laws governing interstate commerce should not discriminate against goods produced in the United States.

Why should 2 identical garments, 1 manufactured in the United States and the other manufactured in Japan, run into different rules at our State borders? If, as is true, we have legislated costs on the United States product, is it fair or reasonable that foreign goods should move in interstate commerce entirely exempt from the rules that apply to American manufacturers?

In my judgment, the American people are too fair minded to approve this type of unfair competition if they understood it. The point is that our laws should take into account the high costs of American manufacture when evaluating the entry of foreign goods into our country. Tariffs, quotas, or a combination of both are necessary if we are to preserve our American standard of living. And let us not forget that American industry has twice been the arsenal of democracy in world wars. Is it wise, in the nuclear age, to decimate, under the halo of reciprocal trade, industries which were essential to allied victories in World War I and II?

Ladies and gentlemen, it is fantastic to many American businessmen to speak of this idea of international trade as reciprocity. Almost alone, we have done all the giving and yielding and losing. It was all the American Government's idea in the first place, 24 years ago, and we sold it all over the world. The act took the tariff control out of the hands of Congress and gave it to the executive branch. The control of American international trade should go back into the hands of Congress, where it belongs. This is the point at which local conditions register promptly and accurately.

Two bills are now in the House Ways and Means Committee and will shortly be acted upon. One is the Dorn bill, H. R. 11250, and the other is the Simpson bill, H. R. 11462.

Both bills return the determination of when American industry, and thus, our country is injured to the Congress, through the medium of the Tariff Commission, by whatever name it may be called. Under these bills economists in the State Department could no longer use global politics, sputniks, or other convenient reasons to overrule the true facts when our industries and mines are actually hurt, as is now the case.

I urge all of you connected in one way or another with American free enterprise to give serious thought to this vital and current subject and to advise your Congressmen and Senators how you feel. There isn't too much time. I have opposed the encroachment upon American jobs of these misleading trade agreements since their inception and I shall continue to do so until some form of equitable relief, based upon the American standard of living, is available.

The danger is clear and present. No one can deny that we must stop being complacent about our technical educational system. By the same token, we cannot be complacent over the fact that our country has actually become the battlefield for cheaply made imported manufactured goods. The American standard of living is under attack from overseas. Many countries who are attacking us in this way are our friends. They rely on our economic strength and our aid. Personally I believe most of them would understand our problem if our representatives at the international bargaining table would present our situation effectively and fearlessly. Let us join together to remind our government of the necessity of defending our hard won high standards of living.

I thank you.

Another Victory for Nixon

EXTENSION OF REMARKS
OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1958

Mr. LIPSCOMB. Mr. Speaker, Vice President NIXON's dignified and calm handling of the delicate situation created by the violent demonstrations during his recent South American trip brought much credit to himself and to our Nation. We all owe the Vice President a solid vote of thanks for the wonderful job he did.

I am submitting for inclusion in the RECORD an editorial from the May 10, 1958 Los Angeles Times, entitled "Another Victory for NIXON," which comments on Vice President NIXON's fine accomplishments:

ANOTHER VICTORY FOR NIXON

Americans cannot be blamed for reacting initially with indignation and anger to the disgraceful outbreak in Peru Thursday. The idea of the Vice President of the United States being subjected to a barrage of insults, verbal and physical, is repugnant in every aspect and even more so when it is considered that this was an official visit made in the interests of establishing better understanding with our Latin-American friends, of whom Peru has long been one.

WE GUARD VISITORS

The Peruvian government was not to blame for what took place at San Marcos University but that it feels some responsibility can be noted in the apology promptly delivered by the Peruvian Embassy in Washington. Correct as that action was, it still does not erase the incident. Foreign dignitaries to our shores are protected to the fullest extent possible from embarrassments or humiliations; it seems that this courtesy was overlooked in Peru.

Aside from that there are a good many other things to consider. Vice President NIXON's good will trip to Latin America has produced some convincing evidence of ill-will and that is a matter of serious concern to all of us. The question has already been askd why such a trip was undertaken in the first place when the State Department must have been aware that anti-American feeling has been growing.

That question can be answered with another: Granted, but was that not all the more reason to send our Vice President abroad to explain and interpret American viewpoints and policies in the interests of better understanding?

APPARENT SUCCESS

It is, perhaps, easy to writeoff the Peruvian demonstration as conceived and guided by Communists and to blame them for other unpleasant happenings in Paraguay, Uruguay, and Argentina. Unquestionably Communists have had an enthusiastic and leading part in promoting and spreading anti-American feeling everywhere they can in South America. But the seriousness of the

situation is that they seem to be enjoying some success; that they appear to be winning over large groups of South Americans in their campaign of hate and lies.

All this calls for some examination of our own policies and our own attitudes toward the South American people. We have been accused specifically in some cases of supporting dictatorships as tyrannical as the one which exists in Russia. We have been charged with promulgating economic policies injurious to Latin-American countries (the United States Tariff Commission has proposed higher tariffs on lead and zinc, major exports of Peru, Mexico, and Bolivia). We have been criticized on the basis that the foreign and we have extended has gone to the top and very little has trickled down in the form of material aid to vast numbers of people who need it.

Here is fertile ground for sowing the Communist seed. Our own business recession had had economic repercussions in South America and that has not helped matters. In Bolivia, Vice President NIXON was showered with pamphlets advising him to go home and proclaiming, "Death to the high cost of living imposed by the Yankees."

REDS TAKE ADVANTAGE

Peru has a growing unemployment problem; the same situation exists in other Latin-American countries. Where the people are not informed, the Communists are quick to step in and provide all the perverted information possible. Anti-Americanism is a commodity that has been too easily sold in too many countries and in some South American countries this propaganda falls on ready ears.

Meanwhile Vice President NIXON deserves our gratitude and admiration for the dignity, calmness, and physical courage which he has consistently shown in every circumstance and provocation. President Eisenhower, himself, has noted this; in his message sent to the Vice President at Quito, Ecuador, yesterday, the President said that NIXON's handling of the Peruvian episode had won him "new respect and admiration in our country."

And so it has. A man of lesser stature could have already worsened a delicate situation; NIXON instead blamed neither the government nor the vast majority of students at San Marcos University. Instead he quietly expressed regret that "a violent and vocal minority denied freedom of expression, without which no great institution of learning can deserve the name great."

The Vice President could have avoided a visit to the university; he had been told there was likely to be Communist-inspired trouble. He went anyway and faced the insults and outrages of the few with equanimity and a quiet defiance. Out of all this came no Communist triumph. As the Vice President, himself, said later, the Communists have suffered "a great defeat, as time will tell."

HAS BARED DANGERS

It may well be. The violence at San Marcos University can serve to promote a better understanding between the people of Peru and ourselves; Senator MIKE MANSFIELD, Democrat of Montana, has said that "the net result could be a strengthening of the already firm ties of friendship between our two countries and between this country and Latin America as a whole."

If this comes about—and it is in our best interests that it should—then Vice President NIXON will have no small share of the credit. He has shown to the world and to his countrymen that the Communist menace exists not only in the East but that it is taking on broad and formidable proportions much closer to home.

Perhaps our Government will now look longer and more closely to the south. The danger exists there, too.

Senator Russell and Foreign Trade

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. DORN of South Carolina. Mr. Speaker, Senator RICHARD B. RUSSELL, of Georgia, is ably defended in the following editorial from the Greenville, S. C., News. Of course, Mr. Speaker, those of us who have carefully studied the testimoney of Cordell Hull before the Senate Finance Committee and the House Ways and Means Committee in 1934, know that he favored only mutually advantageous foreign trade with emphasis on exporting farm and industrial surpluses. At no time did Cordell Hull advocate imports that would injure or threaten serious injury to basic American industries:

OPENING FOR AN OVERDUE DEBATE

The eight former associates of the late Cordell Hull, who took it upon themselves to attack Georgia Senator RICHARD B. RUSSELL'S views on international trade have opened up a debate that is as overdue as it is important.

The eight claimed Senator RUSSELL, in a speech before the American Cotton Manufacturers Institute, had misinterpreted the late Secretary of State's concept of reciprocal trade agreements.

They quoted the Georgian as saying the original idea behind the trade agreements was that the United States would export those goods we could produce in large quantity and import raw materials and goods not produced in great quantity in this country.

"This," they said, "is essentially so barren and inherently so self-contradictory that it could never have been accepted by Cordell Hull."

Unfortunately, the eight former Hull associates did not quote further from Senator RUSSELL'S speech, or at least not in the press association's story we saw, and we do not know what else he might have said.

It is true, and we are sure Senator RUSSELL would recognize the fact, that Secretary Hull knew that some displacement would result from really free, international trade. After all, most nations engage to some degree in production of almost all goods and competition between countries is inevitable.

But Mr. Hull, and the other freetraders, conceived of this competition as being relatively limited in importance, at first anyway, and its effects on our economy capable of being offset by other factors.

At one time, this may have been a valid view. It is not today.

Certainly the classical freetraders never contemplated today's pattern of international production, nor did they foresee today's highly complicated pattern of international trade. They could not have, for both are the result of the cold war and of the free world's desperate, even frantic, efforts to shore up its economy and hold back the industrial development of Communist nations.

They could not have foreseen that manufacturers in the United States would face competition with low-wage nations made overnight into first class industrial powers by the gift of our latest and best production methods and machinery.

They could not have foreseen that the traditional scheme of international trade would be so distorted that, by Government policy, those nations whose economies we are building along lines identical with our own are forbidden to trade with anyone except us and our friends.

These factors are fundamental to the present international trade situation. To ignore them is to misinterpret Mr. Hull's views beyond all recognition.

It is to be hoped that Senator RUSSELL will reply to his attackers and bring on a full-dress debate in the Senate on the problem of free trade today.

It is sorely needed.

The Progress of the Italian Republic

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. ADDONIZIO. Mr. Speaker, on May 25, more than 30 million Italians will cast ballots for the election of members of the house and senate. Once again, as in every election since the establishment of the Italian Republic, the basic issue will be the struggle of democracy against communism.

Ever since the Communists were ousted from the Cabinet in 1947, the democratic parties have had a working coalition in Italy. It has been through the democratic process that the Italian Republic has risen from the misery and humiliation of defeat to a respected member of the world community of nations.

Since the birth of the Italian Republic, the American people have been vitally concerned with its welfare. One of the objectives of our postwar foreign policy has been to strengthen the free world against the spread of communism. Italy was a strategic area in this aim. The rebuilding of this economically shattered country was a task of highest priority, for a weak Italy would be a breeding ground for communism. We sent aid to bolster her sagging economy. Although we did provide assistance, chief credit for her recovery, however, goes to the determination and toil of the Italian people.

This recovery was no small task. The war had disrupted Italian economy; 4 million homes were destroyed; inflation was rampant and unemployment figures were high. Although the situation seemed hopeless, the Italian people with resolve and energy, slowly made their infant Republic economically and politically secure.

This progress made by the Italians since the war has been truly remarkable. The standard of living has risen considerably for all classes of people. Industrial production has doubled. Agricultural development is up over 20 percent and savings have increased over 70 percent. The economy has flourished in all fields with American aid as a support. This progress was shown in recent statistics issued by the Organization of European Economic Cooperation—OEEC—which included Italy among the

countries that have made the greatest progress since World War II.

This economic progress was accomplished in the face of constant Communist resistance. The Italian Communist Party, through a series of strikes and violence, attempted to halt economic recovery and to destroy confidence in the new democratic government that had been established. Fortunately, these tactics were in vain and the forces of democracy held the line against communism. The majority of the Italian people worked diligently to put Italy back on her feet.

Communism, however, is still a threat. But the Italian Government is ever vigilant and has adopted steps to restrict its activities. These measures included: Strengthening the Italian police so they can deal effectively with challenges of the Communist Party; screening personnel holding positions of responsibility in the government; and decreasing the hold that Communist-dominated unions have over organized labor. These policies are indicative of the desire of most of the Italians to support a democratic form of government.

Although occupied by these problems of economic and political stability, the government has not hesitated to pass legislation to strengthen its defense position. When Italy became a member of NATO, additional military responsibility fell upon Italian shoulders. Massive domestic problems imposed limitations on her capacity to build the necessary defense establishment. Consequently, the United States, through the mutual defense assistance program, granted aid to Italy to enable her to meet her NATO commitments and to rebuild her military strength. As a result the reorganized Italian armed forces have become an efficient, well-trained, and effective part of the defense structure of the North Atlantic community.

As the Italian people go to the polls, the Italian economy is stable, communism has been held in check and Italy is an important member of the Western alliance. All this has been accomplished through the democratic process. Most of the Italian people will be aware of this as they cast their ballots. I am confident that the election returns will show that the Italians will continue to support the form of government that has made the Italian Republic stable and strong.

Welcome, Dick Nixon

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following item from the Birmingham News of May 16, 1958:

WELCOME, DICK NIXON

DICK NIXON came home yesterday.

Without wanting to seem melodramatic, we think we can say that the Vice President on his tour of eight Latin American countries had truly risked at least injury. Further—and this we think needs some real emphasis—he had had to undergo an experience any normal man finds as difficult as anything to withstand. He had seen his wife publicly offended and been unable to do anything about it.

NIXON simply had said it was "unpleasant" when his wife was deliberately spat upon.

It was an understatement, we know. Imagine what a personal ordeal that must have been.

In Washington he was welcomed by a great throng of people. Among them were Latin American diplomats from the countries he had visited, where he and the United States had been insulted.

Mr. Eisenhower, on hand to greet him, said that the events would result in improved relations. Strange as that may seem, we have every confidence that will turn out to be the case.

Mr. NIXON and his career have been subject of much discussion in the past. But it can be said, we trust with no gainsaying, that in his most recent service to the country he handled himself superbly. He and his wife deserve the congratulations and the gratitude of the entire Nation. We offer ours.

Let's Keep Our Shirts On

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. CEDERBERG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer of May 16, 1958:

LET'S KEEP OUR SHIRTS ON

Despite natural anger at developments in Venezuela; despite the perfectly natural feeling that the millions we have spent abroad have brought us few friends, Americans must not be stampeded into a desire for isolation in the present world.

Nothing would suit the Communists better than to have us withdraw behind our borders and thumb our noses at the rest of the world. We do have friends, though this may appear doubtful at times, and we need them. For, though we are the strongest power of the free world, we cannot stand alone.

We find it hard to believe that those who spat on Vice President NIXON and his wife could have held any personal animosity toward these two friendly people. We believe they did, it because they were ordered to do so by their Communist leaders. In short—that it was a Communist-inspired, Communist-directed maneuver from beginning to end.

To be sure, the United States reduction of import quotas on some things has produced bitterness in Latin America, and higher tariffs on lead and zinc have not helped the general feeling regarding us. But these are not spitting, rock-throwing resentments. They are the quiet kind that smoulder slowly, until whipped into a flame.

This time, we would imagine, the Reds have overplayed their hand.

Meanwhile, Mr. NIXON, a man of demonstrated physical and moral courage, has added greatly to his stature, as evidenced by the warm reception he received when he and Mrs. Nixon returned to Washington yesterday. And President Eisenhower did the proper thing when he sent token units of American military power into the area where Venezuela could have called for aid had it been needed.

The old American expression: "Keep your shirt on," applies in the present situation. The Reds only hurt themselves. But we will be well advised to give serious though to why supposed friends are sometimes something less than cordial.

First New York Corp., the First National City Bank of New York, and International Banking Corp.

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony given by me before the Board of the Federal Reserve System, Wednesday, May 21, 1958, in the matter of the applications of First New York Corp., the First National City Bank of New York, and International Banking Corp. for prior approval of action to become bank holding companies under section 3 of the Bank Holding Company Act of 1956:

I. INTRODUCTION

This is the first proceeding before the Federal Reserve Board under section 3 of the Bank Holding Company Act of 1956.[1] Thus, the decision rendered in this case will have the greatest significance in future interpretation and administration of this vital, new legislation. Equally important, the plan presented to the Board is one which could have the most far-reaching consequences on the future banking structure not only of New York State but of the entire Nation.

What is involved here is an application under section 3 of the Bank Holding Company Act, seeking, in essence, Federal Reserve Board approval for the First New York Corp. (a corporation organized under the laws of Delaware), to become a bank holding company which would acquire 100 percent stock control of (1) the First National City Bank of New York, (2) its trust affiliate, the City Bank Farmers Trust Co., a New York State charted bank owned by the same shareholders, and (3) the County Trust Company of White Plains, N. Y., also a State bank. The proposal, in addition, contemplates the chartering of three new national banks into which would be consolidated the First National City Bank, the City Bank Farmers Trust, and the County Trust Co. It may be noted that the proposed bank holding company would be the largest in the country with deposits about two and half times more than those held by the next largest holding group.

Basic purpose of the plan, it is clear, is to circumvent New York State statutory

Footnotes at end of speech.

limitations preventing banks in New York City from establishing branches outside the boundaries of the city.[3] These limitations, which are applicable to national banks under the Banking Acts of 1927 and 1933,[3] were designed to safeguard against banking monopoly in the State by protecting independent banks in areas beyond New York City from encroachment by the giant banking institutions in that city. Here, through the simple expedient of forming a holding company, the same management which is restricted in its operation under a bank charter, seeks to acquire a unit bank, operate it in the same manner a branch would be operated, and flout the expressed will of the legislative body of New York State regarding the establishment of branches. Indeed, the applicants themselves admit that circumvention of statutory district lines is the underlying reason for the proposal. In their application they state that "the boundaries of New York City have come to represent an increasingly arbitrary and unnatural division of a trade area, and a correspondingly arbitrary and unnatural limitation upon the extension of service of New York banks." [4]

To forestall the threat to the State banking structure implied in this plan, the New York Legislature adopted, on January 29, 1957, legislation effective until May 1, 1957, to prohibit any holding company from acquiring any bank located outside of the district prescribed for branch banks. On April 22, 1957 the effective date of this legislation was extended to May 1, 1958; on April 16, 1958, the State ban on holding company expansion beyond branch district lines was extended to May 1, 1959. In these circumstances, as I shall discuss later in my statement, New York State law precludes the transaction and makes the present proceeding moot at least until May 1, 1959.

I turn at this point to consideration of the nature of the banking institutions involved in the present proceeding.

The First National City Bank of New York is the second largest commercial bank in New York City and State and the third largest in the Nation. Created in March 1955, as a result of a merger of the National City Bank and the First National Bank of New York which was approved by the Comptroller of the Currency, the First National City bank and its affiliate, City Bank Farmers Trust Co., have aggregate assets of approximately $7.1 billion which comprise about 19.5 percent of the total commercial banking assets in the city.[5] In comparison, Chase-Manhattan Bank, the largest bank in New York City from the standpoint of assets, has about 21.2 percent of total assets of all commercial banks in the city. Next in size to First National City Bank are the Manufacturers Trust Co. and the Guaranty Trust Co., with each having assets of about 9 percent of total commercial banking assets in New York. In contrast, 44 of New York City's 60 banks have in the aggregate 10 percent of the total commercial banking assets of New York City. In brief, total assets of the First National City Bank are twice as large as 44 banks in New York City and exceed the combined assets of the third and fourth ranking banks in the city.[6]

The County Trust Co. of White Plains, N. Y., the other major bank involved in the application, is by far the largest bank in Westchester County, having total assets of approximately $378 million which comprise 48 percent of all banking assets in Westchester County. Its nearest competitor, by way of comparison, has assets approximating $140 million which represent 18.1 percent of the commercial bank assets of Westchester County. Beyond that it may be noted that the County Trust Co. has 39 branch offices, or about 47 percent of all commercial bank offices in Westchester County.

Footnotes at end of speech.

II. REPORTS AND RECOMMENDED DECISIONS OF THE HEARING EXAMINER

It is clear, of course, that the Board, in accordance with applicable Supreme Court precedents, should give great weight to the reports and recommended decisions of the hearing examiner assigned to this case. But even apart from that, the examiner's decisions in this matter were so carefully and objectively prepared as to be entitled to the most careful consideration.

The examiner on October 3, 1957, after exhaustive and painstaking consideration of all the legal issues presented, concluded that New York State law, for the period of its duration, effectively prevent approval of the proposed transaction. To quote from his decision (p. 13):

"In my judgment conformity to the intent of Congress, orderly administration of the legislation, and achievement of the statutory objectives, requires a plural rather than a singular construction of section 7, that is, one preserving State power within State jurisdiction to prohibit or contain bank holding companies composed of National as well as those composed of State banks.

"It is my further opinion that the New York statute, article III–B, is an exercise of State jurisdiction authorized by the Federal law, and that for the period of its duration it effectively prevents the effectuation of the program approval of which is sought herein. In addition, I have also concluded that the proposed consolidation of County Trust Co. with County Trust National Bank would be in contravention of New York law, and therefore not permissible under the Federal consolidation statutes, 12 United States Code 34a. For these reasons I believe that the applications may not presently be granted.

"Those conclusions being dispositive of the case, I do not find it necessary to consider, and do not pass upon other issues, such as whether the proposed program as a whole would be in the public interest."

For reasons which I will discuss in a few moments, I think that the examiner is clearly right and that the existence of the New York State statute is dispositive of the issues in this case.

Nevertheless, on December 10, 1957, the Board remanded the matter to the hearing examiner to obtain his views and recommendations with respect to the merits of the subject application. On February 20, 1958, the examiner, in another cogent and careful decision, concluded as follows (p. 27):

"The program, by combining the dominant banking system in Westchester County with one of the largest banking systems in the Nation, establishes in Westchester County a financial organization of such relative size as perhaps to give it decisive advantage over competitors; may result in an undue concentration of banking assets and control; may induce unnecessary dislocation in the existing banking structure of the county—and thus unsound banking; may unduly and substantially lessen competition between city and county banks; and may result in undue reduction of the number of independent banks in the county with consequent reduction in the number of competing banking organizations.

"In addition, in the existing circumstances, approval may tend to prejudice State regulation unduly and to impair legislative policies governing State banks.

"On balance, the prospective and possible benefits of the program do not outweigh its prospective and possible disadvantages. It is concluded that the program is not required for the needs and welfare of the community and area, and further, that the effect of the proposed acquisition may be to expand the size or extent of the holding company system involved beyond limits consistent with adequate and sound banking, the public interest, and the preservation of competition in the field of banking. Under these circumstances the applicants have not sustained the burden of establishing that the public interest will be furthered by granting approval of the applications."

Again, and for reasons I will set forth, I think the examiner's findings in respect of the merits of the proposed transaction are clearly correct.

III. NEW YORK STATE LAW BARS APPROVAL OF THE TRANSACTION

I turn to the impact of New York State law upon the transaction for which approval here is sought. The major question in this respect is whether the Bank Holding Company Act has preempted the field or whether there is an area for permissible State action. Without stopping to discuss in detail the examiner's conclusions on this point, I submit that the provisions of the Bank Holding Company Act, coupled with its legislative history, make it crystal clear that there has been reserved to the States wide latitude to adopt appropriate bank-holding legislation. Thus, section 7 specifies that "the enactment by the Congress of the Bank Holding Company Act of 1956 shall not be construed as preventing any State from exercising such powers and jurisdiction which it now has or may hereafter have with respect to banks, bank holding companies, and subsidiaries thereof."

The legislative history illuminates the meaning and intent of this section. For example, the report of the Senate Banking and Currency Committee makes this comment:

"Another provision of this bill expressly preserves to the States a right to be more restrictive regarding the formation or operation of bank holding companies within their respective borders than the Federal authorities can be or are under this bill. Under such a grant of authority, each State may, within the limits of its proper jurisdictional authority, be more severe on bank holding companies as a class than (1) this bill empowers the Federal authorities to be, or (2) such Federal authorities actually are in their administration of the provisions of this bill. In the opinion of the committee this provision adequately safeguards States rights as to bank holding companies."[7]

Beyond that, Senator ROBERTSON, sponsor of the legislation in the Senate and chairman of the Banking and Currency Subcommittee which considered the measure, pointed out in Senate debate that "each State may * * * enact legislation to regulate bank holding companies."[8] As an example of the type of legislation States were empowered to enact Senator ROBERTSON inserted in the CONGRESSIONAL RECORD the text of a bank holding bill recently passed by the Georgia Legislature,[9] preventing any bank holding company incorporated under State law or doing business in the State from acquiring 15 percent or more of the voting stock of each of two or more banks. Illinois, it may be added, has enacted similar legislation.[10]

In this setting, it is evident that the New York State legislation prohibiting a bank holding company from acquiring any bank located across the district prescribed for branch banks is a valid and appropriate exercise of State power and entirely consistent with the letter and intendment of the Bank Holding Company Act. The conclusion is therefore inescapable that the Board must give full faith and effect to the State enactment and deny approval to the pending application on the basis that it is barred by State law.

IV. STATUTES INVOLVED IN SUBSTANTIVE PHASE OF THIS PROCEEDING

These considerations apart, what of the merits of the pending application? First

Footnotes at end of speech.

let me direct attention to the several statutory provisions directly involved. Section 3 (c) of the Bank Holding Company Act specifies:

"In determining whether or not to approve any acquisition or merger or consolidation under this section, the Board shall take into consideration the following factors: (1) The financial history and condition of the company or companies and the banks concerned; (2) their prospects; (3) the character of their management; (4) the convenience, needs, and welfare of the communities and the area concerned; and (5) whether or not the effect of such acquisition or merger or consolidation would be to expand the size or extent of the bank holding company system involved beyond limits consistent with adequate and sound banking, the public interest, and the preservation of competition in the field of banking."

Explaining the purpose of this provision, the Senate report on the bank holding bill pointed out that:

"It is upon the basis of these factors that the Federal Reserve Board is to measure whether each application should be granted or denied in the public interest. It will be noted that these factors extend beyond the nature of those primary in importance to bank supervisory authorities in the exercise of their supervisory powers. In most instances, safety of the depositor's funds and adequate banking service to the public in the area where the bank operates are uppermost in the consideration of such bank supervisory authorities. The factors required to be taken into consideration by the Federal Reserve Board under this bill also require contemplation of the prevention of undue concentration of control in the banking field to the detriment of public interest and the encouragement of competition in banking. It is the lack of any effective requirement of this nature in present Federal laws which has led your committee to the conviction that legislation such as that contained in this bill is needed. Under its provisions, the expansion of bank holding companies in the banking field would not be prohibited, but would be regulated in the public interest." [11]

Equally important to the present proceeding is section 11 of the Bank Holding Company Act which provides that:

"Nothing herein contained shall be interpreted or construed as approving any act, action, or conduct which is or has been or may be in violation of existing law, nor shall anything herein contained constitute a defense to any action, suit, or proceeding pending or hereafter instituted on account of any prohibited antitrust or monopolistic act, action, or conduct."

So that there can be no doubt about the meaning of this section, I quote again from the Senate report:

"This bill provides that none of its provisions are to be construed as approving any act, action or conduct in violation of existlaw. It also provides that nothing in the bill shall constitute a defense to any action, suit, or proceeding pending or later instituted on account of any prohibited antitrust or monopolistic act, action, or conduct. In the opinion of your committee, approvals granted and action permitted under the provisions of this bill are not to supersede the provisions of other Federal laws, particularly those designed to control monopoly or break up trusts. For example, the Clayton Act has been judicially determined to apply to banks. Under the provisions of this bill, any action taken by the Federal Reserve Board in accordance with its terms is not to interfere in any manner with the performance by the Board of such functions as may be assigned to it under the Clayton Act." [12]

Footnotes at end of speech.

Against this background, it is clear that the Celler-Kefauver amendment to section 7 of the Clayton Act adopted in 1950, is fully applicable to the present transaction. That amendment provides in part as follows:

"No corporation engaged in commerce shall acquire, directly or indirectly, the whole or any part of the stock of other share capital and no corporation subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or part of the assets of another corporation engaged also in commerce, where in any line of commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly." [13]

Jurisdiction to enforce new section 7 insofar as it applies to banks, banking associations and trust companies, is vested concurrently in the Federal Reserve Board [14] and in the Attorney General.[15]

Thus, a major issue is whether or not the effect of the First National City Bank plan may be substantially to lessen competition or to create a monopoly in any section of the country, within the meaning of the Celler-Kefauver amendment. Making this clear, Mr. C. Canby Balderston, vice chairman of the Board wrote me on January 18, 1957, in part as follows:

"Section 11 of the Bank Holding Company Act of 1956 provides that nothing therein shall be interpreted as approving any action which may be in violation of existing law, nor is anything herein to constitute a defense to any action or proceeding on account of any prohibited antitrust action or conduct. Also, as you indicate, under the Celler-Kefauver amendment to section 7 of the Clayton Act the test is whether the effect of the acquisition may be substantially to lessen competition or to tend to create a monopoly in any section of the country.

"Section 3 (c) of the Bank Holding Company Act requires the Board, in passing upon each application by a bank holding company for approval of its acquisition of bank stock, to consider certain specific factors, including whether or not the effect of the proposed acquisition would be to expand the size or extent of the holding company system beyond limits consistent with the public interest and the preservation of competition in the field of banking. The concept involved in this factor is a broad one, and in the Board's opinion adequate consideration of the facts in this regard necessarily involves consideration of the standards mentioned in section 7 of the Clayton Act—that is, whether in any line of commerce in any section of the country the effect of such acquisition might be substantially to lessen competition or to tend to create a monopoly.

"In the circumstances, it has not been considered necessary to refer specifically in the order for hearing to the standards of the Clayton Act or to give specific instructions to the hearing examiner on the subject. You may be assured that the Board in its consideration of this matter will take into account all pertinent factors, including whether the proposed transactions might involve a violation of section 7 of the Clayton Act or other statutes."

V. THE CONGRESSIONAL INTENT UNDERLYING THE CELLER-KEFAUVER AMENDMENT TO SECTION 7

In light of these considerations, full understading of the purpose of the Celler-Kefauver amendment is essential for proper disposition of the pending application. Basically, this act strengthened provisions of existing antitrust legislation in order to limit future increases in the level of economic concentration resulting from corporate mergers and acquisitions. For one thing, the coverage of old section 7 was extended to cover nonbank corporation mergers accomplished by asset as well as stock acquisitions. Bank mergers accomplished by asset acquisitions remained unaffected by this new legislation. That, however, has no relevance to this proceeding, since the proposal before the Board involves a bank merger accomplished by a stock acquisition—a transaction fully covered by the Celler-Kefauver amendment.[16]

Beyond that, the Celler-Kefauver amendment established a new standard of illegality. It eliminated the old section 7 test which required that the effect of an acquisition may be to substantially lessen competition between the acquiring and acquired corporation in any section or community. In lieu of the effect on competition between the acquiring and acquired firms, the amendment adopted a less restrictive test which predicated illegality on whether the effect of the acquisition "may be substantially to lessen competition * * * in any section of the country". One reason for the change was to make it clear that mergers which enabled small competitors to compete more effectively with giant corporations were in the public interest.[17] This change was not, however, intended to legalize mergers between competitors which were illegal under old section 7.

A second and equally important reason for the change was to enlarge the coverage of section 7 "to make it clear that the bill applies to all types of mergers and acquisitions, vertical and conglomerate as well as horizontal, which have the specified effects of substantially lessening competition * * * or tending to create a monopoly." [18]

The House report added that:

"Acquisitions of stock or assets have a cumulative effect, and control of the market sufficient to constitute a violation of the Sherman Act may be achieved not in a single acquisition but as the result of a series of acquisitions.

"The bill is intended to permit intervention in such a cumulative process when the effect of an acquisition may be a significant reduction in the vigor of competition, even though this effect may not be so far reaching as to amount to a combination in restraint of trade, create a monopoly, or constitute an attempt to monopolize. Such an effect may arise in various ways, such as elimination in whole or in material part of the competitive activity of an enterprise which has been a substantial factor in competition, increase in the relative size of the enterprise making the acquisition to such a point that its advantage over its competitors threatens to be decisive, undue reduction in the number of competing enterprises, or establishment of relationships between buyers and sellers which deprive their rivals of a fair opportunity to compete. * * * It would be unnecessary for the Government to speculate as to what is in the back of the minds of those who promote a merger; or to prove that the acquiring firm had engaged in actions which are considered to be unethical or predatory; or to show that as a result of a merger the acquiring firm had already obtained such a degree of control that it possessed the power to destroy or exclude competitors or fix prices.

"The test of substantial lessening of competition or tending to create a monopoly is not intended to be applicable only where the specified effect may appear on a nationwide or industry-wide scale. The purpose of the bill is to protect competition in each line of commerce in each section of the country." [19]

The Senate report commented that:

"The type of problem to which this bill is addressed was described by the Federal Trade Commission in these words:

Footnotes at end of speech.

Footnotes at end of speech.

"'Under the Sherman Act, an acquisition is unlawful if it creates a monopoly or constitutes an attempt to monopolize. Imminent monopoly may appear when one large concern acquires another, but it is unlikely to be perceived in a small acquisition by a large enterprise. As a large concern grows through a series of such small acquisitions, its accretions of power are individually so minute as to make it difficult to use the Sherman Act test against them * * *.

"'Where several large enterprises are extending their power by successive small acquisitions, the cumulative effect of their purchases may be to convert an industry from one of intense competition among many enterprises to one in which 3 or 4 large concerns produce the entire supply. This latter pattern (which economists call oligopoly) is likely to be characterized by avoidance of price competition and by respect on the part of each concern for the vested interest of its rival * * *. (The Merger Movement, A Summary Report, pp. 6–7.)' "[20]

The legislative intent is also clear that the prohibitions of new section 7 are intended to be far more stringent than those of the Sherman Act; that it is enough to show that the future competitive effect may be adverse even though the actual anticompetitive results cannot be demonstrated. Indeed, section 7 of the Clayton Act was originally adopted to supplement the Sherman Act's prohibitions against mergers and to ban those where the effect may be to substantially lessen competition. Section 7's test of illegality, therefore, was based upon probable future anticompetitive consequences unlike the Sherman Act which requires proof that injury to competition has already resulted. Thus mergers were proscribed under section 7 that were well beyond the reach of the Sherman Act.

However, section 7 soon became a dead letter so far as preventing mergers was concerned due primarily to the fact that the courts held that the Sherman Act's rule of reason (requiring extensive inquiry into economic factors to show actual effects) was applicable.[21] This obliterated for all practical purposes the distinction between section 7 and the Sherman Act and thwarted the congressional intent that monopolistic tendencies resulting from corporate mergers were to be nipped in the bud.

In this setting, a major purpose of the Celler-Kefauver Act, as the Senate Report pointed out, was "to make it clear that the (act) is not intended to revert to the Sherman Act test" but "to cope with monopolistic tendencies in their incipiency and well before they have attained such effects as would justify a Sherman Act proceeding * * *. (The) various additions and deletions—some strengthening and other weakening the bill—are not conflicting in purpose or effect. They merely are different steps toward the same objective, namely, that of framing a bill which, though dropping portions of the so-called Clayton Act test that have no economic significance, reaches far beyond the Sherman Act. * * * The concept of reasonable probability * * * is a necessary element in any statute which seeks to arrest restraints of trade in their incipiency and before they develop into full-fledged restraints violative of the Sherman Act. A requirement of certainty and actuality of injury to competition is incompatible with any effort to supplement the Sherman Act by reaching incipient restraints."[22]

Footnotes at end of speech.

VI. THE PROPOSED TRANSACTION IS CONTRARY TO THE CELLER-KEFAUVER ACT. IT IS ALSO CONTRARY TO PROVISIONS OF THE BANK HOLDING COMPANY ACT BARRING BOARD APPROVAL WHERE THE EFFECT WOULD BE TO EXPAND THE SIZE AND EXTENT OF THE BANK HOLDING COMPANY SYSTEM INVOLVED BEYOND LIMITS CONSISTENT WITH ADEQUATE AND SOUND BANKING, THE PUBLIC INTEREST, AND THE PRESERVATION OF COMPETITION IN THE FIELD OF BANKING

a. Competitive effects on Westchester County

On the basis of the record and the findings of the Examiner, reasonable probability exists of an increase in the combination's market power in Westchester County to such a point that, in the words of the House Judiciary Committee Report, "Its advantage over its competitors threatens to be decisive."

Relevant in this connection is concentration of commercial bank assets in Westchester County as demonstrated by the following table:

Concentration of commercial bank assets, Westchester County, June 30, 1956

[Dollars in millions]

	Total assets	Percent of total
County Trust Co.	$355	48.0
National Bank of Westchester	138	18.6
2 largest banks	493	66.6
First National Bank of Yonkers	56	7.6
3 largest banks	549	74.2
First Westchester National Bank	45	6.1
4 largest banks	594	80.3
8 remaining banks	146	19.7
Total, all banks	740	100.0

The degree of banking concentration in Westchester County is such, with County Trust Co. controlling about one-half of all banking resources, and with the National Bank of Westchester as much as two-thirds, that there is considerable doubt as to whether smaller competing banks in the county will have long-range opportunity to do business profitably, whether they will have unfettered opportunity for growth and expansion, whether new banks will be able to enter into business without undue handicap, and whether new capital will find such new banks an attractive investment.

The short of the matter is that present concentration in Westchester County is serious enough; to combine the resources of the dominant banking institution in Westchester County with the gigantic resources of the First National City Bank of New York may well compound that situation to an enormous extent. If smaller banks in Westchester now labor under a competitive disadvantage with the County Trust Co., that disadvantage would pale into insignificance by adoption of the pending proposal. It now takes considerable courage for small-business men to pool their resources and charter a new commercial bank in Westchester County. The obstacles to new charters, now especially serious because of concentration of banking assets, could well become infinitely greater once County Trust Co. had behind it the weight of the First National City Bank resources. Integration such as proposed, that "links together competitive areas with others in which competition is already seriously defective, accomplishes by financial consolidation something very much like what is accomplished by the tie in prohibited by section 3 of the Clayton Act; it permits the use of market power in one area to create competitive advantages unrelated to efficiency in others."[23]

It follows that the acquisition would introduce in Westchester County an institution of such power that the banking community would be transformed into one overwhelmingly dominated by a single company, with a reasonable probability of price leadership and a general absence of price rivalry. Smaller banks in Westchester County could not be expected to be unaware of the financial power with which they would be confronted by virtue of this consolidation. In these circumstances, their means of competition would be hardly comparable to those available to the First National City-County Trust combination. To suppose that entry by First National City Bank in Westchester County might have no adverse competitive effect on the other 11 banks in that area is like supposing that chickens can dance with an elephant and come out unharmed.

Moreover, the inference can be drawn that the pattern of acquisition behavior that has characterized the operation of the County Trust Co. and the First National City Bank in the past would continue in the future, so that ultimately much, if not all, remaining effective competition in Westchester County would be destroyed via the same route. This is in accordance with the principle that probable future effects of a consolidation cannot be looked upon in isolation, but only in the framework of the merger history of the various parties to the transaction.

As far as the First National City Bank is concerned, it has taken an active part in a recent series of large mergers that reduced the number of more sizable banks in New York City—those with assets of about $500 million—from 16 to 12. By its merger with the First National Bank, the National City Bank increased its assets by $713 milion, or over 12 percent.

The following tables show the result of those mergers on banking concentration:

Concentration ratios, New York City, five largest banks, October 1954 and September 1956

Before the recent wave of mergers initiated with the Chemical Corn merger of October 15, 1954, concentration ratios in New York City for the five largest banks stood as follows:

[Dollars in billions]

Institution	Resources	Percent of total
National City	$5.43	16.5
Chase	5.36	16.3
Total		32.8
Guaranty Trust	3.10	9.4
Manufacturers Trust	2.96	9.0
Bankers Trust	2.16	6.5
Top 5	19.01	57.7
New York City total	32.95	

In September 1956 the ratios stood as follows:

[Dollars in billions]

Institution	Resources	Percent of total
Chase	$7.24	22.0
First National City	6.35	19.0
Total		41.0

Footnotes at end of speech.

[Dollars in billions]

Institution	Resources	Percent of total
Manufacturers Trust	$3.0	8.9
Chemical Corn	2.9	8.7
Guaranty Trust	2.77	8.3
Top 5	22.26	66.9
New York City total	33.42	

The County Trust Co. of White Plains completed 13 mergers in the postwar period. In fact, its activity rose to such a pitch that during 1955 its acquisitions numbered 7 institutions. When it attempted to cross the Hudson, however, to acquire the Ramapo Trust Co. of Spring Valley, the superintendent of banks vetoed this merger. A primary purpose was to keep the merger ambitions of County Trust from spreading into Rockland County.

The following tables show the merger history of First National City Bank and County Trust Co.:

Merger history, First National City

[Dollars in millions]

In the context of the merger history of these two institutions, the present holding company plan appears as but another step toward larger size, greater dominance in the market area, and a possibly destructive dominance in Westchester County. Thus, there is presented the very type of situation to which the Celler-Kefauver bill was addressed. As the Senate report on that bill stated:

"Imminent monopoly may appear when one large concern acquires another, but it is unlikely to be perceived in a small acquisition by a large enterprise. As a large concern grows through a series of such small acquisitions, its accretions of power are individually so minute as to make it difficult to use the Sherman Act test against them * * *.

"Where several large enterprises are extending their power by successive small acquisitions, the cumulative effect of their purchases may be to convert an industry from one of intense competition among many enterprises to one in which 3 or 4 large concerns produce the entire supply. This latter pattern (which economists call oligopoly) is likely to be characterized by avoidance of price competition and by respect on the part of each concern for the vested interest of its rival." [34]

Senator ROBERTSON, cosponsor of the bank-holding bill, was aware of the danger to competition from a transaction such as this. Presenting the bill on the Senate floor, he stated:

"Recently there has been much discussion, in and out of Congress, of bank mergers. I believe there is substantially greater danger of abuse through the bank holding company device than through the process of bank mergers. Imagine what a New York City bank with deposits of $7 billion could do in the way of competition with other banks if it also controlled a vast industrial empire worth $1 billion, and had unlimited ability to establish banks throughout New York State and in any other State.

"It is inconceivable to me that any Member of this distinguished body would say that the time has not come to put a curb on such possible expansion. The pending bill not only would divorce the bank holding companies from their industrial empires, but also would put any future expansion under the control of the Federal Reserve Board, which would have the advice and assistance of the Comptroller of the Currency and State bank regulation agencies—the agencies which are charged with responsibility for maintaining the strength and the integrity of our monetary system." [35]

Similarly Governor Robertson, member of the Federal Reserve Board in a speech on October 22 of last year to the Independent Bankers Association, pointed to the problem at issue in the following terms:

"We are required to pass upon applications by holding companies for permission to acquire additional bank stocks. In doing so, we must be guided by certain standards which Congress has prescribed in the law itself. These standards relate to financial conditions; future prospects; character of management; needs of the community; and restriction of holding company growth within limits consistent with sound banking, the public interest, and the preservation of competition. These are not rule-of-thumb standards. In applying them, the Board must carefully consider all the circumstances of each case that comes before it, weighing one factor against another; and—needless to say—no factor will always weigh the same and no two cases will ever be exactly alike.

"Whether you fully appreciate it or not, there are some differences between a great metropolitan area—for example, New York City—and my home town, Broken Bow, Nebr. One can imagine a multi-million-dollar holding company acquiring a bank in New York City without unduly upsetting competition there. But if such a corporation acquired 1 of the 3 small banks in Broken Bow, the other 2 might fear that their life expectancy had been shortened. Even a Solomon might have to ponder a while in applying the statute in such different situations."

Apart from this, there is a further dimension—a possible chain reaction. The success of the applicant in establishing this holding company would not only spur it to further efforts elsewhere in the State of New York. It is common knowledge that other large city banks, such as Chase Manhattan, Bankers Trust, Chemical Corn, and Manufacturers would have to establish similar bank holding companies to keep abreast. Once First National City had gained approval, it would be useless, and in fact inequitable, to disapprove the rest. These considerations make it plain that this one decision involves not 1 but 4 or 5 bank holding companies.[36]

It is certain, however, that there are not enough of these regional branch banks to go around or satisfy every city bank. The expectation would be for a general scramble to buy up the independent banks in Rockland, Westchester, Nassau, and Suffolk Counties. In the end, local competition in these areas would be trampled and replaced by the Big Five of New York City. As far as the sizable commuter traffic between New York City and the suburbs is concerned, competition between the suburban banks and the city banks at the retail and small-business level would be annihilated, as will be pointed out below.

b. Competitive effects on metropolitan New York City

Among the most important competitive forces in banking in metropolitan New York, particularly to people in the suburban areas, are the sizable regional branch banks that have sprung up in the rapidly growing counties surrounding the five boroughs. These suburban institutions have actually grown in three ways: through the influx of population, through new branches, and through mergers with existing smaller banks. Some of these banks, in fact, have acquired control of so large a portion of the banking resources of their counties as almost to raise questions of undue concentration. An important mitigating fact, however, is that commuter traffic, the automobile, and banking by mail bring these institutions into close competition with the banks in New York City. To an important degree, residents of the suburbs have a free choice as borrowers or depositors between their local institutions and city banks.

For example, First National City controls approximately one-third of both the number and dollar amounts of thrift deposits of commercial banks in New York City. The County Trust's 120,000 thrift accounts constitute roughly one-fifth of the 600,000 such accounts now at First National City. Moreover, the number of individuals with demand accounts at County Trust is approximately 119,000. Further, the number of persons with direct consumer loans is above 15,000.

Most of these individuals will be directly affected by the acquisition of County Trust by the First National City Bank. Most of them (or a member of their family) undoubtedly commute to the city. Thus, they have a choice as to where they may deposit their savings, where they may place their funds for use in regular or special checking accounts, and where they may obtain loans for personal needs. This acquisition would eliminate for these many thousands of individuals a substantial portion of their freedom of choice as to whether they prefer to bank near their homes or near their place of work.

As the examiner pointed out in his February 20, 1958, recommended decision (pp. 24–25):

"Execution of the program will also tend to eliminate competition between Westchester County banks and city banks. About 6 percent of the fiduciary accounts—in dollars a substantial figure—of Farmers originates in Westchester County. That competition may be expected to be eliminated by the proposed program, as well as poten-

Footnotes at end of speech.

Footnotes at end of speech.

tial competition which County Trust could be expected to provide by continued improvement of its trust services. The reduction of competition would, however, be greater than that. As of July 1956 more than half as many employed Westchester residents were employed outside the county, mainly in New York City, as were employed within the county. At the same time at least 10 percent of the locally employed persons were nonresidents of the county.

"It is thus seen that a majority of the county labor force possibly has regular access to banking facilities both in New York City and in Westchester County. To such persons, as well as to large-scale industrial and business establishments, the two areas offer alternative sources of banking service. Under such circumstances the banking systems of the two communities are in competition. The applicants estimate that the percentage of FNCB domestic depositors originating in Westchester is less than 1 percent; the deposits of County Trust originating in New York City less than 3 percent. One percent of FNCB's domestic deposits would be over $20 million; more than 5 percent of County Trust's total deposits. Three percent of County Trust's deposits would be approximately $10 million. These are in substantial amounts. Statistics in evidence indicating greater percentage of overlap in an FNCH branch nearest Westchester appear too fragmentary to be meaningful.

"Since a substantial number of persons employed in Westchester County have access to either the city or the county banks, and thus have a choice between them, I am of the opinion that there is effective competition between the city and county banks for the business of such individuals. The entry of First New York Corp. into Westchester County will tend to eliminate the choice which such persons now have, or may in the future have, between the banking services of FNCB and Farmers on the one hand, and the services of County Trust Co. on the other. In addition, the program will probably eliminate FNCH as an actual or potential correspondent for any of the other Westchester banks. These deprivations of choice result in a substantial lessening of competition, and in some respects a reduction in available banking service."

In connection with this facet of the problem, the ratios advanced by First National City are highly misleading. For example, exhibit F, page 5, cites that the "percentage of domestic business * * * originating in Westchester, based on amount of deposits * * *, is estimated to be less than 1 percent." Similarly it is stated, on page 7, that "the group to be formed by these proposals will have deposits and resources less than 6 percent larger than those of the First National City Bank of New York."

Apart from other considerations, the difficulty with these ratios lies in the fact that the First National City Bank is both a money-market bank as well as a retail institution. The County Trust Co., by contrast, does mostly a retail business.

To show how preposterous this comparison is, New York City banks could acquire the assets of all commercial banks in upstate New York and increase their size by only 23 percent. An analogy might be an acquisition by the Ford Motor Co., which manufactures charcoal, of various charcoal-producing competitors and justifying the acquisitions by putting into the ratios the entire operations of the Ford empire.

First National City produces no data breaking down their banking activities into wholesale and retail components, and showing the effects on size, concentration, etc., on such a detailed basis. An attempt has been made here to estimate, for example, the direct consumer lending business of First National City. It would appear that this bank's share is almost one-half of the New York City total. In these circumstances, it is clear that the First National City Bank's present dominance in this field cannot, consistent with antitrust principles, safely be increased further through holding company activities.

c. Relationship between population and deposits in New York City

One of the major points made by First National City is that since New York City population increase has been lagging behind the growth of the suburbs, it is necessary for a bank which desires to maintain its growth to go into these suburban areas. In the words of the First New York Corp. application:

"The First National City Bank of New York management also believes that due prudence and proper exercise of its responsibilities to First National City Bank shareholders make it desirable to protect First National City Bank against the consequences of business and population shifts from the city to Westchester County, which may create a relatively rapid growth of banking opportunities in the county, while at the same time limiting the growth potential within the five boroughs." [27]

This argument takes the rather simple view that a close relationship exists between population and bank deposits. In contrast with most communities, the New York City banks are not dependent upon this single factor. Because of their countrywide money market and corporate activities, their correspondent banking and their position in international finance, any such claim is fallacious.

On the contrary, when one takes the long view of the period since 1900, population in New York City has grown from less than 3½ million in 1900 to over 8 million today. Thus, the present population is 2½ times that at the turn of the century. By contrast, over the same period the deposits of the downtown commercial banks in the city increased from $1.7 billion to $29.4 billion. After adjusting for changes in the price level, their deposits are over 5 times the level in 1900 as shown in the following table:

Footnotes at end of speech.

Population growth and commercial bank deposits, New York City, 1900–1955

	Population	Index	Total deposits [1]	Index	Total deposits deflated [2]	Index
	Million		*Billion*		*Billion*	
June 30, 1900	3.44	100	$1.64	100	$4.46	100
June 30, 1955	8.05	234	$27.79	1684	$22.93	511

[1] Data for 1900 include all commercial banks in Manhattan. In 1955, only central reserve city member banks (banks with offices below Canal St.).

[2] 1955 figures deflated by implicit price deflator for gross national product; for 1900, the Bureau of Labor Statistics Wholesale Price Index used.

d. Ease of raising capital

One of the points made in the First National City application is that through the holding company device it is easier to raise capital and that County Trust will therefore benefit in this regard. Thus, in the First New York Corp. application (exhibit F, p. 3), the following statement is made:

"The association would likewise facilitate the raising of additional capital for the County Trust Co. to support its present position and future growth. Because of the great expansion in its deposits, its need for additional capital funds has been continuous; they have been provided in part by the sale of subordinated debentures. It is clear that its future capital requirements will be equally great if it is to meet adequately the needs of the communities which it serves. If the proposal is approved, the problem of raising this additional capital would fall upon the holding company which, through the broader market which may be expected for its own stock, would be able to accomplish this task more readily."

However, an examination of the premium existing for County Trust stock indicates that it is actually in an extremely favorable position as regards the raising of additional capital. During 1956, as shown by the table that follows, its market value was about two times its book value per share. By contrast First National City Bank stock was selling at only slightly higher than its book value. Thus the market has already taken into account the future growth and earnings potential of County Trust and this is reflected in the market value of its shares. It can therefore be inferred that County Trust would have no difficulty in raising the capital needed to margin its future deposit growth, and does not need a holding company organization to accomplish this.

Comparative book and market values, First National City Bank and County Trust Co., 1956

	1956
First National City Bank:	
Book value per share	$60.22
Range: Market price per share 60¼ to 73¼.	
County Trust Co.:	
Book value per share	14.18
Range: Market price per share 25¼ to 33½.	

VII. THE APPLICANT FAILS TO MEET ANY OF THE OTHER FACTORS OF SECTION 3 (C) OF THE BANK HOLDING COMPANY ACT

From the background of the act, it is clear that a bank-holding company application, to win approval, has to meet squarely every single test prescribed by section 3 (c). Failing in that, the application must be disapproved.

It must be observed that the Bank Holding Company Act is a restrictive measure, not one designed to place the stamp of approval upon indiscriminate creation of new bank-holding companies. This is demonstrated by the history of the legislation as well as by the provisions of the act itself.

Bank-holding companies first caught the public's attention in the late 1920's when their organizational activity reached a peak. Many such ventures were mainly speculative in nature, with the result that the stock market crash caused much distress. By 1930, the Congress became so concerned over bank-holding companies that it held extensive hearings culminating in specific regulatory provisions in the Banking Act of

1933.[28] Such regulation proved inadequate, however, not only because of loopholes in the act itself, by which bank-holding companies might evade the reach of the Federal Reserve System, but also because of the failure of the act to deal with one of the principal problems involved—concentration. In a special message to Congress on April 29, 1938, President Roosevelt made these comments:

"It is hardly necessary to point out that the great economic power that might be wielded by a group which may succeed in acquiring domination over banking resources in any considerable area of the country. That power becomes particularly dangerous when it is exercised from a distance, and notably so when effective control is maintained without the responsibilities of complete ownership.

"We have seen the multiplied evils which have arisen from the holding-company system in the case of public utilities, where a small minority ownership has been able to dominate a far-flung system.

"We do not want those evils repeated in the banking field, and we should take steps now to see that they are not.

"It is not a sufficient assurance against the future to say that no great evil has yet resulted from holding company operations in this field. The possibilities of great harm are inherent in the situation

"I recommend that the Congress enact at this session legislation that will effectively control the operation of bank holding companies." [29]

Bills subsequently introduced in the Congress failed to make headway so that the Board of Governors of the Federal Reserve System felt moved to renew a plea for legislation in its Annual Report for 1943. This report stated in part as follows:

"There is now no effective control over the expansion of bank holding companies either in banking or in any other field in which they may choose to expand. Moreover, the device lends itself readily to the amassing of vast resources obtained largely from the public which can be controlled and used by a few people and which give to them, when they choose to use them, an unfair and overwhelming advantage in acquiring additional properties and in carrying out an unlimited program of expansion. In the exceptional case, these resources have been used to acquire independent banks by measures which leave the local management and minority shareholders little with which to defend themselves except their own strenuous protests. Likewise, these resources have been used to support the market for their own stocks and thus to facilitate the acquisition of independent banks by the exchange of stocks, as well as to create trading profits for favored participants.

"The Board believes, therefore, that it is necessary in the public interest and in keeping with sound banking principles that the activities of bank holding companies be restricted solely to the banking business and that their activities be regulated, as are the activities of the banks themselves.

"Such legislation should be so designed as to prevent any such company from using the corporate device to circumvent and evade sound banking principles, regulatory statutes, and declared legislative policy."

In 1944 the Federal Deposit Insurance Corporation added its voice to the call for legislation. It stated in its annual report for that year:

"The business of lending money is well suited to private initiative and is best performed under competitive conditions. Monopoly in banking is a threat to American traditions, both because it limits the opportunities to engage in the business of banking, and because it provides an opportunity for favoritism in the extension of credit which may foster monopolies in other industries. The growing tendencies toward monopoly in the banking business are serious, and prompt action should be taken to curb them.

"A partial monopoly which develops when one bank obtains a disproportionate percentage of the total banking resources of an area may have a serious effect on the economic life of the district.

"Holding companies not only tend to become monopolistic, but increase the problem of supervision."

In the meantime, and continuing through the early postwar years, the large bank holding companies continued to expand without hindrance. Finally, in 1948, a point was reached when the Federal Reserve Board decided to grasp the initiative under powers conferred by the Clayton Act. Without repeating here the voluminous proceedings against the Transamerica Corp. in any detail, the following section of the Board's brief seems relevant in stating the bank holding company problem in general terms.

"The Clayton Act is a prophylactic statute, designed to arrest monopoly 'in its incipiency and before consummation,' as Congress itself said when it passed the law. Section 7 was specifically aimed at holding companies which buy up the stocks of companies in actual or potential competition and bring those companies under common ownership and control. The holding company which follows this practice was denounced by Congress as 'an abomination.' Here we have a case where just such a situation as Congress specifically visualized has come to pass. Transamerica and its predecessors have for over 40 years been acquiring the stocks of small, medium and large sized commercial banks in an ever expanding area on the west coast. To date, they have acquired almost 700 separate banking offices in 5 States. As fast as these banks were acquired, they were merged into or became branches of one or another of the rapidly growing branch banks in the controlled group of banks to a point where they now comprise 40 percent of all commercial banking offices in the 5-State area, having 39 percent of all commercial bank deposits and 50 percent of all commercial bank loans in those States. Furthermore, the evidence clearly indicates that, unless restrained, Transamerica intends to acquire more banks and thus to increase further its growing monopoly power in that area. The net 'effect' of these acquisitions, we contend, 'may be substantially to lessen competition, or to tend to create a monopoly' of commercial banking offices, deposits and loans in the 5-State area, contrary to the provisions of section 7. The nub of our contention springs from the conviction that the only proper legal test for determining the 'effect' of such a continuous series of acquisitions is to consider their cumulative effect upon existing and potential competition in commercial banking in the area." [30]

Perhaps nothing sparked renewed agitation for effective restrictions against bank holding companies more than the Board's inability to stop the acquisitions of the Transamerica Corp., due to the apparent impotence of section 7 of the Clayton Act as interpreted in that case by the Circuit Court of Appeals.[31] Finally, by 1955, the Congress had accumulated sufficient testimony, and Members of both Houses had become sufficiently familiar with the issues to bring bills within sight of enactment. The mainline of argument, familiar from many long-drawn-out proceedings, did not falter from its main objective—greater restriction. Thus Chairman Martin, of the Federal Reserve Board of Governors, testified at hearings before the House Banking and Currency Committee as follows:

"These provisions of existing law regulate the activities of a bank holding company only if it happens to control a member bank and only if it desires to vote the stock of that bank. In effect, therefore, regulation is largely voluntary on the part of the holding company. Even if a voting permit is obtained, the regulation to which a holding company is subject is aimed mostly at protecting the soundness of the member banks in the group.

"These provisions, therefore, do not deal at all with two apparent problems in the banking holding company field. In the first place, there is nothing in present law which restricts the ability of a bank holding company to add to the number of its controlled banks. Consequently, there can well be situations in which a large part of the commercial banking facilities in a large area of the country may be concentrated under the management and control of a single corporation." [32]

When the House Committee on Banking and Currency issued its report to accompany its proposed bill, H. R. 6227, the problem was stated again in this form:

"Evidence developed during the hearings has convinced your committee that bank holding companies are not in accord with the very precepts upon which our banking system rests. The United States, early in its history, it should be recalled, adopted a democratic ideal of banking. Other countries, for the most part, have preferred to rely on a few large banks controlled by a banking elite. There has developed in this country, on the other hand, a conception of the independent unit bank as an institution having its ownership and origin in the local community and deriving its business chiefly from the community's industrial and commercial activities and from the farming population within its vicinity or trade area. Its activities are usually fully integrated with the local economic and social organization. The bank holding company device threatens to destroy this democratic grassroots institution.

"Your committee believes that the destruction of the American unit banking system resulting in the further concentration of credit facilities, would have revolutionary effects upon our free-enterprise system. Ultimately, monopolistic control of credit could entirely remold our fundamental political and social institutions.

"The time for action is now. We dare wait no longer, for already we are rapidly following the example of England whose many banks became the Big Five. She finally passed a law against further concentration. The Bank of England has been nationalized. France has nationalized its few banks. The same will inevitably come to pass here unless we forestall it by legislation.

"There is no question about what the reaction of the American people would be to such a condition. A nation that would not allow a monopoly over tobacco certainly will not condone one over the lifeblood of its economy, money, and credit. Through their Representatives in Congress and the State legislatures they have at various periods erected legal barriers against centralization of credit. Some of these have fallen, some have corroded. It is urgently necessary that we stop the remaining laws from being evaded. H. R. 6227 would do this. Its adoption by the Congress is necessary if we are to preserve our free-enterprise banking system, the economic counterpart of our political system. Each is essential to the other." [33]

From the foregoing it is abundantly clear that the act is restrictive and that by no means was it intended to provide ambitious

Footnotes at end of speech.

bank holding companies a hunting license to wage war on the country's independent unit and regional banks.

In addition to its history, provisions of the Bank Holding Company Act of 1956 make it clear that it would be a perversion of congressional intent to depict this act as a harmless ordinance designed to legitimatize or even foster and encourage bank holding companies. The following points are significant:

1. Acquisition of bank stock or assets: Specific procedures are set forth whereby the board of governors cannot render a decision without first consulting the appropriate State authority or the Comptroller of the Currency. Specific provisions of the act, previously discussed, establish that the Congress was deeply concerned about the harmful effects of these acquisitions on competition and the public interest.

2. Banning acquisitions across State lines: Acquisition of a bank located in a State other than where the holding company's principal operations are conducted is expressly forbidden, unless specifically authorized by State law.

3. Divestment of nonbanking organizations: The act, recognizing the great potential abuses inherent in combining banking with nonbanking enterprises, requires divestment within a specified time period.

4. Registration of existing holding companies: The act requires registration with the board of governors of all information regarding the financial condition and operations, management and intercompany relationship of all existing bank holding companies and their subsidiaries. This closed a previously existing loophole in the Banking Act of 1933.

5. General powers given to board of governors: The board of governors is empowered to issue any regulations or orders, to require reports under oath and to examine holding companies and their affiliates whenever necessary to accomplish the purposes of the act.

6. Forbidding intercompany borrowing: The act recognizes the possibility of abuses through financial manipulations within the holding company setup. It therefore forbids a subsidiary bank from investing in the securities of the parent company, from making loans collateralled by such securities, or from extending credit to any subsidiary of the holding company.

7. Responsibility of holding company officers: The act specifies that officers, directors, or employees of a holding company are subject to the same severe penalties for falsification of records as would be the personnel of member banks.

Factor 1: The Financial History and Condition of the Banks Concerned

As the applicant amply demonstrates, the financial history and condition of the two banks involved are sound. Apart from the merger histories of these two institutions, which have been previously described, there is little to be added to the facts presented by First National City Bank. Since both institutions are in a strong and profitable condition, the public interest does not require in the least that their proposed alliance through the holding company device be approved.

Factor 2: Prospects of the Two Banks

From all appearances, the prospects of the First National City Bank and County Trust Company of White Plains are excellent. Again, the applicant has shown that its own growth and earnings—as well as those of its proposed subsidiary—are good. Both institutions may be expected to benefit from the continued growth of population and income in New York State, with a resultant gain in the volume of business done by these two banks. The prospects of these institutions, therefore, are bright and offer no ground whatever why this application should be approved.

Factor 3: Character of Management

Both First National City Bank and County Trust Co. are generally considered adequately managed banks, headed by experienced officers and guided by active boards of directors. Indeed, the successful operation of both banks as separate entities raises a question whether the imposition of yet another layer of management might not result in diseconomies, in a blunting of initiative, and in the creation of a superbureaucracy that might stifle the creative talents of top personnel. Indications that undue size produce such effects—as evidenced by time-consuming and inefficient lending procedures—were given to the New York State Legislative Committee to Revise the Banking Law during its hearings.

In sum, not only does present character of management fail to supply grounds why this application should be approved, but a presumption that management might suffer calls for disapproval.

Factor 4: Convenience, Needs and Welfare of the Communities

The convenience, needs and welfare of the communities in the areas in which First National City Bank and County Trust Co. operates appear presently well served by banking institutions, including the applicant and its intended subsidiary. Both these institutions offer a full and apparently adequate range of services to their customers even though their specialties differ. By volume of business, First National City Bank is not so much a retail as far more importantly a wholesale bank which serves the national and international markets. The County Trust Company of White Plains, by contrast, puts its major emphasis on retail banking.

It is recognized that certain services, such as facilities for international transactions, are more available at the First National City Bank than at the County Trust Co. But any such lack cannot be construed to prove an inconvenience to the residents of Westchester under the meaning of this act. There is no reason why such new services could not be aded equally well—if a large enough demand existed in Westchester—without the proposed combination.

Second, residents of Westchester are now within easy commuting distance of banks in New York City, including the First National City Bank, apart from the fact that they have access to any of the more specialized services of city banks through the unique correspondent banking system. No compelling reason exists, therefore, why the convenience of residents of the area involved would demand the proposed holding company plan. In the absence of such a positive showing, disapproval would have to follow.

As for arguments in the application purporting to show resultant benefits of the merger, let me make these observations. There is no showing as to how and in what particulars the proposed merger would afford increased facilities to the borrowers and savers of Westchester County.

There is no showing that borrowers were unable to get credit or as being unable to obtain it in whatever amounts needed for growth and development.

There is no showing that business enterprise was being stunted in diversification or growth for lack of adequate banking facilities.

There is no showing that the bank facilities of Westchester County, and specifically of the County Trust Co., have refused or been unable to grow as needed. On the contrary the actual growth is shown to be extraordinarily rapid, fully as rapid as the rate of suburbanization of population and business.

Nor is there a showing as to how the proposed merger would bring about more economic and efficient operation. On the contrary it is stated that "no change in management is contemplated." The application speaks of "continuity of able management" presumably facilitated by access to personnel and training program of the First National City Bank without any evidence that a management survey had been made by the County Trust Co. resulting in a finding that after more than 40 years of rapid growth it was experiencing such additional difficulty in recruiting management personnel as to necessitate recourse to supposedly extra supplies of such talent in the First National City Bank. The application nowhere indicates why and wherein the free enterprise method failed of bidding for personnel from not only the graduates of dozens of banking and business schools but from the ranks of all the managerial personnel in all the banks of the country.

Nor is there any proof given that "because of the great growth in deposits * * * the relationship of its [County Trust Co.] capital funds to its deposits is not so strong as that of the First National Bank." The ratio is different—as one might expect in a rapidly growing bank. But the application itself calls County Trust Co.'s financial condition sound.

In short, one looks in vain for facts to show how the proposed merger will add strength, service, adequacy, diversification or growth to the banking facilities that are forcefully demonstrated to be completely adequate in Westchester County.

On the contrary as the examiner found on February 20, 1958 (pp. 12, 14, 15, and 16):

"Initially, it will be observed that no new bank or banking office will be created by the acquisition, either in New York City or Westchester County.

"The growth and increased industrialization of Westchester County in recent years has brought a need for various specialized services, such as foreign banking and foreign financing, small loans, and residential mortgage and consumer loans. These services are presently available in adequate degree and form. There is no present want or need for further banking services in Westchester County in the sense that such service is unavailable, either directly with a county bank, or through the bank's corerspondent relationship with one of the larger New York City banks. In the matter of large loans for industrial enterprises, and perhaps in the field of foreign banking services, referral of some portion of such business to a correspondent bank may at times be necessary either because of loan limits of the county banks, or because of other limitations. Certain other services, now available in varying degrees, could be improved by the adoption of specialized techniques.

"County Trust and the other county banks seem to have kept pace with the essential needs of Westchester. Their growth in the past decade is evidence of responsiveness to and anticipation of community needs. The 1956 annual report of County Trust discloses the establishment of a foreign department in that year, the inauguration of a training school for tellers, and the development or improvement of banking services and administrative programs. Contrary to some suggestion in the record, County Trust offers a complete range of trust services.

"To sum up the considerations bearing upon the fourth statutory factor: It appears that the proposed program may contribute to the convenience of the Westchester community and area; but it is not shown by clear evidence to be necessary for the needs and welfare thereof. It will make no contribution to the convenience, needs, and welfare of the New York City community and area. In addition, considerations involved in factor 5 tend to diminish or cancel the weight of the convenience factor in Westchester. As in the case of Northwest Bancorporation: though the proposed acquisition may serve a useful purpose in the county, existing needs are not of a high order of intensity and the convenience and welfare of the community and area are not

heavily dependent upon its consummation. Indeed, the needs and welfare of the area may be adversely affected."

[8] CONGRESSIONAL RECORD, Apr. 23, 1956, p. 6043.

[9] Ibid.

[10] Mississippi outlaws bank holding companies while Vermont bars any corporation whose primary business is the holding of stock in other corporations. Wisconsin law provides that any corporation controling a majority of stock in a State bank is to be deemed engaged in the business of banking and subject to supervision of the State Banking Department.

[11] S. Rept. No. 1095 (84th Cong., 1st sess.), p. 10.

[12] Id., p. 19.

[13] 15 U. S. C. sec. 18. Sec. 7, as amended, exempts mergers approved by a number of Federal regulatory agencies such as the Civil Aeronautics Board, the Federal Communications Commission, etc. However, it does not exempt mergers, such as the one proposed here, approved by the Federal Reserve Board. Hence, from a technical standpoint Board approval would not insulate from antitrust prosecution an acquisition under the Bank Holding Company Act.

[14] 15 U. S. C. sec. 21.

[15] 15 U. S. C. sec. 25.

[16] There is no question that present sec. 7 covers a holding company's acquisition of stock in another corporation. Indeed, the primary reason for originally enacting sec. 7 was to deal with such transactions. This is demonstrated by the following language of a House Committee on the Judiciary Report, dated May 6, 1914, which recommended passage of the Clayton Act (H. Rept. No. 627, 63d Cong., 2d sess.):

"Sec. 8 (now sec. 7 of the Clayton Act) deals with what is commonly known as the holding company, which is a common favorite method of promoting monopoly. Holding company is a term generally understood to mean a company that holds the stock of other companies. It has usually issued its own shares in exchange for these stocks and is a means of holding under one control the competing companies whose stocks are thus acquired. As thus defined a holding company is an abomination, and in our judgment is a mere incorporated form for the old fashioned trust.

[17] H. Rept. No. 1191 (81st Cong., 1st sess.), pp. 6–8.

[18] Id., p. 8. In view of this new test of illegality, no longer apposite is *Transamerica* v. *Board of Governors of Federal Reserve Board* (206 F. (2d) 163 (CA 3, 1953)); certiorari denied (346 U. S. 901 (1953)). In that case Transamerica had acquired control of 48 banks with 645 offices in 5 Western States. The Board found—and its finding was not challenged in the court—that the area of competition was largely the local community. The Board made no effort to prove the existence of competition between any of the acquired banks in any local community, and, in fact, rejected evidence on that issue. Furthermore, of the 48 acquired banks, 38 were located in communities where there were no other acquired banks. The court held that since there was no competition between acquiring and acquired corporations to begin with, the Board's finding of a sec. 7 violation must be rejected.

[19] Id., p. 8.

[20] S. Rept. No. 1775, 81st Cong., 2d sess., p. 5.

[21] See *International Shoe Co.* v. *Federal Trade Commission* (280 U. S. 291 (1930)); *United States* v. *Republic Steel Corp.* (11 F Supp. 177 (N. D. Ohio, 1935)). Old sec. 7 made illegal stock acquisitions where the effect may be to substantially lessen competition between "the corporation whose stock is * * * acquired and the corporation making the acquisition." A literal reading of this provision could prohibit virtually all stock acquistions of competing concerns even those which had but minimal economic significance. In all probability the courts reverted to the Sherman Act test of looking at actual and immediate effects so as to avoid the literal sweep of this provision.

Smokescreen Resolutions by Governors' Conference Fail To Fool the American People

---

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. CRAMER. Mr. Speaker, on Monday of this week, as is evidenced by the CONGRESSIONAL RECORD, page 8078, under title Battle To End Federal Paternalism a Challenge to the States as Well as the Federal Government, I tried to point out the responsibility of the governors of this Nation to give leadership to the President's proposal to assist the States in regaining some of their lost authority. This would include return of some taxing powers. The recommendations of the Joint Federal-State Action Committee which had been previously reported favorably by 10 of the governors who served on that committee along with 7 administration representatives should be adopted.

For all practical purposes, the faint-hearted effort to comply with this challenge by adoption of the report in principle, with many reservations, and the simultaneous call for further action by the Federal Government in fields of public works and other programs apparently gave stronger support by the governors for continued Federal intervention and usurpation of State responsibilities than support for stronger States rights. In my opinion, the governors thus showed that they are out of tune with the true beliefs and convictions of the people of this country.

For example, a resolution offered by Governor Abraham Ribicoff, of Connecticut, called on congressional leaders to get together and draw up a program covering such areas as unemployment insurance benefits, tax policies, and public works—and accused the administration of government by stalemate in dealing with the so-called recession.

A majority of the governors jumped on the bandwagon in an effort to throw up a smokescreen to cover their own inaction in many instances in their own States and to place the blame on Washington. A program asking for unlimited Federal spending plus tax cutting—under the apparent assumption that deficit Federal spending is perfectly all right. Apparently they believe that the only solution is to spend our way out of the economic situation, and that there is no responsibility resting on the States themselves in finding solutions to our problems. I can imagine the hue and cry that those same governors would raise if a similar program were proposed in their respective States.

In any event, the debate on and preceding the resolution clearly shows a desire to abdicate all responsibility to Washington from the States on this problem. The apparent political purpose being to becloud their own inaction with this smokescreen resolution, and demonstrating an amazing lack of knowledge of what is going on in Washington, what steps have been taken already; how programs presently authorized and in existence can be utilized and how we may properly combat the problems.

For instance, Governor Ribicoff suggested that Democrats and Republicans sit down and work out a program in the fields of tax cuts, public works, and unemployment compensation. Apparently he is unaware that the two parties have been in constant touch with the White House and have held numerous conferences on these very problems. He has not heard that the parties have a gentleman's agreement as to when action should be taken on tax cuts depending on further economic developments. He does not understand as do the parties understand each other fully on unemployment compensation and that the President has voiced his approval of the bill that has already passed the House but is awaiting Senate action (of course under the control of the same party to which the Governor belongs). Nor does he recognize that in public works, Congress has already accelerated, to the tune of $1.5 billion, the highway construction program; has stepped up authorizations

for other programs; is giving favorable consideration, after Presidential recommendation, to $125 million more in public works projects for fiscal 1959—and as for the much maligned Public Works Omnibus bill, the President has recommended that Congress enact a sound bill consistent with his veto message—and that the Bureau of the Budget and congressional leaders are in conference on working out differences of opinion.

The heckling of the politically ambitious governors, including Ribicoff, Meyner, Williams, and Harriman, just to mention a few, calling for further Federal action, completely failed to give any credit whatsoever to the administration—or Congress for that matter—for taking numerous steps to meet the problem. To refresh their all-too-short memories, I include a list of the steps taken under the leadership of President Eisenhower in this matter—and I will challenge any of the governors who gave such carping criticism of the President—to match this record of constructive and effective action and recommendations. The list, not inclusive of every action taken of course, follows:

ADMINISTRATIVE ACTIONS

1. Defense contracts accelerated to $13.4 billion in first half of 1958 as against $7.9 billion in last half of 1957. Calendar year totals: 1958—$23.6 billion; 1957—$17.8 billion.

2. Spending increased in Federal highway programs by $800 million over last fiscal year and plans call for additional increase of $600 million in fiscal 1959.

3. Acceleration of authorized civil works by $200 million in current fiscal year.

4. Federal Reserve discount rate reduced from 3½ to 3 percent on November 14.

5. Reserve requirement of Federal Reserve banks reduced one-half of 1 percent on February 20, thereby freeing additional $3 billion for lending.

6. Release of $107 million for additional purchase of military Capehart housing loans by Federal National Mortgage Association.

7. Additional $50 million in capital grant funds for urban renewal projects issued.

8. FNMA received additional $20 million for purchase of FHA insured loans for cooperative housing.

9. FHA-insured mortgage downpayments reduced.

10. Release of additional $200 million for use in FNMA's special assistance mortgage buying program.

11. About 60 Federal buildings programed for lease-purchase construction, requiring $105 million financing. If ordered by Congress for financing by direct appropriations $177 million would be appropriated.

12. Federal Reserve discount rate cut from 3 to 2¾ percent on January 21.

13. Rule requiring cash payment of FHA closing costs eliminated, in effect a further reduction of downpayment requirement.

14. More funds attracted to VA-insured mortgages by permitting increase in maximum yields allowed on VA loans traded in secondary markets.

15. Defense Department directed to funnel contracts to distressed labor areas and to small business generally. In February, $102 million in Federal contracts set aside for small business, twice the amount in February 1957.

16. Federal Home Loan Bank Board arranged longer term financing with Home Loan Banks.

17. Army schedules award of 100 million in motor vehicle contracts in areas hit by automobile unemployment.

18. Speed-up ordered in $1 billion worth of urban renewal loans and grants handled by Housing and Home Finance Agency.

19. Federal Reserve discount rate dropped from 2¾ to 2¼ percent on March 6.

20. Acceleration ordered in placement of $740 million in Rural Electrification Administration loans for electric facilities and telephones.

21. Federal Reserve again reduces reserve requirement by one-half of 1 percent on March 18, freeing another $3 billion for lending.

22. President orders speedup in $300 million in HHFA loans for college housing.

23. Urban renewal program speeded to 100 new projects in fiscal 1958 and 120 additional in fiscal 1959, compared to 56 started in fiscal 1957.

24. Military departments accelerate construction programed before June 30 to total of more than $2 billion and expect to arrange financing for $500 million in Capehart housing loans. All Federal agencies directed to plan immediately for as many fiscal 1958 supply and equipment orders as possible.

25. Interior Department steps up general construction program by $25 million.

26. Acceleration ordered on $140 million in HHFA public housing loans.

27. General Services Administration given extra $8 million for general repair and improvement work.

28. REA given additional $12.5 million for loans.

29. Speedup ordered on $75 million in HHFA loans for public facilities.

LEGISLATIVE RECOMMENDATIONS

30. Permit Federal Government to assist States in 50 percent extension of unemployment benefits.

31. General supplemental appropriations of $1.2 billion, mostly for defense, requested.

32. Congress asked to authorize $2 billion, 3-year program of postoffice modernization and construction.

33. Area assistance program recommended for Federal aid to sections of the country experiencing persistent unemployment.

34. Additional $200 million requested for accelerated urban-renewal program in year beginning July 1.

35. Army engineers' fiscal 1959 budget for civil works boosted by $125 million.

36. Congress asked to remove limit on life of Small Business Administration.

37. A $2 billion increase in lending authority of Export-Import Bank requested. Bank to finance $625 million in shipments abroad in first half of 1958, with larger program due in last half of this year.

38. Congress requested to authorize $840 million speedup in general Government purchasing by June.

39. Congress asked to suspend expenditure limitations in Highway Act, so that additional $2.3 billion can be allocated for highway aid in calendar years 1958–61.

40. Reclamation Bureau's 1959 budget increased by $46 million to maintain faster construction pace.

41. Congress asked to increase size of FHA loan insurance and to increase FHA total loan authorization by $3 billion per year for next 5 fiscal years.

42. Tax relief for small business proposed.

43. Acceleration of VA home-loan program proposed through elimination of interest-rate limitation.

44. Congress asked for additional $15 million for Agriculture Department watershed program in fiscal 1959.

45. Supplemental appropriation of $46 million for Federal hospital aid proposed.

46. Congress asked for $2 million supplemental appropriation for FHA to use in speeding processing of loan applications.

47. District of Columbia authorized to propose $100 million public-works program, to be financed with Treasury borrowings.

48. Elimination asked of interest-rate limitation on FHA-insured loans for rental projects, cooperative housing and Capehart military housing.

49. Interior Department budget amended to permit early start on small reclamation projects.

50. Additional lending authority proposed for Small Business Administration.

As to the demand for further public works programs, I point out, as I did before in the CONGRESSIONAL RECORD—but apparently to little avail—that many of the States have not used even 50 percent of the money made available under the regular—let alone the accelerated—National Highway Act. I enclose the latest report on State road construction, dated April 30, 1958, in substantiation of this statement.

TABLE 1—STATUS OF THE PROGRAM

Table 1 shows the status of the Federal-aid program for the Interstate System on the date indicated, and includes all actions taken since passage of the Federal-Aid Highway Act of 1956 on June 29, 1956. It should be understood that data in this table represent the program status at a point of time. Progress of work from month to month results in moves across the table: For example, a project that had been advertised for bids during the month will now be in the construction contracts columns but at the end of last month it was in the programed only columns.

An explanation of the table column heads follows:

Unprogramed balance: Federal-aid highway funds authorized by the Congress are apportioned among the States according to formulas prescribed by law. Each State's share now available but not yet committed to projects in any way is shown as unprogramed balance.

Programed only: Funds committed for specific projects in a program which defines the location, general nature, and estimated cost of each project.

Preliminary engineering and right-of-way authorized (July 1, 1956, to date): Funds previously programed and now committed for use or already spent for preliminary engineering (surveys, plans, etc.) and/or acquisition of right-of-way, needed for construction projects.

Construction contracts authorized (July 1, 1956, to date): Funds previously programed and now committed for construction work; includes contracts advertised but not yet awarded, contracts awarded but not yet underway, contracts underway, and contracts completed.

Total programed: The total of all commitments, including all columns to the left in the table except unprogramed balance.

THE NATIONAL SYSTEM OF INTERSTATE AND DEFENSE HIGHWAYS

TABLE 1.—*Status of the program as of Apr. 30, 1958*

[Thousands of dollars]

Source: U. S. Department of Commerce, Bureau of Public Roads.

This clearly indicates the lack of real antirecession leadership on the part of the Governors themselves. They absolutely refuse to fully use an existing program provided by the Federal Government—while asking for new programs.

As a matter of fact, it is amazing that some of the Governors do not even seem to be fully familiar with the programs offered by the National Highway Act. This was evidenced by the Governor from Connecticut when he appeared before our Public Works Committee during hearings on the Bush-May-Buckley proposals for reimbursement of toll facilities and other roads built to Federal standards. He gave as his reason for not getting the National Highway program fully underway in Connecticut that the State had trouble matching the 90 percent Federal money. This was apparently in complete ignorance of section 6 in the program which definitely provides funds to the States for the purpose of assistance in matching funds. Further, according to Assistant Secretary Rothschild of the Department of Commerce, no State requesting such aid has ever been turned down. It certainly would appear the good people of Connecticut were denied full benefits of the program already in existance. The State administration, most apparently failed to acquaint itself with available Federal authority. Now the titular head of that government is now trying to place the blame for the lag of that program in his State on the Federal Government. This is a pure attempt to further condemn the Republican administration for inaction in combating the so-called recession. I doubt if the American people will be fooled by such smokescreen tactics by the sponsor of the resolution at the governors' conference nor will they be hoodwinked by its adoption. Thus, those who have the primary responsibility of administering this program on the State level, who are now pleading for huge new Federal public-works programs, are themselves not spending the money available today on the largest of all Federal public-works programs, the highway program, even after some 23 months in which to get the program off the ground and fully underway to immediately serve to check any recession.

I call special attention to some of the States whose governors are most critical of Federal inaction. These facts prove beyond a doubt even greater State inaction, and in considering some of them it is noted for instance:

Connecticut has only $26.5 million of interstate funds under contract of $50.043 million available.

New Jersey has only $54.9 million of Interstate funds under contract of $83.939 million available.

New York has only $174.088 million of interstate funds under contract of $257 million available.

Michigan has only $103.8 million of interstate funds under contract of $177 million available.

Florida has only $43.2 million of Interstate funds under contract of $85 million available.

Jefferson-Jackson Day Address by Hon. William M. Colmer, of Mississippi

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1958

Mr. ABBITT. Mr. Speaker, I count it a great privilege to serve in the Congress with the distinguished gentleman from Virginia, the Honorable HOWARD W. SMITH, chairman of the Rules Committee of the House of Representatives, and the Honorable WILLIAM M. COLMER, Member of the House of Representatives from Mississippi. They are both great Americans and I am proud to call them my friends.

On May 10, 1958, the Democrats of the Eighth Congressional District of Virginia assembled at Fredericksburg, Va., and again nominated Congressman SMITH as the Democratic nominee for the 86th Congress. The Honorable WILLIAM M. COLMER, of Mississippi, was the speaker of the occasion. He made a memorable address—one that I wish every American could read and digest. The address is as follows:

ADDRESS OF HON. WILLIAM M. COLMER, OF MISSISSIPPI, AT JEFFERSON-JACKSON DAY DINNER, SPONSORED BY THE EIGHTH DISTRICT DEMOCRATIC COMMITTEE OF VIRGINIA, FREDERICKSBURG, VA., MAY 10, 1958

Mr. Chairman, Governor Battle, Congressman Smith, my fellow Jefferson-Jacksonian Democrats, it is with considerable humility and trepidation that I appear before you this evening. However, I hasten to assure you that I am not unmindful of the honor which you have bestowed upon me by inviting me to be with you on this auspicious occasion.

Since my early childhood when I first began to read the history of this country, I have been tremendously impressed with the contribution which the people of the Commonwealth of Virginia have made to the founding and preservation of this Republic. That respect and admiration has grown within me as my thinking and ability to appraise the situation has matured throughout the years. And, so this evening, as always when I cross the line into the great State of Virginia, I feel that I am on hallowed ground. Certainly no people of any State have, in my judgment, equalled much less excelled this substantial citizenry of Virginia in their contribution to the cause of national security and good government.

Mr. Chairman, I would be untrue to the thoughts that well within me if I did not on this occasion, as well as on every other occasion when the opportunity presents itself, pay homage to him whom you have again today signally honored by renominating him for his seat in Congress, HOWARD W. SMITH. HOWARD SMITH is my distinguished chairman of the powerful Rules Committee of the American Congress, my warm personal friend, my counselor and the true leader in that body of House Members who believe in constitutional government as we have known it. Modest almost to a fault, never seeking the limelight, day in and day out he wields a powerful influence for the preservation of those principles of government for which your imortal Washington and Jefferson, your Madison, your Monroe, your unexcelled Robert E. Lee and the long line of other illustrious Virginians devoted their lives. Possessed of a brilliant and logical mind, a man of indomitable courage, he tirelessly wages the fight against the foes of good government both in committee and on the floor of the House. But, it is in the conferences on strategy, in formulating the lines of defense against the opponents of constitutional government that he renders the greatest service. Like unto the great master of military strategy, Gen. Robert E. Lee, outnumbered in force, his brilliant mind conceives and wins many a successful battle.

Mr. Chairman, it has been my high privilege to serve as a Member of the House of Representatives for the past quarter of a century. In no similar period in the history of the Republic, I dare say, have there been more grievous assaults made on the Constitution and the Bill of Rights which we cherish. For certainly in no similar period have we strayed further from the sound philosphy and the admonition of those great Virginians, Washington, and Jefferson, and men of like mind. A brief comparison of the fundamental principles of the philosophies of the Government's founders and their handiwork—the Constitution itself—with the modern philosphy that now prevails will, I fear, confirm this sad commentary.

Washington urged that we "cherish public credit." He said, "One method of preserving it is to use it as sparingly as possible." Today that public credit has been extended to almost $276 billion. This represents an increase of some $250 billion in the past 24 years.

Again, in his farewell address, President Washington admonished: "Avoid likewise the accumulation of debt not only by shunning occasions of expense, but by vigorous exertions in times of peace to discharge the debts which unavoidable wars may have occasioned, not ungenerously throwing upon posterity the burden which we ourselves ought to bear."

Yet today, enjoying the greatest national income and burdened with the highest taxes in the peacetime history of the country, we hover on the precipice of deficit spending. Prudence suggests that under such conditions we should be retiring a part of our gargantuan debt and fortifying our fiscal position for the proverbial rainy day. On the contrary, we are now faced, under the guise of a recession with deficit spending for the next fiscal year of from five to $15 billion. It is often argued that because two-thirds of our expenditure are either to pay for previous wars or to prepare for possible future ones, we cannot retrench; but that we must increase our defense program without limitation for fear of a sneak Pearl Harbor attack. For more than a decade this humble voice has been heard repeatedly in the halls of Congress to the effect that the masters of the Kremlin want neither war nor peace. They are following the blueprint of their idol, Lenin, himself, who wrote in the early stages of the Bolshevik Revolution that the way to conquer the United States was to make it spend itself into bankruptcy. If this be a correct analysis of the sinister Russian objective, they certainly have no more useful allies than the special interests and minority groups who year after year descend upon Washington seeking larger and larger favors from the public till.

Mr. Chairman, I fear the Russian menace less than the danger of collapse of the fiscal structure. I am more apprehensive of inflation than I am of Communist infiltration. For if our economic strength is destroyed, hungary people might well become easy prey to the siren song emanating from the Kremlin.

Along with the peril of unbridled spending and exorbitant taxation, I am sure that you, like I, are justly alarmed with the ever-increasing tendency toward consolidation of power in the Federal Government at the expense of the States and the freedom of our citizens.

Jefferson, who contributed so much to the cornerstone of our freedom, warned: "It is not by the consolidation or concentration of powers that good government is affected. Were not this great country already divided into States, that division must be made, that each might do for itself what concerns itself directly, and what it can do much better than distant authority."

It was to prevent this consolidation of power that the 10th amendment was adopted providing that, "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." For more than a century that mandate was scrupulously honored. On the few occasions when Congress, with an excess of zeal, invaded the domain of the States, the Supreme Court firmly pulled it back. Thus, when Congress attempted by the Civil Rights Act of 1875 to exercise the police power of the States by requiring the operators of inns, theaters and other places of public amusement to serve white and colored people alike, the Supreme Court held the measure void. It told Congress that neither the 13th nor 14th amendments conferred any authority for this interference with the conduct of private individuals.

How changed the situation today. Apparently the States no longer have any rights which the Federal Government is bound to respect. Congress, I am sorry to admit, is partially responsible for this development. It has passed laws, expressed in vague general terms, empowering Federal agencies to regulate vast areas of our economy. Immediately these agencies set up all the trappings of bureaucracy. They issue directives, regulations, and interpretations, which as time goes on, bear less and less resemblance to the act passed by Congress.

But the evil wrought by the executive and the legislative branches has been minor in comparison with the transgressions in the past two decades of the nine black-robed gentlemen of the Supreme Court. You won't find anything about preemption in the Constitution, but the Supreme Court, with ever-increasing frequency, is applying that doctrine to whittle down the jurisdiction of the State courts. Of course, in doing this the tribunal always professes to be carrying out the intent of Congress; the effect is the further centralization of power in the Federal Government. Among the most flagrant examples of this practice in recent months have been the Steve Nelson and Slochower cases. In the Nelson case, the Supreme Court held, under this doctrine of preemption, that Pennsylvania's antisedition law was void. And in the Slochower case, the Court denied the right of the city of New York to discharge a teacher who had invoked the fifth amendment in a congressional committee investigation concerning his past membership in the Communist Party. If this doctrine is permitted to go unchallenged, our State courts will become but empty shells.

Remedial legislation sponsored by your own Congressman has been languishing in committees of Congress for the past 3 years.

"There is no danger I apprehend so much," Jefferson wrote, "as the consolidation of our Government by the noiseless and, therefore, alarming instrumentality of the Supreme Court."

One can conceive of no more flagrant example of the digression from the doctrine enunciated by Washington and Jefferson than the recent school segregation decision of the Supreme Court, on the one hand, and the passage of the so-called civil rights bill, on the other. In the school case the Court admittedly substituted its own political and social theories for legal precedent. The enactment of the civil rights bill under the guise of protecting the liberties of certain minority groups will result in the further

encroachment upon the liberties of all our citizens.

We are now told that centralization is liberalism. Jefferson called it "toryism in disguise." By whatever name called, it can only end in totalitarianism.

The basic principles of human freedom are as invariable as the solar system. They are the same in the jet and nuclear age as they were in the horseback and ramrod and musket days.

And now, Mr. Chairman, we are gathered here this evening to do honor to two truly great Democrats and the contribution made by them to the Democratic Party. Sometimes I wonder, as lip service is rendered unto these great stalwarts of our party, what their own reaction would be if they were permitted to step out of the pages of history on to the current terrestrial scene and view in person the assaults that are being made upon the fundamental principles and philosophy of the party to which they contributed so fully. Yes; I wonder how they would react to the present posture of their beloved Southland within the Democratic Party. What would the reaction of the "Sage of Monticello" be to the advocacy of our Democratic leaders along with the Republican high command, of the use of bayonets for forced integration of our public school system in his beloved Virginia? Would not Old Hickory himself rebel at the continuous whittling away at the foundation of the freedom of the individual by the modern pseudo-liberals in charge of the machinery of both parties?

Surely our beloved Southland finds itself today in a most unenviable position within the party. Notwithstanding the fact that our section and particularly the great Commonwealth of Virgina has contributed so much to the creation and the preservation of the party in both the lean as well as the prosperous years, we are now just taken for granted. Is it possible for instance today for a member of our party from the South to obtain the nomination for President? Can a man of the stature of HARRY BYRD, for instance, receive this recognition?

Whether we like it or not, we must face the facts of life. We have permitted ourselves to be taken for granted so long that we are completely ignored. This is true even though in the last two presidential elections the candidate of our party received the electoral votes of only one State outside of the Solid South. Organized pressure groups under the guise of false liberalism have taken over the machinery of the party. Is it not true that the NAACP, the ADA, and other misnamed liberal minority groups are more powerful in the councils of our party than the so-called Solid South?

To my mind, there is but one answer. The South is the strongest potential minority group in the country. And while I do not like the idea of government by minority groups, I am reluctantly driven to the conclusion that there is but one answer to the problem thus posed. The South must become a militant, aggressive, and crusading organized group dedicated to the preservation of those sound constitutional provisions of government for which so much blood, treasure, and labor have been expended. Then, and only then, will the once strong voice of the South be heard in the smoke-filled rooms of our party's conventions and in the legislative arena.

These, Mr. Chairman, are strong words. But, if the great Democratic Party and the Republic, itself, are to be saved we must fight fire with fire. We in the other States of the South are looking to the statesmen of Virginia. If you will lead, we will follow.

To those of us who believe in the principles of Washington and Jefferson, enshrined in the Constitution, the present posture of affairs would indeed appear discouraging. The distress signals are all about us.

But, surely, we, the beneficiaries of the labor and sacrifice of those who founded the Republic, have the courage, the will, and the patriotism to see to it that this Republic, embodying the most perfect form of human liberty ever conceived by the minds of men, shall not perish from the earth.

Walter Reuther as Manager and Politician

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. HOFFMAN. Mr. Speaker, recent statements by Reuther indicate that he has not changed his political philosophy very much from the day when, from Russia, he wrote back to the comrades in Detroit to "fight for a Soviet America."

Reuther is a very shrewd, unscrupulous individual, whose record as director of organized violence, which is consistent since 1936, shows that he believes that the end justifies the means, however unlawful or reprehensible the latter may be.

He has long insisted that he should share in management. Unfortunately for the rest of us, some industrial leaders have gone along with him in certain aspects of his program, especially on the one where they agree it was advisable to pay whatever wage Reuther might demand, then add the increase in price and pass it along to the purchasers.

We have had a recent illustration—and it is still with us—which demonstrates that consumers, that is, buyers, can be pushed just too far. Their recent refusal to purchase at the price fixed by the motor industry and by Reuther demonstrates the fallacy of Reuther's economic thinking.

From Nation's Business of May 1958 comes an article entitled "Look Behind Unions' Profit-Sharing Demand." The article reads as follows:

LOOK BEHIND UNION'S PROFIT-SHARING DEMAND

Walter Reuther's controversial demand that business share profits with employees and customers raises some important questions:

Will the United Automobile Workers accept the principles of employee profit sharing which have proved necessary to a successful plan?

Do the UAW president and his advisers really want a profit-sharing plan?

The record indicates a "no" answer to both questions, and prompts this third one:

What does Mr. Reuther really want?

Others:

What effect would the Reuther plan have on investors? On taxes? What would it cost stockholders? The Government?

If it had been in effect in General Motors during 1956, the plan would have cost the Government a net loss of $295 million in income taxes.

GM income after taxes would have been cut $290 million and earnings reduced from $3.02 actually earned to $1.97 per share.

The 656,000 stockholders, who greatly outnumber the employees, would have taken a cut in dividends. GM would not have been able to pay, out of earnings of $1.97, the $2 dividend it paid in 1956.

Employees—GM had 371,000 on an hourly basis in the United States—would have shared $300 million. The same amount would have been shared by purchasers of the 3,508,000 cars and trucks produced in the United States.

One of the strong fears of automobile management is that if earnings can be affected year to year by profit-sharing programs imposed on management it will become more difficult to get necessary financing, which would be a blow to expansion prospects. Investors would look for other businesses in which to invest their savings where earnings would not be diluted through employee profit sharing.

Moreover, financing a business has always been a responsibility of management, and should remain so, one Detroit executive points out. Once collective bargaining is permitted to enter into the question of profit sharing, he says, there is an immediate conflict with the financial responsibility of management.

Another asserts that through his profit-sharing plan Mr. Reuther plans to appropriate a portion of the share belonging to those who risk their money in the business.

There is a big difference between employee profit sharing as practiced under more than 20,000 existing plans, and the management-stockholders-employees-customers split-up idea the UAW is testing in current negotiations with major automobile manufacturers.

These differences, combined with the expressed objectives of the UAW and its leadership, have stirred up serious concern over the future of our business system, established collective bargaining principles, and profitsharing itself.

This concern stems not only from automobile management, which is the first to face the UAW's drive on this new issue, but also from other business leaders, experts on employee profit-sharing, companies having or planning to install profit-sharing arrangements, and even from other union officials and members, including some in UAW.

Here are some of the problems they see:

In the opinion of business leaders, Mr. Reuther and other labor leaders want a greater voice in business decisions. This is something they have been getting gradually through increasing bargaining power as they move toward the ultimate objective of joint labor-management-government control of business.

This fear seems to be well founded in the light of the UAW's past and other unions' continuing attacks on profit-sharing plans; labor's opposition to the basic principles of employee profit-sharing, and Mr. Reuther's conviction that he can overcome labor's inherent objections to profit-sharing by giving labor a veto power in most management decisions. This would include determination of profits and their distribution.

Look at the record:

The UAW summed up its view—which has not changed—in this headline over an article in the April 1949 issue of Ammunition, monthly publication of the union's research department:

"What's Wrong With Profit Sharing Plans?"

"They Undermine Purchasing Power When You Need Purchasing Power Most; They Make Workers Pay For Company Mistakes; and They Don't Work."

Today Mr. Reuther is pleading for increased purchasing power as the solution to our economic ills, yet he wants profit-sharing which his union has said would undermine purchasing power when it is needed most.

The answer to this inconsistency seems to be: Mr. Reuther does not want the standard profit-sharing plan, but one that he can control. He must feel confident, too, that the UAW is strong enough to assure that the workers won't pay for company mistakes.

George Meany, AFL–CIO president, reflected some of this thinking. Asked to comment on the Reuther proposal, he qualified standard labor suspicion of profit-sharing with the view that the UAW could protect itself against its evils.

The evil most frequently mentioned by labor is that profit-sharing is an incentive to work harder so as to lower costs and increase profits through hgher productivity, which will increase profits and workers' earnings.

A member of the UAW research department told an AFL–CIO conference last year that elimination of incentives has always been a major goal of UAW. The union opposes incentive arrangements, he said, because they lead workers to concentrate on making more money instead of how to make their jobs easier.

Mr. Reuther made clear at the special UAW convention last January that the membership need have no fear of any work speedup.

In reply to a delegate's qualms on this point, the UAW chief reminded the convention that the union has always fought for decent production standards; that this is the one issue on which the unon may strike at any time despite the overall no-strike provision in the automobile labor contracts, and that the UAW was not going to degenerate into a soft union.

"We will still go on fighting," he said, adding that the plan the UAW is seeking is as different from employer-introduced profit-sharing plans as night is from day.

One of management's strongest fears is that on the theory that, under profit-sharing, a company is doing business with the employees' money, the UAW will claim a right to review every company activity and the company will have to keep its books available for constant inspection by union auditors.

The union's demands already include a union voice, through a joint study committee, in decisions involving plant relocation, and decentralization, technological changes, hours of work, output and related matters.

The Reuther proposal, in the opinion of Ernest R. Breech, chairman of the board of Ford Motor Co., "would invite increasing demands for union veto power over day to day management decisions."

"Budgets for advertising, research and engineering, new-model tooling; capital expansion plans; make-or-buy decisions—all would be viewed by the union as affecting profits," he says.

A delegate to the UAW convention confirmed Mr. Breech's fears in these words:

"The profit-sharing plan would extend the field of collective bargaining and cut down the field of management prerogatives. If we get it even in a watered down form, management can never again say to us that the amount of profit they make is none of our business. They will have to sit down and bargain with us about it."

Another delegate, opposed to profit-sharing, seemed disturbed that the workers might be expected to help the company make a profit.

"The present profit-sharing plan, as presented, seems to carry with it an inherent weakness," he said. "It seems to carry the strong suggestion that, if we are to share profits, we must take a responsibility for seeing that there be profits."

Advocates of employee profit sharing have two special concerns over the Reuther proposal.

One is that Mr. Reuther's disregard for true profit-sharing principles and the controversy with the automobile industry will give employee profit sharing a bad name if the differences between the accepted plan and what the UAW wants are not clearly understood.

The second is that growing union interest in employee profit sharing will discourage employer interest and halt the tremendous postwar spread of such plans. Reasons: An employer will be reluctant to install a plan, or might even discontinue an existing plan, because he may lose control of the plan in case a union wishes to include it in bargaining.

Even an employer with no union might legally be barred from abandoning a profit-sharing plan when a union moves in. Such a step might be construed as an unfair labor practice.

Of 400 companies which are members of the council of profit-sharing industries, only one-third deal with unions, and only a handful make the profit-sharing plan a part of the labor contract.

Even in the latter cases, according to Joseph B. Meier, the council's administrative vice president, the union usually exercises only a token interest in its operation; for example, a voice in how the part of profits available for sharing will be divided among the employees.

Cash profit-sharing plans, which is what Mr. Reuther wants, have a high mortality rate. A recent study of 114 cash plans shows almost one-third have been discontinued since 1946. With regard to deferred plans, usually providing retirement benefits, less than one-tenth have been abandoned.

The reason given most often for discontinuance is union opposition. Objection to cash plans: Union leaders prefer to see all of the money go regularly into pay envelopes. Objection to deferred plans: Union leaders want members to have a fixed pension instead of retirement income geared to profits.

A majority of profit-sharing plans are of the deferred type, providing for retirement, group insurance, sick benefits, layoff pay, and the like, rather than immediate cash payments. Automobile industry sources point out that these types of benefits are assured under UAW contracts without regard for profits.

What Mr. Reuther is up to hardly jibes with the basic principles and objectives of employee profit sharing. Here is what some of the experts say:

J. J. Jehring, director of the profit-sharing research foundation, makes two points:

An employee profit-sharing plan must function in an atmosphere of cooperation, not antagonism, between employees and management.

It must be profit producing, not profit consuming; it must increase profits, not reduce them.

Yet Mr. Reuther, while asking for a share in profits, attacks profits as an evil. The UAW convention resolved to fight any management attempts to cut costs by stepping up the production rate.

Jay V. Strong, a pension consultant, adds that instead of trying to produce more profits, Mr. Reuther wants a share of existing profits. A profit-sharing plan should not cost anything. Mr. Strong says, because it is supposed to produce more than enough extra profits to pay for itself.

Under the Reuther plan, the union would decide each year in each company how the workers' share of profits would be distributed. It might be a cash bonus or be used to increase pensions, holiday pay or vacation pay; implement a shorter workweek, or for some other purpose.

UAW's General Motors council has already decided that, if it gets the profit-sharing plan from GM, at least part of the employees' share will be used to eliminate what workers now pay toward the cost of hospital and medical insurance.

Howard E. Nyhart Co., consulting actuaries, says, in its letter on employee benefits, that management must be in favor of a profit-sharing plan if it is to succeed. Profit sharing is not a means of resolving discord between management and employees; mutual trust and confidence necessary for profit sharing to work cannot be bargained. Profit sharing never has been used deliberately to expand purchasing power.

Rawson L. Wood, chairman of the board of the council of profit-sharing industries, warns that "a faulty profit-sharing plan could easily destroy a company's soundness and sources of capital."

One of the delegates to the UAW convention, opposing the profit-sharing proposal, cited and was disturbed about this newspaper statement by Mr. Wood: "Such plans make every employee a capitalist. Where carefully planned and operated, they act to increase productivity without adding to the cost of the products."

"Now," the delegate told the assembled delegates, "I am sure that there is no delegate here who would have any objection to every worker in the UAW becoming a capitalist, but I do think that there may be a few delegates here that may be a little bit worried about the price we may have to pay to become a capitalist if it means what this man has indicated here, that we are going to have to have, in a sense, another speedup."

Mr. Reuther reassured him the union would continue to fight speedups as hard as ever.

Thus far, other segments of organized labor have been slow to support the Reuther profit-sharing idea. In fact, expressions of opposition have come from other union leaders as well as from within the UAW.

The MESA Educator, publication of the Mechanics Educational Society of America, an AFL–CIO affiliate headquartered in Detroit, as is UAW, said that the wicked and deceptive profit-sharing plan is worse than other piecework or payment-by-results systerms because it has no guaranties.

A MESA member raised a question whether, after the union becomes part and party of management, it would lose its identity and initiative as a labor organization.

Labor relations experts are aware of that element in any new labor-management relationship under profit sharing. They fear, in fact, that a union such as the UAW may feel it has to be even more militant, in even more areas of management responsibility, in trying to discredit management in the eyes of the employees and prove that it is still a tough union.

They point out, further, that the very existence of a union is a hindrance to increasing productivity and increasing profits because of the restrictions collective bargaining imposes on management.

Seniority rules which restrict management in making the most effective use of the work force by restricting transfers, promotions, layoffs, and the like are an example.

What's Mr. Reuther up to?

After talking for 2½ years about a shorter workweek with no loss in pay—and getting his 1957 convention to go on record for it—Mr. Reuther suddenly sprang his plan for a division of business profits above 10 percent of net capital before taxes—one-fourth among all employees who do not share in executive bonuses; one-fourth among consumers in a year-end rebate to car purchasers, and one-half among stockholders and executives.

The stockholders would be taking a pay cut because basically profits are wages paid to them for the use of their money as well as a necessary source of capital for company expansion to create more jobs.

The proposal met with such intense opposition from UAW members and leaders, who want to stick to the original objective

of a shorter workweek, that Mr. Reuther had to qualify his position and agree that the shorter workweek issue would still be on the bargaining table.

Behind it all is Mr. Reuther's sense for public relations as a tool in helping him reach his objectives, the ultimate being comanagement of business. He feels he always has to come up with a big, new idea or plan that is not only startling but will also capture and hold public appeal. (See Business Looks at Walter Reuther, October 1957.)

His demand for wage increases without price increases and a look at the books during the 113-day strike against General Motors in 1945-46, Mr. Reuther admitted later, was to put the company over a barrel in public opinion.

Early this year, Mr. Reuther could see that he was in trouble, both with the public and many of his members, in pressing for a shorter workweek when workers were complaining about layoffs and short weeks and the public was concerned about the sputniks and catching up with Russia.

But he could not drop the shorter workweek without a sensational substitute which would still serve his purposes. Thus, the profit-sharing proposal with something for everybody: savings to consumers and profit-sharing for bosses and other nonunion employees in UAW-organized plants as well as for the UAW members.

UAW convention delegates gave testimony as to the purpose and effectiveness of the Reuther strategy.

One rose to relate how, the morning after the profit-sharing idea was announced, his boss telephoned him to ask how much he, the boss, would share.

Another told how his doctor asked him how much he, the doctor, might get in a rebate on a car purchase.

More significantly, two delegates revealed how the UAW asks for something that will help get the public on its side, then takes advantage of the public support as a pressure in getting what it really wants.

One said that whether the UAW wins or loses a strike this summer will depend in large part on whether public opinion is with the union or with the company.

"Do the delegates here think that people outside of the industry will be more sympathetic to a demand for a cut in prices or a cut in production?" he asked rhetorically.

The other said the union was "going to need something, whether you want to call it a gimmick, some catchy phrase, or anything you can use to get public opinion behind you. * * *

"In this proposal to get the consumer a rebate, if we can get pressure on them [the companies] through the television and newspapers to such an extent that they have got to do something, then we have a chance."

Martin Garber, a member of the UAW executive board, has been quoted as telling local UAW leaders in New Jersey that the union's bid for a profit-sharing plan was a good public relations move. He said, "It puts the public on our side."

National Honor, Dignity Demanded Action

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Nashville Banner of May 14, 1958:

NATIONAL HONOR, DIGNITY DEMANDED ACTION

Peace and security are not served by supine surrender to insufferable riot and insult—and President Eisenhower did not choose to stand by while these ensued in the Caribbean area, imperilling as a breakout relations in the whole Southern Hemisphere.

United States troops dispatched yesterday intrude on no sovereignty. They are there, where the flag flies, on an errand of safeguard—to protect national honor and dignity. It was time to erect that standard of decency and principle for all the world to see—a proclamation of the fact that the United States will not be pushed around either by Communist conspirators or their ragtag riffraff employed to humiliate, slander and kill.

It makes no difference whether the American who was, or is, the target of murderous mischief is named NIXON or Jones or Joe Doakes—where an American citizen goes, his flag follows, and protection must go with that. Vice President NIXON was on official mission, representing the United States, and the infamy of this assault was heaped not on just the man but on the Nation.

It is time to tell all and sundry that the United States does not intend to lose this war with communism, by default or otherwise. If there was necessity to meet it with arms in Korea or to fortify against it as is being done elsewhere, there is equal necessity to meet it realistically wherever in this hemisphere it rears its ugly head—with violence or thumbing its nose at the United States. This is an area, assuredly, of primary obligation.

The oddity of arguments to the contrary, and of those mouthing protests in terms of "imperialism," is that these same critics are the ones voicing the loudest "Amens" to the sending of the 101st Division to Little Rock. They objected not at all to that; they lament the decision to guard national and hemispheric interests put in peril by blazing infamy outside the United States. Their hypocracy speaks for itself—symptomatic of softness toward the real enemy.

President Eisenhower was right in yesterday's order—a stewardship measuring to duty, responsible to that obligation in the truest concept of national honor and dignity.

It was an action lending weight to the determination, shared by the right-thinking among these Latin American neighbors, to guard security here at home. It builds respect, in terms the whole world can understand. It was time to enunciate a principle, backed with arms.

UNITED STATES PROUD OF THE NIXONS

RICHARD M. NIXON has honored, under the most difficult circumstances, the role of ambassador of good will; and decency throughout the Americas applauds official conduct reflecting credit on the land he represents.

He bore himself with courage, restraint, and dignity commanding admiration.

No less did his lady, Pat Nixon, exemplify these qualities; hers the womanly grace and sincere friendliness that earned a Nation's regard during two presidential campaigns at home.

America couuld have had no finer envoys, and the hooligan scum who sought by outrage to inflame hate at such points as Lima and Caracas can get no satisfaction save that of wallowing in their own filth.

Their ideological target was not the Nixons; their object of hate was the United States—and the basic cause of that venom was the communism that inspired it. They would not have been above inflicting bodily harm, as manifested by showers of rocks and kindred violence, to create an international incident. It doesn't take much of that to incite a mob.

Vice President NIXON has increased his own stature and enhanced the respect of America despite this outrageous series of demonstrations.

Thinking people in these nations to the south must resent such brazen escapades, calculated to harrass and humiliate them, and to stigmatize an area basically friendly to the United States.

It is the nature of infamous characters to act with infamy, and of criminal, seditious conspirators to incendiarize and riot. There has been at the points named a sufficient dose to acquaint the populace with the facts—and, surely, to get and keep the guard up.

These lands can be expected to feel deeply and apologetically this exhibition—and with that, deep admiration for the Vice President and his lady for calm gentility and honor fortified by the dignity of the office they graced.

They did not default on their duty, and—as demonstrated in the dispatch of troops—America has not defaulted on its own obligation to guard the principles of international decency they have ably represented.

Italian National Elections on May 25, 1958

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. PATTERSON. Mr. Speaker, May 25 will be election day for more than 30 million voters in Italy. They will go to the polls and cast their ballots in the national elections for a new Parliament. It seems difficult to realize that it was but 12 years ago, in 1946, that Italy voted to end the monarchy of the House of Savoy and become a democracy. Italy has experienced a new life since then and has made great strides in domestic democracy and in European and free-world cooperation. As one writer has put it:

The country has doubtless achieved more substantial progress than in any other decade in its history.

As an American I take this opportunity to congratulate the Italian people on their magnificent accomplishments and urge them to carry on. I do this with both joy and humility in my heart. I am happy because Italy has done so much for herself since the end of the war to rebuild herself as a leading and responsible partner in European cooperation. I am happy because the Italian people have been able to see through the sham and false hopes of communism and have made democratic society a reality. But my joy is mixed with feelings of humility for I know how hard the Italian people have worked against tremendous odds to build those democratic institutions which we in America so often take for granted in our own land. We have forgotten that democracy is indeed a precious treasure.

At the end of World War II, Italy was a broken and defeated nation. Much of the economy had been destroyed in the war. The people had not known democracy for more than 20 years, since Mussolini and his Fascists

marched to power in 1922. Like a phenix, the new Italy has arisen from the ashes of the old.

Today Italy is a land of remarkable political stability. Since the Communists were thrown out of the government in 1947 the center democratic parties have consistently moved forward in building the economic, political and social bases for Italian democracy. The government has made giant strides in land reform and in alleviating the plight of those in the lower economic groups. Free national and local elections are held in an atmosphere of freedom of speech and press.

But what of communism? Palmiro Togliatti and the other hard-core Communists pose as Italian patriots, but in fact they have consistently placed the interests of the Soviet Union first. They opposed Italian participation in the Marshall plan that contributed so much to Italian economic recovery after World War II. They have denounced NATO in violent terms as imposing an American stranglehold on Italy. They will not admit the truth that NATO is a free alliance of nations to deter and if necessary, meet Soviet aggression against the Atlantic community. They have even gone so far as to oppose Italian membership in the European coal and steel community, the new common market, and Euratom that are designed to improve European economic cooperation and increase the opportunities for members to trade with each other.

Today the Community Party is following the Soviet line again by concentrating its efforts on the struggle against guided missile bases in Italy and at the same time demanding the establishment of a zone around the Adriatic Sea from which atomic weapons would be barred. The Italian people have seen through this foolishness. Why should Italy forego weapons which the Soivets already posses? It seems clear that if the Communists are successful it would mean the end to NATO, and to Italian independence. An Italian Communist official put the case well when he addressed a party meeting in December 1956 with these words:

A real Communist must not have doubts or crises of conscience. His temper is measured by his loyalty to the Soviet Union.

The Communist Party remains a seious threat to the hard won liberties of the Italian people even though the Communist strength seems to be on the decline in Italy today. Last year party boss Togliatti himself admitted that the party had lost more than 10 percent of its members in the preceding 12 months. Even so, reliable estimates place the party membership figures at about 1½ million.

The great battle in this year's national elections will be between the Communists on the one side and the democratic parties on the other side. Most observers are confident that communism cannot win. The question still remains, however, whether the democratic parties that can unite in a working coalition will receive a large enough majority to form a stable government to continue the present course of the new Italy. It is our sincere hope that this will happen.

Army Forms Unit for Limited Wars

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. BECKER. Mr. Speaker, public announcement this week disclosing details of the organization of the Army's mobile, highly trained strategic combat force designed to deal effectively and quickly with aggression in the form of limited war represents an important and timely public service. This is reassuring news to all people and I commend the Army for making this announcement at this particular time.

I wish to call to the attention of my colleagues the New York Times article of May 21 by Jack Raymond, which sets forth the details concerning the Strategic Army Corps. The article follows:

ARMY FORMS UNIT FOR LIMITED WARS—150,000 SPECIAL TROOPS IN CORPS WILL BE OPERATIONAL AT A MOMENT'S NOTICE

(By Jack Raymond)

WASHINGTON, May 20.—The Army formally announced today the organization of a force of more than 150,000 paratroopers and infantrymen to deal with limited war situations anywhere in the world.

The announcement was specially timed against the background of the latest United States military movements in the Caribbean, the Mediterranean, and Europe. Each of the services has been involved in military alerts in the Middle East and Latin America.

It was the Army force, known as the Strategic Army Corps or STRAC, which supplied the 500 paratroopers who were flown to Puerto Rico when Vice President RICHARD M. NIXON was attacked by rioters in Venezuela.

READY ON SHORT NOTICE

The Army's strategic unit has heretofore been an official secret, although its existence has been indicated. It consists of 2 airborne and 2 infantry divisions, the Army revealed.

"The Strategic Army Corps is that element of the Army which is maintained in the continental United States to meet or reinforce any initial emergency requirements throughout the world," the official statement said.

Its mission is to be operationally ready on a moment's notice, the Army added, and called attention to the slogan based on the letters STRAC: "skilled, tough, ready around the clock."

Army officials said that the Strategic Corps did not have its headquarters or commander, but that it included the headquarters of the XVIII Airborne Corps at Fort Bragg, N. C., and that the commander there, Maj. Gen. Robert F. Sink, was senior officer of the strategic force.

It includes the 82d Airborne Division at Fort Bragg, the 101st Airborne Division at Fort Campbell, Ky.; 1st and 4th Infantry Divisions, Fort Lewis, Wash.; 1st Infantry Division, Fort Riley, Kans., and supporting units.

It was the 101st Airborne, which is regarded as the Army outfit in the greatest state of readiness, that sent units to deal with the Caribbean alert, as well as the desegregation situation in Little Rock, Ark.

LIMITED WARS CITED

The Army emphasized that its strategic force was specially tailored to deal with limited wars and to move promptly to potential trouble spots anywhere in the world.

But it also added that its effectiveness and speed of movement are dependent upon the availability of adequate air and sea lift.

This was a reference to the Army's repeated complaints that the Air Force and the Navy may not have sufficient planes and ships to transport Army units, while the Army itself is barred from having its own transport.

At Fort Bragg, where General Sink briefed newsmen while the Pentagon made the official announcement, the paratroop officer described his men as hitchhikers.

The Memory of Hon. Maurice J. Tobin

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. PHILBIN. Today in the great, historic city of Boston close to the scenes where he achieved most notable, memorable distinction in public affairs, in the midst of the homes of the people who repeatedly honored him by election to the highest offices in their gift, a majestic, beautiful statue is unveiled to the memory and accomplishments of the late and much lamented, Hon. Maurice J. Tobin.

Governor Tobin enjoyed a remarkable public career. His great talents and zeal were early recognized by the people. While still a young man he was elevated to several high offices in succession—mayor of Boston, Governor of Massachusetts, and Secretary of Labor in the administration of President Harry S. Truman.

One only had to meet Maurice Tobin to know something of the reasons for his outstanding success in the public service. A handsome young man of warm, appealing and dynamic personality, he readily won the attention and personal regard of thousands and thousands of people. Possessed of unusual magnetism, early in life, he gained many genuine admirers and loyal supporters.

Maurice Tobin worked his way up from the ranks. He earned every honor and distinction that ever came to him by virtue of marked ability, unflinching determination and hard, unremitting work. He had no headstart. He labored diligently and sacrified greatly to secure his education and he never gave up the fight until he answered the divine summons.

To an exceptional degree, Maurice Tobin was loved, respected, and trusted by the people. He was a man of great charm and graciousness—considerate, friendly, and helpful—gentle and cultured in his speech, warmhearted, sympathetic, and cordial in his manner and reaction. Few men, if any, in my range of acquaintance ever possessed the qualities of personal warmth and graciousness and wholehearted willingness to assist others that I observed in Maurice Tobin. He was beloved by all who knew him for these qualities and for his loyalty to his friends and his convictions.

I cannot begin in these brief remarks to cover fully the many facets of the character, personality, compassionate

nature, humane impulses, and inspiring career of this great American, Maurice Tobin. But I must allude to his devotion to the working people from whose ranks he so conspicuously rose as one of the most distinguished leaders of our generation. No one ever could exceed Maurice Tobin in his love of the common people, his firm resolve to better their lot, and his tremendous contributions to the welfare and betterment of all those who toil. In every office he ever held with such marked distinction, in every fiber of his being, in his thought, mind, and heart, sincerely, ably, and dauntlessly, Maurice Tobin dedicated himself with resolution and achievement to the cause of the rank and file of the American people.

One of the most brilliant orators and distinguished personalities of our day, known, lauded, and honored for his devotion to his Creator, to his city, State, and country, Maurice Tobin's place in the history of our times is secure. His fame and memory will endure throughout many generations to come as vivid testimony of able, constructive public service, and a noble heart devoted to the people.

I join today in the fitting tribute to the memory of a dear, valued friend, an illustrious public servant, and a great American—Hon. Maurice J. Tobin.

Robert Frost Appointed by Librarian of Congress To Be 1958–59 Consultant in Poetry in English

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mrs. KNUTSON. Mr. Speaker, it is a pleasure to call further attention to one of the more pleasant and gratifying events of recent days, namely, the appointment of four-time Pulitzer prize winner, Robert Frost, to be 1958–59 consultant in poetry in English. His appointment by Librarian of Congress L. Quincy Mumford was announced yesterday and under unanimous consent I include the Library's press release on this impressive literary event:

ROBERT FROST APPOINTED BY LIBRARIAN OF CONGRESS TO BE 1958–59 CONSULTANT IN POETRY IN ENGLISH

Librarian of Congress L. Quincy Mumford announced today the appointment of one of America's best-loved and best-known poets, Robert Frost, to be consultant in poetry in English to the Library of Congress in 1958–59.

Mr. Frost will assume his post at the Library of Congress early in October 1958. His appointment is for a single term, and during its course he will give at least two public lectures in the Coolidge Auditorium of the Library of Congress.

The position of consultant in poetry in English was established in the Library of Congress in 1936 through a gift of funds from the late Archer M. Huntington. The consultant gives advice on improving the Library's collections of literature, recommends the purchase of new materials, assists in acquiring important manuscripts and books through authors and collectors, advises on bibliographic and reference work in his field, confers with scholars and poets using the Library's collections and facilities, and provides editorial supervision of the Library's program of recording 20th century poets in readings of their own works.

To these duties Robert Frost brings the distinguished experience of a long and vivid life in the field of letters. No contemporary American poet has received more honors. Four times his work has won the Pulitzer prize in poetry—in 1924, 1931, 1937, and 1943. In 1922 his poetry brought him the Helen Haire Levinson prize and in 1931 the Russell Loines Memorial Fund prize. Among his medals are the Mark Twain medal (1937), the gold medal of the National Institute of Arts and Letters (1938), the silver medal of the Poetry Society of America (1941), and the Theodore Roosevelt medal (1954). In 1950 the United States Senate, in a resolution on the occasion of Mr. Frost's 75th birthday, extended him felicitations of this Nation which he has served so well.

No stranger to the Library of Congress, Mr. Frost's last visit was on October 24, 1955, when he gave a public reading of his poetry before an audience that overflowed the Coolidge Auditorium. His reading marked the opening in the Library of Congress of a major exhibition devoted to the life and work of the poet. In it the Library displayed more than 100 photographs, original manuscripts, and rare editions, accompanied by a phonograph from which visitors could hear Mr. Frost reading his poetry in the recording made by the Library for its Twentieth Century Poetry in English series of records. Since then this popular exhibition has traveled widely in other cities.

Born in San Francisco on March 26, 1874, Robert Frost was educated at Dartmouth and Harvard and holds a long list of degrees from a variety of distinguished institutions. He has been a teacher of English and psychology at a number of colleges and universities and is Simpson lecturer in literature at Amherst College. He will continue his association with that institution and will give lectures there in the coming year as he has in the past.

Among the celebrated poet's books are A Boy's Will (1913), first published in England, where Mr. Frost lived in 1912–15; North of Boston (1914); Mountain Interval (1916); New Hampshire (1923); West-Running Brook (1928); the prose play, A Way Out (1929); The Lovely Shall Be Choosers (1929), a poem; Collected Poems (1930, 1939, 1949); The Lone Striker (1933), a poem; A Further Range (1936); From Snow to Snow (1936); A Witness Tree (1942); Steeple Bush (1947); A Masque of Reason (1945); A Masque of Mercy (1947); and Come In (1943), edited by Louis Untermeyer.

Mr. Frost's next volume of poetry, And All We Call American, will be published early in 1959 by Henry Holt & Co., United States publishers of all Mr. Frost's poetry.

Vincent J. Petrillo, Packing for Overseas Shipment

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following story which appeared in the Journal of Commerce. Mr. Vincent J. Petrillo, general manager of the Jerome F. Gould Corp., is a resident of my congressional district and an authority on export packing. In view of the forthcoming debate on foreign trade, it is my belief that every Member of Congress will find his comments on the importance of proper export packing most enlightening:

AS BUSINESS LEADERS SEE IT, EXPERT PACKING FOR OVERSEAS SHIPMENTS IS ESSENTIAL

(By Vincent J. Petrillo, general manager, Jerome F. Gould Corp.)

Before World War II, packing for export in this country was a slovenly affair with steamship companies accepting practically anything a shipper offered.

During the war, when the Government became alarmed over the fantastic proportion of goods that was arriving overseas damaged and unusable, it set up stringent packing specifications. After the war, the marine insurance companies forced steamship companies to adopt these specifications to some extent and export packing as an industry was underway.

This industry accounts in part for our competitive position in world trade today. If we are to survive as a Nation, if we are to retain our foreign customers, if we are to expand our world markets, we must pay more attention to our export packing.

It is useless to try to deliver a product overseas in the same type of container in which it is shipped domestically. The domestic container is not designed to withstand the hazards of an ocean voyage. Neither is the product protected against corrosion, pilferage and the risks of handling.

Why American manufacturers spend millions of dollars developing the best product in the world only to pay little or no attention to its packing is something I have never been able to understand.

If we are to compete in foreign markets, if we are to expand sales, we have got to deliver our goods in salable and working condition. This seems so elementary that it seems almost ridiculous to have to say it. Yet so many manufacturers in this country act as if they never heard of the term "packaging engineering."

This same ostrich-like approach to packaging applies to sales promotions and sales campaigns abroad although I think this is an attitude that is beginning to change. One of these days, shippers are going to realize the tremendous advantages of packing at the port. Why its full impact hasn't hit them as yet. I don't understand but I think it is beginning to.

Why should a manufacturer pay the cost of shipping his freight halfway across the country in heavy export containers when he can have his goods packed at the port and save inland freight?

When are industrialists going to realize that the export packer can pack cheaper than the manufacturer himself because of the economies realized by volume packing? Why don't they see that expert packing means cheaper insurance costs and satisfied customers; that their customers do not want to be compensated by insurance, but want the merchandise they ordered in good working condition.

Every day, sales executives abroad warn their home offices that their products are not arriving in operating condition. But the message has not sunk in as yet with top management. How long will it take American manufacturers to realize that if they deliver their goods safely, their own reputations will be enhanced and their foreign sales will increase.

If manufacturers would only inspect waterfront facilities, both here and abroad, they would understand the type of handling their products undergo and hence the kind of packaging their products require.

Voting Restrictions: A Report From the South

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. ROOSEVELT. Mr. Speaker, I have previously published in the CONGRESSIONAL RECORD reports on voting restrictions in Alabama, Florida, Georgia, and Louisiana, which were presented to a conference of the southern conference educational fund held in Washington on April 27. A brief summary of the findings of those reports follows:

Of the four States, Alabama and the rural areas of Georgia present the most insurmountable barriers to registration and voting, to the Negro citizen who is qualified to vote.

In 1956, Negroes represented 30 percent of Alabama's population of voting age, while only 6 percent were actually registered. It is not hard to see why. The registration application in that State contains 21 questions. In many cases, one inaccuracy or failure to answer one part of one question disqualifies the petition. Some registration boards require that a Negro secure a voucher from a white voter in order to register—always difficult and sometimes impossible. Of the registered Negro voters, many fail to exert their franchise through fear of losing their jobs or being denied credit, because they have failed to pay the poll tax, or because they are effectively discouraged by whites.

The largest concentration of Negro voters in Georgia is in the cities. In the rural areas, violence, intimidation, and economic reprisals have been used to prevent registrations. New, more stringent rules for voting qualifications have recently been adopted by the State legislature, with the intent of curtailing Negro registrations. However, these provisions are strict enough to prove such an obstacle to white registration that the law is likely to be repealed as a similar law was 8 years ago. Then, Negro reregistration was much larger than white, proportionately.

In Florida and Louisiana the situation is somewhat better, although in 5 northern Florida counties only 110 Negroes out of 16,533 eligible are registered. There actual intimidation has prevented registrations, and elsewhere in the State, Negroes are effectively barred from holding office.

The greatest problem in Louisiana is the "purge" of registration rolls, a device to challenge imperfect registrations. That progress is being made, however, is illustrated by the fact that in 1952, 23 out of 64 parishes had no Negro registrants, while now there are just 4 such parishes.

Today, under leave to extend my remarks, I include similar reports from Mississippi, North Carolina, South Carolina, and Virginia:

VOTING RESTRICTIONS IN MISSISSIPPI

(By Aaron E. Henry, executive secretary, Regional Council of Negro Leadership, and Albert L. Powell, president, Mississippi Progressive Voters League)

The Negro registers and votes freely in only 6 of the 82 counties of Mississippi. These counties are Harrison, Hinds, Washington, Warren, Lauderdale, and Coahoma.

In 43 counties there is a situation where every now and then a favored Negro is able to register.

In the remaining 33 counties there is gross intimidation that creates a fear complex to such an extent that the Negroes in these counties are in most instances afraid to try to register. These counties include Calhoun, De Soto, Carroll, Panola, Tallahatchie, Humphreys, Issaquena, Sharkey, Clay, Lowndes, Monroe, Lee, Alcorn, Choctaw, Noxubee, Attala, Yazoo, Montgomery, Bolivar, Tunica, Sunflower, Webster, Holmes, Tate, Jefferson, Walthall, Clarke, George, Lamar, Pearl River, Wayne, Chickasaw, and Forest.

The Negroes of the State have appealed to the sheriffs and circuit clerks of each of these counties to cooperate in a movement to permit Negroes to register and vote. Still the report from the counties involved came back like this: From Holmes County, "No." Negroes are still denied the right to vote and register. From Issaquena County, "No relief," please keep working. From Sunflower County, "Things are the same," what next? From Humphreys County came the only report where Negroes actually fear physical violence if they attempt to register and vote.

The Negroes in other areas are more afraid of economic reprisals and pressures such as loss of employment and loss of credit. Some are just afraid to make the white people mad.

The Negroes are determined to pursue this issue until every qualified Negro in the State of Mississippi is free to register and vote.

In March of 1955, the legislature of Mississippi passed a bill that, at the time, its proponents openly admitted was for the sole purpose of retarding the vote of Negroes. This bill made it necessary for the prospective voter to interpret any section of the Mississippi or United States Constitutions to the satisfaction of the circuit clerk.

The circuit clerk himself may have never gone to school a day in his life, as there are no literacy requirements for circuit clerks. If a candidate for clerk can get the votes, he is in. And, as in most elections in Mississippi, the candidate that can yell "Nigger, Nigger" the loudest will be elected.

The application to vote in Mississippi makes it necessary for one to be more highly trained to qualify as a voter than to qualify as a schoolteacher. For in each of these counties where Negroes are barred from registering there are hundreds of Negroes teaching Negro children.

Here are specific instances of intimidation from three counties:

HUMPHREYS COUNTY

Mr. A approached the registrar in Humphreys County and requested permission to register. The person in charge informed him that the registration problem had caused bloodshed once in Humphreys County (obviously referring to the death of the Reverend George Lee and the wounding of Mr. Gus Courts) and advised him not to try.

BOLIVAR COUNTY

On the afternoon of March 12, 1958, just 6½ weeks ago, 2 special agents of the FBI made a 3-hour investigation of the refusal of authorities to allow Mr. A and others of Mound Bayou to register and vote. After the investigation the FBI cautioned Mr. A not to discuss the conversation with anyone. One A. D. Saxton, a white local merchant and a member of the citizens council, demanded that Mr. A repeat the conversation between him and the special agents or there would be another Till case. Affidavits are in our files.

SUNFLOWER COUNTY

Negroes presented themselves to become registered voters. The registrar refused to register them by this ruse: "We'll have to wait until the State legislature adjourns; then we'll see about it."

VOTING RESTRICTIONS IN NORTH CAROLINA

(By Miss Willson Whitman, author and editor)

It is estimated that only 26 percent of the eligible Negro voters go to the polls in North Carolina. Senator ERWIN of North Carolina, told the Senate Subcommittee on Civil Rights that there was no restriction on the registration and voting of Negroes in his State. But he thought there was some apathy, and he admitted there might be a little trouble with local registrars.

To combat apathy and get out the vote is the purpose of a new organization called the North Carolina Ministers' Committee for Full Citizenship, which wants to see 100,000 more voters registered this spring. With the same objective, the NAACP is calling for 250,000 more Negro voters in North Carolina by 1960.

To achieve these goals it is not proposed to make any special racial appeal by putting Negro candidates into the field, although of recent years we have managed to elect Negro members of city councils and so on. To tie in the registration drive with the election of candidates in a given election is of course to risk, by loss of the election, a feeling of discouragement about voting in the future. The idea is to establish the habit of voting in every election, and to do that the NAACP will depend on door-to-door appeals to the individual voters.

Of course the matter of apathy in registration is closely connected with the difficulty of registration wherever such difficulty exists. But there is little or no trouble registering Negro voters in the larger cities and in those parts of the State where white elements in control feel little or no fear of Negro majorities. I have even heard it suggested that there is more discouragement of white mill workers who might wish to register in some industrial districts.

In the northeastern part of the State, notably in Northampton and Halifax Counties, literacy tests, so-called, have been used to disqualify Negro voters and it is hoped that cases now pending will show that these tests are contrary to the Bill of Rights of the Federal Constitution.

Until recently there was no appeal under State law from the decision of election district registrars. This year the law was changed to provide for such appeal, first from the registrar to the board of elections and then to the State courts. There is, however, some question as to whether this newly enacted provision for review was intended to be an actual reform or merely a deterrent to Federal court action to declare the law unconstitutional.

In Northampton County, for example, one of the cases pending would permit registration of Mrs. Louise Lassiter, denied registration by application of the test in the little town of Seaboard. This case has now become 2 cases—1 an appeal to the board of elections and the State courts under the new law, and the other a plea in Federal Court designed to show that the law is unconstitutional. The Federal case cannot be decided until the State courts dispose of the case pending there.

If anyone feels that the literacy test is fair, it must of course be argued that it is fair only if it is applied to all voters, white

and Negro alike. In practice of course this is not the case. I had lived and voted in North Carolina for 7 years before I ever heard of a literacy test, and I sincerely hope that no registrar will ever expect me to interpret the North Carolina constitution in all its provisions. This constitution, like most State constitutions, is more than twice as long as the United States Constitution, and a great deal more complicated. Moreover, in registration the requirement is not merely to understand the constitution but to give it the individual interpretation preferred by the registrar. The State election law does not examine registrars on the constitution.

In the Seaboard case, it was suggested that the registrar fairly and faithfully tried to administer the spirit of the law as she saw it. Her understanding and belief was that white people, in the nature of things, were entitled to vote. Due to unfortunate loss of a war in the last century, she thought, Negroes are also entitled to vote but only if they can successfully surmount the obstacles put in their way; and it is the duty of a registrar to provide the obstacles.

The conscientious registrar may of course have a little help now and then. The same registrar in the little town of Seaboard had earlier disqualified an Air Force sergeant, Alexander Faison, whose right to vote was about to be submitted to Federal adjudication, just as Mrs. Lassiter's has been. But in that case local authorities discovered that the district line ran in a way to put the sergeant in another district, even though the registrar had already registered his brother who lived in the same house.

Another case involving the literacy test, the Ivey case, is also being brought in nearby Halifax County. The great trouble is not winning such cases on appeal. It is the need for litigation and appeal, the expenditure of time and money required to invoke the whole machinery of the law.

REGISTRATION IN SOUTH CAROLINA

(By Mrs. Modjeska M. Simkins, vice president, southern conference educational fund; former secretary, South Carolina conference, NAACP)

A rather thorough check of possible difficulties surrounding voter registration in South Carolina failed to turn up reports of obvious restrictions, except in Williamsburg County, of which Kingstree is the county seat.

A prominent business man, Mr. J. F. Dimery, a product of Howard University, reported as long ago as last December 5 that he had been turned down in Williamsburg County on the literacy test. He was told, when inquiring as to the reason, that he might qualify on the property-tax provisions if he so desired.

This he refused to do, hoping that some organization or agency would desire to work with him as a client in a test case, since his treatment has been the practice with the board of registrars in that county. In fact, the teachers in Greelyville Negro School in Williamsburg County are reported to have been turned down in a body.

An effort was made last Monday, April 21, to reach the county senator and the male member of the three-member registration board. Failing this, I talked with the State attorney general, Mr. T. C. Callison, who said he had heard of no trouble with registration anywhere in the State. I told him of the persistent reports of violations and restrictions in Williamsburg County. He said that clear instructions had been given to all registrars as to the provisions of the election laws, and he saw no reason why the Williamsburg situation should have arisen.

I said, "You mean there's no logical reason." He replied, "There is no legal reason." And then I said, "I grant there is neither logical nor legal reason, but there can be a devilish, prejudicial reason that is the making of some member or members of that board."

Mr. Callison said all registrars were familiar with the law and had been advised to request further information from his office if they desired. He took the names and telephone numbers of the officials we had tried to contact in Williamsburg County, and said he would get to work on the matter immediately. He told me, "I will tell them that I have had these complaints and urge them to right the matter. After that, I do not know what can be done." My reply was, "I know what can be done. We can have a big lawsuit down there."

Officials at the secretary of state's office also said they were puzzled by the reports from Williamsburg County. They also pointed out that Attorney General Callison had called in all registrars and given them what was thought to be a thorough coaching, and that they had expected no trouble.

All of these officials were told that I felt pained to have to give in Washington this report on Williamsburg County, which constitutes the single blot on record so far as I have been able to find. They also appeared to be sorry about it.

I have talked with others of both races by telephone and personally concerning sections of the State that have been historic trouble spots—for example, Abbeville County. This was the site of the most atrocious lynching in the history of South Carolina; it is also the place where a minister was severely whipped for trying to vote just after the primaries were opened to Negroes. The reply from the Abbeville informant was, "I don't think we are going to have any trouble like we had from the old crowd."

I have also talked with officials of groups that are promoting statewide registration programs. They have heard of no trouble. Lethargy and disinterest seem to be the underlying causes of limited registration in some sections. It must be admitted that in some of these sections the situation could be a carry-over of the fear of reprisal that was the cause in earlier years.

At least 2 white persons—1 a lawyer and the other a candidate for the State legislature—on being asked why there seems to be no trouble, said, "These people have been sued so much that they are afraid of being carried to court."

It will be remembered that the NAACP spent about $15,000 in this State to open the primaries. The white primaries were eliminated by decisions in the *Elmore* v. *Baskin and Brown* v. *Baskin* cases.

After the ruling in the former case, when some registrars swore they would refuse to register negroes, the then Federal Judge J. Waties Waring said he would fill the jails with recalcitrant registrars if the law was not carried out by them.

As State secretary of NAACP during this period, I sent information on the law to all NAACP branches, telling them about securing affidavits, etc. We also sent copies to all registration boards so that they would know we were ready to move into the courts again if necessary. This has had a long-lasting effect, I am sure.

VOTING RESTRICTIONS IN VIRGINIA

(By W. Hale Thompson, attorney)

Voting restrictions in Virginia are designed to keep the electorate small and controllable. Legal procedures for qualification do not tell the whole story.

You have all heard how Negroes are kept from registering and voting by manipulation of the poll tax and the use of questionnaires about the Constitution and the statutes.

Less well known are the harsh economic reprisals against Negroes who dare to encourage others to qualify to vote, or who seek to run for public office in Virginia.

In a county in southside Virginia, Mr. J had been leader in the fight for public school equalization and later for integrated schools. He had spent most of his 60-odd years working among his people, trying to get them to qualify for voting.

He was so busy with his schoolwork and the voting problems in his county that he never had time to acquire a farm of his own. He rented one from some white people who had gone North and he worked it for more than 20 years.

Shortly after the school desegregation decision in 1954, his landlord ordered him to move. Mr. J was finally able to rent another farm. He stayed on that one for 2 years, and then the same thing happened. He finally had to leave the county because no one would rent him a farm. He is held up as an example of what happens to Negroes who get too big for their britches.

Nevertheless, he is still carrying on the fight to get Negroes qualified to vote in his home county, which is more than 60 percent Negro.

In another county in southside Virginia, Mr. W was a prominent preacher and farmer. He owned a 150-acre farm and rented another of equal size. It had been his custom to borrow money locally each year for operating expenses and to repay the money after the crops were sold.

Mr. W had been active in the NAACP and in the County Voters' League for many years. Before 1954, the people who ran the county didn't pay too much attention to Mr. W. They considered him just another colored preacher. Then Mr. W decided he was going to run for 1 of the 3 seats on the county board of supervisors, the governing body of the county.

The day after he announced his candidacy, he was asked to pay his creditors over $8,000. Credit that had been extended to him was secured by demand notes. It had been orally understood that payment would be made after crops were sold and new notes given to secure the unpaid balance.

In this as in other Virginia counties, credit is extended to Negroes on demand notes. When one steps out of line, he is threatened with economic suicide.

Efforts were made to obtain money for Mr. W to pay his creditors. He was told by them that if he withdrew from the race they would go easy on him. This man saw everything that he and his family had worked for many years taken away from him.

It took several weeks to arrange to pay off his creditors. In the meantime this poor man had aged 20 years. He withdrew from the race for supervisor, his spirit broken.

These are just two examples of how Negroes are kept from exercising their rights as citizens. Of approximately 750,000 Negroes in Virginia, slightly more than 80,000 are qualified to vote. However, a greater percentage of them generally vote than do the white who are qualified.

Virginia, like most Southern States, has a very small percentage of her population taking part in political activity. About 34 percent of the adult population went to the polls in 1956. However, 64 to 66 percent of the qualified Negroes voted.

One reason given for the voted apathy is the so-called short ballot. In Virginia, only three officers are elected by the State as a whole—the governor, lieutenant governor, and attorney general. All other executive officers are appointed. In other words, the people of Virginia have permitted machine politicians to relieve them of the right to choose those who govern them.

So you see that perhaps the greatest restrictions against voting in Virginia are not legal at all, but rather sociological and psychological.

Negroes and poor whites haev been pitted against each other for centuries. Negroes have become used to seeing everything that represents authority clothed in a white face, and the poor white has been conditioned to being told what to do by his betters.

The pattern of segregation has inflicted upon the masses of Negroes a feeling of despair. If one of his group seeks public office he is either forced to withdraw because of fear of economic strangulation, or the air is filled with race hate and the qualifications of the candidate are forgotten if his skin is not white.

Speedy Air Traffic Control

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. PHILBIN. Mr. Speaker, in view of my remarks yesterday on the subject of air safety, I was gratified by the introduction of the bill for that general purpose by our distinguished and able friend, the gentleman from Arkansas, [Mr. HARRIS], and also by the prompt and diligent attention given this important subject matter by our distinguished and able colleagues, the gentleman from Minnesota [Mr. BLATNIK], and the gentleman from Georgia [Mr. PRESTON], and others.

All these measures taken by appropriate leaders and committees of the House demonstrate the continued awareness and alertness of the House, its committees, and its membership to the great needs in this field so tragically illustrated by recent most lamentable air accidents.

Friends of our great aviation industry and many of the general public have been genuinely concerned for some time past now by the relatively large number of air accidents that cannot be adequately explained, by sudden crashes, and by collisions in the air that cost many lives and caused much damage.

Many communities throughout the country have been visited by these sudden death-dealing accidents plummeted down from the skies with furious speed to bring death and destruction. The growth of civil aviation in itself and the increased number of private planes present serious traffic control problems in the air. The activities of military planes along the air routes in close proximity to settled communities, the unannounced and unscheduled character of their approach, the dazzling speed at which they travel and failure frequently to conform with rules governing civil aviation make this problem much more difficult.

Since the principal part of the problem seems to be reconciling military with civilian flights and since the situation has apparently been getting worse rather than better in recent days, we cannot afford to delay the establishment of basic laws, rules, and regulations controlling these matters. Air congestion is growing apace; air traffic control is one of the Nation's compelling problems at the moment.

With the advent of new civilian jet planes, the problem becomes intensified and the Congress must act to lay down proper, effective controls with all possible speed. I commend our colleagues who are giving these important matters such careful, able, and expeditious consideration, and I hope that nothing will deter them from the goal of pressing forward with a sound, considered program that will bring order into the somewhat chaotic and worsening situation, which is causing so much uneasiness and concern throughout the Nation.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

REPRESENTATIVES WITH RESIDENCES IN WASHINGTON

Appendix

The Farm Problem

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. HAGEN. Mr. Speaker, I am including in the Appendix of the RECORD, for the examination of the Members, two articles on the farm problem which appeared in the May 21, 1958, issue of the Christian Science Monitor. I include these articles without comment because I am in no way committed to all of the opinions expressed therein:

THE FARM EDITOR SAYS

Most Americans agree that since we all depend on farmers to produce the food and fiber we need, we must somehow keep enough farmers in business to meet this need.

This general recognition of the farmer's essential status has fostered wide belief in two theses which possibly merit acceptance but which, considering present economic pressures on the citizenry, seem to call for fresh scrutiny and evaluation. Much of the political campaigning on farm issues now building toward November congressional elections centers around these two theses.

The first is: "Farmers are entitled to their fair share of profits in the Nation's economy."

The second: "Because the family farm represents certain moral values which have contributed to America's greatness, it must, at whatever cost, be preserved in its traditional entity."

At the risk of sounding brutal, honesty demands a second recognition before the theses can be evaluated, the recognition that America is struggling not only with a surplus of certain basic crops, but also with what some economists define as a surplus of farmers. The technological fact today is, that fewer farmers than ever before can produce what Americans need, and still have enough left over to supply some world needs.

This recognition, involving drastic changes in the agricultural structure, is hard to face, especially for farmers who, because of lack of capital or know-how, have been unable to keep up with the all-out mechanization that has taken over American farmlands with incredible speed. They need help. But what will help them most?

Considering the first thesis: Just exactly what is agriculture's fair share of the Nation's profits? (Think of the imponderables involved—such points as: Should everyone's share be the same? Or should personal effort and success be taken into account? Who is to decide such fundamental questions?)

If 500 farmers—or perhaps 100—can today turn out as much as 1,000 could produce 30 years ago, should Government subsidize the thousand just to perpetuate the way of life they are used to?

This leads into the second thesis, concerning the family farm which today is generally defined as a farm where the family makes all management decisions and does most of the work. With all the mechanical help now available, some family farms have become big operations bearing little resemblance to yesterday's few acres worked by a man and a mule and a plow. Many others have remained too small to prosper, and their plight does indeed cry out for aid.

But many people are now asking: To what extent should all citizens be taxed to keep unsuccessful farmers on the land simply because that is where they happen to be and because Americans feel sentimental about a romanticized but somewhat-out-of-date picture of the family farm as grandpa knew it?

We have yet to hear anyone question what would happen to the moral values usually associated with the institution known as the family farm if that institution could be preserved only by the Federal dole.

Would it be better for the farmer and the whole Nation if Government should confine its role to providing disaster insurance and to offering something like industry's unemployment insurance for a designated period to help struggling farmers find jobs in industry or adjust their operations to more profitable methods?

It is not the purpose of this column to try to answer these big questions, nor to support or refute the theses. It is meant only to urge study of these crucial issues, which will to some extent be decided when Americans go to the polls next fall, and vote into office men who do ardently support, or refute, these now familiar premises.

HELEN HENLEY.

FOOD CHAINS TRY HAND AT SUPPLYING OWN MEAT

(By Roscoe Fleming)

DENVER.—Vertical integration has come to the cow country and is creating massive changes in the whole system of livestock marketing. The net effect has been to bring about so drastic a decline in the business done by the Nation's stockyards—the 66 big terminal livestock markets—that they are worried about prospects.

This process has been hurried along by the policy of many of the big food chains to become packers within the meaning of the Packers and Stockyards Act of 1920 so that they can escape from the antitrust rule of the Federal Trade Commission into the arms of the Department of Agriculture, which has jurisdiction of packers under the 1920 act but has never done much about regulating them.

In the Congress this is reflected in the bill by Senators ARTHUR V. WATKINS, of Utah, and JOSEPH C. O'MAHONEY, of Wyoming, which would transfer jurisdiction of meatpacking as a business to the Federal Trade Commission. After some days of inconclusive debate in the Senate, this bill was referred back to its Judiciary and Agriculture Committees, which rereported it with provisions that would leave with the Department of Agriculture regulation of animal trading right up to the packinghouse but would transfer packer jurisdiction to the FTC. This bill now has been passed by the Senate.

The FTC has for years issued antitrust complaints against many of the big food companies and chains, only to have the latter successfully plead that they are packers because they prepare their own meats.

One supermarket chain was denied this classification because its meat preparation was only incidental; whereupon it went out and bought a hundred shares of common stock of one of the big packing companies, and came back pleading that this exempted it from FTC regulation since the law said that any interest in a packing company qualified for regulation by the Department of Agriculture.

BIG CHAINS REPRESENTED

Among the huge retail chains and companies listed by the Department of Agriculture as of 1957 as packers subject to its jurisdiction are seven of the biggest supermarket chains: Atlantic & Pacific, Safeway, American Stores, Food Fair Stores, National Tea, Giant Foods, First National Stores; and such big processors as Procter & Gamble, Campbell Soups, Carnation, General Foods, Quaker Oats, Beatrice Foods.

Now note how this massive drive of general food processors and retailers into the packing business has affected the situation back in the cow country:

It has led such processors and retailers either to establish packing plants and feed lots of their own, buying the animal off the range and taking care of it right through to the cellophaned package on the meat counter, or to use their bargaining powers to buy fat animals direct from the huge feed lots which have sprung up throughout the West and which are, in effect, live-meat factories.

These latter may handle many thousands yearly of cattle, sheep, or hogs, bought from farmers, fattened, and sold. One such operation in Colorado, though by no means the Nation's largest, feeds more than $1 million worth of cattle at a time. And one of the big supermarkets has a Colorado feed lot which is almost as large. Animals from this lot go to the company's own packinghouse. And for the final step two packinghouses owned by supermarket chains now handle one-quarter of all the cattle packed in Colorado.

The effect of this setup through which animals flow around the established livestock markets need not be imagined. A recent study by the Department of Agriculture shows that of livestock headed direct for packing plants only 70 percent of cattle now pass through terminal markets, contrasted to more than 90 percent in 1925. The corresponding figure for sheep and lambs is a little more than 50 percent now, contrasted with 85 percent; of hogs, 40 percent now, against 75 percent. And the decline has been relatively steep since 1950 as the advantages of becoming packing plants have increased.

MARKETS FEEL DECLINE

The effect on one terminal market: In 1953 about 600,000 cattle were sold in Denver destined to nearby packing plants, of which the plants bought direct only 19,000, or less than 4 percent. In 1957 the comparable figures were 632,000 and 160,000, or 25 percent.

In 1953, 578,000 sheep were bought in Denver for packing plants. Of these, 90 percent or 515,000 were handled by the Denver Union Stockyards Co. In 1955 the comparable figures were 894,000 and 544,000—350,000 sheep were bought direct by the ultimate handlers.

It is the thesis of Senator O'MAHONEY that this creates pervasive pressure to drive prices down at the ranch or farm. These big food chains, he says, are able by vertical integration to put meat on their counters at prices several cents a pound less than their competitors who still patronize the older channels—that is, who buy from the traditional pack-

ers, who in turn buy through the terminal markets.

These competitors then demand lower meat prices that will allow them to compete, setting up a chain reaction that puts pressure on prices all the way back to the animals on the range.

Terminal market operators hardly know what to do. They are talking in terms of canceling or bypassing the traditional commission house system by which such houses buy and sell between the ranch and the terminal market, using the facilities of the latter. They think of instituting their own corps of salesmen, to go out and try to turn the tide of animals back to them.

Remarks of Hon. Herbert C. Bonner, of North Carolina, Chairman, Committee on Merchant Marine and Fisheries, House of Representatives, at the Keel Laying of the Nuclear ship "Savannah," New York Shipbuilding Corp., Camden, N. J., Maritime Day, May 22, 1958

EXTENSION OF REMARKS
OF
HON. VINCENT J. DELLAY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, May 23, 1958

Mr. DELLAY. Mr. Speaker, yesterday along with other members of the House Merchant Marine and Fisheries Committee I attended ceremonies at the laying of the keel of the nuclearship *Savannah*, the world's first nuclear-powered merchant ship, in the New York Shipbuilding Corp. yard at Camden, N. J. Our distinguished chairman, HERBERT C. BONNER, delivered the main address at this historic occasion and I am submitting it for insertion at this point in the RECORD.

When I first came to Congress I requested to be placed on the Merchant Marine and Fisheries Committee because of its particular relationship to the activities of the district I serve—which is to a great degree a waterfront district. During the period of time that I have served on this committee the members of the committee under the chairmanship of HERBERT BONNER have been outstanding in their dedication to the work program of the committee and particularly in their desire to bring forth legislation to maintain and develop a strong, modern American merchant marine adequate for our national needs.

The address made by Chairman BONNER yesterday is indicative not only of the ability, foresight, and patriotism of our chairman but also is the spirit that has imbued the entire committee.

The people of this country must be kept growingly conscious of our merchant marine as our fourth arm of defense. Its position must be enhanced so that ships flying the American flag shall be the forerunners in the field of nuclear-powered vessels that will sail the seas in the days to come:

Mr. Teale, Chairman Strauss, Mr. Guill, our most gracious sponsor, Mrs. Richard M. Nixon, friends of the American Merchant Marine, ladies, and gentlemen, on this historic Maritime Day, 1958, we shall lay the keel of the nuclear ship *Savannah*—the world's first nuclear-powered merchant ship.

Within the next few minutes, the United States of America will have resolutely stepped across the threshold of time into the nuclear age on the sea lanes of the world.

In our action here today, we are demonstrating our sincerity and our belief that men of good will can forge tools of peace from the forces of destruction.

One hundred thirty-nine years ago today, the steamship *Savannah* set sail from her home port, Savannah, Ga., to become the first steamship to cross the Atlantic Ocean. It was a proud day for the enterprise and ingenuity of this youthful Nation which had gained its independence and freedom scarcely more than a generation before. The steamship *Savannah*, with her coal-burning, 90-horsepower steam engine, her three masts with full set of sails, was a bold and imaginative symbol of the creativeness of the new Republic. Although far in advance of her time, she was the transitional step that foretold the end of the centuries-old age of sail on the high seas.

Despite the great interest and excitement this revolutionary ship stirred during her triumphal tour of the major ports of Europe, she was deemed a failure by her sponsors. Her fuel supply had been sufficient to run her engine only for a total of 80 hours during the entire 29-day crossing. She was too costly to operate.

It is a paradoxical bit of history that the unprecedented trans-Atlantic voyage of the steamship *Savannah* in 1819 should have turned out to be the forerunner of the era of American supremacy on the seas in the days of the Clipper ships. And American naval architects thereafter concentrated their efforts to perfecting the safer and—at that time—more efficient Clippers. "Steamships," they said, "can never compete with sail as long as the wind remains free."

At that fateful time, blind to the portents of the industrial revolution, decisions were made that, after brief years of glory, were to leave us a third-rate maritime power for a half century. Competing nations quickly saw the significance of the Steamship *Savannah*, while we turned our back on the future.

As Americans, we can be proud of our maritime heritage which is rooted in our earliest history on this continent. This heritage is nobly exemplified in peace and in war; in the exploits of our great navies; and in the bold ventures of the far-ranging Yankee Clippers that carried the American flag through all the seven seas in peaceful commerce. We can be proud of the genius of our naval architects and marine engineers, and the skills and production miracles of our shipbuilders. Living proof of our legacy from the past is embodied in the magnificent Steamship *United States* and the other beautiful, efficient, and safe ships of the American merchant marine now sailing the seas or under construction.

The memorable event in which we participate today marks a step in the progress of modern transportation as significant now as the development of the steamship was more than a hundred years ago. Let us be sure that the lesson of the old *Savannah*—for which this new ship will be named—will be well remembered and studiously observed. May the vision and imagination that goes into the creation of this new *Savannah* lead us ever forward, gaining from this experience and surmounting all obstacles, to keep the American flag foremost on the sea.

We are pioneering here, and we must maintain our lead. Some have advanced the idea of hastily building a reactor copied from an existing design and inserting it in the hull of an old merchant ship to be used as a floating exhibit hall. This makeshift vessel would have been taken to various parts of the world to show nuclear devices and motion pictures demonstrating peaceful uses of atomic energy. Whatever may be the merits of that particular proposal, it would have done nothing to advance our merchant marine.

Other developments in the field of atomic energy showed us that it was timely and appropriate to build a new vessel specially designed in both hull and machinery to secure the maximum advantage from this new source of power of such bright promise. Thus it was, in the spring of 1955, that bills were introduced in the House of Representatives to authorize the construction of a practical merchant ship powered by an advanced type of reactor especially designed for the purpose.

Step by step this project has advanced through the processes of legislation and industry. It has developed out of the idea stage into a full-fledged working element of our merchant fleet.

I am pleased to hear that many of the operators of our present ships are vying with each other for the opportunity to familiarize themselves with the shape of things to come by operating this proud new ship designed to meet the challenge of the future. Make no mistake, what we are initiating here today is no experiment. It is not a toy. It is the forerunner of many more that will assure the continued preeminence of our country in the field of naval design. Of course, it goes without saying that nuclear science is still in its infancy, and we have much to learn.

By the construction of this vessel we will gain the experience we need to move ever forward in keeping with our national policy to maintain and develop a strong, modern American merchant marine, adequate for our national needs—a merchant marine that will be our ambassador of good will throughout the world.

I am proud that I and the House Merchant Marine Committee have been able to play a great part in this outstanding enterprise which surely marks a revolutionary advance in our great transportation system. But, most of all, I offer my sincerest congratulations to this outstanding shipyard, to the Babcock & Wilcox Co. who are building the nuclear reactor, to George G. Sharp, the distinguished naval architect, to Admiral Strauss and Clarence Morse and their able and dedicated assistants in the Atomic Energy Commission and Federal Maritime Administration, and to my colleagues in the Congress whose leadership guided the enabling legislation to enactment.

May all of us who are here today count ourselves especially privileged to take part in this historic occasion, when we will see a piece of steel be transfigured into a symbol of America's destiny.

A Great Contribution

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 23, 1958

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I would like to insert the following editorial which appeared in the May 22, issue of the San Diego Union, San Diego, Calif.:

A GREAT CONTRIBUTION

Vice President NIXON has richly earned the commendation of both his Nation and Latin

America for being the instrument to bring irritants to hemispheric friendship out in the open where something can be done about them.

Mr. NIXON's trying experiences on his 18-day tour have resulted in a reappraisal of the relationship between the Americas. They offer dramatic proof of the inroads communism has made in Latin America. The stones and the jeers hurled at the Vice President by mobs did no permanent damage to the great hemispheric friendship, but they did call attention to economic problems which chafe the relationship.

Mr. NIXON has put the Latin-American picture in true focus. He said that while Communists were the ringleaders of the violence to which he was subjected, Red agitators were in many cases only the lever for projecting the feelings of innocent persons misled by United States policies.

Latin America is pinched by world commodity prices. Many of its governments are unstable, and because of that instability are unable to cope with the needs of their people.

There is a feeling in many quarters of the globe that the United States has all the answers to the economic and political problems of others. When these answers are in conflict with what is expected, there is often resentment. Peruvian metal, Venezuelan oil, Uruguayan wool and Argentine beef seek more favored trade treatment from the United States which also owes allegiance to its own industries.

The reappraisal asked by Mr. NIXON extends to American trade policies and internal remedies that can be taken by the Latin nations. We need to know more about each other, be more sympathetic to each other's problems and responsibilities. Mr. NIXON has contributed greatly toward bringing this about.

Vice President Nixon

EXTENSION OF REMARKS
OF
HON. RICHARD H. POFF
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 23, 1958

Mr. POFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the May 14, 1958, issue of the Richmond Times Dispatch:

MR. NIXON'S GROWING REPUTATION

Card-carrying Communists, or Communist sympathizers in Caracas, of whom there are plenty, apparently were responsible for the gross discourtesies there yesterday to Vice President and Mrs. Richard Nixon. There is no reason to believe that this sort of youthful hoodlumism is typical of Venezuelans or other South Americans. It can also be said that the Nixons again behaved well under pressure.

The United States is not exactly popular in most Latin American countries these days, for it is felt, among other things, that we've been lavishing too many of our grants and loans on other parts of the world. But even temperamental and excitable Latins would hardly throw rocks and tin cans at, or spit upon, a visiting dignitary and his wife, unless such demonstrations had been carefully planned by Communists, or other professional agitators. The rioters were mostly teen-agers.

It will be recalled that widespread disorders broke out in Caracas last January, and that Dictator Perez Jiminez was finally ousted from office. The regime which succeeded him isn't keeping order any too well.

President Eisenhower's praise of Vice President NIXON for his calm and courageous behavior in Lima last week was justified. He deserves similar commendation for his refusal yesterday to let the youthful Venezuelan hooligans rattle him.

It should be noted, furthermore, that one of the impressive facts of recent political history in this country is the manner in which Mr. NIXON has risen in public esteem. The quotation from Max Freedman in the Manchester Guardian, cited in today's column by Roscoe Drummond, is only one of many such striking shifts of attitude.

Visiting editors from Europe at the recent convention of the International Press Institute in Washington said they were impressed with the manner in which RICHARD NIXON is no longer regarded by "liberals" in the United States as the epitome of everything they detest. Time was when it was almost impossible to find a "liberal" on either side of the Atlantic who would say a good word for the Vice President. That is still true of some leading Democrats in Washington, but even they seem to be softening up.

The fact is that Mr. NIXON has risen steadily in the estimation of many who have followed him at close range in recent years. Much of this dislike was based on misconceptions and a tendency to apply more stringent standards of judgment to him than were applied to others in public life.

RICHARD NIXON has made mistakes, like everybody else. We strongly disagree, furthermore, with his views on the race question. Yet he has many more admirable characteristics than he is sometimes given credit for, including quite exceptional ability.

Mr. NIXON's conduct on his South American tour has added to his growing reputation.

Ambassador Langley Wins High Praise

EXTENSION OF REMARKS
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Friday, May 23, 1958

Mr. BASS of New Hampshire. Mr. Speaker, I am pleased to insert in the Appendix of the RECORD, newspaper article entitled "Langley Wins High Praise," by Lawrence Fernsworth which appeared in the May 1 Concord (N. H.) Daily Monitor. We in New Hampshire are indeed proud of the good job and fine reputation Ambassador Langley is making for himself in this very important post:

LANGLEY WINS HIGH PRAISE—PAKISTAN NEWSMEN LAUD MONITOR PUBLISHER FOR ACTIONS

(By Lawrence Fernsworth)

WASHINGTON, May 1.—The editors of Pakistan's three foreign-most newspapers, and a Pakistan press correspondent who were in Washington this past week in the course of a United States tour of information, bestowed warm praise on United States Ambassador to Pakistan, James M. Langley.

"He's one of us," was the encomium bestowed on Langley by Mir. Khalil ur Raham, publisher and editor of the Daily Jang.

Altaf Husan, editor of Dawn, a paper much quoted in press dispatches, told this correspondent that "Mr. Langley is doing a remarkable job in understanding the problems of the country and creating good will for the United States. We see each other quite frequently. He has a newsman's curiosity to learn what lies beneath the surface of things, a trait which we as newsmen understand and appreciate. He gets around the country to see for himself and doesn't take his facts second hand."

SIMILAR SENTIMENT

Mansur Ali Khan, editor of the Daily Zamindar at Lahore, West Pakistan, echoed similar sentiments. "Although I live a thousand miles away from Karachi it is necessary for me to go there several times a year, and a chat with Mr. Langley about mutual Pakistan-United States problems is always a must," he said. "It is pleasant to find him an informal host—what you Americans call a good fellow. Pakistan has some very complex problems and an inquiring and understanding mind on the part of the ambassadors who are sent to us is of highest importance if they are to help us in solving them. Mr. Langley is far from disappointing us in this respect."

With the group is also Zamir Siddiqui, Associated Press correspondent in Karachi. Sharing the views of his colleagues he said, "On my particular job it is necessary to call on Mr. Langley quite often—it is a big help to find him cooperative and understanding of newspaper problems. I feel that I am able to send to your people, and to other countries a better picture of United States-Pakistan relations and their impact on our relations with other countries as a result of the cordial contacts between Langley and the press."

In a general conversation with his correspondent, the visitors remarked that these pleasant relations extend to other persons, whether government officials, political or community leaders or the people of everyday life. They were particularly interested to hear that Langley wrote frequent reports from Pakistan for the Concord Monitor, and wondered how he found time to do so.

They stated that Pakistan is totally anti-Communist, and pro-Western, a policy in which they received strong encouragement as the result of Langley's presentation to his Government of the problems that tied in with this policy.

ALL MOSLEMS

All four of the editors are Moslems. They hoped that Christians would come to understand better the friendly feeling Moslems have for Christians.

As one of them put it: "A black myth has been created that Moslems are the mortal enemies of Christians. The reverse is true. Like the Christians' holy book, our own holy book stems from the ancient Jewish scriptures. The holy men of early Christianity are also holy to us.

"Let it be recalled that when the Moslems first entered Spain they often worshiped in the same temple—the Moslems on Fridays and the Christians on Sundays. The later expulsion of the Moslems was purely political, an unfortunate policy of later rulers who, to justify their actions created the dark legend that Christians and Moslems could not live together. Actually they had been living together for 800 years."

Legislation To Protect Union Members

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Friday, May 23, 1958

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks I should like to include an editorial from

the Herald-News, Passaic, N. J., of May 20, 1958, entitled "Legislation To Protect Union Members":

LEGISLATION TO PROTECT UNION MEMBERS

Democratic leaders of the United States Senate have promised that a bill to protect union members from larcenous union heads and from racketeers will be introduced by June 10.

It is odd that they should have to offer this reassurance. There is general agreement, as a result of the disclosures by the committee headed by Senator MCCLELLAN, that the protection of Federal law is needed. Those who watched on their television sets the parade of witnesses before the committee would agree that the need for protection is urgent. In the words of Senator IVES, the Government cannot allow "anyone to play fast and loose with the money union members pay to their unions. We cannot stand idly by when racketeers * * * take over unions."

The average citizen would probably go further, and agree with Senator MUNDT that additional legislation is required, such as providing for "a dependable secret ballot * * * in the election of union officers and in the authorization of strikes." Election techniques that deprive the voter of the protection of anonymity help to keep totalitarian governments in power, we well know. In unions, the lack of secrecy helps dictatorial corrupt leaders to stay in power.

Despite the widespread belief that corrective legislation is necessary, a note of doubt about its prospects in this session is apparent in the Washington dispatches. One reason is that there is disagreement about how far the legislation should go. At one end of the argument are those who want to confine the legislating to a few items, such as protecting union funds from crooks and putting up barriers against racketeers. At the other end are those who want to do a thorough job by legislating in many other fields, such as limiting union participation in public elections and restricting picketing.

It would be unfortunate if disagreement about how little or how much was to keep the Congress from enacting any legislation at all. A modest start at correcting abuses is better than none at all. If the Congress fails to act, it will be strengthening the hand of the selfish union leaders who are trying to persuade their members that proposed legislation is part of a plot to destroy unions. The Congress should not put ammunition into their hands.

A Bill To Amend Title II of the Social Security Act

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, May 23, 1958

Mr. WESTLAND. Mr. Speaker, I have placed before this body a bill to amend title II of the Social Security Act to increase the amount of outside earnings permitted without deductions from benefits payable thereunder.

This bill will help assure more adequate income for our older citizens and provide them with a sounder base for financial security.

Certainly, one of the important tasks which we face in this session of the Congress is the search for a solution to ease the current financial pressures on persons who receive social-security benefits. Because of the extreme importance of the subject matter of this bill to every citizen of the United States, I sincerely urge that each Member of this body carefully study the provisions of this legislation.

Once they have had the opportunity to study this matter, Mr. Speaker, it is my hope that the appropriate committee will find it possible to hold immediate hearings so that my bill may be considered thoroughly and passed without undue delay.

Our retired citizens need this legislation, and I am convinced that it will do the all-important job as soundly as possible.

Mr. Speaker, briefly the bill does this. It allows those persons who have earned the benefits of social security to receive at least $4,200 a year. Simply, the bill provides that a recipient of social security will not lose a single month's benefit check if his income from outside earnings plus his social security checks total not more than $4,200.

My bill is a new approach to a serious problem. It is a new approach because its provisions allow an equality of opportunity for each classification of social security recipient to receive a decent basic income. It is a new approach because the ceiling is placed on total income instead of outside earnings.

Today a couple who receives benefits of $102.80 a month and who earns the maximum sum allowed without loss of benefit checks has an annual income of $2,433.60. A couple who received $162.80 a month in benefits and who earns the same maximum sum, $1,200, has an annual total income of $3,153.60. Under my proposal, both couples could have total incomes of $4,200.

Here, Mr. Speaker, is a plan that gives opportunity for better incomes without an increase in benefits and without an increase in social security contributions from employees, employers, and the Government.

I have received thousands of letters from my district, not only from persons on social security, but also from community leaders, businessmen, housewives, and the professions, to name a few. All are interested in the problem of adequate income for the older generation. All hope for some solution, because all are affected.

The value of the dollar goes down and the costs of existence goes up, but life continues. The squeeze is particularly hard for the men and women of retirement age. Today, if they are able and want to work, they cannot, because they are afraid they will lose the small benefits they have.

The legislation I have proposed can change this. It provides a way for higher earnings and a more realistic basic income. It gives the elderly person the opportunity, in dignity, to pursue part-time employment without the fear of losing income because of tables in an act made law when our economic situation was different from what it is today.

The immediate effect of this bill would be the easing of financial problems for our senior citizens. It would let them earn more, thereby raising their standard of living. They would spend more, and it does not take an economist to see the possible effect upon business.

Mr. Speaker, the American public is looking to the Congress on this matter of social security. My letters prove the public's interest. We have a responsibility to older people, the public, and ourselves. I sincerely hope this body carefully will study this bill as I have suggested, and will give it full approval.

Myth of German Experts Debunked

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. HAGEN. Mr. Speaker, one of the most important subjects of discussion in this country is the comparative state of the art of missile development and use in this country and in the U. S. S. R. One aspect of this discussion is the question of the size of the contribution of captured German scientists to the Russian development. This question has become the subject of partisan politics with the charge being made that this country under a Democratic President permitted the Russians to capture and make substantial use of German scientists and material. A series of two articles by Willie Ley in the Los Angeles Times commencing on May 18, 1958, is an adequate refutation of these charges. Mr. Ley is a rocket expert who was directly connected with the German program and the substance of his observations which follow is that the Russians derived very little benefit from either German rocket research during the war or from German scientists subsequent thereto:

[From the Los Angeles Times of May 18, 1958]

MYTH OF GERMAN EXPERTS DEBUNKED—LEY SAYS MOST ROCKET SCIENTISTS CAME TO UNITED STATES INSTEAD OF BEING CAUGHT BY REDS

(By Willy Ley)

At the end of World War II, or so legend says, the Red army captured all the German rocket experts and put them to work, which explains the Russian sputniks and a lot of other things. To many Americans this is a much-cherished legend which presumably makes them feel better because it was, at least, not the Russians who produced these spectacular things but German scientists working for them. And Germany is known to produce scientists.

Actually, most German rocket scientists never saw the Red army except in the movies and maybe on television. Most were brought, or came on their own volition, to the United States. And of those who were brought to Russia, none was there when sputnik appeared in the sky. They had all been sent home years before.

But let's begin at the beginning.

RESEARCH CENTERS

Near the end of World War II there were several rocket-research centers in Germany. A small one of the German navy was located near Danzig. It had mainly the purpose of developing a naval torpedo with rocket pro-

pulsion. I don't know whether this work was successful—in fact I doubt it—but I do know that the man in charge, Rolf Engel, was not captured by the Russians. For years he worked in Egypt, of all places, and he is now back in West Germany.

A second research group was industrial and was run by BMW (Bavarian Motor Works) in West Germany, the Red army never got that far to the west. One of its leading men, Heinz Gartmann, was brought to the United States for some months and has been in West Germany ever since.

There were, no doubt, several smaller groups in aircraft plants and powder factories but the most important of all was, of course, the research group of the German army in Peenemunde. Its head was General Dornberger (now with Bell Aircraft), its scientific head was Dr. Wernher von Braun, whose whereabouts are well known.

The whole research and planning staff of the German army's institute surrendered as a unit to the American Third Army.

But the Russians did capture a number of production engineers. They were taken to Russia and the story then emanated from Germany that the Russians had captured very many important German rocket experts. In all fairness it must be said that this story may, in part, be due to a mistake in translation. The Russians did capture a number of jet engine experts. Russia and Germany have words which mean both, jet and rocket. The German word in question is Strahlantrieb; the Russian words are Reaktinaya Dvishenniya. The man who wrote the original news story may have heard it in Russian, or, more likely, in German and then did not know which way to translate.

MOST IMPORTANT NAME

Of the Germans who were captured by the Russians, the most important seems to have been Helmut Groettrup. He and others were brought, with their families, to an island in a river. There they were domiciled in separate small houses. Their children were sent to a little school established for them and the men were put to work.

Were they sent to a Russian rocket proving ground to instruct, advise of assist?

No, they had their own place of work.

Were they occasionally flown to be interrogated by Russian scientists, military men or government officials?

No, if an important Russian wanted to see them he came to see them.

Were they informed about what the Russians were doing or what they accomplished?

Of course not, although there seems to have been a "grapevine" as there is everywhere in the world.

Were they threatened or mistreated in any way?

No, although at times their working hours were not what a well-run union would approve.

What happened to them?

In the end, which means around 1953 or 1954, they were shipped back to East Germany. Then they must have leaked through the Iron Curtain because at least some of them are now in West Germany, lecturing about their experiences.

[From the Los Angeles Times of May 19, 1958]

RUSS USED REICH V–2 ROCKET DATA—GERMAN EXPERTS WERE CONFINED BY REDS TO SOLVING SPECIFIC PROBLEMS—ALL ON PAPER

(By Willie Ley)

When the German rocket experts first went to work in Russia they had to dictate their past experiences, telling in detail how and why all the parts for the V–2 rocket had been made, what changes had been made and why, and so forth and so on.

At a later date the German Collective, as the Russians called them, were given specific problems to solve—all on paper. They might be requested to calculate a fuel pump for a rocket burning 600 pounds of fuel per second. Or they might be asked to design a rocket motor with a thrust of 100 tons. Such jobs it must be said, are jobs any rocket engineer can do. The real trouble is not in calculating or drawing up such devices; it starts when they have been built and are on the test stand. This the Russians did themselves, not letting the Germans see how they made out. It is even very uncertain whether the Russians ever built anything that had been designed by the German Collective. In all probability the Russians made the Germans solve problems which they, the Russians, had already worked out. That way they would get a cross check for the same result, arrived at by two different methods.

At one point the Germans were asked to design a rocket for a range of 1,800 miles, capable of carrying a warhead weighing 3 tons.

The Germans worked this out very painstakingly because the problem was new to them, too. The rocket was called Project R–14, but it was also known as Design G–4. Interestingly enough, the Germans wanted to build it finless, like the Vanguard, but they drew the finless design in about 1950. The whole rocket was to be of conical shape, although the German report (by Helmut Groettrup) does not say why. Off hand, one can think of two reasons. It would be very easy to manufacture. And it might increase stability during take off to some small degree.

MAKE THINGS SIMPLE

In general, the German Collective tried to make everything extremely simple. Every welding seam, every screw or bolt was thoroughly checked with the end in view to eliminate its existence, if at all possible. They also tried to make everything work hydraulically instead of electrically. They completely avoided even the idea of so-called exotic fuels. The fuels they used in their calculations were kerosene or watered alcohol with liquid oxygen. When it came to rocket motors the German Collective did have a test stand at their disposal. But they never fired anything they had drawn.

Two more principles of the German Collective were to build all guidance equipment into the tail end for easier inspection and to start the fuel pump with compressed gas.

MAIN GOAL TOLD

The main goal of the German Collective, Groettrup reports, was to make the deadweight of a rocket as small as possible and the pay load as large as possible. This, of course, has been the main goal of all rocket engineers, but the German Collective carried it to some extremes. They went on the principle that a part which has been left out cannot cause trouble by malfunctioning. But it is also true that a part that has been left out may cause trouble because it should be there.

GERMANS NEVER TOLD

In any event the Russians never built the rocket which was called Project R–14. Maybe they felt that the extreme simplicity which the Germans advocated had been somewhat too extreme.

Naturally the Russians never told the Germans whether they would use any of their designs. The Germans do know that the Russians studied them but they seem to feel that is all that happened.

The Germans had been brought to Russia in 1945 and 1946. By 1950 there were rumors that they would be sent home. Then they heard additional rumors that things had gone wrong on the proving grounds. Nevertheless, they were kept for another 3 years. Then the Russians decided that they could not learn anything from their captives any more and brought them back to their native land.

Puerto Rico Does Itself Proud

EXTENSION OF REMARKS

OF

HON. A. FERNÓS-ISERN

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 23, 1958

Mr. FERNÓS-ISERN. Mr. Speaker, I should like to call attention to a most interesting and significant article by Constantine Brown, in the Saturday, May 17, issue of the Washington, D. C., Evening Star. Truthfully, one of the reasons why I have asked unanimous consent to have this article entitled "Puerto Rico Does Itself Proud" reprinted in the Appendix of the CONGRESSIONAL RECORD as an extension of my remarks, is that it is complimentary to my people and their Government, but more than that, I feel that there is a message which we can take from Mr. Constantine Brown and from the other members of the press who have reported and commented on Vice President NIXON's goodwill trip to Latin America and some of the incidents which occurred. The reasons and motivations for the organized demonstrations have been and are being discussed in general. The Senate Foreign Relations Committee is investigating this matter at the present time. I am sure that some of the agencies of the Government must also have investigations underway. I shall not offer comment on this aspect of the matter.

The message which I see, however, from reports of the incidents, is that while the world has always had struggles, solutions are always found for the most puzzling problems, and very valid suggestions are being currently made with regard to the recent episodes.

We should not be too discouraged and too heavy-hearted over such episodes. Our Vice President proved equal to the situations when confronted with them, and upon his return he indicated that, regrettable as they were, he did not believe them as bad as they appeared to us from this long distance. They seemed to be the irrational behavior of irresponsible, isolated mobs, inspired and encouraged by the enemies of our form of government. But more than that, they revealed a problem, which we now will study and find the solution for. The problem is what shall each of us do to strengthen the hemispheric solidarity which is so important to the free world; what shall we do so that everyone understands the importance of maintaining that solidarity.

We share with the Spanish-American countries the same Western Hemisphere, and our boundaries from the rest of the world are the same oceans. If we are to protect our way of life, if these continents are to remain the great hope of mankind, we must do it together and against the same enemy. Our economies complement one another. The South American countries need what we have to sell, and we need what they produce. It is the most natural kind of a partnership. And it is a spirit of partnership that needs be our inspiration. Being

good neighbors does not imply merely a warm and free greeting, but includes, in addition, perceptive understanding, mutual interdependence, and common action. South America needs the United States, and the United States needs South America. There is considerable to be accomplished in comprehending one another's mutual problems and in assisting one another with these problems. It should not be too much of a job once all of us start working on the task.

Now we have been alerted to a problem as we were similarly alerted by the first sputnik. The first news of Sputnik I inspired us to activity as perhaps nothing else might have done. Will the unpleasant experience of the Vice President similarly awaken and inspire us to an activity which will make both our partners and ourselves stronger? Already there are indications that it will.

I say this as a citizen of the Commonwealth of Puerto Rico, a free people living under the United States flag and vested with United States citizenship. If a little island like Puerto Rico, with the help and encouragement of the great United States, can in such a short span of time improve its economy and its institutions and inspire its people to the point where they, in turn, inspire other peoples of the world—and all of this without any natural resources whatsoever—then what of the South American countries with the great wealth of their resources and the potential might of their populations, if similar common attitudes were adopted? Mr. Constantine Brown hints of this in his article which he concludes by saying:

"We like to think that all Latin American nations, however backward, can emulate the Puerto Rican example with encouragement."

The article follows:

PUERTO RICO DOES ITSELF PROUD—PEOPLE OF SELF-IMPROVED NATION GAVE NIXONS SINCERE WELCOME

(By Constantine Brown)

Once again the little island of Puerto Rico has played a part in the news of world affairs that gives Americans everywhere a feeling of pride and satisfaction.

When Vice President NIXON visited Lima, Peru; Bogotá, Colombia, and Caracas, Venezuela, he was jeered, insulted, pelted with garbage and offal, spat upon and threatened with physical violence by organized mobs. It is probably true that these hoodlums were not representative of the peoples of these Latin American Republics. The evidence is strong enough that they were ignorant, emotional mobs whose fears and superstitions were preyed upon by the Communists and perhaps by other interested minority groups anxious to embarrass the United States.

The Vice President and his courageous wife, after adding luster and dignity to their own reputations and the reputation of the United States, flew to San Juan, Puerto Rico, for the last night of their Latin American tour. There they were welcomed by the able Gov. Luis Munoz Marin and his aids. But most important of all, they were greeted with warmth and enthusiasm by Puerto Ricans all along the streets of the island capital.

Now, Puerto Ricans are just about the same kind of Latin Americans as Venezuelans or Peruvians or Colombians. The island, long a colony of Spain, then a possession and later a Territory of the United States, is now a self-governing Commonwealth, proud of its association with the United States. But there have been days when bitter anti-Yanqui sentiment was open in Puerto Rico, and only a few years ago a few nationalist fanatics attempted the assassination of President Truman, of Governor Munoz, and actually did shoot up the House of Representatives.

There was none of this fanaticism evident when the Nixons arrived at San Juan, for the reason that there is almost none of it left. The Puerto Ricans who clamored to shake the Vice President's hand were proud to be Americans. They shouted "Viva les Estados Unidos" with sincerity and gusto.

Why the immense difference between the Puerto Ricans and their Latin brothers to the south? There has been as much poverty, as much hardship, as long a tradition of oppression in Puerto Rico as anywhere else in the Western Hemisphere. There could be, on that basis alone, plenty of reasons for hostility in San Juan as well as in Caracas—perhaps more so, since the Venezuelan capital is the center of a wealthy oil industry and of other natural resources, lacking in Puerto Rico, on which to build a higher standard of living for the people.

There is an answer, and it is the same answer as that which has brought statesmen and dignitaries from all over the world to see the astounding accomplishments in Puerto Rico over a brief span of years. The Puerto Ricans, with encouragement but not direct dollar aid from the United States, have created a show window for democracy and economic freedom. They have done it on almost nothing. The island has no coal, no oil, no minerals of importance. Its economy had been for years a poverty-stricken one based on sugar. Today Puerto Rico is prospering, with a host of new industries, new highways, new housing. The death rate has plunged; disease is retreating, people are finding hope and confidence.

Foreign aid of the United States since the end of World War II has climbed into many billions of dollars. Much of it—not enough, Latin Americans say—has gone to our sister Republics to the south. Yet there is nothing in all the world to equal the great accomplishments evident in Puerto Rico—and these gains have been made by the Puerto Ricans themselves in what they quite accurately have called Operation Bootstrap.

The welcome afforded to Mr. and Mrs. Nixon in San Juan ought to remind Americans generally that the Commonwealth of Puerto Rico is a prized part of the American heritage. The Puerto Ricans are proud of their American citizenship, and rightly so. We in the mainland United States are proud of the Puerto Ricans, especially for the display they make to us and to all the world of the fruits of their own determination and industry.

We like to think that all Latin American nations, however backward, can emulate the Puerto Rican example, with encouragement.

Labor Legislation Should Be Passed

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, May 23, 1958

Mr. FRELINGHUYSEN. Mr. Speaker, one of the outstanding newspapers in my district is the Daily Home News of New Brunswick, N. J. This paper has proven objective in its reporting, and it has always campaigned in the broad public interest. Its editorials merit respect.

A recent Home News editorial on the subject of labor legislation seems to me to be particularly well balanced and to the point. Under leave to extend my remarks I should like to include this editorial appearing on May 19, 1958, entitled "Labor Legislation Should Be Passed."

The editorial follows:

LABOR LEGISLATION SHOULD BE PASSED

It would be a great loss to the country, and a blot upon the Congress, if no labor legislation at all were to emerge from Washington this year. In the present condition of confusion and hesitation, that danger certainly exists.

Congress is besieged with labor bills which range all the way from the mildest of measures to punitive proposals whose clear purpose is to damage legitimate organized labor.

Obviously there can be no place on our statute books for destructive legislation. But neither will any sound objective be served by the passage of weak, watered-down bills having the appearance but not the real substance of regulation.

The 1957 congressional inquiry into labor's affairs revealed an acute need for proper disclosure and policing of the finances of unions and their officials. It also showed that stiff controls are required to keep unions out of the hands of gangsters and racketeers.

Out of the welter of legislation now in the hopper, out of the testimony being taken by the Senate subcommittee, must come some program which meets those needs.

At first it seemed that labor was unwilling to concede there was a need. Fortunately for his stature as labor's head and a leading public figure, AFL–CIO President George Meany has now seen fit to approve a list of bills which would accomplish regulation of union financial affairs.

He and others still resist, however, any effort to assure democracy and freedom from criminality in union management. They take the view that this is labor's business.

The difficulty is that labor unions today are heavily invested with the public interest. Gangsters in control cannot only cripple the economy at a stroke, but exact vast tribute from an often unsuspecting public. Caution in regulation is wise. But this is no place for the gentle hand.

Marine Safety Regulations

EXTENSION OF REMARKS

OF

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 23, 1958

Mrs. GRIFFITHS. Mr. Speaker, I would like to go on record as supporting the position of the State of Michigan as set out in the following resolution:

Whereas Gov. G. Mennen Williams has created a commission to study water safety in order to encourage even more people to use Michigan's waters and to prevent deaths and accidents when they do; and

Whereas Governor Williams has specifically charged the commission with the responsibility of reviewing Michigan's relations with other States and with the Federal Government on water-safety matters to the end that there can be a greater uniformity of effort and application of water laws and regulations; and

Whereas the commission includes representation from over 35 public agencies, private organizations, and individuals; and

Whereas the commission has reviewed applicable State and Federal laws affecting pleasure boating; and

Whereas the commission has carefully observed the efforts of the Council of State Governments, in cooperation with the Committee on Merchant Marine and Fisheries of the House of Representatives, to develop legislation to further boating safety and the uniformity of boating laws, which efforts culminated in the introduction of H. R. 11078 in the Congress; and

Whereas the commission, after study and reflection, is convinced that H. R. 11078 would further boating safety, provide for identification of motorboats, assure reciprocity between the States, eliminate existing confusion over jurisdiction between Federal responsibility in favor of State action, and stimulate statewide enforcement of marine-safety regulations: Now, therefore, be it

Resolved, That the Michigan Water Safety Study Commission heartily endorses H. R. 11078 and urges its prompt passage by the Congress of the United States; and be it further

Resolved, That the commission's executive secretary transmit a copy of this resolution to each member of the Michigan congressional delegation.

Dual Support Goals Are Called Threat to Cotton

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1958

Mr. HAGEN. Mr. Speaker, I am submitting for consideration of the Members an article from the May 11, 1958, edition of the Fresno (Calif.) Bee newspaper. The arictle reports on the observations of Dr. Hedges, of the University of California, with respect to the problem of cotton. I particularly invite the Members' attention to the fact that Dr. Hedges emphasizes that there are two classes of cotton producers and that any sound program for cotton must recognize this fact and establish different programs for each of them if the interest of the noncommercial cotton growers is to be considered at all rather than our present emphasis of orienting support programs toward the least efficient producer.

The article reads as follows:

DUAL SUPPORT GOALS ARE CALLED THREAT TO COTTON

BAKERSFIELD, KERN COUNTY.—A recommendation that the Federal Government separate the problem of substandard incomes from that of commercial agriculture as one of several necessary steps to save the cotton industry from disastrous effects to present and past policy, was made today in a survey by the Giannini Foundation of Agricultural Economics.

Dr. Trimble R. Hedges, of the University of California, department of agricultural economics at Davis, made a strong plea for support of measures suggested in the survey. He spoke before the San Joaquin Valley Council of the California State Chamber of Commerce.

MIXED OBJECTIVES

"Basic failures of past and present Federal cotton programs stem from mixed objectives and refusal to face economic facts," the survey maintained.

"Two major problem areas exist in agriculture, one concerning low-income noncommercial rural people and the other involving commercial farmers who produce 80 percent of the farm products that go to market on about one-fourth of the farms. One program will not deal effectively with both groups."

CORRECTION NOT ENOUGH

After citing the ills which have developed from past efforts, the foundation concluded, "Correcting the mistakes will not get back the lost markets," and suggested economic criteria for a Federal cotton program should include:

1. Employ farm resources in most effective use.
2. Encourage improved efficiency and lower costs.
3. Choose policies assuring minimum interference with domestic and foreign market prices.
4. Leave maximum freedom in decision-making to individual growers.
5. Minimize cost to the public from either payments out of the Treasury or supporting prices above competitive levels.
6. Limit price and income support policy for agriculture to disaster prevention.

COTTON OVERPRICED

The foundation notes that modern methods permit profits for growers at lower prices than present support levels. It charges supports have overpriced cotton and other products, and thus:

1. Kept farms in production which otherwise would have gone out.
2. Prevented efficient farms from expanding production to make the most economic use of their resources.
3. Priced United States cotton out of the foreign market while holding an umbrella over foreign growers and thus stimulating their production.
4. Encouraged synthetic production, with resultant loss of cotton markets both at home and abroad.

Commendatory Letters Supporting the Work and Activity of the Small Business Administration

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Friday, May 23, 1958

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include excerpts from letters received by the Small Business Administration expressing appreciation by owners and operators of small-business concerns for services performed by that agency.

In thanking the agency for financial assistance when other avenues were closed to him, the owner of a men's wear retail store in Bakersfield, Calif., wrote that it is wonderful that the small-business man has someone to turn to for help. The loan enabled the merchant to move to a bigger and better location where his sales volume increased and the loan is being paid off with regularity.

A La Crosse, Wis., garment manufacturer wrote in February of this year thanking the Small Business Administration's Philadelphia regional office for aid in securing a bond bailment of a contract with a Government purchasing agency. The Wisconsin company's president drew attention to the special circumstances surrounding the bailment which the Small Business Administration was able to help overcome, with the result that procedural changes were allowed and the garment company obtained its contract.

Meanwhile, in Richmond, Va., a furniture company, low bidder on a $175,000 order to supply furniture for Sewatt Air Force Base, Tenn., was being excluded pending settlement of the question of whether his company was big enough to handle the order.

With the expiration date close at hand, the company president appealed to the Small Business Administration and the Small Business Administration really got on the ball. The agency arranged examination of the company's facilities and issued, a certificate of competence for the General Services Administration. Without the Small Business Administration's intervention, the company president said, it might have lost the contract. He expressed his appreciation for this much-needed agency, and urged its continuance in a letter to his representative.

The thorough planning which goes into loan assistance was appreciated by a San Francisco department store seeking a loan from a San Jose bank for construction of a new store. Assisting in arranging the requested $41,500 loan, the agency was praised by the borrower for its help in thinking through this whole expansion program. A resulting lower construction bid than had been anticipated allowed the company to pay off a first mortgage of $16,500 and to plan for earlier repayment of the loan.

The services of the Small Business Administration are available also to small firms in all Territories of the United States. Its work drew recognition from Honolulu where, according to a merchant there, its pamphlets and brochures are accepted as gospel. Particularly is this true, the merchant wrote the agency, of Small Business Administration's Small Marketers Aids. Removed geographically as they are from the mainland, they have perhaps a greater appreciation of the valuable information contained in these brochures, the Hawaiian merchant wrote.

A manufacturer in Nebraska wrote crediting the work of the Kansas City, Mo., regional director and his staff for their assistance in obtaining a $60,000 loan which helped his firm manufacture a new product. The sales volume of the new product required his employing additional personnel "and we are constantly adding more," he said. The resultant sales volume enabled the company to meet prior obligations, the manufacturer said, "and since you have contributed so much to make our progress possible we want to express our deep appreciation."

The Small Business Administration loan-assistance program embraces numerous kinds of businesses, such as the food distributor who sought a loan to erect a new cold storage plant. He voiced his appreciation to the Regional Director at the Boston Small Business Administration Office, for aid in building his Cambridge plant and added that "we

know that without the spadework which you did for us" the success of the loan application would have been very much in doubt.

More unusual is the letter received from a construction company executive who failed to obtain a contract, although he had obtained a bond for the contract through the Small Business Administration. "The fact that I missed the job by $30,000 is not too important," he wrote. "The real significance is that you fellows fired me up to the extent that I returned to the bonding company with a comprehensive financial statement." He is now squared away on bidding for new contracts, he wrote.

Often the acknowledgment of assistance rendered by the Agency comes from sources other than the applicant. A Delaware attorney wrote to the Small Business Administration on behalf of an applicant for loan assistance and told the Philadelphia Regional Office that the applicant's problems had been satisfactorily worked out and that the borrower was particularly appreciative of the courteous treatment extended to him.

Informed by the Small Business Administration of the plans to assist a small business located in his area, an important South Carolina civic leader wrote the branch manager in Charlotte, N. C., that he was delighted to learn of the small corporation's eligibility for a loan. He said the SBA assistance to the company "makes it possible for more than 400 people to earn a livelihood. The agricultural income in the community is small," he wrote, "and the industry provides one of the major sources of income in this section."

The Philadelphia Regional Office was told by a residential real estate developer seeking a loan that "the intelligent explanations given were the best I have ever received from any Government office and equal to any I have ever had in private industry." He added that it was "refreshing to know that in some branches of our Government we have such great efficiency."

A Durango, Colo., office supply company, enclosing a check for payment on a modernization loan arranged by the Small Business Administration wrote that "we could not have made this advantageous move without your wonderful help. Again, thanks a million."

A simliar note was received from a California industrial minerals company official whose organization was quickly repaying $4,000 which had been disbursed on a $15,500 loan. Requesting cancellation of the undisbursed portion, he wrote that business had expanded beyond the volume for the previous year. Thanking the Small Business Administration for its advice and guidance, he said that it had been of "genuine constructive assistance to us and you may be sure it has been greatly appreciated."

Advice and assistance other than financial is frequently supplied by the Agency, exemplified by the services proffered to an Oakland, Calif., meat packer seeking reinstatement of inspection services so that he could again supply meats to the Army. The Small Business Administration was instrumental in reinstating inspection services for the packer, who wrote the Agency that "the cooperation and help we received from your office of the Small Business Administration were beyond our greatest hopes. I am convinced that the SBA is doing a wonderful job in behalf of the small-business man."

In Texas, a Dallas manufacturer wrote that his organization is "in a much better position to secure and successfully handle various Government contracts" because of Small Business Administration assistance.

"Our bank," wrote an Oklahoma construction official, "on learning you were willing to make us the loan, decided to go ahead and loan it all themselves."

Other banks have recognized the part the Small Business Administration plays in bolstering the small-business man. The San Francisco regional director received a communication from a banker in that city who said that "the excellent manner in which you and members of your office have worked with our bank has been mentioned to me several times and has just been called to my attention again."

In Jackson, Mich., another banker commented on SBA handling of a loan to a company employing 40 persons which was facing dissolution. According to the banker, the company's "situation was critical" and "the organization would have had to discontinue business, as all other financial avenues were closed, if you had not given constructive financial assistance." The loan enabled the company to obtain a new contract and the chances appear "very favorable for the continuance and profitable operation of this important local industry," the banker wrote.

A small firm in Sacramento wrote to the agency after successfully bidding on an Air Force repair, overhaul, and maintenance contract with the Small Business Administration's help. "The contract represents quite an extensive step in the growth of our small company and we feel that the help received from your office was a definite contributing factor in our being awarded this contract. The Small Business Administration should be complimented on the caliber of people who represent the agency. It is our sincere wish that the Small Business Administration continue its function."

Awareness of the functions of the Small Business Administration has contributed not only to small businesses but to lending agencies helping to finance such businesses. A Council Bluffs, Iowa, bank wrote that not only was it "impressed with the speed with which all matters pertaining to this loan were handled" but that "having had such a favorable experience we will have less hesitancy in being a part of subsequent participations."

These letters comprise only a few of the communications commenting favorably upon the assistance to small businesses by this agency. Nevertheless, they offer indications that not only does the need exist for such assistance but that it is growing as the part played by the Small Business Administration receives greater recognition.

Purely aside from disaster loans, lending assistance to companies whose collateral assets lies outside the requirements of local lending agencies and participation in loans with local lending agencies, the Small Business Administration performs other functions without which many companies might be restricted in their activities because of the complex welter of details involved.

These include planning and advice for businesses considering expansion; assistance in procurement of set-aside segments of Government contracts; assistance to lending agencies unfamiliar with the procedures in participation loans to small business, and publication and distribution—upon request—of pamphlets and brochures containing marketing advice, information on new products developed by other companies, management tips, information on international trade possibilities for small business and numerous other aids to assist small businesses in solving their problems, to grow and provide jobs and profit in the constantly changing world of commerce and industry.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, May 23, 1958

Mr. VANIK. Mr. Speaker, under leave to extend my remarks, I include a resolution passed unanimously by approximately 5,000 representatives of the Ohio division of the Polish-American Congress on the occasion of Polish Constitution Day on May 11, 1958. On that day the ceremonies sponsored by the Polish American Congress, the Polish Legion of American Veterans, the Polish Army Veterans Associations, the Polish National Alliance, and many other Polish organizations were a demonstration of the desire of Americans of Polish descent for the restoration of freedom of Poland. On that occasion the assembled persons were addressed by the Honorable G. Mennen Williams, Governor of Michigan, as the principal speaker:

Whereas since its very inception 14 years ago, the Polish American Congress stands unalterably opposed to communism and condemns its tyranny, its insidious designs for world conquest and its suppression of civil liberties. We cannot agree with those few American statesmen, politicians, and publicists, who insist on regarding Poland as a Communist country, and would deny the Polish people any help from the United States; and

Whereas it is true that Poland is presently governed by a very insignificant minority of adherents to the Moscow-dominated Communist Party. This situation, however, is not of Poland's free choice. It has been forced on Poland by treacherous means of Red conspiracy and with tacit consent of the West. Poland's 28 million people continue loyally dedicated to democratic principles; and

Whereas throughout her 1,000-year history, Poland, as a powerful nation on the ramparts of Christendom, has offered time and

again proof of her steadfast and unyielding allegiance to the tentes and democratic ideals of western civilization, mainly, her last effort as a subjugated ally of the Western Powers during World War II; and

Whereas this noble tradition of 10 centuries cannot be changed by Communist oppression of recent years. Historically, traditionally, culturally—the Polish people are not susceptible to Communist persuasion and will never accept it even in the face of overwhelming pressure from the Kremlin; and

Whereas a Poland, broken in spirit through our indifference to her plight, to her rights, and to her deeds of the past, would be a major calamity for the West for we cannot emphasize too strongly that a free Poland is the real key to peace in Europe. We strongly urge continued assistance to Poland not only in the form of surplus commodities but of credits to help build her consumer industry; and

Whereas we commend the stand of the President of the United States and the Secretary of State against a hasty and ill prepared summit conference between the heads of governments of the free world and the Communist bloc; and

Whereas it is our considered opinion, that in addition to undeserved gains in propaganda value, the Soviet Union is striving to create among the subjugated nations within the Red empire an impression that the West, by implications, if not by written consent, is accepting the intolerable status quo among the captive nations in central and east central Europe; and

Whereas if the United States decides upon a summit conference with Soviet leaders we strongly urge that the first prerequisite of such a conference, should be a demand by the United States for the liberation of the satellite nations and under no circumstances should the United States agree that liberation of Poland from Communist rule is an internal matter for the Poles to determine. The Red regime was forced on the Poles by acts of omission from the West and restoration of her liberty is a world responsibility; and

Whereas we further believe that American foreign policy would gain immeasurably in stature in central Europe if the United States would now take effective steps to ratify Poland's western boundaries as agreed at the Potsdam Conference. It is an indisputable fact that the formal ratification of Poland's western boundaries along the Oder-Neisse Rivers would deprive the Soviet Union of her only claim for keeping Soviet troops in Poland under the guise of helping Poland protect her western boundaries; and

Whereas we further believe that the United States should expose the fraud presently being perpetrated by the Soviets and the present Communist regime in Poland that the hundreds of thousands of Poles taken from their homeland to Soviet slave labor camps by the Communists in the early phases of World War II are now being returned to Poland. The United States should not be misled by the so-called reproachment between the present Communist regime of Poland and Moscow rulers regarding the Polish repatriates. The United States should proclaim to the world that any continued imprisonment of these gallant Poles in Russia is a violation of the United Nations Charter which the Soviets have signed, and is in violation of the accepted conduct of civilized nations; and

Whereas we should treat Russian's move to suspend nuclear tests with suspicion. The Russians will never deviate from their goal of world conquest. While talking about peace and suspension of nuclear tests, the Reds are building the world's greatest war machine. The Polish-American Congress feels that it would be a tragic mistake to recognize the so-called Rapacki plan to create a nuclear-free buffer zone in central Europe because it is clearly apparent that the Soviet Union has authorized this move merely because the Soviets themselves are fearful of giving their satellite captives nuclear weapons; and

Whereas we feel that for too long American policy has been on the defensive regarding our dealings with the Communists. We feel that a firm and decisive policy toward the Soviet Union will have the most effective results toward world peace and one such area where decisive action can be taken now is for the United States Congress to adopt the recommendations of a select committee of the United States Congress which in 1952 indicated the Communists for the Katyn massacre and urged that the Soviet Union be tried before the International World Court; and

Whereas we further strongly urge our State Department to demand of the Polish Government that the $1 CARE food packages be admitted into Poland for general distribution to relieve hunger and privation—as a condition of any further discussions with the Polish Government on cultural and economic exchanges; and

Whereas historians justly speak of Jamestown colonists as the "Beginners of the Nation" and Poles were among them, being instrumental in building the first factory in America, the historic Glasshouse, and in manufacturing resin byproducts, contrary to popular beliefs, created by ethnic prejudices at the turn of the century, Americans of Polish origin are not latecomers to American shores, their heritage reaches the earliest epoch of American history that in October of 1958, 350 years will have passed since the landing of the first Poles in Jamestown, founded in 1607 as the first permanent English settlement in the New World. We call upon all Poles and all Polish-American organizations to commemorate the 350th anniversary of the coming of the first Poles to America and to join with the Polish-American Congress the national observance planned throughout our country: Be it therefore

Resolved, That freedom and independence are and always will be a permanent goal of our Nation's policy. We pledge our moral and all material resources to help Poland in her difficult progress toward full freedom—and to support American policy in its search for a just and lasting peace and international security in a world where freedom reigns.

LEONARD J. WOLĘDZKO,
Chairman.
WALTER DWORAKOWSKI,
STANLEY SAMOK,
JERZY DOMANSKI,
W. OSIKA.

Nixon Plagiarizes Truman

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 23, 1958

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Is NIXON Un-Republican?" which appeared in the North Virginia Sun of May 22, 1958:

IS NIXON UN-REPUBLICAN?

Attention all investigators and members for the un-Republican activities committee:

The Northern Virginia Sun has just come into possession of convincing evidence that (hold on to your seats) Vice President NIXON is hewing to the Trumanist line.

Upon his return from his recent South American trip, the Vice President told the crowd that greeted him at the airport, "the only war the people of the United States want to wage is a war against poverty, misery, diseases, wherever it exists in the world."

Investigators and members of the un-Republican activities committee will note the almost word-for-word similarity between Mr. NIXON's words and those of Mr. Truman of May 24, 1951:

"The only kind of war we seek is the good old fight against man's ancient enemies * * * poverty, disease, hunger, and illiteracy."

One might be willing to pass off the similarity as mere coincidence, were it not for the fact that this was not the first time Mr. NIXON had followed this particular Trumanist line.

But what is one to conclude when one considers that in 1954, Mr. NIXON said, "If we can find the road to peace, for the first time in history, man can launch a winning war on poverty, disease and misery in the world, and that is the only war the people of the United States want to wage."

Actually, we hope that the un-Republican activities committee will treat Mr. NIXON with mercy, for the thought expressed is, we believe, a noble and worthy one, no matter what its origin or what its author or spokesman.

We Want Peace

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. HOFFMAN. Mr. Speaker, from one of the many, many constituents who want peace comes a copy of a letter written to the Governor of Michigan.

The letter follows:

HASTINGS, MICH., *November 22, 1957.*
The Honorable G. MENNEN WILLIAMS,
Office of the Governor,
Lansing, Mich.

DEAR GOVERNOR WILLIAMS: Thank you for your exceptionally nice letter and serious sideration of the paper on Political Expediency.

This time I most respectfully request your thought and help on the concept of Women Around the World Outlawing War—enough of this hateful, wasteful nonsense—say we. This might seem like an overly ambitious giant step, but break it down to the basic, primitive law of nature—mothers protecting the young and innocent—and it is as right and reasonable as can be.

Since we have made friends with the Germans and the Japanese after war, isn't it a sensible shortcut to make friends with the Russians prior to war, with its many innocent victims on both sides.

We as people have to do something for ourselves to maintain traditional independence. It is neither right nor healthy to place all burdens on the politicians.

Peace is not inherited—excerpt from a letter by Dr. G. P. Bidder to the London Times, November 1939:

"Too many people think and speak as if peace were the natural state of the world, disturbed from time to time by wicked men like Alexander, Napoleon, and Hitler.

"There is no peace in Nature; peace is the greatest product of the human intellect. The world will have peace some time, for man is very great and becomes greater. Let us abstain from the folly of pretending again that we shall have peace by the removal of Hitler, or the Nazis, or Stalin.

"If our minds are great enough now and our ideals are wise enough, the best men among us may set a new order in the world which will give it peace—trebling the value of every man's work and his time for happiness.

"This year, next year, in a hundred years, in a thousand years, this will be attained. Peace will not be won by conquest or obliteration; it must be invented and constructed and maintained by endless effort, such as is now given to the perfection of war."

All good wishes.

Very sincerely,

ANGIE LEA CASE WAIT,
Member of the President's Committee for Traffic Safety.

Resolution of Catholic War Veterans Against Reduction of National Guard Strength

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mr. MULTER. Mr. Speaker, the New York Democratic delegation has heretofore protested to the Department of Defense the proposal of that Department to reduce the strength of the National Guard. I commend to the attention of our colleagues the following resolution adopted by the Kings County chapter of the Catholic War Veterans on April 25, 1958, recording that organization in opposition to the proposed cut:

"RESOLUTION 32

"Whereas the Department of the Army is proceeding with plans to reduce the Army National Guard strength by approximately 30 percent for the fiscal year 1959; and

"Whereas the House Armed Services Committee, following 2 weeks of hearings, unanimously adopted Resolution 1—which provides for maintaining the strength of the guard for the fiscal year 1959 at the current 400,000 for sufficient funds for an input of 55,000 nonprior servicemen into 6 months' training, and directed that the revised troop basis for the Army National Guard be developed with the approval of the States and Territories; and

"Whereas the proposed reduction will require the discharge of 1,700 full-time employees of the guard and the elimination of 5,000 officers and warrant officers, the great majority of them highly trained in military skills; and

"Whereas the loss of these officers constitutes a writeoff of a valuable national resource and military skills at a time when the Pentagon is pressing for an increase in pay to attract and retain such competent personnel; and

"Whereas the proposed reduction would effect a wholesale elimination of units who are a vital part of the Nation's trained Reserve force, and a writeoff of millions of dollars invested over the years in the training of these units, and would adversely affect the security of our country, especially in these uncertain times; and

"Whereas the economy of the communities where National Guard units would be eliminated will be adversely affected: Now, therefore, be it

"*Resolved*, That the Kings County chapter, Catholic War Veterans go on record as opposed to reduction in the strength of the Army National Guard for the fiscal year 1959 and that the recommendations of the House Armed Services Committee—to maintain the strength of the guard at 400,000 for the fiscal year 1959, to allow sufficient funds for the input of 55,000 nonprior service men into 6-months training, and that any revised troop basis for the Army National Guard be developed with the approval of the States and Territories—be adhered to by the Department of the Army; and be it further

"*Resolved*, That copies of this resolution be forwarded to the State and national departments of the Catholic War Veterans for concurrent action."

The above resolution was unanimously adopted by the Kings County chapter, Catholic War Veterans, at a regular county chapter meeting held at room 4, Boro Hall, Brooklyn, N. Y., on Friday evening, April 25, 1958, and is being forwarded for your information and guidance.

MARTIN J. O'REILLY, Jr.,
County Commander.

Postal Rates and Pay

SPEECH
OF
HON. TOM MURRAY
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. MURRAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following summary:

SUMMARY OF CONFERENCE REPORT—MAJOR POINTS

Postal pay: 7½ percent increase for all postal employees except level 20; temporary cost-of-living increase of 2½ percent for levels 1 through 6; 1½ percent for level 7; average increase of 10 percent; retroactive to January 1, 1958. Cost: (1) Annual, $265 million; (2) retroactive, $96 million (5 mo.).

Postal rates, revenue to be derived: Approximately $550 million when all rates are in effect.

First-class mail: Letters from 3 cents to 4 cents; airmail from 6 cents to 7 cents; postal and post cards from 2 cents to 3 cents; airmail post cars from 4 cents to 5 cents—effective August 1, 1958.

Second-class mail: Reading portion: Three 10-percent increases, first increase effective January 1, 1959.

Advertising portion: Three 18-percent increases, first increase effective January 1, 1959.

Minimum rate per piece: From one-eighth cent to one-fourth cent on January 1, 1959; to three-eighths cent on January 1, 1960; and to one-half cent on January 1, 1961. No increase on nonprofit, and so forth, organizations or for classroom use.

Controlled circulation: From 10 cents per pound for under 8 ounces and 11 cents per pound for over 8 ounces to a uniform 12 cents per pound, regardless of weight.

Third-class mail: Individual items—weighing less than 16 ounces—2 cents to 3 cents on first 2 ounces and 1 cent to 1½ cents on each additional ounce, effective January 1, 1959.

Books and catalogs: 2 cents to 3 cents on first 2 ounces and additional ounces; 1½ cents for each additional 2 ounces to 1½ cents for each additional ounce, effective January 1, 1959.

Bulk rates: Pound rate from 14 cents to 16 cents on circulars and merchandise, effective January 1, 1959; books and catalogs not increased. Minimum per piece rates from 1½ cents to 2 cents January 1, 1959, and to 2½ cents on July 1, 1960; bulk mailing fee increased from $10 to $20; odd sizes and shapes from 3 cents to 6 cents; no increase on nonprofit, and so forth, organizations until July 1, 1960, when the per piece minimum will be increased from 1 cent to 1¼ cents.

Books: Increased from 8 cents on the first pound and 4 cents on each additional pound to 9 cents on the first pound and 5 cents on each additional pound; extends rates to certain additional material. Continues existing library book rates and extends them to certain additional material.

Miscellaneous: 4-percent leeway before Postmaster General petitions ICC for increases in parcel post rates. Retirement contributions considered as a postal cost.

Mr. Speaker, I urge the adoption of the motion to approve the conference report.

Hermann B. Deutsch—Journalist, Author, Broadcaster, Raconteur, Gourmet, Outdoorsman, and Citoyen Extraordinaire

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. HÉBERT. Mr. Speaker, I was privileged last week to attend a testimonial dinner honoring Hermann B. Deutsch on the occasion of his 40th anniversary as a member of the repetorial staff of the New Orleans Item.

Forty of Mr. Deutsch's oldest friends were there to pay him homage on his 40th anniversary.

I was particularly grateful to be included in chosen 40 as Hermann Deutsch and myself started in the newspaper game in New Orleans almost simultaneously. The difference between us—and our ages—was that Hermann Deutsch was already a seasoned reporter when he became associated with the New Orleans Item and I was still in high school when I began writing sports for the Times-Picayune.

During the course of the years we became rivals in the field of news reporting and then competitors in the arena of political reporting. During those years we fought each other with every weapon at our command. There were no holds barred. It was our job to get the story and get it first and "damned be he who first cried, 'hold enough'." During all those years of rivalry we always had a respect for the other's ability which respect

caused to be cemented a personal friendship which has never sagged.

On the occasion of Hermann Deutsch's 40th anniversary I was particularly privileged to deliver to him a letter of felicitations from the President of the United States. It was a well-merited and well-deserved honor.

The things you should know about Hermann Deutsch and his career are best told in an editorial from his own newspaper, the New Orleans Item, and a story by one of his colleagues, the very able and competent Thomas Sancton, an author and splendid in his own right.

Under leave to extend my remarks, I now insert these two articles which so eloquently tell the story of Hermann B. Deutsch—journalist, author, broadcaster, raconteur, gourmet, outdoorsman, and citoyen extraordinaire.

"I Write as I Please"

The remarkable Mr. Deutsch—

How else can one sum up the abilities and the achievements of Hermann Bacher Deutsch, who this month marks his 40th year on the Item?

How else does one convey the astonishing capacity of one man to do so many things so well—whether it be writing or gardening, cooking or broadcasting, fishing or story telling, hunting or long-distance swimming (at which he once set a world's record)?

Hermann Deutsch's four decades on the Item are an exciting kaleidoscope of Louisiana and national history.

They embrace, as he himself noted some years ago:

"Two world wars, the coming and going of a prohibition interlude, the advent of women's suffrage, the final achievement of flood control over the Mississippi, the decline and fall of New Orleans' ancient political bossdom, the birth of radio and television, consignment of the city's legalized district of prostitution to the same limbo which earlier had received the Louisiana lottery, the genesis and dissolution of the Huey Long era, the flaming skyrocket rise of the Klan menace and its dark, sticklike disappearance."

On another occasion he observed that he also had covered the writing of Louisiana's 1921 constitution; the hanging of six men from the same gallows in a single execution; countless regular and (truly) extraordinary sessions of the legislature, Armistice Day celebrations, yacht races, doll dressing contests, murder trials, a Eucharistic Congress, the New Orleans visits of three Presidents, levee crevasses, and the award of prizes in a school essay contest.

Hermann Deutsch is first and foremost a great reporter, a distinguished member of the breed to whom the story is the thing, without regard to time or hardship in chasing it down.

At 69, he looks at today through today's eyes. His curiosity is undiminished. He yearns for new horizons, new adventures.

Would he like to go to sea on an aircraft carrier? He would and does. Would he like to hop to Europe or Latin America? He would and does. And through his phrase-turning, his readers go along too.

Did we say the remarkable Mr. Deutsch? It really should be the remarkable Dr. Deutsch or Professor Deutsch. For there is a doctorate of philosophy in biology from the University of Chicago and a spell at teaching in a West Virginia college.

"I Write As I Please" is how Hermann titled his daily column which he began in 1949. (He had been associate editor since 1942, then chief editorial writer after the late Marshall Ballard's retirement.) And he does write as he pleases. In the Item and elsewhere.

He has had more pieces than one would want to count in the Saturday Evening Post, Cosmopolitan, Esquire, Collier's, and, even prior to his New Orleans days, in the late Literary Digest and such now-forgotten publications as Every Week and Illustrated World. He has written books—and has two movies to his credit.

He's a man with formidable convictions, a massive fund of information, a willingness to debate, and strong lungs. With Hermann Deutsch around, there's never a dull moment. And, come to think of it, in a newsroom that's the way it ought to be.

Deutsch: 40 Years on the Item

(By Thomas Sancton)

Forty years ago this past Saturday, Hermann Deutsch—having arrived by paddle-wheel steamboat at a Mississippi landing several seasons earlier—walked into the Item office and found his destiny as one of modern journalism's great and enduring talents.

How does one describe the life and works, the ideas, the personality, of a man who for 40 years has pounded out millions of words on the dramatic and vivid interests of his life—millions of other words on his keen observations, his travels, his memories, his own beliefs, his deepest insights?

It would take a book—a large one, many faceted. In this space let is simply be noted how Hermann Deutsch came to New Orleans in 1915 and to the Item in 1918—a brilliant, aggressive youth who with a buddy, Don Higgins, hit town with some vague plans to "travel around the world."

One day recently, strolling with the interviewer along the shaded Metairie streets where Deutsch lives, he told how the journey started.

It began in Chicago, Higgins, just graduated from the University of Wisconsin, and Deutsch, fresh out of the University of Chicago, made the step which must be every cub's first step. They entered a newspaper office, approached the Olympian editor—gulped—and then asked for a job. The paper was the Chicago Journal.

The editor (cunning rascal) told Deutsch and Higgins, little realizing both were men of talent, there was but one job open; and they would have to fight for it.

For days thereafter they beat their brains out competing for the single job. They would cast malevolent glances at one another across the desk. Then one day—suddenly—they made their separate peace. They decided to share the job.

The work paid them a total of $15 a week. With two other roommates, each earning about the same amount, their pooled incomes made possible a princely way of life. The century was young. Money was really money.

Then, one day, it came—the wanderlust.

Deutsch and Don Higgins gave up their Chicago work and started south, to sail from New Orleans for a voyage around the world. They traveled by train to St. Louis, to catch a steamboat southbound.

There, however, they learned that the storied Mississippi steamboats had come on bad times. Indeed they had all but vanished The next passenger steamer south would not leave St. Louis for 17 days.

So the wanderers decided to spend the time on a side adventure.

Deutsch and Higgins caught a train to Watertown, downriver, then took the first beckoning road that led into the Ozark hills. At night they rented rooms from natives of the hills. It was a world of incredible discovery for two youths from the cement canyons of Chicago.

They met some old-timers in the mountains, who spoke like patriarchs of Abraham's days, and others who spoke like rubes on a Chicago stage.

Hermann Deutsch, years later, was to become a marksman of rare skill, a wingshot worthy to walk the dove and quail brush with the best hunters in the Deep South.

But he remembers still his astonishment at seeing long rifles on pegs above the fireplaces, and learning they were still used as regular hunting pieces.

Some, perhaps, were as old as the American Revolution.

"There was one old man who boarded us for a night," Hermann recalls, "who got down his long rifle as we talked of these things. It had an octagonal barrel. The old man said:

" 'I'm not much of a shot myself, because I flinch away from the flash. But my pappy, now, he could bark a squirrel at 100 yards.' "

Deutsch still recalls the amazement he and Higgins felt to realize they were talking to a hillman who hunted with a flintlock—long, long after the repeating rifle had ushered in the age of modern firearms, in the Civil War.

They returned to a river port, at the end of their unforgettable journey through the Ozark Mountains.

There they caught the southbound steamboat they had first seen almost 3 weeks earlier in St. Louis. The porter remembered them as the youths who had come aboard asking about passage south.

"It seemed the most natural thing in the world to him, apparently, that we should wait all that time to catch the boat," Deutsch said.

That was one of the many rich and subtle details of a changing world, a changing sense of time and purpose and leisure and outlook—that came to the youths as they moved down toward New Orleans between the high bluff banks of the Mississippi.

After switching steamboats farther down the river, they arrived here at a landing at Canal Street in a day when crude levees shored by rough timbers lined the waterfront. There were no modern docks.

"We were almost broke. I think Don and I had about $8 between us," Deutsch recalls. "So we ate our first breakfast here on a steamboat. Then we set out to explore."

It is hard to think of a time when Hermann Deutsch, who probably has put in type in 40 years as much authoritative eyewitness observation and accounting of personal experiences in Louisiana as has any journalist in generations—it is hard to think of a time when he set foot here for the very first time.

With Higgins he walked the first block along Canal Street. In the recent interview I asked: "Now, without the sentiment which the question almost begs to be expressed, tell me: Did you know from the first moment that New Orleans was your city?"

Hermann paused thoughtfully. Then he said:

"Yes, I think I did."

"As you left the river, what sight left the dominant impression on you, forever?"

"The Customhouse," said Deutsch.

The interviewer, remembering something else, then smiled at the mysteries of human taste and fashions.

"Forgive this beginner's presumption, but you do know that Mark Twain, in Life on the Mississippi, published in the 1880's, called that very customhouse the ugliest building in the world."

Deutsch, with a smile of unusual patience—Mark Twain of course being far removed from the field of disputations among living men—said:

"What Mark Twain saw as the ugliest building, I saw as one of the most impressive. And I believe that before I had walked half a dozen blocks out Canal Street I knew that New Orleans was my home."

Today, four decades later, he often defeats descendants of New Orleans founders on issues of New Orleans history and culture.

Hermann, who rushes to a rousing ink battle like a Viking with battleax, likes nothing

better than to be called a simpleton, to be villified by experts or called an ignoramus by an ignoramus.

This provides the opening for lively dispute. And no type of writing so rivets the attention of a reader—which is the instinctive goal of newsmen.

All these rousing and readible wars in the letters columns turn, usually, on the question of judgment. But the question is obscured, often, by Deutsch's opponents by charges of pig-headedness, or mossback prejudices.

But there are few people who ever worked with Deutsch who would be fool enough to call him a simpleton in the sense of a weak IQ. There are still fewer, doubtless, who would be inclined to gamble their own money in an IQ contest with Hermann Deutsch—or with any of his remarkable family, for that matter.

Hermann, for instance, long before his New Orleans arrival, had mastered the ability to write swift, expert shorthand. He had learned it in Cincinnati from "Old Man" Pittman himself, inventor of a basic school. On arriving in any new town, Hermann usually would drift to the local Underwood placement agencies which were flourishing in those days and, in routine fashion, he would be placed in a secretarial job—usually by the next day.

In New Orleans, he got his first job in this way at a big freight depot for a railway. This sustained him until a newspaper staff job opened. Higgins got a job eventually on a newspaper here. Both started their New Orleans careers in a newspaper era which often saw newspaper staffs crossing over like square dancers in a dosey-do line.

Deutsch worked at first for the Times-Picayune. Then he joined the States. He also did theatrical publicity work. In May 1918, Clarke Salmon of the Item sent for him.

"How much are you getting paid?" he asked the young reporter. The figure was $25. But the big issue, with the ambitious young Hermann Deutsch, was that no raises at all had come his way in a long time.

"I'll hire you for $35," said Salmon.

"I have 2 weeks' vacation coming to me on the States," answered Deutsch.

"I'll also give you your 2 weeks, beginning in a few days."

"I have a friend named Don Higgins, an excellent newspaperman," said Deutsch. "He would like to make a move, too."

"I know Higgins' work," said Salmon. "I'll hire the both of you."

That is how the Item's Hermann Deutsch, 40 years ago Saturday, joined the staff of this newspaper—where he was to pound out his millions of words; and to cast his own outline on the cultural horizons of the State; and to grow in commanding knowledge of politics, people, photography, sport, cuisine, geography—and just name it.

In time, also, he was to become indistinguishable from the newspaper he has served through more than half its own existence.

Nine years ago, he began to write his daily column. As associated editor, with long years of service in the grade, it never occurred to Hermann Deutsch to forbear to speak his own mind when the editorial page expressed policies he sometimes felt were unrealistic.

Unrealistic, however, is a genteel word for Associate Editor Deutsch's own salty blast-offs.

He has on occasion endorsed his own candidates; Eisenhower for one when the paper supported Adlai Stevenson. He has laughed scornfully on occasion at unrealistic projects cherished by the newspaper or by earnest and powerful groups—full educational TV, for one example; and, for other candidates or procedures of certain Jefferson Parish reform groups.

To some of his colleagues, one telling characteristic marks Hermann Deutsch now and forever as the craftsman who really cares. It is the sight of his studious concentration, his moving pen, as he goes wholeheartedly at the task of editing his own column—the painstaking scratching here; the writing in there; the change of a verb, an adjective: his trips to the dictionary, the atlas, the almanac to check his formidable memory.

Only those craftsmen who care chop away at their own work—whether it be in marble, paint, or the flimsy stuff of paper with lines etched by a pounded typewriter ribbon. Hermann cares about his work. He always did.

That is why, on his worst days as on the best, what he writes has indeed mattered.

It is the reason that, in 40 years, his written record in the columns of the New Orleans Item have piled up a Himalayan peak of information and it is why this record will serve future researchers, who need the accounts of such eyewitnesses and the opinions of such bold minds to write the basic histories of any time or place.

Let Down in Enthusiasm Over Our Education System's Improvement

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mrs. KNUTSON. Mr. Speaker, I have been wondering about the let down in enthusiasm over improvements in our educational system, an enthusiasm which had reached fever pitch in the nation-wide concern over our lag in scientific know how.

Last week I was very interested to see a thoughtful analysis of this let down by our able news commentator, Malvina Lindsay in the Washington Post of May 15. Under unanimous consent I include Mrs. Lindsay's concerned discussion of this strange apathy as follows:

IN SPUTNIK'S WAKE—SCHOOL APATHY

(By Malvina Lindsay)

The public, which so recently was aroused over sputnik and eager to mass produce scientists and start crash programs in education generally, now is showing waning interest in this undramatic and long-range activity.

Bills providing aid to school construction seem to be bogged down in congressional committees by partisan wrangling. And Members of Congress are receiving relatively little mail concerning them. Yet their mail was heavy when legislation relating to pay television was before Congress.

Also in many communities the drive to counteract this Nation's lag in education has been stalled or detoured by indifference or by group controversy.

Is it that American grassroots sentiment responds only to acute crisis? Is our emphasis on material values so great that only legislation relating to things moves us? Are we incapable of interest in long-range goals?

Excitement over sputnik could not have been expected to continue at fever pitch. Nor could all the earnest resolves that grew out of that fright retain their burning zeal. But more followthrough was to be counted on from a people that had been fully informed about the weakness of their educational ramparts.

Meanwhile the need for action grows. A study of school overcrowding made public yesterday by the National Education Association shows that about 300,000 city grade-school children are on half-day schedules, compared with around 250,000 2 years ago. More than half of urban grade-school children are in overcrowded classes. Testimony before a House Education Subcommittee showed that about 800,000 children in all grades were on half-day schedules.

Oversized classes are one of the major handicaps to discovery and development of talent, to maintaining of discipline, and to helping each child realize his potentialities.

If the public is unmoved by educational lacks under its nose, small wonder it is even more unmoved by what those lacks are piling up on the horizon, namely, loss to the totalitarian world of the battle of productivity.

Not only scientists, but persons highly trained in all walks of life will be urgently needed if the economy of tomorrow is to expand rapidly enough. By 1965 a 35 percent increase in numbers of workers in professional and technical fields will be required, the United States Department of Labor estimates.

Two House education subcommittees have just approved a $240 million, 4-year aid program to improve science and language training in elementary and high schools. A $260 million program of scholarships and loans for science and mathematics students has also been approved. But the basis for such programs must be laid in all-round improved teaching and facilities in elementary schools.

Controversy over feudal domain in one form or another is largely responsible for slowing up educational defense. The bogey of Federal interference with State educational affairs causes some opposition to proposed legislation. Meanwhile, many States are not able or willing to step up adequately their own expenditures for education. But the effects of a lag in education in any region soon permeate the whole national economy, since the fruits of ignorance, like those of talent, cannot be confined within State borders.

While many parents now are deeply concerned about half-day schedules, overcrowded classes and deteriorating instruction in the schools their children attend, they do not seem to be able to take the political steps that would promote action to change this. Then, too, educational legislation lacks highly paid lobbyists and well-organized pressure forces. It lacks glamour, tangibility, and attention-getting devices. It faces the same problem as American foreign policy—that of getting public support for its long-range needs.

The more discouraged proponents of a bold, dynamic educational offensive say that the best hope for it would be for the Russians to put a man on the moon or to announce that as a result of Soviet productivity every man, woman, and child would receive a big Zil car. There may be danger of such salvation coming too late.

A Poll Among Students

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, May 23, 1958

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include the results of a poll taken by Mr. Arthur A. Wolpin, head of the Department of Social Studies at Perth Amboy High School, Perth Amboy, N. J., among the students

in Problems of American Democracy on the questionnaire I recently sent to the constituents in my congressional district. I felt the results of this poll are of general interest.

The results of the poll follow:

YOUR CONGRESSMAN SHOULD KNOW WHAT YOU THINK

1. Do you believe that Soviet technological achievements indicate the need for greater expenditures for national defense? Yes, 187; no, 63; no opinion, 30.

2. Do you believe a need is indicated for greater Federal expenditures to improve the American education system? Yes, 234; no, 27; no opinion, 5.

3. Do you believe Congress should press for greater unification of the armed services in the Defense Department? Yes, 173; no, 75; no opinion, 32.

4. Would you favor complete unification of the armed services, putting all servicemen in a single uniform and reorganizing the Defense Department on the basis of strategic mission assignments? Yes, 33; no, 220; no opinion, 24.

5. Do you favor cuts in nondefense programs such as agriculture, water resource development, etc., in order to permit larger expenditures for national defense and scientific development? Yes, 38; no, 221; no opinion, 24.

6. Do you consider our overseas mutual security program an essential part of our national defense effort? Yes, 206; no, 22; no opinion, 49.

7. Do you favor President Eisenhower's reciprocal trade program? Yes, 91; no, 42; no opinion, 149.

8. If a choice had to be made between a balanced budget and providing adequate funds for national security, do you believe first priority should be given to national security? Yes, 190; no, 57; no opinion, 22.

9. Do you favor Federal legislation aimed at preventing the misuse of labor-management welfare and pension funds? Yes, 215; no, 23; no opinion, 40.

10. Do you believe that Congress should go beyond welfare fund legislation and attempt to police general union finances, election procedures, etc.? Yes, 94; no, 134; no opinion, 52.

Speech of Hon. Francis E. Dorn, of New York, Before the Legislature of the Republic of Costa Rica

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, May 23, 1958

Mr. VANIK. Mr. Speaker, it is with a great deal of pleasure that I include, under leave to extend my remarks, a speech which was made in the Spanish language by my good friend and colleague, the Honorable FRANCIS E. DORN of New York, before the legislature of the Republic of Costa Rica. Congressman DORN was recently designated a member of the United States delegation to attend the ceremonies occasioned by the inauguration of His Excellency Señor Don Mario Echandi Jiménez as President of the Republic of Costa Rica, held at San José during the week of May 7, 1958.

At a time when our official relations south of the border have been strained, it is extremely heartening that a Member of this Congress was able to make such a highly effective appearance before the Costa Rican Legislature. Congressman DORN, who was selected by the Speaker to represent the Congress of the United States during these important ceremonies, has rendered a service to his country which deserves our gratitude and our admiration. The fact that he was able to deliver his remarks in the Spanish language has left an impression upon our South and Central American neighbors which is indeed welcome at this period of stress in hemispheric solidarity:

I feel very close to Costa Rica, because my wife, who was born in Central America, looks upon your country as her second home, having recuperated in Costa Rica for 1 year from a serious illness in your salubrious climate and her love for your country and its citizens has become my love.

The glorious history of our two countries has evolved in both a traditional respect for the rights of man founded on equality and universal suffrage for all.

As our countries have a common love of liberty, so we have a common contempt of those who would tear down that liberty, and are united in a common stand of mutual protection and mutual understanding and mutual help against the common foe of us both, communism.

Although tired and weary from my labors in the United States Congress, I nevertheless felt that the importance of the Costa Rican inauguration warranted my taking the arduous nonstop trip from Washington to Costa Rica.

This immediately proved worthwhile from the moment when I was met at the beautiful new airport of Costa Rica by a delegation from this assembly. My heart was warmed by the cordiality of the greeting and the glow that was then enkindled by your representatives, and this has been constantly refired by your hospitality.

I will carry to the United States Congress and to the people of my country a "simpatico" in the form of a torch burning in my heart which will light similar fires in the hearts of the citizens of my country so that we will continue to work together forever in the common cause of true world peace.

Honor Representative O'Brien of Illinois

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 23, 1958

Mr. PRICE. Mr. Speaker, in an unprecedented action, the House, on Thursday, paid unusual and high tribute to one of its colleagues, the Honorable THOMAS J. O'BRIEN, of the Sixth District of Illinois. Through speedy and unanimous adoption of H. R. 12613, the membership of this great body showed its esteem for TOM O'BRIEN, and gave recognition to his fine qualities for leadership. The House determined that the lock and dam to be constructed on the Calumet River, Ill., between turning basin No. 5, at Lake Calumet, and the junction of the Little Calumet River and Grand Calumet River, such lock and dam to be located at approximately 134th Street, shall be known and designated hereafter as the Thomas J. O'Brien Lock and Dam.

It was my pleasure to call up this bill and request approval of it. I was elated when this request received unanimous consideration because it gave positive proof of the high esteem in which our colleague, TOM O'BRIEN, is held by the Members of this body.

Under leave to do so, I would like to include with my remarks an editorial which appeared in a Calumet City newspaper:

HONOR REPRESENTATIVE O'BRIEN

Perhaps the most unheralded man behind the tremendous progress that has been made on the Calumet-Sag Channel improvement project in recent years is Congressman THOMAS J. O'BRIEN, Democrat, Sixth District.

One of the pioneers in Congress—he recently marked his 80th birthday—Congressman O'Brien has taken a personal interest in the Cal-Sag project because of its tremendous importance to the industrial future and the workingmen of Chicago.

It was through O'BRIEN'S quiet influence that the entire Illinois congressional delegation was lined up behind the Cal-Sag project. He has consistently led the fight for appropriations year after year.

As a result of his efforts, the Cal-Sag project is well on its way to completion. Bids have already been advertised for a 1,000-foot lock to be built in the Little Calument River below Lake Calumet and will soon be asked for widening Acme Bend,' one of the worst bottlenecks on the waterway.

We think that Representative O'BRIEN should be given some permanent recognition of his fine work. We recommend that the new lock, construction of which will start by fall, be named the "Thomas J. O'Brien Lock" in honor of the Congressman.

It would be the kind of "thank you" that he'd appreciate.

Report of New York County Lawyers' Association on S. 3386

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1958

Mr. MULTER. Mr. Speaker, the committee on the Federal courts of the New York County Lawyers' Association adopted, on April 28, 1958, a report recommending against the enactment of S. 3386, which seeks to limit the jurisdiction of the Federal courts in certain cases involving the right of persons to practice law before State courts.

The report of the committee is as follows:

NEW YORK COUNTY
LAWYERS' ASSOCIATION,
COMMITTEE ON FEDERAL LEGISLATION,
New York, N. Y.

Report of committee on the Federal courts on S. 3386, which seeks to amend part IV of title 28 of the United States Code, in relation to limiting the jurisdiction of the Federal courts in cases involving the right to practice law.

RECOMMENDATION DISAPPROVAL

This bill would deprive all courts of the United States of jurisdiction of suits presenting the question of whether a State had properly denied to an applicant the privilege of practicing law in that State because of subversive, criminal or corrupt activities, or because of his refusal to answer any question of a governing body of the State relating to subversive, criminal or corrupt activities. The bill is an attempt to overrule the decisions of the Supreme Court in *Schware* v. *Board of Bar Examiners* (335 U. S. 232), and *Konigsberg* v. *State Bar of California* (353 U. S. 252).

The committee takes no position as to whether or not the aforesaid two cases were correctly decided. However, it disapproves this bill because of its belief that Congress should not attempt to overrule specific decisions of the court with which it disagrees by limiting the jurisdiction of the court. Further, the aforesaid cases were decided on constitutional grounds and it is doubtful that Congress may deprive citizens of the right to invoke the aid of the courts of the United States to protect their constitutional rights.

Respectfully submitted,

COMMITTEE ON THE FEDERAL COURTS.

Rewriting the History of Alger Hiss

EXTENSION OF REMARKS

OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 23, 1958

Mr. SHEEHAN. Mr. Speaker, it is interesting to note that certain apologists for the treasonable conduct of Alger Hiss are becoming more and more vocal in trying to delude the public into thinking that Hiss was wrongly convicted.

Apparently the American public is slated for a brainwashing for the purpose of making martyrs of such treasonable men as exemplified by Alger Hiss.

In order to put the Hiss situation in its proper focus, the Richmond News Leader, in its editorial of May 20, concluded with these words:

Eight of the 12 jurors agreed on conviction at the first trial; all 12 agreed at the second. And if history is not to be swallowed in clouds of smoky conjecture, that verdict, freely and fairly arrived at, will have to stand.

The editorial from the Richmond News Leader follows:

REWRITING THE HISTORY OF HISS

This is an interesting time for the student of history—an interesting time, and a horrifying time as well—for we live in an age in which history not only is being created; it is being corrupted as well. Little by little, we are seeing in our own time the truth of Matthew Arnold's bitter comment that reality often is swept away "on the breast of that huge Mississippi of falsehood called history." And we are seeing also that Emerson was right when he remarked that "there is properly no history; only biography."

Three examples serve to make the point. These are the histories, or biographies, of Joe McCarthy, Robert Oppenheimer, and Alger Hiss. The good that McCarthy accomplished, in awakening a drowsy Nation to the nature of Communist subversion, is firmly interred with the Senator's bones; all that lives after him is the evil of McCarthyism, and a more overblown evil never was spun out of thin air. So, too, but in a directly opposite direction, a myth of Dr. Oppenheimer takes form and substance; he is seen now, as he lectures on ethics at Harvard, the innocent victim of witch hunts—a virtuous man, cruelly wronged.

What prompts these reflections is a new book on the Hiss case, The Unfinished Story of Alger Hiss, by Fred J. Cook. More than 8 years have passed since a jury convicted Hiss of perjury and Judge Goddard sentenced him to 5 years' imprisonment, yet the effort continues to make of Alger Hiss a martyr to the liberal cause. The smokescreen still mounts, and the haze, obscuring fact and recollection, so distorts reality that reality is fast becoming lost.

Mr. Cook is a reporter for the New York World-Telegram and Sun. His book is an elaboration of an article he wrote last year for the Nation. His thesis is that there can be no compromise in one's view of the Hiss case: "Either Alger Hiss was a traitor to his country and remains one of the most colossal liars and hypocrites in history or he is an American Dreyfus, framed on the highest levels of justice for political advantage." Oddly, Mr. Cook does not come right out and state his conviction that an innocent Hiss was framed, but in a long peroration at the close of his book he submits that only a person who can believe the unbelievable could believe otherwise.

On what foundation is the glowing innocence of Mr. Hiss kindled up? The bonfires arise from perhaps the flimsiest mass of misstatement, innuendo, insignificant haggling, and blind surmise ever assembled. To read Mr. Cook, everybody was against Alger Hiss from the beginning; Whittaker Chambers was a liar; Judge Goddard was prejudiced; the jurors were denied essential evidence; and Hiss' only faults were that he naturally found it impossible to remember remote events precisely, and, further, that he left a cold and lawyerlike impression on the jury. All this is put forward with such an air of objectivity that the inattentive reader is bound to be impressed.

Those who insist upon a decent respect for truth will be amazed to learn from Mr. Cook that: "There can be no doubt that Hiss fought his battle for vindication from the start in a hostile atmosphere. * * * The scales against [Hiss] were weighted by a heavily partisan press which accepted without question * * * the official pronouncements of the House committee regarding Chambers' reliability and Hiss' evasiveness."

This is what we mean by rewriting history. For the facts were, of course, that at the outset all the advantage was on Hiss' side and none was on Chambers' side. Far from a "hostile atmosphere," Hiss enjoyed all the sympathy, adulation, and influential support that flows naturally to one of his position and background. Major newspapers, such as the Washington Post and the New York Times, were wholly in his camp. It was Hiss, not Chambers, who could command two Supreme Court Justices as character witnesses. To the President of the United States, the prosecution of Alger Hiss was no more than a red herring; the Secretary of State would not turn his back upon so stanch a friend. It was not until Hiss damned himself by evasiveness that segments of the press, one by one, began reluctantly to confess the possibility that Chambers might be telling the truth.

Throughout his book, Mr. Cook magnifies small points and minimizes large ones. He spends pages belaboring Chambers' frequent assertion that he broke with communism in 1937, when actually Chambers was still engaged in espionage through March of 1938. It does not seem to have occurred to Mr. Cook that a devout Communist's break with his party is not essentially different from a devout churchman's break with his faith. As Mrs. Chambers was to testify, her husband's break did not come at a special hour—it was a long time in coming and thought out very thoroughly and suffered through, and he finally broke. But if one is to haggle over dates, it is worth recalling that in his very first appearance before the House committee on August 3, 1948, Chambers began by saying, "It is 10 years since I broke away from the Communist Party." He did not say 11 years; he said 10 years, and that was before the pumpkin papers, relating to events in the early months of 1938, were to appear.

This niggling, lint-picking approach to the testimony manifests itself in many other ways in Mr. Cook's brief. Thus he charges Chambers with embellishing fact by testifying that Mrs. Hiss once had pointed out a road near Paoli down which their farm lay. Actually, Mr. Cook goes on to say, Mrs. Hiss' father lived in a commuter's home "that only fancifully might be called a farm."

The fact of this very minor matter is that Hiss himself testified before the House committee, when the point was under scrutiny, that "I suppose it could be called a farm." To the ordinary reader, or juror, the impression emerges of truthful testimony on Chambers' part. One sees Mrs. Hiss, on this drive, pointing down a road: "My father lives down there; he has a little farm." And Chambers responds, perhaps, with some comment that he hopes to have a farm himself one day, and the incident catches and sticks in his memory, and emerges a decade later under committee examination: "She once showed me while we were driving beyond Paoli the road down which their farm lay."

The case against Alger Hiss was built not only on the dramatic evidence of a Woodstock typewriter; it was also built on the cumulative foundation of a hundred such small points and details. In the end, it was this array of tiny arrows that pointed overwhelmingly to Hiss' guilt. Eight of the 12 jurors agreed on conviction at the first trial; all 12 agreed at the second. And if history is not to be swallowed in clouds of smoky conjecture, that verdict, freely and fairly arrived at, will have to stand.

Tough, Speedy SEC—Slaps Three Wrists, 2½ Years Late

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1958

Mr. MULTER. Mr. Speaker, the following article by Leslie Gould, which appeared in the New York Journal-American of May 9, 1958, is worthy of the attention of our colleagues, and especially of the congressional committees having jurisdiction over this agency:

TOUGH, SPEEDY SEC—SLAPS THREE WRISTS, 2½ YEARS LATE

After a big furor a year ago, and 30 months after the complained-of deed, the SEC has slapped on the wrist three brokerage firms—one a member of the stock exchange and a second a member of the American Stock Exchange.

This is the Crowell-Collier bond case of the summer of 1955, where a favored few on a deal cooked up by the Stock Exchange firm made a fast 80-percent profit.

This was done by handling the deal initially as a private placement and therefore

not subject to SEC registration. The bonds were convertible into stock at prices substantially below the market.

EXCHANGE FIRM INVOLVED

The SEC held long public hearings 18 months after the fact and now, more than a year later—more than 30 months in total elapsed time—the SEC hands down its decision. This is that the deal violated SEC rules.

As punishment, the SEC has suspended the three firms from the National Association of Securities Dealers—the NASD.

The Stock Exchange firm which negotiated the deal with Crowell-Collier—Elliott & Co.—is suspended for 20 days, beginning May 19, from the NASD. This was the stiffest penalty.

PENALTIES MEAN NOTHING

The other 2 houses—Gilligan, Will & Co., American Stock Exchange member and specialists in the Crowell-Collier stock—and Dempsey & Co. of Chicago—are suspended for 5 days.

This punishment means nothing. The Stock Exchange and the American Exchange see no reason for disciplinary action against their two members, saying the case involves only SEC rules and not rules of the exchanges.

ONLY NASD AFFECTED

The firms for the period of suspension are barred only from certain NASD privileges, such as participation in underwritings and the purchase of over-the-counter securities from other dealers under the public price.

In the over-the-counter market, dealers make their profit in the difference between what they pay another dealer for the securities and the markup to the public. This in general is about the same as existing commissions on the exchanges, although it can be larger.

Under the suspension order, the activities of the firms in the listed market—the exchanges of which they are members—are in no way restricted.

So, the whole business means very little. The SEC might better have "stood in bed" on this one.

SEC DOES THE USUAL

The original $3 million offering of Crowell-Collier bonds provided for conversion into stock at $5 a share, which was $4 under the then market for the shares on the American Stock Exchange.

Crowell-Collier got into difficulties about a year after the bond financing, and the stock from a high of $10 in 1955 sold down to $3.75 late in 1956. The low in 1957 was $5.50. The stock has recovered this year to around $10.

The SEC's Washington office did its usual stunt. It handed out releases on its disciplinary action hours before its decision reached the parties involved.

One of the worst features of this very questionable operation is that the SEC says nothing about the tipping of the stock around the time of the bond sale, which made it possible for the favored few to make a handsome, quick profit.

The Steamship Lines Help To Sink the Plywood Hoax

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. PORTER. Mr. Speaker, it has been my experience, in the business world and in politics, that men and organizations directly concerned with the financial operations of any given situation have the keenest sense of dangers which might harm their financial interests. The region of the wallet is a most sensitive area.

Therefore, I was delighted to receive today a letter from Mr. Ralph B. Dewey, president of the Pacific American Steamship Association of San Francisco. Mr. Dewey's association is made up of the principal American-flag dry cargo carriers operating on the Pacific coast. Their ships carry Japanese hardwood plywood to American west coast ports and they carry back to Japan all the myriad goods purchased by Japan. Furthermore, two of the member lines have extensive lumber interests in the Pacific Northwest, so that the association had the benefit of their advice in formulating the firm stand which the association has taken against the hardwood plywood import quota bills sponsored by my distinguished colleague from Washington [Mr. MACK] and others.

The association states that its investigation discloses that "the demand for import restrictions on this commodity—hardwood plywood—is the work of a certain few who are using the opportunity to create a smokescreen and cloud the real root cause for the difficulties now encountered by the Douglas fir plywood industry—namely overproduction."

Under leave to extend my remarks, I include the followin letter to me from Mr. Ralph B. Dewey, president of the Pacific American Steamship Association of San Francisco:

PACIFIC AMERICAN,
STEAMSHIP ASSOCIATION,
Washington, D. C., May 23, 1958.

Hon. CHARLES O. PORTER,
House of Representatives,
Washington, D. C.

DEAR MR. PORTER: Having noted with interest your speech of April 24, 1958, which appeared in the CONGRESSIONAL RECORD, I would like to take this opportunity to make known to you the position of the Pacific American Steamship Association on the matter of import restrictions on shipments of hardwood plywood coming into the United States.

The Pacific American Steamship Association is a trade association representing the principal American-flag dry-cargo carriers operating on the Pacific coast. Member lines of this association, who operate vessels in the trans-Pacific trades, have expressed alarm over the introduction of H. R. 5964, S. 1598, and similar bills, which would establish import restrictions on hardwood plywood.

These member lines engaged in the trans-Pacific trades enjoy a substantial volume of inbound hardwood plywood, and of course, desire to preserve this trade. Because of that, we have investigated the reason for the introduction of this legislation, and were amazed to discover how absurd a proposal this legislation really is. The most obvious irrationality is the fact that imported hardwood plywood, most of which comes from Japan, is not at all competitive with the plywood industry in the Pacific Northwest, nor, in fact, in the entire United States. The threat of import competition to the United States plywood industry simply doesnt' exist. Because of our carriage of a considerable amount of imported plywood, our member lines are rather close to the Pacific coast lumber industry. In fact, two member lines also have extensive lumber interest in the Pacific Northwest, and thus this association has had the benefit of their knowledge of that industry and their comments on these proposed restrictions. In short, our investigation has disclosed that the demand for import restrictions on this commodity is the work of a certain few who are using the opportunity to create a smokescreen and cloud the real root cause for the difficulties now encountered by the Douglas fir plywood industry—namely, overproduction. To further indicate the irrationality of this legislative proposal, it is pointed out that Douglas fir is a soft wood, and the market for plywood of this type is entirely separated from the market for imported hardwood plywood, most of which is imported from Japan.

Japan is creating additional markets for products from the Pacific Northwest, much of which is carried outbound by our member-line vessels. Restrictions can only mean retaliatory measures by the Japanese, the ultimate result of which will mean loss of business to both this country and Japan and the loss of employment of our own people, both in the steamship industry and the lumber industry.

It goes without saying that international trade creates job opportunities and it is an established fact that about 7 percent of our total labor force is involved in some form of international trade. Less foreign trade means fewer jobs and fewer job opportunities.

In the past, this association has always favored increased reciprocal trade. It has done so because of the basic premise that we can't sell unless we buy. The steamship industry is dependent upon free international trade, and our costly expansion and ship replacement program is predicated upon the continued expansion of a stable world commerce. Further, our vessels are engaged exclusively in the trades to and from the continental United States. Developing new markets as well as maintaining present ones is essential to this industry, as is the stability of international trade both for imports and exports.

For these reasons, we request your immediate action to put to a complete halt the perpetuation of this paradoxical proposal.

Very truly yours,

RALPH B. DEWEY,
President.

The Impact of the Housing and Home Finance Administration in Florida and the Nation—Address of Albert M. Cole, United States Housing Administrator, at the Urban Renewal Conference, Orlando, Fla., May 9, 1958

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. CRAMER. Mr. Speaker, the Honorable Albert M. Cole, Administrator, Housing and Home Financing Agency, gave a very enlightening speech at the urban renewal conference in Orlando, Fla., on Friday, May 9. I also had the privilege of attending and briefly addressing this excellent meeting. There is so much valuable information on programs available to all the States and local communities in the Nation, Florida being an example of one of the States possible activities, that I believe inclusion in the RECORD of Mr. Cole's remarks is in order that other Members of the House might

have a bird's-eye view of the value of the HHFA programs.

In my own remarks to the conference I cited some examples in my own district where the program had proven most valuable. Included were: the $35,000 advanced planning loan to the Billsboro County Port Authority for long-range planning for development of Tampa Harbor; $68,000 in an advance planning loan to Pinellas County for sewage programing; and the approval of a workable program for the city of Tampa which is the first step in an urban renewal and redevelopment for public use program. Florida, of course, faced a problem as the supreme court of the State struck down the State redevelopment law as unconstitutional. This was referred to by Mr. Cole so far as it relates to property to be planned and developed for private use—but he also pointed out this decision does not prevent use of all the tools of HHFA so long as it relates to public purposes and uses. I voiced my opinion that many Florida communities have been asleep at the switch in making long-range plans for future development and in using all the tools made available through HHFA and other Federal laws, such as Public Law 660, and the Water Pollution Control Act providing 30-percent Federal participation in sewage treatment works. It was my since hope that the Orlando conference would awaken Florida out of its lethargy.

Florida is one of the fastest growing States in the Nation and as such it is essential that public-spirited citizens and public officials join hands in making long-range plans for proper development of the State—for provision of adequate roads, public buildings, parks, public parking, recreational facilities, sewage and waste treatment programs, slum clearance, police and fire protection, and carry out other public services and provide other public facilities—and to use every tool available to accomplish this. The same is true in many communities in other States throughout the Nation.

I believe Mr. Cole's remarks will be of value in assisting the people to meet this challenge.

ADDRESS BY ALBERT M. COLE, UNITED STATES HOUSING ADMINISTRATOR, AT URBAN RENEWAL CONFERENCE, CENTRAL CHRISTIAN CHURCH, ORLANDO, FLA., MAY 9, 1958

Since this is an important meeting and I have to compress what I have to say, I am not going to burden you with any oratory. You can take it from me that any time a former Congressman decides to bypass oratorical effects he is really serious.

The representative of the Housing Administrator for the Southeastern region, which includes Florida, is, of course, Walter Keyes. He is the man you will want to go to with your problems.

Firstly, I'd like to explain how I plan to organize my remarks. I thought I would split them into two parts. In the first part, I'll discuss the nationwide situation—in other words, what is going on throughout the country with respect to the programs we are here to discuss—urban renewal, metropolitan planning, and others.

The second part I'll devote to Florida. In any case, we have to take a bird's-eye view of the whole in order to get the Florida situation in better perspective.

Now in giving you a brief overall picture of nationwide developments, I am going to use a device that has proved helpful in the past. I am going to ask you to imagine—and also to fix in your minds—that there are three problem areas. Loosely speaking, these are:

Suburban or metropolitan sprawl.
Municipal sprawl.
Downtown sprawl.

As for the first—suburban sprawl—here is the position:

We are on the way to creating a septic-tank suburban civilization—a maze of septic-tank suburbias. We are doing this because we are repeating, in principle, the mistakes we permitted in our cities and which we are spending billions of dollars to correct.

What is happening is, of course, a part of a great transformation—call it explosion—that is taking place in our living patterns.

Because our cities grew planlessly and in any case were unfit to handle our automobile way of life, people have been beating it out to the country. At least it used to be the country.

The green fields and the old swimming pond have been replaced by hot-dog stands, filling stations, superhighways, highway intersections, airports, outdoor movies, indoor skating rinks, and shopping centers.

These things have their place, but usually they are in the wrong place.

In many, if not most cases, there isn't a plan, or what plans there are aren't being implemented in relation to the whole. The financial cost of straightening out this mess is going to be enormous. And who is going to bear the cost? The taxpayers—you and I, our children and grandchildren.

One of our most important programs, known as 701, relates to this problem of urban sprawl. It is designed to assist metropolitan planning. It authorizes Federal financial aid on a matching basis to official State, metropolitan, or regional planning agencies for the planning of metropolitan and other urban regions.

Some 40 areas are now participating. Others are applying.

Problem No. 2 is urban or municipal sprawl. All of us know what has been happening in our cities. Antiquated codes, cock-eyed zoning—you might almost term it antizoning—automobile congestion; in brief, disorganization such as no successful business could or would tolerate—these things have reduced many municipalities close to bankruptcy.

You may remember that it was here in Florida, at Miami, that I warned municipalities that if they didn't start putting their house in order they would go bankrupt.

There is no need for me to tell you that a great reawakening, a process of reassessment has been taking place. All over the Nation cities are struggling to make up for lost time.

And why not? The money they have been losing has been their own. Consider the financial advantages of urban renewal, quite apart from any others.

Assessed values in one small New York city have risen from $18 million to $40 million in the last 6 years as a result of urban renewal activities. A west-coast city estimates an increase in value of one area from $29 million to $170 million.

Obviously, if I start to go into details about urban-renewal programs, we would be here not only all afternoon but all evening and probably all week. So I will just touch on a high spot.

The overall picture is that more than 500 urban renewal projects are under some form of Federal contract in some 300 cities, and by the end of this year, for the first time, the number in actual execution will be about equal to those in planning.

The third of the three problems is downtown sprawl. On account of the deterioration of municipal areas, the downtown business and shopping areas are no longer the centers of influence they once were. Tax revenues are declining sharply.

In 1930 the downtown core of Fort Worth produced 22.54 percent of the city's total tax revenue. In 1955 the figure was down to 11.03 percent.

In view of this growing problem, this administration has sent to the Congress a proposal for a new program to assist cities to fight downtown blight. It would authorize the Federal Government in effect to guarantee repayment of private loans for the purpose up to a total of $150 million.

* * * * *

So much for the national picture. Next, the Florida picture.

The position is that the Florida Supreme Court, in 1952, in the case of Adams v. the Housing Authority of the City of Daytona Beach, held the State redevelopment law to be unconstitutional. As a result of that decision Florida communities have been prevented from sharing in the full benefits of Federal programs which have been available to communities in other States.

Specifically, it has not been possible since 1952 for any Florida community to obtain Federal financial assistance for a title I project contemplating slum clearance and urban redevelopment and urban renewal if the project land is to be sold for private use.

I am well aware of all this. I have been following subsequent developments with interest. But let me interpolate that I haven't come to Orlando to tell Floridians what to do about a problem that is strictly their business.

As a Federal official my position is that there are certain Federal tools available to communities if they wish to make use of them. But if they don't wish to make use of them, or wish to use them only in part—then that's up to them.

As a matter of fact, there are eight States in the Union that for one reason or other do not have the necessary legislation to enable their communities to share in federally assisted slum clearance and related programs. Florida is 1 of those 8.

Actually, all I wish to do here today—all it is in my power to do—is to offer some factual observations based on the current situation. Certain things can be done in Florida as the law stands; certain things can't be done.

Here is the rollcall as it appears to me:

Point 1: Under certain conditions and with certain provisos a Florida community might be eligible for title I Federal assistance. That is assuming the project area to be acquired would be used for such purposes as parks, playgrounds, or public buildings. However, even here a court test might be necessary. The legal and technical questions that arise are such that generalities are quite impossible. All of this would have to be a matter for exploration.

Point 2: Participation in FHA section 220 mortgage insurance is possible in Florida. Section 220 is a special type of insurance under which FHA undertakes to insure home mortgages in areas which have become run down but which are to be redeveloped or rehabilitated with or without Federal assistance. It is available for both new and existing structures. However, there is one compelling requirement—that the community involved must have a workable program. This matter of the workable program is of a great importance. I shall return to it later.

Point 3: Participation in FHA section 221 financing is possible in Florida. This is designed to assist the relocation of families displaced by urban renewal activity or other governmental action such as highway construction.

FHA 221 financing is favorable, to say the least. FHA can insure 100 percent on mortgages up to $9,000 and they can run for as long as 40 years. The only cash requirement is $200, which may go toward covering closing costs and other expenses.

Here again a workable program is essential.

I am happy to announce at this juncture that section 221 financing has just been made available for 1,700 units of low-cost private housing in Tampa for displaced families. At least 1,300 of them are to be provided by new construction. I signed the certification just before I left Washington.

Needless to say, Tampa has a workable program.

Point 4: Participation in the section 701 planning program is possible in Florida.

We are authorized to provide grants to official State agencies for use in giving planning aid to communities of less than 25,000 population. Also under this program grants can be made available for metropolitan area planning.

Here I have another announcement.

The Urban Renewal Commissioner has just approved a Federal grant to the Florida Development Commission of $28,300 to assist seven Florida communities create comprehensive plans for their growth and development. These seven are: Cottondale, DeLand, Fort Walton Beach, Lake City, MacClenny, St. Augustine, and Winter Haven.

The grants will finance half the cost of the planning work. They are the first of their kind in this State.

Point 5: The program of public facility loans to State and local governments to finance the construction of public works, is available in Florida. Up until a few days ago five Florida applications totaling $1,437,000 had been approved.

Also available are advances from a revolving fund to defray the cost of planning various public works. Such advances are repayable without interest when construction starts or when the contract is awarded. Under the current planning program 11 Florida applications have been approved totaling $300,000. Under previous programs 141 other Florida applications had been approved.

Loans are also available to Florida institutions under the college housing program. There have been 16 approved loans so far for some fine colleges and universities. These involve $20 million in Federal funds.

Point 6 (and finally): Let me amplify my previous references to the workable program. This is a subject about which I have firm convictions. I have been close to it for some years.

The idea of the workable program came into being while I was Chairman of President Eisenhower's Advisory Committee on Housing Policies and Programs. That was in 1953. The Committee, you will recall, was engaged in forging a new approach to the problems of slums and blight, and our work culminated in the Housing Act of 1954.

As we discussed things in our Committee it was clear that the process of urban renewal must begin with the community itself. A community is the creation and reflection of its own people. But before a community can help itself, or can ask the Federal Government for assistance, it must first know itself. It must review its failings and its virtues candidly and purposefully. In short, it must devise a plan to set its house in order. This plan we call the workable program.

I won't go into details. The point I want to make to you is that a community that lacks a plan is deluding itself. The planless, aimless, slaphappy era is nearing its end. The slaphappy community collapses eventually under its own deadweight.

A program of action by and for the community itself is a necessity in the world of today, and of course it is doubly important to Florida towns and cities. As things stand your constitutional restrictions limit your participation with the Federal Government. This puts the job squarely up to you. So your job has to begin with your own planning, your own workable program in your community.

Yet quite apart from the question of possible Federal aid, the workable program concept has a much broader meaning.

It is a matter of community survival.

No more and no less.

Medal of Honor Award to Mr. H. Leslie Hoffman

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. ROOSEVELT. Mr. Speaker, last night Mr. H. Leslie Hoffman, president of Hoffman Electronics Corp., of Los Angeles, was awarded the medal of honor of the Electronics Industries Association at its 34th annual convention in Chicago.

Mr. Hoffman, whose firm is one of the outstanding small businesses in my district, has well earned this honor for his contributions to the betterment of the electronics industry, both nationally and on the west coast. It is a pleasure to include in the CONGRESSIONAL RECORD the text of his address to the convention:

STATEMENT BY H. LESLIE HOFFMAN, PRESIDENT, HOFFMAN ELECTRONICS CORP., AT AWARDS DINNER, ELECTRONIC INDUSTRIES ASSOCIATION, SHERATON HOTEL, CHICAGO, ILL., MAY 22, 1958, ON RECEIPT OF EIA MEDAL OF HONOR AWARD FOR OUTSTANDING SERVICE TO ELECTRONICS INDUSTRY

Thank you, Paul. Ladies and gentlemen, distinguished guests, and fellow members of EIA. I am deeply grateful to you and to all the members of EIA for judging me worthy of so high an honor. It is a heartwarming experience for both Mrs. Hoffman and me.

I am proud, very proud, to be permitted to join the ranks of people who have previously been awarded the medal of honor. It is an elite group, indeed, that includes the names of such men as General Sarnoff, Doc Baker, Bob Sprague, Les Muter, Paul Galvin, and Max Balcom. These are the men who have been in the forefront of the dramatic growth of our great industry. I only hope that I can measure up to the tradition that they have established.

This is a return engagement for both of us. Two years ago it was my signal pleasure to hand you the medal of honor. It was much easier to find the proper words for that occasion than it is tonight when I am the recipient.

Only a few years ago ours was a relatively simple business—close knit, compact, and concerned with making just one product. But almost faster than we could realize what was happening, it has mushroomed into an enormously complex industry. We now produce many products and work in widely diversified fields. Our products and services have become essential to the national security and have provided a more satisfying and comfortable life to millions of Americans in their homes, their offices, and in their leisure hours.

Many of us can remember when the electronics industry had a market volume of half a billion dollars a year. Yet last year our industry set a sales record of $7½ billion—15 times what it was only a few years ago—and thus it has become the fifth industry in manufacturing volume in the United States. It is significant that this growth was sparked by new ideas and new products—the end result of research. Seventy-five percent of today's employment is involved in projects which were born within the last 10 years.

Not long ago I suggested that the electronics industry might well become the economic barometer of our Nation because of its breadth, depth, and scope. Certainly there is no single industry in America today which holds, at one and the same time, the major responsibility in our military and scientific battle with Russia and the prime stimulant for a dynamic and growing economy.

Yesterday we were responsible only for originating and transmitting the voice of broadcast communications. Today we have not only the responsibility of giving our military systems voice but also we must endow them with sight beyond the horizon and guide them unerringly into outer space. We must build for these systems brains quicker and surer than any possessed by man, and muscles whose components must react in microseconds.

But important as this is, I would like to draw to your attention a responsibility that I believe is even greater perhaps than the one we have assumed in the defense of the free world through military strength.

Overnight the headlines have changeed from sputniks, Explorers and Vanguards to talk of recession and labor negotiations—and now back to sputniks. This focuses our thinking on the salient elements of our economy.

Our economy is predicated on the thesis that we can maintain the highest military standards and the highest living standards at one and the same time, without either being sacrificed for the other. This is no small order. It means that in the international race for superiority and survival, we have established objectives and responsibilities for ourselves which the Russian dictators have not recognized for the Russian people.

Thus, we find ourselves with two challenges instead of one—and they go hand in hand. They are so interwoven that we cannot—and must not—try to consider them apart. To put all of our effort into one at the expense of the other would be a catastrophe.

What are these goals?

The first is economic. It is the target we must reach if we are to keep the United States a healthy, virile entity, strong enough to give the free world the leadership it must have. To accomplish this, we must increase our gross national product from $430 billion of today, to $600 billion in the next decade.

Our second basic goal is to create and maintain a superior military establishment that will insure peace in today's uneasy world, with the ultimate objective of a permanent peace.

Both of these obtainable goals need to be reached without inflating our dollar still further.

You may notice that I put the economic, non-military goal first. I did so intentionally because we cannot support the growing strength of our military establishment without a sound, vigorous, and expanding economy.

The average factory worker in the United States, in April of 1958, received $2.10 per hour—8 times that of Japan's average of 26 cents per hour, and approximately 3 times that of France, West Germany, and England whose average is 72 cents, 68 cents, and 80 cents respectively.

Germany and Japan have made inroads into our once-strong economic areas. Why? For the past 10 years these dynamic and hard-working nations have devoted most of their best manpower, facilities, and efforts to creating new products and improved machines and techniques for civilian uses. They have been relatively free from the heavy burden of armaments. Their top scientists and engineers have concentrated

on non-military projects. Unfortunately, we cannot discount either their productivity or the quality of their products.

We face the prospect of losing our markets at home and abroad unless we can equalize these wage differences through greater productivity. We should not forget that our greater productivity, is the fountainhead of our higher standard of living. In order to increase our productivity, we need new tools, new techniques, and new products generated by commercial research and supported by long-range planning by both Government and industry on the commercial front.

Russia flatly and officially has challenged us on production. Nikita Khrushchev many times has said in public that the Soviets will outproduce the United States on all fronts, civilian as well as military. To support this claim, the Kremlin boast that more scientists and engineers are being trained and graduated into industry, business, and agriculture than in any other country. Heavy stress is being placed on research.

It is generally agreed that Russia's economy is growing faster than ours. Today our industrial productivity is still three times that of the Soviets. We are told, however, that most Russian industries are increasing production annually at the rate of about 10 percent. We are still ahead, but the only certain way to stay ahead is to accelerate our rate of growth.

The result of research can, many times, be not only spectacular but also a real stimulant to the economy. All of us here tonight are quite familiar with what the development of television did for our radio industry some 10 years ago and in the subsequent years. This success story, predicated on research, can be multiplied many times over in all phases of industry if adequate resarch is undertaken.

The time has come for Government to help industry expand commercial research substantially. Up to this time, industry has carried the commercial research expense alone—and in most cases only the giants can afford it. Now I believe it is eminently proper to ask the Government to share this task with us to insure that more research is done and that it is accomplished on a broader front.

We are told that the Government budget for fiscal 1958 was $3 billion for research and development, with $300 million going to nonmilitary activity. We do not question the propriety of spending such large sums on research and development to insure weapon superiority; however, we do believe it proper for our Government to invest in commercial research in order to insure a superior economy.

Our country operates on the incentive system. The harder we work and the more creatively we think, the greater our rewards will be. This is the basic concept of our free capitalistic economy. Without such an incentive to spur us, however, this country would not be what it is today.

I therefore propose tonight that the Government provide industry an incentive to improve and enlarge commercial research. I am suggesting that this incentive should be in the form of a tax credit that would apply to both product and market research. I am confident that with this incentive activity in commercial research would double in a short period of time. What that would mean in terms of fresh ideas, new products, greater business, and additional tax revenue to the Government staggers the imagination.

Now, that last point—additional tax revenue to the Government—is important. Before we explore this idea further, I want to emphasize that in suggesting a tax credit of this sort we are not joining the parade of those who advocate a reduction in taxes to simply permit more spending. We are making a sound business proposition—suggesting an investment on the part of both Government and industry from which both parties will profit.

What will the Government get out of it? I am confident that every million dollars invested by the Government on this program today will return several million in future tax collections.

Today we are exploring, with hope and some apprehension, the possibility of a planned disarmament. Certainly it is pertinent to raise the question, What new products and services can we develop in our civilian economy to replace the $40 billion per year that we are now spending on armaments? This is the type of long-range planning that Government and industry should be considering and implementing.

Let's consider for a moment a few possible avenues for commercial research.

Think for a moment what it would mean to all of us if we could develop an economical process for converting salt water into fresh water. Think for a moment what a stimulant the development of all of our new energy sources—nuclear, solar, and chemical—and the storage of these energies would be to our economy as well as to the world. A low-cost solar energy converter could do much to improve the economic and political conditions in the large population areas of Asia,

Think for a moment what doubling the amount of commercial research in electronics alone would do for education, transportation, communications, and health. Those more familiar with other industries could cite the effect of greater emphasis of research on commercial products for each of their industries. Two quick areas that demand immediate attention are aircraft collisions and accidents and deaths on highways.

However, let's take a look at our own industry as an example of the problem that I have been attempting to describe. I cannot recall a time when we did not have something which we could look forward to in our electronic consumer products. At the time we had radio we were looking ahead to television. At the time we had black and white we were looking ahead to color. We now have color—which has yet to reach its full marketing impact—but after color, what?

The television industry, the automobile industry, and the appliance industry cannot expand the basic economy significantly merely through replacement sales or by putting new dresses on old concepts. We need basic, new ideas and we need to expand our markets through the stimulation of planned obsolescence.

Our industry has many examples of new products resulting from research and its stimulating effect on growth and expanded employment. For instance, consider semiconductors. Here we have a new industry whose sales are forecast to be $1 billion by 1960. Significantly, it has not injured the existing tube industry because new applications and new usages were found.

Research costs big money. The days are gone when a single man like Lee deForest worked long hours in a shop to develop the audion tube. Today it takes research teams, but we continue to be in a position where only our big corporations can afford commercial research.

The reaction I have received from people I have talked to about this idea has encouraged me to spend considerable time with our tax people to develop a possible plan to implement this thought. I suggest these broad outlines merely as a place to start, and with no particular claim that it is the complete answer.

This is my proposal:

I propose that corporations be given a direct credit on their Federal taxes amounting to 35 percent of the amount spent on approved research and development of commercial products and services—this 35 percent tax credit to be over and above the fact that such expenditures would be recognized as normal business expense.

I propose that the approved expenditures for any company be limited to 1 percent of the corporation's gross sales and that the tax credit be limited to 35 percent of such expenditures or $500,000 each year, whichever is the lesser.

A quick example: Let's take a company doing $50 million a year and showing a profit. One percent of its sales would be $500,000. Assuming it spent this amount, or more, it would have a tax credit of $175,000. This research expense would be a normal business expense and, consequently, the Government would pay 52 percent, or $260,000. This would mean that the company would invest $65,000 of its own operating capital in this research project,

I have had our tax people do some research to determine just how much this potential tax credit would be. It is their estimate that it would amount to approximately $900 million—or roughly one-third of the total $3 billion budget that our Government allocated for military research.

A clear definition of how this tax credit is to be applied could be administered by the Treasury Department—the same as all other special considerations.

Obviously, there could be considerable difference of opinion as to what should be incorporated in the definition of commercial and industrial product and market research. I am confident, however, considering the stakes involved to the well-being of our Nation, that any of these differences can be resolved and that we can develop a clear, equitable, and effective program.

There is byproduct besides the advantages that expanded research would do to vitalize and expand our economy. I believe that if the proposal were to be adopted, a great number of small firms desiring and needing research, but without the facilities and manpower to pursue it, would turn, naturally, to the universities. Thus, we accomplish a much needed flow of funds into our colleges and universities. I need not expand on how significant it would be to stimulate a revitalization of our technical and marketing effort on commercial products in our universities.

I am confident that the basic idea I have presented tonight can and should be implemented and submitted to the proper people in our Government for study and adoption, not only by our industry but by all who qualify. I will be glad to elaborate on this suggestion tomorrow at the board of directors if they so desire. I have some illustrations as to just how this incentive-tax credit would be applied.

Let's review my proposal.

We are in a battle for survival—not just physically, but our way of life. We cannot fail. But to succeed we must have a strong and expanding economy. To accelerate the blood-stream of our economy, we need a continual flow of new products, new materials, new ideas, and new techniques from all phases of our economic life. Expanded commercial research is essential to accomplish this objective. Industry today is in a vise of rising costs and lower profit margins and cannot afford to expand its research without a new stimulant and a new incentive.

The incentive-tax credit that I propose tonight would provide this stimulant, not only for today but for a better world of tomorrow.

Let us in the electronics industry get tuned in with our own destiny. Our industry has become synonymous with the economy and the society of tomorrow. There is no other industry where expanded commercial research would mean as much to the economy as in electronics. We in electronics are the logical people to take the lead. Incentive commercial research is the keystone to a $600 billion economy.

"What Are We Willing To Give Up for National Security"—Bernard M. Baruch

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 23, 1958

Mr. PRICE. Mr. Speaker, the elder statesman, Bernard M. Baruch, has often spoken wise words to the American people and recently he has spoken wise words again. I agree with him utterly when he warns that we must think our present problems through and discipline ourselves to meet them by whatever actions are necessary.

Members of this House know that few of us here are by nature alarmists. But it is now literally true that we are challenged by a hardened, disciplined adversary and that we have not as a people taken the steps to repulse that adversary.

It is literally true that our people do not yet fully comprehend the nature of the diplomatic and potential military offensive we face.

Here it is not my purpose to assess blame. But clearly it is not enough for us to have a foreign policy that lacks support by adequate military strength. It is not enough for us to be second best in our total military posture. The kind of world we live in awards no security to the second best.

Earnestly I hope, Mr. Speaker, that in this session we shall be able to obtain clear guidance to our national needs, in their full scope, and that during this session the people shall be called to respond to these needs as they have been called clearly in other times of crisis.

Our people are not soft when it is explained to them why they must do things necessary for survival. For the preservation of our basic values they have sacrificed in the past, and they will do it again if clear and urgent words are spoken explaining what is required.

Under leave to revise and extend my remarks, I offer the following message from Mr. Baruch, printed in the American Weekly and taken from his book, A Philosophy for Our Time:

WHAT ARE WE WILLING TO GIVE UP?
(By Bernard M. Baruch)

We face a challenge. It was expressed well by an item I clipped from a newspaper back in 1947. It told of a boast made by a Soviet general that the Western democracies were bound to be defeated because they would not make the necessary sacrifices. The Western democracies prized their living standards too highly to accept the disciplines to put guns over butter.

The Soviet Government though, the general boasted, would force the sacrifices to mobilize. A lean, hungry, but mobilized Russia would overrun a Western world which couldn't bring itself to mobilize—in time.

Wherever we have won in the cold war, it has been where we made the necessary sacrifices. Wherever we have lost, it has been where we failed to give up what was needed to insure victory.

Again and again we have tried to evade this truth. We have acted as if an effective foreign policy could be laid down by making a fine speech or by proclaiming lofty aims.

For a time we seem to be getting away with this masquerade of words that some call foreign policy. Then something happens, as in Korea or Indochina, which strips off the mask and shows that our foreign policy is worth no more—nor less—than our ability to see that policy through with men and other resources.

And so it will always be. The acid test of any policy we lay down—and it is a test the Soviets will be sure to put us to—will always be our answer to one question:

What are we willing to give up to see that policy through?

Those who argue against universal military training, or readiness to mobilize, because these things infringe on the freedoms for which we are fighting, mistake both the nature of the cold war and the nature of government.

The only freedom man can ever have is the freedom to discipline himself. That is what we are fighting for, to maintain our right to self-discipline instead of having the disciplines of slavery and tyranny thrust upon us by a conquering enemy.

The test is not one of faith but of performance. It will not be enough to demonstrate that we believe in self-government. We must succeed in making self-government work, first by thinking our problems through, and second, disciplining ourselves to whatever actions may be necessary.

Think.

Discipline.

Those are the two weapons we must rely on in this crucial battle in man's long war to govern himself. If that battle is lost, the cause of self-government will sink into eclipse not to rise again until after a new dark age of worldwide slavery has been undergone.

To sum up, on this vital issue of man's ability to govern himself, we must now either put up or be shut up.

Back Door Swindle

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include herewith a timely article published by the I. U. D. Digest.

The quarterly I. U. D. Digest, published by the AFL–CIO, is without question one of the best journals of thoughtful opinion and careful issue analysis being published in the United States today. This distinguished journal is without peer in its field, and it enjoys an enviable reputation among journalists and publishers the country over.

This journal is free of any advertisers' pressures or prejudices, and it is not inhibited by any fear that it might justly offend powerful financial interests. As a consequence, it is frequently a source of good reporting on important matters which the editors of commercial publications regard as a little too delicate for fully candid treatment, or perhaps too delicate for mention at all.

The bill to create a new Financial Institutions Act, S. 1451, appears to be one of those exceptionally delicate subjects. In any case, whatever the reason may be, it is one of those subjects which has been generally overlooked and neglected by the daily press and by the commercial journals—and I might say peculiarly so, considering the importance of the subject matter and, let us say, the dramatic content, of this subject matter.

Some of the Members are not, as I understand it, readers of the I. U. D. Digest, and may have missed seeing the account of this banker legislation in the spring 1958 issue. This legislation is now pending in the House and I know that many of the Members who have not seen the I. U. D. Digest article would wish it brought to their attention. I believe, Mr. Speaker, they will find it highly readable as well as informative.

The article follows:

BACK DOOR SWINDLE

When a clever confidence operator swindles a few thousand people out of their hard-earned cash—say several hundred thousand dollars, or even a million—he is clapped into prison to dampen his enthusiasm for other people's money.

When a confidence game runs into hundreds of millions and is perpetrated by respectable bankers, it becomes a matter for remedial legislation. We don't even call it a swindle.

There is today pending before Congress a bill whose sponsors say has only the purpose of bringing under one cover all laws which relate to commercial banking. It passed the Senate in the first session of the present Congress. Virtually no one questioned that it provided genuine codification of the banking laws until it reached the House of Representatives.

But until Representative WRIGHT PATMAN, Democrat, of Texas, discovered that it contained some very peculiar provisions, there appeared to be every prospect that it would slide through the House untouched. PATMAN is a member of the House Banking and Currency Committee with a long-time interest in banking.

He discovered that this bill, called the Financial Institutions Act (S. 1451), went much further than codification of the laws. During many months of hearings he called this to the attention of BRENT SPENCE, Democrat, of Kentucky, chairman of the committee. But only after the hearings were over was the committee staff put to work digging out the substantive changes from existing law which the bill contained. Their report revealed that at least 117 substantive changes had been written into the Nations' banking laws without notice being taken of that fact—in the Senate.

Here appeared to be a misrepresentation of great magnitude—one that had slipped in by the backdoor. The bill had been represented by its sponsors as nothing really new. Now it was disclosed to contain a whole flock of new laws of far-reaching importance.

USURY LAWS

Outstanding among the basic changes in banking laws which this measure proposed was the repeal of the usury laws. Any repeal or weakening of usury laws strikes directly at labor. Protection against usury is of tremendous importance to all consumers, as well as to small business and farmers. Taking the lid off of interest rates at the consumer level means increased cost to buyers of automobiles, furniture, refrigerators, TV sets—in short, everything consumers purchase on time payments, including vacation travel.

It also means increased cost of farm machinery, office machines, and all kinds of equipment which farmers and small-business people purchase on time.

This hits the little man in front and in back. He pays more for consumer durable goods. The market for his products shrinks as a result of decreased consumer purchasing power, whether that market is trucks that must be sold or vegetables carried in those trucks.

Seldom has there been so flagrant a hocuspocus about any bit of legislation. When the history of pernicious lawmaking is written, the financial institutions bill of 1957 will go down in the book as a towering example of how badly our legislative system sometimes works—up to a certain point, at least. While there is little hope that the bill will be thrown out, there remains some hope that it can be amended to eliminate its worst features.

Take a glance at its legislative history.

If the sponsors of the banking laws were correct in saying that this is merely a codification bill, it would be quite unimportant—merely a housekeeping matter. It has been found highly satisfactory to the banking industry. Everyone in the Eisenhower administration concerned with banking has pronounced it exemplary. It slid through the Senate as routine business—nothing new in it.

LOBBY OPERATION

But why, if it is merely a recodification, did the American Bankers Association and the United States Chamber of Commerce put on a long, intensive lobbying operation to assure the passage of this bill? During the last year measures of enormous importance have come before Congress. Yet the financial institutions bill has never lost priority position on the calendar.

And it was only after hearings were closed in the House that the Banking and Currency Committee staff discovered that this bill had altered the law in 117 places. This staff report was dated March 7, 1958. It is too late now to question witnesses about all these changes.

In commenting upon this bill Representative PATMAN has said:

"The history of this bill violated all the rules of good procedure which democratic legislatures have learned over the last 300 or 400 years. Not the least such violation concerns the usual rule against putting substantive amendments to law into a general recodification. If the bill accomplishes nothing else, it proves the soundness of that rule. It dramatizes the point that when changes in law are mixed into a codification bill, these changes are likely to be enacted without sufficient public understanding of what is being done, and without sufficient understanding by the legislative body itself."

This was not an easy bill to understand. One has to look sharply at several clauses, and then consider them all together, to catch on to the very tricky game the bankers are playing. In any case, it appears to have been entirely too subtle for the newspaper reporters who have largely ignored the bill and its implications.

Take the business of knocking out the usury laws, for example. Section 35 (a), title I, would do that. Congressman PATMAN calls this section, which would actually promote usury, the Ebenezer Scrooge amendment, after the famous miser in Charles Dickens' Christmas Carol.

The history of the Ebenezer Scrooge amendment is quite intriguing. The event which appears to have triggered the financial institutions bill was a decision in the United States Court of Appeals for the Fifth Circuit entitled *W. E. Daniel and E. A. Dillard* v. *the First National Bank of Birmingham* (227 Fed. 2d 353). This decision in November 1955, followed by a supplemental decision in the same court the following January, electrified the banking world. However, the bankers didn't rush to the press. They kept their concern very quietly to themselves.

Some of them had been reaping unconscionable profits on what they thought was a loophole in the usury law. Upon the advice of their shrewdest lawyers, they had been charging interest on certain types of credit in excess of what the law allows. But it turned out that the loophole wasn't there. Billions (yes, billions) of dollars were involved.

CONDITIONAL SALES CONTRACT

The biggest bank in Alabama was found to be violating the usury law. Arguments in defense of an alleged loophole, contained in a brief filed by the Alabama Bankers Association, were slapped down by the courts.

What was this dreamed-up loophole?

The bankers had invented a new kind of credit paper since the Federal usury law was passed, and since most of the State laws were passed. This is called the "conditional sales contract." The usury laws mention such things as loans, discounts, extensions of credit, etc., and they also contain a phrase, "other evidences of indebtedness." But they do not mention the conditional sales contract.

So the bankers got to thinking, or at least hoping, that when credit is extended by means of the conditional sales contract the usury laws could be ignored. Their lawyers gave them support for going on this theory. And the penalty for ignoring the law was rather slight. Indeed, there is none unless the individual who has been overcharged discovers the fact and brings suit. In that case, the court can order a refund of double the amount of excess interest paid.

In the Daniel case, a couple of truck drivers were buying the vehicles they drove from a trucking company. The court held they had been required to pay usurious interest. The decision destroyed the imagined loophole of the conditional sales contract. In effect, said the court, usury by any other name is still usury.

So what were the banks to do? In every city in this nation there were national banks holding conditional sales contracts similar to those which had been declared illegal. These had been purchased from auto dealers and merchants of other goods and services.

At the end of December last, commercial banks held more than $6 billion in automobile paper alone. Some $4 billion of this had been purchased from dealers. The interest on this purchased paper, most of which was in the form of conditional sales contracts, amounted to hundreds of millions of dollars annually. After the Daniel decision this because hot money. What could the bankers do about this very touchy situation, which might result in a deluge of lawsuits if customers wised up?

The answer to their dilemma appeared to be to keep very, very quiet until they could get the law changed. And this they proceeded to attempt. But they haven't quite gotten there yet.

If the American Bankers Association had asked outright for a repeal of the usury laws, there is little question that Congress would have turned them down flatly. So they thought up a pretty good scheme. They would ask for a codification of the banking laws—no substantive changes, of course.

The person they picked to engineer this job through Congress was Senator A. WILLIS ROBERTSON, Democrat, of Virginia, who became acting Chairman of the Senate Banking and Currency Committee just as this legislation was brought forward. During the summer of 1956, ROBERTSON discovered that the banking laws of the United States never had been codified. He appears to have overlooked the fact that the United States Code consulted by every practicing lawyer codified the banking and credit laws, that a new edition is issued every 6 years, with supplements annually, and that this code for many years has satisfied the law profession.

Nevertheless, Senator ROBERTSON's assumption that the banking laws had never been codified was considered conclusive proof that codification was required instantly.

In August 1956 the Virginia Senator announced the appointment of an advisory committee, which was to work up the so-called codification. Senator ROBERTSON was very proud of his advisory group. On this 27-man committee, 22 were bankers. Each was either a president, vice president, or board chairman of his bank.

Rather naively Senator ROBERTSON remarked at hearings on his bill:

"During the past 24 years I have attended a lot of hearings in Washington, and I do not remember any in which as much concentrated wealth was represented as we have here this morning. For instance, the bankers alone represent over $250 billion of liquid assets. It necessarily follows that a lot of people in this country ought to be interested in their views on how to make their money safer, or how to make it more plentiful, or how to let those that have not got it, and I think they ought to have it, get it."

If there is any doubt as to why the bankers suddenly became interested in codifying the laws that govern their operations, it is made clear in the testimony before the Senate committee of the chairman of the advisory committee, Kenneth Cravens, a St. Louis banker, who, incidentally, did not put the usury amendment into the draft of the bill submitted to the subcommittee. It was only when the Senate committee itself reported the official bill that this bit of legislation came to light, although the committee gave no reason for its existence. In fact, no one has yet claimed fathership of this clause.

If we turn to the Senate hearings, however, we find mention of the amendment in the testimony of Cravens. He said it was his understanding that the purpose of the amendment was to overturn a ruling of the Supreme Court in *National Bank* v. *Johnson* (104 U. S. 271). He approved that purpose, but without giving a hint as to what the ruling was, or what the consequence of overruling it would be. More recently the Federal Reserve Board also has stated that the amendment would reverse the principle held in *National Bank* v. *Johnson*.

STATE LAWS

Now what is the principle evoked in this ruling of the Supreme Court of more than 77 years' standing?

First we should note that there are two kinds of commercial banks: national banks which are chartered by the Federal Government, and State banks which are chartered by the States. The Federal usury law names a maximum rate of interest at 7 percent. However, many States set no maximum for the kind of credit extended under conditional sales contracts. But the Federal statute applies to national banks only when there is no State law which names a different maximum rate. Hence, it aims to give protection only when the State law does not do so.

But the Alabama State laws did not apply to the conditional sales contracts involved in the Daniel case; so the Federal usury law did apply.

Now section 35 of the bankers' bill reverses the principle of *National Banks* v. *Johnson*. The new approach is essentially this: If State law sets no maximum for a particular kind of credit transaction, there will be no Federal law either. The practical effect is to repeal the Federal law in many cases. The laws of most States permit the banks to buy usurious paper from automobile dealers, furniture dealers, appliance dealers, loan sharks, and others, even though their laws do not permit the banks to make usurious loans directly to consumers.

Many bankers are too dignified or respectable to look across the counter at their customers and tell them that they are going to charge an interest rate of 15 percent, or even

more. Yet instances have been brought to light where 60 percent has been charged by dealers. And the bankers have no objection if the dealer, or someone else, drives such a bargain.

SMALL STATE PROTECTION

Unfortunately, only a handful of States have modernized their laws to establish firm consumer protection against exorbitant interest charges through the relatively new device of the conditional sales contract. The others still permit bankers to extend credit through the back door, through dealers and loan sharks acting as their agents.

The bankers say that strict enforcement of the Federal laws would place national banks at a disadvantage with State banks. They demand what they call parity treatment. Even the Federal agencies which are supposed to be most directly responsible for this bill approve the parity idea. The assumption appears to be that customers would prefer to go across the street to a State bank that would charge them higher rates of interest than are permitted to national banks.

The bill, nevertheless, seems inconsistent regarding its desire to create parity for State banks. Section 51, title I, says that the States cannot require any license of a national bank to do business in their territory. It says that State banking authorities may not examine national banks. It even goes further, declaring that State cannot have laws which interfere with the citizens of the State doing business with national banks. In other words, it places national banks beyond the reach of State law.

It is illuminating to note that when the bankers were writing these exemptions for themselves they included the new terms—such as conditional sales contract and installment consumer paper—which they did not recognize in the sections where they were dealing with what are supopsed to be prohibitions and limitations.

It is also extremely enlightening to note who will enforce the State laws. The answer is only a Federal official—the Comptroller of the Currency—so far as national banks are concerned. Section 3 sets up the Comptroller as supervisor of the national banks, and section 51 prohibits the States even from taking steps to find out whether or not there is compliance with their laws.

It is as if the Soviet Government said to one of its satellite countries:

"We are not going to interfere with your country. We are going to be democratic, and depend upon the laws your legislature passes. But we shall enforce them for you just so you won't be bothered. Indeed, we are not going to let you find out whether they are being enforced."

Furthermore, section 49 of the bankers' bill says that reports which the Comptroller makes when his agents examine the national banks are to be privileged. They are going to have immunity from subpena of any court.

There is another section of the bill which makes certain that the General Accounting Office will have no authority to audit the Comptroller of the Currency. It is based upon the strange practice which allows the Comptroller's office to operate upon fees which it collects from the banks. The Comptroller does not have to come to Congress for appropriations. And the bankers' bill declares that the fees he collects from them "shall not be construed to be Government funds or appropriated moneys."

PATMAN is today questioning whether there is any justification for giving the national banks immunity from State laws. They are 100 percent private, profitmaking business. He says:

"If the Federal Government can give national banks immunity from State law, it can give drugstores, automobile dealers, farmers, or any other business such exemption."

Nor does he see any reason why the Office of the Comptroller should be exempted from audit by the General Accounting Office as though it were owned by the private banks. He believes the Office of the Comptroller should be under budget control and audit review, as any other Federal office, and not operate under secrecy.

ROADBLOCK

The few points reviewed here are enough to stamp the financial institutions bill as an extremely tricky piece of legislation. Obviously it is not what it is claimed to be—merely a codification of present laws. It is sufficiently something other than represented to be called a first-class swindle—one that could cost the public hundreds of millions of dollars. Nor would the reader escape its effects upon the cost of everything he buys.

But it is also something more. In the never-ending battle to protect the public against the growing power of great economic concentration this bill would place blocks in the way of true banking reform—reform which would amend the usury laws in the interest of the public, reforms which would bring the operations of the Comptroller of the Currency under Federal supervision, reforms which would check the growing tendency of private bankers to swallow the Federal Reserve System.

The financial institutions bill should have a much more thorough public examination than either the Senate or House Banking and Currency Committees have afforded. Amendments now are being considered by the House committee. Some will be made. Eventually the House and Senate committees will go into conference on the measure. There is still a chance that its worst features may be eliminated.

Cystic Fibrosis Bill, H. R. 12331

EXTENSION OF REMARKS

OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mrs. KNUTSON. Mr. Speaker, yesterday I circularized my colleagues in the House, and also in the Senate, soliciting support of the bill H. R. 12331, calling for intensive research on the dread children's disease, cystic fibrosis. Under unanimous consent, I include here the letter, the bill, and descriptive material sent out yesterday:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 20, 1598.

DEAR COLLEAGUE: On May 5, I introduced a bill to provide for intensive research into the dread disease, cystic fibrosis, which takes its yearly toll in the lives of our children. This bill is H. R. 12331, copy of which is attached. I commend it to your attention, seeking your help in securing its passage before the end of this session of the 85th Congress.

The disease is hereditary and almost always fatal. Children may live through its horror until the late teens, but the agony of those years in addition to the heartsick burden of the parents standing helplessly by, creates one of the saddest pictures of our modern world.

Research into cause, transmission of the disease-bearing genes, relieving medication and possible cure, should be pursued with the greatest speed. The care of these children is constant, the medication very expensive. Hopeless as the living problems are, the parents face the future of heavy indebtedness as well. Surely, something must be done, and at the earliest possible time—to give these burdened families help—and hope.

The bill is pending before the House Interstate Commerce Committee. Any assistance you can give this bill will be most welcome. Of course, if you could see your way clear to introduce the bill, this would be of great assistance. In either case, you will have not only my gratitude, but also the gratitude of the helpless CF families all over the country.

Kindest personal regards,

Sincerely,

Congresswoman COYA KNUTSON.

P. S.—For additional information, may I refer you to the following items in the CONGRESSIONAL RECORD: March 20, page 4408; April 21, A3575 and A3565; April 28, A3836 and A3842; May 1, A4024.

A bill to require the Surgeon General to undertake a special research program with respect to cystic fibrosis

Be it enacted, etc., That the Congress hereby finds that the disease of cystic fibrosis constitutes a national health problem which is of exceptional gravity because (1) recent studies show its incidence to be far higher than heretofore realized, (2) it is a disease of children, with an exceptionally high mortality rate, (3) little is known about the disease, and (4) relatively little research is being conducted in this field. It is, therefore, the purpose of this act to provide for a special cystic fibrosis research program.

SEC. 2. The Surgeon General shall without delay develop and carry out a massive research attack on cystic fibrosis through a cooperative effort among the National Institutes of Health.

SEC. 3. In carrying out his duties under the first section, the Surgeon General shall—

(a) establish a special organization of the National Institutes of Health to which he shall assign responsibility for coordinating and expediting the research attack within and among the several National Institutes of Health;

(b) take such action as may be necessary to insure that research grants and research projects in the field of cystic fibrosis are given a priority consistent with the magnitude of the research problem presented by cystic fibrosis;

(c) make a concentrated effort (1) to discover research personnel competent to carry out research in this field, (2) to interest such persons in undertaking research in such field, and (3) to provide preliminary training necessary to enable persons with the requisite capacity to obtain the training necessary to enable them to conduct research in this field;

(d) devise procedures to discover avenues of approach which show promise of contributing to the success of the research attack provided for in the first section.

SEC. 3. There is hereby authorized to be appropriated the sum of $200,000 to be used for carrying out this act. The funds appropriated under this section shall be in addition to funds appropriated under other provisions of law for medical research.

THEIR "VALLEY OF THE SHADOW OF DEATH": CYSTIC FIBROSIS

WHAT IS CYSTIC FIBROSIS?

A disease that strikes children more frequently than such better known ailments as leukemia and nephrosis, cystic fibrosis affects their lungs and digestion.

In fact it strikes about 1 child in every 600 born. This means about 7,000 cases a year. About half of these unfortunate youngsters die before reaching 5 years of age. For the remaining victims, the long-range outlook is still bleak. Doctors are seeking a cure for this disease, as well as its cause, but they need help desperately.

WHAT ARE THE SYMPTOMS?

Chronic coughing, difficulty in breathing, pneumonia, a large appetite but small gain

in weight, and bulky diarrhea. There may be a swollen abdomen and club-shaped fingers.

WHAT PRODUCES THESE SYMPTOMS?

The basic cause of cystic fibrosis is still a puzzle. For some unknown reason the child's mucous glands do not function properly, but secrete so much abnormally thick mucus that the lungs and the pancreatic ducts become clogged and cannot function normally.

The child's respiratory system is disturbed when the mucus blocks the air pasages of his lungs. Chronic infection results and the child often perishes as his lungs can no longer overcome the persistent obstruction.

The child's digestive system is disrupted when the mucus blocks his pancreas, a small organ near the stomach. This prevents the free flow of pancreatic juices that are vital to healthy absorption of food and regular elimination.

WHAT IS THE TREATMENT?

To control respiratory infection, daily antibiotics are prescribed. Often germ-fighting, detergent solutions are sprayed into the air passages periodically in the form of a fine mist. Severe cases may require intermittent positive pressure breathing to help overcome severe obstruction.

To restore more normal digestion and bowel movements, the child is given enzyme preparations to replace the blocked pancreatic juices. A high-protein, low-fat diet, laced with large doses of vitamins, also may be advised. Sometimes surgery is required to open intestinal obstructions in newborn infants.

Mortality of cystic fibrosis, 1938–40, 100 percent of diagnosed cases died before adolescence; 1957, with early diagnosis and best care, 50 to 60 percent should reach adolescence.

IS THERE ANY QUICK DIAGNOSIS?

Yes, just recently a fingertip test was developed that makes diagnosing cystic fibrosis relatively simple. The child touches his hand or foot to a gelatinlike chemical solution, and if the high amount of salt found in the sweat of cystic fibrosis children is present on his skin, a yellowish imprint appears.

WHY IS THIS MALADY SO DANGEROUS?

As yet few people—even physicians—know much about this disease despite its being so deadly. All too often precious days, weeks, and even months pass by while youngsters are mistakenly treated for asthma, bronchitis, allergy, celiac, or other diseases.

Meanwhile, cystic fibrosis is sapping the little victim's vitality, choking off his air supply by clogging the lungs with thick mucus, at the same time it is starving his body by blocking the pancreas.

This ailment is taking more lives than necessary because the American people are not yet fully awake to its threat. Only relatively small amounts of money have thus far been raised for research into its cause and cure.

Average age of death with diagnosis and treatment, 1946, 2 years; 1956, 5 years.

The weapons now being used to hold back the disease are expensive, but cystic fibrosis is no respector of a family's income. Not contagious, it afflicts the offspring of parents who pass along the inherited tendency in their genes.

We cannot allow these unfortunate children to continue suffering. Dark as their future seems, we must keep them alive today because a cure may come tomorrow.

Help the National Cystic Fibrosis Research Foundation, and you will bring new hope to thousands of little children often doomed to lose their lives before they have really begun to live.

Contributions are tax deductible.

NATIONAL CYSTIC FIBROSIS RESEARCH FOUNDATION,
PHILADELPHIA, PA.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Address of Hon. Earl Warren, Chief Justice of the United States

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 26, 1958

Mr. WILEY. Mr. President, in these days when we hear so much criticism of the Supreme Court, I was very much pleased to read an address by the distinguished Chief Justice of the United States, delivered at the annual meeting of the American Law Institute on May 21, 1958. I think all Senators could benefit by reading the address, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS DELIVERED BY EARL WARREN, CHIEF JUSTICE OF THE UNITED STATES, AT THE ANNUAL MEETING OF THE AMERICAN LAW INSTITUTE, MAY 21, 1958

I am appearing before you not to make an address, but in accordance with custom to give you a report to which your great interest in justice entitles you. Furthermore, it is in anticipation of services to be rendered and because of the interest that has guided you through the years and which brings you from all parts of the country to Washington at the end of another year. Your continuous study of the ever-present problems facing our judicial system gives us the confidence to believe that your presence here and the results you are sure to accomplish will result in immeasurable benefit to the better administration of justice.

These words which were used in connection with the observance of Law Day, U. S. A., come to my mind:

"Freedom and justice for the individual—grounded in a just system of laws and protected by the courts—are the keystones of America's strength and its main claim to moral leadership in the world community. Perhaps better than any other facts of American life, the peoples of the world understand the meaning of liberty and opportunity for the individual citizen in this country."

This is a great concept. It challenges us to reexamine our profession and our system of justice to determine whether we are presently approaching or receding from this goal. High-minded concepts should indeed be our objectives, but the real test of our system is the extent to which our ideals are given actual concrete reality in the lives of our people. A system of laws—however just—that exists only in theory is a slim basis for a claim to moral leadership in the world community. It is a weak reed to support our national strength.

We must not forget that the role of the courts is not merely to define the right. It is also to administer the remedy. Unless the remedy is actually applied to persons and things, the right is a mere pious idea.

With these thoughts in mind, I must report that the delay and the choking congestion in the Federal courts today have created a crucial problem for constitutional government in the United States. It is so chronically prevalent that it is compromising the quantity and quality of justice available to the individual citizen and, in so doing, it is leaving vulnerable throughout the world the reputation of the United States for protecting and securing these rights and remedies.

We have made some progress, but the truth is that for every inch we gain, the normal healthy economic and population growth of our country extends a yard—leaving in its wake a whole new volume of litigation for the courts. As an illustration, since I last met with you the backlog in civil actions alone, in United States district courts, has increased by more than 5,000 new cases. The Federal judiciary is simply unable—as long as it lacks a sufficient number of judges, improved administrative and procedural techniques, and ample supporting staff—to keep pace with the dynamic growth of our country.

The business of the district courts is the best evidence of this. If we go back to the prewar year 1941—the first year that complete statistics were compiled in the administrative office—we can trace a veritable upward surge in the volume of litigation in our Federal trial courts.

You know, of course, that I am not referring to the criminal business of the courts because, despite its importance, it takes only a minor portion of the court time. Criminal business has priority and is promptly disposed of.

It is, rather, the civil business of the courts which has skyrocketed since 1941. In that year, 38,000 civil cases were filed, and an equal number of cases were disposed of. The pending caseload at the end of the year was 29,000. The time interval—the vital issue-to-trial period—during which time the case is entirely in the control of the court, was only 5 months for the average or median case. In that year, 1941, we had approximately 200 trial judges.

Today—16 years later—the number of cases filed annually has increased to 62,000, and the pending backlog of business totals some 66,000 cases. We have, in our Federal trial courts, 250 judges.

In other words, the numbers of cases filed annually in Federal district courts has increased more than 60 percent since 1941. The backlog of cases has risen more than 125 percent. But, in contrast, there has been but a 25 percent increase in the number of judges to handle the increased volume of business. This also applies generally to supporting personnel.

The inevitable result has been a most discouraging increase in the length of time for getting a case heard. From 5 months in 1941, the interval from issue-to-trial for the median case has risen to 9 months. At the present time, over 38 percent of all the civil cases in the Federal courts are subject to undue delay—that is, delay from 1 to 4 years between the date of filing and the time of trial. This delay is chiefly in our large metropolitan areas. For example, in Brooklyn the delay is 42 months; in Pittsburgh, 33 months; in Cleveland, 30 months; in New York City, 26 months; Philadelphia, 26 months; Milwaukee, 26 months; Denver, 20 months; Chicago, 18 months; and in San Francisco, 13 months. The Judicial Conference, as you know, has established an objective standard of 6 months for a normal case from the time it is filed until it is tried. Unfortunately, there were but 7 out of 94 districts which met the 6 months' standard in 1957. They include the Middle District of Alabama and the Southern District of West Virginia, and such populated areas as Memphis, Tulsa, Albuquerque, Dallas, and Fort Worth. The actual median case throughout the United States takes 12 months.

The median time interval in the courts of appeal from filing of the complete record to final disposition ranges from 3.8 months in the fastest circuit to 10.4 months in the slowest. This time must be added before final disposition of the case is reached.

The upward trend in the number of appeals seems to be leveling off, at least temporarily, but in the second, fourth, and fifth circuits the additional judges recommended by the Judicial Conference must be supplied or the growing pressure of business will surely force these courts behind.

Now, after the interested parties have exhausted the appellate procedure, they have a right to seek a review in the Supreme Court. That also takes a considerable period of time. Fortunately, because of our discretionary power on certiorari, the Court has been able to keep abreast of its work every year since 1928. While the work has increased very greatly since that time, in recent years the flow of cases has been somewhat uniform.

The number of cases docketed in the Court during the past year has continued at the same high level of the preceding 2 years. As of May 19 there were 1,013 cases on the appellate docket and 781 cases on the miscellaneous docket, an increase of 25 as of the same time last year. There have been 154 cases argued before the Court compared to 145 in the preceding year, an increase of 9. On May 19 we had disposed of 1,391 cases from both dockets, compared to 1,380 at that time last year. On the appellate docket 567 petitions for certiorari have been denied and 90 petitions have been granted. On the miscellaneous docket 571 petitions for certiorari and applications for leave to file extraordinary writs have been denied and 19 petitions have been granted. We have every reason to believe that at the last session of this term we will be able to say, as the Court has said every year since 1928, when it acquired the certiorari jurisdiction, that all cases ready for argument have been heard and decided. However, until the discretionary writ of certiorari was authorized by the Congress, the Supreme Court found itself falling further and further behind, as are the other courts in the Federal system. We can all derive satisfaction from that innovation in court administration because I have no doubt that if it were not for that change, the Supreme Court would be suffering from the same congestion that confronts the other courts in our judicial system. As a remedy was found for the congestion in the Supreme Court, so we must search day by day and year by year for remedies to put the district courts and the courts of appeals on a current basis. There is no single answer, but I have the confidence to believe that if the bench and bar come to a realization of the dangers involved, that we can and will find the remedy. If we really believe in our system, we must have that faith.

As I have stated, the backlog in civil business has already increased by more than 5,000

cases in the district courts this year, and it is continuing to spiral upward. But I should emphasize, the total number of cases is not an entirely satisfactory criterion for measuring the problem of congestion. The type of case is important, too. For example, during the war and shortly thereafter we had on our dockets a large number of Government price and rent control cases, which took a minimum amount of time. Studies that we have made show that on the average, cases between private individuals, the majority of them under the diversity of citizenship jurisdiction, take 3 times as much time to handle as Government cases. These private cases, therefore, are the most important factor in the caseload. And it is this group which has increased most rapidly. Between 1941 and 1957, private civil cases based upon diversity of citizenship jurisdiction increased from some 7,000 per year to over 23,000. The backlog has increased 150 percent.

Bankruptcy matters, while usually handled by the referees, are also an important part of Federal court business. The number of bankruptcy cases has not increased significantly excepting cases involving wage earners. Although it is true that during the fiscal year 1957 the total backlog of bankruptcy cases of all types rose from 59,000 to 68,000 cases, the fact is that about 80 percent of the total are employee-type cases and almost 20 percent of these were filed under chapter 13 as wage-earner plans for the payment of indebtedness. If it seems somewhat misleading to lump the chapter 13 proceedings with ordinary bankruptcy, it should be borne in mind that each of them constitutes another case for the courts to handle no matter what section of the act may be relied upon.

These statistics are a record of delay piled upon delay in the Federal courts. But, serious as they may be, they are no accurate measure of the extent to which our administrative weaknesses have caused injustice. They do not reflect the hardship and suffering cause to unfortunate victims of such delays, nor the inadequate settlements which individuals are frequently forced to accept on that account. Neither do these figures include what are probably the worst and most numerous cases of all: those instances in which citizens with causes that cry for justice under law have turned from our court system in despair and have sought ways of working out their problems without resort to the courts at all.

It is evident that if this condition is not remedied it will seriously undermine what we have described as "the keystone of America's strength," and will dilute what we have proclaimed as "our main claim to moral leadership in the world community." Certainly we must be gravely concerned when our judicial machinery is facing an outlook of this kind.

The immediate and most pressing need is for additional judges. No new judgeships have been authorized for more than 4 years and, indeed, during that period we have lost 3 positions as the result of the expiration of judgeships created on a temporary basis. The Judicial Conference has recommended to the present Congress the creation of 45 additional judgeships, many of which were contained in the omnibus bill originally introduced in the 84th Congress. These are not just requests from localities for more judges. They are recommendations of the Judicial Conference of the United States based upon serious study of the statistics and conditions facing the particular districts and circuits for which the additional judges have been recommended.

I regret to report that this legislation—so vital to the administration of justice in the Federal courts—has still not received the consideration of Congress.

Our judges have done a magnificent job carrying an increased burden. In 1941, the average number of civil cases disposed of per judge was 169; in 1957, this figure had increased by 37 percent to 232.

We all recognize that additional judges are needed. But, within the judicial structure itself, we must have more efficient court administration; we must make a more flexible use of Federal judgepower by transfer from one district to another; and we must utilize, far more than we have, pretrial procedure.

We need the enactment of legislation authorizing the Judicial Conference to make a continuing study which will assist the Supreme Court in the revision of our Federal rules; and we need a realistic limitation of the diversity of citizenship and Federal question jurisdiction in light of present-day conditions.

Equally important, we need to have filled the 10 vacancies which now exist on the district courts. These vacancies—in the face of increasing business and a shortage of judges—are of serious concern to the district courts.

This brings me to the steps we have taken, since I met with you last May, to improve our own administrative machinery.

First, I should like to mention that we have strengthened the Judicial Conference of the United States by the addition of district judges—a district judge selected to represent each circuit, thus doubling the membership of the Conference. The importance of this, of course, is that we now have as members trial judges who are experiencing daily the complex problems which plague the courts. Already, we have availed ourselves of this increased membership to establish a budget committee to study, appraise, and make recommendations as to the overall needs of the judicial branch.

Second, we have moved to strengthen the Administrative Office of the United States Courts. I am sure you remember that Mr. Henry P. Chandler retired as Director of the Administrative Office of the United States Courts and Mr. Elmore Whitehurst resigned as Assistant Director to accept another position in the Federal service. These two men guided the Administrative Office since it was established and did a very fine job of it.

I am especially proud to report at this point that we were successful in prevailing upon Mr. Warren Olney III, former Assistant Attorney General of the United States, to accept the position as Director of the Administrative Office. As many of you know, Warren Olney has a wide and distinguished record in the field we broadly refer to as the administration of justice, combining the experience of both a scholar and a dynamic administrator.

For Assistant Director, we have been fortunate to obtain the services of Mr. William Ellis, who possesses the best technical and fiscal law experience to be obtained in the executive branch of the Government.

These two individuals are combining their talents and diverse experience to give to the Administrative Office expert and resourceful leadership and I, for one, am very optimistic about their chances of accomplishment. I know that they will appreciate your advice and suggestions as they tackle their difficult task.

You will also be interested to know that the Attorney General, Mr. Rogers, will convene the second nationwide conference on court congestion and delay on June 16. Again, he will bring together representatives of all agencies having any responsibility for the administration of justice—the courts, bar associations, law schools, public representatives, and, of course, the Department of Justice, itself. It is a good omen, to my way of thinking when the full power and prestige of the United States Government is brought to bear on this problem.

I have mentioned a more flexible use of Federal judgepower by transfer from one district to another. This is not a satisfactory permanent solution to the lack of a sufficient number of judges to carry on our business, but it can be of great help in taking care of the situation until Congress has acted. We have in the Federal courts in those districts having purely Federal jurisdiction 13 districts where in 1957 the number of private cases filed per judge exceeded 200. We also have 31 districts where it was less than 100, the average for the country per judge being 151. To bring about an adjustment of this situation is one of the challenges to the Judicial Conference and to the Circuit Councils.

A greater and more effective use of pretrial procedure is another measure to expedite court business. This procedural tool, given to the courts by rule 16 of the Federal rules, can be more widely and more efficiently used. Judge Alfred Murrah, the dynamic chairman of the pretrial committee, calls it applied commonsense. The Conference has been urging that pretrial should be used in every civil case before trial, except where the district judge expressly enters an order to the contrary. The report of the Conference pretrial committee indicates that there has been a steady increase in the use of pretrial in recent years, but in many circuits it still appears to depend in the individual districts on whether the individual judges like the procedure or not. I agree with the committee that pretrial procedure has proved itself and that it should be as much a part of our Federal court procedure as the other requirements set down in the rules of civil procedure for processing a case.

The exception when it is not used should be unusual and should result from the particular nature of the case rather than on account of the predilections of the judge.

I should also like to mention in the category of long-range improvements in judicial administration the proposal endorsed by the Judicial Conference of legislative authorization for it to participate in the rulemaking function of the Supreme Court.

The bill does not alter the rulemaking power of the Court. It merely authorizes the Judicial Conference to maintain continuing studies of the rules, through committees, and to recommend needed changes in the rules for consideration of the Supreme Court. That Court can adopt, modify, or reject the Conference recommendations.

If the bill is adopted the restudy of the court rules will call for close cooperation of the bench and bar to make the judicial rulemaking process more nearly a science. I am hopeful that the bill will pass this session of Congress. If it does your individual assistance in the rulemaking process will be called for and will be greatly appreciated.

The Judicial Conference has also recommended an amendment of the statutes conferring Federal question and diversity jurisdiction on the district courts.

It may eliminate a number of cases that are not of sufficient importance to challenge the jurisdiction of the Federal courts on such grounds. It must be remembered that when the jurisdictional amount of $3,000 was fixed in 1911, the purchasing power of the dollar was about three times what it is now. It is, therefore, appropriate that there should be a corresponding increase in this amount, and the Judicial Conference is recommending it be raised to $10,000. The bill, which was approved by the Conference and is now pending in Congress, would have a considerable effect on the cases where a corporation is involved by providing that "a corporation shall be deemed a citizen of any State by which it has been incorporated or the State where it has its principal place of business."

It is hard to say just what this will accomplish, but at all events it should be helpful because there are many corporations doing a strictly local business with a foreign charter, and the necessity for diversity juris-

diction in litigation affecting them in the State where they do business would no longer seem to exist. The phrase "principal place of business" was used following the words of the Bankruptcy Act which employs this same language as a basis for jurisdiction in a bankruptcy case. There are a number of cases in the books which construe this language. These provisions would give at least some measure of temporary relief to the Federal courts because they would decrease the number of Federal question and diversity cases filed and these are on the average the most time-consuming type of cases for the courts.

In making this overall report to you, I am not criticizing individual judges because I firmly believe that by and large judges are as devoted public servants as can be found anywhere. However, in a sprawling, detached judicial system such as ours is, with 250 judges dispersed from Maine to California and from Washington to Florida, judicial administration and modern procedures, as well as sufficient personnel of necessity play a large part in the efficiency of the system, and it is to promote your continued interest in this field that I feel justified in taking the time of the members of this important Institute to give you these dry but important statistics.

Finally, may I extend to you, on behalf of all the members of the Supreme Court, best wishes for a successful conference. If the Court work would permit my doing so, I would like nothing better than to attend all of your sessions, but we are now in the closing weeks of the term, and there are very few moments for anything except studying cases and writing opinions, if we are to adjourn within a reasonable time.

As a matter of fact, we are to convene for our last session of arguments within the next hour.

University of Wisconsin Statement on Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 26, 1958

Mr. PROXMIRE. Mr. President, the University of Wisconsin faculty has adopted an important policy statement on the question of Federal aid to education. The statement was drafted by the university committee, which is the faculty's principal committee on policy. The full faculty then considered the statement, and revised and adopted it.

There are some points made in the statement which must not be lost from view. One is that a Federal-aid program which merely subsidizes the student, and does nothing to aid the institution—which must supply part of the cost of educating every student it enrolls—would mean financial disaster to most institutions of higher education. A second point is that the Federal Government should avoid programs which distort and unbalance the educational offerings of the colleges and limit the freedom of the student to select whatever field of concentration he pleases. The best way to get an adequate number of scientists is to strengthen education all along the line.

Mr. President, the concern of the University of Wisconsin faculty with providing leadership in the great national town meeting over the crisis in education is in the fine tradition of the university. In Wisconsin it is said that the boundaries of the campus are the boundaries of the State. In these times of national peril they may expand, and should expand, to the boundaries of the Nation.

Mr. President, I ask unanimous consent that the statement of policy of the faculty of the University of Wisconsin be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the Appendix of the RECORD, as follows:

STATEMENT OF UNIVERSITY COMMITTEE ON PROPOSED FEDERAL AID TO HIGHER EDUCATION (REVISED MAY 12, 1958)

The faculty of the University of Wisconsin is aware of the great need for financial support of education now and in the immediate future. If the Federal Government is to be a major source of aid to higher education, then such support must be given in a manner that will guarantee the traditional freedom of each university to determine its basic educational goals, and to allow its intellectual and financial resources to be utilized without distortion of purposes or impairment of educational results by ill or hastily conceived conditions of acceptance of the aid. Consequently, to those engaged in the formulation of Federal aid programs of financial assistance to institutions of higher learning, we urge the following considerations:

I. SCHOLARSHIP PROGRAMS

Federal scholarship programs should be designed to recruit gifted students primarily on the basis of merit, should provide compensation to the institution as well as to the student, and should include both graduate and undergraduate students.

1. Opinions differ as to how much consideration should be given to need in addition to intellectual ability and achievement in administering scholarship programs. We assume that in the final analysis the Federal support programs, which are being currently discussed as pertinent to our national security and welfare, have special concern for the gifted minds among which one can reasonably expect to find the imaginative and urgently needed leaders of the next adult generation. We believe that the relatively limited number of such students constitutes one of our greatest resources and that they should be aggressively recruited and encouraged in their intellectual efforts regardless of their prior social background or economic environment. We believe that such minds are too rare to risk their loss to society. Consequently, in efforts to recruit and encourage the highly gifted student, as contrasted with the good or average student, we suggest that the factor of merit be given primary consideration.

2. A program which merely provides financial aid to the student, without corresponding aid to the institution to meet costs not compensated by tuition, may only tend to increase the financial problems of the institution as enrollments increase. Every student receives financial aid from the college or university he attends, in the amount of the difference between the actual cost of education and the tuition he pays. If the purpose of the scholarship program is to attract additional students of exceptional ability, and the program is successful in achieving its purpose, it will inevitably increase enrollment pressures and attendant educational costs.

3. An important problem of higher education is the attraction of better students to the universities and colleges at the undergraduate level. Equally or more crucial is the attraction of superior students into graduate work and into teaching and research. While these two are interrelated, encouragement and support of graduate students is of special significance relative to the gifted mind.

II. FINANCIAL SUPPORT FOR A BALANCED EDUCATIONAL PROGRAM

Legislation should permit universities to maintain their initiative in developing a balanced educational program, and permit students freedom of choice in selecting field of study.

1. In recent months public statements have been made urging special measures of support for education in science, engineering, and modern foreign languages. We recognize the urgent need for citizens highly trained in the above areas. But we also recognize an equal need for intellectual leadership on all fronts. The sciences increasingly provide us with the means for both the improvement of the welfare of mankind and for his destruction. The ultimate decisions which will determine the destiny of the free world will be made, in considerable measure, through judgments stemming from other disciplines. Hence, any program of aid to education, under the influence of expediency, should not be unbalanced nor shortsighted, but rather should encourage the training of our best young minds for leadership in all of the areas of learning.

2. Any program of education in a free society should provide a real measure of choice of education to the individual student. We have no fear that gifted minds of scientific or linguistic aptitudes will not seek the fields in which they are most effective. On the other hand, to encourage individuals capable of high achievement to devote themselves to concentration in inappropriate programs of study could be wasteful and result in a high incidence of failure or mediocrity of performance.

III. LONG-RANGE-AID PROGRAMS

Programs must aim at improvement of education at all levels and should recognize the need for long-range programs.

The problems of higher education require long-range solutions, not temporary palliatives. Extensive Federal aid on a temporary basis may serve only to stimulate a growth which cannot be sustained by State or private resources once Federal aid were withdrawn. Education is a long process and improvement in quality must take place at all levels. Higher edueation builds on the foundations provided by elementary and secondary education and highly unusual results cannot be expected, for example, within the 4-year span of one college class.

IV. THE DANGERS OF MATCHING GRANTS TO STIMULATE SPECIFIC PROGRAMS

It should be recognized that grants on a matching basis to stimulate specific programs may create dangers to other programs of an accepting university. Since finances for many institutions are limited by endowments or by State appropriations, the diversion of funds for one program may result in less funds for others. Moreover, extension of aid on such a basis may provide no opportunity for those institutions which have already extended themselves financially.

V. CONSTRUCTION GRANTS

Within a Federal-aid programs funds for construction would serve a vital need for an expanding college population. We believe that any such construction program should be subject to the same principles of liberal use as stated in sections II and IV relative to other programs.

Liberty Under Law

EXTENSION OF REMARKS
OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, May 26, 1958

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very outstanding address entitled "Liberty Under Law," delivered by the Honorable Robert McC. Figg, Jr., of Charleston, S. C., at the annual convention of the South Carolina Bar Association on Thursday, May 1, 1958.

Mr. Figg is one of the most prominent and astute lawyers in the Nation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LIBERTY UNDER LAW

Law Day has been proclaimed by the President of the United States as a day of national dedication to the principle of government under laws.[1] It is a day for the American people to remember our heritage of liberty, justice, and equality under law, and to recognize our obligation to preserve and strengthen that great heritage. It is a day for us to renew our loyalty to the principle of fundamental rights of individuals guaranteed by organic law, which principle is the heart and sinew of our Nation, distinguishing our government from all those which rule by might alone, and making it an inspiration and a beacon of hope for oppressed peoples everywhere.

May 1 is also the day on which international communism celebrates its past victories and looks forward to its future conquests. There can be no better date for us to recall the basic moral and philosophical principles upon which our society is based, and to contrast these principles with the cynical, immoral, and atheistic philosophy that underlies the international Communist conspiracy.[2]

The striking contrast between our governmental system and the totalitarian systems of the world is the great measure of liberty which our law extends to every individual in our land, not only our citizens but even the strangers within our gates. Individual liberty is the cardinal objective of government and law under our Anglo-American traditions.

Our Declaration of Independence declared that governments are instituted to secure liberty as one of the inalienable rights of men.

The Constitution of the United States recites that it was ordained to establish justice and secure the blessings of liberty to ourselves and our posterity.

The preamble to the constitution of this State reads:

"We, the people of the State of South Carolina, in convention assembled, grateful to God for our liberties, do ordain and establish this constitution for the preservation and perpetuation of the same."

Our State supreme court sitting en banc declared many years ago through Mr. Justice Woods that "the fundamental principle of these constitutions is that the welfare of all the people is prompted by the enjoyment of equal liberty by all alike, and that even if prosperity is not always promoted by constitutional guaranties, liberty is better than prosperity."[3]

In our legal and governmental institutions, we have endeavored to follow the teaching of St. James in his Epistle that "whoso looketh into the perfect law of liberty, and continueth therein, he not being a forgetful hearer, but a doer of the work, this man shall be blessed in his deed."[4]

Under our tradition as a free people, we live under a government of laws and not of men. The term "law" embraces all legal and equitable rules defining human rights and duties, and providing for their enforcement, not only as between man and man, but also betweeen government and its citizens.[5]

As Chief Justice Hughes once held,[6] the Constitution does not recognize an absolute and uncontrolled liberty. The liberty safeguarded by our institutions is liberty in a social organization which requires the protection of law against the evils which menace the health, safety, morals, and welfare of the people. Liberty is necessarily subject to regulation which is reasonable in relation to its objective and is adopted in the interests of the community.

One man's absolute liberty must end in law where the liberty of another begins, as otherwise one individual could be deprived of the essentials of liberty by the actions of another. By means of regulation of the kind mentioned, law has supplanted force in human relations, and the right secured to everyone to pursue his happiness unrestrained except by just, equal, and impartial laws.[7]

The founders of our Nation, in order to spell out beyond any reasonable doubt the fundamental rights of those living under our law, and to guarantee those rights in express terms, appended a Bill of Rights to the Constitution. The States of the Union have all written the same or substantially similar guaranties into their organic laws.

It is appropriate on this day to recount these rights in some detail. When we do this, we see in our minds the specter of tragic and bloody events that only recently have occurred in other countries where such rights are nonexistent or utterly ineffective.

Our guaranteed rights include the free exercise of religion; freedom of speech and of the press; peaceable assembly; petitioning the Government for the redress of grievances; the right to keep and bear arms; and the right to be secure in our persons, houses, papers, and effects against unreasonable intrusions of constituted authority.

They also include protection against excessive bail, excessive fines, cruel and unusual punishments, successive trials for the same cause, and self-incrimination as the result of torture or otherwise.

In so many words, we are given the guaranty of the right to a speedy and public trial by an impartial jury of the vicinage; the right to be informed of the nature and cause of the accusation; the right to be confronted with the witnesses for the prosecution and to compel the attendance of defense witnesses; and the right to have the assistance of counsel for our defense.

Taken together, these rights make certain that in our country a contest in the criminal court between the Government on the one hand and an accused individual on the other is an equal contest, despite the disparity in size and strength between the parties.

Under our law, no individual can be arrested and held for days, weeks, months, or even years, as has happened time and again in other lands, and left to wonder why. The right to have the assistance of counsel and the existence in the Constitution of protection against the suspension of the great writ of habeas corpus as the means of forcing the according of all of the other constitutional rights are effective insurance that our people cannot suffer the fate of long imprisonment without the entry of a charge, a fate too often visited upon unfortunates under totalitarian systems of law.

The right to counsel is a recognition that written law will not automatically protect liberty. There have been many times in the history of liberty when its continued existence has depended upon the courage and devotion to duty of lawyers who have been called upon to assert and defend it, and we as lawyers still have the continuing duty and privilege of fulfilling the constitutional guaranty of the right to the assistance of counsel when called to serve.

Among the most precious liberties accorded by our law is the presumption of innocence. This presumption clothes an accused from the time that a charge is made against him and remains with him until it has been removed by proof of guilt beyond a reasonable doubt. The Supreme Court of our State once declared the philosophy of our law that it is deemed better in the administration of justice that many guilty persons escape than that one innocent person should suffer.[8]

So long as we have the writ of habeas corpus, the right of an effective trial by jury, and the presumption of innocence, every American will be enabled thereby to stand erect on his own two feet and with confidence say to the world, "I am indeed a free man."

Contained in the Bill of Rights is another priceless guaranty, one that may properly be called the broadest and mightiest of all, the provision that no person shall be deprived of life, liberty or property without due process of law.

On the 19th day of June, in the year 1215, the sovereign in Magna Carta declared that "no freeman shall be taken, or imprisoned, or disseised, or outlawed, or exiled, or anywise destroyed; nor shall we go upon him, nor send him out, but by the lawful judgment of his peers or by the law of the land."[9]

The phrase "due process of law" in our Bill of Rights is the exact equivalent of the ancient phrase, the law of the land, and its application to the relation between man and government in our jurisprudence has well nigh made it the synonym of, liberty under law.

By Magna Carta the sovereign and the sovereign power were acknowledged to be subject to the law of the land, a concept expressed some centuries later by Sir Edward Coke in his famous declaration that "the king is under God and the law."

The heritage of liberty under law and of the supremacy of law thus derived from Magna Carta through the centuries came to our shores with the English common law. South Carolina in the year 1712 was the first of the colonies to adopt the common law system.

[8] *State* v. *Browder* (183 S. C. 447, 191 S. E. 302).

[9] Volume 12, American Jurisprudence, p. 261.

In 1819 Justice William Johnson, a South Carolinian, as a member of the United States Supreme Court, said: [10]

"As to the words from Magna Carta * * * after volumes spoken and written at length with a view to their exposition, the good sense of mankind has at length settled down to this: that they were intended to secure the individual from the arbitrary exercise of the powers of government, unrestrained by the established principles of private right and distributive justice."

The United States Supreme Court has said that the liberty mentioned in the guaranty of due process of law means not only the right of the citizen to be free from the mere physical restraint of his person, as by incarceration, but the term is deemed to embrace the right of the citizen to be free in the enjoyment of all his faculties; to be free to use them in all lawful ways; to live and work where he will; to earn his livelihood by any lawful calling; to pursue any livelihood or avocation; and for that purpose to enter into all contracts which may be proper, necessary, and essential to his carrying out to a successful conclusion the purposes mentioned.[11]

This enumeration suggests the breadth of the guaranty of due process in relation to liberty, but does not contain, by any means, all of the instances to which the conception has been applied.

It is not inappropriate to refer here to our antitrust and antimonopoly statutes that have been passed to protect and effectuate the right of every American to engage in business freely and exercise to the full extent of his abilities the privileges of our system of free enterprise, without being crushed by legalized cartels and even State and State-granted monopolies which destroy such opportunity in many countries. Such cartels and monopolies not only abridge or destroy the right and effective opportunity of the individual to engage in business, but also deprive the economy of the country of the benefits of competitive production and distribution, and the lower prices and higher standard of living that result therefrom.

In setting up our National Government to secure the blessings of liberty, the founders separated governmental powers into 3 parts, and created 3 branches of the Government to exercise those powers, the executive, legislative, and judicial.

Justice Brandeis expressed the purpose of such division when he observed:

"The doctrine of the separation of powers was adopted by the Convention of 1787 not to promote efficiency but to preclude the exercise of arbitrary power. The purpose was not to avoid friction, but, by means of the inevitable friction incident to the distribution of the governmental powers among the three departments, to save the people from autocracy." [12]

Our governmental structure was recently described by a Supreme Court Justice as follows:

"A constitutional democracy like ours is perhaps the most difficult of man's special arrangements to manage successfully. * * * The founders of the Nation * * * acted on the conviction that the experience of man sheds a good deal of light * * * not merely on the need for effective power, if a society is to be at once cohesive and civilized, but also on the need for limitations on the power of the governors over the governed.

"These long headed statesmen had no illusions that our people enjoyed biological or psychological or sociological immunities from the hazards of concentrated power. * * * The accretion of dangerous power does not come in a day. It does come, however, slowly, from the generative force of unchecked disregard of the restrictions that fence in even the most disinterested assertion of authority.[13]

Shortly before his elevation to the bench, Edward Douglas White, afterward Chief Justice, said this of the Supreme Court of the United States:

"The glory and ornament of our system which distinguishes it from every other government on the face of the earth is that there is a great and mighty power hovering over the Constitution of the land to which has been delegated the awful responsibility of restraining all the coordinate departments of government within the walls of the governmental fabric which our fathers built for our protection and immunity." [14]

The Supreme Court has on a number of occasions, in the exercise of judicial power, set straight the legislative and executive branches of the Government when they exceeded their authority or usurped or encroached upon the exercise of functions not committed to them. In so doing the Court served the cause of liberty well.

But the Court itself is sometimes guilty of usurpation or of amending the Constitution by changing settled interpretations.

Not long after his elevation to the Supreme Court, Justice White was impelled to dissent from the Court's decision overruling previous precedents and declaring the Federal income tax law of that day unconstitutional. Justice White, with the concurrence of Justice Harlan, wrote:

"If the permanency of [the Court's] conclusions is to depend upon the personal opinions of those who, from time to time, may make up its membership, it will inevitably become a theater of political strife, and its action will be without coherence or consistency. * * * The rights of every individual are guaranteed by the safeguards which have been thrown around them by our adjudications. * * * The fundamental conception of a judicial body is that of one hedged about by precedents which are binding on the court without regard to the personality of its members. Break down this belief in judicial continuity, and let it be felt that on great constitutional questions this court is to depart from the settled conclusions of its predecessors, and to determine them all according to the mere opinion of those who temporarily fill its bench, and our Constitution will, in my judgment, be bereft of value and become a most dangerous instrument to the rights and liberties of the people." [15]

Currently many throughout the Nation feel that the Court, as presently constituted, has shown a proclivity for intruding into matters beyond its competence or amending the Constitution by changing long-settled constructions. There is strong support for this feeling among outstanding authorities on constitutional law and government, as witness the quite recent public expressions of Prof. Edward S. Corwin in the New York Times of March 16 and the Harvard lectures of Judge Learned Hand.

Under our system of Government under law, it is within our concept of liberty that even so august a tribunal as the Supreme Court is subject to public discussion of a critical nature.

Professor Corwin bluntly says that the country needs protection against what he calls the aggressive tendency of the Court, but he believes that fragmentizing appellate jurisdiction on matters of national (as opposed to essentially local) concern among the 11 circuits of the Nation would be like throwing the baby out with the bath.

Hitherto in our history the exercise of judicial self-restraint has been relied on to confine or return the Court to its constitutional orbit. With the growth in size of our Nation, and the increasing complexities of our Federal-State, and our international relations and problems, it may be that the time has come to provide, in the Constitution, for some amplification of the judicial branch of the Government in the consideration of grave constitutional issues and conflicts between the several branches of Government. An effective approach may be the establishment of an en banc Court in somewhat the form provided for in the South Carolina Constitution for the consideration of constitutional questions on which the Court itself is in substantial disagreement, whereunder the circuit judges are called to the assistance of and sit with the Supreme Court Justices on the argument of such questions.[16] Such a broadening of the base of decision, with regional representation throughout the Nation, would be calculated to fortify and strengthen the judicial branch of the Government in public esteem, and to make that branch of our Government an even more effective guardian of the liberty that government was instituted by the founders to secure.

In closing, let me quote from the address of President Charles S. Rhyne of the American Bar Association on the subject of Law Day—U. S. A.:

"We tend to take too much for granted the great principles which underlie our Government. We have a legal system which, in spite of the size of our country and the necessary complexities of its organization, assures for the average citizen more vigorous protection for life and person, more widespread justice, more equality under law, more effective protection for individual rights, more evenly distributed economic opportunity, more security in person and property, and greater personal freedom; than any other system yet developed in all the history of mankind. What more meaningful proof is there that life under the rule of law assures the best existence yet devised by man?"

The Late Elmer Davis

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, May 26, 1958

Mr. JACKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the following statement on Elmer Davis by Edward P. Morgan, delivered on the American Broadcasting Network, Thursday, May 22.

Among the host of tributes to Elmer Davis, none, I feel, have better caught the quality and significance of the man and his work than Edward Morgan's moving story of the memorial service in Washington's National Cathedral.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

At noon today, a modest number of people, decorously dressed and clothed too, with solemn thoughts, forsook the full May sunshine and bright midday bustle of the Capital streets for the vaulted coolness, the quietly awesome grandeur of Washington's National Cathedral. They entered this place in a mixed mood of sadness and respect to pay their tributes, silently and each in a private way, to Elmer Davis.

Somewhere in the far internal distance the organ produced the strains of requiem, its subdued melodic sinews encircling the vast crossing of the cathedral and binding the men and women there into a kind of human faggot, a bundle strong and singular in its common, collective, dignified sorrow.

Three or four baskets of flowers sprouted unostentatiously from the base of the pulpit as if simply notifying the massive chandeliers of the tenderly vigorous light of their natural beauty. No sobbing cut out the organ sinews, no ponderous black veils choked the clear respectful scene. Down the north transcept aisle now, preceded by the verger bent slightly with the burden of his long staff, accompanied by Canon Luther Miller, moved the tall, straight figure of the dean of the cathedral, the very Reverend Francis B. Sayre. The congregation, including four women in vivid purple robes and caps of the choir, rose as they entered to commence the memorial service.

For a moment, as if in accidental recognition of the fact that Elmer Davis himself was never completely at ease with electronic gadgets, Dean Sayre had trouble adjusting his microphone. Then the service moved quickly through a simple ritual as if in tribute to the tart, nourishing tenderness of Davis' own broadcasts.

There was the 23d Psalm, and then the 121st. Certainly, one's thoughts ran, Elmer Davis feared no evil, either in the presence or the absence of his enemies, and he was not ashamed to lift up his eyes unto the hills from whence came his help.

Finally, Dean Sayre mounted to the pulpit and quoted from the eighth chapter of the Gospel of St. John. The beacon of Elmer Davis' life must verily have been that verse which says "and ye shall know the truth, and the truth shall make you free." Yet there were indeed those who would have killed his voice, having heard his truth. And who more than this man could testify "But I seek not my own glory"?

Then, in just a few minutes more than an Elmer Davis commentary took, the service was over, most of the crowd melted quickly into the dazzling sunshine outside. A few found their way to the north entrance to grasp the hand of a little, white-haired woman in black, the bravely dry-eyed widow. Inside an acolyte snuffed out the candles beside the alter. The flame of the topmost taper in the right hand candelabrum refused at first to die and even after the acolyte had stifled it again, it seemed somehow to continue to burn, with a defiance befitting the occasion.

It would be easy and soothing to say that the bright sharp truths of Elmer Davis will burn forever, but there is a dark danger that this may not be so. A man of his stonelike integrity, his towering, fearless, and wonderful anger, his rasping conscience, such a man does not sit comfortable or evoke a warm unanimous welcome from any society in any era. With too many of us in our time there exists the careless lack of appreciation of his abrasive value. When, I wonder, has there been more need for a scrub brush applied to the pudgy skin of a softening populace? When have we been in such short supply of the probing needle that deflates swollen, distorted values, pinning flapdoodle, claptrap, pomposity, hypocrisy and fear to the wall? When have we been more thickly siruped with the unctuous, pear-shaped tones poured on by special interests and more desperately groping for the clean, salty twang of truth in the general interest?

A man like Elmer Davis cannot be replaced. His words may live in memory but really only if people remember them to live by them, determined, as he was, to build a structure of social justice to protect man's sanity from an avalanche of goo.

This is Edward Morgan saying good night from Washington.

Frances Rose Leutscher—A True Friend of Wisconsin's People

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 26, 1958

Mr. PROXMIRE. Mr. President, last month thousands of Wisconsin citizens were saddened by the death of one of their truest friends. Mrs. Frances Rose Leutscher, who was the executive secretary of the Democratic Party of Wisconsin during the past several years of its rising strength and influence, was stricken with a heart attack at only 38 years of age. She had been suffering for years from heart disease, but it was typical of her quiet strength of character that very few of her closest associates had any hint of the danger under which she lived.

Mr. President, a fine and richly deserved tribute to Mrs. Leutscher was paid by Mr. Patrick Lucey, who, as State chairman, was Fran's closest associate in her work. Mr. Lucey's tribute has appeared in a number of publications in Wisconsin. I request unanimous consent, Mr. President, that this brief statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

WORKING PEOPLE LOST A GOOD FRIEND

(Statement by Patrick J. Lucey, chairman, Democratic Party of Wisconsin)

The working people of Wisconsin lost a great and good friend today. Just a little bit of the tragedy of her passing is that so many thousands of them will never know her.

Frances Leutscher has served for most of this past decade as executive secretary of the Democratic Party of Wisconsin.

During that time she married. Her last name changed from Rose to Leutscher, but to 10,000 working Democrats it mattered not—she was still just "Fran" to them. They all loved her and she them.

RELEASES FOR OTHERS

She turned out many press releases for others. I recall but one that bore her own name. Significantly it was the one just last week when she proudly announced a new record for Democratic membership. Ten thousand had paid their annual dues by April 15. That had never happened before.

Many who read the Wisconsin Democrat paper knew that Fran wrote most of the stories herself—yes, including those which quoted an unknown expert on election statistics. The expert was Fran. We used offset type because it was cheaper. This meant that every character of print was typed and pasted into place by Fran. It was a lot of work, but she made each deadline without complaint.

Fran was an idealist of the practical kind. When the Democrats win this year, as folks tell me they will, people who work in mines, on farms, in factories, behind grocery and drugstore counters, schoolteachers, professional people who will benefit from social reforms. They will benefit from Fran's work through the trying years, but she won't be there. They won't be able to say, "thank you."

Fran was no sentimentalist. She would scoff at this statement. She had a sense of history though, because once when I was critical of the condition of the files, she said, "Oh, let the historical society worry about files. We have work to do."

Fran is gone. Ten thousand Democrats join her personal friends and relatives in mourning her death. Perhaps the papers won't print this. Why should they—they couldn't know her greatness, but this release will be distributed as if she were writing it for someone else.

One to each of the Madison TV stations, 1 to the Capital Times, 1 to the State Journal, 1 to UP, and 1 to the Milwaukee Journal, 1 to the Milwaukee Sentinel, and 1 to John Wyngaard.

An Antimilitary Defense Bill

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. WILSON of California. Mr. Speaker, one of our colleagues recently introduced legislation which is known as the Antimilitary Aircraft Workshop Competition Act. A better title for this legislation could well be the antimilitary defense bill. It suggests that aircraft overhaul and repair facilities such as those now operating in the major naval air stations and Air Force depots should be discontinued and the work of overhauling these complex military machines let out on contract to business.

I am certainly not opposed to the Government letting out contracts for civilian production of normal civilian goods and services, but it does not make sense to try to divest the fighting units of our country from the facilities and the manpower vital to the maintenance of an adequate fighting force. The overhaul and repair shops at North Island in my district, at Alameda, Norfolk, and other installations, are a vital part of our Navy's striking force. They are ready at a moment's notice to provide overhaul and repair facilities for peacetime and wartime operations. They keep our carrier-based aircraft in fighting trim. I shudder to think what delays might result if we needed aircraft in a hurry and had to take the time to go through the normal business channels to get this work done.

I know the Navy considers the overhaul and repair facilities a vital part of

their mobilization requirement. While it is true that these facilities could be mothballed, we cannot put away on a shelf the talents of the thousands of men and women who have gained experience and the intricate technical know-how and expect to have them ready in an emergency. To keep our fleet operating with a real striking potential, we must have not only the facilities but the manpower in being ready for any call.

I am proud of the fine work the civilian specialists are performing in the Government facilities around the country. I am particularly proud of their work at the naval bases in my district. As a businessman, I say it is just good business to keep these facilities operating as long as the fleet itself sails the seas.

Private Commercial Laboratories Are Indispensable Asset to Small Business

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, May 26, 1958

Mr. NEUBERGER. Mr. President, at a recent conference held in Corvallis, Oreg., where the theme of the conference centered attention on research and development for small business, Mr. David B. Charlton, a businessman from Portland, Oreg., participating as a panelist, spoke on the subject: Technical Research Agencies for Small Business.

In our schools and colleges, basic science is studied and the research activity there carried on advances man's knowledge of the world in which he lives. However, outside the schools, research too is conducted in private laboratories as a commercial enterprise. It is well to note that the function of the colleges is considered to be quite properly in the field of basic research, while the function of the private research firm is generally considered to be in the realm of applied science. A private laboratory functions by applying those principles developed through the basic research of the college laboratory. Both are indispensable in our complex society.

Mr. President, I am sure Mr. David Charlton's explanation will interest my colleagues, who vote vast sums to support much of the research activity of schools and colleges. I, therefore, ask unanimous consent that Mr. Charlton's statement be printed in full in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TECHNICAL RESEARCH AGENCIES FOR SMALL BUSINESS

1. COMMERCIAL

(By David B. Charlton, Charlton Laboratories, Portland, Oreg.)

Research and development as an aid to small business firms has been divided into two main categories for the purpose of this conference, namely, technical research and business research. The first day of the program dealt primarily with definitions, needs, goals, and what can be accomplished in research programs developed by small business.

The agenda for this the second day of the conference is designed to describe the types of research agencies and sources of information which are available to small business. The first panel of speakers will describe the services of the technical research agencies. These include independent consultants, laboratories of many sizes and kinds, engineering firms, nonprofit research institutes, college, and State laboratories and Federal agencies.

The topic assigned to me is Commercial. This, of course, means the taxpaying business firms and individuals represented in the first 3 or 6 groups enumerated above. Perhaps the word "independent" would be a better descriptive term. We are not tax-favored in any way and we have no connection with a State or Federal agency. We are in business and are, therefore, commercial but we are not part of another organization which is also commercial such as a manufacturing firm that has its own technical staff in laboratories that are often designated as captive.

The independent scientific laboratories in this country are an integral part of our national economy and are vigorous exponents of the American system and of the principles of private enterprise. As commercial organizations, they are dedicated to assist the development of American industry and make specific contributions to the communities in which they are located. There are over 300 independent laboratories staffed with over 5,000 scientists and technologists located in all the major cities of the United States. But some are in the smaller cities; for example, one of the largest on the Pacific coast is in Fresno, Calif. Pioneering work in the development of the raisin industry was performed there. At present it is perhaps best known for its service to the petroleum industry. It is estimated that these laboratories serve 60,000 clients. No doubt an even greater number of clients utilize the services of consulting engineers in a great variety of industrial development work.

A few brief descriptions of testing and development work performed by the closely related organizations with which I am connected, Charlton Laboratories & Metallurgical Engineers, Inc., will serve to illustrate the various types of problems we handle for small business concerns. Much of our work is quality control analysis and testing, but it is an essential service and lots of real problems are solved. Shortly after my laboratory was available to clients (which means I was looking for work) a local food processor had a product causing outbreaks of food poisoning. It proved to be bacterial in nature, the source was determined and eliminated. This illustrates how we helped an existing company stay in business and for the past 23 years it has utilized our laboratory services on a monthly basis.

About the same time a man who loved dogs started making dog food. He knew little about food products and had trouble—at least the dogs did. Some dogs that ate the food, which was not well balanced nutritionally, had fits. We advised him on the food formulation and the trouble was overcome. We performed quality control work over a period of years. The business grew and later on equipped its own laboratory. Good merchandising advise must have been obtained since the business was sold recently for about $1 million.

An example of development work in the consulting engineering field will illustrate how local manufacturing concerns are benefited. A Portland concern that manufactures truck and trailer bodies consulted with us on the design of a new body type to be used in the transportation of wood chips. We suggested one that would be made of steel yet light in weight. It would compete with those made of aluminum. A model was designed by us, tested in use, and is now in production. Several other trailer-body designs were subsequently produced. In this case, the consultant supplied the novel idea.

On the other hand, take the case of a logging-equipment manufacturer who was approached by an inventor with an idea that involved a new design for log loading tongs. Since we serve this company on a continuing basis, we produced a working model and studied its feasibilities. Would it work as represented? What are the "bugs" if any? How much would it cost? Since there appeared to be a market for it we prepared the material and dimensional specifications, supervised field tests, and the production control testing.

Each of the 2 companies just referred to has only about 60 employees, yet they are about the median size for Oregon industrial concerns.

One more example illustrating assistance to a new industry—a welding-rod manufacturer—may be of interest. To start in manufacture, our services involved the design of equipment, plant layout, casting specifications, and procedures from furnace charge to electrode coatings. Based on our client's requirements the billing ranged from $100 to $500 per month over a 2-year period. The business now has 10 employees and the product is distributed through the 11 Western States.

So you see by these examples that manufacturing firms need technical help in developing new products and processes with which to overcome their competitors and competitive products. The less exciting but essential functions such as quality control over materials purchased, conformance of product to specification standards, investigation of failures in mechanical products and of spoilage in food products, byproduct utilization, and control over air and water pollution factors can be performed by the independent laboratory.

The selection of the right laboratory or consultant for a particular analysis or research project is not unlike the situation one faces in the choice of a physician. Usually there is a family doctor whom you know and trust. He knows you and has no doubt had various tests made and prescribed for you on many occasions. Should an operation or treatment be required that can best be done by another doctor or at a clinic specialized in a particular field of medicine, he will refer you there and consult with you later. Similarly, we enjoy the confidence of our clients who, in turn, refer others to us. A simple phone call will clear the way for an interview for which you are under no obligation. In those cases where we are not staffed adequately or lack specialized equipment to handle your problem we will refer you to a laboratory that can do so. Through our membership in the American Council of Independent Laboratories we are personally familiar with the facilities, specializations, and key staff people of the member laboratories. As in the case of lawyers and doctors most of us name our laboratories or offices after ourselves, which is not very impressive in comparison with institutions bearing names of States, universities, and millionaire philanthropists.

Manufacturers that maintain laboratory facilities—and those that don't—both utilize independent laboratory services as needed and frequently on a retainer basis. The choice may be a small laboratory or an independent consultant who maintains no office or laboratory staff but possesses engineering or scientific knowledge in a specialized field. It may also be a very large organization well staffed in a variety of technical fields. For example, the United States

Testing Co. has one large plant and several branch operations with a technical staff of over 500, volume of business of several million dollars annually. This laboratory organization had its beginnings in 1880 providing an impartial inspection and weighng service to buyers and sellers of raw silk and wool. Today it is not only serving the textile industries in research and testing work, but many other industries as well. Another independent laboratory that has been in business about 50 years is well known for its leadership in the nutritional and biochemical research fields.

Mention should be made of certain operating policies and the charges made for our services. Engineers have generally well-known standards in these matters based upon a code of professional ethics. They do not advertise except a small professional card type of announcement placed in appropriate technical and trade publications. Chemists, physicists and many other scientifically trained people in business generally follow the same procedures as those of the organized professions. Our reports are our product and are based upon our knowledge and reputation which in turn gets us business through recommendations from our clients. The reports are the exclusive property of the client. However, we protect the public from misrepresentation of our reports by requiring our clients to have our review and approval on any advertising or promotional material where our reports are involved. Our charges are usually based upon an hourly or daily charge rate stated in advance. The client is informed on any extra costs for special equipment or analytical and testing services that may be involved. On a research project where its duration and complexity are not known it is customary to set up a budget with reporting of results and charges at regular intervals.

The independent research laboratory or engineering firm is the logical type of organization to serve small business firms. This professional group is aware of the needs and problems of small business concerns and we are trained in doing research and making investigations with the objective of a practical application of findings. Get acquainted sessions as are provided by this conference should be beneficial to all concerned with the growth of Oregon industries.

Cost of Living and the Recession

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 26, 1958

Mr. PROXMIRE. Mr. President, an editorial in the New York Times makes some hard sense on the troubling problems of a rising cost of living in the midst of an economic recession. The editorial points out that the principal increases have come in the cost of medical care and rent, and makes clear that the rising cost of living needs to be analyzed; to use it as a blanket excuse to take no action to deal with recession is inexcusable.

Mr. President, I ask unanimous consent that the editorial, entitled "Perspective on Inflation," published in the New York Times of May 23, 1958, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PERSPECTIVE ON INFLATION

It is hardly happy news that the cost of living, as measured by the Government's Consumer Price Index reached another new high last month. If there are any pleasant aspects to the matter, they arise from the fact that the latest rise was comparatively small—two-tenths of 1 percent—and from the belief expressed in Washington that no important additional increases are likely in the months immediately ahead.

Whatever the future may hold the hard fact is that the cost of living has risen 3.5 percent in the past year and 23.5 percent since the index' base period, 1947–49. In the aggregate this record represents a significant degree of inflation, and this inflation is obviously behind much of the present fear that energetic antirecession measures may be unwise in that they may spur further inflation. To many it seems that we have a choice between the evil of, say, 5,000,000 unemployed and the evil of further price rises, and there is a substantial body of opinion which fears the latter more than the former.

Yet, before such a defeatist view is accepted it is wise to seek perspective by looking a bit more closely at the pattern of inflation which the official data reveal. This look suggests that the past decade's pattern of price rises is something quite different from the classic one of too much money chasing too few goods—the model many have in mind when they argue against, say, a tax cut, on the ground that it will be inflationary.

The figures show that the greatest rises since 1947–49 have not been in merchandise categories but in the cost of medical care and in the magnitude of rents. Medical care is largely a service area in which the problem of increased productivity is typically difficult; the more than 37 percent rise in rents undoubtedly reflects the pressure of increasing population on housing space and the partial rectification of the wartime and post-war rent freezes. On the other hand, less than average price increases have taken place in such key commodity classifications as food, gas, and electricity, clothing and housefurnishings. Of course, in recent months food prices, particularly prices of fruits and vegetables have risen relatively sharply, but this has been the result primarily of unusual weather conditions, not of extraordinary demand.

Antisubversive—Special Resolution No. 1 of American Legion, Department of Illinois

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, May 26, 1958

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the American Legion, the Department of Illinois, at its annual convention in August of 1957. This resolution was unanimously adopted when the Legionnaires of Illinois met at their 39th annual convention.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

ANTISUBVERSIVE—SPECIAL RESOLUTION NO. 1

Whereas it has pleased Almighty God, the Supreme Commander, to summon to His immortal army the beloved patriot, Joseph R. McCarthy; and

Whereas we humbly bow to the will of divine providence, while ever cherishing in our hearts the memory of his distinguished service to our Nation. Comrade McCarthy served Wisconsin with justice and dignity in the courts first as a lawyer and later as a circuit judge. Then in World War II, with men and women whose courage was tested and burnished bright by the crucible of war, he served proudly and bravely as a United States marine in the South Pacific. Continuing his service to State and Nation in the Halls of the United States Congress, the honored Senator made substantial contributions to Americanism and as a stalwart foe of communism that will be forever recorded in the annals of American history: Now, therefore, be it

Resolved, That the American Legion, Department of Illinois, in convention assembled, 2d day of August in the year 1957, mourns the passing of the distinguished Legionnaire, Comrade McCarthy, May 2, 1957, and in token of our common grief and great loss to our Nation, prayerfully stand with bowed heads in his memory and his honor; and be it further

Resolved, That a copy of this resolution be presented to his bereaved family, a second copy be forwarded to the 39th national convention of the American Legion, meeting in Atlantic City, N. J., September 14–19 for its concurrence, and a third copy presented for inscription in the CONGRESSIONAL RECORD.

HAROLD A. CUMMINS,
Commander.
JAMES S. GWALTNEY,
Adjutant.

(The foregoing resolution was unanimously adopted at the 39th annual convention of the American Legion, department of Illinois.)

Right of Expression

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, May 26, 1958

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial which was published in the Northwest Arkansas Times.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RIGHT OF EXPRESSION

Industrialist Cyrus Eaton may go before the House Un-American Activities Committee at a hearing in Washington—called there by the committee to testify. As this is written, the industrialist says all he knows about it is that the committee director, Representative Richard Arens, has issued a public statement in which he said the industrialist will be subpoenaed before the committee at an appropriate time.

Eaton reports "I have not heard from the so-called Un-American Activities Committee, so I assume that the release issued by a member of its staff is for the usual publicity seeking purposes."

The issue has arisen because of an interview in which Eaton reportedly expressed concern over police state methods used in

this country and described the Federal Bureau of Investigation as one of many agencies engaged in snooping, informing and creeping up on people.

In response to the announcement from Arens that Eaton will be summoned to Washington to appear before the committee, the industrialist remarked:

"Needless to say I shall be delighted to appear before any congressional committee for a serious discussion of the Federal secret police and intelligence agencies, and the effects, as I see them, of their sub rosa activities against the freedoms guaranteed to the citizens by the Constitution and the Bill of Rights. * * * The charge that anyone who challenges them is 'giving aid and comfort to the enemy' is the familiar but threadbare line that is constantly employed to throttle the traditional American freedoms for which the Founding Fathers of this Republic were willing to lay down their lives."

Aren't we indeed moving toward the very "police state" that Mr. Eaton is talking about when an American citizen is summoned to appear before a congressional committee because he is forthright in expressing his own views concerning a Federal agency? Apparently that is what the American industrialist has done—in his views the FBI is subject to mistakes, just as any other agency or individual. Certainly it can make errors of omission and commission. Americans always have had the freedom and the liberty to disagree vocally if they wanted to.

We don't like some things some of the other Federal agencies do sometimes, and we are pretty sure the State Department makes grave mistakes which will affect every citizen. If we say so are we to be ordered to Washington for questioning as though we are un-American?

Absolute immunity from the scrutiny or the criticism of the public does not belong to any individual or agency operating in the name of the United States Government.

Talmadge Farm Plan

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, May 26, 1958

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial entitled "New Farm Program," from the May 20, 1958, issue of the Albertville (Ala.) Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEW FARM PROGRAM

Senator HERMAN TALMADGE, of Georgia, recently came up with some basic concepts for a new farm program which we think have a good deal of merit.

In his speech on the floor of the Senate, Mr. TALMADGE pointed out that the time has come when Congress must face up to the fact that our present farm program has been a miserable failure. He also pointed up the unfortunate fact that our present dilemma is the product of partisan politics.

We think the time has come, as Mr. TALMADGE says, that the Federal Government free the farmer to plan and sell his crops as he sees fit, with the Government paying him the difference between the prices he receives for commodities sold for domestic consumption and parity.

The Georgia Senator has suggested this five-point program:

1. Eliminate all acreage controls and Government loans.

2. Assign each farmer growing basic commodities a domestic production quota to be expressed in terms of unit measurements (pounds, bushels, bales, etc.) which would be the same percentage of the national consumption of basic commodities that the farmer's historic acreage base bears to the total national acreage base.

3. Guarantee and pay to each farmer a sales price support of the difference between the price he receives for his domestic production quota and 100 percent of parity.

4. Require each farmer to submit a bill of sale with his application for sales price support payments.

5. Impose a maximum of $25,000 on the amount of sales price support payments which any individual farmer could receive.

In simple terms, Mr. TALMADGE is proposing that farmers be allowed to grow just as much of all crops as they want to. On each basic commodity a basic production quota would be determined by the actual domestic consumption of the commodity.

Let's take cotton, for example. If our domestic consumption was 8 million bales per year, this quota would be apportioned among all farmers who wish to grow cotton, based on their past history in producing the crop. A farmer might have a domestic quota of 8 bales, which would mean that he could market 8 bales that year with 100 percent of parity price support. He could grow and sell all the other cotton he pleased, but he would have to sell the rest of it at world market price. On his 8 domestic bales, the Government would simply pay him what the price lacked coming up to parity.

Senator TALMADGE quotes figures compiled from the Legislative Reference Service indicating that such a farm program as this would save the Government two to three billion dollars a year over the present farm program.

At the same time, he figures, it would put an extra $500 million a year into the farmers' pockets.

The agriculture committe of the Albertville Chamber of Commerce submitted a very similar proposal as this to our Representatives in Congress several months ago as its recommendation on the kind of farm program we need.

We are inclined to feel that we would all be better off if all segments of our economy were entirely free from Government control and allowed to seek their own levels. But it is unrealistic to say that farmers should be denied Government subsidies, when practically every other economic group in the country has them. Certainly farmers have the right to expect just as much economic protection from the Federal Government as labor gets through the guaranteed wage and industry through the tariff.

This paper is convinced of the urgent need for the present Congress to set up a more realistic farm program. We believe that Mr. TALMADGE has offered at least the basic principles around which to build such a program. We urge all our citizens to study the matter carefully and to write to Congressman ALBERT RAINS and JOHN SPARKMAN your views.

Democratic Gubernatorial Candidate Walter Reuther

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1958

Mr. HIESTAND. Mr. Speaker, a speech by Miss Zasu Pitts, motion picture and television actress, in support of the gubernatorial candidacy of Senator WILLIAM F. KNOWLAND, is attracting a great deal of attention all over the State of California.

The speech has been recorded and is being broadcast by Mrs. Helen Knowland on her 5,000 mile bus campaign on behalf of her husband. I don't know that I have seen or heard any statement that so adequately sums up the political activity of Labor Czar Reuther. Its entire text follows:

There is a mighty interesting contest going on in California about who is going to be the next Governor, our own Senator KNOWLAND or the Democratic candidate, Walter Reuther. I know that Reuther's running under another name, Pat Brown, I think it is, but Reuther is already the Governor of Michigan.

He uses the name of Williams in that State, and I think even 1 State under the control of Walter Reuther is 1 State too many. I have been told that the Reuthers have put up over $750,000 for this campaign.

That's easy to do if you're using somebody else's money. It's as easy as falling off a log if you can dip it up in buckets from a union treasury like the Reuthers have.

I'll bet before this campaign is over that they'll dip deeper than they did back in Ohio for $12 million, you remember, when they thought they had beaten Robert Taft.

I am sure the union workers of California are just as patriotic and intelligent as those in Ohio, and they certainly told Mr. Reuther where to go.

Fallout Shelters

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, May 26, 1958

Mr. JOHNSTON of South Carolina. Mr. President, I ask that the column, Fallout Shelters, written by Warren Unna and published in the Washington Post of Friday, May 23, 1958, be printed in the Appendix of the RECORD.

This article clearly points out what I have contended for a long, long time—that our civilian defense program is lagging far behind and that the administration should come forward with a program worthy of the name.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FALLOUT SHELTERS

(By Warren Unna)

CIVIL DEFENSE GETTING ATTENTION—BUT IT'S SLIGHT

Civil defense, that unpleasant stepchild of Government which most people would just as soon not be reminded of, has been getting some slight attention lately—but pretty slight.

The administration last month announced that effective July 1 it would merge the Federal Civil Defense Administration and the Office of Defense Mobilizatiton. FCDA Administrater Leo A. Hoegh and ODM Director Gordon Gray said the move would mean less duplication and more efficiency.

Early this month, Hoegh said there now is a national shelter policy: The encouragement of structures which will protect people from radioactive fallout. He said the Federal Government would take care of the

research and build "a limited number" of prototype shelters with alternate uses as underground garages, subways, and school assembly areas. But the main financing is up to the State and local governments.

Hoegh also announced the purchase of 800,000 fallout detectors, half of which will be distributed around the country, for indoctrination among high school students as well as among local Government personnel.

Chairman CHET HOLIFIELD (Democrat of California), of the House Military Operations Subcommittee concluded 7 hearing days this month, taking testimony to update that which he has accumulated during the past 3 years on the state of the Nation's civil defense.

HOLIFIELD has had a bill pending in the House since last year which calls for a national shelter program, federally financed, with a Cabinet seat to insure that civil-defense matters are carried out.

Although not optimistic over the chances for his bill, HOLIFIELD has made it plain that some bill had better be passed, and soon.

In an interview in last month's edition of the Bulletin of the Atomic Scientists, HOLIFIELD declared: "If the Russians know that a nuclear attack can break our will to resist, they might be induced to gamble. On the other hand, if they know we are capable of surviving an attack they might be deterred."

HOLIFIELD's previous hearings induced former FCDA Administrator Val Peterson to abandon his run-and-hide doctrine for one calling for a $32 billion—that's right, billion—Federal shelter program.

Last fall's Gaither committee recommendations have never been made public, even to Congress, but it is known that this group of experts urged the administration to spend $5 billion a year for shelters for the next 5 years.

Those close to the Gaither report now say its shelter recommendations are the deadest part of the overall findings—so far as the administration is concerned.

And yet another study group, headed by Nelson A. Rockefeller, last January made public its findings and also urged a Federal shelter construction program, integrated with the Nation's hopes for economic expansion.

The Rockefeller report found shelters for radioactive fallout more feasible than those for burn and blast.

FCDA's Hoegh seems to be in agreement with this: "There is no assurance that even the deepest shelter would give protection to a sufficient number of people to justify the cost. In addition, there may not be sufficient warning time, in view of the development of missile capabilities, to permit the effective use of blast shelters."

Ellis A. Johnson, Chief of the Operations Research Organization and head of the Army's own shelter study, told the Holifield subcommittee this month that fallout shelters are "absolutely essential" and declared: "Fallout shelters can be provided at about one-half the cost of blast-proof shelters and they can be substituted for or supplemented by low-cost modifications of existing shelters in basements and in those buildings that still stand after an attack."

Johnson, who was a member of the Rockefeller study group, cited Sweden, a country of seven million, which is taking civil defense problems so seriously that she has already built the more expensive underground blast shelters to protect more than 20 percent of her people.

As impressed as he is by Sweden's civil defense progress, so depressed is Johnson by the lack of it in this country.

"I think the time for action is now," he told the Holifield subcommittee. "I'm scared by this 1961–63 ICBM capability of the Soviet Union. If we wait 1 more year, it will be a year we can never buy back."

Fort Garard, Pa.

EXTENSION OF REMARKS
OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, May 26, 1958

Mr. MARTIN of Pennsylvania. Mr. President, for years I have been greatly interested in the early history of our Nation. The gradual westward movement was made possible by certain forts in various parts of our country. There are many of these in western Pennsylvania.

When I was Governor of our Commonwealth, I arranged for the placing of more than 2,000 plaques in various parts of the State. I have noticed that Fort Garard was marked by appropriate ceremonies yesterday afternoon. This is the location of the massacre of part of the family of the celebrated Baptist minister, Rev. John Corbly.

Hon. Stephen McCann, a member of the Pennsylvania Legislature, was largely responsible in having this fort permanently marked, and he made the address on that occasion.

There is a very good account in the Washington (Pa.) Observer of Friday, May 23, and I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLAQUE TO BE UNVEILED SUNDAY AT SITE OF ONE OF COUNTY'S FRONTIER FORTS

GARARDS FORT.—The site of Fort Garard, one of the early frontier forts of western Pennsylvania, is to be marked by a historical plaque which will be unveiled Sunday afternoon, May 25.

The marker has been erected by the Pennsylvania Historical and Museum Commission and is located on Route 616, about a quarter of a mile east of Garards Fort, which is named for the stockade.

The dedication ceremony will be combined with memorial services at the Historic Garards Fort Cemetery, which contains the graves of Indian fighters and men who fought in the Revolutionary War, War of 1812, Civil War, Spanish-American War, World War I, and World War II.

The memorial service will be held at the cemetery at 2 p. m. by Greene County Post 3190, Veterans of Foreign Wars, at Carmichaels.

The marker will be unveiled at 3 p. m., with Assemblyman McCann delivering the dedicatory address. County Superintendent of Schools, D. C. Longanecker, who was born in a house on the old Jonathan Garard farm, where the fort was located, will give a brief history of the fort.

Historical records indicate the fort was completed in late 1773 or early 1774. It was 100 feet square and was built of long, straight logs, which were split in half. The outer row of logs was placed with the flat side out, close together, and stood 15 feet high. An inner row of such half-logs had the split side inward, one being placed in each space between the logs of the outer row. There was one large, wooden gate, and several buildings were inside the stockade.

The woods around the fort were cleared to extreme gunshot distance from the stockade, with not even a stump or log left to shelter an enemy.

One of the few remnants of the fort is the entrance to a small, underground passage, large enough for a person to crawl through. This passage apparently came up in one corner of the fort and was there so that, in an emergency, a person could crawl into the fort without the main gate being opened.

This tunnel entrance can be seen on the farm which is now owned by Mrs. Vern B. Core and occupied by Mrs. Core and her son-in-law and daughter, Mr. and Mrs. Harold Bunner. Mrs. Core is the widow of Dr. A. R. Core.

The well which was in the stockade still gives good drinking water and is used daily by the occupants. The hillside vegetable storage house on the farm was also part of the old fort. Mrs. Bunner said it has been rebuilt several times, and that the original stones were always used.

The fort has always been linked with the Corbly massacre, which took place Sunday morning, May 10, 1782. Rev. John Corbly, who was pastor of the Goshen Baptist Church, founded at Garards Fort in 1774, was on his way to the stockade to hold services. With him were his wife and children.

Indians leaped from ambush and killed his wife and three children. Two other daughters were scalped, and one later died.

The grave of both Rev. John Corbly, who was a captain in the home guard and in the minuteman of Fort Garard, and that of his wife are in the Garards Fort Cemetery. Her tombstone is marked with the following epitaph:

"Beneath the Indian Tommy Hawk,
Me and my babe we fell;
Was hurried suddenly away,
With Jesus for to dwell."

Graves of other Indian fighters and Revolutionary War soldiers in the cemetery are those of Nicholas Livengood, George Morris, Benjjamin Sutton, Sr., Jeremiah Long, Abner Mundell, Lt. James Williamson, J. R. Minor and Peter Meyers, Sr.

J. P. Minor is the only veteran of the War of 1812 buried there, but there are 23 Civil War soldiers interred. They are Otho Darr, Evan Evans, William Gass, William Hunt, Eri Gregg (Morris), John Myers, William Thomas Ruse, William Deets, William W. Evans, Harrison Gump, James Husk, Lt. J. M. Morris, Samuel Robinson, Henry Rush, Benjamin Evans, William L. Freeland, Dr. Hill, Benjamin Lantz, Alpaeus Maple, William H. H. Morris, Thomas Benton Roberts and John Stickles.

John Rich, who served in the field artillery, is the single Spanish-American War veteran buried in the cemetery. World War I dead are Cpl. William Barb, Ruben H. Haines, Lt. A. R. Core, Reed Long, Sylvia Darr, and Clarence Rumble.

Conrad Wayne Huggins, reported the first man from Greene County losing his life overseas in World War II, is 1 of 3 soldiers of that war buried in the cemetery. Others are Robert Dillon and William F. Rhodes.

The roster also includes one soldier, W. J. Johnson, who served in either the Civil or Spanish-American War.

The program for the 2 p. m. memorial service at the cemetery:

Selection, Greene County Band.

Invocation, Rev. Errol G. Smith, Garads Fort Methodist Church.

Address, Assemblyman Stephen McCann.

Memorial ritual and salute by firing squad, Greene County Post 3190, VFW.

The program for the 3 p. m. historical marker dedication:

America, Greene County Band.

Invocation, Rev. Clark M. Neptune, John Corbly Memorial Baptist Church.

Historical résumé, D. C. Lonanecker.
Stars and Stripes Forever, band.
Unveiling of marker.
Dedicatory address, Assemblyman Stephen McCann.

Assemblyman McCann, Warren H. Roberts, Columbus Henry and D. C. Lonanecker were instrumental in obtaining the marker from the State.

Meeting the Teacher Shortage

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 26, 1958

Mr. PROXMIRE. Mr. President, one of the most imaginative proposals to use existing manpower resources to meet a national need that I have seen is the plan of the United States Army to supply Regular and retired officers as teachers in the mathematics and science departments of public schools. It is now the responsibility of school systems and teacher organizations to find ways to take advantage of this proposal.

Mr. President, the Army's suggestion is described fully in an article written by Arthur Krock and published in the New York Times of May 23, 1958. I ask unanimous consent that the article, entitled "The Army Program for the Public Schools," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the Appendix of the RECORD, as follows:

THE ARMY PROGRAM FOR THE PUBLIC SCHOOLS

(By Arthur Krock)

WASHINGTON, May 22.—The United States Army has now organized a formal and active program for supplying retired Regular and Reserve officers as teachers in the science and mathematics departments of those public high schools (more rarely colleges) that may wish to avail themselves of this largely unused source of education. Secretary Brucker has prepared an announcement of the details of this program, which is the Army's response to a finding by the research division of the National Educational Association that in 1957 the supply of such teachers in the high schools was only one-third of the demand.

"Among Army personnel, retired and approaching retirement," this announcement reads, "are substantial numbers who have essentially all of the academic preparation required for teaching, a profession closely related to the military in many respects. Army men who have baccalaureate degrees and special competency in at least one core subject (science, physics, mathematics, history, language) can offer our high schools and colleges the crystalized lessons of almost a full lifetime of teaching and being taught; the seasoned understanding of young people; and a rich resource of contacts with other peoples of the world."

The idea is a couple of years old. But not until the recent military demonstrations of Soviet Russian advances in science did it appeal with urgency to retired military personnel or arouse much interest among administrators of the high schools. But early in January of this year Dewey Short, Assistant Secretary of the Army, began to develop the idea into an organized program for his branch of the armed services. The forthcoming announcement by the Secretary of the Army will herald the success of Short's efforts.

DETAILS OF THE PROJECT

In a memorandum he circulated, dated January 7 last, the Assistant Secretary outlined three methods for consideration in the building of the Army project on which he has concentrated. He cited the notation by the President's Committee on Education in 1957 that the retired military personnel—Army, Navy, and Air Force—was an "untapped reservoir" of well-qualified high school teachers in short supply in certain departments. And on the prompting of this memorandum the following program has been established:

The Adjutant General will maintain a name and credential file of officers qualified for high school teaching whose services may be applied for. Their average ages on retirement are the mid-forties for reserve, and the mid-fifties for regular, officers.

The Army will write the major commanders enjoining their cooperation in publicizing the national teacher shortage and the opportunities in the educational field for officers retired or about to be. The latter group will get letters offering full information on prospects to any who may be interested.

An Army staff study on the subject will be circulated in the Army Information Digest and other appropriate publications.

Letters of information on the program will be sent to national educational associations, with requests for their support.

Civilian education advisers, employed in the Army's world-wide program of general educational development in more than 300 centers, will receive packets of guidance and counseling materials so that they may provide authoritative assistance to interested Army personnel. These packets will also be supplied to the Army's Retired Activities Units.

A STATEMENT OF DESIGN

The Secretary's forthcoming announcement will formally inaugurate the program and be addressed to all Army personnel, active and retired. On the premise that education is national defense the Nation's schools are as assuredly action agents of national security as are the military services, the announcement will state the following as the design of the action program:

"To inform, motivate and assist Army personnel in preparing themselves as appropriate, and offering their services as teachers in the Nation's schools. As the focal point, the office of the Adjutant General will continue to cooperate closely with the Retired Officers' Associations, the United States Employment Service, national educational associations and both State and local school jurisdictions. Correspondence with individual schools and colleges is welcomed."

The Navy and the Air Force, this correspondent was informed today, have also taken steps to interest their qualified Regular and Reserve officers in retirement in helping to fill up the high school teachers' shortage and to interest the high schools in availing themselves of this material. But on the evidence of Secretary Brucker's manifesto, it would appear that the Army is the first of the services to organize the effort as a major project.

Now it remains to be demonstrated whether the various teachers' organizations will cooperate with—or, on the trades union closed shop principle, will move to obstruct—those educational authorities who may wish to relieve shortages in the departments of science and mathematics with availables from this new and exceptionally qualified source.

Anti-Americanism

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, May 26, 1958

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "Anti-Americanism," which was published in the Watertown (N. Y.) Daily Times.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Watertown (N. Y.) Daily Times of May 17, 1958]

ANTI-AMERICANISM

Acts of anti-Americanism, such as occurred in South America against Vice President NIXON, the riots in Lebanon, and the friction in Canada, will be thoroughly investigated by the Senate Foreign Relations Committee beginning next week. This could well be a very important inquiry because, until the violent action against Mr. NIXON, the United States somewhat blithely had thought everyone outside of the Iron Curtain was either friendly or decent in attitudes toward this country. This is the time to get at the basis of the frictions before it is too late.

Fundamentally, in the last few years there has been a lack of concern, particularly in the legislative branch, toward preserving foreign friendship. There is a tendency to form legislative attitudes from isolated irregularities in foreign lands. The State Department presents for legislative enactment a program, and that program is cut apart because of real or feigned legislative indignation over the isolated irregularities.

Canada, for example, is protesting again over the way the infringements on Canadian sovereignty appear to take the form of overlooking Canadian economic interests. The legislative branch threatens import quotas on lead, zinc, and oil in such a manner that hits directly at the basic economic structure of Canada. Mr. Benson disposes of wheat through dumping, and in so doing throws into economic collapse the wheat industry of Canada.

The Treasury Department attempts to levy a $4 million tax against a Canadian company that was owned by American citizens. This is the Premium Ore Co., operated by Cyrus Eaton of Cleveland. This concern started mining in Canada in 1942, with a 3-year Canadian tax exemption. In 1953, the Bureau of Internal Revenue in Washington prosecuted the company for alleged unpaid taxes. This matter, according to United States courts, is covered in a tax treaty between the United States and Canada. Nevertheless, the Treasury Department is now appealing, and Canada, quite rightfully, protests that the appeal violates the spirit of the tax treaty. The tendency is, in the words of Senator FULBRIGHT, for the United States to lack tact and disregard the sovereignty of the American neighbors.

President Eisenhower is engaged in trying to renew reciprocal trade the tariff program of the past 25 years. Reciprocal trade may have its flaws, but the evidence of reciprocity in the handling of tariffs indicates a willingness and a desire on the part of the United States to negotiate with foreign countries, rather than declare legislatively and unilaterally that this or that impost will be so much. After all, there are two industries in every tariff negotiation—the industry of

the foreign country, and the industry of this country. Reciprocal trade indicates an attempt to relate the importance of both industries to a common purpose. Unilateral tariff pronouncements disregard the industry of the foreign country and suggest that there is only one industry of importance, and that is the American industry.

Do this a number of times, and there cannot help but be an accumulation of anti-American feelings. Add further the fact that the United States is still the wealthiest country in the world with a general policy of increasing the economic stature of its friends among Western nations. Then try to square this with specific acts that undermine the economies of foreign nations and again there is an opportunity for anti-Americanism.

Finally, the Senate committee ought to recognize in its investigation that foreign countries in reviewing the relations with the United States, can recall high-handed acts of isolationism years ago by this country. Necessarily, they must wonder whether there will be a return to this isolationism. In the last 25 years this country has been international in its views and efforts. But there is increasing evidence that under one guise or another the United States is narrowing its attitudes and restricting its policies a little here and a little there so that resentment is accumulating.

John Foster Dulles and his brother, Allen Welsh Dulles, go before the Senate and point out that the biggest problem that confronts the United States today is the Russian program to trade with foreign countries in such a manner as to expand the economies of those foreign countries. The two Dulles brothers argue that the United States must compete with this tremendous Russian effort if it is to succeed in maintaining its world superiority. This kind of competition, however, is not enhanced by such things as high tariffs, import restrictions, and the like. If the United States is to export, it must import.

Communists can be expected to make the most of capitalism's economic failures. As the leading capitalist nation in the world, this country must not permit situations to arise in its relations with other countries in which the capitalistic defects invite Communist inroads.

The Foreign-Aid Fiasco

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, May 26, 1958

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the column by Henry Hazlitt entitled "The Foreign-Aid Fiasco," from the May 26, 1958, issue of Newsweek.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

THE FOREIGN-AID FIASCO
(By Henry Hazlitt)

The treatment of the Nixon party in South America—the face-spitting, the rock-hurling, the desecration of the American flag—is an end result of our policy of total foreign entanglement in the last dozen years, and in particular of the foreign-aid program.

It may not be possible to determine the exact extent to which the South American riots were inspired by organized Communist plots directed locally or from Moscow, and to what extent they reflected genuine national feeling. In any case, the Communists won another major propaganda victory, and our own world prestige suffered another major blow. The Nixon tour was primarily an effort to woo South American good will an to secure a demonstration of it. Instead, our Vice President and his wife were insulted, physically attacked, and shamefully humiliated. The rioters successfully showed that they hate us and do not fear us. From this standpoint it is hard to deny the Moscow radio's triumphant claim that the Nixon tour was a fiasco.

WE CAN'T BUY ALLIES

A few months ago (January 13) I quoted here a passage from Machiavelli in which he pointed out that, in international affairs, "it is much safer to be feared than loved, if 1 of the 2 has to be wanting" and that "the friendship that is gained by purchase is bought but not secured." James Burnham, in National Review (May 17), has taken an even more appropriate quotation from the same source: "When things are so managed in a government, that the neighbors purchase its comity, and make themselves its pensioners, 'tis a certain sign of the potency of that government; but when the neighbors on the contrary receive money from it, 'tis as infallible a sign of its weakness."

From the very beginning, one of the main purposes of our foreign-aid program, in whatever euphemistic forms it may have been expressed, has been to buy the friendship and good will of other nations—to buy allies. It has not only failed to do so; it has done the opposite. We overlooked the elementary fact that the recipient of alms feels humiliated in accepting them. They wound its national pride; they advertise its dependence on the giver. The recipient resents any quid pro quo or any conditions, even when these are in its own interest. One of the signs carried by the mob that attacked NIXON in Lima was "Peru is not for sale." Even if this was composed by Communists, they could count on it to inflame anti-American feeling.

GET RICH BY GIVEAWAY?

For many other reasons our foreign-aid policy has produced exactly the opposite results from those its supporters expected. To woo a country with bribes or their equivalent is to make that country feel that any alliance is primarily for our benefit rather than for its own. It regards such offerings as a sign of weakness. We lose respect by them. We have extended foreign aid to some 60 countries. The crowning irony is that nations that should have got not a cent from us are resentful and embittered because they get less than other nations.

The economic case for foreign aid is even worse. If there had been no economic foreign-aid program, countries wishing private American capital for development would have had to adopt sound political and economic policies to attract it. Government-to-government foreign aid has made this unnecessary. It has supported and prolonged foreign exchange control, inflation, confiscatory taxes, and socialism. And so on it has on net balance retarded, not advanced, world production and economic recovery.

The reductio ad absurdum of all the economic arguments for foreign aid has been solemnly put forward by the Secretary of State. "The great bulk of our mutual-security funds—over three-fourths," he said on March 24—"are spent in the United States. * * * To cut these funds would be to cut employment here at home." This is the argument that we get rich by giving our goods away. We could, of course, create the same employment by making the same goods to dump into the sea. If we want to subsidize our exporters, there are cheaper ways of doing it than giving away $100 for every $5 or $10 of net profit that exporters might get from added foreign sales.

Meet the President's Pastor

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, May 26, 1958

Mr. MARTIN of Pennsylvania. Mr. President, Guideposts for June has a most interesting article on the subject Meet the President's Pastor, by Paul Wooton. The work of the church means so much in these trying times that I feel this article should have deep consideration by all of us who appreciate the greatness of our country.

I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

On Thanksgiving, 1957, 2 days after he had suffered a cerebral disturbance, President and Mrs. Eisenhower drove up Connecticut Avenue to an old gray stone church whose walls have turned dark from 70 years of weathering—the National Presbyterian Church.

As a morning-coated usher escorted the President and Mrs. Eisenhower to their pew, an involuntary murmur rose from the congregation: no one had expected to see the President so soon after his illness.

After the service, the pastor, Dr. Edward L. R. Elson, walked to the Eisenhowers' pew and personally escorted the Chief Executive and Mrs. Eisenhower to the rear of the church. On the steps outside they paused while cameras flashed. The pictures that appeared in the papers the next morning seemed to catch a look of mutual admiration as these two men exchanged handshakes.

As an elder of National Presbyterian Church, I wrote to General Eisenhower during his first candidacy for president, and said that "We would be complimented if you would throw in your lot with us." From the first, we had some reason to think that the Eisenhowers might accept our invitation. Mrs. Eisenhower was a Presebyterian and their son, John, years ago had been a member of our church's Boy Scout troop. Also, General Eisenhower knew and liked our pastor.

Dr. Elson was born 51 years ago in Monongahela City, Pa. From the time he was in his early teens, he was struggling with the choice of going into the ministry, or into the Army. When young Elson opened the mail one morning to find that he had been designated to take the entrance examination for West Point, the decision could be put off no longer. That summer his parents were spending their vacation in a mountain cabin, and Edward went along, still wondering which career he would choose.

One day when his parents were away, he closed the cabin door, dropped to his knees and began to pray.

"I prayed all day, asking God for help," Dr. Elson recalls. "By the time my parents returned, I knew that I would go into the ministry. I did, but I still could not give up my interest in the Army. Two days after my ordination, I joined the reserves as a chaplain."

Dr. Elson still carries himself with military bearing. He walks fast, speaks fast, works fast. During the Second World War he went on active duty and saw 169 consecutive days of action in Europe. He first met General Eisenhower during this tour of duty.

Over the years, the Eisenhowers and the Elsons have become good friends. Dr. Elson and his wife, Helen Louise, are frequent guests at White House dinners. It was more than a formality when, after her husband's heart attack in September 1955, one of the first persons Mrs. Eisenhower called was Dr. Elson.

Whenever he is asked what difficulties there are in having such a close relationship with the President, Dr. Elson answers: "Difficulties? Difficulties? There are no difficulties."

But of course there really are. In every mail Dr. Elson gets letters urging him to intercede with the White House on some matter. These letters always get a polite but firm reply in the negative. More difficult to control, are the people who use the church simply as a chance to do some sightseeing. One Sunday during his pastoral prayer, Dr. Elson heard a commotion and looked up in time to see a young husband stand up in his pew and hold his wife high in the air so that she could get a glimpse of the President.

The church office is constantly bombarded with telephone calls, asking when the Eisenhowers will be in church. These callers are always given the same answer: "We never announce when any of the members of our church will be attending worship. We have services at 9 and 11. Visitors are welcome."

Actually, the church is advised in advance when the President will be there. Some time before the Sunday service begins, usually on a Saturday evening, a member of the Secret Service puts in a call to the church, advising that the President will come to either the 11 o'clock, or, more often, the 9 o'clock service. This is kept secret. Any announcement is given out at the White House.

An hour before the President is due, Secret Service men inspect the church carefully. Firemen and policemen take up their posts at all doors.

Since he came to Washington as President, this procedure has been repeated some 250 times, for Eisenhower is far more than a casual churchgoer. On the Sunday he flew back from the Geneva Conference, tired and harried, he rushed to the White House, changed clothing, and went immediately to church. At the services, he seems particularly to enjoy the singing. (What a Friend We Have in Jesus is perhaps his favorite hymn.) Recently he sent copies of one of Dr. Elson's sermons to many of his friends. The subject: The Mastery of Moods.

Dr. Elson is painstaking with his sermons. "It is sometimes frightening to preach here," he says, "it always is humbling. This pastorate particularly compels one to ask continually for divine guidance."

Perhaps in no other church has there ever been such a grouping of important officials. John Foster Dulles, the Secretary of State, and J. Edgar Hoover are members, as are half of the Cabinet, a third of the Supreme Court, and many Senators, Representatives and Federal judges. Dr. Elson cannot but be aware of their presence. In the back pews are reporters, busily taking notes for copy that literally is read around the world.

The doors of National Presbyterian are open 7 days a week. Nearly 130 meetings and services are held here every month. Our pastor especially is proud of our large young people's group, and that its program is vital and alive. To meet the heavy demands on his time, Dr. Elson puts in a long day, with each minute accounted for and carefully spent.

But not all of our pastor's time is spent in scurry and press. There is also time for meditation and prayer, and here, it seems to me, is the true secret of Dr. Elson's standing in Washington.

Frequently after the day is over, Dr. Elson leaves his office and walks downstairs to the sanctuary. There he carefully closes all the doors, then glances around the empty church, walks slowly up the aisle, stops, moves into a pew. There he kneels. After a while he rises, looks around, moves to another pew, and again he kneels. For an hour he moves around the church, praying at each pew about the concerns of the pewholder. It might be that he prays for the problems of a Government clerk, or for a young man whose mother has just died.

Or it might be that he moves to Pew 41. On the armrest is a simple plaque: "Dwight D. Eisenhower. President of the United States. 1953—."

That is the way our pastor prays for his congregation.

TV Can Tell the World

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 26, 1958

Mr. MUNDT. Mr. President, for the information of Congress, I ask leave to have printed in the Appendix of the RECORD an article entiled "TV Can Tell the World," in the writing of which I collaborated, and which appears in the May issue of Think. It suggests some means which I believe we Americans can usefully employ in getting the true story of freedom across to many millions of people in less fortunate areas of the world.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TV CAN TELL THE WORLD

(By Senator KARL E. MUNDT, of South Dakota, as told to Katherine Kirkbride)

When a group of us in the Senate studied the problems of international communications, we saw the television picture as the medium that could show the American way of life to the peoples of the world, and unite both individuals and nations in common understanding. But to build a TV network around the world presented technical obstacles.

The microwave that carries the picture is a straight wave. Television in the United States is set up on 30-to-100-mile relays across the country. To cross the Atlantic Ocean with this wave we need to go 290 miles—the longest single distance between land masses of the North Atlantic. To send the 6 million-cycle wide-band television picture across the horizon was an ingineering feat challenging the ingenuity of the most enterprising engineers.

Yet on September 13, 1957, twin square antennas built by the American Telephone & Telegraph Co., just outside Florida City, Fla., beamed a high-frequency wave into the sky. One hundred and eighty-five miles to the southeast, similar antennas waited. When enough of the signal made the 5-mile trip to the tropospheric ceiling of the sky and reflected back over the horizon to reach the waiting antennas, American communication engineers had achieved one of their most historic triumphs.

Across Habana's television screens that night flashed pictures of boxers fighting in upstate New York. Men in the Havana bistros watched German middleweight Frank Szuzina knock out Randy Sandy in the 10th round in the War Memorial Auditorium, Syracuse, N. Y. But the men in Habana saw more than a prize fight on a TV screen that night. They witnessed the first wide-band picture ever broadcast "live" from one nation to another over an extended body of water.

A little more testing, more power, and the new means of electronic transmission called scatter propagation, would send the television picture the 290 miles needed to cross between Iceland and the Faeroe Islands of the North Atlantic.

Similar square antennas would stride North Atlantic icecaps to beam the picture to England. From England the picture would travel through Europe by a system of retelevising called Eurovision. Eurovision converts technical lineages to carry the TV picture from country to country through Europe to Turkey. Stations in Saudi Arabia, Iran, Kuwait on the Persian Gulf, India, Thailand, the Philippines, Australia, Okinawa, Japan, and other countries, would complete the world circuit.

Almost every month now, new stations join the world network. A new station is being built in Spain. International Telephone and Telegraph Co. has built telephone and telegraph scatter relays between Puerto Rico and Santo Domingo, and while these narrow-band relays do not yet carry the wide-picture band, they establish the locations for later picture relays to reach into this area. Turn the globe around, and you see new IT&T towers sending scatter telephone and telegraph communications 230 miles between the Mediterranean islands of Sardinia and Minorca.

Only recently, the Japanese Government issued construction permits for 43 new stations in Japan, 36 of these to be private enterprise. And, as the stations spring up around the world, as new narrow-band telephone and telegraph scatter relays pioneer other routes, as new stations penetrate the Middle East and into Asia, it leaves only crossing the North Atlantic to link the world network. With the historic Havana broadcast the decisive technical hazard has been overcome.

The next step, crossing the North Atlantic route to England, we should achieve within the next year. RCA's distinguished Dr. H. H. Beverage, vice president in charge of research and development, believes the problem now is one of servicing the relays after they are built. Sturdy helicopters will be needed to fly technicians to outposts whipped by 100-mile winds. Dr. Beverage estimates that the series of relays to cross the North Atlantic will reach a cost of some $50 million, though international lawyer and telecommunications pioneer Henry Holthusen believes this figure is high.

The historic relays between Florida City and Habana, costing $3 million, were built by American Telephone & Telegraph Co. and by International Telephone & Telegraph Co. in Cuba. The services of the antennas were leased by NBC, which sold the fights to the Gillette Co. Gillette found such a responsive audience in Habana that they responded by signing a long-term contract to broadcast the Friday nights fights to Cuba. And more recently, boxing matches have been broadcast back from the Sports Palace in Habana to the United States.

The development of international television to this point has been almost as long and as hazardous as the trip the microwave signals took through the Florida sky. As far back as November 2, 1949, RCA's board chairman, Gen. David Sarnoff, forecast, "We shall look across the hemispheres from nation to nation," and he believed the added sense of neighborliness to be attained would help us better understand each other.

About the same time, in the United States Senate, the members of the Smith-Mundt committee, advised by Henry Holthusen, were puzzling over the problems of the Voice of America. Had the Voice really done the things we had hoped it would do? Had it sold the idea of freedom, the institutions of democracy, to other nations of the world? Or did we need to add to the Voice the Vision of America? Henry Holthusen and I spent many hours in closed conference, Holthusen championing as David Sarnoff had, the television picture as the most potent force to unite the world's peoples.

On June 5, 1950, I introduced the idea of international television on the floor of the United States Senate, in a 90-minute Senate speech entitled "The Vision of America." I said we must energetically contend for the individual freedoms and liberties of all peoples. Two-thirds of the world's peoples are illiterate, while the lands they occupy are rich in nature's abundance. Soviet-paid agents move into these dark areas of the world, spreading discontent, chaos, offering bribes. Hungry, suffering peoples are easily lulled by false promises that can enslave them. We could help these peoples to help themselves. We did not seek to impose upon these people any particular pattern or system of government, I told the Senate. We hoped they might improve their lot and emerge as free men, masters of their own fates.

We saw the screen as a teacher. A single blackboard, a single teacher, could remedy the illiteracy of thousands. One TV transmitter with its screen and its relays could teach thousands of people to boil water, to keep themselves clean, teach them inoculation against disease. It could also teach them the use of new tools, new methods for tilling the soil, how to rotate their crops. Our State Department reports showed areas in India, for instance, where men farmed as their forefathers did centuries before them, having no way to learn new methods. In one area the use of a longer hoe increased food production many times. And the TV screen could help these peoples in underdeveloped lands without the debts of foreign contribution.

Henry Holthusen believed the picture could help where monetary gifts would fail. "Show people how to improve their lot," he said, "and they will attract the foreign credit that builds sound economy." We both believed the picture could show foreign peoples how their American brothers lived, and would show the Americans the problems and the cultures of the peoples of Europe and of Asia. Whole nations, lulled into tyranny by constant conditioning, could be roused to new effort toward freedom. When they saw the vitality, the rewards of American life on the screen, they could be spurred to new efforts to improve their way of life.

Henry Holthusen traveled to many countries, telling the television story, to Japan, Turkey, Egypt, the Philippines, Thailand, through Central and South America. In Japan, government and communications leaders hailed him as bringing a fresh age of progress to Japan. Japanese Government leaders, who were about to adopt Russia's 625-line standards of television, yielded to Holthusen's suggestions and changed to America's 525-line standards so that in future years Japan could become the key to the Far Eastern network.

A few months after Japan's first 525-line anchor station, JOAX, officially opened in Tokyo, 2,000 people stood in Tokyo Square to watch a single American kinescope broadcast of an American boxing match. And government leaders saw the screen as an aid in solving Japan's most vital problem—her food supply. On the other side of the world, Eurovision linked the nations of Europe in special events broadcasts of such happenings as the Salzburg festival, the international soccer matches, the Olympic games. In France, groups of 50 to 100 gathered to buy a community TV set for their local teleclub.

Even Russia had tried to join the trend by beaming her cultural TV broadcasts into Finland and Norway, and from Eastern into Western Germany. But Russia can never show her way of life to the world as America will, because Russian everyday living is held behind a vengeful Iron Curtain. In time, with the aid of the new over-the-horizon "scatter propagation," we may penetrate this curtain and show our way of life to the Russian people.

We will bring education to the areas of the world where illiteracy causes famine. We can place large screens in outlying areas and show thousands of people at one time the techniques of the modern know-how we take for granted in America. We will be able to show our workingman, our schools, our great cities, the rewards of living in a country that is free. We have found the weapon that can be decisive in winning the cold war.

We have had this medium for years. The television picture has flourished in America, but we had given little thought to its powers except as an entertainment medium. Its history, since its inception in 1884 as Nipkow's disc, through Baird's experiments in England, Braun's cathode ray tube, the iconoscope of RCA's V. K. Zworykin, and then the image orthicon developed under Zworykin's direction, has been an exciting one technically. To the engineering accomplishments has been added the unconquerable determination of David Sarnoff in guiding the TV picture to its final conclusion. But in recent years, the wonder of television has waned and become an accommodation we were almost complacent about.

The thought of its use in an international network was an idea staggering human imagination at first. But we have had the caliber of men who were not easily blocked by obstacles. We had our Smith-Mundt committee, which had studied the chaos of post-World War II Europe. And we had the counsel of Henry F. Holthusen. We had the sturdy determination of America's great communications companies. True, we have also had the skeptics. But not so many years before us, David Sarnoff had disregarded the pessimists who had said it could never be done, when he had guided television, itself, into existence. And now, our American engineers have created an advance in communications equal to the beginnings of short wave, in their efforts to televise the American way of life to all peoples.

Already an Air Force installation reaches across the icecap outposts of the North Atlantic, carrying telephone and telegraph messages. These are the trailblazers, pioneering the outpost locations. The historic broadcasts to Havana make it possible for the wide-picture band to follow this route, after additional power and testing can assure us the reliability of transmission through the several relays needed to cross the Atlantic.

Then the final chain in the international network link will close. And the world will be joined in the greatest single medium ever conceived to create understanding among the world's peoples.

A Storm Is Always a Challenge

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1958

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a splendid address entitled "A Storm Is Always a Challenge," which was delivered by Mr. Norman Knight on the occasion of the 15th anniversary dinner of the Boston Food Brokers Association, held the evening of April 28, 1958, in Boston, Mass.

There is not a more forward-looking or progressive-minded business executive in the United States than Mr. Knight:

"A STORM IS ALWAYS A CHALLENGE"

(Address by Norman Knight,[1] 50th anniversary dinner, Boston Food Brokers Association, Somerset Hotel, Boston, April 28, 1958)

Frank Sweeney, Bill Knott, Watson Rogers, John MacNeil, Wally Pierce, past presidents of the Boston Food Broker's Association, honored guests, it is a rare opportunity for me to sit among so many men whom I admire and respect.

This Nation has seen great progress these past 5 decades—our achievements as a people are phenomenal in areas of material living standards, continuing spiritual values, and recognition of individual dignity.

Nowhere, though, in all the histories of all the great nations of the world, past and present, have there ever evolved better methods than ours for the manufacture, distribution, and sale of food.

And nowhere in any one region of this great Nation can there be assembled an equal number of people associated with this great food marketing triumph of the 20th century who can match the contributions of New Englanders, many of you here in this ballroom, tonight, who with your collective efforts have pioneered, perspired, persevered, persisted and performed in such a manner as to set the standards for America in your chosen fields as manufacturers, brokers and retailers.

Charles F. Kettering said: "We have a lot of people revolutionizing the world because they never have had to present a working model."

That's what I admire so much about so many of New England's food industry leaders—you've brought the future into the present and then you've made it work.

Therefore, do not expect me to criticize that which I find to be as healthy and vigorous as in New England food marketing.

Do share with me, though, some thoughts which all of us in the communications field and you in areas of food marketing can express together with feelings of mutual respect and a fundamental knowledge that ours is a common objective designed to bring a better way of living to New Englanders and to maintain the proud Yankee tradition of setting standards for all America to follow.

That which we have in New England is substantial, no matter what criterion is used as a basis of comparison.

Illustrating this claim best is the imposing statement that New England, with only 2.2 percent of the land area of the United States has 7.5 percent of all bank deposits; 6.8 percent of all life insurance; 11.8 percent of all bank, insurance company, and investment trust assets; 8.7 percent of all manufacturing establishments; 9 percent of all manufacturing employment.

And yet, startling as are these figures, the plain truth is that New England's greatest growth is still ahead, because we have more of the greatest natural resource than does any other region of this or any other country—manpower, with vision, with courage, with strength.

You New England leaders in food marketing—manufacturers, brokers, and retailers—

[1] Norman Knight is president of the Yankee Network Division, RKO Teleradio Pictures, Inc., whose New England operations include the Yankee Network, WNAC radio, WNAC–FM and WNAC–TV.

can well be proud of past accomplishments, but we urge you to continue to recognize your responsibilities to this democracy that cradled your success and to the consuming public which financed your growth.

Perhaps your most important responsibility is to each other. There are those among you who must patiently and understandingly bring to newer and less experienced associates the great lessons you have learned. Among these is the interdependence of all facets of the industry.

No coddling is necessary—no good salesman wants special favors; no useless or inferior product should be nurtured to success.

But neither should a salesman with good ideas and quality merchandise be denied access to the market place—nor a deserving entrepreneur severed from opportunity to achieve growth.

For it would be a sad day if ever these proud achievements of your hearts and minds should be shattered, if not financially then morally, by those who arrive late on the scene with either a lack of understanding of human values or varying degrees of pomposity, selfishness, or complacency which can only invite long-term deterioration.

With the forces of food marketing constructively creating new opportunities for all, it is my fondest hope that the communications elements which constitute the great advertising force in our economy can join with you in the next 50 years to achieve a better standard of living for New Englanders than any of us even dared to dream.

For today, the food manufacturer can prosper with only intelligent advertising; the broker can sell strongest when he merchandises that advertising; the retailer can serve consumers best and profit most when he aggressively capitalizes on the advertising of manufacturers and the merchandising of that advertising by brokers.

Brokers can well take time today to remember a lesson learned by hard experience—that a salesman representing a food product must know a great deal about the merchandising of advertising.

And this knowledge starts with what must be the salesman's unshaken belief that good advertising does work, does produce sales, does make his job easier, does affect larger profits for himself, his company, his product. He must believe in advertising.

A 1950 survey made by sales management among district managers of large national advertisers in the consumer goods field indicated that it was possible to place an actual dollar value on the power of advertising as a merchandising tool.

This survey tells us that companies who have mastered the merchandising of advertising actually buy their advertising for only 47 cents on every dollar spent.

While large numbers of advertisers pay the full dollar for their advertising * * * the merchandising masters—the real dollar-stretchers—prove that sound merchandising methods derive 53 cents greater worth from every advertising dollar.

Many manufacturers and brokers will in the next 50 years bring to retailers ideas that will be of considerable help to those retailers who are in a position to utilize them. Conversely, many salesmen have much to take back to their companies after visits with buyers.

It is well for all to remember that—

There is no profit in merchandise—there is profit only in the movement of merchandise.

Merchandise must move and fast.

Stiff markups are of the past.

Storekeeps want wide margins.

Merchants want fast movement.

Products that bring greater numbers of consumers into a store constitute the most profitable merchandise any retailer can carry.

The most important merchandising principle in food marketing is just one 3-word thought: "Get people in."

With the forces of food marketing and advertising joined together, our next 50 years will bring us a prosperity almost beyond comprehension.

Expect to see: precooked meals of every type; dehydrated foods with fresh taste; frozen canned foods; extensive use of radar ovens for preparation of frozen ready-to-eat meals; canning in plastics and aluminum; increased number of marketing cooperatives by growers; all factors (costs, competition, lower margins) to favor growth of alert, agressive brokers; survival of progressive independent retailers; retail chain store development into merchandising phenomena whose complicated operations will demand the best energies and abilities of New England's finest manpower.

We can never expect utopia.

Someone once defined utopia as conditions that will prevail when Americans enjoy: 1950 wages, 1926 dividends, 1932 prices, and 1910 taxes.

But if we never achieve utopia throughout this country, you can be sure that here in New England we will come the closest to it * * * for here abound the qualities of aggressiveness, thrift, and hard work.

And when things get a little rugged (as they are now for some of our fellow businessmen and larger numbers of our fellow citizens), here in these qualities will be the determination to create a better life for all.

This excerpt from Archibald Rutledge's Beauty in the Heart best conveys my closing thought:

"Going up a mountain path one day, I met a mountaineer with an axe in his hand. I walked with him and asked him what he was going to cut. 'I need a piece of timber to fix my wagon,' he said. 'I need the toughest kind of wood I can get. That kind always grows on top of the mountain, where all the storms hit the hardest.'

"Storms rend and mar; but they strengthen, they build and they may bring forth serene and changeless beauty. The beauty born of storms has a nobility about it. A girl's first bloom lacks significance and spiritual durability. It can represent no effort, no decision, no struggle, no strength or valor on the part of its possessor. Years later, when the girl has become a woman, if she has reacted gallantly to trouble, there will come to her a beauty that has about it the air of immortality. That is because it is rooted in character.

"We are prone to lament that the world is not better. Yet the fact that it is full of trouble affords us our only chance to spend our hearts. A time of prosperity is a dangerous time; the soul loafs and grows fat. Times of storm and peril are the ones that show what we are made of. A storm is always a challenge; there seems to be something in the heart that rises up to meet it."

More Support for Banning Nuclear Testing

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1958

Mr. PORTER. Mr. Speaker, the most encouraging news to come to my attention this past weekend has been the President's proposal to the Soviet Premier that scientific talks get underway in Geneva in 3 weeks on ways of policing a nuclear weapons test ban.

The most discouraging news is that the United Nations scientists have found that nuclear-test radiation is causing harm to world health and that it threatens uncounted injury to future generations.

These are matters, Mr. Speaker, which concern mankind and which have prompted men and women throughout our Nation to write to me asking that I continue to urge that nuclear testing cease.

Under leave to extend my remarks in the RECORD, I include a second set of excerpts from a number of the letters which I have recently received, and which oppose the continuation of nuclear testing:

Thank God for men such as you who have the courage to stand up for your convictions against the pressure of war madness. If we do not stop these bomb tests which are poisoning our air, water, and food; if we do not outlaw all nuclear weapons and do these things now, it will soon be too late. So, here is one small citizen who applauds you and prays for you.

MRS. MARION R. LOVEKIN.

TUCSON, ARIZ.

It is rather difficult to get a full picture from press stories of what transpired in your criticism of Admiral Strauss and the Atomic Energy Commission. We are a small paper and, of course, have no wire service.

We feel the issue you raise is extremely important and should be brought to the attention of our readers.

CONRAD KOMOROWSKI,
For the editorial board of People's Voice (Glos Ludowy).

DETROIT, MICH.

I wish to support you and all other Congressmen who have the courage and the sense to ask for an end to nuclear tests. * * * Thank you for your courageous, challenging, and sensible position.

MRS. EDNA P. LEGG.

POUGHKEEPSIE, N. Y.

I hope that you will continue your good work—wish I were in your State so that I could support you with my vote but if there is anything else I can do, please let me know.

MRS. TED BERLIN.

MALIBU, CALIF.

I feel that our course comes daily perilously closer to insanity and it seems to me the crew of the "Golden Rule" deserves every possible support for at least dramatizing the issue in a way more effective than almost any other I can think of.

Thank you again for giving this support. Oregon can indeed be proud of its representation in Congress.

MISS IRMGARD LENEL.

SANTA MONICA, CALIF.

I commend you for your plea for the cessation of the testing and encourage you to continue to take this stand. There are many of us who feel very strongly as you do, but who are unheard. It is only through people like yourself that we may speak. I sincerely thank you for this effort and any effort that you might make in the future.

MRS. A. PERRINO,
Central Methodist Church.

DETROIT, MICH.

It is so rare that a national representative has the courage to speak out against the

continuance of H-bomb testing that I am writing to commend you for your stand. The case against discontinuing testing has become so feeble that it requires lies by the AEC on detection limits and other aspects of the problem to defend it. The clean-bomb arguments are something out of Jonathan Swift. I hope that you will continue your efforts to arouse the public to demand a halt to these senseless tests.

C. W. GRIFFIN,

ERLTON, N. J.

Mr. wife and I heartily thank you for arousing the people of this country to the terrible danger of these nuclear tests. We have read several of your statements in the New York Times and find that there seems to be much courage required to go against the official statements of AEC and of Mr. J. Foster Dulles. We thank you for helping to bring this issue into the open for discussion.

ROBERT and ANN STOWELL.

WILTON, N. H.

Please accept gratitude of New England American Friends Service Committee for your opposition to continued nuclear tests. We support you and others in attempts to end this evil and explore paths to disarmament.

ROBERT A. LYON,
Executive Secretary.

CAMBRIDGE, MASS.

I wish to commend you on your opposition to the continuance of atomic tests.

HENRY R. KORMAN.

LONGVIEW, WASH.

I want to commend you most heartily for the stand you took this week in your opposition to the continuance of the nuclear tests. Praise God for a few men of courage in these perilous days.

HELEN E. DOLLEY.

COMPTON, CALIF.

I am very glad indeed that you are taking the position you are. I have felt for some time that the AEC has been too autocratic and has wielded too much power over the American people through its policy of secrecy and hocus pocus. Keep it up. I don't think the people are so stupid they won't act reasonably if they know the facts.

LIONEL CHADWICK.

SALT LAKE CITY, UTAH.

Nuclear testing, with its deadly accompaniment of radioactivity is a menace to the future of all peoples. If agreement can be reached on ending tests, with inspection, it must be the duty of our Government to seek such an agreement. To this end, the AEC serves merely as an obstacle to the search for peaceful alternatives to the arms race.

MRS. L. MAUSNER.

RIDGEFIELD, N. J.

As a Democrat I feel especially happy when I hear one of my own voicing sentiments that are for the good of mankind. The people and especially thinking people are questioning the wisdom of nuclear tests and are looking for wise leadership.

MARION R. INNERST.

PASADENA, CALIF.

One cannot escape the conclusion that a few willful men are practicing a gross and vicious deception upon the American public, and that it is high time their motivations and aims were brought to light. More power to you, sir.

MATTHEW P. HYLAND.

WASHINGTON, D. C.

Please be assured that your forthright and fearless efforts to stop nuclear testing have a large and appreciative following. I hope you will persevere courageously, and that others wil join you in working toward a safe and peaceful world.

ANTON KUERTI.

PHILADELPHIA, PA.

We stand squarely behind you on your efforts for cessation of nuclear testing and for disarmament. We have given much thought to the subject and can only come to the inevitable conclusion that the United States must unconditionally stop testing nuclear weapons.

Although reports are contradictory and misleading, the indications are that radioactive poisons are already accumulating to a danger point and no one is certain how serious the effects will be on generations yet unborn. If there is doubt then under no circumstances have we the moral right to risk the health and life of people yet to come because of our present follies.

It seems that the people are not really informed and somehow should be made more aware of the dangers.

ROWLAND and CAROLYN ORUM.

OAKRIDGE, OREG.

Your speech should have been printed in headlines. It is what the entire world is waiting for, or should be waiting for. At last there is a gleam of hope that our Congress is waking up. * * * My son * * * flies jets on this useless test expedition that is so morally wrong and so dreadfully wasteful.

Mrs. ELMA RHODES.

SPANARD, ALASKA.

You are speaking for large numbers of us who seem to have little opportunity to be heard or represented in Washington.

Mrs. EZRA EVANS.

MEDFORD, N. J.

Though you are not a representative of California, which is my State, in fact you do represent me better than our own Senators, for you stand for what we believe is right. I am referring to your speech in Congress criticizing our government officials for setting off nuclear explosions without notifying the people of this country that such action had been taken.

Here in California we have been exposed to a great amount of radiation from fallout, both from explosions in Nevada and those in the Pacific, even from those set off in Siberia. We are the ones who get the first dose of strontium 90. * * * Please do not flag in your efforts to bring sanity to our country. Many who are too shy to write their representatives at Washington are frightened and angry just the same.

PHYLLIS ZAKHEIM,

SEBASTOPOL, CALIF.

About a week ago, I read in the CONGRESSIONAL RECORD your statement made upon your return from the Eniwetok Proving Grounds concerning your proposals to help avert all-out thermonuclear war. In my humble estimation, I honestly believe that this was as fine a statement as has ever been made on the floor of the House. * * * Your actions with regard to Trujillo, Latin American problems, plywood, and avoidance of thermonuclear war are certainly consistent with the finest traditions of a liberal Democratic Party. Please keep up the good work.

FELIX M. PUTTERMAN.

NEW YORK CITY.

My husband and I would like to thank you for your efforts toward informing the public of the dangers of fallout. We most wholeheartedly support you. If only there were more like you.

MARY WEST.

MILL VALLEY, CALIF.

I am writing to express my support of your stand against the nuclear tests and to say that I hope you will have many opportunities to speak out on this vital issue. I am working with others in my own community who share this conviction and realization of the need for action. I am sure that you are speaking for many concerned people all over the world.

Mrs. RUTH FORRESTER GOODHARD.

SANTA MONICA, CALIF.

My husband and family and I all heartily agree with you that all nuclear tests should be stopped (indeed, should have been stopped long ago—or before they began) for the reasons which you enumerate and which are sheer common sense. Anything less is immoral and insane. I have long intended to write you our thanks for your H. R. 8296 * * * and haven't we learned yet that an arms race, continued, can lead only to war?

Mrs. KURT BUSIEK.

MOCKSVILLE, N. C.

Oregon State College Study of Farm Economics

EXTENSION OF REMARKS
OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, May 26, 1958

Mr. NEUBERGER. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD an informative editorial from the Oregonian of May 19, 1958, entitled "Spreading Farm Dollar." This editorial emphasizes a most illuminating study of farm purchasing power conducted recently by Dr. Gerald E. Korzan, of the faculty of Oregon State College at Corvallis.

It emphasizes in detail how the income of farmers spreads out through the entire economy, and creates jobs and purchasing power in all realms of business and industry.

Because farm income is vital not only to Oregon, but all 47 of the other States, I ask unanimous consent that the Oregonian editorial describing Dr. Korzan's significant study be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Oregonian, Portland, Oreg., of May 19, 1958]

SPREADING FARM DOLLAR

In round numbers, Oregon farmers take in $400 million a year. This provides employment for approximately 30,000 commercial farm operators and the equivalent of 17,972 full-time farm laborers.

In itself, this is an extremely important contribution to the State's economy. But city and country are not separate entities; everyone realizes that the welfare of the one is closely allied to the welfare of the other. Other jobs—purchasing power—are generated by Oregon agriculture, and a study recently completed by Dr. Gerald E. Korzan of Oregon State College gives some idea of the economic ripples that move outward from the farms.

Basing estimates on data for 1956, a fairly typical agricultural year, the Oregon State

College agricultural economist has produced intriguing figures. Of the $395 million in total cash farm income in 1956, Oregon farmers kept $94 million, or about a quarter of the total, as net farm income. They paid out $53,900,000 in wages to their hired help and spent a whopping $247,100,000 for goods and services.

Dr. Korzan has computed that $25,300,000 of these latter expenses represented direct employment to persons other than the farmers themselves and their hired men. This is the equivalent of 5,615 full-time jobs, including 1,626 having to do with repair and operation of capital items, 1,593 with depreciation and other consumption of farm capital, 700 with feed, 422 with interest, 158 with fertilizer, 116 with seed and 1,000 with miscellaneous expenses.

But farm products move on beyond the farmyard gate. They are processed and handled by others from then on. The Oregon State College economist figures that $176 million was added to farm product value on processing in only the first step beyond the farm gate. Of this, processors' supplies and miscellaneous expenses accounted for $108,400,000 and processors' direct payroll, $67,600,000.

This first-step processing, thus, provided the equivalent of 16,874 full-time jobs. Added to the 30,000 farm operators, 17,972 farm workers and 5,615 jobs represented by goods and services furnished the farmers, this makes a grand total of 70,461 full-time jobs supported by agriculture in Oregon through primary processing.

This annual payroll of $241 million was more than twice the 1956 payroll for contract construction in Oregon, nearly 10 times as great as the primary metals industry payroll and amounted to 63 percent of the lumber and wood products payroll, Clancy Jean, manager of the agricultural department of the Portland Chamber of Commerce, points out. The chamber had asked Oregon State College to make the study now available.

Annually, the number of Oregon jobs supplied by agriculture is considerably higher than that given in the study. The money spent for processors' supplies bought a lot of cans, other kinds of containers, labels, etc., produced by Oregon workers. Also wholesaling, storage, and transportation were not taken into account because the extent of their payroll and revenue production was difficult to assess.

The study proves beyond question that agriculture plays a much larger part in the overall economy of the State than is represented by the total farm cash income figure. And much of it is not as seasonal as is generally supposed, marketing activities, for example, going on, for the most part, the year around. A prosperous agriculture should be the aim of every Oregonian.

Resolutions of the Tennessee Municipal League

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, May 26, 1958

Mr. KEFAUVER. Mr. President, the Tennessee Municipal League had its annual meeting at Nashville, Tenn., Tuesday, May 13, 1958. Various matters of public importance were thoroughly considered by the members of the Tennessee Municipal League, and resolutions were passed giving the position of the members of the league on these various issues. The resolutions were thoroughly discussed and undoubtedly represent the viewpoint of most of the citizens of the State of Tennessee, as well as the outstanding municipal officials who constitute the Tennessee Municipal League.

I ask unanimous consent that these resolutions be printed in the Appendix of the RECORD.

There being no objection the resolutions were ordered to be printed in the RECORD, as follows:

THE TVA PROGRAM

RESOLUTION ON TENNESSEE-TOMBIGBEE CANAL COMPACT

Whereas the opening of a waterway between the Tennessee River and the Tombigbee River will provide a direct route for water shipping between the Tennessee Valley and the Gulf of Mexico, cutting hundreds of miles from the present route and vastly adding to the advantages of our State's commerce and industry; and

Whereas the feasibility of this long dreamed-of project now is under intensive restudy by the Army Corps of Engineers and will be the subject of a fresh report to Congress at this session; and

Whereas our neighboring States of Alabama and Mississippi by legislation action and gubernatorial affirmation have recently established a compact for an aggressive and continuing effort to bring this waterway into being and have cordially invited the participation of the State of Tennessee in said compact and enterprise; and

Whereas the opening of this waterway is a matter of equal concern to the people of our State: Now, therefore, be it

Resolved, That the Tennessee Municipal League recommend that the State of Tennessee join Alabama and Mississippi in the Tennessee-Tombigbee Canal compact and in vigorous action to advance the common interest of the three States in the development of a great shared resource.

RESOLUTION ON PRIVATE UTILITY ATTACKS ON TVA

Whereas the vested private utility monopoly of the Nation continues to stage in the magazine press and in other media their scandalous and unprincipled attack upon TVA, seeking by the grossest misrepresentations and most brazen insinuations to poison the minds of the people against this world-famous American river control project; and

Whereas at the instance of Senator ESTES KEFAUVER, of Tennessee, and other aroused Members of Congress, the Commissioner of Internal Revenue, and the Federal Power Commission have been moved to declare that the burden of this costly campaign no longer may be settled on the shoulders of the Federal taxpayers and the ratepayers of these giant corporations, but must be paid hereafter by their stockholders; and

Whereas the recklessness of this campaign of detraction should at least be checked by the said ruling, which is long overdue, and the interest of truth should be served: Now, therefore, be it

Resolved, That the Tennessee Municipal League convey its commendation to Senator KEFAUVER and those who have stood with him in his attention to this matter, and that it commend the vigilance of the Federal Power Commission and of the Commissioner of Internal Revenue to the end that the consumers of the services of the aforesaid corporate enemies of TVA no longer be taxed to support a propaganda campaign whose vicious purpose is to discredit the TVA "yardstick" and defeat their own proper hopes of obtaining electric power at better rates.

RESOLUTION ON SELF-FINANCING LEGISLATION

Whereas the municipalities and countrysides of this State are by choice distributors of and consumers of TVA power at exemplary rates which permit the common use of twice as much power as is used by the average consumer outside the TVA region, brightening the homes and quickening the industry of the people; and

Whereas assurance of the adequacy of this power supply in the future is of vital concern to the whole body of this State; and

Whereas there is now before Congress a plan whereby TVA would be authorized to go into the private money market to obtain capital for building needed additional powerplants by selling revenue bonds backed solely by TVA's own earnings, that is by the ability and willingness of the users of TVA power to pay their power bills, this plan having already been approved by an overwhelming vote in the Senate and is soon to be brought to a vote in the House; and

Whereas enactment of this TVA self-financing plan will remove the uncertainties which of late years have hung like a sword over the electric power supply of our State and will demonstrate to the Nation what already is clear to the people of Tennessee—that TVA's power users are in fact paying fully for the TVA power system; and

Whereas this TVA self-financing plan is unique in that instead of calling for more room in the Federal Budget it provides a sound means of obtaining investment funds for expansion of the TVA power system without governmental obligation: Now, therefore, be it

Resolved, That the Congress and especially each and every Representative of Tennessee in Congress be again apprised of the will and wish of this organization for the enactment of said TVA self-financing legislation as approved by the appropriate committees of the House and Senate and as recommended by the board of directors of TVA itself, and that this action be taken by Congress without alterations of the pending bill that would hamper or cripple the Tennessee Valley Authority in procuring and expending the funds needed to keep its power services at all times abreast of the needs of the State, the region, and the Nation.

CITIZENS FOR TVA

RESOLUTION ON CITIZENS FOR TVA

Whereas our State and area have no cause more important to the present and future welfare of the people than the planned development of the great resources with which nature has endowed us; and

Whereas our association has been and is a sponsoring member of the one citizens organization in the Tennessee Valley region created for and working for the comprehensive and integrated development of our water resources in the Tennessee and Cumberland Valleys, including the long-projected Tennessee-Tombigbee Canal; and

Whereas Citizens for TVA, now in its fifth year, is sponsored for this work likewise by 14 other State and regional associations, including the municipal associations of our sister States of Kentucky and Alabama, and the rural electric associations of Kentucky, Tennessee, Mississippi, Alabama, and North Carolina, by the Tennessee Valley Public Power Association and State labor organizations within the TVA region; and

Whereas the programs of Citizens for TVA, approved and ordered by its sponsoring members, look to the preservation of TVA from its powerful and unremitting enemies, to presenting the true story of TVA to the national opinion, to continuation of the

allied development of the Cumberland for navigation, flood control and power, to the advancement of projects for linking our State's growing waterways with other arms of the Inland Waterway System and the Gulf of Mexico, to the enlightenment of our own people and of people everywhere upon the realities and merits of the great resource-use projects and possibilities of our area and the rallying of favorable sentiment for these undertakings on a national scale; Now, therefore, be it

Resolved, That our association express and otherwise manifest its appreciation of the work of Citizens for TVA to these ends and continue its sponsoring support of Citizens for TVA as an instrument for the effectuation of our prudent and forward-looking interest in the fullest, coordinated development of our water resources.

POLICY ON FEDERAL PUBLIC WORKS ASSISTANCE

The Tennessee Municipal League supports the prompt enactment by Congress of legislation which would extend Federal matching grants to local governments to undertake construction of a broad range of vitally needed public works facilities, and consideration by Congress of a Federal low-interest loan program for local public works.

Tennessee counties and communities have a $500 million-plus backlog of needed local public works improvements. They lack the debt capacity and the tax resources to finance any substantial portion of these public works. City and county general obligation debt now exceeds $423 million and municipal revenue-supported debt exceeds $327 million.

Federal emergency aid to combat the current economic recession already is being made available to State governments for highways, unemployment compensation, and other purposes. Federal expenditure programs are being increased. Local governments should receive their fair share of such assistance from the Federal Government.

RESOLUTION ON INCREASED FEDERAL HIGHWAY AID

Whereas United States Senator ALBERT GORE assumed leadership in the passage of the 1956 Federal Highways Act to create a 41,000-mile network of interstate superhighways, and in the appropriation of an additional $1.8 billion this year for the Interstate System along with provision for total additional Federal and State appropriations of $12.5 billion during the life of the interstate superhighways program; and

Whereas this additional appropriation will enable the return of the nationwide interstate system construction program to the original 13-year completion schedule rather than the 25-year stretch-out proposed by leaders of the present administration; and

Whereas the additional Federal funds now available for regular Federal aid to highways are estimated to include $8,200,000 more for Tennessee in 1958, and Tennessee's prospective share of the interstate funds is estimated to be approximately $60 million in 1959 and $75 million in 1960; and

Whereas the members of the Tennessee Municipal League have actively supported a great new highway program in the Nation and in Tennessee, and have had outstanding leadership in advocating this program through the efforts of Mayor Ben West, of Nashville, as highway committee chairman, and former president of the American Municipal Association, and of Mayor P. R. Olgiati of Chattanooga, and other municipal officials active in Tennesseans for Better Roads; and

Whereas the Tennessee Municipal League has supported the adoption by Congress of new and higher cost estimates for the Interstate Highway System, and continual increases in regular Federal aid to highways: Now, therefore, be it

Resolved, That the Tennessee Municipal League commend Senator GORE for his successful efforts in behalf of the interstate highways legislation and other legislation affecting Tennessee highways; and be it further

Resolved, That the Tennessee Municipal League also commend other members of the Tennessee delegation in Congress who have contributed strong leadership and support in behalf of beneficial highways legislation.

POLICY ON FEDERAL ASSISTANCE TO SMALL INDUSTRY AND UNDERDEVELOPED AREAS

The Tennessee Municipal League supports Federal financial assistance to small industry and underdeveloped areas now denied adequate financing from private investment sources.

The Tennessee Municipal League endorses and supports the Douglas-Payne bill (S. 3633) to provide $375 million in Federal loans and grants to aid areas with economic troubles. This includes both industrial areas with high unemployment levels over a long period, and rural areas with low-income families.

This bill would authorize a $100 million revolving fund for loans for industrial projects in rural redevelopment areas; authorize a $100 million revolving fund for loans for public facilities in redevelopment areas, which would increase opportunities for reemployment; authorize $75 million for grants for public facilities in redevelopment areas; and authorize $4,500,000 a year for technical assistance.

The bill would meet some of the objectives of the Tennessee Municipal League board of directors resolution calling upon Congress to provide Federal matching grants to local governments for public works facilities. Also, it offers the prospect of real and immediate economic assistance to the underdeveloped areas of Tennessee in addition to urban areas now suffering the effects of the nationwide recession.

The Tennessee Municipal League also endorses and supports the objectives of the bill introduced by Senate Majority Leader LYNDON B. JOHNSON to set up a Small Business Investment Administration. This agency could borrow $250 million from the Treasury, and invest up to $250,000 each in privately organized small business investment companies.

The present Small Business Administration has been limited to meeting short-term credit needs. Small businesses and industry in Tennessee and the Nation have been unable, through SBA and private sources of capital, to expand and grow in the face of increasing economic concentration. They must have access to long-term loans and development capital.

STATEMENT ON TAX EVASION BY THE FEDERAL CONTRACTORS

The Tennessee Municipal League strongly urges that the Congress enact legislation providing that no person may claim an exemption from otherwise applicable State and local taxes arising out of business conducted in a State, on the grounds that such person is a private contractor and at the same time a purchasing agent of the United States for the purpose of procuring tangible personal property to be used in the performance of his contract.

Senate-approved bill S. 6, which has been pending before the House Ways and Means Committee since March, should be promptly enacted to close this tax loophole which is robbing the State of Tennessee of millions of dollars of sales tax revenue vitally needed to finance education and other programs of the State.

Our Ailing Regulatory Agencies

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Anthony Lewis. Mr. Lewis specializes in reporting on the courts and regulatory commissions as a member of the New York Times staff in Washington. The article is taken from his address to the Federal trial examiners conference on April 29, 1958. It appeared in the New Republic of May 19, 1958:

OUR AILING REGULATORY AGENCIES
(By Anthony Lewis)

It would be hard to avoid realizing that there has been a significant loss of confidence in the regulatory agencies. Nothing has illustrated this more sharply, I think, than the recent order of the court of appeals here sending the Miami channel 10 case back to the Communications Commission for a hearing on charges of improper influence. The Commission had suggested a remand with instructions simply to do whatever seemed appropriate. The court, in what seemed to me a most unusual order, told the Commission exactly what issues to investigate, what kind of hearing to hold, when to report back—practically everything except what room to have the hearing in. And then the court ordered that the Attorney General be invited into the proceeding as an amicus, presumably to keep an eye on the Commission. In my view that order plainly implies a lack of confidence in the Commission. And I think it is an indication of the trend of feeling among some judges and among a great many lawyers.

What are the reasons for this loss of confidence in the administraitve process?

First, there is, of course, the charge of improper approaches by parties and members of Congress in adjudicatory matters.

Mr. OREN HARRIS' congressional investigation has at least laid bare the existence of this evil. Putting aside the sad case of Mr. Mack, I was fascinated by the testimony of a former Communications Commission Chairman who said he was approached by various parties to a Boston television case. They didn't want to influence him or do anything wrong, this gentleman testified, they just wanted to tell him what fine fellows they were.

I think some of us have tended to become cynical about this business of ex parte representation, coming to believe it is an inevitable evil that just has to be lived with. It was a tonic in that regard to hear the oral argument in the court of appeals on the Miami case. The court was genuinely outraged at the whole idea of parties and Congressmen speaking privately to commissioners in an adjudicatory proceeding. Some might regard the judges' tardy discovery of corruption as naive, but I found it a welcome expression of moral indignation.

Beyond the question of overt corruption there is what may be a more serious charge—that the final judges in the administrative process often have their minds made up before they consider the case. As one lawyer put it to me, "They don't need to be bought. They know the result they want to reach on almost any issue, and everyone else knows it, too." Of course that is an exaggerated statement, but there seems to be enough to it to worry a lot of people. Nothing gives a lawyer

a sense of greater futility, I should think, than arguing to deaf ears. I watch oral argument quite regularly in the Supreme Court, and it is a fascinating process. We all know that the members of the Court have points of view—some of them very well established indeed. Yet, more often than not, I believe the oral argument of a case affects the results. The Justices appear open to persuasion; they want information and help from counsel. The complaint from some lawyers who practice before the regulatory agencies is that they are just going through the motions. One example that I must say bothers me is what happens to comparative television cases after the court of appeals reverses a decision of the Communications Commission. In two recent cases the court in quite strong language indicated that there seemed to be no rational way to apply the rules and come out the way the Commission had. On remand, the Commission voted exactly the same way—and I gather none of the lawyers had any particular hopes to the contrary. In no case has a television station actually on the air ever lost its license as a result of a court decision. The law of averages alone would suggest to me that a disinterested Commission, not deciding on the basis of previous commitments, would occasionally change its mind.

This allegation of the closed mind is related to another complaint—against the process of decision itself. These criticisms go essentially to the fact that those who decide the issues eventually are too remote from what should be the decision-making processes of trial and evaluation of the evidence. The parties try out their case before the hearing examiner. The issues are threshed out at length and a record built up. But then the final decision is made—the charge is—by men who have not read the record. And the failure of the judges to write their own opinions is even more bitterly criticized. As the critics see it, we have here a body which takes no responsibility to know the facts in a case or to justify the rationale of the result. The critics would say that reduces the role of the commissioners or board members to nodding their heads—and with that separation of the judges from the process they lose the personal identification and responsibility that are the only real check on arbitrary decisions.

These are the most frequently heard criticisms of the administrative process. But there are two others of a broader character that must also be considered.

The first amounts to a charge that too many agencies are just plain stodgy. After all, the men who had the great dreams about the administrative process saw it as a new, creative tool of government—flexible, ready to attack new problems, not held back by encrustations of tradition, really able to deal with the multiple difficulties of an industrialized society. Instead, the critics see administrative agencies that plod along, doing routine tasks in a routine way, bound by fictions and habits as hampering as those of the courts and apparently incapable of taking the bold action of a legislative character philosophers of the administrative process envisaged.

Which brings me to the last of these indictments. This is the charge that the agencies have become too identified with the industries they are supposed to regulate, so that the regulated have become regulators. It is said that board members, appointed only for a term of years, must inevitably look to the regulated industry for their future. If the member wants to be reappointed, he will almost certainly need the support of the industry. If he is not reappointed, his professional future almost certainly lies with that same industry. And so a kind of unspoken accommodation of views takes place.

I myself believe there is a good deal to this last charge—the identification of an agency with its industry—but I would not place it only on the personal need of commissioners for industry approval. That seems too simplified an explanation. I think the trouble is that in most cases a regulatory agency has responsibility for a particular, narrow segment of the economy. The board member has to mingle with leaders of the industry and get to know it. In such a situation anyone would tend to concern himself more and more with the special problems of the particular field, letting the broader concept of public interest slip into the background, not seeing the forest for the trees. The antitrust problem is a good example. Again and again the Justice Department finds itself at odds with the regulatory agencies about antitrust enforcement. The Maritime Board rejects antitrust considerations which seem important to the Justice Department in rate matters. The Communications Commission "loses" a letter from the Department objecting to a station transfer on antitrust grounds. The Power Commission disagrees with Justice about whether some pipeline amalgamation should be allowed. Over and over, the agency seems to be taking the view that it must protect its own industries against too stringent an application of the antitrust laws.

One reason that may underlie the faults which are being found in the administrative agencies is that the agencies have aged without acquiring the usual accoutrements of age—respect, and wise traditions. The demerits of age—the delays and cautions of the courts—now do seem to be part of the administrative process. But where is the sense of tradition and pride that glorifies the courts? In part this failing can be traced to a lack of respect for the jobs themselves—a lack of sufficient prestige. If we have had some small men in administrative agencies, it is perhaps because those who have made the nominations regarded them as small plums. I think there is something wrong with asking a man here from the Middle West as a possible candidate for a commission whose work he knows—and then, when that vacancy turns out to be filled, fobbing him off to another agency about which he knows nothing. I think there is something wrong when we can have as chairman of an agency a man who goes around at social gatherings trying to set himself up in law partnership with men upon whose cases he is presently passing.

And along with the lack of pride and tradition is a lack of personal pride in one's own craftsmanship. A judge is an independent force. His opinions bear his name. He builds up a body of cases with his stamp. No office of opinions and review does his work for him. He is a figure in his own right. In the administrative agencies, I would guess, the lack of personal identification of board members with the process of decision underlies many of the procedural shortcomings.

I think, too, it is of basic importance to recognize that the agencies are not the only sinners. My own feeling is that a large proportion of the blame can be apportioned to Congress. Certainly the example set by Congress in recent years is no guide to the way the administrative process should work. To begin at the bottom, venality has not been a stranger at the Capitol. Why should the agencies be above deciding issues by preconceptions when Senators are not ashamed to take a leading part in matters in which they have a personal economic interest? Why should the agencies be expected to act swiftly and creatively on new problems when Congress is so hampered by inertia? What can impel the Communications Commission to try to deal rationally with the problem of pay television when a committee of Congress summarily orders it to forget years of hearings and not even hold a test? Nor is the executive branch immune to criticism for lack of vigorous, creative leadership.

Perhaps the underlying reason for our Government failures is a decay in our political life. Louis M. Lyons, curator of the Nieman Foundation at Harvard University, spoke with accuracy last week of "the drabness of our contemporary public life." If we have an uncreative Government, surely it is because we have voters who are not interested in new ideas.

Let me mention some cures that have been suggested for the alleged ills of the administrative agencies. The first, about which we have heard a good deal, is that Congress or the agencies themselves should promulgate a code of ethics. This, it is said, would eliminate influence peddling. Well, I am somewhat cynical about this proposal. Of course, it is fine to be on the side of morality. But no one should be fooled into thinking that a command to be honest is going to correct all the deficiencies of the administrative process. These deficiencies, as I have tried to indicate, go very much deeper than overt corruption. And I think that the appointment of strong-minded commissioners would be a much surer guaranty of disinterested decisions than any code of ethics.

Some have suggested that members of the agencies be appointed for life, like judges. The idea would be: make them independent of pressures from industry and Congress—the unspoken as well as open pressures. But this idea seems to me to deprive the administrative process of one of the major reasons for its extistence—the constant influx of new men and new ideas to meet new problems. I am not ready to entrust lifetime appointees with such rapidly changing problems as gas regulation or television techniques. Or, I should amend that to say that if appointments are to be for life, I see no reason not to go the whole way and turn the whole business over to the courts.

That is the third suggestion we hear—let the courts take over. Somewhat strangely, this proposal has support from two entirely different schools. There are some who never did trust the idea of administrative agencies and who prefer the more familiar atmosphere of the courts. There are others, veterans of the agencies themselves, who have become so discouraged with what they regard as an irrational, unresponsive process of decision that they would go for the radical cure of letting the courts handle at least the so-called adjudicatory aspects of agency business. Some persons have proposed a general administrative court. Others would give the regular Federal courts jurisdiction.

Perhaps the very word "court" brings with it some tradition of disinterestedness, and to that extent it might be valuable to give the name of court to one or more agencies. But the difficulty is in knowing how to divide adjudicatory from legislative functions. At present, for example, it is regarded as adjudicatory for the Communications Commission to choose between competing applicants for a television channel. But it is legislative when the Commission removes that channel from one city and assigns it to another. Even if you could draw the line sharply, who is to carry on the agencies' policymaking activities after the supposedly judicial aspects have been assigned somewhere else? Some observers feel that these policy functions should be given right back to the executive branch—that the Commerce Department, for example, should make television channel allocations. But I am not at all sure that the already existing pressures would not then become overwhelming.

The one aspect of the Court proposal that appeals to me is the idea of one governmental body concerning itself with many different industries and different problems. I

do subscribe to the charge that expertise—concentration on 1 industry, 1 set of problems—has been damaging to the administrative process. I think it has made many agencies tend to identify with the regulated industry, to forget the broader concepts of public interest. In fairness I should add that the regulatory agencies are not, of course, the only examples of industry orientation in our Government. The Agriculture Department, for example, might be said to fall into the same category. And beyond the matter of identification with the regulated industry, I think confinement to a narrow area of problems tends to stifle the broad intellectual processes we need. A judge told me recently that the best part of his job was that he did not have only one kind of case. His court's great advantage, he said, was that it passed on wills and torts and criminal cases as well as administrative matters. He said the variety of cases produced a cross-fertilization of ideas that he regarded as essential.

For all these reasons I would look favorably on any device to broaden the purview of the administrative agency heads. One idea that has been suggested has been to combine some of the agencies. Another is to appoint roving commissioners who would sit with one agency for a certain time, then move to another. Objections will be heard, and there are valid ones. But I would sacrifice a good deal to get agency heads out of a single track of problems and out of a specialized relationship with one industry.

As I indicated earlier, I would favor procedural reform to emphasize the role of the individual commissioner or board member. I think he should have a sufficient staff of his own so that he can take the responsibility for his own opinions. There is nothing like drafting an opinion, and knowing it will appear in print under your name, to make a judge of any kind rething his decision in a case.

I must say also that I would go for less regulation in general. I think sometimes that as a Nation we have become psychologically too adjusted to regulation. When I see the Supreme Court taking its time deciding whether the ICC should have given a different permit to a small trucker to haul goods between two cities, I just wonder whether we would not be better off letting anyone haul whatever he wants, subject only to safety regulations. Wouldn't it be fun to forget all the arguments about pay television and just let anyone go ahead who wants to, letting the fittest system of television survive the resulting donnybrook? I know this is a heretical thought, but I would not mind a touch of the robber baron here and there in our overprotected life. At least it would be more interesting.

The Need for Price Reductions

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, May 26, 1958

Mr. KEFAUVER. Mr. President, Dr. Paul F. Gemmill, professor of economics, Wharton School of Finance and Commerce, University of Pennsylvania, has written a thoughtful letter to the editor of the New York Times regarding the cutting of prices. I ask unanimous consent that Dr. Gemmill's letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Times of April 30, 1958]

CUTTING PRICES ADVOCATED—RELIEF FOR SELLERS OF GOODS SAID TO LIE IN OFFERING REDUCTIONS

To the EDITOR OF THE NEW YORK TIMES:

Herbert Hoover tried not too successfully to lick the great depression of the 1930's with the phrase "Prosperity is just around the corner." If in fighting the present recession we are again to place reliance in words rather than deeds, I propose that the slogan "You auto buy now," which is being directed at the potential consumer, be matched or perhaps superseded by another, "You ought to cut prices now," aimed at would-be sellers of goods.

I object strenuously to the notion which is being expressed today that consumers have an obligation to buy, though they may already have all the goods they need, simply to help manufacturers reduce their over-expanded inventories and thus put them in position to resume production.

Surely, in a competitive, private enterprise economy it is the producers' job to turn out the goods that consumers want, and in the quantities wanted; and not the duty of consumers to buy goods they do not want, at prices they consider excessive, simply for the sake of keeping producers busy. Have our slogan-writers forgotten that the goal of an economy is consumption and that production is merely a means of reaching the goal?

BUYING WITH CARE

Indeed, the consumer in our economy has a definite obligation always to buy with care, to reward efficiency by buying from producers whose costs (and hence whose selling prices) are low; and to penalize inefficiency and undue cupidity by refusing to buy from those who ask what seem to him to be unwarrantedly high prices. If he fails thus to discipline producers, he is neglecting a duty to the economy, and lowering its efficiency.

The present recession is largely the outcome of a good many businessmen guessing wrong, overproducing, and now finding themselves in possession of large inventories of goods in which the consuming public manifests little interest. It seems unlikely that even the cleverest of slogans, unless aided by price cuts, will be able to wipe out these excessive inventories promptly.

If the help of the consumers (who, I submit, have not the slightest moral obligation to buy) is to be enlisted in reducing the excess inventories which industrialists have piled up, this help will be forthcoming just as soon as—and let us hope not before—the sellers of goods offer them at prices which are genuinely attractive.

BUSINESS RISKS

Businessmen in a private-enterprise economy voluntarily assume business risks. They expect and are expected to reap profits when they are lucky, and to take losses when they are not. The price cuts that are called for in the present situation will be either moderate or substantial, depending upon the extent to which a given businessman has misjudged his market. The losses that are thus borne by him are the price he pays for the privilege of operating in a private-enterprise economy and reaping profits when the going is good.

If prices are not cut and producers are allowed to escape from their present predicament without taking any loss whatsoever because misguided purchasers have heeded their cry to buy now, they will have failed to learn from experience, the great teacher, that inflation and overproduction have painful consequences. The economy will be the weaker for that unlearned lesson.

The lesson can be taught if consumers will insist that the economic game be played according to the established rules of a private-enterprise economy, and steadfastly refuse to buy at prices they consider unduly high. Moreover, this adherence to the principles of the capitalistic system may contribute materially to the stability and survival of our present economic order.

PAUL F. GEMMILL,
Professor of Economics, Wharton School of Finance and Commerce, University of Pennsylvania.
PHILADELPHIA, *April 25, 1958.*

TVA After 25 Years

EXTENSION OF REMARKS

OF

HON. JOHN D. HOBLITZELL, JR.

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, May 26, 1958

Mr. HOBLITZELL. I ask unanimous consent to have printed in the RECORD an article under the heading "TVA After 25 Years," written by Raymond Moley, and published in Newsweek of May 26.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TVA AFTER 25 YEARS

(By Raymond Moley)

On May 18, no inconsiderable enthusiasm over the entire 80,000 square miles served by the Tennessee Valley Authority marked that agency's birthday. This commemorative event comes just as legislation is pending in Congress to expand greatly the independence and operations of the institution.

The TVA, like many other agencies of the Federal Government, was a child of economic distress. But, unlike many other alphabetical agencies established in 1933, it was a permanent affair. The TVA, however, was not a product of the so-called brain trust, as were most of the other agencies started by President Roosevelt. Indeed, the titular head of that group during 1932 was as much astonished as almost everyone else when, sometime before the new President was inaugurated, there burst into the press the revolutionary concept of an immense experiment in planned economy for a great region, to be built around the long-dormant Muscle Shoals installation of World War I.

The idea, as well as the detailed provisions of the act, came from Senator George Norris, a dedicated battler for public ownership of power. There had never been the slightest suggestion of such a plan in candidate Roosevelt's campaign. All that he had to say was that the Federal Government should develop Muscle Shoals as a "measuring rod" in the regulation of private utilities.

PLENARY POWER

The act itself was unique in several respects. It provided that the directors should be in sympathy with the objectives of the project, which were indeterminate. A director might be removed under the curious charge of "contumacy," a provision which proved to be something that the President didn't like. Also, there should be no politics in the selection of personnel, and the working force should not be under civil-service regulations.

The purpose of TVA as defined in the act included unified development of the Tennessee River area under the complete con-

trol of a corporation wholly owned by the Federal Government; flood control in the entire valley; navigation aid; reforestation and the proper use of marginal lands, and agricultural and industrial development of the valley; operation of Government power and chemical properties; and the economic and social well-being of the people of the valley and adjoining territory.

I am not concerned with terminology here. But if this is not socialism, then Socialists at home and abroad who have hailed it as a great first step to the abundant life are badly fooled. Certainly to call the TVA democracy in action, as its adherents hail it, is a misnomer because the directorate responsible only to the President and Congress has plenary power—a power that has grown with the years.

A PROSPEROUS CHILD

According to a report of the Comptroller General of the United States issued less than a year ago, the Federal Government from the beginning to June 30, 1957, has made $2,041,500,542 available to the TVA. The TVA has repaid $277,908,515. In the same period TVA has had a net income of $413,430,539 from its power operations and net expenses of $175,818,690 for its other operations. Hence, the equity of the Federal Government was a little over $2 billion.

There has been no requirement that the TVA pay interest on this investment. Uncle Sam, says the agency, is not a creditor but a stockholder—in short, is holding the bag.

The Comptroller General has repeatedly recommended that this prosperous child pay interest on this money, but Congress has never required it. Nor does the TVA pay any Federal taxes on its property or operations. It pays local and State governments something in lieu of taxes, but private companies point out that while these in lieu payments were only 3.88 percent of gross revenues in 1957, investor-owned companies paid 22.7 percent of their gross in 1957.

The Kerr bill, which would permit the TVA to finance its own expansion by bonds secured by its very large profits, passed the Senate last August, and is now pending in the House. It has been strongly condemned by the Comptroller General. The merits and demerits of that proposal I shall consider later.

Veterans' Legislation

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. CANNON. Mr. Speaker, at the request of officials of the Missouri Department of the Veterans of World War I, I include in the CONGRESSIONAL RECORD a copy of a resolution adopted by the department at its State convention, May 18, 1958, as follows:

Whereas the National Tribune-Stars and Stripes, in its front-page editorial of April 24, 1958, stated that the leadership of war veterans' organizations vigorously presented their programs to the House Veterans' Affairs Committee, but since that time appear content to sit back and wait to see what the administration may do for the neglected war veterans; and

Whereas the Veterans' Administration, Budget Bureau, and other Government departments are under the direct orders of the President, have removed thousands of war veterans from the pension rolls, and reduced many thousands more, in carrying out recommendation No. 70 of the Omar N. Bradley Commission report; and

Whereas the hope of all war veterans' groups for relief lies with the Members of Congress, this election year: Therefore be it

Resolved by the Missouri Department of the veterans of World War I, United States of America, Inc., at its annual convention held in West Plains, Mo., May 17 and 18, 1958, That all national officers of the Veterans of World War I, United States of America, Inc., are hereby urgently requested to promptly contact the leadership of other veterans' organizations, and ask that all attend a meeting to be promptly held in Washington, D. C., for the purpose of demanding that the Veterans' Affairs Committee pass bills to implement the mandates of the various veterans' organizations, at this session of Congress; be it further

Resolved, That copies hereof be promptly mailed to all officers and committee members of our national organization.

B. E. KOEGER,
Commander, Missouri Department.
H. L. BRATTON,
Adjutant, Missouri Department.

Address by Hon. Carmine DeSapio

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mrs. KELLY of New York. Mr. Speaker, on Thursday evening, May 22, 1958, the dinner of the executive committee of the Democratic Party of Kings County was held at the Hotel St. George in Brooklyn.

Well oversubscribed, the dinner was a financial success, but more important to me was the serious and constructive approach by the speaker to the problems facing our Nation.

As the national committeewoman of the Democratic Party of New York, I am proud to present the address of the national committeeman of the State of New York, the Honorable Carmine DeSapio:

ADDRESS OF THE HONORABLE CARMINE DESAPIO, NATIONAL COMMITTEEMAN, DEMOCRATIC PARTY, NEW YORK STATE

My good friends and fellow Democrats, it is always great personal pleasure for me to meet with all of you ladies and gentlemen of Kings County to witness anew the vitality which you have infused into the life and activities of your Democratic county organization, and to express my warm personal regard and friendship for our very dear friend, Joe Sharkey.

For, here in Brooklyn, you have created a very remarkable and very powerful force for civic and governmental progress.

And—perhaps still more significantly—you have not been content merely to stand back and admire what you have created. Rather, you have sought constantly to build upon it; to improve, to refine and to polish it in accordance with a political philosophy founded upon the simple truth that the only valid function of politics—and therefore, the primary responsibility of the politician—is to serve the people.

And I believe that your outstanding success, both in securing and in advancing the welfare of the people of Brooklyn, is directly traceable to your capacity for understanding the tremendous diversity of human interests, human hopes, and needs, which is represented by the nearly 8 million Americans who proudly call Brooklyn their home.

As we all were reminded last week, on the annual occasion of I Am An American Day, the need for unity among all Americans—and with our friends throughout the free world—never has been greater than it is at present. The importance of rededicating ourselves to the task of providing constructive leadership for all freedom-loving peoples never has been more challenging than it is today. And the urgent necessity for reaffirming—through deeds, rather than through mere words—our loyalty and devotion to our representative form of government—to our country—never has commanded the attention of all Americans so strongly as it does at this critical moment in history.

Our party always has prided itself upon its ability to interpret the problems of the people in terms of contemporary social and economic life.

And we have insisted—always—upon recognizing, acknowledging and honoring simple human dignity above all other things. In our efforts to provide maximum public service, we have encouraged the people to work with us, to become active participants in progress, and to share with us in the joy of achievement.

You—the loyal and dedicated Democrats of Kings County—have done this in Brooklyn. You have reaped the rewards of civic development throughout your community and you have, thereby, earned the confidence and trust of your fellow citizens.

The result—as almost any alert student of contemporary American politics knows—is that you have built the largest and strongest political organization in America upon your partnership with the people of Brooklyn.

During the past 2 weeks, your concept of human relations—this sense of partnership achieved through an active, intelligent sharing of problems and accomplishments which is a guiding principle of Democrats everywhere—was sharply accented by a series of unhappy, unidignified and unnecessary events in Latin America.

For the lamentable demonstrations which greeted the Vice President of the United States on his widely prepublicized good neighbor tour of South America revealed, dramatically and painfully, the terrible failure of the Republican administration in Washington to appreciate the fact that successful human relations—at the international or any other level—is compounded of constancy, sincerity, and understanding and that neighborliness consists of more than borrowing an occasional measure of moral support with appropriate expressions of gratitude.

My friends, these are goals which, as Americans and as New Yorkers, all of us who are present here tonight share which, as alert citizens, we demand and which, as Democrats, we will achieve.

The established fact that the anti-Nixon demonstrations were organized and led by Communists, and that they were directed against a symbol of the United States Government, rather than against the Vice President personally, does not really explain the violence in Peru and Venezuela or the less dramatic but equally significant hostility which greeted him in Uruguay, Argentina, and Bolivia.

Nor does the fact that NIXON acquitted himself well, exempt the administration in Washington from having gratuitously placed him on trial before our South American neighbors.

For it has become quite clear that the Communist-inspired rioting provided a long-pent-up emotional outlet for the grievances of many Peruvian and Venezuelan citizens who have no more sympathy for the Communist ideology than has NIXON himself.

Those grievances stem from what many Latin Americans consider, and not without reason, the arrogance of the Eisenhower administration's refusal to treat their countries as free and equal nations.

It is one thing for administration spokesmen to declare that because we are a great and powerful nation, we must expect to have some enemies. It is quite another when our Government's foreign economic policies and diplomatic blunders incite our closest international friends to hold anti-American demonstrations—as they did in France last week; to burn a United States Information Agency library—as they did in pro-Western Lebanon last week; and to do physical violence to the man whom many Republicans hope will be the next President of the United States—as they did in South America last week.

The failure—the refusal—of the Eisenhower administration to consult our neighbors to the south on matters which cannot help but concern them is hardly conducive to friendship, cooperation, good neighborliness or plain commonsense.

We need only to glance briefly at the reference record in dealing with the American farmer, with organized labor, with the consumer, with the small-business man, with the individual taxpayer to see reflected in our domestic affairs that same brand of arrogance which has brought our international prestige to a new low during the past few weeks and which has centered on our National Capital the anger, the disappointment, and the disillusionment of much of the free world.

There are today, in Washington, in Albany and in many of the major seats of government throughout our country, a great number of brilliant American statesmen and capable administrators. Unfortunately, few of these men and women are associated with the political party which will control the White House until 1960.

And if our country is to move forward toward 1960 without relinquishing its position of strength and leadership among the nations of the free world, then you and I—and all of our fellow-Democrats throughout the United States—must redouble our efforts to install them in positions of leadership in our National, State, and local governments.

If we are to pull ourselves out of the valley of economic recession—from which, just the other night, Mr. Eisenhower gazed so wistfully up at a future "bursting with vitality and promise"—then our Democratic party must equip the 86th Congress with the necessary majority to overcome the President's fondness for merely hoping that everything will turn out fine in the end.

We have, within our party, the men and women who can—and who will—translate the hopes and the dreams of the people—and even some of Mr. Eisenhower's rosier visions—into reality.

In our own State, we have our very great Governor, Averell Harriman, who understands—as fully as any living American—the importance of meaningful, constructive partnership between the people and their government who, during the past 4 years, has dedicated himself to the task of reestablishing New York as the prototype of compassionate, foward-looking government in America and who, during the next 4 years, will lead our State to new summits of positive achievement.

The Metropolis in Transition

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by Dr. Alfred H. Williams at a dinner of the National Planning Association held in Washington, D. C.:

The 1958 award by the National Planning Association of its gold medal is significant because it is a recognition of the work of not one individual in one city but many individuals in many cities striving to improve the quality of life in the metropolitan sector of American civilization. There is, of course, apprehension about other sectors. Throughout the country there is a widespread concern, a feeling of foreboding, as to the future of our entire civilization. Despite the fact that Americans are characteristically optimistic, confident, possessed of high self-esteem, we have come finally to realize that our mode of life is being put, and will continue to be put, to severe test on many fronts. Currently there is an urgent sense of need to achieve better results in the areas of science, technology, education, stable economic growth, private and public morality, and international relations. This present mood is in marked contrast to the attitude of self-satisfaction that existed when we announced the doctrine of "manifest destiny" at the time of the Spanish-American War. But a mood of apprehension has advantages if it leads to objectives self-examination. Tonight I suggest we look at one aspect of our present-day life, the growth and decay of metropolitan areas.

Large cities of the United States almost without exception face acute problems. The details vary, but the general pattern is the same; static population in the central core of the metropolitan area, unplanned sprawling growth in the suburban areas, outmoded means of transport and resultant traffic congestion, blighted housing, shrinking tax bases, juvenile delinquency, shortage of water, lack of open spaces, poor recreational facilities, obsolete factory buildings, minority group frictions, unwillingness of local governmental units to cooperate. Back of these developments, and basic to them, are two facts: an unexpected increase in the rate of population growth, and a steady increase in the proportion of total population resident in standard metropolitan areas. In the United States the rapid growth of the population, if its continues, will yield a population of 200 million by 1968, and if the current expansion of metropolitan areas is maintained, 75 percent of the 200 million Americans will be resident in such metropolitan areas.

The first response of the citizens of these areas to the problems we are discussing has been to make a survey. There have been 50 such studies sincce 1945; the bulk of them have come since 1950. As one studies these surveys in detail, it becomes apparent that it is almost impossible to overestimate the complexity, the difficulty, and the importance of making progress on the metropolitan front, of achieving the cooperative action that is needed to bring solutions. The difficuties are of two sorts: political and economic.

First, as to those problems which are political—that is to say, governmental—in nature. Central to the task of achieving functional, dynamic unity in the area of metropolitan government is the concept and the reality of sovereignty. Deeply rooted in American traditions and values is the goal of self-government. It is a cherished value; citizens of small, incorporated units are very reluctant to relinquish the rights of self-government to larger gomernmental units. Equally clear is the fact that the problems of traffic congestion, sewage disposal, police administration, park facilities, water supply, air pollution, etc., etc., traverse governmental lines and cannot be adequately handled by splinter governments. If we are unwilling to create structures of government broad enough to correspond to the size of regional problems, then progress must be achieved along less formal collaborative lines buttressed by thorough-going educational efforts within the electorate. Perhaps we might term such an approach "progress by project." This calls for skilled use of all of the arts of exposition, discussion, and creative compromise. The difficulties encountered in the metropolitan regions which center in Miami, Philadelphia, St. Louis, Detroit, Los Angeles, and other large cities give point to this generalization. Indeed, the major difficulties that are faced by the entire human family at all levels of government are ones calling for improvement in the arts and techniques of collaboration.

The second set of problems are economic in nature. The economics of a metropolitan area, like economics in general, has to do with the distribution of scarce resources. The key word in this sentence is "scarce." There are not enough resources to supply all demands. How shall these scarce resources be allocated between private needs and public needs? By the latter I mean needs for schoolteachers and school buildings, public parks, clean air, storm sewers, civic agencies, public housing, probation officers, adequate transportation facilities, etc. The attitude of the man in the street seems to be somewhat as follows: "The money in my pocket is my own. Please do not tell me how to spend it. As to public expenditures, I do not really understand them; they are too complex for me. This is the reason why I vote for a mayor, a governor, a Senator, and a President. Public expenditures are their responsibility; don't bother me about them. I have enough headaches of my own." On the personal expenditure front, allurements to spend are put before the individual citizen by all business enterprises. These enterprises, under our competitive system, are working constantly, with great resourcefulness, to lure from the pockets of each consumer his private funds. Corporate management, under the dictum of "root, hog, or die," drives to induce the general public to spend for personal purposes. When we turn to the public expenditure front, a different situation confronts us. Although each citizen participates in public purchases, he seldom, if ever, is acutely conscious of the fact that public funds are in part his funds. This raises the question as to who shall set up the allurements on the public expenditure front. In a recent CED symposium on the economic trends of the next 20 years, a participant made the following statement: "A considerable proportion of current consumption, not only of the rich, but of a large part of our people, satisfies only trivial or frivolous needs." He called for a shift toward social objectives such as better education and better health. He expressed the moral judgment that we must risk some reduction in our rate of growth in order to apply our expanding capacity to worthy and

meaningful uses. He asserted that if this shift is a risk, it is a risk well worthwhile.

Because of the widespread and growing volume of the difficult urban problems that were mentioned at the outset, it is suggested that the National Planning Commission renew its 1957 request for a White House conference. The need for a White Conference on Urban Life is almost as pressing as the needs which resulted in White House Conferences on Higher Education and the Family. By the use of White House prestige, there can be assembled scores of specialists on critical aspects of metropolitan life. These leaders could, in face to face discussions, cross-fertilize and inspire each other's thinking. Included in this group would be administrators, politicians, architects, engineers, foundation officers, trade union leaders, corporation executives, editors, professional planners, and others. A White House Conference could, by means of thoroughgoing staff work and skilled chairmanship, bring into focus the vast, intricately-related congery of activities that characterize life in the metropolitan area. A conference could, by reason of the pulling power of White House sponsorship, bring up to the point of public visibility the shortcomings and the possibilities of life in metropoltan areas, where ever larger groups of human beings insist on congregating, and where life, all too frequently, is shabby and barren. It is quite possible that such a White House conference could induce us to take a fresh look at our group behavior, set new goals, and adopt more rational means of attaining these ends. When this association made its initial request for a Conference, it was, I take it, with such an objective in mind and with the conviction that the time has come for the country to see the problem whole.

When Autos Lag, All United States Feels It

EXTENSION OF REMARKS

OF

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1958

Mrs. GRIFFITHS. Mr. Speaker, I respectfully request permission to insert in the RECORD the following article from the New York Times dated May 25, 1958:

WHEN AUTOS LAG, ALL UNITED STATES FEELS IT—INDUSTRY INVOLVES MILLIONS OF AMERICANS—NEW CARS TAKE 10 PERCENT OF INCOME—A BIG SOURCE OF TAXES—ABSENCE OF A SPRING UPTURN CONCERNS FAR-REMOVED AREAS OF ECONOMY

(By Richard Rutter)

Brazil and coffee. Chile and copper. Ceylon and tea. America—and what? Autos, of course.

For all this Nation's vaunted industrial diversification, this one key industry has an almost controlling effect on the economy. This is not a one-crop economy, certainly, but Detroit does have an overriding impact. The present recession underscores this situation. On all sides the talk is of autos—"You auto buy now," massive layoffs in the industry, lagging sales and production, contract negotiations.

This may help to explain why unemployment has risen over the last nine months to the highest level in nineteen years. One out of every six businesses in the United States is dependent in some way on the automotive industry. That includes supply stores, repairs and services, storage and parking, manufacturing, drive-in theaters, motels, tourist courts, rentals of cars and trucks, taxicabs, auto wreckers, and gasoline stations.

More than 10 million people are employed in highway industries—1 out of every 7 persons working in the United States today.

There are about 45,000 car and truck dealers. The auto industry buys 42 percent of all sheet steel and something like 390 million pounds of textiles for upholstery.

TAIL WAGGING THE CHASSIS?

Sales of new cars have been running about 30 percent below the 1957 level. Spring was not only late, it never arrived at all for the industry. Unless there is an upsurge in the fourth quarter, auto makers will do well to sell 4 million cars this year. Nearly 6 million were sold last year and a record total of 7,200,000 in 1955.

It is significant that car production actually turned down last year well before the recession became apparent. Thereafter steel went down, automotive equipment and, eventually, just about everything else. Is it a case of the tail—autos—wagging the body of the economy? Could be.

There are now about 750,000 new cars in dealers' hands, possibly a record figure for this time of year, when cars in the past have sold briskly. Production for the first half of the year will come to about 2,200,000 cars; the summer lull is approaching and nothing like a major upturn is probable before the fall. That, in turn, is why few observers see a general business snapback before the leaves turn.

It is almost impossible to exaggerate the importance of the automobile industry in the great American industrial complex. The statistics are overwhelming. For instance, dollar sales are in the billions, and the number of persons engaged in the field, directly and indirectly, runs into the millions.

Sales of automotive replacement parts alone (all figures are the latest available) run to almost $2 billion a year, at wholesale. Some 36 percent of all radios go into new cars. Batteries, of course, are almost exclusively an auto item. These number more than 25 million a year. Some 85 million tires are sold each year. Here surely is a clear-cut case of an entire industry that goes as Detroit goes.

Retail sales as a whole so far this year are lagging behind the 1957 pace. One big reason is the dip in automotive sales. These have totaled about $34 billion in recent years. They are down sharply in 1958.

In the recession of 1948–49, significantly, automotive sales rose from $18.7 billion in 1948 to $26.7 billion in 1950. There is no doubt that this helped to prevent a more serious business deterioration. On the other hand, in the 1954–55 recession auto sales did slump $7 billion, affecting the entire economy.

Then there's the export market. This aggregates more than $1,500,000,000 a year, including cars, trucks, and accessories. Small foreign cars have been making inroads on the American market, but this country's exports have risen steadily since 1950. This year, however, some decline is expected.

The United States makes about 65 percent of all the cars produced in the world. England comes second, a far second, followed by Germany and France. The Soviet Union turns out fewer than 100,000 cars a year.

Detroit has reason for not being overpessimistic about the present contretemps. There are some 20 million passenger cars that are over 5 years old, and the replacement market is huge. All that's lacking is the urge to buy. In addition, 11 percent of all trucks date back to before World War II.

Installment credit has been the big impetus to car purchases since World War II. More than 60 percent of all cars are bought on time. Terms are still easy. The amount of auto credit outstanding totals more than $15 billion.

Some other figures: Motor vehicle insurance premiums are well over $4 billion a year. Auto purchases comprise almost 10 percent of all personal income. One out of every six patents issued is in the automotive field. Factory payrolls in this industry are more than $3 billion a year.

It is possible that Detroit is pricing itself out of new-car sales. This has been mentioned by many economists, and the man in the street is pretty vociferous on the subject. Auto makers for their part insist they cannot cut prices in the light of steadily rising labor and material costs.

As of May 1958, it is not a happy situation. Is there an answer? Will autos get back on the glamour road of big production and big sales? No one seems to know.

Space Direction

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1958

Mr. McCORMACK. Mr. Speaker under permission to extend my remarks, I include an editorial entitled "Space Direction," which appeared in the Boston Traveler on May 21, 1958.

The editorial properly states:

Space exploration quite possibly is the greatest challenge ever to face mankind. We are speeding toward problems, discoveries and adventures that will surpass anything we've ever imagined.

We must be absolutely certain that we enter this new experience with the best possible leadership and full cooperation from all agencies.

The editorial follows:

SPACE DIRECTION

The House Space Committee has chosen civilian perspective over military power as the appropriate leadership for our journeys beyond the earth.

A bill placing our nonmilitary space ventures under civilian control has won unanimous committee support. A copy already has been forwarded to Dr. James R. Killian, top science adviser for President Eisenhower.

There's no question, of course, but what this action will meet with enthusiastic approval at the White House. The President's recommendations have been consistently in support of the idea that the best way for us to outstrip Russia in the space race is through strong civilian direction. And now, if the House committee's action prevails, that's what we'll have.

Up to this point, the Senate Space Committee has taken a somewhat different view of space supervision. That group has leaned more toward a division of control between the civilian and the military, with the feeling that too much emphasis in civilian hands might hold back our military projects.

However, there's a lot more to be gained in space than the mere overtaking of the Russians in missile development. There's an opportunity to lead the way in what Congressman McCORMACK calls "the boldest and most sustained large-scale effort in the history of man's exploration." And to do that properly, we need to raise our sights beyond the limits of war possibilities.

We must not neglect our military problems, of course. But there's no reason to suppose that intelligent civilian leadership would allow that to happen. On the contrary, good civilian supervision would in-

evitably be drawing benefits from military progress and knowhow.

Space exploration quite possibly is the greatest challenge ever to face mankind. We are speeding toward problems, discoveries and adventures that will surpass anything we've ever imagined.

We must be absolutely certain that we enter this new experience with the best possible leadership and full cooperation from all agencies.

Outstanding Accomplishments of Vocational Education

EXTENSION OF REMARKS
OF
HON. PHIL M. LANDRUM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. LANDRUM. Mr. Speaker, within the past one-quarter century this Nation has achieved near miraculous growth in industrial and agricultural pursuits. A very large part of this progress has resulted from vocational education and the able and wise leadership of the men and women devoted to teaching in the vocational field.

In the most recent session of the Georgia General Assembly various members of the House of Representatives of Georgia took occasion to recognize its importance in our general education program by offering and passing a resolution citing some of the outstanding accomplishments of vocational education.

Two splendid young citizens of Georgia, Miss Priscilla Jones and Mr. Wesley Patrick, were also given special recognition for their individual attainments.

It is these young leaders, and thousands like them throughout America on whom we must depend for new ideas, and fresh thinking so necessary to keep our great democratic experiment alive and growing.

I invite your attention to the resolution and its tribute to vocational education and these young Georgians:

Resolution commending the State board of education, and the State department of education with emphasis on the vocational division; and for other purposes

Whereas the State board of education has vast responsibilities for the training of Georgia's youth in an ever-expanding population; and

Whereas demands are broadening for emphasis in various fields of instruction to meet changing needs; and

Whereas industrial demands are requiring increased numbers of trained personnel; and

Whereas technological and scientific advances have transformed agricultural and livestock pursuits into a more exacting industry; and

Whereas larger numbers of high-school graduates can be gainfully employed to assist in meeting the constantly increasing demands in the industrial, and agricultural expansion of the State: Now, therefore, be it

Resolved by the house of representatives, That recognition be given to the State board of education, and the State department of education for their constant efforts to properly provide public-school instruction and training at a high and satisfactory level for the youth of our State; and be it further

Resolved, That the vocational division of the State department of education be given special commendation for its outstanding work in training Georgia's youth for citizenship and outstanding leadership; be it further

Resolved, That special recognition be given to Miss Priscilla Jones, of Blakely, Early County, Ga., a graduate of the Blakely-Union High School, a former president of the Georgia chapters of the Future Homemakers of America, and the 1957 national winner (competing with 350,000 others) of the All-American Homemaker of Tomorrow award which, among other recognitions, provided a $5,000 college scholarship; and be it further

Resolved, That special recognition be given to Wesley Patrick, of Quitman, Brooks County, Ga., a graduate of Quitman High School a former State president of the Georgia chapters of the Future Farmers of America, and the 1957 national winner (competing with 400,000 others) of the Star Farmer of America award, which among other recognitions, provided a $1,000 award and a rancho type pickup truck; and be it further

Resolved, That the State board of education and local school continue their efforts in developing a strong and vigorous program of vocational training for the youth of Georgia with emphasis on agriculture, homemaking, trade and industrial training, distributive and vocational business training—with the idea of expanding high-school vocational programs and further development of area-trade schools; and be it further

Resolved, That a copy of this resolution be sent to each member of the State board of education and to the State superintendent of schools.

In house, read and adopted February 21, 1958.

J. BROWN,
Clerk of House.

Resolutions Adopted by Congregational Christian Conference of Iowa

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. LECOMPTE. Mr. Speaker, at the annual meeting of the Congregational Christian Conference of Iowa on May 2 of this year, a resolution concerning the display of church flags was adopted and also a resolution favoring the extension of reciprocal trade agreements.

Both are of such wide interest that I include them in the RECORD as a part of my remarks:

RESOLUTION CONCERNING DISPLAY OF CHURCH FLAGS

Adopted at annual meeting of the Congregational Christian Conference of Iowa, on Friday, May 2, 1958:

"Whereas for the Christian, one's highest allegiance is to God; and

"Whereas our country has recognized the sovereignty of God in such ways as the adoption of the motto, 'In God we trust' for our coins and currency, and by the recent addition to the Pledge of Allegiance of the words, 'One nation, under God'; and

"Whereas our country believes in the separation of church and state, and

"Whereas if symbols are to be used in a church, they should be used to express proper truth and belief, and

"Whereas the flag code, officially approved by Congress in 1942 (Public Law 828, 77th Cong., ch. 806, 2d sess., H. J. Res. 359, sec. E, approved December 22, 1942), presumes to tell churches how they should use symbols in the church; and

"Whereas the flag code states that the symbol of our country, the American flag, has precedence in churches over a symbol of God, namely, the Christian flag, and should be placed in the position of honor, with the Christian flag relegated to a subordinate position: Be it

"*Resolved*, That this conference goes on record as reaffirming that as Christians, our highest allegiance is to God, and that Congress has, perhaps without intent or consideration of the deeper issues involved, exceeded its boundaries in attempting to tell the churches how to use their symbols in their houses of worship; and be it further

"*Resolved*, That the State conference asks our elected representatives in Congress to work for the amendment of this portion of the flag code so that the Christian flag may legally be displayed at the place of honor in church, that is, at the right of the minister; and be it further

"*Resolved*, That copies of this resolution be brought before the general council meeting in Boston with the hope that this body take similar action, and that copies of this resolution be sent to Advance and to the Messenger, and to the Christian Century."

RESOLUTION CONCERNING RECIPROCAL TRADE AGREEMENTS

Adopted at annual meeting of the Congregational Christian Conference of Iowa on Friday, May 2, 1958:

"Whereas the reciprocal trade agreements between our Nation and other nations have promoted harmony, good will, and the freer flow of goods and services between the friendly people of the earth, and have served as a powerful deterrent against the economic forces which make for war: Be it

"*Resolved*, That our conference goes on record as favoring the extension of said reciprocal trade agreements and copies be sent to the Representatives and Senators of Iowa in the Congress of the United States."

A Letter From Hon. Carlos P. Garcia

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a copy of a letter, dated May 27, 1957, written by Hon. Carlos P. Garcia, President of the Philippines, to Mr. Max Abelman, 35 Tennis Court, Brooklyn, New York, N. Y., showing the friendship President Garcia has for the United States.

As President Garcia will visit the United States in the near future it is a pleasure for me to insert this letter in the RECORD.

President Garcia should receive a most hospitable welcome and his visit to the United States should be very fruitful and beneficial to his country.

Mr. Abelman, throughout the years, has been one of the best friends the Philippines and her people have in the United States.

The letter follows:

MALACAÑANG, MANILA, *May 27, 1957.*

Mr. MAX ABELMAN,
Brooklyn, New York City, N. Y.

MY DEAR MR. ABELMAN: I have just learned that you are one of the friends of the late President Ramon Magsaysay and that during his tenure, you kept an abiding interest in his administration by corresponding with him.

President Magsaysay, as is the general consensus, was truly a respected leader of international stature. He was not only the best friend of democracy in Asia but he did everything in his lifetime to fight its foremost enemy—communism—on every front. In his passing, the free world has indeed lost a formidable ally.

It is my sincere hope that you will continue to be generous with your abiding interest in this country. On my part, I see no plausible reason why I should depart from the policies of my illustrious predecessor insofar as the cordial relations of my country with the free world are concerned. Those relations being based on mutual respect and understanding and a kinship of lofty ideals, there is certainly nothing more to be desired.

With assurances of my highest esteem, I am

Very sincerely,

CARLOS GARCIA.

The Explosive Situation in Panama

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two articles written by George Rothwell Brown, which appeared in the New York Journal American on May 10 and May 17, 1958, respectively, in which Mr. Brown reports and comments upon the explosive situation in Panama:

[From the New York Journal-American of May 10, 1958]

RED THREAT IN PANAMA

(By George Rothwell Brown)

WASHINGTON.—The recently renewed outbreaks of anti-Americanism in Panama, Communist inspired, have been the boldest challenge thus far to the sovereignty of the United States over the Canal Zone.

They are believed in well-informed circles in Washington to be leading up to a demand in the United Nations for the internationalization of the Panama Canal, which would be a threat to the American lifeline.

The Communist design is aimed not so much at the Panama Canal, as at the Dardanelles and the Bosporous, as a part of Moscow's penetration in the Near East.

It is believed that the demand will be for the internationalization of all interoceanic waterways.

Representative DANIEL J. FLOOD, of Pennsylvania, member of an Appropriations Committee subcommittee, which has special jurisdiction over all matters relating to the Panama Canal, pronounces Panama's anti-Americanism to be of Communist origin.

President Ernesto De La Guardia, Jr., of Panama, is himself not anti-American, but Mr. FLOOD feels he is being pushed by political extremists.

According to a dispatch from Panama this week, President De La Guardia said he will ask the United States to permit the Panamanian flag to fly over the Canal Zone.

This was demanded by demonstrators who marched on the presidential palace in what was called "Operational Sovereignty."

This is a direct challenge to American sovereignty, as guaranteed by the Hay-Bunau-Varilla Treaty of 1903.

It was this treaty that granted the United States the right to build the Panama Canal, and gave to it possession of the Canal Zone "as if it were sovereign."

A year ago Soviet Ambassador Arkady A. Sobolev expressed the wish before the United Nations that the Panama Canal might be regulated on the same principles of Egypt's operation of the Suez Canal, that is by Panama instead of the United States.

[From the New York Journal-American of May 17, 1958]

ANTI-UNITED STATES ACTS IN PANAMA

(By George Rothwell Brown)

WASHINGTON.—Pressure is being brought to bear on Congress to adopt a pending resolution reasserting American sovereignty over the Canal Zone under the treaty of 1903.

The resolution introduced in the House of Representatives by Representative DANIEL J. FLOOD, of Pennsylvania, member of an appropriations subcommittee specializing in the Panama Canal is now before the House Merchant Marine Committee.

Partly as a result of the disclosure of Red infiltration in Latin America, highlighted by the recent attacks on Vice President NIXON, and partly because the Panama Government is being needled by similar radicals into an anti-American attitude, it now seems probable that the United States will have to take a formally declared stand.

The American people have an investment in the Panama Canal and its defenses, of close to three-quarters of a billion dollars. That investment is being jeopardized.

In the opinion of some canal authorities the situation in Panama is now the hottest item in our foreign affairs.

As in Peru, the Communists are using students as a front for the Red conspiracy to divest the United States of all sovereignty over the Panama Canal.

Recently Panama students planted 72 Panama flags in the Canal Zone, which is as strictly American as Hawaii or Alaska. There was no police prevention of this outrage.

The flags were seized, and turned over to the Government. Subsequently 59 of the same flags turned up in another anti-American student demonstration. The inference in Washington is that the Government returned these flags, after this highly provocative outbreak, to the demonstrators. There has been no punishment of anybody.

The feeling in Washington is that the state of affairs in Panama is becoming so disquieting that the United States cannot afford to temporize with it much longer.

Happy Days at Brewster

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am pleased to include a news story from the Wenatchee Daily World written by Mr. George Richardson.

This well-written story outlines the inaugural period as the Brewster unit of the Chief Joseph reclamation project comes under water.

The article follows:

IRRIGATION—HAPPY DAYS AT BREWSTER—FARMERS BUSY TURNING DESERT INTO FERTILE FARMS ON FLAT

(By George Richardson)

BREWSTER.—The familiar apple trees on Brewster Flat will have some neighbors soon, thanks to irrigation waters flowing onto this big new United States Bureau of Reclamation project on the Columbia River.

Strawberries, pears, wheat, and dwarf apple trees are among the new plantings included on the site. The crops are in, and water is only a brief testing period away.

There are 24 families living on the land now. Others own land and have planted crops but live in town. A total of 796 acres will be under irrigation when testing is completed, nearly 300 more than the 500-acre estimate made when the project was approved.

Eventually, some 2,432 acres will be irrigated on Brewster Flat.

The water district will repay about $1.3 million—less than half the project's cost—to the Government. The remainder of the costs will be paid through surplus power revenues from nearby Chief Joseph Dam.

The project will be a boon to Brewster and the surrounding area, townspeople feel. Brewster's Mayor Al Lowry affirmed this when he said: "It may take time, but the completion of the project will mean a lot to the town."

But what do the people themselves think of the multi-million-dollar project?

Though not actually a farmer anymore, W. D. Crandall is perhaps one of the more qualified persons to speak on the subject. Crandall, who has been retired since 1944, started the Pioneer Pump Co. which has provided water for land on the project since 1928.

"I haven't got a hand in this one," he mused, "but I wish I did. This is the prettiest water system I've ever seen.

"Wish I had 20 acres of orchard land again. Wife wouldn't let me though, I suppose."

Crandall said about 1,240 acres of orchard was under water at one time and that another 1,500 to 1,800 acres were planted but never received water at all and eventually dried up and died. "Water was just too short," Crandall explained.

He took over from the Okanogan Power and Irrigation Co. later and his company kept water on the flat until the reclamation project went in.

Crandall, who served as a member of the water board for some 30 years before his retirement, was out looking over the orchard land owned by his son, Emery, who has 25 acres near where the Crandalls homesteaded many years ago.

For young Danny Gebbers, the project will mean an end to carrying water to his young trees.

Gebbers planted 10 acres last year and hauled water to the trees by truck. He's planted another 10 acres this year, knowing that the project would take over his carrying chores.

Strawberries are a comparatively new crop on Brewster Flat and the man putting them in is Herb Freeman. He has planted 5 acres of the lush, red berries and plans on more later.

When they are ripe, Freeman plans to throw the fields open as a "you pick" venture and will probably set up a processing plant along with it.

He said he plans to have a complete setup so all berry buyers will have to do is stick the strawberries in their lockers.

Besides his strawberry plants, Freeman also has about 30 acres of irrigated pasture and keeps horses on the land.

W. George McDonnell is a newcomer to the ranks of orchardists and he's off to a booming start. The former Brewster car dealer, his wife and seven children, decided to take advantage of the water and are in the process of putting in 20 acres of Goldens and Red Delicious.

The family has also planted 500 pear trees, another newcomer to the Brewster Flat area.

To help him with the new undertaking, McDonnell has asked for the advice of his father, Bill McDonnell, a Crescent Bar orchardist many years ago.

One of the few growers who still uses rill irrigation on a flat full of sprinklers is G. H. Driskell, who also serves as one of the directors of the water district.

He has been an orchardist here for 14 years and has 25 acres in apples, mostly winesaps and delicious.

The water won't mean a large expansion program for Driskell but, he says, it does mean rounding out the acreage where he wasn't able to water before.

"Adequate water will mean probably about five acres more for me," Driskell explained.

Dr. Harold W. Lamberton, a Brewster physician, is planting wheat on his acreage.

An experimenter is Ed Rinehart, a retired Los Angeles policeman who came to Brewster Flat in 1952.

He has planted 400 semi-dwarf apple trees. "I've always wanted to try the dwarfs," he said. "But there just wasn't the water before to experiment."

Rinehart bought the young trees in Kelowna, B. C., and said they'll produce around two boxes after the third year. He also has some 750 young apple trees on the rest of his 10 acres.

His well supplies water to four families in the area.

Project manager Don Storlie said getting domestic water is 1 of the 2 major problems confronting Brewster Flat. The fortunate ones find water at from 200 to 300 feet. Some find none at all.

"The other problem is roads," Storlie said as he bounced from farm to farm in his jeep to check water connections.

"Okanogan County commissioners say it will be from 2 to 10 years before anything can be done with the roads," Storlie said. "But the roads have already been surveyed and we've laid our pipelines accordingly."

Despite these two dark spots, Storlie said he feels the project is off and running.

Testing is nearly completed and most of the bugs—one of which is how to get rid of the excess air that builds up in front of the giant piston of water as the river is sucked into the pipes—are nearly worked out.

The Brewster area is happy with its spanking-new project and it plans to trot out the welcome mat for a large-scale celebration when the water is ready for full-time delivery.

"We'll have a big-name speaker, tours of the project, and the whole works," said Brewster attorney Jack Doty as he dashed off, busy helping the town get ready for the gala day.

A Successful Sales Campaign

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. LECOMPTE. Mr. Speaker, the president of the Maytag Co., Hon. Fred Maytag, of Newton, Iowa, has responded magnificently to President Eisenhower's recommendation to sell more goods in order to improve the economic situation, and has conducted a very successful sales campaign.

I am sure Members of the House will be interested in a telegram Mr. Maytag sent to the President on May 22. Under leave to extend my remarks in the RECORD, I include his wire.

I am sure other Members of Congress will conclude, as I have, that if business people throughout the country will follow the pattern of the Maytag Co. and other manufacturers who are making an all-out effort to increase sales, the recession will be of short duration with the full employment that will naturally follow:

THE MAYTAG CO.,
Newton, Iowa, May 22, 1958.

The PRESIDENT,
The White House, Washington, D. C.:

My compliments on your excellent speech to AMA conference which I was unable to attend because I was too busy taking orders. We believe good merchandise and hard selling are an unbeatable combination to stimulate consumer purchasing and to maximize employment. At 8 o'clock this morning the Maytag Co. concluded highly successful sales campaign during which our top executives were on duty continuously for 72 hours receiving telephoned orders from our 235 field representatives. They sold more than $17 million worth of Maytag appliances at the rate of 1 every 4 seconds. This is our response to your challenge and our contribution for this month.

With warmest regards.

FRED MAYTAG II,
President.

A Resolution To Reduce Accidents and Deaths on Our Highways

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a concurrent resolution I introduced in the House today. I shall push for its enactment before the long Memorial Day weekend holiday.

The resolution follows:

CONCURRENT RESOLUTION ENDEAVORING TO REDUCE THE NUMBER OF ACCIDENTS AND DEATHS FROM ACCIDENTS ON THE HIGHWAYS

Whereas millions of motor vehicle traffic accidents occur in the United States every year; and

Whereas there are millions of persons injured and permanently crippled as a result of these accidents; and

Whereas there are many thousands of persons killed as a result of these accidents; and

Whereas many of these accidents occur over long weekends due to a holiday; and

Whereas many drivers of motor vehicles over these holiday weekends are inexperienced; and

Whereas many of the motor vehicles in operation on the highways over these weekends are mechanically defective; and

Whereas speed is very largely the cause of these accidents; and

Whereas it is the desire of the Congress of the United States to prevent as many motor vehicle accidents as possible over holiday weekends and prevent death and injury on the highways; and

Whereas it is the desire of Congress to take whatever steps that are possible to limit these accidents: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That (a) it is the sense of the Congress that the speed of all motor vehicles on the highways over holiday weekends, with the exception of emergency vehicles, should be limited to 50 miles an hour, and that no vehicle should be permitted to operate on the highways over such weekend if it has not been inspected and certified to be in safe operating condition.

(b) The President of the United States is requested to notify the governors of the several States of this resolution, and to request their cooperation in its implementation.

Tucker Sno-Cat Corp. Awarded United States Navy Certificate of Merit

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. PORTER. Mr. Speaker, the Tucker Sno-Cat Corp., of Medford, Oreg., in the Fourth Congressional District has been awarded the United States Navy's certificate of merit.

The mobile and versatile Sno-Cats are building an international reputation. It is a real pleasure for me to join in honoring the company, its employees and President E. M. Tucker. I have driven in a Tucker Sno-Cat and someday I hope it will be possible for many of my colleagues to do so.

Under leave to extend my remarks in the RECORD, I include the following news story from the May 21, 1958, Medford Mail Tribune which sets forth the reasons for the Navy award to this Oregon company:

SNO-CAT COMPANY RECEIVES ONE OF HIGHEST HONORS—VEHICLES TOOK PART IN ANTARCTICA

Tucker Sno-Cat Corp., of Medford, has been awarded the United States Navy's certificate of merit, one of the highest honors the Navy can bestow, it was reported today.

The award was made for the Sno-Cat company's participation in supplying its over-the-snow vehicles for Operation Deep Freeze, the Navy's expedition to the Antarctic in connection with the International Geophysical Year.

The Tucker company also supplied Sno-Cats to other participating governments.

MAKE TRIP

Four of the big vehicles were the only ones to make the trek all the way across the Antarctic continent, the first time this has been done by motorized ground transport, with Sir Vivian Fuchs, of Great Britain.

Formal presentation of the certificate of merit will be arranged by Rear Adm. E. J. Peltier, chief of the Navy's civil engineers.

E. M. Tucker, president of the company, was notified of the award in a letter from Thomas S. Gates, Jr., Secretary of the Navy.

Gates' letter follows:

"MY DEAR MR. TUCKER: It is my great pleasure to inform you that Tucker Sno-Cat Corp. has been awarded the Navy Certificate

of Merit for its outstanding contributions to the Department of the Navy in the fields of development, technology, and production for Operation Deep Freeze.

"This is one of the highest honors which the Navy can grant, and on this occasion I wish to express personally the Navy's deep appreciation of the unselfish interest and patriotic service which you and your company have so generously extended to the Naval Establishment.

"I am asking Rear Adm. E. J. Peltier, Chief of Civil Engineers, to make arrangements for presentation.

"With hearty congratulations and best wishes.

"Yours sincerely,

"THOMAS S. GATES, Jr.,
"Secretary of the Navy."

More Pay—No More Inflation

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. RAY. Mr. Speaker, I am glad to place in the Appendix of the RECORD the following editorial which appeared in this morning's New York Daily News. It outlines a pamphlet written by Dr. Arthur R. Upgren, director of the bureau of economic studies of Macalester College, entitled "Productivity and Wages." Both the editorial and Dr. Upgren's conclusions deserve careful study.

The editorial follows:

MORE PAY—NO MORE INFLATION

You hear any amount of talk these days about how the big labor unions, by continually forcing wages upward, are dooming the United States to an inflation which will keep creeping along indefinitely or else break into a gallop that will end in a colossal depression.

Big labor union leaders, notably Walter P. Reuther, deny that wage boosts feed inflation.

What's the straight of it?

The most interesting discussion of this subject that we've seen recently is contained in a pamphlet entitled "Productivity and Wages," issued by the bureau of economic studies of Macalester College, St. Paul, Minn.

Macalester's economics director, Dr. Arthur R. Upgren, has studied the history of United States productivity (output of goods per man-hour) in the period 1947–56, as compared with the rises in prices and wages in those same 10 years.

He finds that nonfarm productivity increased by 26.1 percent, that nonfarm wages went up 61.4 percent, and that prices went up 21.7 percent.

Thus, wages in the 10-year period climbed about 2⅓ times as fast as did productivity. This means that labor was getting ever-bigger slices of a pie which was not getting bigger in production to the labor slices taken out of it.

This in turn accounted for the 21.7 percent rise in prices, as Dr. Upgren sees it. Organized workers whose wages kept going up could pay these prices without too much pain. But unorganized workers, and the millions of Americans on more or less fixed incomes, suffered from the price rise—and are still suffering.

The Upgren solution: hold wage increases to around 2.5 percent a year, thereby keeping them in line with the national increase in productivity of around 2.5 percent a year—and "this will double wages without (more) inflation in 28 years."

This reasoning probably won't appeal to the Reuthers and some of their followers. But we should think it would appeal to a large majority of Americans, and we hope the Upgren ideas may be widely circulated and as widely discussed.

Communists Hate Vice President Nixon

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. McINTIRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column written by May Craig which appeared in the Portland (Maine) Press Herald of May 21, 1958:

COMMUNISTS HATE VICE PRESIDNT NIXON

(By May Craig)

WASHINGTON.—One thing must be frankly recognized by the people of the United States and that is that the Communists hate Vice President NIXON because of his anti-Communist record. In all the furor about the mistreatment of NIXON in some Latin American countries, this may have been lost sight of. There is no doubt that Communists helped to stir up trouble. Even the banners carried by the students who mobbed the Vice President show this, if one has the seeing eye to recognize it. As one travels around the world and meets Communists in many countries, one learns the Communist double-talk, the party line jargon.

Vice President NIXON pointed out after he came home, one of these doubletalk banners: "Independence for Puerto Rico." Fact is, Puerto Rico is a Commonwealth, a unique sort of semiautonomy which they chose and which was granted by the United States. They govern themselves, but we defend them and they get the advantage of free trade. Puerto Rico is prospering under its experienced and liberal Governor Muñoz Marín. It is doing so well that some of the United States officials and businessmen want to find out how they do it. They do not want complete independence. This was considered, with other forms of separation from Territorial status, years ago, and the Puerto Ricans chose what they have. They are satisfied with it. For Venezuelan students to be parading banners advocating independence for Puerto Rico is plain Communist Party line—Communists are always stirring up trouble in Puerto Rico. They would like to separate it from the United States and then take it over, as they are infiltrating everywhere with their false, bright blandishments covering the iron fist.

STOPOVER IN PUERTO RICO

Vice President NIXON stopped in Puerto Rico on his way home. He was guarded carefully in Venezuela on his way from the American Embassy to the airport, spent the night in Puerto Rico with the Governor, chatting about the whole situation. None knows the situation better than Governor Muñoz Marín. He has his troubles with the Communists. He had to apologize a couple of years ago when Puerto Ricans shot down five Members of the House of Representatives from the visitor's gallery. Never did I expect ever to see Members of the House lying on the floor of the House bleeding, with mobsters in the gallery shooting wildly at the whole membership. They said they were for independence for Puerto Rico, too. And you remember they tried to get into Blair House, where President Truman was staying while the White House was being remodeled?

It was a good thing for Mr. NIXON to have that quiet discussion with Muñoz-Marín, himself of Latin American extraction and a wise man. NIXON was a member of the House Un-American Activities Committee before he came to the Senate from California. He was a member of the Senate Government Operations Committee and a member of the Investigating Subcommittee. It was NIXON who really put Alger Hiss in jail. NIXON never gave up his belief that Hiss was guilty, even when most members of the House committee had given up hope of proving it. The Communists know that NIXON knows their technique backward and forward and that he would continue to understand it if he became President. It is a wonder to me that they did not kill him in Latin America. No public personage is safe if an assassin is willing to give his own life to kill the target. Huey Long was shot down in Louisiana State House by an assassin who knew he could not escape.

One reason for the mistreatment of NIXON in Latin America springs from this hatred of NIXON by Communists. One reason for Democratic dislike of Mr. NIXON is that he said they were soft toward communism, while they were in power. They were. We all were in those early days when we said communism was just "another political philosophy," and we remained soft while we said Russia was "our magnificent ally" in World War II.

THE DIRTY WORK

President Truman hates NIXON. Truman says NIXON called Truman a traitor. NIXON defies anybody to show him chapter and verse where he did this actually, in so many words. "Liberals" do not like Mr. NIXON partly because of his 1952 campaign when he attacked the Democratic Party and the "liberals" for being soft to communism. Fact is, NIXON was sent out to do the dirty work of the campaign, while Eisenhower remained on the high-level to attract straying independents.

Out in California, NIXON is controversial because of the campaign he waged to defeat Helen Gahagen Douglas for the House, the first time. That was a tough campaign and NIXON fights tough—the Communists know that. This pleasant-faced young man with the curly black hair is tough, don't be deceived about this. He would be tough as President. Friends of Mrs. Douglas resented bitterly NIXON's charges that she was soft to communism too. There are Californians today—and many liberals in Washington, who almost spit when they hear NIXON's name, because of that campaign against Mrs. Douglas. But that is American politics—if you can't take what comes, you better not run.

NIXON has become a wee bit more liberal himself, along with Eisenhower, who represents the new Republicans, but many of the Ike Republicans still think the conservative tinge remains in NIXON's character. I think so too. This may make him a middle-road candidate in 1960. It remains to be seen who the Democrats put up. General opinion here is that NIXON will be the candidate, though the President is still high-level about this too. He said at a recent press conference that there are a lot of darn good Republicans for candidate for President. The President did not tie himself to NIXON in the 1956 pre-convention campaign and the President allowed a member of his cabinet, Harold Stassen, to try to dump NIXON. However, the way the administration arranged a great welcome for NIXON on his return from

Latin America made it look pretty good for NIXON—whether or not the glow lasts until 1960.

It is possible that NIXON will succeed the President before 1960 by the resignation or death of Mr. Eisenhower. That would guarantee NIXON the GOP nomination. This would not suit the Communists. They do not hesitate at assassination—they killed President Castillo Armas in Guatemala. They have killed elsewhere. If they did kill NIXON and it could be proved on them it might bring such a world reaction against them, that it may deter them from such violence. But it is well to remember about the Latin American trip, and others NIXON may take abroad, that the Communists hate him and they will do anything to discredit him.

Coal Needs One Voice

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Hazleton (Pa.) Plain Speaker of May 22, 1958, which comments on the recommendations made by the Honorable John L. Lewis, president of the United Mine Workers of America, in a speech which he made in Cincinnati:

COAL NEEDS ONE VOICE

President John L. Lewis, of the United Mine Workers of America, sounded a new rallying call to the coal industry in a recent speech before the Coal Convention of the American Mining Congress in Cincinnati. His theme was: "Coal Needs One Voice."

The fact that Lewis based his challenge on have been well known in the various segments of the coal mining industry. If a unity of action results from the plea, the voice of the anthracite industry would carry greater significance in the struggle for greater recognition from the Federal Government on the part coal plays in the life of the Nation.

As Lewis pointed out, no one agency speaks for the coal industry now. All its leaders are only able to speak for segments of the industry. The influence of their words and the impact of those words upon their hearers are minimized by the fact that they speak for a group in the industry.

Lewis suggested that such an agency or committee might meet quarterly and that it would be the voice not only of the investors of the industry, and the management of the industry but also of the manpower of the industry.

Despite the fact that in two World Wars the coal industry performed remarkable feats—it is an industry that is taken too much for granted by the Government. It is accepted as a matter of course, left to its own resources, without aid or reasonable assistance in expanding its markets or overcoming its scientific problems of research and experimentation.

There has been no particular or efficient effort made to find world markets that will insure generations yet to come of receiving great value from coal.

It would be a good thing if the suggestion for a national agency to speak for the coal industry bears fruit. It would be a voice, much stronger and much more effective on the things upon which all segments could agree, than the divided voices that have been raised on behalf of the industry in the past.

United Press-International Merger Raises Serious Antitrust Question

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 1, 1958

Mr. CELLER. Mr. Speaker, the merger, agreed to May 16 and kept secret until announced May 24, of the United Press Association and the International News Service is highly important to the American public. The new organization, United Press International, takes over 5,000 papers from the United Press and 3,000 from the International News Service, as well as the international operations of International News Pictures and the still-picture service of both wire services.

The public has an acute interest in any merger that affects the control of the news it receives. It is essential in a democracy that there be continued strong and healthy competition in the gathering and distribution of news. This is the only means the public has to assure the flow of vital information essential in a democracy. This merger reduces the general news gathering agencies serving the American public from 3 to 2.

Competition now has been greatly reduced. It may be substantially lessened as that term is employed in the Celler-Kefauver amendment to the antimerger section of the Clayton Act. Undoubtedly the public's opportunity to get news has been substantially diminished.

News is a commodity that grows stale quickly. Any tendency toward monopoly in a business where the product is quickly outmoded is particularly dangerous.

I am glad that the Department of Justice ultimately was alerted to this action and is conducting an investigation to determine its legality under the Celler-Kefauver Act. However, since the agreement became effective on May 16, assets may have already become commingled. Thus it would be difficult to unscramble these assets if divestiture ultimately is ordered by a court after trial under the antimerger statutes.

This situation sharply points up the need for prompt enactment of my premerger notification bill—H. R. 7698. This bill was reported to the House on May 28, 1957, by the Judiciary Committee and has since been held up in the Rules Committee. My bill would have required notice of this merger to the Attorney General, 60 days prior to its consummation. If it had been law, we would not have had this situation where there has been combination of these companies before the Department of Justice even became aware the merger was contemplated. If the Department of Justice had notice in advance, a court may not now be faced with a fait accompli in this vital area of news gathering. As it is, the Department of Justice is confronted with a situation which will vastly increase the difficulty in enforcing the antimerger law.

Rates to Savers Heading Down

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. MULTER. Mr. Speaker, a subject of interest to all of our citizens is discussed in an article by Sylvia Porter which appeared in the Washington Star on May 9, 1958. I am sure that Miss Porter is right in her prediction.

The article follows:

RATES TO SAVERS HEADING DOWN
(By Sylvia Porter)

Rates paid on savings by banks and savings institutions are now heading distinctly lower—the first change downward in almost 20 years.

If you have savings in a bank or a savings and loan association you're now being paid the absolute top in interest.

You'll get no higher rate than you're getting today, and the odds that your institution can or will continue to pay you as much as it is now paying are shrinking daily.

The odds that the rate paid to you will be shaved around July 1 or before December 1 are mounting rapidly.

Clue: Throughout the country savings institutions are starting to change the appeal in their ads, are beginning to soft-pedal rather than boast about the rates they pay on deposits. The shift in advertising policies is paving the way for the rate reductions.

Clue: Big banks in the great money centers have twice shaved the rates they pay on time deposits of other than small individual savers just since February. In February the rate paid on these deposits went down from 3 to 2½ percent; it is now down to 2 percent.

Clue: At a forum of bankers in Providence, R. I., a few days ago, one of the Nation's leading analysts of banks, M. A. Schapiro, openly recommended that banks reduce the rates paid on savings to maintain adequate earnings in this period.

Clue: Although bankers are naturally reluctant to discuss the subject publicly, the likelihood of cuts is being actively debated in closed meetings. From bankers in the West and South comes the prediction that unless conditions change markedly in the next 30 days, many reductions will be announced July 1.

The question is no longer one of direction in rates paid on savings. The direction is clear; it's down.

The question is only one of the precise timing of the reductions and the area in which the break in rates will start.

Just as interest rates paid on savings went up unevenly—rates today vary widely from region to region, between banks, and between banks and savings associations—so rates will go down unevenly.

But this is not the majority opinion and here is why:

The plunge in interest rates—which began last November when the Federal Reserve System abandoned its tight money policy and started to combat the recession with easy money—is cutting deeply into the earnings that financial institutions can get from loans and investments.

Easy money has two aspects. It means lower rates charged to borrowers and it also means lower rates paid to savers. Savers will discover this second meaning as 1958 rolls on.

Farming Today for Tomorrow

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an article written by Miss Eleanor Gresham, of Cordova, Tenn., entitled "Farming Today for Tomorrow."

This young lady has so brilliantly written on this subject that I am anxious that my colleagues have the benefit of its examination.

The article is as follows:

FARMING TODAY FOR TOMORROW

(By Eleanor Gresham)

(Based on information compiled and contributed by John V. Reid, associate county agent, Shelby County)

Soil conservation—how often this topic is brought to the attention of all, especially the farm population. There is this remedy here, and there is that precaution there. True, society is fortunate in that there are new methods revealed in an effort to assure not only a prosperous present but an even brighter future.

However, how many heed any of these warnings or utilize this new research? Percentagewise, very few. Is it because there is a feeling of inadequacy, or is it a lack of equipment? Throughout the State of Tennessee and the Nation reasons may vary, but there is one locality in Tennessee in which definite and organized steps are being taken in an all-out movement to promote prosperity, both presently and in the future.

Shelby County, an area of 801 square miles and 6,000 farms, ranging from 1-acre truck farms to others of thousands of acres, lies in the extreme southwest corner of Tennessee. Creek valleys, gently rolling slopes, steep-sided hills, and a narrow strip of Mississippi River bottom produce cotton, corn, small grains, soybeans, hay, and truck crops with cotton the leader in monetary returns.

Like many other American counties it has an agricultural extension program in operation, but until the program was in swing some years ago, a mediocre existence on rundown land was all the future seemed to hold, for much of the hill land was being slowly eaten away by erosion. But under careful planning of agricultural leaders in the country, a series of subprojects were set up to serve, in the words of one local official, as stepping stones toward permanent prosperity.

The first of these steps, the organization of the Shelby County Soil Erosion Control Association, was taken in 1934. Making heavy equipment for soil erosion and water control work available to farmers at cost, was its primary objective. This is the only nonprofit cooperative of its kind in the United States.

The provision of heavy equipment was the first objective of the organization, but as more time became available with the addition of new staff members, additional objectives included: (1) To do mechanical soil erosion control work that could be used as a model for that kind of work; (2) to try out and evaluate new methods of doing this work; and (3) to develop new techniques for doing this kind of work better and more cheaply and to pass these techniques on to the farmers and farm contractors.

The association now owns approximately $300,000 worth of equipment, including 2 new D6 Caterpillar tractors, terracing machines, and other earth-moving units. In its first 20 years of operation (1935–55), the association served 1,000 farms, terraced 27,500 acres, constructed 250,000 feet of ditches, and reclaimed 4,000 acres. Included among side jobs was the grading of 250 acres of church, school, and home grounds, and included among records set were 2,300 feet of standard terrace in 1 hour 55 minutes and one 12-foot dam that impounds water in a 4-acre lake at a cost of 8.7 cents per cubic yard.

This work has not been piecemeal, for professional agricultural workers plan each job as part of the overall program.

For example, on the 1,200-acre J. P. Chase and Son farm, a special terrace which doubles both as a road and terrace was developed. Installed wherever roads were needed, all parts of the farm can be reached without driving over field terraces.

Water doesn't escape the Chase farm easily as a result of the planned system for catching runoff. As a result of eight ponds on the farm, arranged in an interlocking system of overflow and carry-off ditches, the water is held to work its way slowly into the subsoil water reserves, instead of escaping to add flood damage downstream.

In 1947, came another significant step in Shelby County's series of projects—the establishment of permanent pasture demonstrations in every community. Intended to show how much such pastures could add to income from livestock, they also helped conserve soil.

A 30-acre field on the Roy Henderson farm was the scene of one demonstration pasture. Soil tests were made, the soil being treated in accordance with tests, and the best-known methods were used in the preparation and seeding of the pasture. Twelve hundred dollars was the cost of the improvement, and by keeping careful records, Henderson found that his pasture paid for itself in 100 days through increased milk flow. This is one example of other demonstrations which illustrate the additional income obtainable from well-managed pastures.

By starting a corn production project in 1953, the county took a third important step. After a look at the county's average corn yield of 30 bushels per acre, the county agricultural officials concluded, wisely, that it was a losing proposition. Not meeting costs in most cases, this level of production certainly did not give much income.

The first demonstration in the project was established in the W. G. Petty farm, Petty setting out to grow more corn on an acre than has ever been produced in Shelby County. With the help of soil tests and by using recommended practices, adapted hybrids and irrigation, his production on a middle grade hill soil was 171 bushels in 1953 and 165 in 1954. In 1955, Petty made more than 200 bushels per acre, showing that Shelby County land is capable of growing corn on a money-making basis.

What applies to corn growing also applies to cotton, and a new set of cotton demonstrations was started in 1955. Employing the most modern methods of cotton production, the kind that return the most income to the farmers using them, these were regarded as the fourth step in the county's improvement program.

A demonstration of what can be done with an entire farm and home has been a final step in the Shelby County program, with C. F. Chitwood, owner of a farm in the Mary's Creek Watershed of the county, volunteering the uses of his farm for the project. Although the work is just getting underway, a plan for the Chitwood farm is being developed by county agricultural officials which should provide maximum returns for many years.

The initiative in getting these subprojects started being taken by farm leaders in Shelby County, Federal and State Government agencies are lending assistance in all projects. Included among the agencies are the Soil Conservation Service, Agricultural Stabilization and Conservation Committees, Forest Service, Fish and Wildlife Service, and Agricultural Extension Service.

Demonstrating that it is possible to get a good return from rundown land, these Shelby County projects are of interest everywhere. Not only is there no real income from the use of out-of-date farming methods, but these methods also waste and destroy the soil, resulting in nothing for future generations to farm.

The farmer who takes advantage of modern, improved agriculture, in contrast to low-yield farming, builds and conserves the soil, thus making a step toward increasing country life enjoyment and raising the economic level of farmers. Active areas, such as Shelby County, contribute to the welfare of the Nation.

United States Air Force Reserve Honors Hazleton (Pa.) Publisher

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story from the Hazleton Plain Speaker of May 22, 1958, reporting upon the certificate awarded to Mr. Frank Walser, Copublisher of the Plain Speaker, by the United States Air Force Reserve:

The United States Air Force Reserve, yesterday hoonred Frank Walser, copublisher of the Plain Speaker–Standard-Sentinel, when they presented him with a certificate of appreciation for his outstanding cooperation and enthusiastic support of the Air Reserve program.

The certificate was presented to the publisher by Lt. Charles Wyatt, commander of the 2605th Air Reserve Center, Wilkes-Barre, on behalf of Maj. Gen. Roger J. Brown, commander of the 1st Air Force.

The framed certificate was inscribed as follows: "In recognition of public services rendered to the Air Force Reserve, this certificate of appreciation is presented to the Plain Speaker-Standard-Sentinel. The recipient of this award has exhibited outstanding cooperation and continuous effort to further the national security of the United States by enthusiastic support of the Air Force Reserve." It was signed by General Brown.

It marks the first certificate of this type to be presented in the greater Hazleton area by the Wilkes-Barre Air Reserve Center, which has on its rolls more than a score of men from this area.

On hand to witness the presentation were Maj. Franklin D. Coslett, commander of the 9101st Air Reserve Group, Wilkes-Barre; Capt. Paul York, administrative officer of the Center, and Harrison M. Henritzy of the Information Services staff of the 9543d Air Reserve Squadron.

Our Flattening Economy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. MULTER. Mr. Speaker, an editorial which appeared in the New York Times of May 10, 1958, is most timely. It is particularly worthy of the attention of the House Banking and Currency Committee, which is presently conducting hearings in connection with the current recession and attendant unemployment problems.

The editorial follows:

OUR FLATTENING ECONOMY

It has been customary for some time now for the Department of Commerce and the Bureau of Labor Statistics of the Labor Department to combine their figures on employment and put them out in the form of a joint release about this time each month.

It will be recalled, however, that this rule was suddenly fractured with respect to the statistics covering the month March 15–April 15. The Department of Commerce decided to beat the gun, which it did by releasing its own figures independently on May 1, or more than a week before the scheduled release of the combined figures of the two departments. What was the justification for this extraordinary act by the Commerce Department? Viewed circumstantially against the background of the Commerce Department's more or less notoriously Pollyannaish mentality where business is concerned; the only conclusion seemed to be that the Department couldn't wait to announce its discovery that unemployment had declined in the period from mid-March to mid-April. The fact that the decline was only a single fraction of what it should have been on a seasonal basis and was, in fact, scarcely more than the allowable margin of error, even on an unadjusted basis, was apparently regarded as of little consequence.

This week, running strictly on schedule, the Bureau of Labor Statistics has released its own, complementary figures. These statistics, which are in the general nature of an analysis of the Commerce Department's figures, do not make very enjoyable reading. They show that in absolute terms the drop in factory jobs was 267,000. Of this 267,000, moreover, 100,000, or 37 percent, could be attributed to seasonal influences. The other 63 percent, in short, was caused by the recession. In absolute terms the employment in all nonagricultural establishments showed a rise, though a microscopic one, of 56,000. Placed on a seasonally adjusted basis, however, this is transformed into a decline of nearly three times that number, to be exact, 160,000.

There is little in these statistics that show we are close to the point when we may look for a rebound in the economy. Even if one were to accept the frequently reiterated statement that a "saucering out" of the decline is now close at hand, this would not make any less desirable, not to say urgent, decisive action in the form of a sizable tax reduction.

The chief argument against such action by the administration seems to be that it would mean a substantial budget deficit. Perhaps the reply to the argument was best stated recently by Dr. Neil Jacoby, dean of the Graduate School of Business Administration, University of California, and former member of the President's Council of Economic Advisers. As Dr. Jacoby points out, we already have a deficit. Moreover, he adds:

"This deficit [now put at $1.5 billion] will become larger as the business recession reduces the tax base, which is the amount of personal income and corporate profits on which taxes are paid. A $5 billion package tax cut would, of course, immediately increase the deficit now being automatically generated by the business recession. However, if the tax cut did serve to revive private expenditures by business firms and consumers; if it did shorten the recession and speed a vigorous recovery, it would expand the tax base and could readily reduce the Federal deficit that would otherwise exist. Our experience in combating the recession of 1953–54, when we reduced taxes by nearly $7.5 billion on an annual basis, indicates that there is a very good probability that, over a period of 2 or 3 years, tax reduction would reduce rather than increase the amount of deficit financing by the Federal Government."

Not Fantastic

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I included an analytical editorial as to the future "Not Fantastic", appearing in the Washington Star of May 24, 1958:

NOT FANTASTIC

It is a measure of the fantastic nature of our age that Dag Hammarskjold, Secretary General of the United Nations, has seriously proposed to the Conference of Governors in Florida that all the world's powers promptly join in renouncing any territorial claims to outer space. By coincidence, in approving a bill to establish civilian control over our own country's nonmilitary ventures into the high heavens, a special House committee has called for essentially the same sort of international celestial agreement—to insure that man's coming exploration of the regions far above us will be carried out solely for peaceful purposes.

As Mr. Hammarskjold has put it, once this exploration goes beyond its present modest limits, the nations engaged in it will face the problem—legal and otherwise—of avoiding potentially dangerous rivalries in relation to celestial bodies like the moon, Mars and Venus. These are places, judging from all expert predictions, that will one day be visited by human travelers, to be exploited thereafter, in one way or another, for mankind's use. Accordingly, in Mr. Hammarskjold's words, "We have here a vital field of activities and joint interests for which rules must be established and procedures must be created that will render it possible for the world community to safeguard the observance of those rules." This means, of course, rules designed to insure that no one power will seek to extend its sovereignty to the interplanetary field and that the universe around us will be internationalized—with no single piece of it subject to the sovereignty or military control of any state—for the benefit of peoples everywhere.

At the moment, to the earthbound among us, all this may appear to add up to an issue too remote to be taken seriously. But that is not really the fact of the matter. Actually, as the experts have emphasized, the space age—an age in which man will almost certainly become a lunar voyager and interplanetary explorer—is rushing in upon us very fast. That is why Mr. Hammerskjold, with the support of the special House committee, has solemnly advocated an early international agreement on the subject. Fantastic as it may seem, the idea—which is scheduled for debate in the United Nations—is real enough to merit careful attention right now.

Address by His Excellency, Jose Ma. De Areilza, Spanish Ambassador to the United States, at the Pennsylvania State Convention of the Knights of Columbus Held at Wilkes-Barre on Sunday, May 4, 1958

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by Ambassador Areilza at Wilkes-Barre on May 4, 1958:

I am deeply honored by your invitation, dear Knights of Columbus of the State of Pennsylvania. Every Spaniard is proud of that great achievement, the discovery of the New World, carried out by our country back in the 16th century, under the inspiration of Queen Isabella and the genius of the great navigator. A famous Catholic author once said that, after the incarnation and the nativity of Our Lord, this was, actually, the most important date in universal history, as it helped the human race toward achieving unity, and, therefore, toward shaping a more complete and accurate image of the world.

But the discovery of Columbus was not just a single successful journey. It was really the beginning of a whole era of exploration and civilization. For 300 years our Spanish people came to the shores of America and created a whole new life, founding cities, building churches and universities, clearing roads, constructing ports, and bringing to the New World every element of modern life, from the printing press to the horse, from carriages with wheels to the seed of wheat and the stem of roses. Not only that, but their intermingling with the natives of Central and South America in a few generations created a mixed race of Spanish and native blood, thereby uniting Spain and America. Ours was not a very big country at the time. Therefore, our population was deeply affected by the tremendous strain of this epic achievement. Hundreds of thousands of Spaniards came over during those three centuries, and left the impressive tradition of their way of life and their philosophy here. Today, when one travels south of the Rio Grande in this continent, one can still find the presence of Spanish life, not only in the language of the countries, but also in their cultural inheritance, in their customs, their behavior, their family and social life, their prayers.

Yes, their prayers. Though we forget it too often, the whole achievement of the American discovery was substantially a religious fulfilment, a supreme spiritual adventure. A whole campaign of international slander has distorted the conquistadores' history during the last century. If one

listens to these professional calumniators, the Spaniards were the villians of the story, with their hearts full of hatred and greed, persecuting with infinite cruelty the poor, harmless Indians. A study of the documents which can be found in the archives of Europe and America proves exactly the contrary. There are certainly many episodes of human frailty and error associated with these conquerors, who were subject to passions and sin, like everyone else, but on the whole, the fabulous achievement of bringing the light of civilization to millions of people who lived in the midst of darkness and ignorance was carried out under the inspiration of Christian principles, and with the direct participation of the church. Bishops and theologians, friars and priests, took active part in the superhuman task. Thus, the laws concerning the natives were absolutely human, respectful and Christian, and for the first time in the history of international relations, the unknown races discovered in the new Continent were considered, not as booty for the conqueror, but as a new community of human beings who also were part of Christianity itself. This theory was going to become the most important step toward international law, and the present universally accepted principle of the community of nations.

That is why, as Ambassador of Spain, I am always pleased to visit some new city of your wonderful country, and take part in the gathering of the Knights of Columbus. Though located in Europe, Spain considers herself, to a certain extent, by reason of her American ties, as being a part of the American brotherhood, and, of course, as fundamentally a Catholic country, thus having two common affinities with the idea of your own organization.

Although the Spanish conquest was carried out especially in Central and South America, here also, in what today is the territory of the United States of America, one can still find, from Florida to California, an impressive trail of Spanish memories, as for instance, in the names of the cities, the rivers and the mountains; the souvenirs of Ponce de Leon, De Soto, Oñate, and Coronado; the rosary of the California missions; the dress and vocabulary of your Spanish cowboys; the friendly hospitality of the sun-loving South; the life at the ranches; the exultant joy of the rodeo; the emotion of visiting the first Catholic shrine, the first school, the first image of Our Lady in Saint Augustine, all created by the Spaniards.

But let us now leave the past with all the glory of our common inheritance of which we are so proud, and take a look at the present. Let me say a few words of what our common ties are today; of what the relationship between the United States and Spain is now, and what the problems we are facing together are. I believe we ambassadors have the duty of bringing these questions to the knowledge of the American people, because the people have the right to be informed about these important aspects of international life.

A great danger is facing us, the members of the free Christian civilization. A threat which is the most fearful of all historic challenges. One-third of the human race is enslaved by a revolutionary group that is trying to impose its dictatorship on the rest of the world. This power has immense resources, employs merciless methods, has no respect for human personality, no moral principles, and no belief in an eternal life for the soul. It also has a dangerously strong military force equipped with the most deadly weapons. As blackmailers, these people will not stop at anything, nor balk at any threat that will further their aims.

We know this enemy. We had to fight against him, more than 20 years ago, when the rest of the world was not really aware of the menace. Our country, back in 1936, was on the verge of falling into the hands of communism. Some people like to say that there were not many Communist members in the Spanish parliament at that time, and not many pro-Soviet members in the cabinet, to make such a possibility a real danger. But the Communist Party has never taken over a country with the consent of the people, or by the rule of the majority. It has always achieved its ends through the violent imposition of a small minority of terrorist fighters, or with the help of military occupation, and against the will of the people. Spain had to struggle for survival, to fight a desperate war to preserve her Christian faith, her traditional way of life, the basic principles of our common civilization. It was a 3-year battle, with an enormous loss of lives and wealth by our country. We learned then what Soviet respect for alien property was. Basing their attitude on the fact that the so-called loyalist Spanish government gave them the gold reserve of our national bank, worth more than $700 million, for safekeeping until the war was over, they removed it to Russia and never returned it. This gives us a good idea of what Soviet ethics are.

The Korean war was the turning point of the Western World's awareness of the Red danger. It was this great country of yours which was the first to see it, and to understand the extent and gravity of the situation. Thus our own war became understandable after 10 years of absolute misunderstanding and factual distortion. People began to think that through General Franco's fight and victory, the first Red satellite state in western Europe was prevented from being formed back in 1936. In 1953 my country and the United States signed an agreement of military and economic cooperation, which has been carried out with great success and excellent results on both sides. Spain offers the United States bases for her Air Force and receives economic aid and technical assistance for the development of production. Now, at the end of 5 years, the bases have been practically completed, and those who have visited them expressed great admiration for such an extraordinary technical achievement. These bases are considered the best that the United States possesses abroad.

As regards economic aid, it has been notably efficacious in improving the development of our productive resources, and I must state that in the present state of rapid expansion of our industrial and agricultural capacity that type of aid, especially in that which refers to capital goods, may give spectacular results, if it continues for some time. This serves as the best example of up to what point foreign aid may be useful for countries such as ours, which are experiencing a period of rapid expansion, together with grave economic difficulties due to adverse circumstances.

But Spain offers to the United States, in this cooperative period, something far more important than the existence of a network of modern military installations. That is the spiritual alliance of a country of 30 million inhabitants, with a strategic geographic position in the west, whose anticommunism is not merely formal, nor in need of stimulation, but rather fervently shared by the immense majority of its inhabitants. Our anti-Communists, has its origin in the tragic experience suffered by us more than 20 years ago, which cannot easily be forgotten. If, therefore, in the form of government which Spain has needed in order to survive, the political structure does not coincide exactly with other types of democratic government of the Anglo-Saxon world, this does not, by any means, indicate that an alliance, based on such substantial common interests, may not be discussed by instrumental ideological differences.

Some fanatics of the liberal ideology whose opinions we respect, though we do not share, suppose that the same political model, especially in that which refers to the representative system, and to civil liberty, should apply in a uniform manner to all the nations of the free world. But my understanding is, that if we accept this criterion, we fall into the same error as Soviet Russia, whom we justly accuse of imposing systems rigidly identical to that of Soviet Russia on all the countries within its orbit. Every country of the free world must be guaranteed complete liberty to dictate the form of government most suited to its traditions, its history, and to the mentality of its people.

And thus, in this hour of great threat for the world, we find ourselves confronted with an enormous danger, that we must face squarely, and without becoming confused by the wiles with which the enemy tries to sow confusion in our ranks.

An event has occurred which to me seems more important than all the technical and military advances over the last few years, and that is the recent rebellions in Hungary, Poland, and Eastern Germany. In these uprisings of the people against Communist tyranny, it was the workers themselves, that is to say, those people whom the Communists call the proletariat who took up arms against the occupying Soviet tanks and guns, which represented, however, the troops of the Communist paradise, theoretically ruled by the working class. After all, any university student knows that the criticism made by Karl Marx more than a hundred years ago regarding the failures of the capitalist system, was based on an analysis of facts which have now practically ceased to exist, since they concerned circumstances peculiar to the nations then beginning their industrial revolutions. And how can one apply this analysis to the working world of today, in which the colossal new sources of energy, the automation of machines, the enormous complexity of new techniques and the development of inventions have made sensational changes in the fundamental facts of the economic problem and the concepts used by Marx, which today have been completely modified, such as salary, values, supervalues, and capital remuneration? Marxism is a doctrine of which its adherents still speak, as one might discuss the light of a star which we still see, but which, however, died many years ago. The Communist rule which threatens us today uses the Marxist ideology like a smokescreen, fully aware of its falseness and inadequacy, to hide its true doctrines. These doctrines are those of a ruling class born of the bureaucratic revolution, whose only aspirations are toward the imposition on the world of its collective tyranny, to achieve its imperialistic aims.

I think that one should have the courage to call a spade a spade in this rather delicate ground, and leave aside conventional topics and phrases. The economic system of the United States has shown its efficacy, overcoming its first shortcomings, and creating a permanent revolution within itself. I have here a successful example of the production and distribution of wealth which is based, without any class prejudices, on private initiative, on social justice, and which is fully cognizant of all the revolutionary innovations in modern, industrial technique. The reason why this system thrives and flourishes so strongly is because it respects, above all, liberty, which is a very part of the life of man. And liberty can only flourish in a society such as ours, which possesses a religious creed that instills in man respect for his neighbor, whatever his class or race.

Our answer to the challenge of the present hour is, that one must be not only ma-

terially and militarily stronger than the enemy, but also superior to him on moral ground. And in this we will prevail, if we can succeed in offering to all the people of the world—those on our side, those who are noncommitted, and those who are under Communist tyranny—an economic system which offers greater material prosperity to the greatest number, a form of political life which respects personal liberty, and a spiritual hope that reminds man, as a child of God, of his eternal destiny.

Summer Fellowship Programs for Secondary-School Teachers

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. MILLER of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a brief news article which appeared in the San Leandro (Calif.) Morning News just recently. The article is brief, but, to my mind, it is significant.

It states how one industrial company—the Maxwell House division of General Foods Corp.—is giving a helping hand to local high-school teachers in San Leandro, Calif.

Sidney L. Feener, Jr., the plant manager of the local Maxwell House operation, calls the program the summer fellowship program for secondary-school teachers.

His program, which is comparatively simple and inexpensive, strikes directly at an area of our educational system which has been of deep concern to us recently. It involves providing a grant or grants to secondary-school teachers to take advanced courses of study during the summer months at little or no expense to themselves.

It is my understanding that Mr. Feener's parent organization, General Foods, is going to expand this high-school teacher grant plan to many more of its plant communities. The program will become effective this summer.

The need to improve the quality of teaching in our secondary schools has been apparent for some time, and recent world events have added emphasis to this. One of the main reasons for our great teacher shortage is low pay, and this grassroots method of alleviating some of the teachers' financial burden is certainly welcome at this time. Furthermore, this novel program of teacher-aid will benefit the teachers themselves academically as well as benefit the local school system by strengthening it in areas where greater teaching skills are needed.

It is a source of personal satisfaction to me to know that an industry in my district of California is taking a lead in so practical and effective a plan to help teachers and hence the community school system.

I would hope that other industries, other communities, civic groups, and educators, would study this General Foods high-school teacher fellowship program, for this is an area in education which certainly needs to be helped at this time.

The article follows:

[From the San Leandro (Calif.) Morning News of April 16, 1958]

ONE THOUSAND DOLLARS STUDY GRANT FOR SAN LEANDRO TEACHERS O. K.'D

(By Culver Lewis)

A $1,000 grant to San Leandro High School teachers for advanced summer extension study was accepted by the board of education last night.

S. L. Feener, Jr., manager of the Maxwell House division of General Foods Corporation, Halcyon Drive and Washington Avenue, made the offer to the board on behalf of the corporation.

Feener explained that General Foods started such a program in LeRoy, New York, 2 years ago and it had proved very successful.

The board was informed that no strings were attached to the offer. Feener told the trustees that the purpose of the fund is to make possible further teacher study which would be of value to the students, the high-school teachers and the community of San Leandro."

Board President A. J. Oliveira expressed the trustee's appreciation and said it was "a fine gesture on the part of General Foods. I only hope that other local plants will follow suit."

Voluntarism at Its Best

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. JOHANSEN. Mr. Speaker, I am an ardent subscriber to the view expressed by David Lawrence that "voluntarism is freedom's greatest vehicle of progress."

For this reason, I welcome activities which reflect this spirit of voluntarism as opposed to increasing reliance upon Government.

It seems to me particularly desirable that these methods be strengthened and expanded in the very important field of education.

Accordingly, I am happy to call the attention of the House to a program of aid to public schoolteachers which is being initiated in the Third Congressional District of Michigan.

Under leave to extend my remarks, I include a recent news article from the April 7 Battle Creek Enquirer and News, which describes this plan inaugurated by the Post division of General Foods Corp. in Battle Creek.

Mr. George Laimbeer, vice president and general manager of the Post division, describes the plan as the "summer fellowship program for secondary schoolteachers."

As the newspaper article points out, this program involves the awarding of grants to secondary schoolteachers in the Battle Creek, Lakeview, and Springfield high schools to enable the teachers to take advanced summer courses of study at little or no expense to themselves.

The local schools administer the program, set their own criteria, and make their own selection of the recipients of the awards according to their curriculum needs.

It seems to me that this is a program of very practical nongovernmental aid to education which can be emulated with profit by other industrial concerns and by civic groups.

I understand that other divisions of the General Foods Corp. are adopting the same program. However, I take particular pride in the announcement by Mr. Laimbeer not only because the ready-to-eat cereal company he heads is located in my district, but also because this concern, formerly the Postum Cereal Co., was the parent organization of General Foods Corp.

I warmly commend the decision of Mr. Laimbeer and his associates in General Foods to pioneer this program. It is one more timely reminder that reliance upon Government, and especially upon the Federal Government, is by no means the only or best solution of all our problems, and particularly the problems of education.

The newspaper article to which I referred follows:

AREA HIGH-SCHOOL TEACHERS TO RECEIVE GENERAL FOODS CORP. STUDY HELP

Fellowship grants which will aid senior high school teachers of Battle Creek, Lakeview, and Springfield in pursuing advanced study programs during the summer have been offered to the three school districts by the post and carton and container divisions of the General Foods Corp.

The grants, totaling $3,000, are to be allocated to the school districts in amounts proportionate to the number of high school teachers in each senior high school. This will provide the Battle Creek school district with $1,750; Lakeview $750 and Springfield, $500.

TRUSTEES TO WORK IT OUT

Formal acceptance of the funds by the three boards of education is expected this month. A company spokesman said the school trustees will be responsible for working out a plan to administer distribution of the grants to the maximum advantage of high school teachers.

John Crossen, planning and development manager for the Post division, stated that the general purpose of the grants "is to make possible further teacher study, which will be of value to students, to high-school teachers and to the communities."

He said there are "no strings attached" in the offer of fellowship funds. The company asks only that the money be used for senior high-school teacher study. Mechanics of the program will be left entirely to the school administrators, he said said

"General Foods has been studying the needs of educational systems over the last 4 or 5 years and found that although industry is already giving significant aid to higher education in the form of scholarships and fellowships, there was little being done at the secondary school level," Mr. Crossen stated.

He reported that General Food's Jell-O plant at LeRoy, N. Y., took the first step in this direction in 1956, in making available $1,000 to help selected high school teachers in LeRoy take advanced courses of study during the summer. The plan was so successful that it was repeated last year and is scheduled again this year.

He explained that the fellowship grants here will be made on an annual basis also,

if the first-year program this summer proves successful.

Offer of the grants was made during a recent meeting of Post and carton and container division officials with officers of the three school boards. Mr. Crossen presented the offer on behalf of George M. Laimbeer, Post division general manager, and Robert de S. Couch, carton and container division manager.

The program, which has become known in General Foods Corp. as the summer fellowship grant for secondary school teachers is described as unique in industry grants to education.

A Legacy from a Great Leader, John T. Alsop, Jr.

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. BENNETT of Florida. Mr. Speaker, recently John T. Alsop, Jr., for 18 years mayor of Jacksonville, passed away, to the great loss of the many whom he benefitted in his wide area of influence. His friend, Will Rogers, the famous comedian, gave him a title by which many addressed him even in his final years of semiretirement "The Mayor of Florida." Because of his wide area of service the title was particularly appropriate.

Mayor Alsop was always a great inspiration to me and a dear friend at all times. The Jacksonville Journal recently published the following editorial which may inspire not only those who knew him but also those who never had that opportunity:

NINE SUCCESSFUL RULES FOR SUCCESS

Mayor John T. Alsop, Jr., left his mark in many places around Jacksonville and in many places in the hearts of Jaxons.

But perhaps his greatest legacy will be his rules for success, nine maxims he followed from childhood. They are:

"Good sportsmanship in work as well as in play. Ever be fair.

Loyalty to family, friends, and business associates.

"Temperance in all things—work, play, and appetite. Don't worry. Practice self-restraint, thus insuring self-reliance.

"Adherence strictly to the Golden Rule, lest it becomes merely a platitude.

"Constant application and thoroughness, and to these add thrift and economy.

Cultivation of that greatest of all assets—personality—for it will be invaluable all through life.

"Let service be paramount always, whether it be with affairs of church, State, home, or business.

"Be positive in thought, speech, and action, but above all, be tolerant.

"So live that the world may be made better, your friends and neighbors made happier, and to paraphrase another, that even the undertaker will regret your passing."

The success of Mayor Alsop's formula for success can perhaps be measured by the fact that the undertaker—and every other person with whom he came in contact during his long life—truly regret his passing.

Governor Meyner Emphasizes the Importance of a Liberal National Trade Policy

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. THOMPSON of New Jersey. Mr. Speaker, Gov. Robert B. Meyner is a strong supporter of a liberal national trade policy. On a recent trip to Europe he missed no single opportunity for acquainting European Government and business officials, as well as American businessmen abroad, with his earnest desire to increase trade between Western Europe and the United States and with the benefits and advantages of such trade.

Using dollar value as a measure, foreign trade through the New York-New Jersey port in 1957 was almost $9 billion, or about 38 percent of the total value of United States foreign trade. A measure of the importance of this trade is the fact that more than 3 million people in New Jersey and New York are directly or indirectly dependent for their livelihood upon it.

I include here the text of an address made by Gov. Robert B. Meyner at a luncheon of the Newark, N. J., Chamber of Commerce on May 9, 1958:

ADDRESS BY HON. ROBERT B. MEYNER, GOVERNOR, STATE OF NEW JERSEY, AT A LUNCHEON OF THE NEWARK CHAMBER OF COMMERCE, HOTEL ROBERT TREAT, MAY 9, 1958

The Newark Chamber of Commerce, in arranging this special meeting of New Jersey businessmen, has given me a greatly appreciated opportunity to report back to the people of the port district on one of the most constructive and gratifying experiences I have had as governor of this great State. For I am encouraged to believe that my mission to help sell the advantages of shipping by way of the port of New York-New Jersey has been accomplished.

Many of you here today were also here 5 weeks ago on April 2. At a Newark Chamber of Commerce luncheon then, I announced that Chairman Donald V. Lowe and other port authority commissioners had convinced me that it would be important in the port authority's trade development efforts for me to take the time to join the chairman on two of his many important trade promotion assignments in Western Europe, and to accept an invitation from the Irish Ministry of Industry and Commerce to discuss Irish-American trade.

I also disclosed that I would represent New Jersey at special ceremonies at the United States pavilion of the Brussels Universal and International Exhibition on New Jersey Day, and unveil the New Jersey State flag at the port of New York exhibit in the hall of transportation at the exhibition.

You will recall that the luncheon orginally was billed as a tribute to the port authority's first 10 years of achievement at port Newark and Newark Airport. It developed into an opportunity for the unveiling of a master plan for the completion of port Newark, the construction of a new Elizabeth Channel and the development of the Elizabeth port authority piers. When the Newark-Elizabeth sector of the port of New York is completed, as Commissioner Horace K. Corbin told us, it will represent a total investment by the port authority of $275 million. It will handle 40 percent of the cargo in the entire port of New York.

There will be jobs for 18,000 people at an annual payroll of $90 million. The construction job over the next 3 years alone will produce a labor payroll of $10 million.

It was with this inspiring send-off by the Newark chamber that we started our European trade development tour.

I do not want to anticipate Donald Lowe's personal report. But I think it is important to say that in the course of his trip through 18 European cities, he addressed audiences totaling over 2,000 government, shipping and business officials. At every point he had conferences with newspaper, radio, and television reporters on the advantages offered in shipping through our port facilities here in New Jersey and New York. He met with top officials in the ministries of transport of 6 countries as well as with about 25 United States Embassy and Consular officials, including four of our Ambassadors. He met with mayors and port officials and he inspected the seaports and airports in every city he visited.

No opportunity was missed for acquainting European government and business officials, as well as American businessmen abroad, with our earnest desire to increase trade between Western Europe and the United States and with the benefits and advantages of shipping via the port of New York-New Jersey.

In general, both Chairman Lowe and I stressed the importance of a liberal United States trade policy, and the advantages to shippers moving their goods through the port of New York-New Jersey.

We found the most intensive interest in the legislation now before Congress calling for the extension of the Reciprocal Trade Agreements Act. We took every opportunity to assure our European neighbors that Gov. Averell Harriman, the port authority commissioners and I firmly believe in the need for a liberal trade policy.

They are convinced, I am sure, that we are aware that the welfare and security of the United States, and indeed of all the nations of the free world, require that our trade policies encourage the movement of goods both to and from our shores. Our determination to do everything possible to meet the challenge of the Soviet economic offensive was greeted everywhere with enthusiasm and appreciation.

I should like to take a moment to emphasize the importance to us here in New York and New Jersey of the liberalization of our national trade policy. In 1957 our great port handled almost 13 million tons of foreign trade general cargo, the greatest volume of any United States port. In fact, we handled a fourth of the total United States export-import general cargo during the year. This is the type of cargo that provides more jobs and other benefits for our people than does the heavier bulk cargo that swells the tonnage record of some of our competing ports.

Using dollar value as a measure, foreign trade through our New York-New Jersey port in 1957 was almost $9 billion, or about 38 percent of the total value of United States foreign trade.

Another measure of the importance of port business is found in the fact that more than 3 million people in our bi-State port district are directly or indirectly dependent for their livelihood upon waterborne commerce through this gerat bi-State harbor.

You will remember that a recent survey by the League of Women Voters here in New Jersey found that a large majority of New Jersey manufacturers have "a direct interest in foreign trade." According to the survey, New Jersey, which is the Nation's sixth industrial producer, "has a considerable stake in a continued high level of international trade," and "the interests of New Jersey as a whole would best be served by policies designed at least to maintain and possibly increase the present level of international commerce."

In discussing the advantage to shippers in moving their goods through our port we followed the long established trade development program of the port authority. The timing of our port of New York sales drive was determined by the fact that the port authority has just added two new trade development offices to its port service. One of these is in London and the other on the Continent in Zurich.

Previously, one by one, on the basis of proven success over the past 13 years, the port authority has provided four trade development offices in the United States and a fifth in Rio de Janeiro. All of these offices are designed to meet the competition of the sales jobs that are being done by other United States ports. Naturally, they are out to increase their share of the cargo that moves between the United States and other nations.

Mrs. Meyner and I arrived in London on the morning of Thursday, April 24. This was inauguration day for the Port Authority's London trade development office. Chairman Lowe presided at a luncheon at the Dorchester Hotel attended by more than 500 guests. These included two Cabinet Ministers, five Parliamentary Secretaries, the American Minister for Economic Affairs and top-ranking officials in the fields of transportation, shipping and foreign trade. This was a most impressive affair.

I have no doubt that everyone concerned was made aware of our foreign trade policy, our port development program and the services available at the port authority's London office. The British Minister of Transport and Civil Aviation, Harold Watkinson, in his response to Chairman Lowe and me, congratulated the port authority on its foresight and determination. He repeated, on behalf of his country, our call for increased trade, travel and services between the United Kingdom and the United States. He described the London office as "a sign of the confidence that the Port Authority has in the future."

And then we went on to Dublin. There, I met with the Irish Ministry of Industry and Commerce. My host was Minister Sean Lemass who is also Deputy Prime Minister of the Irish Republic.

In Dublin, I of course called for an expansion of trade between Ireland and the United States. And I urge the businessmen and shippers to avail themselves of the services of the new London office. Minister Lemass was delighted to receive the New Jersey State flag and called it a symbol of the close tie of friendship which unites our two nations.

On our second day in Dublin we were the guests of the Dublin Port and Docks Board. Our inspection of the harbor facilities was most interesting and constructive. We also enjoyed meeting with Lord Mayor John Carroll.

We were happy to have an opportunity for a brief personal holiday in Paris before going on to Amsterdam where we were reunited with Chairman Lowe.

Since almost a half of the Dutch economy is involved in foreign trade, The Netherlands naturally supports lower tariff barriers. Our position on reciprocal trade therefore was the keystone of our approach to the encouragement of Netherlands' trade through this port.

Our stay in The Netherlands was marked by constant activity. We toured the great Schiphol Airport in Amsterdam. We also were conducted on a tour of the Port of Amsterdam under the guidance of municipal and port officials. The extent and modernity of the terminal and cargo handling facilities were most impressive. Significantly, here, as in the other port cities I visited in Europe, the officials stressed that first priority in postwar projects was given to reconstruction of port facilities. This, of course, was in recognition of the fact that commerce flowing through the ports is a major source of livelihood for their people—as it is of ours.

We were honored at a luncheon by the American Businessmen's Club of Amsterdam, attended by over a hundred American and Dutch Government and business officials who were greatly interested in the establishment of the port authority's continental trade development office at Zurich. I am sure they will make regular and profitable use of it to our mutual benefit.

A highlight of our trip was the important and warm courtesy extended to chairman and Mrs. Lowe and the port authority group as well as Mrs. Meyner and myself by Burgomaster and Mrs. van Hall at their official residence in Amsterdam. The affair, which was attended also by leading shipping and port officials of the city, was marked by exchanges of sincere friendship.

Amsterdam marked the final point on Chairman Lowe's exacting 7-week trade development tour. I want to say that he and Mrs. Lowe and the port authority staff members did a magnificent job in winning innumerable new friends and customers for the New York-New Jersey port.

I cannot over-emphasize the importance of the European press, radio, and television coverage received by our trade development program and our port facilities here in New Jersey and New York during the course of our trip. A part of the record is posted around this room. On our arrivals and departures we were interviewed by large groups representing all communications media. I believe it is important to our whole trade development effort that our story was published and broadcast throughout continental Europe, England, and Ireland. And it was encouraging to come home to find that so many stories had been printed here in the press of New Jersey and New York.

As you can see, this has been a busy 2 weeks. And now, I should like to make a few personal observations.

I feel that I have benefited greatly in obtaining first-hand information about European port problems and progress. I returned with a feeling that international trade is indispensable to the welfare and security of the free world. There was considerable expression of critical interest in the recession here in America.

I found great appreciation of our accomplishments in our port, and particularly in its great new marine and air terminal facilities. There was great interest, too, in the State of New Jersey and its people and industries. The chairman of our New Jersey economic ambassadors, Mr. Charles W. Engelhard, took the opportunity also of joining me in selling the advantages and opportunities of our great industrial State. I was particularly pleased to have had an opportunity to join with Chairman Lowe and the port-authority group in inspecting the ports and airports and of seeing at first-hand other evidence of the great progress which the people of Western Europe have made in rebuilding and expanding their transportation and terminal facilities since the end of World War II. In many respects, their building and promotion programs are remarkably similar to those which the port authority is undertaking at our port.

Mrs. Meyner and I had one more important piece of business to transact before we set out for home. This was our participation in New Day ceremonies at the Brussels World's Fair on Wednesday. As many of you know, the United States pavilion at the fair is honoring each of the 48 States with a day dedicated to their respective achievements. It was inspiring to see the flag of New Jersey raised at the beautiful American Pavilion.

I would like to say just a word about America's contribution to the fair. Howard S. Cullman, the United States Commissioner General, and his staff, have produced an exhibit of which all Americans can be proud. For me, the rivalry between the free world and Soviet bloc participation was summed up best in the words of a Belgian who said: "The Russian pavilion shows what they make. The American pavilion shows what they are."

Later on Wednesday, I visited our attractive New York-New Jersey port exhibit in the hall of transportation, featuring terminal city at New York International Airport as its central theme, an installation which I described as "America's aerial counterpart to the Statue of Liberty." In fulfilling its responsibility for the promotion and protection of land, sea, and air commerce through our bi-State port, I emphasized in a brief talk, the port authority is fostering and developing sound trade relationships between the United States and other nations of the world. By working for expanded international trade, it is performing a vital function in the field of international peace and good will.

I was also delighted to learn that there is continuing contact and exchange of information between the port authority and the port and airport officials of Western Europe. Such cooperation is the best guaranty of our mutual security and progress.

I firmly believe that the program which the port authority is undertaking abroad on behalf of the people and industries of this great northern New Jersey-New York port district, will yield substantial benefits in terms of increased commerce moving through this port. Moreover, I am convinced that the two new offices which have been opened by the port in Western Europe should certainly serve to put our friends at home and abroad on notice that the port of New Jersey and New York, aided by outstanding civic organizations such as the Newark Chamber of Commerce, has the competence, vision, resources and determination to maintain its position as America's greatest port.

The Honorable William H. Francis, Jr.

EXTENSION OF REMARKS

OF

HON. ALBERT THOMAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1958

Mr. THOMAS. Mr. Speaker, the sudden and unexpected passing of our distinguished friend, the Honorable William H. Francis, Jr., Assistant Secretary of Defense, is a shock to all of us. I have known him intimately for many years. He was brilliant and had a wealth of human understanding. In fact, he possessed everything that made life worthwhile.

The Republican Party of Texas and the Nation have lost one of their young and ablest leaders. During his service as Assistant Secretary of Defense, he brought great credit and distinction to his party, to himself, and to his family.

The Republicans and Democrats alike, in the executive branch and in the Congress, had the greatest respect and admiration for him.

I know that the membership of the House joins me in extending to his family our deepest understanding and sympathy in their great loss and sorrow.

Abundance for What?

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending my remarks to include an article by David Riesman, professor of sociology at the University of Chicago, which appeared in the April 1958 issue of the Bulletin of the Atomic Scientists. In this article Dr. Riesman states that "we are a generation prepared for Paradise Lost who do not know what to do with paradise found," and at another point he says:

Serious discussion of the future is just what is missing in the United States; we live now, think later.

The full text follows:

ABUNDANCE FOR WHAT?

(By David Riesman)

I was one of those quasi-Keynesians who became convinced, shortly after we entered the Second World War, that great depressions were most unlikely in the American future. As I occasionally overstated matters to my economist friends: "Zealously budget-minded Congressmen and their supporters may be able to bring on a depression by the main force of stupidity, but it is most unlikely the country and even the Republicans would allow this." My conviction was based, less on confidence in the Keynesian armamentarium as politically feasible medicine, than on the surmise that the war had taught Americans the lesson that wars cure depressions and are, as conducted extraterritorially, less unpleasant: not a lesson to be learned in school or pulpit or even to be explicitly stated to oneself (save perhaps in lower-class male circles), but rather a tacit agreement that Government can control depression, if need be, by war and preparation for war. (There is some fragmentary evidence from surveys of public opinion that in the period from 1949 to 1956 more Americans have expected a major war than a major depression in the years ahead.)

DEFENSE SPENDING

It should be clear that I am not talking about the merchants of death. Such companies as Du Pont are much too frightened—and too responsible—to influence policy in favor of military rather than diplomatic preparations; and even the direct military producers would throw their weight in favor of their arm of the services out of patriotism rather than profits. Domestic support for American military spending is popular, despite the outcry against high taxes, in part because it has the tacit backing of people who recognize the support it gives the economy, or their fair city; in an era when corruption is less and less a vehicle for Government spending (despite what is said later about highways), this is the new, often relatively disinterested pork barrel, periodically supported by the U. S. S. R. and its allies.

To be sure, there are many influential taxpayers, whether in the Taber mold or the more sophisticated Humphrey mold, who do not like Government spending, even for defense; old-fashioned pre-Keynesians, ready to equate the morality of private with that of governmental budgets, they cannot accept what must seem to them the sleight of hand by which an economist like Sumner Slichter defends allopathic doses of inflation as a disagreeable remedy for worse diseases. They were not brought up to approve of waste, either in their own family, their own company, or their own country—and they are patriotic enough, and insular enough, to believe that what is good in the one realm is good also in the others. And they may even sense, from the baseline of their limitations, a certain lunacy in military spending anyway; they may feel that the amount the services can spend in competition with each other is almost as limitless as what could be spent on civil defense if we really took seriously the mutuality of threat implicit in our own and Soviet military policies. They may have come to realize that, while most American military men are (to my mind, quite astonishingly) deferential to important businessmen, there are some dedicated members of a warrior caste who—as in all militarized countries—have contempt for business caution, business selfishness, and business lack of political foresight.[1]

Businessmen of this stripe, moreover, have convictions: they are not shaken by the equally strong convictions of diplomats, politicians, or military men. They know a dollar is a dollar—or ought to be. Their own past, and their image of America's past, supports them.

Such businessmen, however influential the positions they hold, are not a very large group, although they probably exceed in number the "modern Republican," or Committee on Economic Development, or Keynes-influenced managerial businessmen (who read, rather than simply purchase or advertise in, Fortune or Business Week). Their power comes in large part from their control of the nostalgic rhetoric of an earlier, thriftier America—a rhetoric to which many small-business men and small-town professional men (including State committeemen and Congressmen) almost automatically respond. Nevertheless, the majority of businessmen, I suspect, do not unequivocally share the traditional convictions they think they hold: they are perfectly willing to join the ritualistic outcry against high taxes and Government spending, but their hearts are not always in it, especially of course if there is a jolt in the rate of economic expansion; such businessmen are like most of us in being able to coexist with apparently incompatible opinions, and with firmness of tone screening willingness to be unorthodox. Correspondingly, whatever temporary extravagances they may allow the local chamber of commerce or the NAM to perpetrate on their alleged behalf, they are too public relations minded to dare to be accused of undermining prosperity or sabotaging national defense and the national interest (as, let us say, the energetic Alsop brothers define the national interest). Many of them are accustomed, in their corporate capacity, to pay money in order to prevent a row or even criticism: money to their workers, to their civic associations, to their fellow executives. Running their businesses (and often their personal lives, too), like increasing numbers of other white-collar Americans, on the buy now, pay later, basis (greatly modified, however, by retained depreciation and dividends, and by Federal tax policy), they realize in spite of their comptrollers that "it's only money," and are reluctant Keynesians whatever their theoretical adherence.[2]

BUY NOW, PAY LATER

America has been, since Jacksonian times and earlier, a country in which the creditor class, and the creditor-minded, were a minority, and moderately slow inflation was hence politically popular. But only recently has the combination of alluring advertising, easy credit, and the loss of sumptuary restrains brought millions of consumers into the debtor class; a quite expensive "standard package" of durable consumer goods has now become a necessity.[3] To be deprived of this necessity seems both arbitrary and intolerable to people who cannot help sensing the economy's ability to produce, and who (save in rapidly dwindling rural and urban slum enclaves) see nothing in the status system that forbids their quest for possessions. One short-range consequence is that the moral basis of a George Humphrey is not widely shared in the planning of families and other future expenditures of the electorate at large, outside the business class; the electorate has no platform from which to be really indignant at Government debt, Government spending.[4]

They may, to be sure, assail the Government, projectively, for "bad habits they will not give up in their own case, but they will in the end be ambivalent, seeing in the Government the insurer of their own perilous course—a course which assumes that no one in their family will be seriously ill (beyond what Blue Cross or their corporate employer covers) or crazy, and that close to full employment will continue as before. It was a straw in the nonagricultural wind when a reporter in the town of Anaheim, Calif.—a town dependent on new and war-supported industry (and Disneyland)—inquired as to what residents might do in the case of a depression; the latter were all, in good suburban style, mortgaged 30 or more months ahead for cars, furniture, etc., as well as for their homes. One man replied:

"No one is worried, because there's a theory in town that if anything slips up the Government will declare a moratorium on all debts. No one knows who started the rumor, but these kids really think it's true. The Government would have to do something like that, they say to me, because otherwise this whole place might be a shambles overnight."[5]

It is only a step from this outlook to assume that the Government would be forced to stockpile cars.

WHAT GOALS FOR AMERICA?

What are some of the long-range implications of these versions of political economy? One is an orientation toward tangibles—toward what the military call "hardware." We have to consume, or stockpile, some thing. Yet, as many people at the same time recognize, there can be a surfeit of things: it is only for intangibles, and the people producing them, that markets are truly insatiable. We are coasting psychologically on the remaining gaps and deficiencies in the ever rising "standard package," but beyond that, we have very few goals, either individually or socially. Those Americans who attain, let us say, 25 percent or even 50 percent more income in stable dollars can quickly learn ways to spend it but if faced with 250 percent they cannot easily and rapidly learn new wants. The level and style of living of a well-to-do businessman at the turn of the century, with his large house, his many servants, his stable, objects d'art, and caretakers (and sometimes courtesans)—this is not for them. Their corporation or institution can

Footnotes at end of speech.

Footnotes at end of speech.

live this way (what I like to call "conspicuous production"), and they can benefit from its expense accounts, including a Canadian chalet or Florida yacht. But many in the younger generation of reasonably well-off Americans are not drivingly or basically materialistic: invidiousness in taste or acquisition is not their style. Contrary to the image envious non-American often have, ferocious desire for things for their own sake is declining, let alone desire for money or land for its own sake. Rather, as already indicated. Americans resent being deprived of the things they are supposed to have, and advertising tempts us with the halo of association rather than with the objects per se.

Thus, I suggest that there is a tendency for people, once accustomed to upper-middle-class norms, to lose zest for bounteous spending on consumer goods. This tendency remains hidden from us by the fact that, even in this stratum, there are still modest expansions underway, along the moving escalator of an inflation which is at once monetary and material; moreover, the look of asceticism, whether in Mies van der Rohe houses or foreign cars, is still a minority desire, hence expensive. More important, the zeal of the previously underprivileged to make up for lost time brings into the market for gaudy consumption more millions than education presently removes (of course, only in part) from the market. And enormous expenditures for research and development of new, or seemingly new, products, along with ever larger advertising budgets, have helped postpone the specter of satiation. Finally, I would admit that, as the country gets more tangled and crowded with unrestricted growth of population and urban sprawl, many upper-middle-income families will pay large sums simply to keep at their present level of amenity and space and sanitation.

Nevertheless, the basic stockpile on which our society's dynamism has rested—the stockpile of new and exhilarating wants—seems to me badly depleted. (I say this knowing that alarmists have thought this periodically—thus, Milton Friedman reminds me that in 1908 people thought the limit on autos had been reached; and I learn from George Katona's surveys of consumer expectations for the Federal Reserve Board that most Americans asked what they would want if they had the money to buy it, can come up with desires: a newer or another car, another room, a deepfreeze, air conditioning. But, after all that, then what?) The rate of increase expected in the next years in the gross national product exceeds what the country could readily absorb, given any really sizable drop in defense expenditures; we have no adequate plans for substitute goals, or the political channels for securing understanding and support for the process of developing such plans.

WHAT COULD REPLACE DEFENSE SPENDING?

Indeed, as Gerhard Colm's article, "Economic Implications of Disarmament,"[6] suggests, it is hard to forecast how we will deploy our rising productivity even without reducing defense expenditures. He sees education as absorbing much of the largest part of the surplus, highways and other transport facilities next, along with public works in general, hospitals, and water conservation. Education is, of course, one of the intangibles for which the demand curve is nearly completely flexible—but we do not have as a cultural goal the ethos of "each one, teach one," nor do our educators have a utopian vision of a humane education around which to build new curricula for adults and young people alike. Nor do we as yet have a culture in which the desire for quality in urban and rural landscape justifies conservation not only of a few natural grandeurs and historical mementos, but of the textures (and aesthetic values generally) which have been built over generations into whole regions and cities. Thus, when I recently suggested that New Orleans, for instance, be made a national park, with its homes inhabited by subsidized families (much as bear or deer are "subsidized" to live in Yellowstone), I was thought to be joking.

But, of course, I want to conserve not only precious urban and rural "prospects" (to use the old English term), but also the core of all our still viable metropolises: conserve them, not for the auto, but from the auto (as in Victor Gruen's plan for Fort Worth). Urban renewal is fabulously costly and, if done with enough taste and vision to keep people coming to the city even if they have a choice of locale, can certainly absorb much of our productivity in the next 20 years; but again, what is lacking is not only the willingness to tax and spend for such collective purposes—purposes that will outlive any one of us—but also the kind of political and cultural organizations to accomplish anything like so radical a change with no apparent crisis to make our "needs" visible and dramatic. That is, we appear to be in a trap in which we may become weary of the goods we have learned to miss not having, without having learned other than inchoately what we are missing when we do have them—let alone having learned how to institutionalize acquisition of such values as the complexity and beauty of certain cities, and the simplicity and quiet of certain countrysides, or their proper relation.

What are the economic consequences of this wantlessness? I rather doubt if we shall stockpile cars: the auto industry lacks the gerrymandered political base of the farmers, and their ideology of small family-scale business. We are, however, already stockpiling highways, with little regard for the consequences in the amenity both of city and country life the throughways will have. Highways—unlike schools, public and private health, nonobvious scenery, or nonslum redevelopment—are not controversial—though the residual car-less poor and bulldozered rich might wish they were; they disperse much patronage, and speed and efficiency of movement do have an aesthetic appeal to which Americans respond, though the appeal is buttressed by economic arguments. Even so, the new Federal highway program will spend in 15 years around 60 percent of what our military establishment spends in 1. There will be a multiplier effect in this program, of course, filtering through contractors, makers of road-building equipment, of bridges, concrete, and lumber. But defense contracts are geared into the whole manufacturing economy in a way that road-building contracts could never be. I doubt if roadbuilding can take up the impending slack due to the cheapening costs of total destruction, and I cannot conceive of an economy as rich as ours supported by public works alone, on any scale now contemplated, any more than pyramid building could sop up a gross national-product which will soon be $500 billion.[7]

Indeed, I would tentatively suggest that expenditures which serve no real social imperative, other than proping up the economy itself, will eventually produce wasteful by-products to slow that economy down in a tangle of vested inefficiencies, lowered morale, and lack of purpose and genuine inventiveness. Men will scarcely want to go on producing goods as mere items in a multiplier effect.

So the question comes back to what we want. For the present, though as already implied with perhaps diminishing enthusiasm filtering down from the elite, we unequivocally want to have good cars and good roads to drive them over. What else do we want as unequivocally? We want healthy babies and suburban homes to put them in, and we want an increasing variety of services (including education). We seem increasingly to look in our family life for some of the satisfactions missing in our economic and general social life—so much so, that in a recent science-fiction story, The Midas Touch, the upper classes are privileged by being allowed to spend less time and zeal in enforced consumption and more time at work or enjoying close personal ties.[8] But I repeat: there are few channels, political or economic, for translating these as yet undefined shades of feeling into a program which could give us alternatives both to spending for defense and to spending for spending's sake.

A NEW SITUATION

No society has ever been in this position before, or anywhere near it, and thus the dream of plenty has remained unsullied. Indeed pleasure in possessions has been for many people throughout history partly shored up by the surrounding backdrop of general poverty. At the present time some smaller countries are in much the same boat as the United States—these include Switzerland, West Germany, and several Scandinavian nations, which have the highest or close to the highest suicide rates in the world; these countries have solved many social problems which in the United States still have much (but still insufficient) psychological mileage in them. Likewise, if we cannot look to the experience of other times and other countries for models for the American future, we can also not discover much wisdom in earlier prophets of abundance, for very few of them foresaw the actual cornucopia of even so modestly efficient an industrial plant as ours.[9] Edward Bellamy's Looking Backward, for instance, which had an enormous impact in the Gilded Era, envisaged an amiable and genteel level of living, long since attained in amount throughout a large middle-income belt, though scarcely touched in inner peace and spaciousness. Even the most devoted apostles of capitalism in previous generations scarcely foresaw that it would soon outrun its most optimistic boosters (though Schumpeter did grasp this)—while its enemies like Karl Marx, who realized capitalism's power to subdue all earlier traditional levels of production and consumption, could not foresee its chastened managerial form nor indeed its bounteous exploitability. We are a generation, prepared for Paradise Lost, who do not know what to do with paradise found.

Several years ago, I had a chance to examine interviews done with ten seniors each at twenty colleges throughout the country—interviews in which the young men were asked what they expected their lives to be like in fifteen years, that is, in 1970. The demands these men were willing to put both on themselves and the planet were, I thought, rather modest: they expected to have a good professional or corporate job paying around $15,000, enough (as they figured it) to pay for a wife, three or four children, a home in the suburbs, a boat on a lake, two cars, and cultural amenities. The family—actual or prospective—loomed large in their thinking; both consumer goods and the society loomed small; their own careers were somewhere in between.[10] These young people struck me as being on the whole very decent, very nice. The family life they envisaged was empathic and warm; they would be good husbands and fathers and, within the limits of their suburb, good citizens. But in the whole lot of interviews, there was very little stirring of the discontent which could presage new needs, new wants, let alone an image of a

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

social pattern organized to supply them. Such young men might be prepared to speed up the rate of obsolescence of consumer goods by, let us say, one third, in order to exhaust inventories faster, if the patriotism of advertising urged them on. And they will almost undoubtedly continue the philoprogenitiveness which increases our population without engendering serious discussion as to how many people can live comfortably with each other in the American way. Indeed, serious discussion of the future is just what is missing in the United States: as our actual life spans have lengthened, our timetables of the imagination have shrunk: we live now, think later.

There is liberation in this from the penny-pinching of earlier generations of middle-class people who wanted to save for their businesses, their children, their funerals, their estates. There is liberation from pie-in-the-sky consolations for present misery. There is liberation in plenty itself, up to a point. And yet I think we fear the future's opacity, and try not to pierce it with concrete plans. The terrifying prospect of atomic and biological annihilation has been one factor in this foreshortening, but for most Americans it is not a very important (not nearly important enough) cloud on anticipation. What we fear to face is more than total destruction: it is total meaninglessness; and it is my contention that we may bring about the former, in some part because the latter inhibits our alternatives to what I have here depicted as our subrosa military keynesianism; and, perhaps more important, our future as a country is not inviting or challenging enough to mobilize our attention and our energies.

IS THE PROBLEM IMMINENT?

Since I began this paper, the sputnik has shot into the sky and shown that there is life in the old armaments race, the old comparisons, yet.[11] Democratic leaders have been attacking Republican budgetmindedness. They are like coaches whose athletes have broken training and lost a game. But the motivations which give vitality to an economy cannot for long endure on a merely sporting or collegiate basis—though one could well argue that the United States in two world wars postponed reckoning with aims which transcended levels of welfare and justice which the social thought of previous generations had proposed. We have seldom bothered to stockpile hopes, not for a rainy but for a sunny day.

There are those who would argue that people do not discover new values and meanings in prosperous times, but only in times of oppression, of war or other crisis; that at such a time, men must fall back on basic cultural imperatives or rediscover values that had been repressed during the good times. I am not sure this is historically correct: crisis evokes meanness as well as creativity; more important, "crisis" is itself a conception, a product of our conceptions, not a Kantian a priori proposition. The age of abundance has its grandeurs and miseries which are both like and unlike those of any other age; and the searching of aims and discovery of motives appropriate to our new forms of peril and opportunity, along with the discovery of ways to institutionalize our collective aspirations, seems to me the fundamental economic and meta-economic task.

(For assistance in the preparation of this paper, I am indebted to the center for the study of leisure, established at the University of Chicago under a grant from the Behavioral sciences division of the Ford Foundation. The paper was orginally written for the Committee for Economic Development.)

[1] Conversely, both in the American Army and Navy, there have been many leading men in the cold-war years who have had a keener sense of the madness of an arms race than many bellicose civilians: They have not had to show their manliness, or their patriotism or political purity, by gestures of jingoism.

[2] Attitudes toward Sewell Avery are a good test for business thinking. While some businessmen may still admire the saltiness and tenacity of Avery's character, very few admire his public relations or his hoarding attitude toward capital and fear of the future. And Montgomery Ward has now joined Sears, Roebuck in a managerial outlook favoring expansion as against stability.

[3] For elaboration of the notion of the "standard package," see my article, with Howard Roseborough, Careers and Consumer Behavior, in Consumer Behavior, volume 2, edited by Lincoln Clark (New York: New York University Press, 1955), pp. 1–18.

[4] Intimations as to the factors of buoyancy and anxiousness that enter into purchase plans in the expanding "discretionary" area turn up in the periodic surveys of consumer finances and purchases conducted by George Katona and his colleagues at the Survey Research Center for the Federal Reserve Board. (Less is known about the often comparable factors that enter into business investment decisions, though the McGraw-Hill surveys and the work of Franco Modigliani and others are illuminating.)

[5] See Bruce Bliven, Jr., The Golden Age of Buy Now, Pay Later, the Reporter, May 3, 1956, p. 21.

[6] Illinois Business Review, 14 (July 1957), 6–8.

[7] If not pyramids at home, Aswan Dams abroad? Congressional and general American experience with point 4 and its successor programs does not make me sanguine, especially as the newly industrialized and still xenophobic South turns increasingly away from its traditional internationalism. Great and courageous political leadership might conceivably change this, but few signs of it appear in either party.

[8] Frederic Pohl, The Case Against Tomorrow (New York: Ballantine Books, 1957).

[9] As any serious businessman knows, American efficiency is a legend which exists because other countries are either even more inefficient or have fewer cushions against waste; much of our productivity now gets eaten up by friction—some of which, as in much featherbedding, is based on fear of productivity itself.

[10] The interviews were originally done on behalf of Time; cf. my discussion in The Found Generation, The American Scholar, 25 (1956), 421–36.

[11] I would much rather have seen a race in which each country bombarded the other with consumer goods: with the Russians sending us tinned caviar and we sending them Chevrolets and Bendixes—though, of course, such competition would solve neither Soviet nor American problems of ultimate meaning. Cf. my article The Nylon War, Common Cause, 4: 379–85, 1951; also in: Individualism Reconsidered (Glencoe, Ill.: the Free Press, 1954), pp. 426–34.

The Future of American Education

EXTENSION OF REMARKS

OF

HON. MARGUERITE STITT CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1958

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks, I am inserting herewith an analysis of the purpose and the implementation of the educational process in our modern era, as drawn up by the class of 1958, the 100th class to graduate from Northwestern University:

CLASS OF 1958,
NORTHWESTERN UNIVERSITY,
Evanston, Ill., May 26, 1958.

Hon. MARGUERITE STITT CHURCH,
House Office Building:

As members of the 100th graduating class of Northwestern University, we are concerned with the future of American education and what lies ahead for tomorrow's students.

With the rise of Sputnik I last fall, a panic-stricken howl went up from American Government officials, businessmen, amateur educators, and suddenly conscientious citizens against the American education system.

The threat of an atomic war and of Russia's rapid scientific advancement started an overnight movement to increase emphasis on science and technology in high schools and colleges.

But is education for social adjustment and vocational training only a passing fancy? Is technologically directed education the panacea for America's future?

Those who believe that America's security can only be assured by stepping up technological training in the schools may find that the person whose entire education was devoted toward learning to construct bigger and wider range rockets may be an excellent rocket builder. But he is incomplete as a man, incapable of putting rocket building into its proper place in his life.

The same criticism applies to education for becoming a journalist, radio announcer, businessman, or engineer. Before a man is any of these, he is a human being, and his first responsibility as a rational human being is to be conscious of himself, his society, and the universe around him.

A really basic education is one which brings man to this consciousness and trains him to live rationally. This is a liberal education.

What is the result of the liberal education which today's seniors have undergone?

It has made them think and open their eyes—at least sometimes. But in many ways it has developed an insecurity. As a student goes through college, he realizes how little he knows and how utterly incapable he is of putting his finger on the answers.

Knowledge can tear down the fortresses of security which have been erected in a person's youth—the youth in which he was taught pragmatically without the aim of teaching him to think for himself.

For some of this year's graduates the loss of the fortresses of youth has weakened their religious faith, made them cynical, and destroyed their faith in mankind.

These are some of the penalties for being able to think for oneself.

But on the other hand this type of education has produced freedom too—a freedom a person gains from knowing that he does not have to rely on others.

In this freedom some of this year's graduates have found a glory in accepting God on the basis of their own beliefs; a happiness instead of cynicism in knowing that they are free to enjoy life and improve it, and a trust in mankind based upon their freedom to search out the good in others.

Seniors imbued with this freedom know that within reasonable limits, at least, they can choose their life's work as they see fit; that others can do likewise. For the person who believes in personal liberty, a liberal education can be a good thing.

Perhaps the graduates who fall somewhere in between these two products of liberal education are the best equipped to meet the challenge of life.

The people who are critical, yet do not overlook accomplishment; the ones who search for answers, but are not frustrated when they find only partial ones; the people

who do not accept blindly, but still can accept—with sincerity—some things on faith.

To know that in the world of vast complexity one may not necessarily always be right or know the answer is education. That is knowledge.

But this goal is not always achieved and this year's seniors do not whitewash their 4 years of education with praise. While most of them have learned how to think for themselves—at least in some matters—many feel they have not been stimulated. They don't think they've been challenged to the fullest extent of their abilities.

Some blame the college administrator. They feel that he takes over the role of the parent and leads students through college. Things are controlled down to the point where there is no initiative. Fraternities and sororities may also tend to fulfill the father and mother roles.

Thinking is often done for the student in his social life. Women's hours are set, and men's hours are indirectly and partially controlled by those for women. Students are not trusted to make mature decisions about their social activities.

In class some professors baby students through courses by spoon feeding and pampering to the lowest common denominator in the group.

As a result, some students depend on authorities or their peers to make decisions for them.

The senior would have liked his 4 years of college to have been a gradual evolution from dependence to independence. Students, he feels, should have a better training at home and in high school so the dependence will not be so great at college.

What do this year's seniors think has to be done to enable education to produce youth capable of facing tomorrow's challenges?

Some propose segregated classes—segregated, that is, on the basis of capability and intelligence. Others say the answer is better teachers trained in schools with higher standards for work at higher pay. Still others say the level of required academic accomplishment should be raised, so exceptional students will be stimulated to a relatively higher attainment.

But today's seniors agree that whatever the answer, today's education system—as is the case with most other things—can stand improvement. The challenge of Russia, the challenge of progress, and the challenge of life demand it.

THE CLASS OF 1958, NORTHWESTERN UNIVERSITY, 100TH GRADUATING CLASS.

The Future of the Nation's Nursing Homes

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1958

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include the following speech which I delivered at the American Nursing Home Association Convention in Atlantic City, N. J., on October 9, 1957:

SPEECH OF HON. JOHN E. FOGARTY, MEMBER OF CONGRESS FROM THE SECOND DISTRICT OF RHODE ISLAND, AT THE AMERICAN NURSING HOME ASSOCIATION CONVENTION, ATLANTIC CITY, N. J., OCTOBER 9, 1957

It is a pleasure for me to participate in this meeting. I appreciate the opportunity of meeting with you as a group and of becoming acquainted with many of you personally. For I believe that you are performing a service that is vital to the health and well-being of millions of Americans.

In the field of health, I am, of course, a layman. My years in the Congress of the United States, however, have increased my awareness of progress and problems in health. As a member and in recent years as chairman of the House of Representatives Subcommittee on Appropriations which considers health and related matters, I have had many opportunities to become acquainted with health needs in the United States today.

I have also been watching the rapid growth of such organizations as yours—organizations dedicated to finding solutions to our pressing health problems.

A few years ago the American Nursing Home Association had only a handful of members, and only a few States were represented. Now you have thousands of members representing practically every State in the Nation. You have been drawn together by the need for high standards of care, by the benefits of mutual cooperation and interchange of knowledge, and by your earnest desire to brighten the later years of the millions who seek your services.

The work you are doing is of the utmost importance. As one of the senior medical officers of the Public Health Service has said: "Nursing homes are a greatly needed part of our current cultural pattern. The nursing home in which skilled nursing care is provided and where the patient is under a physician's direction is rapidly becoming a part of the constellation of medical care facilities. It is not a substitute for a hospital. It is not a substitute for the private home. It is, in fact, an entity in the medical care field for those now frequently found occupying beds in our hospitals who could be adequately cared for in facilities designed to meet their specific needs more realistically and less expensively."

Nursing homes of this kind are an invaluable addition to our total health resources in this country. They help to relieve the shortage of beds in general hospitals. For many people, they represent new hope, new opportunity to live in decent surroundings. In our complex society, we cannot do without this type of facility. And that is why it is your job, as well as ours, to see that these facilities have the highest possible standards of care and operation.

I believe you well know the needs and the factors which have given rise to them. The control of infection, higher standards of living, better medical and hospital care are all contributing to greater longevity and to the higher proportion of older people in our population.

With a population that now exceeds 170 million people, chronic illness and the problems of aging are of tremendous national significance. The age group 65 and over represents something over 10 percent of the population but accounts for about 40 percent of the chronically ill in this country. These older citizens occupy 22 percent of the long-term hospital beds and require between 80 and 90 percent of the nursing home beds and supplies.

These are not merely statistics, but millions of people—many of them suffering, bed ridden, and in need of care. I know you will agree that this represents an enormous responsibility, and one in which we all share.

The 25,000 nursing homes in this country have become increasingly important resources upon which the community must depend for the care of the chronically ill and the disabled aged. The fact that over 90 percent of these homes are privately owned indicates the nature of the responsibility that you shoulder as operators and directors. Studies made by the Public Health Service have revealed that 71 percent of the 450,000 beds in nursing homes are in privately owned homes, whereas only 15 percent are in publicly owned facilities.

The progress you have made in less than a decade of existence as an organized association is a tribute to your initiative and your dedication to the public good. It is a demonstration of the kind of voluntary action that has served to make our country great. Cooperation among private, voluntary, professional, and governmental agencies, and the public in general, has enabled us to meet our health and welfare problems in a manner that is perhaps not duplicated anywhere in the world.

What kind of patients do you serve in nursing homes? The Public Health Service study tells us that the average age of patients in nursing homes is 80. Less than half of these patients can walk unaided. More than half have periods in which they are disoriented. Two thirds have some type of circulatory disorder.

These facts clearly indicate the need for close medical supervision and skilled nursing care.

On the other hand, most nursing homes are small, and are limited in capacity and resources. For the country as a whole, they have an average capacity of 18 beds. The size of these institutions obviously limits the amount of medical and nursing services that can be provided. It would be unrealistic to expect every private nursing home to provide all the medical supervision, and nursing and restorative services that are usually available in general hospitals and large institutions.

The point to remember, I think, is that no one expects all these services to be given in every nursing home—provided they can be made available in some other practical way. There was a time when it seemed enough for a nursing home or a rehabilitation center to operate as a separate entity, without relation to any other health or medical service in the community, but now we know we can no longer afford this separation of functions. The ultimate test of any institution providing medical or related care today is that it makes available to a patient all of the services and comforts which he may need, oftentimes including some which the institution does not offer within its own four walls. This calls for very close coordination and good working relationships with other public and private community health facilities.

I understand that the average monthly charge for nursing home care in this country is about $150. In the Public Health Service study, it was learned that the average cost of nursing home care ranged from $90 to $200 per month.

It was found that approximately 50 percent of the patients in nursing homes are cared for through public funds and public assistance payments that ranged from $55 to $155 per month. It is obvious, therefore, that privately owned nursing homes have to keep their rates low. As a consequence they are seriously handicapped, in many instances, in the amount of medical and nursing service they can provide.

This is a serious problem, and I am happy to see that your association has invited to this convention some of the experts in the field of medicine and public health and welfare to discuss it with you. As a group, you need help in discharging your important responsibility. But the community also needs your help in providing the services and facilities within reach of most of the families.

There are avenues of approach to this problem that can be mutually beneficial to the nursing home operators, the chronically ill and disabled aged, and to the community in general. On financing, for example, welfare departments can help by recognizing the need for increasing the amount of welfare payments for those who are cared for at community expense.

Close working relationships with State and local welfare departments can, I am sure, accomplish a great deal in adjusting the cost of the services you provide to public assistance recipients. Through conventions such as this one, your association can help focus public attention on the problems of nursing home operators and directors and in so doing, develop support for meeting these problems.

I know that all of you are aware of the assistance you can obtain from the Small Business Administration and the Federal Housing Administration, and of the new amendments to the Hill-Burton legislation enacted by the Congress in 1954. The Congress is aware that these approaches do not solve the whole problem and is exploring for new, practical ways to aid privately operated nursing homes.

There is a vital need for private and public agencies to work together in the common task of improving the care for older people and the chronically ill. A great step forward would be the extension of health insurance plans to include nursing home fees, and broader coverage of heart, blood vessel, cancer, paralysis, and other ailments common to the elderly.

Individual institutions have a direct interest in the activities of other community agencies. For example, the policies and money paid by welfare agencies, as I indicated earlier, have a profound effect upon the care provided the indigent aged in institutions. Your association can play—and is playing—a vital role in elevating standards of efficiency and service in nursing homes, and in gaining public recognition for their contributions.

What we are all too likely to hear about, unfortunately, are the instances of inferior services and poor management. A newspaper headline shrieking about infirm and bedfast older people trapped in a disastrous nursing home fire. A magazine feature on crowded and dirty conditions in some nursing homes. An editorial on the expensive rates and hopelessly long waiting lists in some homes. These are the things that capture public attention, that create public impressions.

Your work, patient and painstaking, seldom makes the newspapers. It is nonetheless courageous and pioneering, although largely unsung. For you are creating, out of your own mind and spirit and determination, the kind of conditions that are fashioning for the nursing home an indispensable place in the constellation of national health resources.

I can assure you that you do not stand alone in this great task. I believe you will find many helpful allies in your States and Communities. The kind of leadership demonstrated here and the concerted support of all your affiliated State associations inspire this cooperation in all aspects of your work.

For example, I feel certain that State and local medical societies will, upon invitation, provide guidelines in the development and operation of medical care and rehabilitation programs for nursing home patients. Voluntary health and welfare agencies are also sources of valuable assistance.

State and local health departments are especially valuable resources that you can count upon for considerable help. On the staff of these agencies are people skilled in such fields as medical care, nursing administration, nutrition, social casework, records maintenance, health education, sanitation, safety, and engineering. Most State health departments have programs in chronic disease control and health of the aging that are closely related to your work.

I understand, for example, that many State health departments offer training for nursing home personnel, in patient care and education, and in nutrition. Some health departments provide professional consultation on all aspects of nursing home maintenance and operation. By working with your health department, you can help in the development of nursing home standards that are satisfactory to the operators and patients of nursing homes alike. Since the health departments in 43 States are responsible for setting standards for nursing home operation, the desirability of continuing cooperation with these agencies is obvious.

It seems to me that our nursing homes are going through the same process of maturing experienced by our hospitals. Not so many years ago, people still considered a hospital as a place to go to die. Today, our hospitals are becoming centers of preventive as well as curative medicine. They are becoming centers of life, not death.

In a very real sense, this is the future of the Nation's nursing homes, too. We know today that it is no longer necessary for older people to spend their later years merely vegetating. We know that modern medical care makes it possible for many who might otherwise be bedridden to be up and about most of the time.

Therefore, I believe, earnestly, that we can look forward to the day when a nursing home—like a hospital—will no longer be considered a place to go to die, but a haven of comfort and companionship which will add abundantly to the quality of living. The work of your associatoin is hastening the dawn of this new day. I believe you can make no more worthwhile contributions to our national health and progress.

Decline in Our Tuna Industry

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. UTT. Mr. Speaker, on previous occasions over the last several years, I have informed the House concerning the rapid decline of our formerly great tuna fisheries in the Pacific under the increasing weight of imports, chiefly from Japan.

Although the market for canned tuna in the United States has expanded steadily and rapidly in the postwar years, the domestic tuna fisheries which reached a peak of production in 1950, when they became the most valuable fishery of the United States, have declined steadily for the last 7 years and show every indication of continuing so to decline, unless the Congress takes remedial action.

The reason for this is quite simple. There is a tariff on canned tuna and there is no tariff on frozen tuna. This situation cannot be corrected by administrative action under our existing trade-agreement legislation. Such safeguards as are available to domestic industries under this legislation and under the policies adopted pursuant thereto are not available to our tuna industry.

The largest of the tuna commodities in international trade—frozen yellowfin, skipjack, and bigeye tuna—do not fall within the purview of the escape-clause provisions of the act. They bear no tariff and they are not the subject of a trade agreement. Accordingly, neither the escape-clause provisions in the present act nor those provided in the Extension Act now being contemplated in the Congress will have any effect with respect to them.

Frozen albacore tuna, on the other hand, is bound on the free list in the Japanese trade agreement. Consequently, even though it bears no duty, this commodity is subject to escape-clause proceedings. When our San Diego albacore fishermen's cooperative petitioned the Tariff Commission last August to have an escape-clause proceeding with respect to frozen albacore, the Tariff Commission turned them down on the basis that the Commission could do the industry no good under the law. If the Commission did find that frozen albacore imports had increased because of actions taken under the Reciprocal Trade Agreements Act and did impose the full remedy available, that is a quota, this would not do the industry any good at all, because the albacore would simply come in as loins or disks for canning, as a separate commodity, or as tuna canned in brine—another separate commodity class.

The Chairman of the United States Tariff Commission testified to the accuracy of these statements before the House Committee on Ways and Means on February 20 of this year—page 217, hearings before the Committee on Ways and Means between February 17 and March 7, 1958, on renewal of Trade Agreements Act—and stated further that it would require specific legislation on tuna by the Congress to remedy this situation.

Because of these two factors, primarily, we have been unable to get any relief for this important industry under law and its decline has continued.

The extent of this decline has been documented by the United States Tariff Commission in its May 1, 1958, Report on Tuna Fish Investigations conducted pursuant to a resolution by the Committee on Finance of the United States Senate, dated August 20, 1957.

An even more detailed and graphic description of the decline of this industry, and the causes of this decline, has been issued by the Department of the Interior on May 22, 1958, in its Report of the Secretary of the Interior to the President and the Congress on Fresh or Frozen Yellowfin, Skipjack, and Bigeye Tuna. The summary and findings of this report are so succinct and direct that I wish to bring them to the attention of the House, as follows:

Since the early 1930's and especially after World War II, the United States supply of tuna available from the domestic catch and from imports has increased almost continuously to nearly 565 million pounds (whole-fish weight) in 1957. (Data for Puerto Rico and American Samoa have not been included since they were not available for official publication.) Almost the entire supply of tuna is consumed in the United States as canned products. The United States supply, however, originates from four different sources: (1) Domestic landings, principally yellowfin and skipjack tuna caught by the southern California bait boat and purse-seine fleets and albacore by the trolling fleet; (2) imports of fresh and frozen tuna, principally yellowfin and albacore tuna and lesser amounts of skipjack and bigeye tuna; (3) imports of canned tuna, principally packed

in brine; and (4) imports of frozen, cooked loins and disks, principally albacore.

The tuna industry is composed of many segments—large canners, small canners, importers, fishermen, and operators of large bait boats and purse seiners and of such smaller craft as albacore trollers. Each group is confronted with different problems, mainly associated with the species involved or with the stage at which it handles the tuna.

This report has been requested by the California vessel operators and fishermen who are the primary producers in supplying canneries with domestically caught yellowfin and skipjack tuna. (Some bigeye and bluefin tuna are also caught; the bigeye is included with yellowfin tuna in United States catch statistics.) Yellowfin and skipjack tuna usually comprise between 75 and 85 percent of the domestic landings of all tuna species. Downward trends have occurred in the production, employment, prices, and sales in the yellowfin and skipjack fishery, which is conducted almost entirely by bait boats and purse seiners. This report deals primarily with the trends in this fishery; other segments of the tuna industry are referred to where comparison is necessary.

Among the factors cited to account for the downward trend in production and the loss of markets in the yellowfin and skipjack fishery are (1) declining ex-vessel prices; (2) increasing competition from imports of frozen tuna, canned tuna in brine, and frozen cooked tuna loins and discs; (3) differing tariff rates on the various tuna import categories; (4) growing use by canneries of imported frozen yellowfin and skipjack; (5) higher costs of United States vessel operations; (6) higher costs of construction of United States tuna vessels; and (7) increasing insurance cost for United States tuna vessels.

The investigation conducted by the Department of the Interior presents the facts dealing with the yellowfin and skipjack fishery; the most salient of these facts are:

1. United States landings of yellowfin and skipjack tuna were at a peak of 324,711,000 pounds in 1950. Thereafter, despite the increase in the consumption of tuna, the trend has been downward; in 1957, landings were 237,113,000 pounds, which represented a 27 percent decline from the 1950 production.

2. Scientific research reveals that the yellowfin resource in the eastern Pacific was not overfished at the highest level of fishing effort during 1950 and that greater yields of skipjack can be realized without endangering the productivity of the resource.

3. The number and total carrying capacity of United States bait boats over 50 gross tons have shown a decline since 1951. The number of boats decreased 30 percent from 210 in 1951 to 146 in November 1957, and the carrying capacity 24 percent from 44,300 short tons to 33,875 tons.

4. The average ex-vessel price for yellowfin tuna declined 25 percent from an annual average of $345 per short ton in 1954 to $258 in 1957; for skipjack the price declined 28 percent from $304 per ton to $220.

5. Because of the reduced landings, the decrease in the number of vessels, and the lowered ex-vessel prices, earnings of the fishermen and opportunities for their employment in the California yellowfin and skipjack fishery have decreased. The number of berths on bait boats decreased by 27 percent from 2,730 in 1951 to 1,989 in 1956; on purse seiners engaged in the tuna fishery the decline has been 50 percent, 1,661 in 1949 compared to 827 in 1956.

6. Although the total supply of all species of tuna in the United States has increased, United States fishermen are providing a smaller actual and proportionate share of the supply. On a whole-weight basis, imports of all types of tuna products (fresh, frozen, canned, and cooked) contributed 6 percent to the supply of tuna in the United States in 1948; imports supplied 39 percent in 1956 and 46 percent in 1957.

7. Imports of tuna became a significant factor in 1950 when 117,100,000 pounds (whole-fish weight) of canned and frozen tuna were shipped to the United States by foreign producers. By 1957, an estimated 259,600,000 pounds were imported. During the early years of this period, canned tuna predominated in the imports. Imports of frozen raw albacore, however, soon increased rapidly to 63,200,000 pounds in 1953; thereafter, except for 1956, they were at or above this level. In 1954, imports of other raw tuna (almost entirely frozen yellowfin and skipjack) began to surpass those of frozen albacore. During 1955–57, imports of other raw tuna were between 80 million and 87 million pounds annually. Besides the canned and raw tuna, frozen cooked loins and discs have become important in the tuna import situation. These products first entered the United States in 1951; by 1957 imports of loins and discs were about 21,700,000 pounds on a whole-fish basis.

8. About 85 percent of imports of frozen raw tuna have been received from Japan, where recent expansion in the tuna fisheries has been mainly directed toward producing larger quantities of such exportable species as yellowfin tuna. Most of the remaining 15 percent has been from Peru; imports from Peru, however, have been largely transshipments of catches made by United States-flag vessels.

9. Increases in the United States consumption of tuna have not kept pace with the increases in the total supply of raw tuna. Surplus situations have resulted in lower prices for raw tuna with consequent lowering of returns to domestic fishermen.

Adverse trends, such as declining landings and lower prices for domestic tuna, have been intensified by the general inflation in the domestic economy; this inflation has increased the costs of operation for United States tuna producers. In an effort to reduce costs and operate competitively, domestic tuna fishermen have, aside from accepting lower prices, attempted to introduce shipping and marketing economies through transshipment of catches and through auction sales. Although helpful, these have not been sufficient to overcome the downward trend in production and exvessel prices.

In the foreign tuna fisheries with which our fishermen must compete, lower vessel construction costs, long-term loans at low rates of interest, and subsidies by the local government have facilitated the construction, rebuilding, and insuring of vessels. The Japanese high-seas tuna fleet has nearly doubled its carrying capacity since 1951. On the other hand, vessel construction in the California yellowfin and skipjack fishery has stagnated, and only 9 new large vessels (in a bait-boat fleet of 146 vessels) have been built since 1951. Most of the present bait-boat fleet is becoming obsolescent; the vessels now average about 13 years in age. Vessel owners have little or no incentive either to replace old or lost vessels with new ones, or to make additions to the fleet. Moreover, investment money to build new vessels is lacking because of the recent poor financial experience of vessel operators.

The present import duty on canned tuna in oil is 35 percent ad valorem. On canned tuna in brine the duty is 12½ percent on quantities up to 20 percent of the previous year's pack; on quantities above this amount the rate is 25 percent. On frozen, cooked tuna loins and discs the duty is 1 cent per pound, if in bulk or immediate containers weighing with their contents over 15 pounds, and 12½ percent ad valorem, if in containers under 15 pounds each. Fresh or frozen raw tuna is free of duty. The two products, canned tuna in brina and canned tuna in oil are essentially identical except that oil is added to one and salt brine to the other. Canned tuna in brine can be packed for about 75 cents per case less. Frozen cooked tuna, which can readily be packed as canned tuna by the addition of oil and the sealing and processing of the can, can be imported at a rate equivalent to about 3.3 percent ad valorem, compared with the 35 percent rate for canned tuna in oil.

The tariff rates on the different tuna products have had an effect on the pattern of imports since 1950. Imports of canned tuna in oil were heaviest during 1950 when the Japanese made special effort to ship canned tuna in oil to the United States prior to an announced increase in duty. In January 1951, the duty was scheduled to revert to 45 percent from 22½ percent as a result of the abrogation of the trade agreement with Mexico which had reduced the rate in 1943.

Upon the imposition of the 45 percent duty, imports of canned tuna in oil declined. The Japanese shifted their exports to a new product—canned tuna in brine—after it was found that the brine pack was dutiable at 12½ percent as the result of a United States tariff concession given to Iceland in 1943. In 1952, it was also found that cooked tuna products would be dutiable at 1 cent per pound. Since 1958, imports of cooked tuna products have increased sharply.

The types and quantities of tuna exported by the Japanese have been influenced by the differences in tariff rates Since April 1952, the Japanese Government has maintained controls on the quantity and price of most tuna destined for the United States. In recent years the Japanese have practically prohibited shipments of canned tuna in oil. Their increasing supply of tuna has been exported mainly frozen or as canned tuna in brine or as cooked loins and discs at considerable tariff advantages.

Mr. Speaker, four Congressmen from the west coast—Mr. WILSON, Mr. KING, Mr. TOLLEFSON, and I—have introduced identical bills to correct these inequities in law that are destroying this valuable industry. These bills are now pending before the Committee on Ways and Means and we are hopeful of getting them reported out of committee favorably and soon. We hope that this legislation will receive the approval of the House so that it can be enacted into law before this session of the Congress is concluded.

Defense Interest in Transportation Administration

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Mr. P. M. Shoemaker, president, the Delaware, Lackawanna & Western Railroad Co., before the annual meeting of the Baltimore chapter of the National Defense Transportation Association, Sheraton Belvedere Hotel, Baltimore, May 16, 1958:

In no way could I be more remiss than by failing to pay tribute to the broadened scope of activity and responsibility which the National Defense Transportation Asso-

ciation has been assuming at national, State, and local levels. Great problems of transportation policy exist. As the broad objectives of NDTA are observed, we have a growing and informed group of able men dedicated to an understanding of transportation in all of its aspects, and to the assurance that commercial transportation is adequate for national defense.

National transportation policy, as defined by the Congress, clearly emphasizes the importance of preserving and encouraging all forms of transportation for the social and industrial welfare of the country and for the national defense. This is a sound philosophy, for if our transportation machine is adequate for our society and industry; if it is healthy; if it is growing in competence and capacity with the growth of the country, then there is achieved simultaneously a general adequacy for defense.

That this is so was proven in World War I, World War II, and, to a lesser extent, in the Korean war. I say to a lesser extent only because we found some of the dangers of trying to have two commercial-type transportation systems in operation and competing with each other, one military and one civilian. Particularly in the field of air transportation this is a competition which has continued to grow. I decry it as being contrary to the public interest from the standpoint of hundreds of millions of dollars of expense; from the standpoint of duplication; from the standpoint of our necessary dependence, in wartime, upon commercial transportation personnel as well as facilities and equipment.

We all know that adequacy of transportation is fundamental to the successful waging of war. It is thus basic to national defense. I would not be misunderstood in feeling that a reasonable nucleus of commercial-type transportation is not a desirable arm of the Armed Forces. I do say that the building up of the Military Air Transport Service into the largest airline in the world, and competing to the extent it does with American flag, publicly supported airlines, represents a questionable balance in military judgment which goes beyond the walls of the Pentagon.

I do not desire to be considered as merely throwing a brickbat at MATS, as such. The point is that the policies involving MATS' operations carry through into the broad principles of such general support transportation as the Army, Navy, Air Force, and Marine Corps manufacture for themselves in all kinds of transportation, including trucks, buses, planes, ships, pipelines, and railroad cars. Military support of, or excessive competition with, private commercial-type transportation has tremendous impact upon our transportation economy and capacity.

In fiscal 1958, the estimated expenditure by the Department of Defense for the transportation of persons and goods was estimated, in the budget, to be $2,263,000,000, or almost 6 percent of our total expected military outlay. Involved, as you all know so well, in the spending of such money is the handling of persons and goods in accordance with varying degrees of priority and movement on a worldwide basis. The transportation of goods includes most types of material in commercial movement, but additionally includes those of a strictly military characteristic together making up the more than 3,300,000 items of supply in the military pipeline. It includes movement between normal commercial centers. It includes movement between points remote from the domestic channels of national and international commerce.

I would reemphasize to you that there is available to the commerce and industry of this country, and to our military establishment, commercial transportation of high quality. If we exercise wisdom in public policy to protect the economic health or the private transportation enterprises involved, be they water, air, highway, or railroad, there is automatically available to the military the kind of transportation upon which it is dependent in peacetime and in war.

It becomes self-evident, then, at the Washington scene, that Department of Defense policy with respect to transportation, and the adequacy of Department of Defense traffic management in its broader concept, are both of great importance in their effect upon domestic and international commercial transportation of all kinds. It is presently far from clear what transportation policy actually motivates basic decisions within the Department of Defense, and this organization, the National Defense Transportation Association, can achieve a great public service by making such a clarification one of its objectives.

Great public controversy exists today over the changes in law recommended by the President with respect to the organization of the Department of Defense. I strongly support the basic thinking behind his recommendations because, in this day and age, there must be no question of unified military command. I am very disturbed at some of the statements which have been made in the testimony before the Vinson committee and the tenor of some of the questions which have been asked, which indicate an absence of congressional realization of how seriously the phraseology, "separately administered," with respect to the services, and as established in the 1949 amendments to the National Security Act, have impaired the ability of the Secretary of Defense to really achieve policy control and really place into effect related coordinations, if not unifications, of great importance to the smooth and economical operation of our military machine.

And I am thinking, among other things, of transportation and transportation control. The single managership in the Army over traffic management is confined to the continental United States and it can exercise no control over the utilization of commercial-type military transportation lodged with and protected by the Air Force, nor commercial-type sea transportation lodged with and protected by the Navy under MSTS.

Our defense posture with respect to transportation raises the basic question as to whether it has been segregated too much from the broad interest in transportation going across all departmental lines of our Federal Government. Adequacy, in fact the correctness of the Federal Government's policy, or lack of policy; interference, or lack of interference; support, or lack of support, in various aspects of transportation has become one of the challenging questions of today. I believe that our finding the right answer to this question would have a great impact upon our defense planning and defense capability.

And so, going to the broader picture of evaluating the proper and necessary place of Government, I see no alternative to the creation of a Secretary for Transportation, as a Cabinet officer of the President. I believe that the creation of a Transportation Department, with responsibility for the promotional aspects of all forms of transportation in the public interest and in the defense interest, is a necessary evolution of Government for the national welfare.

I believe the regulatory agencies should retain their independence and not be under the control jurisdiction of such a department. I believe that, to the extent the Federal Government, except the military, is involved in operational aspects of transportation such as the Panama Canal, the Alaska Railroad, the Panama Steamship Line, and river and harbor work, including that now under the Corps of Engineers, should be a part of the jurisdiction and responsibility of such a department.

I believe that the buying of commercial transportation by the Federal Government should not be in the Transportation Department but should be lodged with the military on the one side and with GSA for all civilian agencies on the other.

I would not have you think that this is a new thought. I deliberately used the word "evolution". Clearly the time has come when the transportation industry on the one hand and the people of business on the other deserve to have our common interests in the hands of a stronger and more centralized type of operation than presently exists. Transportation interests are now scattered through more than forty governmental departments. Any objective analysis must lead to the conclusion that the presently uncoordinated overlapping, and even confused approach, of the Federal Government is a combination of historical accident, fixed bureaucratic interest and the failure of our people as a whole to recognize the importance and significance of transportation as an entity in our national existence, and as a visual function of national growth.

I said this was not a new subject. It has disturbed students of government and students of transportation for a long period of time. Going back at least to 1932 there is a record of public concern over the relationship of the Federal Government to transportation as a whole.

In 1933, the Calvin Cooldige-Bernard Baruch report recommended that the Interstate Commerce Commission be "reorganized with appropriate separate departments, with a chief at the head of each, for its legislative, executive and judicial functions." Alfred E. Smith made a supplemental statement favoring the abolition of the Interstate Commerce Commission and the creation of a bureau or department of transportation.

It was in 1934 that Joseph B. Eastman, who, historically, is recorded as one of the greatest Commissioners ever to serve on the Interstate Commerce Commission, recommended that a single member of the Interstate Commerce Commission be designated by the President as Coordinator of Transportation, and that his orders and regulations be subject to ICC review.

In 1937 the Brookings Institution prepared for Senator HARRY F. BYRD'S committee a report of governmental reorganization in which was recommended the establishment of a Division or Department of Transportation with Cabinet representation.

In 1938, a presidential committee, known as the Committee of Three, recommended, as an independent agency, a Federal transportation authority. Later in the same year another presidential committee, known as the Committee of Six, recommended another independent agency, namely a transportation board.

In 1942, the National Resources Planning Board, at the request of the President, published a report on Transportation and National Policy. The report was prepared under the direction of Owen D. Young, as Chairman of an Advisory Committee for the Transportation Study, which was composed of heads of the various Federal transportation agencies. This report recommended a revived Office of Federal Coordinator or a Transport Authority, but clearly pointed out preference for a Department of Transportation with Cabinet rank. It further emphasized that the quasi-judicial functions of regulating rates and discriminations should be left in independent hands.

In 1944, the Board of Investigation and Research, a three-member Board appointed in compliance with the Transportation Act of 1940, recommended three new permanent Federal agencies:

1. A Federal Transportation Authority.
2. A National Transportation Advisory Council.
3. An Office of Public Transportation Council in the Department of Justice.

In 1947, a presidential Advisory Committee on the Merchant Marine concluded that the Maritime Commission, established under the Merchant Marine Act of 1936, should be reorganized, and recommended that a Maritime Administrator be placed in charge of the executive and operative functions, and that a Maritime Board be appointed for the regulatory functions.

Again in 1947, the President's Air Policy Commission recommended that the Secretary of Commerce retain direction of the Government's executive functions relating to civil aviation but that the Department of Commerce perform only the housekeeping functions of the Civil Aeronautics Board and the Air Safety Board. This Commission, in addtion, foresaw the need for a Department of Transportation to coordinate the development of all forms of transportation.

The immediate recommendations of both the Merchant Marine and Air Policy Commission reports were placed into effect.

In 1949 the First Hoover Commission was critical of the existing Federal transportation organization, and among other things made these specific points:

1. Transportation activities are scattered over many separate agencies, with consequent waste and overlapping.
2. There is a lack of coordination of policies in the transportation field.
3. The scattering of functions makes intelligent budgeting difficult, and policies or programs cannot be considered for transportation as a whole.
4. Research activities are carried on in narrow segments of certain areas of transportation, and these segments are not coordinated. In some areas, they overlap; in others, they are deficient.
5. The amount of subsidies to carriers included in mail contracts is not clear under the present system of appropriations and accounting.
6. Merchant marine activities are directed by a full-time board, whereas good administration requires a single executive.
7. Safety requirements are too often administered by regulatory groups, rather than by executive agencies.
8. Transportation planning for national defense is inadequately centralized.

The first Hoover Commission went on to point out that a major weakness in Federal transportation policy was its failure to recognize that the primary objective must be to assure the Nation the best possible transportation system for the movement of persons and goods, and that there has been a failure to think and act in terms of total transportation requirements. The Hoover Commission recommended the establishment of enlarged transport service within the Department of Commerce.

Also in 1949, the Brookings Institution published its study of national transportation policy. It disagreed with the Hoover Commission's recommendation and favored a Department of Transportation, headed by a Cabinet member.

In 1955, the transportation report of the second Hoover Commission did not go into the question of a Department of Transportation, but did recommend that traffic management within the Government be confined to General Services Administration for the nonmilitary agencies and be centralized in the Department of Defense for the military agencies.

We are now approaching the middle of 1958. There continues to be a situation under which the Federal Government's direct and indirect interest in transportation is scattered among more than 40 departments, agencies, commissions, bureaus and committees of the Federal establishment. There continues to be a segmentized, piecemeal, discriminatory, overlapping approach. An incomplete analysis of the 1958 budget discloses more than $3 billion of Government expense in the transportation field, outside of some $2.5 billion in the military budgets for either the purchase of, or the manufacture of, transportation.

Clearly, we are talking about a major function of our economy. Clearly, we are talking about an activity vitally important to the future of the American people. This uncoordinated and diffused handling must, in the interest of commonsense and economy if for no other reason, be stopped.

It is my belief that we are talking about an activity which is within the scope of the executive branch of the Government; that it should be an executive function. Therefore, I cannot accept the desirability, as recommended in some previous studies, of transportation being centralized in an independent office or a congressional agency or under a transportation czar or continued as a side function in the Department of Commerce. As a department of the executive branch, the Transportation Department would be subject to all of the checks and balances of the Congress and others. It would offer a vehicle for real coordination with the Department of Defense in the field of transportation as a whole.

I would make no attempt to estimate the economy from the establishment of a Department of Transportation, but I am sure it would be substantial.

I can think of no greater immediate public service for the National Defense Transportation Association than for it to consider this recommendation for a Department of Transportation with great seriousness. It is not an easy subject to understand. Those of us who spend our lives in daily work in the transportation field have repeatedly made this mistake of assuming that our friends in business, in the professions, on the farms, and in government understand what transportation has meant to our past history, what it means to the economic realities of today, and what it means to our future.

I am strongly convinced that the security of our country would not be enhanced by transportation being socialized by Government operation and ownership of the railroads, the truck lines, water and air transportation. One of our greatest strengths is to keep each form of transportation healthy; to keep it operating competitively; to keep it free from monopoly and to have its own future dictated by its service contribution to the public, as developed under a policy of equal and impartial treatment in governmental relationships.

I emphasize the importance of this to our national security, and it is particularly from this standpoint that NDTA has an opportunity, and a challenge, to apply to this subject that judgment and action which is consistent with its growing stature of recent years.

I commend it to you.

The Current Economic Problem

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. SCHERER. Mr. Speaker, one of the fine and alert organizations in the First Congressional District of Ohio is the Cincinnati Life Underwriters Association. Its board of directors has given serious consideration to some of the current economic problems with which we are wrestling here in the Congress and not always too successfully.

On May 5, at one of its meetings, the following resolution was adopted and forwarded to me:

Be it hereby resolved:

1. That inflation is the greatest internal danger this Nation faces, as evidenced by the rise in the cost of living during a period of recession;
2. That deficit financing contributes in large measure to inflation and the Government estimates the deficit for fiscal 1958 will be $3 billion, fiscal 1959 will be $5 billion or more;
3. That the Congress and executive branch must be held responsible for the manner in which they are increasing expenditures, particularly in years to come. The Congress must shoulder the major share of the blame.
4. That the only sound way to fight the recession is to reduce Government expenditures enough to allow for reduction of the national debt each year and a permanent income-tax cut. Such action would inspire confidence in the people.
5. That the tax cut should recognize the principle that each man is equal under the law and should provide for a gradual reduction of the discriminatory top-bracket rates. We believe this would have an immediate stimulating effect on the economy.

Austria Slashes Taxes and Its Income Zooms

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks, I am inserting herewith, that all may read, a significant article from the Chicago Daily News of May 7, 1958. As the heading of the article so aptly suggests, the facts contained therein may indeed hold some lesson for us.

AUSTRIA SLASHES TAXES AND ITS INCOME ZOOMS—THREE CUTS IN 4 YEARS HELP BUSINESS PROSPER

(By Sylvia Porter)

Austria has just put into effect her third tax reduction in 4 years.

After each of the previous two tax cuts the Austrian government's income from taxes zoomed—and this is the way the trend is going again.

So stimulating to business have been the soundly conceived and timed tax reductions that her treasury has been able to collect more money via low tax rates than via the high ones.

Of all the nations in the Western world, Austria—which regained full political independence only about 3 years ago—is now the most prosperous.

But the tale is particularly pertinent to us right now—as the debate in our land over the wisdom of a tax cut to stimulate our own economy intensifies by the day.

Those arguing against tax reductions now are doing so because they honestly believe that any significant tax slash would take so much revenue away from the Government

that our already ballooning budget deficit would be swelled to astronomical proportions.

FEAR A BALLOONING BUDGET

But must it turn out this way? Our own experience after recent tax cuts says it wouldn't.

And Australia's record is dazzling refutation of the theory—which is the reason I've been digging for details.

In 1954 when Austria put through the first of her series of across-the-board tax cuts—giving both individuals and corporations relief—her total tax take was $729 million.

In 1955 the tax take was up to $791 million.

That year she put through the second broad tax reduction.

In 1957 the tax take was up to $996 million.

FAVORS LOWER INCOME GROUP

Now, in 1958, the third reduction is in effect. While this year's reduction favors middle and lower income taxpayers and particularly aids working couples, it also includes major relief for corporations and exempts income from stock dividends up to $144.

The forecast is for continuing business boom. Last year production in Austria rose to an impressive 6 percent while prices and wages held stable.

The estimate by the Institute of Economic Research is that production will climb another 6 percent in the first half of 1958.

Admittedly, our Marshall plan aid was of crucial importance.

Admittedly, Austria's economy cannot be compared with our vast, complex economic machine.

Nevertheless, we can learn plenty from Austria's experience—and the least our policymakers should be doing is to be studying it intently.

Special Congressional Committee on Space

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. MADDEN. Mr. Speaker, the Rules Committee held hearings this morning on the bill reported out of the newly created Select Committee on Astronautics and Space Exploration, of which Majority Leader JOHN W. MCCORMACK is chairman. This bill was reported out favorably by a unanimous vote of the Committee on Rules.

The following editorial by Mr. H. B. Snyder, editor-publisher of the Gary Post-Tribune, Gary, Ind., sets out some pertinent facts with reference to this legislation:

CIVILIAN SPACE AGENCY

Congress appears headed toward creating a space agency in the form requested by President Eisenhower—one in which the civilian scientists will have the predominant role.

The bill sent to the floor of the House by the special committee headed by Representative JOHN W. MCCORMACK, Democrat, of Massachusetts, with Representative JOSEPH W. MARTIN, Republican, of Massachusetts, as its vice chairman, is an excellent example of bipartisan action on a matter in which politics should play no part.

The bill provides for a new National Aeronautics and Outer Space Agency which will utilize the existing National Advisory Committee for Aeronautics as its nucleus. Its Administrator would be a civilian.

The agency would be given control over all research and development projects in space exploration except those primarily connected with national defense or control of atomic energy. It would have its own facilities, build its own vehicles for travel in outer space. It will get an excellent start in life because of the work already done by the NACA and by the laboratories and other facilities it has built up.

The key of the measure is its provision for civilian control. Some of the military leaders have objected, but the defense phase appears adequately cared for in the bill. Any disputes over control of a particular activity can be referred to the White House for a final determination, and Congress will monitor the agency through a special joint committee such as the one that works with the Atomic Energy Commission.

But the emphasis should be, as the President proposed and as the House committee has approved, on letting civilian scientists handle the research and development work. In the first place, we should still hope that an agreement can be reached for international rule in outer space, and should do nothing now to discourage that possibility.

Furthermore, military control would mean research primarily for military purposes. The scientists should not work under fetters. Best results are not obtained that way, either for military ends or for the broader purposes of expanding man's knowledge of the universe in which he lives. In fact, we might do harm to our military position by unduly restricting research to purely military projects.

The bill is only started on its course through Congress, it is true. But the endorsement it has received from the select committee headed by MCCORMACK and MARTIN should go far toward winning it favorable approval in both House and Senate. Its enactment would put America truly on its way to the stars.

Socialized Medicine?

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. LATHAM. Mr. Speaker, I wish to set forth for the benefit of the Members a resolution adopted by the board of trustees of the Jamaica Hospital, New York City, expressing their views with regard to certain provisions in H. R. 9467:

At a meeting of the board of trustees held November 25, 1957, the following resolution was unanimously adopted:

"*Resolved*, that the board of trustees of the Jamaica Hospital, of Jamaica, New York City, a voluntary hospital now supported by voluntary gifts and the proceeds of voluntary medical insurance, are unalterably opposed to the so-called old-age and survivors program of the Social Security Act, H. R. 9467, upon the ground that such an act is an intended initial step toward complete socialization in the United States of America of medicine in all forms—a system which has proved in England to be bad and which here, if enacted, would serve mainly to further intrench a new class of bureaucrats and deprive the individual American citizen, through taxes of more of his earnings and subject him to myriad rules and regulations with resultant harassment and deprivation of private rights; further

Resolved, That a copy of this resolution be forwarded to the American Medical Association with full authority to use the same in any manner it deems beneficial; and further

Resolved, That a copy hereof be forwarded to the United States Senators and Congressmen from the State of New York."

This resolution was adopted in connection with our approval of a letter from Dr. David B. Allman, president of the American Medical Association, under date of November 20, 1957.

Very truly yours,

THE JAMAICA HOSPITAL,
F. C. LEUPOLD, *Administrator*.

Heavy Electrical Equipment: A Key Industry

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. RAY. Mr. Speaker, recently Mr. W. G. Scholl, executive vice president, Allis-Chalmers Manufacturing Co., made an interesting and important address dealing in part with certain problems created by our Government's purchase of heavy electrical equipment from foreign manufacturers. The most significant portions of that address were as follows:

The electrical equipment industry has made a tremendous contribution by its development of better and more efficient generating, transmission, and distributing apparatus, as well as the many products it products for homes and industry, to say nothing of its contributions to national defense.

In 1956 this great industry employed more than 870,000 people. Wages and salaries for these people totaled just under $10 billion. Total assets of this industry, at the end of 1956, were well over $12 billion. It paid over $800 million in Federal income taxes, not to mention the hundreds of thousands of dollars paid for other forms of taxes, such as State income taxes, property taxes, etc. To me it seems easy to see the tremendous impact the electrical equipment industry has had on the total economy of our country. The abundant use of power has resulted in the highest standard of living for our people that has ever been known in the history of any country.

But it is confronted with a problem today that could have an important effect upon its future growth and stability. One which it alone can do very little about. It is so important that I think I should take just a few moments to talk about it with you.

It is this matter of the purchases of large quantities of heavy electrical apparatus abroad by our own Government. Please don't misunderstand me—I am not nationalistic in my views on foreign trade, and neither am I against foreign aid. Those two points don't enter into the matter as I see it.

CUSTOM BUILT FOR SPECIFIC NEED

Let me picture the situation for you. Heavy electrical apparatus in the generating and transmission fields is designed in every case for a specific job. It has a tremendous amount of engineering time in it and a very large number of man-hours. Be-

cause of this fact, this type of equipment cannot be mass-produced and probably never will be. Further, there is a definite limitation on the use of anything but very large general-purpose tools, making it difficult and sometimes impossible to tool man-hours out. In other words, this particular type of equipment is custom-designed and custom-built to fit specific requirements.

That causes us a problem in worldwide competition. It takes just as many man-hours to engineer and produce a hydraulic turbine, a generator, or a large transformer in Milwaukee, Wisc., as it does in England. At the same time, the labor rates for both engineers and production people are 3 to 4 times as high in Milwaukee as they are in England. Including the fringes, we pay about $3 an hour for skilled production labor in Milwaukee as against approximately 75 cents an hour for the same type of labor employed in the Midlands of England.

You can quickly compute what that does to the costs of an item in which the man-hours are equal. If material costs about the same in both places, which it does, and if machine tool time cost isn't much different, and it isn't—the man-hour costs would wreck you. That is exactly what is happening to the heavy electrical industry in its effort to compete with foreign maufacturers in markets outside North America. We just can't compete, because our costs are so high that we price ourselves right out of the market. As a result, practically no heavy electrical generating apparatus or transmission equipment is being exported by American manufacturers.

But that isn't what I am disturbed about. I don't know what we are going to do about it and I am not talking about subsidizing American manufacturers so that we can compete with countries with lower labor rates. I like this country and I wouldn't change it, so I wouldn't want to reduce our labor rates. In fact, our whole country is so geared to this high-level economy that we can't think of changing our labor rates or think about dropping our standard of living. This we must live with.

OUR STANDARD OF LIVING—PRODUCT OF ELECTRIC POWER

Now, incidentally, this standard of living which we have here in our country, in my mind, is a direct product of the use of great quantities of power. By using electrical power and lots of tooling, we have contributed toward this high-level economy which we enjoy in this country.

But there is one phase of this matter about which I am incensed, and that is the recent habit of various governmental divisions going into the world market and purchasing heavy electrical apparatus, inviting foreign bidders to come in and quote a low price and walk off with the business. Most of the money which comes from these Government institutions is wrung out of American taxpayers, both corporate and individual, in the form of taxes. The reason our Government can set tax rates so high is due to the high-level economy which we have developed in this country. And a lot of that goes back to our generous use of power and the employment of large quantities of capital and labor at high wage rates. We cannot separate the Government's ability to tax at these rates from the type of economy which we support.

At the same time, sections of our Government take these tax dollars wrung from individual and corporate taxpayers in a high-level $3-an-hour economy and spend them in another economy where wages paid for the same kind of work are 75 cents an hour. Under these conditions we do not believe that these governmental institutions are doing us any particular favor in even asking us to bid. We know before we start that we won't get the business.

GOVERNMENT SHOULD BUY FROM ITS OWN TAXPAYERS

Now my point is that it is absolutely immoral for any section of our Government to wring money out of its citizens and spend it in an area abroad whose ability to compete is based purely on low wage rates and what to us is a substandard standard of living.

Again, I repeat, I am not a protectionist, but I am firm on two points, one of them being that our own Government should not engage in this kind of double standard of operation, and further that it is particularly reprehensible in the electrical area, since such a great portion of our high standard of living can be directly credited to our great use of electrical power.

ONE EXAMPLE: 600,000 AMERICAN MAN-HOURS LOST

I could give you a few statistics on man-hours involved, just as illustrations. For instance, one hydraulic turbine order in 1956 represented the transfer of 600,000 man-hours of work from the $3-an-hour economy in which the taxes were raised to the 75-cent-an-hour economy in which the money was spent. That was a direct loss in the turbine shops—but in addition, it is estimated that about 250,000 other American man-hours were transferred from the steel mills, forge shops, etc., to those in the other country.

Another example—one generator of the type installed at McNary Dam needs 500,000 man-hours of labor directly and indirectly in whichever country gets the job.

Now there are of course other arguments against this practice, one of them is the matter of national defense. In view of the steady requirement for electric power, and particularly in times of international stress, I think you would agree that it is an understatement when I say that it would be unhandy to have one of these large machines fail and have to depend on an outside manufacturer to fix it. Incidentally, I understand Great Britain handles that by just insisting that all of the purchases of power and transmission equipment for their central electric authority be made from domestic suppliers, and says very simply that "it would be unwise for the electricity supply industry (of England and Wales) to be dependent upon foreign manufacturers for spares and maintenance."

This misguided effort of governmental agencies to take tax money out of the highest market and spend it in the lowest market has been going on for some time. For a little while, certain applications of the Buy America Act handicapped it, and that was good as far as it went. But this doesn't seem to have been operating lately, and again, I don't think I know what can be done about it. I certainly wouldn't want to see it tangled up with our reciprocal trade matters, for it doesn't belong there. It belongs in a niche by itself and is connected with our own Government's responsibility to play fair by spending the money it collects in the same kind of an economy from which it collects it. My reason for talking about this problem here is that you are the kind of folks who can explain this problem to others if you agree with my thinking, and I believe you would be doing our industry and your country a favor in so doing.

ORDER OF THE DAY: GOOD JUDGMENT

In conclusion, let me say that with the exception of the problem just mentioned in connection with the electrical equipment industry, I can't feel anything but optimistic about the long-term possibilities for business, and for the future of this great country of ours in which we live.

I feel confident that the present situation in our economy and business is only temporary, and that if we will all keep our feet on the ground (as incidentally I think our President has been doing during this period), and practice good business judgment in the conduct of our business as we ought to, anyway, that in the not too distant future we will see both business and employment rising to new and even greater heights.

Let me repeat—I don't think things like this just happen. We have to make them happen. The very thing that caused commerce and industry to pause and take a look when they found we needed some adjustment in inventories is the very same factor that will start our economy rising again

---

The States Act To Conserve Their Heritage

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. THOMPSON of New Jersey. Mr. Speaker, many State governments are giving increased attention these days to the conservation of historical resources such as letters, diaries, early newspaper files, archives of government, both State and local, and historic sites and buildings.

Original historical resources, once lost or destroyed, can never be fully recovered. Historic buildings can be restored, but the accuracy of such restoration is dependent upon documentary historical evidence and the authenticity of the restoration is sometimes open to question.

The growth of State activity in the field of historical conservation is due in part to the growing recognition that the roots of American history are in the soil of the States and in the local communities. We are coming to realize that the American heritage is best understood when it is examined at State and local levels.

S. K. Stevens, executive director of the Pennsylvania Historical and Museum Commission, said recently that—

Increased State attention to the problem may also be said to be a part of a revolt against national centralization. Half a century ago Josiah Royce in his The Philosophy of Loyalty wrote: "We need * * * in this country a new and wiser provincialism * * * which makes people want to idealize, to adorn, to ennoble, to educate their own province." He went on to say, "Further centralization of power in National Government, without a constantly enriched and diversified provincial consciousness, can only increase the estrangement of our national spirit from its own life."

Another important reason for increased interest on the part of the States of their heritage is that it is proving to be good business. A recent survey by Redbook magazine showed that more than 90 percent of those queried indicated that their future vacation trips would be limited to the United States. Every person in charge of State historical shrines, as distinguished from those administered by the National Park Service, reports that visits to these places are

increasing by leaps and bounds, just as they are at the federally administered historical parks, buildings, and monuments.

New Jersey has lost numerous landmarks and historic sites to the march of progress in the form of rubber tires, gasoline fumes and highways. In addition New York, Massachusetts, Pennsylvania, Florida, Louisiana, and Virginia are States where places of historic interest are presently threatened by new-highway programs. This situation led the Camden (N. J.) Courier-Post to say editorially on February 11, 1958, that—

Priceless bits of the American heritage will be chipped away unless public opinion is alerted and expresses itself in demands that State legislatures, as well as Congress, pass laws to protect the Nation's less tangible values from burial under our ever-burgeoning strips of asphalt and concrete.

This same newspaper reported that—

The State of Pennsylvania is planning to run a modern-express highway down New Hope's narrow, tree-shaded Main Street. The project threatens destruction of the renowned Bucks County Playhouse, which fronts on Main Street. Residents are up in arms, petitions are circulating, and the State in the end may have to divert the highway. Never before has highway planning threatened historic and cultural sites in America as it does today. New Hope's case is only one of many.

I include here an article from the magazine State Government, by S. K. Stevens, and an editorial from the Camden (N. J.) Courier-Post:

[From State Government of April 1958]

THE STATES ACT TO CONSERVE THEIR HERITAGE

(By S. K. Stevens)

State action in the field of conservation of natural resources, including streams, forests, game, and the land itself, has become a common feature of governmental policy in the last 50 years. It is only within the last decade or so that very much attention has been directed toward conservation of historical resources. These include letters, diaries, and records, early newspaper files, archives of governments, both State and local, object materials such as tools, utensils, and implements used by former generations, and historic sites and buildings which were the places with which notable persons had an association or where great events took place.

The loss or destruction of such materials can be more permanent than the depletion of natural resources. The latter can be replaced. Forests can be replanted, streams purified and cleared, game supplies restocked, and land improved. Original historical resources, once lost or destroyed, can never be fully recovered. Historic buildings, it is true, can be restored, but the accuracy of such restorations is almost entirely dependent upon documentary historical evidence. Even the adequate marking of historic sites and buildings must rest upon basic source materials for authentication.

Accurate and comparative figures are not available, but it is a considered judgment that 50 years ago no State spent more than a few thousand dollars which could be considered as devoted to conserving or restoring any of its historical resources. Pennsylvania, with its historical riches, did not create an official State historical commission until 1913. The principal early pattern of activity at the State level was that of the State Historical Society, so termed because it was chartered by the State and utilized the name of a State as the prefix to the words "historical society." New York, Massachusetts, Rhode Island, and Pennsylvania were leaders in establishing such societies early in the 19th century.

Actually, these societies were largely semiprivate institutions. As Americans moved westward, they took with them the idea of the State historical society. But there developed one very important difference. While the eastern societies basically were both privately supported and controlled, many Western States subscribed to the idea that the State government should have more responsibility. In return for aid to the society in preserving State historical records, the State itself was given representation on the governing board of the State historical society. State funds were appropriated in small sums to aid in this work. In such typical Midwestern States as Ohio and Wisconsin, the State Historical Society of Wisconsin and the Ohio Historical Society today receive an increased portion of their financial support from the State, and the State is represented on the board of trustees in each case, although the societies retain the idea of individual memberships and operate essentially as semiprivate associations.

PATTERNS OF ORGANIZATION

Several States now combine the privately supported and directed society with a State department of history or historical commission which is an official unit in the State's governmental organization.

The Pennsylvania Historical and Museum Commission is the official State historical agency. It is concerned with research and publications; marking historic sites; preserving, administering, and interpreting historic buildings and sites placed under it by act of the general assembly; operating the State museum and the Pennsylvania Farm Museum; caring for the State's public and historically important records, and carrying on a general program of informational and publication services in the field of Pennsylvania history. At Philadelphia, the Historical Society of Pennsylvania sits serenely as one of the Nation's oldest privately endowed and managed State historical societies, with one of the largest and finest historical manuscript collections in America.

New York has the even older New York Historical Society, in New York City, with marvelous manuscript and other collections, and the New York State Historical Association, based at Cooperstown, has its nationally famous Farmer's Museum. Both are private rather than public institutions. In Albany, in the department of education a State division of archives and history administers State historical markers, sites, and museums, preserves State and local records, and promotes a program of statewide historical activity.

Michigan has both a privately functioning Michigan Historical Society and a Michigan Historical Commission—the latter the official State agency, with archival, research, publication, historical marking, and related functions under its official direction, and using State funds. Other examples could be cited. Obviously there is today no fixed pattern of State-supported historical work in terms of the way this function is organized.

STATE ATTENTION RISES

The more important point, however, is the fact that, whatever the pattern of organization may be, there is a noticeable increase in State attention to conservation of historical resources. More money is being spent out of State budgets to support this work. On the other hand, no taxpayer need yet be frightened at the size of the State historical agency budget in any State; it remains a mere drop in the bucket. Pennsylvania is a fair sample of the present trend. The biennial budget of the Pennsylvania Historical Commission in its early years averaged a few thousand dollars; today it has climbed over the million mark. Wisconsin, New York, and Ohio are States with comparable budgets for this purpose.

Why are States turning more attention to State history, and spending more money in this area despite mounting pressures on total State budgets? One reason certainly is that Americans today are searching as never before for an understanding of their historical tradition. The search has been intensified by world events of the last few years and a realization that the American tradition needs to be revitalized more than once a year on the Fourth of July. As Americans reach out for this understanding of their heritage, there is a growing realization that it rests upon knowledge of the Nation's history. A quick look at the dates when a majority of the national historic sites and monuments administered by the National Park Service were taken under the wing of the Federal Government will indicate that a majority were acquired less than 30 years ago.

THE ROOTS OF HISTORY

In part, at least, the growth of State activity in historical conservation may be attributed also to a growing recognition that the roots of American history are in the soil of the States and the communities within the States. There is indeed an increased realization that the American heritage is best understood when it is examined at State and local levels, where it is closer to the life and the experience of people, than is possible at a national level. State shrines and State history implement basic appreciation and understanding of the American past.

Increased State attention to the problem may also be said to be a part of a revolt against national centralization. Half a century ago Josiah Royce in his The Philosophy of Loyalty wrote: "We need * * * in this country a new and wiser provincialism * * * which makes people want to idealize, to adorn, to ennoble, to educate their own province." He went on to say, "Further centralization of power in national government, without a constantly enriched and diversified provincial consciousness, can only increase the estrangement of our national spirit from its own life."

The essence of this thought is that achieving a philosophy of loyalty to an abstract and general thing we know and think of as America is not enough. Indeed, it is the most difficult of all loyalties to cultivate in a land so broad and so diversified as ours. People tend more readily to understand and to idealize and venerate those things which are close to them than those which are remote. It is my considered opinion, based on 20 years of association with historical activity at the State level, not only in Pennsylvania but throughout the country, that the growing attention to conserving and emphasizing State and local history on the part of our State governments is in large measure a response to a realization that it is important as the very foundation for preserving our national heritage.

ATTRACTING TOURISTS

Yet another important reason for cultivating the historical heritage of the States is that it is proving to be good business to do so. A recent survey by Redbook magazine presents further striking evidence of the interest of Americans in America. More than 90 percent of those queried indicated that their future vacation trips would be limited to the United States. Granted that much of this travel is purely recreational, who can deny that in its course increasing hundreds of thousands are being brought into contact with more than recreational benefits? The very scenery of America is an inspiring panorama which cannot help but create a new spirit of appreciation of the greatness of the Nation. The American landscape is truly a vital part of the American heritage. Every person in charge of

State historical shrines, as distinguished from those administered by the National Park Service, will testify that visits to these places are increasing by leaps and bounds, just as they are at the federally administered historical parks, buildings, and monuments.

Recognition that there "is gold in them thar hills" in tourist travel is leading many States to take a new look at their history. Virginia went all out last year in celebrating the Jamestown tercentenary and with resulting economic benefits. Every tourist who can be attracted by a State's historical shrines into spending a few days in that State will spend on an average of $12 to $15 a day for food, lodging, gasoline, and odds and ends. National Park Service statistics show that national historical monuments, for the first time, are competing with and even running ahead of scenic areas in the percentage of increase in tourist visitation. Like figures are not available at the State level, but it is reasonable to believe that they represent a comparable trend.

To conclude and summarize, conservation of the history of our States is an increasingly important concern of State government. It is, and should be a concern, in terms of its very real place in the pattern of a rising consciousness of the need to translate the American heritage into terms which will lead Americans to become educated in the historical tradition of their own particular States. Provincialism is no longer a "dirty word" to those concerned with developing a truly national spirit. It is rather, perhaps, the indispensable means to that end. At the same time, with increasing thousands of Americans milling about—searching out the physical evidences of their past as preserved in museums and historical monuments and buildings, or as pointed out by increasing thousands of State historical markers alongside the highways, or as recorded by the landscape itself—there is a very practical aspect to increasing State budgets of the agencies entrusted with historical tasks. In most States conservation of our State historical heritage is at once a contribution to better citizenship and a sound business practice.

[From the Camden (N. J.) Courier-Post of February 11, 1958]

HIGHWAYS AND HISTORICAL SITES

New Hope, Pa., is a famous artists' colony. To call it quaint might be insulting, but it is a beautiful old town that retains the charm of a bygone American era. That is why artists originally congregated there.

Now the State of Pennsylvania is planning to run a modern express highway down New Hope's narrow, tree-shaded Main Street. The project threatens destruction of the renowned Bucks County Playhouse, which fronts on Main Street. Residents are up in arms, petitions are circulating, and the State in the end may have to divert the highway.

Never before has highway planning threatened histbric and cultural sites in America as it does today. New Hope's case is only one of many.

Elfreth's Alley, the famous little enclave of colonial Philadelphia near Benjamin Franklin Bridge, is threatened in whole or in part by a new highway planned along the Philadelphia waterfront. Like New Hope, it will not be so desecrated without a terrific fight by its many friends.

New Jersey has already lost numerous landmarks and historic sites to the march of progress in the form of rubber tires and gasoline fumes. A major threat is posed at the moment to the old Ford mansion in Morristown National Historical Park. This mansion, dating back to pre-Revolutionary days, was Washington's headquarters in the winter of 1779–80. Actual physical destruction of the building is not planned. But a realinement of Route 202 worked out by the State highway department under the new Federal highway program would bring heavy through traffic within less than 100 yards of the mansion. Part of the protective park land would be bitten off.

Perhaps the Ford mansion is luckier than many of its counterparts. Not only the Morristown Planning Board but the National Trust for Historical Preservation and the National Park Service itself are battling the projected encroachment. The highway department in the end probably will have to give in and build along a different line. Other routes are said to be perfectly feasible for the new road, as they are in virtually all similar cases.

Representative FRANK THOMPSON, JR., Democrat, of New Jersey, has introduced legislation in Congress to protect federally controlled areas like Morristown National Park from despoliation by highway construction. Similar legislation has been introduced in the Senate. It seems to have a fair chance of enactment, but it will apply only to historic sites under Federal control—a small minority.

In addition to New Jersey, New York, Massachusetts, Pennsylvania, Florida, Louisiana, and Virginia are States where places of historic interest are presently threatened by new highway programs, a conservation writer reports.

Priceless bits of the American heritage will be chipped away unless public opinion is alerted and expresses itself in demands that State legislatures, as well as Congress, pass laws to protect the Nation's less tangible values from burial under our ever-burgeoning strips of asphalt and concrete.

Slovak World War II Martyrs

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1958

Mr. MADDEN. Mr. Speaker, Mr. John C. Sciranka, editor of American Friends of Slovak Freedom, has forwarded the following article to me, which reveals the records of two outstanding Slovak heroes and patriots of World War II, namely, Capt. Thomas Scecina, Army chaplain from Indianapolis, Ind., and Alaman Lucien Bily, professor at De Salle College, Manila, Philippine Islands.

Mr. Sciranka, very fittingly, over 13 years ago recommended that two scholarships be established in memory of these two outstanding heroes and patriots. This article will give further details:

TWO FORGOTTEN AMERICAN MARTYRS OF WORLD WAR II

(By John C. Sciranka)

When His Eminence Francis Cardinal Spellman, archbishop of New York, honored the illustrious Gen. Douglas MacArthur, announcing that in observance of the famous military leader's 78th birthday, he established a $50,000 scholarship for four Filipino students to be known as "Memorial to 'Saviour and Liberator'," the writer was reminded of two American Slovak World War II martyrs who may be termed as "forgotten" heroes.

We mention them today because they fit in with the life and sacrifices of General MacArthur, in whose honor the famous Cardinal established the four scholarships as a monument in the hearts of the Philippine people, who look upon the famous American war leader as their saviour and liberator.

Cardinal Spellman noted that "there is no monument to Douglas MacArthur in the Philippines and, as far as I know, there is no monument to him in the world."

His Eminence, according to the story of Bill Linge, felt the scholarship will help cement relationship between the United States and the Philippines where, he pointed out, "twice the precious blood of American youth has been shed in the cause of liberation."

The writer recommended in October 1945 that two scholarships be established, one in memory of Capt. Thomas Scecina, chaplain in World War II from Indianapolis, Ind., in the Catholic University, Washington, D. C., and the other one in memory of the Venerable Brother Alaman Lucien Bily, professor at De Salle College, Manila, Philippine Islands.

Capt. Thomas Scecina was a United States Army chaplain, who died a martyr's and hero's death on October 24, 1944, on the Japanese ship with other American soldiers, captured by the Japanese. The ship was torpedoed in the South China Sea. The chaplain priest died giving last rites to his American captured soldiers.

In September, 1945, Father John Blazic, pastor of St. Mary's Parish of Uniontown, Pa., gave the following facts on the life of this forgotten martyr and hero.

The late Captain Scecina was born in Clinton, Ind., of Slovak parents. His maternal uncle lives in Uniontown, Pa., and his cousins live in the section of Brownfield, near Uniontown, Pa. Before World War II Captain Scecina spent his vacation on several occasions with his relatives near Uniontown, Pa. At that time he was taking up postgraduate course at the Catholic University in Washington, D. C. Father Blazic noted, that during one of his vacations Captain Scecina represented him as acting pastor of the Uniontown, Pa., parish. The hero's mother lives in Robstown, Tex., where her other son is also a priest of the Corpus Christi diocese. The mother is an ardent reader of Slovak and Slavonic newspapers.

The heroic Captain Scecina was a priest of the Indianapolis, Ind., archdiocese.

At the time of his martyred and heroic death the writer called upon the Slovak people to establish a scholarship in his memory at the Catholic University. No doubt, that the postwar problems made us forget that duty toward one of the first American Slovak priests and Army chaplain, who paid the supreme sacrifice during World War II under the leadership of now honored "Saviour and Liberator" of the Philippines, who was remembered and honored by His Eminence Cardinal Spellman. Perhaps this noble gesture of the famous New York Archbishop will inspire us to remember the forgotten Father Thomas Scecina.

And at the same time in 1945 the writer has also recorded the martyrdom and heroic death of the Venerable Brother Alaman Lucien Bily, who was the professor of De Salle College in Manila.

Brother Alaman Lucien, as he was popularly known, was born in the town of Dolna Krupa, County of Bratislava, Slovakia. He was a great scholar and mastered fluently eight languages. When the city of Manila fell into the hands of the Japanese, Brother Alaman Lucien and 15 other religious brothers were tortured and died martyrs deaths. His nearest kin were Mr. and Mrs. Joseph Stracar, parishioners of the Rt. Rev. Msgr. Stephen J. Krasula of St. John Nepomucene Parish of New York City, who were notified of the death of this modern martyr.

Now and on many occasions before, when his Eminence Cardinal Spellman showed us by vivid examples how to honor our heroes, may we be inspired to remember Capt. Thomas Scecina and Brother Alaman Lucien Bily.

Farm Price Supports

EXTENSION OF REMARKS
OF
HON. GEORGE H. CHRISTOPHER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. CHRISTOPHER. Mr. Speaker, in the May issue of the Missouri Farmer, a magazine published by the Missouri Farmers Association at Columbia, Mo., there appears an article on page 6 written by the president of MFA, Mr. Fred V. Heinkel.

Mr. Heinkel, like myself, has been working with and for Missouri farmers for more than a quarter of a century. From his many years of practical experience, he has learned to know farmers and farm problems as few men know them today. I am proud to include his article with my remarks, and I hope my colleagues will take time to read the article because, as Mr. Heinkel reminds us, general depressions have always been farm led and farm fed.

Recently one of my colleagues asked me this question: "Do you believe the Federal Government can afford to support farm prices?" I answered his question by replying, "The Federal Government cannot afford not to support farm prices."

Let us consider the record and see if facts back up this contention. In 1933 the American farmers paid $5 million in income taxes on their 1932 incomes, but in 1953 their Federal income taxes had swelled to $1,365 million for the 1952 tax year. From 1932 to 1952, farmers alone paid a total in Federal income taxes of $9,825 million, but it should be remembered that in the first year of that period, they paid only $5 million. The primary reason for such a low tax payment in 1932 was because at that time they had little income on which to pay taxes. If farm incomes had remained as low as they were in 1932, farmers would have continued to pay only $5 million in tax per year, and would have paid into the Treasury only $100 million during that entire 20-year period. Instead, however, price supports and other farm programs began to raise the agricultural income of farmers and they were thus enabled to pay more and more money into the tax fund each year. Price support programs during that 20-year period cost the Federal Government $1,200 million in CCC losses. Subtracting these losses from the total 20-year farm tax of $9,825 million leaves a balance of $8,625 million in additional taxes. Now, if we subtract the $100 million that farmers would have paid had their incomes remained as low during that entire period as it was in 1932, we still have a balance of $8,525 million.

No one would argue that all that increase paid into the Federal Treasury by farm income taxes was the result of price supports alone, but anyone familiar with the situation will readily admit that without the farm programs, including price supports, agriculture would have remained in an impoverished condition and a fair estimate would undoubtedly be that at least 50 percent of the increase in taxes paid by the farmers was due to the raise in farm incomes brought about by supported farm prices.

These price-support programs raised farm prices to 100 percent of parity in the first 8 of those 20 years from 1932 to 1952, and held them above 100 percent of parity for 11 consecutive years—1953 being the first year since 1941 in which farm prices averaged less than 100 percent of parity. It should be remembered that parity means equality of purchasing power and nothing else.

From these figures it is evident that the price-support program for agricultural products brought into the United States Treasury $4,626 million that would never have been paid had farm prices not been supported. In other words the Treasury invested $1,200 million in agricultural price supports over a 20-year period and gained $4,262 million in net return after all possible expenses had been deducted. In even simpler figures, for every $12 invested in price supports a net profit of not less than $42.62 was realized, and this does not take into consideration the increased taxes that were generated in other industries by the restoration of the purchasing power of the American farmers.

Secretary Benson reports that farm prices averaged 87 percent of parity in April 1958. He obtained that figure by averaging in apples at 101 percent, grapefruit at 135 percent, oranges at 156 percent, and limes at 365 percent of parity. Here are the April figures for Missouri products taken from Mr. Benson's report in which he quotes the 87-percent figure:

	Percent
Wheat	83
Corn	64
Soybeans	70
Grain sorghum	67
Milk	70
Butterfat	66
Beef cattle	99
Hogs	92
Eggs	68
Chickens	56

Average for principal Missouri farm products 73.5 percent of parity, or 13.5 percent less than Mr. Benson's. Figures do not lie but—

Another false statement heard quite often is "supporting farm prices robs the consumer." The answer to this statement is that at no time in the past 50 years, war or peace, has the cost of living been as high as it is today. Ask yourself if there has ever been a time in your entire memory when a $10 bill paid for as few groceries as it does today. Low farm prices do not mean cheap food for the consumer.

In 1955, I told my colleagues on the floor and have reiterated it since, that the depression then building up on the farms would not stay there; that it would lead to business stagnation, unemployment, generate heavy Federal expenditures that would be made in an attempt to care for the jobless, that it would drive farm people to the cities to seek nonexistent employment and that unless conditions affecting farm prices were reversed, these conditions would in time advance to the point where they would adversely affect the Federal Treasury.

All these things have now happened and neither the President nor the Secretary of Agriculture show any inclination to even permit Congress to remove the basic cause. The under-payment to American farmers for their services in producing more than 60 percent of all the new wealth generated in this country each year is the primary cause of the present recession.

That the affects of this agricultural depression has finally reached the Treasury is abundantly proven by an article appearing in the Washington Evening Star for May 21, 1958 in a statement reported to have been made by Budget Director Morris Stans, in which he said "I expect the deficit for the fiscal year ending June 30, 1958, to reach $3 billion." The Star further reports Mr. Stans as saying that the deficit for fiscal 1959, which begins July 1, this year, will probably reach $10 billion if no legislation for the reduction of taxes is enacted, and an even greater deficit in case of any tax reductions.

The American farmers have been underpaid $6 billion per year for the past 5 years. Had the farmer received this money over that period, every dollar of it would have generated $8 in national product. The basis for this statement is the fact that every dollar paid the farmers did generate $8 of national product. If the American farmer had received 100 percent of parity during the past 5 years, almost 2 million farmers who are now in the cities would still be on the farm, we would have no unemployment, we would have no recession, and the Federal Treasury would not have gone in the red.

Again I say that the President, the Secretary of Agriculture, the Congress of the United States, as well as industry, labor, and the entire national economy cannot afford to permit the liquidation of the family-type American farmer.

The article from the Missouri Farmer, May issue, follows:

THE PRESIDENT SPEAKS—DEALS FARMERS A LOW BLOW

(By Fred V. Heinkel)

"What the farm economy needs is a thaw rather than a freeze," and with this rebuke to Congress for its attempt to hold-the-line on sagging farm incomes, the President of the United States vetoed the farm bill.

The bill, which passed by a 50–43 vote in the Senate and a 210–172 majority in the House, would have required that support prices and acreage allotments of most basic crops and milk and butterfat be held at 1957 levels in order to prevent further decreases in farm income and allow Congress time to consider new approaches to farm legislation.

But Eisenhower pointed out that twice in the past 2 years the Congress had sent him a farm bill which he could not approve, and suggested that if they were after a solution to agriculture's problems, they adopt the farm program which he had previously sent them. Among other things his program calls for legislation to permit price supports to fall to 60 percent of partiy.

Congress is in no mood to sacrifice farmers in such manner, and leaders there are going ahead on an all-out campaign to override the veto. Maybe by the time you read this, the Senate will have taken favorable action. I hope so. However, it will

be difficult to get the required two-thirds majority—especially in view of the unyielding opposition of the Secretary of Agriculture toward any move which would halt his plans for doing away with Government price support programs.

I am sure you will be interested to know that your MFA vigorously supported passage of this bill, and wired the President urging that he sign the measure. Our message to him reminded that already millions of people have been forced off farms, and that any further reduction in prices could only speed up this movement. "General depressions are farm led and farm fed," we pointed out, "and the present economic slump can find its deepest roots in the perilous situation facing our agricultural communities."

In his comments about the bill, Benson made the remark that it was only a political move on the part of Congress, and stated that, "the farm organizations were not given a chance to be heard." Nothing could be further from the truth. While no formal hearings were held, all expressed their opinion on the bill. The Grange worked for its passage and also asked the President to sign it. The Farmers Union, the National Milk Producers Federation, the Conference of Commodity Organizations—all were active in working for this measure. The American Farm Bureau alone declined to support the bill.

Early this year, I spent a week in Washington on behalf of Missouri farmers, conferring with the Missouri delegation and other farm Congressmen. Your MFA is given credit there for helping to draft the recommendations which later were incorporated into this bill.

The implication that farmers through their organizations did not have a chance to be heard is but one of a number of misleading statements which have come from the Secretary of Agriculture. His earlier announced cut in dairy supports was purposely heralded by him as a means of lowering the price of dairy products to consumers. It received a big play in the city press. The facts are that prices of milk and other farm commodities have been steadily declining since Benson's appointment. Yet food prices have continued to increase. Last year, total receipts for all farm products were actually $2.6 billion less than in 1952, though total production was up some 6 percent.

Did consumers get this food for less? They did not. The Bureau of Labor reports that food prices are now at an all-time high.

It is beyond the realm of reason as to how an official—whose duty it is to administer the agricultural programs of Government to the best interests of farmers and the Nation—can continue to spread propaganda which sets consumers against farmer, and city Congressman against farm Congressman.

The Secretary has made quite an issue over the fact that he is required by law to lower supports when supplies are adequate. But it's plain that this is a hollow excuse. He has filled bins and barges to overflowing but has been reluctant to open his storehouse to provide supplies for school lunches and needy persons. And when Congress passes legislation to give him legal authority to maintain price supports, he denounces both the bill and the intentions of those who offer it.

Favor is mounting for future farm program development that would place control of such programs in the hands of elected farmer boards, rather than a Cabinet officer. It had been hoped that legislative action to halt the decline of farm prices would allow time to properly study improved approaches to farm problems. USDA estimates that last year almost 2 million persons left the farm. I wonder how many of them are now in the ranks of the unemployed.

Farmers continue to suffer from lowered take-home pay, also. USDA estimates the average return to farmers for their labor and management last year was 69 cents per hour—the lowest in 12 years except for 1955 when it dipped to 67 cents.

MILTON YOUNG, Republican Senator from North Dakota, recently summed up the problem when, after reminding that the number of unemployed is the highest in 16 years, he warned, "Our national economic situation could become far more serious than it is now—that is, if we do not correct the basic reasons for its cause." As every depression in the past has started with depressed farm prices, the Senator recalled, it doesn't make sense for this administration to purposely plan lower farm prices. "What we need is increased purchasing power—not less," he said.

Construction of Superliner Passenger Vessels

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MAILLIARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. MAILLIARD. Mr. Speaker, on Thursday, May 22, 1958, I introduced H. R. 12644, to amend title 5 of the Merchant Marine Act, 1936, to provide an additional defense allowance to aid in the construction of superliner passenger vessels.

As I stated during the recent debate on H. R. 11451, although I supported the passage of that bill, it had been my hope that we would be able to offer an amendment to the Merchant Marine Act to provide for the construction of these highly desirable and special purpose vessels. Since I anticipate that there will be a future requirement for building other vessels of this type, I have introduced this new bill which is a general modification of the law so as to provide additional government participation in the construction of these very large vessels, so urgently required for national defense. This approach will not be an "opening of Pandora's box" since there is no likelihood that there will be commercial requirements for vessels of this character in excess of a total of 8, namely, 2 to be operated on the North Atlantic run, providing a weekly service, 3 on the New York-Mediterranean run, also providing a weekly service, and 3 on the west coast-Orient run, providing a biweekly service. At the present time and in the foreseeable future, vessels designed for in excess of 1,000 passengers could not be operated commercially under the United States flag on any other presently established trade routes. Nevertheless, in order to avoid the necessity of the Congress considering what is in effect private legislation on the occasion of a commercial operator indicating his willingness to operate such a vessel, it seemed desirable to me to amend the law as the framers of the original 1936 act anticipated might be necessary.

I have knowledge that American Export Lines at this time is interested in building such a vessel to run opposite the presently operating *Constitution* and *Independence*, so as to provide a regularly weekly service on that route. The provisions of the bill I have introduced would make the construction of this vessel possible under certain circumstances.

This would also serve to construct, when the time comes, replacements for the *President Cleveland* and *President Wilson* and for the *Independence*, *Constitution*, and the *United States*, at such time as their economically useful life is ended.

It is my firm belief that under the provisions of this bill negotiations between the prospective operator of a new vessel and the Maritime Administration can produce better results both from the Government's point of view and the operator's point of view, than if it is necessary, as we did a few weeks ago, to have the Congress specifically approve a particular financial arrangement.

This bill embodies the philosophy under which the Committee on Merchant Marine and Fisheries reported the bill to construct a replacement for the *America* and a replacement for the *President Hoover*. However, it provides greater flexibility for negotiation and perhaps a greater opportunity for the Defense Department to negotiate on national defense features such as speed, compartmentation, and so forth.

Although I realize it is late in this Congress to attempt to enact a fundamental amendment to one of our basic laws, I have introduced the bill so that all those who may be interested will have an opportunity to study it, and it would be my hope that, if reelected to the 86th Congress, I could initiate action on this bill in the early part of 1959.

The text of H. R. 12644 follows:

Be it enacted, etc., That title V of the Merchant Marine Act, 1936, is amended by adding at the end thereof the following new section:

"SEC. 512. (a) Any citizen of the United States who holds, or who applies for and is granted, a contract for the payment of an operating-differential subsidy under title VI of this act may apply to the Federal Maritime Board for a national defense allowance (hereafter in this section referred to as additional defense allowance) to be paid by the United States as part of the cost of construction of superliner vessels in accordance with this section, in addition to any payment for costs of national defense features under other sections of this title.

"(b) The Federal Maritime Board is authorized to grant an additional defense allowance to aid in the construction of any superliner passenger vessel which the Secretary of Defense certifies to be urgently required for national defense purposes, and which the board determines—

"(1) will have a capacity of at least one thousand passengers;

"(2) is designed to embody the highest practicable standards of safety and design; and

"(3) will be equal to or faster than the speed of the fastest superliner passenger vessel operating, or under construction to be operated, in the service or route for which the vessel is to be constructed.

"(c) Whenever an additional defense allowance is granted under this section, it shall not exceed that amount which the Federal Maritime Board determines will reduce the original cost of the superliner passenger vessel to the applicant to the point where such applicant may reasonably be expected to earn, upon capital necessarily

employed in the business of such vessel, a fair and reasonable average return over the life of such vessel. All determinations made by the Federal Maritime Board to carry out this subsection shall be final and conclusive and no other official nor any court of the United States shall have power or jurisdiction to review any such determination.

"(d) No additional defense allowance granted under this section shall exceed 10 percent of the original contract cost (without regard to any increases in cost occurring after the award of the contract) or constructing the commercial vessel (without regard to national defense features).

"(e) Any contract for an operating-differential subsidy in the operation of a vessel with respect to which an additional defense allowance has been granted under this section shall be subject to the provisions of title VI of this act, except that such contract shall provide that if at the end of any recapture period the net profits of the operation of such vessel for such recapture period, computed without regard to profits or losses on other vessels operated by the contractor, exceed 10 percent per annum on a cumulative basis on the contractor's capital necessarily employed in the operation of such vessel as determined by the Federal Maritime Board, the contractor shall account to the United States for an amount equal to 75 percent of such excess profits, without regard to the amount of operating-differential subsidy paid for such recapture period for operation of such vessel.

America: Reluctant Champion

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mrs. ST. GEORGE. Mr. Speaker, it is a source of considerable worry to many of our people in or out of Congress to find that now that we have proclaimed ourselves leaders of the Western World, and that that leadership has been accepted by the peoples of the West, we seem so loath to play the role we are called upon to play.

The following article by Mr. Constantine Brown, the well-known columnist, appeared in the Washington Star of May 23 and brings out our rather sorry situation.

It seems to me that we suffer from the fact that we are never willing to help the strong on our side, but always spend our time on the weak, who are not our friends and only want our money.

Mr. Speaker, it is high time to remember that, "He who is not with me is against me." We are now playing for keeps, and if we do not know it, our opponents certainly do:

AMERICA: RELUCTANT CHAMPION—HALF-HEARTED "DEFENSE OF TITLE" IN EYES OF WORLD SEEN ADDING TO DIFFICULTIES

(By Constantine Brown)

Experienced American official and unofficial observers returning from travels in many areas of the world agree that our present international difficulties need not be attributed exclusively to communism.

The Soviet plots and intrigues are definitely intended to keep the world in turmoil. But there is something else which contributes to the present confusion: The fact that Uncle Sam appears in the eyes of all foreigners (friends, neutrals, or enemies) as a champion who is called to defend his title, but does it only half-heartedly, as if he had a premonition that he cannot win.

The veteran champ comes out once in a while with a powerful right or left hook which sends his opponent reeling. But these outbursts of strength are getting rarer. The trained observers say that if our leaders and our people would only realize that a real show of strength is best understood, not only by our antagonists but also by our best friends, world conditions would improve rapidly. The cold fact is that despite the national hysteria caused by the Red sputniks or the reported might of the Communist forces, we still have the power and ability to accept the Communists' challenge and defeat them. The price may be high. But no higher than if we continue the present course.

Moreover, it is doubtful, according to those in a position to judge the Soviet power accurately, if the men in Moscow and Peiping would dare issue a deadly challenge in the face of a determined stand by America. The last 12 years have proved that they retreated whenever we flexed our muscles and advanced successfully whenever we hesitated or cowered.

These evaluations are concurred in by a number of Pentagon and State Department policymakers. But they all add in haste: "We cannot do what should be done because the country is apathetic and the politicians who carry so much weight are opposed to any real show of strength. They seem convinced that peace is a commodity which can be purchased in the market and that the world is a general store where the dollar can purchase good will and friendships."

This contention was best illustrated last Wednesday when the once very influential Senate Foreign Relations Committee decided tentatively to restore all cuts on foreign economic aid and suggested a $225 million a year item for India for what appears to be an indefinite period. Similiarly a number of members of that committee expressed themselves favorably for continuing aid to Yugoslavia on the strength of the present squabble between Khrushchev and Tito.

It is apparent that the bulk of our policy and lawmakers cannot break away from the concept that economic aid dispensed indiscriminately can act as an antidote against all poison diffused in the world by international communism.

The Marshall plan completely restored the economies of Germany, France, Britain, the Lowlands, Italy, and Japan after the last war. This is interpreted by our policymakers to mean that the same miracles can be effected everywhere else, including the most backward regions in Africa and Asia. They lose sight of the fact that the countries which have made a miraculous comeback were actually very far advanced industrial countries before the war broke out. They had the know-how, technicians, skilled workers, extremely able engineers and scientists. All they needed for their recovery was the money and machine tools to put their men to work. This was supplied by the United States and was put to such good use that we are faced today with a serious challenge in the world and domestic markets from these nations.

Because the Marshall plan was so effective, the unreasonable conclusion was drawn that the same thing could be applied to undeveloped nations which had never had an industry and lacked everything from know-how to the men to handle the complex tools of modern industrial machinery. In the past the best the men could do was to guard a flock of sheep or goats or beat the harvested crops with a stick to get out the grain.

Because of the example of success in Western Europe and some Asian countries which were industrialized in the past, we are attempting to ram down the throats of people of undeveloped areas a vast program of quick industrialization. We are providing the willing recipients (the newly created independent governments) with hundreds of millions of dollars (as in the case of India and to a lesser extent Laos and Cambodia) and with technicians accustomed to the quick grasp of machinery of the American worker. This seems to be the underlying concept of settling the most confused and threatening situation in the history of the world.

Labor Union Leaders and the Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. SHEEHAN. Mr. Speaker, one of the most amazing bits of congressional testimony from a labor-union leader was presented last week by Mr. George Meany, president of the AFL–CIO.

The only interpretation one can place on Mr. Meany's testimony is that he went along wholeheartedly with the Democrats in trying to perpetuate a hoax on the American people when they called the Taft-Hartley Labor Relations Act a slave-labor act.

Mr. Meany, in not speaking out forthrightly prior to this admission, has been guilty of playing politics with the cause of union labor.

Such tactics only result in harming the rank and file of union labor because the well being of the rank and file of union labor should be above partisan political considerations.

The Chicago Tribune, in their editorial of May 26, presented their views on this matter in an editorial, as follows:

MR. MEANY AND OTHER HYPOCRITES

Remember the demands for repeal of the Taft-Harley "slave labor" Act, which were urged so vehemently in the 1952 general election by the Democratic Party, the CIO, and the AFL? Well, all those demands were mere campaign oratory.

We get this from no less an authority than George Meany, president of the AFL–CIO, who testified before a Senate subcommittee on labor reform proposals. He frankly admitted that the hollering about the "slave labor" act was political and quoted an unnamed Democratic Senator as saying that keeping the issue hot was more important than any action to repeal the law.

Of course Mr. Meany, his union associates, and the Democratic politicians knew then, just as they concede now, that Taft-Hartley was far from being a tough law. In fact, some abuses that the law sought to correct continue to exist and, as the recent racket committee hearings have shown, union members are still being robbed and exploited by union officials who enjoy powers and privileges like those of ancient royalty.

Mr. Meany conceded to the subcommittee that the union movement is still full of crooks and racketeers, but he insisted that it needs only a little help from Congress to clean house. He was willing to accept legislation requiring financial reports by

both unions and employers. As for laws to regulate union elections, give members the right to vote on strikes, and other measures to protect the workers and the public, Mr. Meany was against all of them. He asked the Senators not to be misled by those who would subvert the legislative process to cheap political ends.

In his view it was all right in 1952 to use the slave-labor slogan for cheap political ends, but now he regards any serious effort to enact labor reform legislation as an undertaking for cheap political ends. He was willing in 1952 to help the Democrats misrepresent the mild Taft-Hartley Act as a harsh, restrictive measure, but now he is unwilling to accept any restrictive legislation in spite of the overwhelming evidence of need for it.

There is a word for Mr. Meany's conduct: hypocrisy. The same word applies to the Senators who praised his testimony. They know we need laws to protect the rights of individual employees and to deal with the effects of the national union trusts, but they are scared to say so. Just as they yammered about "slave labor" in 1952, they will yammer as directed by the union bosses in 1958.

Report From Congress

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. HILLINGS. Mr. Speaker, following is my regular report to my constituents in California's 25th Congressional District:

COMMUNIST CLOUDS OVER LATIN AMERICA

There is little doubt that the master strategy of the Kremlin now is directed at our friends in Latin America. The Communist plot was tellingly revealed by the demonstrations and riots that threatened the lives of our Vice President and his wife during their good will tour of South America. This tour has placed in sharp focus the following:

1. We can be proud of Vice President RICHARD NIXON and his wife for the remarkable courage, dignity, calmness, and diplomacy they displayed in the face of agitators who obviously were bent on destroying them.

2. Our policy toward our neighbors in the Western Hemisphere must be given a thorough reappraisal, for there was more to the demonstrations against the Nixons than just Communist agitation; there is economic distress in many of the countries to the south and it is absolutely necessary that our country take this into account on future foreign-aid programs.

3. Communist infiltration of the Western Hemisphere has abandoned the subtle technique and has reached the point of outright aggression against the institutions of personal freedom and liberty.

Again we can be proud of our outstanding constituents in the 25th Congressional District—Vice President and Mrs. Nixon.

RED MENACE STILL HERE

Recently the San Francisco Chronicle attacked me for my stand in support of the action of immigration officials in deporting one William Heikkila, an admitted Communist, to Finland. Some of you may have read about this case in the newspapers. It was claimed that Mr. Heikkila was deported without just cause; was spirited away in the dead of night while a court order was pending; that he had no opportunity to inform his wife or attorney of his arrest and that he could not speak or write the language of Finland, the country to which he was being deported; that he had no relatives there; and that the congressional investigation of the case had only taken 1 hour. My investigation was termed another "red herring" in much the same manner as the Alger Hiss case. All oft hese allegations are false. The plain facts are that Heikkila has lived in the United States for 52 years without even bothering to become a citizen; that he has refused under oath, as late as December 1956, to tell whether he is or is not an agent of the Communist Party; that his arrest was perfectly legal, and that he was allowed to notify his family. As a lawyer, as a Congressman, and as a citizen, I have always believed in due process of law. For 11 years, Mr. Heikkila fought his case through the courts and even though an alien, had every benefit of our judicial system although he was dedicated to the overthrow of our Government. I predict that as a result of the continuing investigation of this case by my committee in the Congress, the evidence will show that Heikkila does not deserve to remain in our country and that the United States Immigration Service was perfectly justified in deporting him to his native Finland.

NUCLEAR TESTS SHOULD CONTINUE

There has been a clamor for the end of testing of nuclear weapons. I would subscribe to the end of such tests 100 percent if the Soviet Union would agree to an ironclad inspection plan. But the leaders of the Kremlin won't agree to inspection despite all the propaganda that has been pouring out of Moscow that Russia has ended such tests.

I have sponsored a resolution to express the sense of the House of Representatives that such tests should be continued by the free world as long as the Soviet Union refuses to agree to a suitable inspection plan and presents a threat to the security, freedom, and liberty of peoples in the free world.

Moreover, I checked with Adm. Lewis Strauss, Chairman of the United States Atomic Energy Commission, on the safeguards being taken to reduce the hazard of radioactive fallout during the current experiments being undertaken at the Eniwetok Proving Ground in the mid-Pacific area.

Admiral Strauss told me: "Protection of health and safety is a primary consideration during the current tests. * * * The test series will advance the development of weapons for defense against aggression whether airborne, missile-borne, or otherwise mounted. * * * Test operations will be conducted in a manner designed to keep as low as possible the public exposure to radiation arising from the detonation of nuclear weapons."

Law for Weapons in Resolving Disputes Between Nations

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. REES of Kansas. Mr. Speaker, under unanimous consent approved by the House, I am including an interesting and informative address delivered by the Honorable Charles S. Rhyne, president of the American Bar Association, before the Bar Association of Kansas on May 9, 1958.

I am sure Members of the House and Senate will be especially interested in reading this well-prepared statement:

Those of us who have chosen law as our life's work certainly do not have to be sold on its importance and its value in our daily lives and as the very foundation of our governmental system of ordered freedom. Yet perhaps because we are so close to our great structure for the administration and preservation of justice, we occasionally tend to forget the magnificent role which law has played throughout our Nation's history and throughout the entire course of civilization as the protector of the inherent and natural rights of man.

On May 1, only just recently, by Presidential proclamation we celebrated Law Day, U. S. A. The sole purpose of this program was to refresh in the minds of our people the extent to which the entire culture which we so proudly call the American way of life is built around the concept of freedom under law. Engaged as we are in the current great battle for the minds of men which seriously threatens the very survival of individual freedom, the need to clearly recognize and realize the potential role of law as a substitute for weapons as the decision mechanism in international disputes stands as a great challenge to the legal profession.

The vigorous activity of the organized bar in promoting Law Day, U. S. A., has been a wonderful experience. The great force unleashed by the concentrated effort of our profession made May 1, 1958, one of the most significant and meaningful nationwide celebrations in our history. For through hundreds of local, State, and national programs, our people have taken a tremendous initial step toward publicizing for all the world to see, the most essential ingredient in our way of life—the rule of law.

Never in all history has any joint effort of the organized bar exceeded that which took place on Law Day, U. S. A. Lawyers, judges, and law teachers joined forces to offer the 28,000 high schools, colleges, civic clubs, and associations, speakers to talk on law and what it has meant and can mean to America. These programs were planned and executed with an enthusiasm unparalleled and unsurpassed in all bar organization history.

Governors and more than 1,000 mayors released proclamations stressing the great significance of Law Day, U. S. A. Senators, Congressmen, and other public officials added endorsements and laudatory comments. More than 100 lay organizations cooperated in making Law Day, U. S. A., the most meaningful day in legal history. Newspaper stories, editorials, coverage in articles in major magazines such as Life and Time, nationwide radio and TV coverage of speakers, and public service "spot" announcements, all combined to insure that maximum public attention focused on the idea and ideals of Law Day, U. S. A. And I firmly believe that the result of this great cooperative activity has been to successfully launch the most important program ever undertaken—the task of selling the rule of law as the only means of securing a lasting peace.

In the outer-space-satellite competition the Communists can make boastful claims. They can do likewise with respect to atom and hydrogen bombs and missiles. But they dare not even suggest individual human freedom.

In putting his finger on human freedom as the ideal we offer to the world, President Eisenhower in his proclamation of Law Day, U. S. A. has flung out as a challenge an achievement of our system of government to which the Communists have no answer. If the Communists meet our President's challenge and offer the people behind the Iron Certain individual human rights and freedoms, that freedom will destroy the basic principles of communism.

When we talked about justice under the rule of law on May 1, its absence behind the Iron Curtain was apparent to all. When we talked about freedom under law, Hungary was forcefully recalled in the minds of men. And when we talked, as we must continue to talk, about peace under law—peace without the bloodbath of war—we made a cogent appeal to the foremost yearnings of all peoples everywhere.

To me the ultimate weapon—the decisive weapon—in the cold war fight for the minds of men is a convincing presentation of what individual freedom under law really offers to mankind. Our country constitutes the greatest example of that freedom and its meaning. But we have never yet used or expressed that concept of human freedom in a clear vision which all men can comprehend. As the cold war grows hotter with the hot weapons stalemate, we must step up our propaganda of truth with individual freedom under law as the ideal we offer for mankinds's salvation. What better way could this be done than to say to the world look at us and what this concept has done and is doing for us? Law Day, U. S. A. has thrown the spotlight of the world upon us and that concept, and the rule of law was and always will be its own "best evidence" of its priceless value.

We have through Law Day, U. S. A. taken the first step on the road to peace. But freedom has never been free, and we have a long way to go before we can reach the great goal of the universal rule of law. However, if civilization is to survive in the space era, law and reason must replace weapons as the ultimate decider of disputes between nations. That is the thesis I am here to present for your consideration.

One must concede that weapons must maintain peace and remain as the ultimate decider until the mechanism for peaceful settlement of disputes between nations under the rule of law is developed and accepted. That such development and acceptance cannot come dramatically and be achieved overnight is also conceded. The use of law to replace weapons in the international arena must go through many growing or formative stages before the idea can function as it should and must. But when the alternative is the destruction of the free world, the costs of success become immaterial.

Let us begin by focusing upon the broad picture of the world in which we live. The miraculous technical and scientific achievements of our day have created unprecedented peril from abroad and growth and change at home. Distance is now almost meaningless as rapid transportation and communications have shrunk nations to neighborhoods. Our era has witnessed such achievements as flight faster than sound, satellites in space, the splitting of the atom, miracle drugs, and other rapid and turbulent changes in the scientific, economic, and social fields almost too numerous to name or to evaluate under prior standards and experience. The whole pattern of our existence is being reshaped at an undreamed of pace.

This in capsule form is the background picture against which I would like to discuss with you a readjustment of our thinking so as to take a new approach to the all-important problem of disarmament and peace to meet the needs of our people in the space era. No one can deny that the No. 1 problem of our day is how to achieve and maintain a lasting peace. Certain it is that this problem has plagued man since the beginning of time. Certain it is also that never before has its solution been so imperative. A generation that has achieved so much heretofore deemed nearly impossible should not be dismayed by these past failures but, in fact, be spurred on by the challenging of our times to achieve this great goal of peace.

We are engaged in an ever-accelerating arms race with Russia, and we must win this race for supremacy in capacity to destroy, on that point, I find no disagreement in Washington or elsewhere. It is recognized that peace in today's world can only be maintained by our winning the arms race and by our keeping on winning it even though this requires billions upon billions of dollars and a great economic drain upon our Nation. No one can or will quarrel with the fact that 64 percent of the proposed new budget goes for national security, in fact, the only quarrel is that the amount may be too small. But a world divided into two mighty armed camps is no pleasant future to envision. The peril from such a situation is obvious. History teaches that every arms race has ended sooner or later in war. We must therefore conclude that war with Russia is as certain as tomorrow's sunrise unless a formula or mechanism can be developed to maintain peace other than through arms. It is such a formula or mechanism which the rule of law offers, with persuasion and reason replacing weapons in the all-important international dispute arena. We cannot be saved from the holocaust of war by science or weapons alone.

As we listen to the roar of current history it is absolutely clear that we must learn to live together or see our civilization go up in the senseless devastation of war. The atomic and hydrogen bombs, the sputniks, Explorers, and Vanguards, and the recent Russian accusations that our Strategic Air Command is threatening her boundaries which we, of course, have hotly denied, have set everyone's nerves on edge. The realization that hot war, regardless of who is right or wrong, may well result in mass extermination has attuned the people of the world to an overwhelming desire for peace which is probably stronger than any such desire in all history. There is a common realization that under present conditions every man, woman, and child will be in the frontline trenches if the holocaust of world war explodes. This most urgent desire to prevent war thus offers a unique and unparalleled opportunity to develop the legal machinery that is essential for peace with the overwhelming support of worldwide public opinion. Never have the people of the world needed or demanded leadership on the issue of peace in a more concerted way. Either we furnish that leadership or someone else will.

Law exists now in some form in all nations. It is a universal term which all peoples understand. Justice and law connote innate fundamentals of fairness embodying the wisdom of the centuries. They are so understood by all peoples. The average person is not learned in the law but the idea of justice under the law is to him very real. We need not so much then to acquaint the people of the world with law but to strengthen and use it in an area where it is little used today. Of all human institutions, law has the best historical claim to satisfy the need for peace and order. Law could offer the long sought common denominator for the creation of a method for the settlement of disputes between nations short of war. I firmly believe that law offers the best growing point toward order in a disordered world and the best path to disarmament and peace.

The most important public service open to our legal profession today is therefore the opportunity to mobilize the prestige and the power, the sanity and the skill, the judgment and the judicial temperament of the lawyers of the world in behalf of the goal of peace under law. We must build upon the experience of the past and the possibilities of the present to insure a peaceful future. To do this we lawyers must evaluate world law and develop new international legal machinery which will maintain essential national sovereignty, yet still provide for peaceful settlement of disputes between nations under the rule of law.

Disarmament conferences have been held down through the centuries, but no agreement resulting from such a conference has ever contained a successful formula to maintain peace. The best evidence of this is the fact that every disarmament conference or agreement has been followed sooner or later by an arms race—then war. My study of the conferences and agreements of the past 100 years reveals that the reason they have failed was an inherent inability to devise a method for so weighing armed might that all participants in such conferences and agreements would always feel that they were treated fairly. In essence this means treated equally.

The formula here presented does not contain this inherent defect, as under it all nations would be on a basis of equality before the law.

Are there reasons why nations should not be on a basis of equality before the law? I think not. There are perhaps some disputes to which present legal principles cannot be applied, but we of the legal profession have always developed new laws to meet the needs of new problems. Our creative capacity should not be paralyzed now by the constant crisis in which we live, but it should be in fact spurred on to ever greater achievements. We must not allow law, legal procedures and legal tribunals to continue to lag behind the needs of the world in this vital field of settlement of disputes between nations.

And so it is that on the vast new frontier of the international community, disputes previously settled by the bloodshed of a war must be settled by tribunals of justice. The International Court of Justice is perhaps the best known but the most unused existing tribunal of justice for the decision of international disputes. It has decided only an average of slightly more than a case per year since its creation in 1945. This situation indicates that as presently operated it may be inadequate and need changes to make it more acceptable, effective, and useful.

The statute creating this Court allows it to sit—in its discretion—all over the world and in chambers of three or more judges. So far it has sat only at The Hague. The inaccessibility of the International Court and lack of knowledge of its jurisdiction, procedure, and precedents are major reasons why it is not used by nations to settle their disputes. This Court should make known its willingness to sit elsewhere than at The Hague. The entire Court, or even a chamber of the Court, should sit rather constantly at United Nations headquarters in New York, for example, so that its advisory jurisdiction would be used more than it is now, and law would move more to the forefront in the deliberations of the United Nations.

Just think of the possibilities for calm and considerate use of law in this Court in such disputes as Suez, border incidents such as that between Spain and Morocco, and similar controversies now fought out in the arena of power politics and backstage diplomacy or by armed might. Public opinion which forced an end to the use of arms in Suez could—if properly and justifiably directed—so crystallize as to require use of this Court, or of other such tribunals, and force reluctant nations to take their disagreements there for decision.

Nations which have been accustomed to settling their disputes by hard bargaining, with little regard for justice or law, will begin to realize that it is to their advantage in the long run to submit their disputes for decision by impartial judges under the rule of law. The idea of the supremacy of intellect over physical violence should ultimately be decisively accepted and put into practice by mankind. Thus on a gradual

basis our goal can become a reality. Let the free nations of the world agree on a plan to snuff out war among themselves before the next step of tackling Russia. Let us offer this plan for settlement of disputes under law in the courts as the free world's path to world peace. And we should show our good faith by positive action such as adopting the Organization of Trade Cooperation. If we are not willing to take the lead, we cannot expect others to follow.

World government, which will not and should not arrive in the foreseeable future is not a part of the picture I paint. Such a government has inherent defects similar to those of disarmament agreements. This idea of peace under law envisions law which can grow out of the enlarged use of law by the world community and does not require any super or other world legislative body.

No plan for peace is worth mentioning unless it takes Russia into account. And Russia could not be expected to favor a plan for peace under law and justice. But this plan can capture the minds of the uncommitted peoples of the world for its sponsors and leave Russia naked of friends. Even Russia does not envision such nakedness as desirable—that is the reason for her constant propaganda effort. To launch this plan—unlike a disarmament agreement—we do not need her, nor do we need to trust her word. She can hurt only herself by her failure to cooperate. Russia's often dishonored signature is worthless on a disarmament or any other agreement, but here only actions would count and all could evaluate those as we go along developing peace under law.

The history of the rise and fall of nations and civilizations is the history of the rise and fall of ideas. Among all the contending ideas which have fought for the minds of men since the dawn of history, the concept of individual human freedom has been outstanding. On this concept, which embodies the natural law, which was the heart and core of Magna Carta, which is the spirit and guiding light of our Bill of Rights, we can build with every confidence that it is a foundation not of sand but of everlasting rock.

An idea can be more powerful than any atom; and an idea whose time has come is too powerful to deny. Our task is to see to it that the time of the rule of law as a decider of international disputes arrives before atomic annihilation overtakes us.

Mankind stands at the crossroads of one of the great dramatic and decisive moments of history. One road can lead to war and annihilation or, what is worse, the slavery of communism. The other road can lead to peace and freedom under law.

As a concrete program I suggest the following as a broad program for action.

1. The State Department, which now has no group or section concentrating solely on law as a replacement for weapons, should create an entirely new section staffed with experts whose sole and exclusive function would be to concentrate on law as a program capable of creating a breakthrough to achieve and maintain peace. This breakthrough is not only possible but absolutely essential. The mere knowledge that our Government is making a serious effort in this regard would revive the hopes of peace-loving peoples throughout the world.

2. Intensified effort to achieve such a breakthrough should be the organized bar's major project and the lawyers in our country should be urged to emphasize individually the importance of international law and of the development of a rule of law in international affairs. They should think about it, talk about it, write about it, and work on the problems themselves on a constant basis, as their ability and circumstances permit. Law Day, U. S. A. is a start in the right direction. It will help to provide the essential foundation of crystallized public opinion in support of the rule of law in the international community. And this program should be expanded to reach the legal profession all over the world and convince it to further the same objectives. By common effort the legal professions of all nations can succeed in establishing and maintaining peace under law.

3. Every institution of legal education in America should make international law a required course, and teach that knowledge of international law is an essential to a successful legal career in the shrunken world in which we now live. We should contact law schools all over the world and urge them to do likewise.

4. All Government agencies should further the use of law to the greatest possible extent in all international contacts and in particular should seek and take every opportunity for progress along the road that leads to the substitution of law for weapons in any and every field of international interest from law to guaranty of world investments to the protection of national boundaries, and to the settlement of all international differences.

5. The United Nations and all other international agencies should be urged to bring law, legal procedures and legal methods to the forefront in all deliberations, and particularly by making more use of the International Court of Justice and its advisory jurisdiction.

6. The lawyers of America should unite in urging removal by the United States of the present reservation which makes inapplicable to our country the compulsory jurisdiction of the International Court of Justice, to the end that we as a nation will accept the jurisdiction of that court in all international disputes in the future.

I sincerely believe that the combined brain power of lawyers can create and achieve as greatly as our scientists in meeting the needs of the world today. From its inception to the present zenith of its power our governmental machinery has been in large part conceived, formulated and operated by lawyers. Now is the time for leadership in a broader and more difficult area. Let us use our talents in taking the broad vision of a formula for peace under law herein presented and making it a reality in the world community. As lawyers we should be proud that our profession is afforded this opportunity to render such a magnificent service to mankind. No greater challenge exists for any profession. No greater public service can be performed.

Voting Restrictions—A Report From the South

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. ROOSEVELT. Mr. Speaker, last week I published reports on voting restriction in eight Southern States in the CONGRESSIONAL RECORD. These had been part of a recent conference on voting restrictions held in Washington under the auspices of the Southern Conference Educational Fund. The meeting concluded with the following summary of the reports.

Additionally, I include in the RECORD today a special report outlining a registration drive in Baltimore, Md., which resulted in registering 15,000 new voters in 12 months:

SUMMARY OF REPORTS ON VOTING RESTRICTIONS IN SOUTHERN STATES

(By James M. Nabrit, Jr., Esq., Howard University, Washington, D. C., Southern Conference Educational Fund's Conference on Voting Restrictions in Southern States, Washington, D. C., April 27, 1958)

A summary of the reports made to this conference on voting restrictions in Southern States supports the shocking conclusions reached by many able students of the Negro vote and voter in Southern States in previous studies. These are that: (1) Negro voters must run the gauntlet of apathy, ignorance, fear, bodily harm, and racial discrimination in order to register as voters; (2) having registered, they must then face these same obstacles in order to vote; and (3) if they indicate a desire to run for office or pose a threat to entrenched segregationists, they face repeated purges of the registration or voting lists or actual carving up of entire counties in order to nullify any effective participation by them in politics.

These reports indicate the need for three types of action: (1) Political action to enlist national party support of a strong and decisive report by the Civil Rights Commission; (2) a southwide State by State campaign to get Negroes to register; and (3) an educational campaign to instruct Negroes in the value of the vote, the use of the ballot, how to register, how to vote, and that voting is a Federal right.

The Civil Rights Commission which is charged with the duty of investigating and recommending action with respect to these and other impediments to the free and untrammeled exercise of the right of suffrage by the Negro should have an easy job of locating and pinpointing these abuses and violations of the fifteenth amendment. That is, if it ever begins operation the records of the hearing on the civil rights bill in 1956 and 1957 are full of testimony of threats, violence, murder, roving registration and polling places, absent registrars, trick questions asked of Negroes only, repeated purges of voting lists, and economic and political intimidation of Negroes by whites.

The Southern Regional Council in 1956 reported a total of 1,238,038 Negro voters in the South, located by States, as follows: Alabama, 53,366; Arkansas, 69,677; Florida, 148,703; Georgia, 163,389; Louisiana, 161,410; Mississippi, 20,000; North Carolina, 135,000; South Carolina, 99,890; Tennessee, 90,000; Texas, 214,000; and Virginia, 82,603. In 1958, we have probably 200,000 more, with a likelihood of a total increase of 1 million Negro votes in these States between 1956 and 1960 if purges do not offset a large part of this gain. If the Civil Rights Commission does a dynamic and effective job, this increase will certainly occur, and it could, in fact, be doubled. If the Commission is ineffective or weak in its technique, timid in its approach, and apologetic in its report, this increase can actually be less.

Many of the more subtle devices for restricting the Negroes' right to vote are the more difficult to combat. Some of these are literacy tests, knowledge of the names of district and State office holders, use of a blank sheet of paper for registration purposes and requiring the candidate to fill it in correctly from memory, or judging correct qualification for voting by correct use of grammar and punctuation. One of the most biased tests is the oral test where the arbitrary whim of the registrar dictates the questions and answers and where obviously no record of either may be found.

Effective participation in politics requires more than registration and voting, essential as these basic requirements are. But even

these first basic steps seem difficult for large numbers of Negroes to take, although no barriers of law or threats of violence or economic reprisals impede them. As a matter of fact, however, barriers to these elementary steps do flourish to some extent and in varying degrees all over the South. Numerous obstacles to registration combine to prevent both registration and voting. One of the most effective restrictions is the purging of Negro registrants' names from the voting lists. It is true that the law permits an appeal when a registrant's name has been stricken from the rolls, but such appeals are of little avail, because the election at which the registrant intended to vote will have long since passed before an appeal can be heard. Such appeals have no priority over pending cases triable at the next term of court following removal of the registrant's name. The latter fact makes it highly desirable, if not imperative, that a challenge to a citizen's right to remain on the registration rolls should be required to be made in ample time to permit final determination of the issue before the election in which the registrant intended to participate. Such a provision, which is included in one of the proposed Federal civil-rights bills, would nullify one of the most nefarious devices used to deprive citizens of the rights guaranteed by the supreme law of the land. A lack of understanding of political processes and the dominant influence of factors outside the South are potent forces which also must be taken into account in any analyses of the future of the Negro voter in the South.

We know that all over America voting participation is lowest in the low-income, low-education groups in our population, black as well as white. Further we know that apart from restrictions on voting because of race or color we should expect a lower level of participation by Negroes in the black-belt counties of the South. That is exactly what we do find. There are few sections in America where the income and education received are as low as they are for Negroes in the black belt. Here is where the Negro population is thickest, where in many counties he outnumbers the whites from 2 to 1 to as high as 7 to 1. Here too, is where in county after county, there is no Negro registrant or only a handful of teachers and professional Negroes on the voting list. The number averages out at about 30 Negroes registered for 1,000 Negroes of voting age. This, one recalls, is the rural section of the South, the center of active, emotional opposition to the Negro.

Finally, it should be borne in mind that despite all of these restrictions and dangers, Negroes have continued to seek registration. But if the whites of voting age register 50 percent of this potential and Negroes only 24 percent of their voting potential or less, the power of the Negro vote will not be materially increased.

One should not overlook the fact that the potential white voter in the South, or even in the North, has a low registration record, while the registered voter has an even worse voting record. A 20-, 30-, or 40-percent turnout of voters is an amazing event. Negroes do not have sole claim to apathy in this area. Under our system political parties and trade unions make registration and voting their business. The future of the Negro voter in the South is intertwined in their growth and development.

The future of the Negro voter in the South may very well be in the hands of voters completely outside that region and subject to forces and factors far removed from him. This may be the case, not because of his apathy, lack of organization or leadership, nor because of the resistance to his participation in politics by white southerners, but because his future is bound up inextricably in the future of political parties in America, in their program and policies, in the effect of Negro voters in the North and West upon political parties, and partly depends upon the pressure of outside or world problems upon American political and governmental policies and actions.

The Negro, as a member of the working class, will normally give his allegiance to institutions which have as one of their major policies the welfare of workers. As these institutions develop and change the Negro voter will tend to switch his affiliation as he identifies their economic philosophy and its relationship to him. Further, the Negro voters in the North and West wield definite influence on the platforms and policies of both major political parties, which in turn may have some effect on the Negro voter in the South. The present civil rights bill was foreshadowed in both party platforms in 1956, for instance. In addition, integration in the armed services and the efforts of the President's Committee on Government Contracts to insure equal job opportunities for Negroes, set patterns of public behavior which in turn condition the thoughts and actions of all sections of the country. Furthermore, as the leader of the free world, the United States wants to win the confidence and support of all of the uncommitted millions of colored people in Asia, Africa and the islands of the sea. Thus, it becomes necessary for America to dispatch the Vice President to these areas as a good will ambassador; to invite their rulers here for the purposes of developing and keeping their good will; and to demonstrate at home that racial hatred and prejudice are not a policy of the Government. These high level policy considerations of the Federal Government are powerful instrumentalities in the field of Negro suffrage.

To the extent that this future can be decided within the South one cannot be too optimistic as to what it portends. Persons or symbols seem essential for rallying masses of Negroes for political activity. I mean political leaders, office holders or party functionaries. Politics require organizations and money, patronage and self-interest motivation. Within the southern framework many of these essentials seem to be missing. These observations do not ignore or discount the election of Negroes to public office in the South in recent years, nor the increased registration and voting of Negroes since the white primaries were abolished by the Supreme Court. These are encouraging signs but in my opinion are of little real significance, except for purposes of indicating possibilities or for creating a political esprit de corps.

A more pressing demand is the immediate need for the registration of an increasingly larger number of Negroes so as to furnish a reservoir out of which actual voters may come. The very existence of a vast number of registered Negroes may have an astonishing result. True, whites may become alarmed and register in larger numbers than usual, but, as is more likely the case, they may very well remain indifferent. In either event the growing Negro registration will function as a strong inducement to white politicians to seek the Negro vote. This latent threat of a heavy potential vote is the key to the national concern over the Negro vote. Politically, it is considered inherently dangerous to ignore it even at present.

The Negro must be aroused until he seeks registration by the tens of thousands. It is much easier to deny registration to 1 or 10 than it is to 100 or 1,000.

In conclusion, a summary of these reports reflects numerous, subtle and ingenious restrictions which operate to curtail the effectiveness of the Negroes' right to vote. A strong campaign to increase the registration of Negroes is a paramount necessity. Let us get it going.

The Register and Vote Campaign in Baltimore

(By Dr. John L. Tilley, pastor of New Metropolitan Baptist Church and chairman of the campaign)

The Citizens Committee on Civil Rights legislation is conducting a register and vote campaign in Baltimore which has resulted in the addition of more than 15,000 voters to the rolls in 12 months.

This drive was set off by refusal of the Baltimore City Council and the Maryland State Legislature to pass civil rights legislation presented to them. It was spurred by statements that councilmen and legislators considered the Negro vote of no significance or consequence. (The Afro-American reported that fewer than 80,000 of the 180,000 Negro adults were registered.)

A resolution was presented to city council to disapprove of discrimination by hotels in Baltimore and ask them to relax discriminatory practices, but the measure was beaten by a sizable margin. Opponents of all civil rights legislation are reported to have stated with contempt that the Negro's vote was inconsequential.

Several civil-rights bills drafted by the Citizens Committee on Civil Rights Legislation were presented in the legislature but were defeated. Senator Della from the sixth district even presented a bill to make it unlawful to present a civil rights bill to the legislature. This despite the fact that Senator Della is from a district predominantly colored, which has 1 housing project with 15,000 Negroes and only a few white persons. It is reported that he told some Negroes who approached him that the Negro vote was of no significance to him.

The citizens committee, of which the Reverend Marcus G. Wood is chairman, decided that the only effective answer to these insults to the dignity of Negro citizens was to get all eligible Negroes to register; to educate them in the proper use of the ballot, and to urge them to vote for persons and measures which would promote full civil rights.

The committee was aware that petitions, telegrams, and letters have but little weight with members of legislative bodies if they are not from people registered to vote.

The committee also concluded that in neither the Democratic nor the Republican Party is there hope for freedom of all people, but in a nonpartisan civil-rights movement made up of all liberty-loving people, whether Democrats, Republicans, or Independents, white or colored. The committee saw an urgent need for an intensive person-to-person campaign to inform, arouse, and direct people to register and vote.

It decided that a non-partisan register and vote campaign could be carried out most successfully through the churches with the pastors providing the leadership. There are churches in practically every community; the membership meets regularly; churches cross all lines in society; they are committed to the ideal of serving and meeting the basic needs of people; churches have the resources and techniques for moving people to service.

We worked out a detailed program for carrying our campaign to the precincts and blocks. The pastors of the churches headed up certain wards and precincts. The heart of the drive is house-to-house canvassing for the purpose of urging people who had not registered to do so at once, to get the names and addresses of those not registered, and to get registered persons who had moved to report their changes of address. We have written up and mimeographed the detailed plan, and copies of it are available for the asking, so I will not go into that here in the limited time available.

We have also worked out a number of forms which proved valuable. These facili-

tated the collection and organization of information which will be useful in subsequent register and vote programs and in pushing for civil rights legislation.

The citizens committee recognizes that getting people registered to vote is only one phase of a most vital program. Motivating people to use the ballot and to use it for the best interest of the local and larger community rather than for narrow, selfish interests is a matter of major importance.

By the time of the next election, the Citizens Committee on Civil Rights Legislation plans to list the legislation that we wish to have passed in the city of Baltimore and the State of Maryland. We will interview the candidates to determine their stand on the civil rights legislation that we will want passed. We will consider the record and commitments of each candidate for office and will determine which ones we can conscientiously endorse and those we cannot endorse. We will then communicate our findings to the people through two media:

1. We will send out letters to the citizens who are already registered and those who register during the campaign. We will have their names in our files from the block canvassers' data sheets.

2. We will inform the pastors, and leaders of other cooperating organizations, who will be asked to mobilize the block workers who canvassed the people to get them to vote; and to get them to go back to the people with written materials and inform them of the issues and the position of the candidates concerning them.

This should get some friends of true democracy elected to office and keep some enemies out. This will be an important step toward true democracy.

Letter From Dr. Harry M. Hoxsey, of the Hoxsey Cancer Clinic

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1958

Mr. BURDICK. Mr. Speaker, I have here a letter which I believe should be called to the attention of the Members. Inasmuch as cancer is one of the most vicious killers of human beings known to science, it seems to me that anyone offering the possibility of a cure or the alleviation of this deadly disease should be given a chance to help the sufferers who come to him, and that as an American citizen he should not be subjected to persecution by those who may not agree with him or support his methods. I believe this to be particularly true inasmuch as I have in my files many letters from people who claim to have been completely cured by Dr. Hoxsey's treatment.

The letter follows:

HOXSEY CANCER CLINIC,
Dallas, Tex., January 31, 1957.

Mr. JOHN L. HARVEY,
United States Department of Health, Education, and Welfare, Pure Food and Drug Administration, Washington, D. C.

DEAR MR. HARVEY: According to your latest press release concerning me and the Hoxsey treatment, it is the intention of the Food and Drug Administration to post warnings against this treatment in all 46,000 post offices within the United States. It is the apparent objective of your department to give the general public the impression that I am, in the eyes of the Government, a criminal, since most of the posters in the post offices are of wanted criminals. I have been advised that, when you do this, you will be violating my constitutional rights, and I intend to take action against this un-American persecution.

In these warnings against the Hoxsey treatment for cancer, the FDA has asserted that it has conducted a thorough investigation of the Hoxsey treatment, and that not a single cure was affected. If this be true the FDA, without ignoring me (I am an American citizen, and yours is a department supposedly a servant of the American people—not yet its master) or without sidestepping the issue, or without lying about it, can and certainly ought to furnish me with (1) a list of the patients investigated; (2) information on where this alleged investigation was held; (3) by whom it was conducted; and also all other pertinent information relative to this alleged investigation.

In previous press releases, the FDA stated that a Dr. J. R. Heller of the National Cancer Institute, which, by the way, is dependent upon the people's tax money for its support, conducted an investigation of 77 case histories which were furnished him by the Hoxsey Cancer Clinic. I challenge you to send me copies of all data relative to this investigation. If I do not receive copies, I shall rightly assume that no such investigation was ever made, and that the FDA again has released lies about me and my treatment of cancer.

It is now known that Dr. Heller never undertook the investigation at all. He referred this task to a Dr. Gilcin Meadors. During a court trial in Dallas, Tex., Dr. Meadors testified under oath that he did not write a single letter, in an attempt to investigate the 77 case histories of the patients in question. As a result, when he sat on the witness stand, in the Pittsburgh trial, and this testimony came to light, presiding Judge John L. Miller refused to allow him to testify further, on the grounds that he had not conducted an investigation. In further questioning, it came out that all he had done was give the case histories a very casual "perusal" and formed a personal opinion that the case histories did not meet his criteria.

Also, Dr. David Karnofsky, to whom I had turned over a group of cured patients' histories, was called to Pittsburgh to testify for the Government. Judge Miller denied his testimony on the same grounds; that is, that he had not made a thorough investigation of the patients, their pathological reports, and the hospital records.

Mr. Harvey, whenever you notify 165 million American people that the Food and Drug Administration has made a thorough investigation of the Hoxsey Cancer Clinic (where we have currently over 10,000 patients under treatment and observation) somebody is perpetuating a grand lie on the public. The American Medical Association, Food and Drug Administration, National Cancer Institute, Sloan-Kettering Foundation, American Cancer Society, Damon Runyan Fund, Dallas Medical Society, and the Texas State Medical Board all have been repeatedly invited (even urged) to come here and make an unbiased investigation of my clinic. None have ever come. And, Mr. Harvey, you know this well.

Here, again, I want to extend such an invitation. If you will come, or cause to be sent, delegates from your Administration, I and my entire staff will cooperate fully, in every way possible, so that you and the FDA will, once and for always, know the truth: Whether my clinic really cures cancer sufferers. I am willing to stand on the finding of this delegation—good or bad. Then, and only then, in this free and democratic Republic of ours, should a Government agency conduct a national denunciation against me and my cancer treatment.

Mr. Harvey, since I assume that, as a servant of my Government, you do want to be fair and conduct your office after an honorable pattern, I offer the free run of my clinic and facilities and my staff, and offer to open all my files and records for and to a delegation of your choosing. I suggest you send the following: Five M. D.'s (not on Government payrolls, and not members of the American Medical Association), 5 scientists from Government hospitals and research foundations, 5 members of the United States Senate or Congress. If I fail to prove to this group of scientists, doctors, and experts that you would send here, that I have not cured—after radium, X-ray, and surgery have failed to cure—the deadliest types of cancer, then I will no longer protest to your advertising that my treatment is worthless. Moreover, if I fail to prove to this group of experts that the Hoxsey method of treating cancer has cured numerous pathologically proven, metastatic cases of the deadliest types of cancer, I will voluntarily lock my door. But, until then, I want you to know that I know that you know that you are persecuting me, by continuing your campaign against me.

I fully realize how easy it is for you to sit in your Washington Ivory Tower and condemn me. Have you not examined the testimonies of the pathologically proven cured patients I put on the witness stand in the Pittsburgh trial? Or, have you examined it and fear to come here and make a firsthand examination of my clinic and my cancer treatment? The FDA has admitted that "it may be a long time before we can close the Hoxsey Clinic." I want you to know, Mr. Harvey, that as long as there is a drop of blood in my veins, or a breath of air in my body, I shall fight for the right of cancer sufferers throughout the world to elect a treatment for themselves, of their own choice.

The louder the voices against me, and the more hostile my enemies become, the more cancer sufferers come to my clinic. They come because my treatment has been proven successful. They come because they talk with the dead restored to life who have received the Hoxsey treatment. They come because they see the living proof results of my clinic. I stand ready at all times to substantiate this living proof.

Enormous funds are constantly being solicited through press, radio, TV, movies, and other mediums to be used in chemotherapy research for the treatment of cancer. Don't you think that representatives of some of these research foundations should come to Dallas and make an investigation of the largest clinic in the world using the chemotherapy treatment, and getting results?

For the convenience of the Government, and in order to get an investigation underway without delay, I would be willing to pay the expenses of this entire project. So, in the name of suffering humanity, and millions now doomed to die of the dread disease, come and make this investigation.

Again, let me repeat: If you should find that I am not curing both internal and external cancer cases, the Government will not have to put me out of business. I would want to be out of business.

I trust this letter will bring an immediate reply as to when I may expect your investigating delegation.

Until then, I am

Most sincerely,

HOXSEY CANCER CLINIC,
HARRY M. HOXSEY, N. D.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my weekly newsletter to constituents for May 24, 1958.

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

The Department of Commerce and related agencies appropriation bill involved expenditures totaling $917 million, $199 million above last year's expenditures, yet $65 million below this year's budget request (the double play—we spend more but we are still for economy). Congressmen pass legislation at the people's request offering more Federal services, then criticize the Commerce Department for adding 6,056 new permanent positions in this bill. Government is still growing. Primary interest in this bill is the money for the Civil Aeronautics Administratiton (CAA) for increased airways safety, and recognition of the need for immediate coordination of all aircraft flight—civilian and military—under one authority. Military aircraft cannot be permitted free range.

The joint postal pay and postal rate increase bill, both overdue, in the form of the Senate-House conference report passed unanimously, but with misgivings. The parliamentary procedure made acceptance of the conference report almost mandatory, the culminatiton of the long struggle of postal union pressure and political infighting for advantage. Questionable features which some Members disapproved were: (1) The retroactive-to-January pay increase, costing $97 million (total yearly increase is $265 million); (2) the failure to raise all postal rates immediately, instead setting 1959 and 1960 increase dates for certain classes of mail. Rate increases effective August 1 are first class to 4 cents, postal cards to 3 cents, and airmail letter to 7 cents, airmail card to 5 cents. Other rates, second, third, fourth, and miscellaneous (including "junk mail") also go up. Other conclusions: (1) There should have been no discrimination between pay levels (levels 1 through 6 get 7½ percent permanent and 3-year temporary 2½ percent boost, while level 7 gets only 7½ percent plus 1½ percent); (2) postal pay and postal rate bills should not have been joined together; (3) other Government workers will now request raises; (4) postal matters are the most "political," "pressure-group lobbied" that Congress considers.

The Trade Agreements Extension Act (reciprocal trade) is approaching its day in Congress. Trade affects all citizens. It isn't a matter of being for or against trade. It's not that simple. It's what kind of trade bill—and whether Congress has abandoned its constitutional control. Questions to answer: (1) How "reciprocal" is the bill (some nations don't cooperate, keep high tariffs)? (2) Are Tariff Commission's recommendations getting sufficient administration attention? (3) Is the President, acting on the State Department's advice, making diplomatic rather than economic decisions, and, if so, how much and what industries are being affected? (President makes executive agreements with other nations, having force and effect of treaties.) (4) Are the peril-point and escape-clause provisions sufficiently protective of United States industry? For example, heavy foreign importation of oil jeopardizes domestic oil production and defense readiness. I have joined in the effort to safeguard the oil industry, not unaware that Government regulation is a continuing danger. There are other industries, too, such as cotton, that need consideration.

The Alaska statehood bill has occasioned an unusual rule under which debate is conducted—1 hour per Member (435 hours would keep us here until Christmas). Fortunately, all will be said without every Member taking part. Alaskan statehood ran squarely into some tough opposition. (1) The number of people involved is small, 161,000, of which 141,000 are adults (less than the capacities of many college football stadiums); (2) 2 Senators and 1 Representative for 28,767 voters (1956 figure) is disproportionate and excessive; (3) Alaska's unsound economy—business income $160 million, Federal aid $122 million plus $350 million military construction (1958 figures)—demonstrates that statehood would be prohibitively expensive at this time; (4) a citizens' poll by 5 Alaskan newspapers on the question, "Do you favor immediate statehood?" produced answers 2 to 1 against; (5) the noncontiguity location would set a questionable precedent—that of the first State separated from the mainland by a foreign nation or international waters.

Briefs: (1) Important defense reorganization bill may be amended making it acceptable to most, the major change being to keep control in Congress; (2) the Trinity survey by the United States Corps of Engineers is necessary and proper as prelude to later decisions whatever they may be; (3) the CAB is considering south central route matters of interest to Dallas. The danger is reduction of airline service, as the examiner initially has recommended; (4) a fair-trade bill allegedly to protect competition poses a real dilemma—to permit manufacturers to set prices on trademarked products, thus eliminating cutthroat competition but cause higher prices to consumers.

Deterrent NORAD

EXTENSION OF REMARKS
OF
HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. CHENOWETH. Mr. Speaker, I wish to call the attention of the House to an editorial from the Washington Star on the North American Air Defense Command. I am happy to have this important installation located in Colorado Springs in my district.

I want to take this opportunity to commend General Partridge, commanding general of this service, for the outstanding job he is doing. Air Marshal C. Roy Slemon, of Canada, is also located in Colorado Springs and is making a most valuable contribution to this operation.

The editorial follows:

DETERRENT NORAD

The new 10-year Canadian-American agreement on joint air defense is well designed to safeguard North America against the threat implicit in advanced nuclear weapons, supersonic bombers and ballistic missiles. To that end, it significantly improves upon and supplants the cooperative arrangements that have heretofore existed between our two countries.

As explained in the notes formally effectuating the new pact, the supplanted arrangements consisted of coordinated but separate Canadian and American plans that failed to provide authoritative control over the defensive action that would be needed in the event of attack. Although adequate enough when first drawn up, these plans have been outdated by progress in military science and technology. Accordingly, to strengthen their own security and the security of NATO as a whole, our two countries now have in operation, and have had for some time, a North American Air Defense Command (NORAD) whose main feature is that is is more tightly integrated than the former setup.

This means that NORAD, which is directed from headquarters at Colorado Springs, Colo., is capable of markedly swifter defensive action than that provided by the old arrangements. Its top commander is Gen. Earl E. Partridge of the United States Air Force, and its deputy commander is Air Marshal C. Roy Slemon, of Canada. Between them, subject to the chiefs of staff of both countries, these two men run the show, with General Partridge exercising operational control over the American-Canadian forces assigned to him—control of a sort calculated to promote the fastest possible response to a threatened or actual attack on North America.

Of course, in the age of supersonic bombers, not to mention ballistic missiles, there is precious little time to counter an attack. Even so, defensive arrangements like NORAD, if vigorously sustained on an alert around-the-clock basis, can make good use of that time. Indeed, in that sense, its existence can serve as a powerful deterrent to the potential aggressor.

Crackdown on Smut Peddlers

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mrs. SULLIVAN. Mr. Speaker, the House last week approved a bill, H. R. 6239, intended to help curb the vast traffic in distribution of obscene and crime-inciting matter. In connection with House consideration of the bill, I included as part of my remarks the testimony on this bill which I submitted last January to the Judiciary Subcommittee which held hearings on this legislation.

In my statement before the subcommittee, I cited the difficulty from a legal standpoint of legislating effectively in an area which touches so closely on the first amendment to the Constitution, stating:

The Constitution is our great bulwark. The first amendment is a great guaranty of our freedoms. We respect it. We are conscious of the practices which the first amendment was intended to prevent.

This amendment to the Constitution was written to serve the noblest aspirations of our people. It was written to protect the free exchange of thought—of literature—of the ideas which make democracy work and prosper and flourish.

It was not written into the Constitution in order to protect panderers to the depraved, or to protect the pusher of obscene printed or visual matter, as despicable a person as the pusher of narcotics. Those who deal in obscene material are among our worst offenders against the moral bases of our society.

GLOBE-DEMOCRAT CALLS FOR CURBS ON OBSCENITY

Mr. Speaker, the views I expressed in my statement last January are similar in many respects to an editorial appearing recently in the St. Louis Globe-Democrat on this problem of curbing the flow of obscene material, which it identified as a big business, and a national disgrace, declaring "it has no right to hide behind the Constitution."

Quoting the Supreme Court, the Globe-Democrat added:

Obscenity is not within the area of constitutionally protected speech or press.

Mr. Speaker, under unanimous consent, I submit for inclusion in the Appendix of the RECORD the full text of the editorial referred to from the St. Louis Globe-Democrat, Crackdown on Smut Peddlers, as follows:

CRACKDOWN ON SMUT PEDDLERS

America's pornography peddlers make the Parisian hawker of offcenter post cards look like a piker. Smut peddling is no clandestine, penny-ante trade in the United States. It is big business.

The traffic in pornograph is a $500 million a year racket, the Senate Juvenile Delinquency Subcommittee estimates.

This flood of smut is making a mark on our generation. As FBI Director J. Edgar Hoover says, there is a "growing conviction among law officers that the flood of pornography that has ben circulating among our young people for the past 10 years is a major factor in today's rapidly rising rate of sex crime."

Many Americans haven't the faintest idea of how big and how bad the smut pedding is in this country. They often assume that it is a simple matter for the Post Office Department to dry up this flood of obsecenity by barring it from the mails.

But many smut peddlers, publishers, or distributors, get around this by shunning the mails. They can ship their stuff, for example, by truck.

In addition, the Post Office Department's power to keep the lewd and lascivious out of the mail is less effective than many realize.

Postal authorities have two ways to proceed against the offender. They can try to deny him use of the mails. But this can wind up in the courts, or involve lengthy hearings and appeals. Or they can try to prosecute the offender.

But 5 years ago, Federal courts up to the 10th circuit court of appeals, held that the violator must be prosecuted in the district where the smut is mailed, not where it is delivered.

Smart smut peddlers now base their operations largely in Los Angeles and New York City. Experience has shown them that courts and juries there are lenient with them. In short, they are free to shop around and settle in a district where the judges or jurors are broadminded about their sleazy kind of business.

This year, Congress is going to try to plug some of these loopholes. It is expected to pass a bill that would permit the Justice Department to file suit wherever the obscene matter is delivered—instead of just at the point where it is mailed.

Whether this law will stand up in the courts is debatable.

The Post Office is also making extra efforts to keep obscene publications out of the mail. Postmaster General Summerfield has set up a new judicial office charged with speeding up proceedings against persons using the mails to defraud or debauch.

Smut peddling is a national disgrace, as a House committee declared not so long ago. It has no right to hide behind the Constitution: "Obscenity is not within the area of constitutionally protected speech or press," the Supreme Court said last year.

It must be stopped by whatever constitutional means are available.

Nixon's Triumph

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1958

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Dallas Morning News from Friday, May 16, 1958, entitled "NIXON'S Triumph."

Pat and DICK NIXON have again proven themselves worthy representatives of this Nation. Their goodwill tour was a United States triumph, not just a Nixon triumph. As Vice President he has a very real obligation that transcends future expectancies, and as Vice President he was representing the people of this Nation officially on the tour. The courage and dignity of the Nixons reflected great credit on the United States and branded them indelibly in the minds of many as the good Americans that they are.

The El Independiente of Bogota, Colombia editorial was typical of the foreign appraisal when it said:

Mr. NIXON is a man of great human qualities who conducts himself with dignity under difficult conditions because he has learned in the school of life how to overcome obstacles.

True, there are lessons to be learned from this trip, mindful of the Communist rabble-rousers efforts, representative of only a handful of the people. Beyond our recognizing the unceasing efforts of Communists to penetrate our hemisphere is the recognizable fact that we must, all of us, bend every effort toward good salesmanship, the accurate representation of what the United States stands for, of our basic beliefs, of capitalism over communism.

The efforts of the Nixons, representative of our United States citizens, must be but one of our continued efforts to establish the person-to-person contact between the citizens of this Nation and our many foreign friends—not the least those of the South American countries. Nixon's triumph was America's triumph, but must be followed by many others, until we completely vanquish the Communists' ideology.

NIXON'S TRIUMPH

Vice President and Mrs. Nixon amply deserved the outpouring, bipartisan welcome which greeted them Thursday on their return to Washington.

Their reception at the airport and triumphal drive through the streets of the Capital constituted a truly national ovation. It was warmly extended to two spunky Americans who had carried out a most difficult and trying mission with distinction to themselves and their country.

Keep in mind that much of the trouble encountered was not unexpected. Their South American journey was no routine goodwill junket. The Nixons well knew before they left that they would not have fair sailing all along the way. It was patent that relations with more than one country on the southern continent had deteriorated. The real purpose of the trip, in fact, was to clear up as much of the misunderstanding as might be possible.

To the everlasting credit of DICK NIXON and his brave wife, be it said that from the start the Vice President was determined to go beyond the police security safeguards ordinarily provided for foreign visitors. At admitted risk to his person he sought firsthand contacts with students and other elements bent on staging anti-American demonstrations.

This courageous facing of antidemocratic groups for man-to-man discussions of differences was DICK NIXON'S supreme compliment to these neighbors to the south.

Uruguay, as might have been expected of this advanced little democracy, met the test of that compliment with flying colors. Peru flunked it disgracefully. The complicity of the Prado government itself is open to suspicion.

Only in Venezuela was the Vice President's visit on the somewhat foolhardy side. Barely emerging from revolution, this backward land, for all of its false-front glitter of oil riches, has no effective law-enforcement bodies. The visit there might well have been passed up entirely. But there, in the worst ordeal of all, the Nixons comported themselves as the great Americans they both are.

Comments of O. R. Strackbein on Statement of Secretary Dulles Before the Ways and Means Committee, February 4, 1958

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1958

Mr. DAVIS of Georgia. Mr. Speaker, inasmuch as we expect to take up on the floor of the House within the next day or two legislation to extend and modify the so-called reciprocal trade legislation, I think it would be helpful for the membership to read a letter written to Hon. Wilbur D. Mills, chairman of the House Ways and Means Committee on March 7, 1958 by Mr. O. R. Strackbein, chairman of the Nation-Wide Committee of Industry, Agriculture and Labor on Import-Export Policy.

This letter analyzes and comments upon the statement of Secretary of State, John Foster Dulles, before the Ways and Means Committee on February 4, 1958.

I have read this letter with a great deal of interest and under unanimous consent granted by the House, I attach Mr. Strackbein's statement hereto as a part of these remarks as follows:

THE NATIONWIDE COMMITTEE OF INDUSTRY, AGRICULTURE, AND LABOR ON IMPORT-EXPORT POLICY,
Washington, D. C., March 7, 1958.

Mr. WILBUR D. MILLS,
Chairman, House Committee on Ways and Means, House Office Building, Washington, D. C.

DEAR MR. MILLS: On February 24, 1958, the Secretary of State, Mr. John Foster Dulles,

appeared before your committee and presented a prepared statement for the record.

I would like to offer an analysis of, and comments on, some of the leading points set forth by Mr. Dulles and hope that this may be included in the record. Ordinarily I would make no request of this kind but I believe that because of the far-reaching implications of some of Mr. Dulles' observations and judgments and their vital bearing on the merits of the legislation that is before your committee in the form of H. R. 10368, you and members of your committee no less than those who look to the hearings record for information and guidance will be interested in an analysis of his statement from the point of view of one who disagrees with his position.

The Secretary of State's paper is divided into seven parts and this reply will be addressed in sequence to these parts.

I

In part I Mr. Dulles refers to what he calls the two main aspects of the President's proposal to extend and strengthen the Trade Agreements Act.

The second aspect was selected by Mr. Dulles himself for your attention. As set forth by him this aspect of the President's proposal is the part designed to help make the United States secure against external danger.

The Secretary of State should be lauded for his frankness. It is clear from his statement that the Trade Agreements Act is to be wrenched from its original intent and converted into an instrumentality of the diplomacy of this country. That it has in fact been used in this manner for a number of years has been asserted numerous times by those who have questioned the unauthorized direction taken by the program, but never before has the State Department so clearly pleaded guilty to the charge.

The question thus presented by Mr. Dulles is really twofold. One is whether the danger to the United States on the political side is so great and imminent that it should be raised to an overriding discipline, superseding our Constitution and such considerations of the domestic economy as might be held to upset international diplomatic maneuvers and negotiations. The other is whether international trade as an instrumentality of diplomacy is in fact a suitable or useful or manageable tool that can be used successfully to further the security of this country against external danger.

The first part of the question is a most serious one. If we keep in mind that there was a time less than 200 years ago when the American colonists were willing to risk death and privation and did indeed experience both, for the sake of setting up a constitutional system of government on this continent, we must naturally wonder why today we should throw the principles of that constitution overboard as a means of courting safety.

Presumably danger may be so great at times that we must temporarily forego the benefit of principles for the establishment of which others died; but when there may be a clear doubt about the nature of the danger and when there is in any case no compelling reason for believing that the action proposed to avert the danger would be more fruitful than other proposals, then surely there can be no justification for jumping to a totalitarian conclusion about what should be done.

It has become a habit in high places to shoot from the hip with superlatives, to say, for example, that a course of action not conforming to the official proposal, would be totally disastrous. The meaning of words is thus vitiated and testimony that deals in such superlatives loses its weight. If it is necessary to invoke totalitarian principles in order to gain the acceptance of testimony it may be suspected that the testimony lacks the force to recommend itself.

The other part of the question, i. e., conceding the danger, whether the trade agreement program is a suitable instrumentality for warding it off, should also be closely examined. This phase of the question leads us into parts II, III, and IV of Mr. Dulles' statement.

The Secretary's statement says that the trade agreements legislation of the United States has become "symbolic of economic cooperation as a substitute of economic warfare." Then, going back to the depression of 1929, the statement refers to the trade barriers that were erected as a means of reviving the economies of various countries and the decline in world trade that ensued. Since World War II "the trend has happily been in the other direction, at least so far as the free world is concerned," the statement continues.

The latter statement will come as news to many people who are under the impression that international trade became more closely hedged by quotas, exchange controls, embargoes and import licensing systems after World War II than ever before. The Secretary evidently paints with very broad strokes of the brush. Very recent years have indeed witnessed some relaxation; but the trade of most countries continues under close surveillance of their governments; and there is visible little or no hesitation to restore restrictions that have been taken off if this is regarded as necessary.

The United Kingdom still has the token import plan which greatly restricts imports of a long list of goods from this country. For this there may be good reasons. The point is that GATT or no GATT other countries shuttle between liberalization and restriction of trade very much to suit themselves.

Mr. Dulles points to the need of liberalizing trade more and more because of the "physical danger that we face."

Evidently 24 years of the trade agreements program did not prevent us from drifting into such physical danger. Why then should we try more of the same medicine? Evidently as a preventive it was not effective; and just as surely it has not acted as a cure. Whence the notion then that the record supports a further 5-year extension of the program?

"For the first time in history," the statement continues, "the United States is subject to major devastation from weapons launched from foreign soil."

Can Mr. Dulles really believe that the existence or continuation of the trade agreements program bears any ascertainable relevance to the fact that Russia has risen to a position of challenging this country physically? If there is any relevancy the more obvious conclusion, according to ordinary logic, would be that the program did nothing to prevent the unwelcome development if it did not indeed enhance it.

He does indeed claim that "the danger is met, and our peace is preserved, by one fact and one fact alone—that is that the free world is not disunited, but works together and provides dispersed power to retaliate against armed aggression."

In saying this he makes two assumptions. One is that such unity as there is does not come from military considerations but from the trade agreements program. The other is that the trade agreements program will be the magnet that will keep the free world together.

Both are very strained assumptions and can be sustained at best and then only flimsily by exaggerating vastly the proposals of the so-called protectionists. Thus Mr. Dulles says "If other world nations think that the United States market will be increasingly closed to them, that will immeasurably help the Soviet Communist bloc to prosecute their plan of economic encirclement and ultimate strangulation of the United States." In other words, the "free" world will lose its unity and Russia will pounce on us.

There is no proposal before the Ways and Means Committee or before Congress that would come anywhere near closing our market to imports. There are, indeed, proposals that would keep imports from running wild as they have in some sectors since the war and with their low-wage advantages driving our own producers, with their vaunted higher productivity armor, like chaff before the wind. Principally these are proposals to keep imports within bounds and to housebreak them competitively so that it will be possible to live with them.

Again, Mr. Dulles in part IV says that "some elements of the United States industry seek to improve their competitive position by implying that any competition from abroad, merely because it is 'foreign,' should on that account be debarred."

It would be very helpful if Mr. Dulles supported this bald assertion with substantiating citations. Without bothering to do so, he swings stoutly at this ugly strawman that he has thus set up and brings him down flat with this: "The United States cannot accept that viewpoint without endangering our whole Nation." This is in part V of his statement.

Naturally we are moved to shout "Bravo." The trade-agreements policy scores again as it has scored so many times against the villains made of straw.

But then Mr. Dulles softens. This is a pity because it robs him of his victory. He says, "There is, of course, a wide range of cases where foreign competition should be restrained, and is restrained by protective action."

This admission brings him within the range of reality; but in the process he lost his lance.

His admission that there is a wide range of cases where foreign competition should be restrained ranges him alongside the proposals of the so-called protectionists. That is all that they have claimed. They do not propose a general increase in tariff rates nor the general imposition of import quotas. They seek redress against injury only when this can be proved to the satisfaction of the Tariff Commission in public hearings where all sides are heard, in individual cases; and they advocate quotas only where the tariff alone is unequal to the situation because of the operation of the most-favored-nation clause.

Why is Mr. Dulles not satisfied with this? He, as spokesman for the State Department and accepting the long-time position of that Department, does not believe that the regulation of our foreign commerce can be left to the Congress, where it was placed by the Constitution.

And why does this attitude come so naturally to the State Department? Evidently it is not so much a matter of principle as it is a matter of who exercises power. That it is not a point of principle is readily deduced from the Secretary's and the State Department's view of restraining imports so long as it is done by that Department in consort with the Department of Commerce or other executive agencies and not by Congress.

Thus he cites with approbation the voluntary restriction of oil imports, "including those from Venezuela and Canada." These restrictions, such as they are, are in the form of quotas. Obviously quotas are respectable if they are under the control of the executive but unspeakably wicked if they are imposed as a matter of law under procedures spelled out by Congress and controlled by Congress.

Again he points approvingly (part VI) to the restrictions imposed by Japan on her exports of "textiles, flatware, and other goods sold to the United States." Once

more these "voluntary," self-imposed restrictions find no echo in the well-stocked arsenal of ill-will against quotas in the State Department.

Obviously it is all right to impose trade barriers so long as it is done by the State Department or some other arm of the executive. Evidently sin becomes saintly if it is committed in the right quarters.

In other words, what concerns the State Department is not the restriction of trade as such but who does it, even if the law and its orderly application must be set aside; and even if our system of government must be subverted in the process. Such a view is a natural product of the assumption that diplomacy must be the arbiter of our lives. All else must then be subordinated to the considerations of foreign relations, including the Congress.

VI AND VII

Here Mr. Dulles turns to all points of the compass, north, south, east, and west.

He cites Canada and her "unfavorable" balance of trade with us in 1957 and by deploring such a condition swallows the mercantilistic philosophy that his Department abhors so busily. In 1957, a year during which Canada made tremendous capital outlays for pipe lines, iron-ore development, and other enterprises that drew heavily upon United States sources of supply, that country imported $3.9 billion from this country but sold us only $2.9 billion. Already toward the end of 1957 this "unfavorable" balance began to move toward a balance, as should have been expected as these developmental enterprises neared completion. Imports from this country dropped $160 million in the second half of the year. That the "unfavorable" balance was no great strain on Canada in the first instance was reflected in the sound exchange position of the Canadian dollar.

What Mr. Dulles did not mention is notable. He said nothing about the Canadian grievance against our liberal trade-minded wheat producers and flour millers who hold tenaciously to a virtual embargo against the importation of Canadian wheat and wheat flour while ranging themselves staunchly on the side of the freer-trade advocates in this country.

Also, Mr. Dulles failed to note that the duty on American goods going into Canada averages a good 2½ times our average duty on imports from Canada.

Southward he points to Venezuela and points out that in 1957 we shipped $1 billion of exports to that country while we bought only $900 million. He observes that if the Government of Venezuela consider that we intend to put up serious barriers to imports from Venezuela the consequences will not be in the interest of our national security. Yet he admits that we have a Government-sponsored voluntary restriction which limits oil imports including those from Venezuela and Canada. In other words, the restrictions are sanctified by the fact that they were sponsored, not merely by our Government, but by the executive branch thereof. Had they been put on by Congress or an agency of Congress under due process of law, the same restrictions would have to go to the foot of the line and stand as a monument to the crumbling of our national security.

Now eastward he points to the United Kingdom, a country that he correctly describes as living by participation in world trade. In 1957 the United Kingdom bought $1.1 billion from us but we imported only $775 million from there. This left a balance of over $300 million against England.

One of the principal troubles is that Britain competes in our market principally with finished products that not only we also manufacture, but that are also manufactured and shipped to us by England's competitors, such as West Germany, France, Italy, the Netherlands, Belgium, and, not least, Japan. The most-favored-nation clause prevents our granting lower duties to British imports as could be done in many cases because of their relatively higher prices. Should we lower the rate on imports from the United Kingdom, the same lower rates would be applied unconditionally under the most-favored-nation clause to imports from all her competitors. This would only widen their price advantage in this market over imports from England, and would not help her.

So, the capping statement of Mr. Dulles is mere hollowness and rhetoric when he says: "If the United States were to adopt policies that would set in motion a series of world-wide trade restrictions and high tariff policies, the effect upon the United Kingdom would be grievous."

Possibly. However, there is no proposal before Congress that suggests what Mr. Dulles professes to fear. Moreover, Britain did her best in a world of high tariffs before World I. Lower-wage competition in combination with the most-favored-nation clause (the principle of nondiscrimination) later undermined her position.

Turning westward Mr. Dulles comes upon Japan. He points at her unfavorable trade balance with us. In 1957 she bought $1,250,000,000 from us but we took only $600,000,000 or half as much from her.

Unquestionably we have a responsibility here so long as we insist that Japan must not trade with Red China and North Korea.

However, recognition of the responsibility does not solve the problem. Of all the routes to take in our relations with Japan GATT is probably the poorest. We should not have sponsored Japanese membership in GATT but should have entered into a bilateral agreement with her. Fourteen of the other leading nations of GATT have in any case refused to extend most-favored-nation clause treatment to her, although we have done so. Our support of Japanese entry into GATT was a case of a bankruptcy of ideas and of following what appeared to be the obvious and easiest channel.

We should have made a study of our trade with Japan and of the capacity of our industries to absorb competion from Japan in our market. We should then have devised import quotas which would have kept the imports within limits but which would have set aside a reasonable share of the market to be supplied by Japan. This would have made it possible to live with the imports.

As it is we are being driven of necessity to the use of import quotas on a global basis because imports from Japan not only confront our own industries with a problem in our market but also exporters from Europe and especially the United Kingdom.

In the end Mr. Dulles again invokes danger as the impelling consideration in support of H. R. 10368.

What is his suggestion worth? The trade agreements extension for another 5 years would presumably provide us the necessary shield.

Now let us suppose that the Russian economic threat against which Mr. Dulles so properly warns us should materialize. The next question is how GATT, which is the offspring of our trade agreements program but which in turn houses the program, is fitted for economic warfare. Let us remember that at the outset Mr. Dulles said that since 1934 we had moved toward economic cooperation as a substitute for economic warfare. Now apparently we are to use the same instrumentality of international cooperation, that is, GATT, for purposes of economic warfare.

Obviously what is meant here is the use of foreign trade by our Government for international political purposes—in a new direction, namely, to block Russia.

Implicit in this undertaking is an end to private international commerce; for nothing is less suited to economic warfare than private trade conducted for profit. What we are really witnessing here is the effort of the State Department in the guise of freer-trade to gain complete dominion over the flow of commerce.

This effort continues to reflect the same philosophy that produced both the ill-starred ITO (International Trade Organization) signed in 1948 but rejected by Congress in 1950, and the still waiting OTC (Organization for Trade Cooperation) which is still in the eggshell on which Congress has been sitting for 3 years. The Russian economic and military threats are merely handy arguments to be pressed into service in the attempt to denude Congress of its authority over foreign commerce.

Obviously, if it becomes necessary to meet the Russian trade challenge by extraordinary means we must quickly forget the most-favored-nation clause in order to gain greater maneuverability. Also we must set aside earmarked products, raw materials, and farm surpluses for shipment where they will do the most good, and not according to profit consideration nor through established distribution channels. Commercial consideration must be brushed aside.

Such a course would upset the normal trade channels to an incalculable degree and would undoubtedly interfere with our trade relations with GATT countries. Instead of being of help to us GATT would no doubt challenge our violations and throw into doubt the value of our economic efforts against Russia.

All that Mr. Dulles really accomplished in his statement was to press into the service of the State Department the latest international developments for help toward gaining the long-standing objective of the Department, but which it has so far not quite succeeded in assuring—and that is, making of international relations a totalitarian discipline to which Congress and our Constitution must bow if any of us are to remain free or even alive and establishing the executive branch of the Government and the State Department in particular as the supreme arbiter.

Sincerely yours,

O. R. STRACKBEIN, *Chairman.*

Has HEW Overstepped Its Authority?

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1958

Mr. BURDICK. Mr. Speaker, the Department of Health, Education, and Welfare, it seems to me, has stepped out with unauthorized assurance in its article condemning the Hoxsey cancer treatment because of two court decisions. Here is their latest barrage:

PUBLIC BEWARE: WARNING AGAINST THE HOXSEY CANCER TREATMENT

Sufferers from cancer, their families, physicians, and all concerned with the care of cancer patients are hereby advised and warned that the Hoxsey treatment for internal cancer has been found worthless by two Federal courts.

The Hoxsey treatment costs $400, plus $60 in additional fees—expenditures which will yield nothing of value in the care of cancer. It consists essentially of simple drugs which are worthless for treating cancer.

The Food and Drug Administration conducted a thorough investigation of the Hox-

sey treatment and the cases were claimed to be cured. Not a single verified cure of internal cancer by this treatment has been found.

Those afflicted with cancer are warned not to be mislead by the false promise that the Hoxsey cancer treatment will cure or alleviate their condition. Cancer can be cured only through surgery or radiation. Death from cancer is inevitable when cancer patients fail to obtain proper medical treatment because of the lure of a painless cure "without the use of surgery, X-ray or radium" acclaimed by Hoxsey.

Anyone planning to try this treatment should get the facts about it.

For further information write to United States Department of Health, Education, and Welfare, Food and Drug Administration, Washington, D. C.

There is no definite cure for cancer and especially internal cancer, that has yet been devised. No cure is in existence today, and anybody who says that any particular system is hocus-pocus is speaking from authority that does not exist.

I spoke to one of the leading cancer experts in the United States this last winter, and I asked him about the Hoxsey cure and he told me he was very guarded in what he said about any cure. As long as he did not have one of his own that could be relied upon, it would ill become any physician to say that there are only two ways to cure it, one by surgery and the other by radiation. Unless the development of cancer can be treated at an early stage, operations have been proven to be useless; and radiation treatment, according to testimony of many doctors themselves, in advanced stages merely spreads the cancer and does not cure it. Unless people know what they are talking about they should not condemn any treatment. I do not know whether the Hoxsey treatment is good or bad, but I do say that for doctors to condemn it when they can offer nothing better is stepping out on a limb in the eyes of the public.

As Tyndall says:

The greatest discoveries of science have been made when man has left the region of the seen and known and followed the imagination by new paths to regions before unknown.

I sent my daughter-in-law to Hoxsey's institution this last February suffering from cancer of the liver and they at once said that they believed the cancer had made too much headway for them to cure, but they would try. They did at least offer hope when every other source pronounced the cancer incurable. She passed away within 60 days, and while Hoxsey did not cure her or did not say that he could, he certainly did not injure her, while the radiation treatment, according to best authorities, spread the cancer and did not cure it.

Hundreds of affidavits have been filed in court, which the court took no notice of, by people stating that they were cured by the Hoxsey treatment, and who knows at this hour whether in many instances they cannot cure cancer? In one case the court did not rule on the admissibility of these affidavits without first calling up the department of health and then the next day rejected the affidavits.

Who knows but what a final act of success in finding a cure for internal cancer will not be made by someone not within the medical fraternity? The bulletin put out by the Department of Health, Education, and Welfare is premature.

Still Fighting

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. ULLMAN. Mr. Speaker, a recent letter appearing in the letters to the editor column of the Lewiston (Idaho) Morning Tribune presents a fine statement of why the high dam at Hells Canyon still remains the outstanding symbol of sound river development.

I congratulate Mr. Lynn Tuttle, chairman of the Idaho-Oregon-Washington Hells Canyon Association, for his forthright statement, and I commend it to my colleagues.

The statement follows:

STILL FIGHTING

To the TRIBUNE:

In development of water resources and hydro power, Russia is forging ahead much more rapidly than the United States. In 1956, 5 percent of her national investments, equivalent to $2.1 billion went for hydroelectric purposes. This much money would go a long way toward building all of the prospective storage and hydro plants of the Northwest. But due to the influence of private power companies and their political bedfellows, it is hard to get funds for any project they cannot control.

Due to our intensely commercialized profit system, public benefits are submerged in the interests of pampered special privilege. These monopolistic groups are pulling all the strings possible to hamper and hamstring any and all cooperative or public effort, especially that of rivers for navigation and power. Disregarding the needs of the public or of the country, they seek full control over water resources and also over the general economy.

Thus, the fight for the full potential of Hells Canyon has been long and hard. It is not yet over. The power companies and their satellites, a few of whom still sit in governor's chairs and the Halls of Congress, have pulled all strings to get this most valuable strip of river for their own wasteful, cream-skimming semidevelopment. But more and more people are seeing the light. The need for full economic usage of water is becoming increasingly apparent. Hells Canyon Dam will eventually be built.

According to President Eisenhower, "we spend $5 billion a year on military weapons research, learning how to kill the mostest the quickest. But in the process of becoming the world's most militaristic power and forcing reluctant nations to rearm, we are neglecting our most vital and essential potentials of strength; our renewable-energy and water resources.

Mr. Dulles outlined the whole program of the administration, both at home and abroad, when he said almost these words, "We are not interested in other people; all we want to do is to protect American interests." Abroad we are protecting the big oil companies and a variety of unscrupulous dictators. These include Chiang Kai-shek, and Batista. At home, the administration is "private power or nothing." Such is the power politics of money and force.

Hydropower and storage are most important for both our economy and our security. Hells Canyon and Nez Perce Dams offer perhaps the greatest feasibility and the most economic benefits of any location in the Northwest.

Hells Canyon has become the symbol, if not the fact, of wise river usage. The substitute dams have become the symbol of waste. We continue to fight.

LYNN TUTTLE,
Chairman, Idaho-Oregon-Washington Hells Canyon Association.
CLARKSTON.

Minnesota Federation of Women's Clubs Favors the Corn Tassel for Our National Floral Emblem

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mrs. KNUTSON. Mr. Speaker, I have received a resolution in favor of the corn tassel as our national floral emblem, from the Minnesota Federation of Women's Clubs. This federation consists of 400 clubs in 78 counties in Minnesota with over 10,000 members. I think the covering letter is itself full of fine arguments in favor of this legislative action. Under unanimous consent I include the letter and resolution as follows:

MINNESOTA FEDERATION OF
WOMEN'S CLUBS, INC.,
Minneapolis, Minn., May 23, 1958.

The Honorable COYA KNUTSON,
House of Representatives,
Washington, D. C.

DEAR CONGRESSWOMAN KNUTSON: I am pleased to tell you that the voice of the Minnesota Federation of Women's Clubs joins that of the Minnesota Legislature and that of many individuals in our State who are interested in seeing the corn tassel become the national floral emblem. I am enclosing herewith a copy of the resolution as passed without dissent by the Minnesota Federation of Women's Clubs in convention assembled in Minneapolis May 15, 1958.

As you know the Minnesota federation consists of 400 clubs in 78 counties in Minnesota with over 10,000 members. The women have become genuinely interested in making the corn tassel our national emblem because, in addition to the historical, economic, agricultural, social and reverential importance of corn, there is a worldwide significance. A nation that adopts a humble symbol such as corn will certainly win friends internationally over one that might adopt a symbol synonymous with luxury.

Although there are other measures pending that are very much more important, would it not be a comparatively simple matter to complete this little bit of minor legislation now? We are willing to help in any way we can. Please tell us how.

May we count on you and our Minnesota delegation taking the lead in getting this done? Corn is the leading agricultural product of our State. The corn tassel crusade has been waged almost single-handed by a Minnesota citizen. Let's complete the job by having the congressional delegation from Minnesota take the lead in naming the corn tassel the national emblem.

We humbly solicit your consideration and support.

Sincerely,

Mrs. KERMIT V. HAUGAN.

THE CORN TASSEL AS THE NATIONAL FLORAL EMBLEM

The following resolution was adopted by the delegate body of the Minnesota Federation of Women's Clubs in convention assembled May 15, 1958, in Minneapolis:

"Whereas most nations have a floral emblem to be recognized as their national symbol, while our country has made no such choice; and

"Whereas corn is native to our United States, is characteristic of our land, is grown in every State, was cultivated originally by the Indians here, continued by the farmers to become the most widely cultivated food crop of the world; and

"Whereas corn kept alive our Pilgrims through perilous winters and was sent by them to England to pay for their *Mayflower* crossing; and

"Whereas the corn tassel has a glory all its own, blooming through many weeks, then to live again in seed which became the first export from our present United States: Therefore

"*We hereby resolve*, That in gratitude we should honor corn, the genesis of our history, our agriculture, our economy, by adopting for our national flower, the corn tassel."

New Orleans, a Town Both Gentle and Violent

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1958

Mr. HÉBERT. Mr. Speaker, New Orleans, it is agreed, is one of the world's largest cities with a distinctive flavor and in deed a city of character.

Anybody who visits New Orleans never forgets it.

Recently the New York Herald Tribune asked a number of editors from around the country to write guest articles about the special qualities of their cities. The series of articles was to be called Our Town.

Among the prominent and competent editors invited to contribute to the series was George Chaplin, the editor of the New Orleans Item.

Following is Mr. Chaplin's vivid and living article on New Orleans:

A TOWN BOTH GENTLE AND VIOLENT

This is a magic town, caressed and nourished by the river, a town that loves its jazz and its Mardi Gras, its food and its wine—but lives by water.

The Mississippi, impatient for its freedom in gulf deepwater 100 miles downstream, rolls enough gallonage past the foot of Canal Street each day to slake the entire Nation's thirst.

Water brings ships (4,300 in foreign trade alone last year) and lures petrochemical plants. It is a blessing, but a bother, too, for this sprawling metropolis rests on a below-sea-level sponge and every raindrop must be pumped out through a canal network big enough for Holland.

Water and heat make this a town of outdoor living, a town that plants and gardens the year around. There is redolence in the air and semitropical lushness—palms, magnolias, banana trees, flowering oleanders, great live oaks, azaleas and camellias, and the ripple of fountains.

This is a town of iron-laced balconies and patios, of old brick garden walls, of stately columns—and a town, too, with the squalor and evil of slums and the dingy, headbusting joints along the waterfront.

This is a town both gentle and violent, that enjoys its art and its mayhem. It was once the wickedest town in the world. The local correspondents of the New York Tribune reported in 1855 that "murders here are an everday occurrence." And earlier Andrew Jackson's wife, Rachel, wrote back home during a visit here: "Great Babylon is come up before me. Oh, the wickedness, the idolatry of this place. Oh, farewell. Pray for your sister in a heathen land."

Life is safer nowadays, but still pleasantly turbulent. New Orleans, someone has said, is like a slightly tarnished female who on Sunday morning can't make up her mind whether to take another drink or go to early worship.

Whatever her decision it will be to music—for this is a town that is sustained by its sweet sounds, from Ferdinand (Jelly Roll) Morton's to W. A. Mozart's, with an understandable partiality for the farmer.

Symphony, opera, chamber groups—they're all popular here, although underfed as everywhere—but the hometown music is the jazz that burst out of Storyville, the red-light district dead these 40 years.

Louis Armstrong, Buddy Bolden, Bunk Johnson, Kid Ory, Manuel Perez—they and many other greats served their time in the tenderloin. Alphonse Picou remembered: "Those were happy days, man, happy days." And Jelly Roll once recalled: "New Orleans was the stomping grounds for all the great pianists. * * * The sporting houses needed professors."

In 1917, when wartime Secretary Josephus Daniels decreed Storyville must go, the city's chief executive rushed to Washington to protest and one of the housekeepers sought an injunction. But both mayor and madam lost, and Storyville's 38 blocks went.

Satchmo Armstrong, 15 at the time, remembers "it was a sad, sad situation." There were still the riverboats and the minstrel shows and the roadhouses, but jazz headed 'way up yonder from New Orleans.

Today the Basin Street of Storyville is the site of a low-cost housing project, but a few squares away in the French Quarter, on Bourbon Street, they're still beating out the hot licks. Now and then somebody suggests putting up a statue to jazz, but the idea never gets far—perhaps because monuments are really for the dead.

Parades and street bands get the right-of-way here, and there are still Negro funerals where the musicians march. "He rambled all around * * * till the butcher cut him down." Lizzie Miles insists that when her time comes the hearse must pass down Bourbon Street—even it it's only for a block—because it's the street that gave her a start and a comeback.

And Thomas Griffin, Item columnist, confides that one society matron has it in her will that when she's lowered into the grave a jazz band must play "When the Saints Come Marching In."

This is a town that likes its freedom; a town that goes carnival-crazy on Shrove Tuesday and rushes penitently to church on Ash Wednesday; a town that likes to gamble and does when it can get away with it; (General Beauregard once drew $30,000 a year for supervising a post-Civil War lottery here); a town that prefers jaywalking to the new "walk" and "don't walk" signs; a town whose streets are an invitation to freewheeling enterprise (with those white lanes obviously painted only for visitors).

This is a town that drinks its coffee hot and black, and flavored more often than not with the roasted root of the blue-flowered chicory plant.

It is estimated that 72 to 74 percent of the coffee drunk locally is chicory-blended and that 65 percent of the chicory consumed nationally is processed and distributed from here. This chicory comes mostly from France, Holland, Belgium, and Yugoslavia, occasionally from Poland, Czechoslovakia, and Rumania. There was a time when restaurants served only chicory, but tourist demands have brought about concessions and you can get it pure if you wish.

There is no compromise, however, in the preparation of the oysters, the shrimp, the crawfish bisque, the trout, the pompano, Mark Twain called the fish here "as delicious as the less criminal forms of sin." Former Mayor Maestri spent a whole day hosting the late President Roosevelt and reportedly made conversation only once. He asked FDR: "Mr. President, how ya like dem ersters?"

This is a town where a lot of people speak Brooklynese without having been north of Lake Pontchartrain; where kids don't have birthdays but "make" them—"he just made 16;" a town where the faithful run classified ads to show their gratitude—"Thanks to St. Frances Xavier Cabrini, Mother of Perpetual Help, and Our Lady of Fatima."

The story is told that when an adjoining parish, St. Bernard, cast fraudulent votes in a major election, this ad appeared in the local press: "Thanks to St. Bernard for favors granted."

This is a town that paints and sculpts and turns out more aluminum than the entire Nation did before World War II; a town where streetcars still clang down Canal St. while city council is talking monorail; a town where a sternwheeler paddles under the just-opened $65 million bridge connecting east and west banks of the river with the country's longest cantilever span.

This is a town named after a carouser (the Duke of Orleans), a town with history and mystery and not a little music in its street names. Burgundy, Chartres, Dumaine, Toulouse, Melpomene, Terpsichore, Euphrosine, Felicity and Virtue. And where did Tchoupitoulas come from?

This is the town that was the original Dixie. A bank here issued a 10-dollar note printed in English and French (in which 10 is dix) and the rivermen loosely pluralized it. "Let's go to New Orleans and get those dixies." The name didn't go regional until the song was written in '59.

This is a town that is now building on the original site a duplicate, at least externally, of its famed old St. Louis Hotel, in the ruins of which Galsworthy found a white horse wandering and wrote a piece about it.

This is a town for lively news. Typical examples during April:

Gamblers were robbed of $50,000 in cash in a club in next-door Jefferson Parish, but the sheriff wasn't interested: "We never investigate unless there's a complaint."

The director of the Vieux Carre Commission, guardian of architectural integrity in the French Quarter, climbed over a back fence to photograph some oversized window panes, which appeared to be in violation of the code, instead reportedly got a picture of the pretty but irate housewife who'd rushed out in her underwear. Said she: "I was born and reared in the French Quarter. But if this is what it's coming to, I'll leave."

Diamond Jim Moran (really James Brocato turned Irish), restaurateur and delightful rogue, who often said, "When I go, pal, I wanna go fast," went just that way, of a coronary. With him went his ermine tie, his bediamoned appurtenances including sparkling toupee, spectacles, bridgework, shoes, and zipper, and a penchant for serving Dutch beer in an ice bucket and putting small

diamond rings in pals' meatballs. When Senator KEFAUVER grilled him here some years ago about his slot-machine days with Costello and Kastel, Jimmy answered candidly, then in effect said, "Say, pal, how about comin' duck-huntin' with me?" "Sometime," indicated the Senator.

Yes, this is a delightfully different town, a fun town, but behind the fun is a solid and aggressive community which really works harder than it plays; which supports its charities and capital fund drives; fills its churches and synagogues more often than most places; boasts two top medical schools with major research achievements; is a great retailing, industrial, and oil center; and a gateway between Latin America and the midcontinent.

Like other cities it has its tensions, racial and other; its bigness and its pettiness, its headaches and its challenges. Where to get money for schools, for the needs of suburbia, for the battle on traffic congestion and downtown blight?

This is a town that mixes the Latin with the South; a town in transition that has taken in stride, plague, yellowjack, and hurricanes. It faces the future with hope and skill—and another cup of coffee.

Lyle Saxon called it marvelous. It was and it is.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.
